CS 546. Seminar on Liberation Technologies. 1 Unit.

This one-unit seminar will present speakers relevant in a variety of ways to how various forms of information technology are being used to defend human rights, improve governance, deepen democracy, empower the poor, promote economic development, protect the environment, enhance public health, and pursue a variety of other social goods.

Same as: POLISCI 337S

CS 547. Human-Computer Interaction Seminar. 1 Unit.

Weekly speakers on human-computer interaction topics. May be repeated for credit.

CS 548. Internet and Distributed Systems Seminar. 1 Unit.

Guest speakers from academia and industry. May be repeated for credit.

CS 571. Surgical Robotics Seminar. 1 Unit.

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role. May be repeated for credit. Same as: ME 571

CS 801. TGR Project. 0 Units.**CS 802. TGR Dissertation. 0 Units.**

Dance Courses

DANCE 13AX. Ballet Intensive. 2 Units.

Rigorous daily practice that will challenge and expand students' understanding of and perspective on the art form. Focus on strengthening technique, exploring ballet as an expressive form and performing art, and developing an artistic voice.

DANCE 14AX. Modern Dance: Traditions of Creation. 2 Units.

Interested in putting your hands in the clay? In this hands-on course, dancers will investigate and re-choreograph some of Robert Moses' signature works. Robert and long-term dancers in his company, Robert Moses' Kin, will collaboratively guide students in intensive studio sessions as they revisit the significant issues, techniques, and directions in such seminal works as *Word of Mouth*, *The Soft Sweet Smell of Firm Warm Things*, and *Helen*. Elements used to create the works will be re-investigated and re-framed through the lens of the students' experience and perspective. Students will coordinate a showcase of excerpts of their remolded choreography. This class will utilize the language of Robert Moses' repertory to train dancers in the basics of Moses' movement vocabulary. Students will improve and reinforce technical proficiency, artistic range, and performance skills. In addition, students will expand their movement range and vocabulary in a manner that demonstrates an increase in strength, agility, flexibility, and endurance through classical ballet and contemporary modern dance techniques.

DANCE 23. Movement and Meaning: Dance Studies in Global Comparative Context. 4 Units.

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices across time and space. The course's structure challenges the Western/non-Western binary that still pervades many academic disciplines by comparing dance forms across the globe on the basis of functional similarities. At the same time, we will keep in mind the unequal power hierarchies shaping our modern world, and therefore we will examine how and why certain forms have become delineated as 'Western' and others as 'world' or 'ethnic,' despite similarities in movement, meaning, or purpose.

Same as: CSRE 159M, TAPS 159M, TAPS 259M

DANCE 24. Introduction to Dance in the African Diaspora. 4 Units.

This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project.

Same as: AFRICAAM 24, CSRE 24D, TAPS 152D

DANCE 25. Studio to Stage. 1 Unit.**DANCE 26. Dance and at the African Diaspora. 4 Units.**

Same as: TAPS 155M

DANCE 27. Choreographic Film. 1 Unit.

Stanford Lecturer and Choreographer Alex Ketley will work with the students on the creation of a new dance for film. The class will consist of a number of rehearsals in the studio where the students will explore Ketley's movement vocabulary. When this movement material is built, the dancers will then take the material throughout the Stanford campus to be filmed with a curiosity about how different contexts and environments effect the quality and presentation of the movement. After the film is shot, Ketley will create the film, but also give all the participating students access to the raw footage in the event that they are interested in making personal edits of the material. Students with a background in ballet, modern, or hip-hop are encouraged to participate. Students with limited dance training are welcome and are encouraged to email the choreographer so that they can have a dialog about what the class will entail. Any questions can be directed to Lecturer Alex Ketley at aketley@stanford.edu.

DANCE 28. Integrated Dance: Dance and Disability Class. 1 Unit.

Stanford Lecturer and Choreographer Alex Ketley has had a long history working on dance pieces integrating dance for people with and without disability. The politics involved in working with dance and performance as it functions in the realm of disability are very potent. Society has inherent prejudices and fears when it comes to disability, and engaging this directly through the creation of dance pieces is a way to challenge assumptions of who can dance, and what a dancing body can look like. The class will function as a studio class, where dancers with and without disability will learn choreography as well as different improvisational and collaborative strategies towards the goal of the creation of a new dance work. Discussions and reading will also be involved around the topic of how the body, in all its different configurations, lends itself and informs artistic exploration and creation. Any questions can be directed to Lecturer Alex Ketley at aketley@stanford.edu.

DANCE 30. Chocolate Heads Movement Band Performance Workshop. 2 Units.

Students from diverse dance styles (ballet to hip-hop to contemporary) participate in the dance-making/remix process and collaborate with musicians, visual artists, designers and spoken word artists, to co-create multidisciplinary fully produced production and installation. Open to student artists of different genres, styles, disciplines and levels. By audition and/or discussion with the instructor.

DANCE 31. Chocolate Head-Space: Crowd-Sourced Performance Experience. 2 Units.

Students who participate in the Chocolate Head-Space will engage in a dance and music activities and collaborative crowd-sourced performance on the Stanford campus. A mobile app using GPS data would be implemented to fellow Chocolate Heads students-- prompting them to engage, perform and collaborate with others in that space. Students (and audiences) would be encouraged to learn a piece (or multiple pieces with friends) and record themselves performing in a different places on campus. No prior experience is required.

DANCE 32. Choreography for Evita. 1-3 Unit.

In this course, students will be given the opportunity to be part of the development of choreography for the Stanford TAPS Spring production of *Evita*. They will learn about tango, salsa, musical theater dance and waltz as we construct combinations and pieces that will ultimately go into the show. Auditions for *Evita* will take place in week 1 of winter, but students enrolled in the course need not be in the cast to participate. On the flipside, students hoping to be cast are strongly encouraged to consider enrolling in the course. No previous dance experience is required.

DANCE 33. The Critic as Artist. 3 Units.

Criticism is art. It therefore must aspire to reach the heights, depths and strange in-betweens it grapples with in the art of others. Yet criticism owes a singular responsibility to these others, and to the wider culture it seeks to interrogate. Our interrogation will be generated by dance and performance criticism, with possible forays into live visual art, theater, hybrid forms and whatever else we think might suit our purposes. Various methodologies will be debated and employed throughout the semester, as students are encouraged to begin (or continue) developing personal philosophies and voices through their writing. Our meetings will be hands-on affairs, guided by student experiments. This class will function like a laboratory, an introduction to an unruly literary art form that is open to all individuals with an interest in better understanding themselves and their world through words and art.

Same as: TAPS 151D

DANCE 34. GAGA. 1 Unit.

Gaga is a movement language created by the Israeli choreographer Ohad Naharin. It is the main mode of training for the Batsheva Dance Company in Tel Aviv, Israel, which is directed by Naharin. Gaga provides the person with an experience of freedom and pleasure while emphasizing sensation through a wide variety of multi-textured movements. The Gaga language is dynamic, fluid, and continually evolving. It connects you to your groove, passion, and physicality. Guest instructor Bobbi Jene Smith is a former dancer with the internationally acclaimed Batsheva Dance Company, and a principal collaborator in the works of choreographer Ohad Naharin, as well as one of the world's most recognized teachers of GaGa and Naharin repertory.

DANCE 35. Choreography and Textures. 1 Unit.

An introductory class in exploring the different ways of approaching choreography. Bobbi will create an original work on the students throughout the term that will focus on the cognitive and emotional experience of movement. Guest instructor Bobbi Jene Smith is a former dancer with the internationally acclaimed Batsheva Dance Company, and a principal collaborator in the works of choreographer Ohad Naharin, as well as one of the world's most recognized teachers of GaGa and Naharin repertory.

DANCE 36. Scene in Action Performance Workshop. 1 Unit.

This singular performance opportunity and workshop is inspired by the stunning abstract expressionist art found in the Anderson Collection at Stanford opening in fall 2014 that includes Robert Frank's photography at the Cantor, and the special Anderson Collection of abstract expressionist paintings shown in the brand new Anderson building at Stanford. The period between the 1950s and early 1960's was a rich time for painting, dance, music, conceptual and interdisciplinary art movements. Through this course we will consider how contemporary dancers/musicians/models/performers might express these ideas as a direct response to the impulses seen and felt in the art of this period. The objective is to consider and integrate historical and contemporary ideas into the choreography, music and fashion performance. Culminating performance installation will be presented during the fall quarter 2 nights -- October 29th and October 30th, 2014 at the Cantor Arts Center and at the Anderson Collection -- in celebration and commemoration of the openings of the Robert Frank exhibition and the Abstract Expressionists art collection.

DANCE 37. Beginning Lyric Contemporary. 1 Unit.

Lyric Contemporary appeals to the creative mover with little or no experience in dance and will focus on developing a fluid coordinated dancer. The work in this course does not assume a technical or conceptual proficiency in any dance form. It does presume you have some interest in dance forms including Jazz, Hip Hop, Ballet, and Modern or at least have a strong interest in one or more of the arts. This class deals with the notion of movement as a mode of expression. We will try to find ways through movement to render as clearly as possible concepts central to the human experience.

DANCE 39. Intro/Beginning Contemporary Modern. 1 Unit.

Beginning Modern Dance appeals to the beginning mover with little or no experience in dance and will focus on developing a coordinated and technical dancer. We will use exercises from Limon, Cunningham, and Ballet techniques in training, but will not focus on any one-dance form. This class deals with the notion of movement as a mode of expression. We will try to find ways through movement to render as clearly as possible concepts central to the human experience.

DANCE 43. Liquid Flow: Introduction to Contemporary Dance and Dance-making. 1 Unit.

This introductory dance course combines the fundamentals of contemporary dance technique and exercises from various movement practices, such as yoga and Tai chi. Liquid Flow implies the continuum from the dance of the everyday to the studio to the stage. Students will develop articulation, flexibility and "grace", learn contemporary, popular and classic dance vocabulary, and gain freedom dancing with others. Designed for beginners, we welcome student movers from diverse dance traditions, non-dancers, athletes, and more advanced dancers, who desire fluidity in their daily life, from thought to action.

DANCE 45. Dance Improvisation Techniques and Strategies Lab: From Hip Hop to Contact. 2 Units.

By learning various dance improvisation forms across cultures, students will develop techniques to gain a deep understanding of generating movement from the inside-out, inspired by conceptual strategies from master improvisors while harnessing that potential for creating dances. Guest dancer/choreographer workshops and Dance Jams enhance the learning experience. All Levels welcome.

Same as: AFRICAAM 45

DANCE 46. Social Dance I. 1 Unit.

Introduction to non-competitive social ballroom dance. The partner dances found in today's popular culture include 3 kinds of swing, 3 forms of waltz, tango, salsa, cha-cha and nightclub two-step. The course also includes tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. The emphasis on comfort, partnering and flexibility enables students to dance with partners whose experience comes from any dance tradition.

DANCE 48. Beginning Ballet. 1 Unit.

Fundamentals of ballet technique including posture, placement, the foundation steps, and ballet terms; emphasis on the development of coordination, balance, flexibility, sense of lines, and sensitivity to rhythm and music. May be repeated for credit.

DANCE 56. Ballet Repertory: Swan Lake Recalibrated. 1 Unit.

Series of directed studio practices focusing on the creation of a formal choreography to be integrated in the Dance Division repertory and performed during the Division Winter Concert. The course is designed to engage students in acquiring interpretive and expressive skills working one on one with a choreographer, increase adaptability of artistic technique and style, develop knowledge of movement possibilities and artistic voices, and cultivate presence and authority as performers. The new work, Swan Lake Recalibrated, will be a contemporary reinterpretation of the traditional ballet, created by choreographer Alex Ketley. Students recruited via audition. Contact: aketley@stanford.edu.

DANCE 57. Dance Repertory: Hope Mohr/Denae Hannah. 1 Unit.

Choreographer Hope Mohr/Denae Hannah will set contemporary work from her company repertory as part of an alumni commission initiative. Rehearsal Autumn Quarter. Culminate in performance on Winter Quarter concert. Participation by audition and/or invitation (Rehearsal Director: Diane Frank).

DANCE 58. Beginning Hip Hop. 1 Unit.

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

DANCE 59. Intermediate-Advanced Hip-Hop. 1 Unit.

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

DANCE 60. The Evolution of Hip Hop and the Dance Stage: From Broadway to Hollywood and MTV. 1 Unit.

The repertory of Hip Hop history through steps and choreography. May be repeated for credit.

DANCE 63. Beginning Dance and Dance Making. 1 Unit.

This Choreography course is designed to expose students to fundamental techniques and approaches used in the creation of dance. All of the basic elements of dance composition will be creatively touched upon including: style, form, theme and variation, narrative versus abstract methods of expression, elements of time, quality and use of space, motif and repetition. These different tools will be illustrated and the options and restrictions of each will be explored. Practical assignments will culminate in a performance of work generated and arranged by the instructor and students. The course is recommended for all students interested in the artistic process in a creative situation.

DANCE 65. Construction Site. 2 Units.

This movement-based introductory course to site-specific dance/performance art investigates one of humanity's basic drives: to build and express relationship to the external environment. Using their bodies as sensory information-gathering tools, student will examine the qualitative aspects of various sites, indoor and outdoor. Using skills/knowledge acquired through studio work supplemented by readings/ concerts/videos & films of site specific works, students will create short culminating projects/works in physical conversation with campus sites, building upon both the concrete and imaginative dimensions of place.

DANCE 67. Being S(c)ene: Dance, Fashion and Art as Exhibition. 2 Units.

In everyday life we are constantly moving from the subjects of the public, to its objects--from seeing to being seen. This performance- creation, interactive seminar explores everyday/pedestrian movement as articulated through the language of dance. Looking through the interpretive lenses of fashion, dance and visual representation, we critically consider how we observe others and ourselves in the world, and how we respond performatively or unconsciously. In addition to seminars and rehearsals, we will host guest lectures by curators, artists and professors: incorporate fieldwork research in museums as sites of display, and discuss scholarly texts and films. A performance installation with dance, fashion and visual display will ensue in the galleries at the Cantor Arts Center at Stanford, in conjunction with the Fall 2013 exhibition, Carrie Mae Weems: Three Decades of Photography and Video.

DANCE 69. The Athletic Body in Dance: Conditioning to Aesthetics. 1 Unit.

This course provides instruction in the fundamentals of the goal-oriented body in the artistic practice. Emphasis will be placed on using sports movement as a base for training in dance.

DANCE 100. Student Choreography: Studio to Stage. 1 Unit.

Students develop their own choreographic projects--from initial concept, through rehearsal phase, to culminating performance - under close faculty guidance. The course focuses on choreographic process, with no restrictions on movement vocabulary or movement style. Dancer/choreographers of all forms and genres are strongly encouraged to participate. This course is required for students working towards performance on Divisional concerts. Work includes individual mentoring within rehearsal setting as well as outside of rehearsal. May be repeated for credit.

DANCE 103. Dance, Text, Gesture: Performance and Composition. 1 Unit.

Students practice, compose and combine the languages of dance, gestural movement, music and text, to render complete expression in performance. Suitable for dancers, actors, spoken word artists and triple threat performers to devise original performance, dance and theater, culminating in an end of quarter showing.

Same as: AFRICAAM 103

DANCE 108. Hip Hop Meets Broadway. 1 Unit.

What happens when Hip Hop meets "Fosse", "Aida", "Dream Girls" and "In the Heights"? The most amazing collaboration of Hip Hop styles adapted to some of the most memorable Broadway Productions. This class will explore the realm between Hip Hop Dance and the Broadway Stage. Infusing Acting thru dance movement and exploring the Art of Lip Sync thru Hip Hop Dance styles.

DANCE 118. Developing Creativity In Dance. 2 Units.

Developing Creativity In Dance Robert Moses Course description: This introductory course explores the creative process in dance. There are many effective ways to approach creative expression, and this course will utilize multiple approaches, both in series and in parallel. Parallel processing and multitasking will become the dominant mode as rational, intuitive and physical skills merge. Processes will include changing perception, design by analogy, quick adaptation to changing situations, musicality, overcoming creative blocks, and stress reduction to relax into a more creative state of mind. Class sessions will be primarily practice, with two-thirds of the class time spent in the dance studio, creating ways of moving, to embody the concepts that will be detailed in the discussion sessions. Previous dance experience will not be required to take this course. Rationale: Dance in the University plays a vital role in the experience of self-definition. The opportunity to create dance offers students the means to experience the body in new ways through diverse forms of movement. Students come to understand dance as a conduit for impression and expression in society. It becomes a means of giving physical voice to the most private and powerful aspects of an individual's understanding of himself in relation to the world.

DANCE 133. History of the Waltz. 1 Unit.

Two hundred years of waltzing: Regency era waltz (1816), Vienna in the 1830s, redowa and mazurka waltz variations, waltz in 5/4 time, the Russian Mazurka Quadrille, pivots, 20th-century hesitation waltz, tango waltz, Parisian valse musette, 1930s Boston, 1950s Bandstand-style waltz, swing waltz. Each form is explored for possible adaptation to today's non-competitive social dancing. May be repeated for credit two times.

DANCE 140. Intermediate Contemporary Modern Technique. 1 Unit.

This intermediate studio dance practice class is primarily grounded in training practices of Merce Cunningham, with additional technical work drawn from other major modern dance training techniques. Participation in this class will increase strength, speed, line, amplitude and rhythmic acuity/musicality. Dance technique will be supplemented by other studio experiences that will increase awareness of dance as an art form. Studio work will be supplemented by readings, video viewings, concert attendance, and lively participation in classes with guest artists. Students must be ready to work at an intermediate level.

DANCE 141. Advanced Contemporary Modern Technique. 2 Units.

This advanced dance technique class is grounded in the technical training, aesthetic sensibilities, and choreographic processes of Merce Cunningham, American dancer/master choreographer. This studio work at an advanced level will build technical strength, speed, line, and rhythmic acuity/musicality and amplitude in dancing. The class will provides solid technical training useful and applicable to other forms of dancing. Dancers must be ready to work at an high intermediate/advanced level to enroll. Studio practice will be supplemented by readings, video viewing, concert attendance, and participation in special workshops with guest artists. Cunningham-based technique is particularly well-suited to dancers with prior training in ballet technique; dancers with prior training in any form are welcome. May be repeated for credit.

DANCE 146. Social Dance II. 1 Unit.

Intermediate non-competitive social ballroom dance. The partner dances found in today's popular culture include Lindy hop, Viennese waltz, hustle, traveling foxtrot, plus intermediate/advanced levels of cross-step waltz and nightclub two-step. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46.

DANCE 147. Living Traditions of Swing. 1 Unit.

Swing dancing: the early Lindy of the 1920s; 6- and 8-count Lindy hop, Shag, Big Apple, 1950s Rock 'n' Roll swing, disco Hustle and West Coast Swing. Partnering and improvisation. Swing's crosscultural influences and personal creativity. May be repeated for credit.

DANCE 148. Intermediate Ballet. 1 Unit.

Intermediate Ballet at Stanford is designed for students who have done ballet in their past, but maybe have stepped away from the form for awhile. The class focuses on technique, musicality, vocabulary, coordination and artistic choice. The class looks at ballet as an enduring and vibrant movement system that can be used for classical purposes or as a way to strengthen and diversify the movement vocabulary inherent in other dance forms like modern, hip-hop, or social dancing. Any questions can be directed to Lecturer Alex Ketley at aketley@stanford.edu.

DANCE 149. Advanced Ballet. 2 Units.

Advanced Ballet at Stanford is offered for students who are interested in rigorous, complex, and artistically compelling ballet training. The class focuses on technique, but in the broad sense of how ballet as a movement system can be used for a wide range of dance disciplines. The class honors the historical training legacy that defines classical ballet, but is in no way shackled to that history in an antiquated fashion. The students are encouraged to explore the form as artists, to question its foundations, and find their own sense of agency within classical dance. Students with a strong background in ballet are encouraged to come, but also students with less ballet training are welcome as long as they have an email dialog with the lecturer beforehand. Any questions can be directed to Lecturer Alex Ketley at aketley@stanford.edu.

DANCE 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 251H, TAPS 151H, TAPS 351H

DANCE 156. Social Dance III. 1 Unit.

Intermediate non-competitive social ballroom dance: intermediate/advanced waltz, redowa, Bohemian National Polka, intermediate/advanced tango, cha-cha, and salsa. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46. Dance 156 may immediately follow Dance 46.

DANCE 156T. Movement and Digital Culture. 4 Units.

What is physical intelligence? How could we cultivate it? What technologies can extend sensory awareness, and which can suppress it? How can better understanding of human movement impact a creative/design process? The term 'hybrid actionquest'; introduces the notion of movement, expressed in both the physical and virtual worlds. Through interactive technologies, such as the Kinect and camera tracking, and literature from multiple fields, this class takes human movement as a practice-based, creative, theoretical, historical, and philosophical realm of study. The course introduces basic principles and practices of body awareness as a way to extend onequest;s physical intelligencequest; and asks how studying movement can inform creative practices from computer programming to engineering to choreography, as well as applications in health and rehabilitation, cognitive and neuroscience, philosophy and literature. The class emphasizes hands-on, individual and collaborative projects through research and prototyping.

Same as: TAPS 156T

DANCE 160. Rethinking the Ballerina. 4 Units.

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: FEMGEN 160, TAPS 160, TAPS 260

DANCE 161H. Dance, History and Conflict. 4 Units.

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict.

Same as: TAPS 161H

DANCE 162H. Baroque Modernities: Dance, Theater, Film, Political Theory. 4 Units.

What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century -- becoming particularly prominent in the 1980s -- beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-century dance and theater to contemporary dance, film and literature.

Same as: TAPS 162H

DANCE 167. Performing Indigeneity on Global Stage. 4 Units.

Explores how indigeneity is expressed and embodied through performance on the global stage.

Same as: NATIVEAM 167

DANCE 177. Introduction to Dance on the Global Stage. 4 Units.

The course will examine and engage with dance cultures from around the world. Through historical and theoretical readings, film screenings, and viewing performances, this course aims to introduce students to a number of theoretical issues central to the study of dance across various disciplines. As a class we set out to explore how dance is more than a set of organized bodily movements, pleasurable to both do and watch. We will consider what cultural work dance performance accomplishes in the world.
Same as: CSRE 177B

DANCE 190. Special Research. 1-5 Unit.

Topics related to the discipline of dance. May be repeated for credit.

DANCE 191. Independent Research. 1-18 Unit.

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

DANCE 197. Dance in Prison: The Arts, Juvenile Justice, and Rehabilitation in America. 4 Units.

This class works collaboratively with a local juvenile hall to use civic engagement and performance to explore the aesthetic, cultural and legal issues in the lives of incarcerated youth. In the process students gain an understanding of incarceration on an immediate and personal scale. Taught jointly by a Dance Studies scholar and a lawyer specializing in Juvenile Justice, we will consider what unique understandings are possible if we position the arts as central to an exploration of punishment, rehabilitation and recidivism in America. The course will examine case studies, historical and contemporary narratives about the social, imaginative and behavioral change possible through arts programs in prison. Half of the class meetings will be in Hillcrest Juvenile Hall in San Mateo, where our class will join with a group of 13-18 year old youths currently detained there. Dance will be used to help shape their individual expressive voices, and ours, through collaborative hip hop dance classes. Books to be read are *Just Mercy: A Story of Justice and Redemption* by Bryan Stevenson, and *Last Chance in Texas* by John Hubner.

Same as: TAPS 197

DANCE 251H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 151H, TAPS 151H, TAPS 351H

DANCE 290. Special Research. 1-18 Unit.

Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.

Dermatology Courses

DERM 199. Undergraduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

DERM 309A. Pediatric Dermatology. 3-6 Units.

2-4 week clerkship based at Pediatric Dermatology Clinic at 770 Welch Road, Suite 261 at LPCH Palo Alto location. Designed to give students a broad clinical exposure to pediatric skin diseases. Emphasis on the outpatient diagnosis and treatment of common skin problems and the cutaneous manifestations of systemic disease. Students are expected to attend the Tuesday morning didactic teaching sessions as well as the dermatology grand rounds every Thursday morning. Students are expected to learn how to describe and recognize morphology, to perform a thorough skin examination, and to perform basic diagnostic and therapeutic procedures. Basic conversational Spanish is recommended but not required as we have a translation service accessible in every exam room in the clinic. Prerequisites: nMed 208 or IND 206, DERM 300A preferred.

DERM 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

DERM 399. Graduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Opportunities are available in dermatopathology, histochemistry, electron microscopy, biochemistry, tissue culture, quantitative and qualitative evaluation of peripheral vascular disease and sweating, immunofluorescent microscopy, connective tissue molecular biology, and wound healing. Prerequisite: consent of instructor.

Developmental Biology Courses

DBIO 12Q. The Evolution and Development of the Human Hand. 3-4 Units.

Evolution of the human hand in the context of primate evolution; roles of the human hand in tool use, manufacture, art, music, and communication. Development of the hand: embryonic axes, appearance of the digit program, roles of cell death, molecular bases of normal and abnormal hand patterns. Prerequisite: advanced placement biology.

DBIO 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

DBIO 200. Genetics and Developmental Biology Training Camp. 1 Unit.

Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.

Same as: GENE 200

DBIO 201. Development and Disease Mechanisms. 4 Units.

Mechanisms that direct human development from conception to birth. Conserved molecular and cellular pathways regulate tissue and organ development; errors in these pathways result in congenital anomalies and human diseases. Topics: molecules regulating development, cell induction, developmental gene regulation, cell migration, programmed cell death, pattern formation, stem cells, cell lineage, and development of major organ systems. Emphasis on links between development and clinically significant topics including infertility, assisted reproductive technologies, contraception, prenatal diagnosis, teratogenesis, inherited birth defects, fetal therapy, adolescence, cancer, and aging.

DBIO 210. Developmental Biology. 4 Units.

Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, induction events, cell lineage, maternal inheritance, cell-cell communication, and hormonal control in developmental processes in well-studied organisms such as vertebrates, insects, and nematodes. Team-taught. Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics.

DBIO 211. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent. Same as: BIOE 211, BIOE 311, BIOPHYS 311

DBIO 215. Frontiers in Biological Research. 1 Unit.

Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker's primary research literature. Students meet with the speaker after the seminar to discuss their research and future directions, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research. Same as: BIOC 215, GENE 215

DBIO 220. Genomics and Personalized Medicine. 3 Units.

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200. Same as: GENE 210

DBIO 257. The Biology of Stem Cells. 3 Units.

The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: HumBio 2A and 3A, or the equivalent in the BioCore in Biological Sciences. Same as: HUMBIO 157

DBIO 273A. A Computational Tour of the Human Genome. 3 Units.

Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>. Same as: BIOMEDIN 273A, CS 273A

DBIO 299. Directed Reading in Developmental Biology. 1-18 Unit.

Prerequisite: consent of instructor.

DBIO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

DBIO 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

DBIO 802. TGR Dissertation. 0 Units.

.

Division of Literatures, Cultures, Languages Courses

DLCL 1. History and Theory of Novel Group. 1 Unit.

This reading group, organized by the Undergraduate Initiative of the Center for the Study of the Novel (CSN), is intended for undergraduates interested in the study of the novel. The group will meet four times in the Spring Quarter, to discuss works by major theorists of the novel, including Lukagrove;cs, Watt, Bakhtin, Barthes, Foucault, Moretti, Sedgwick, and others. Discussions will be led by CSN's graduate coordinators, Elena Dancu (DLCL) and Mark Taylor (English). All readings will be available on CourseWork.

Same as: ENGLISH 1

DLCL 101. Translation Matters: Applications in the 21st Century. 1 Unit.

For students interested in translation, interpreting, and translation studies. The course will highlight guest speakers who apply translation in a variety of professional contexts (e.g. medical, legal, literary, nreligious contexts, localization, machine-translation).

DLCL 105. Going Medieval: Introduction to Freiburg, Germany, and its Surrounding Region. 1 Unit.

This course offers an introduction to materials that are pertinent to the BOSP summer seminar "Going Medieval" offered in summer 2015. It is a required course for participants of the seminar.

Same as: GERMAN 105

DLCL 111Q. Spanish-English Literary Translation Workshop. 3 Units.

This course introduces students to the theoretical knowledge and practical skills necessary to translate literary texts from Spanish to English and English to Spanish. Topics may include comparative syntaxes, morphologies, and semantic systems; register and tone; audience; the role of translation in the development of languages and cultures; and the ideological and socio-cultural forces that shape translations. Students will workshop and revise an original translation project throughout the quarter. Same as: ILAC 111Q

DLCL 121. Performing the Middle Ages. 3-5 Units.

Through an analysis of medieval love, satirical and Crusade lyrics in the Old Occitan, Old French, and Galician-Portuguese traditions, we will study deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Special attention will be given to the transmission of vernacular song from live performance to manuscripts. Authors include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtessa de Dia, Thibaut de Champagne, Dante, and Pound. Taught in English. Same as: FRENCH 151

DLCL 122. The Digital Middle Ages. 3-5 Units.

How can we make historical materials, social and cultural practices and extant sites accessible in the present day? In this course, students will have the opportunity to design and create an innovative digital project based on a medieval primary source. In the first part of the course, we will familiarize ourselves with medieval European cultural history, focusing on different kinds of sources, including historical and religious texts, narrative and music, architecture, images, objects, and textiles. Then we will examine and evaluate digital resources and approaches to medieval sources, including digital facsimiles, experiments with virtual spaces, and informational sites. In order to contemporize and vivify the medieval, an integral component of this course will be the California Missions, since they so dramatically represent a medieval *modus operandi* in a modern, and, for Stanford, local, world.

DLCL 123. Medieval Journeys: Introduction through the Art and Architecture. 3-5 Units.

The course explores the experience and imagination of medieval journeys through an interdisciplinary, cross-cultural, and skills-based approaches. As a foundations class, this survey of medieval culture engages in particular the art and architecture of the period. The Middle Ages is presented as a network of global economies, fueled by a desire for natural resources, access to luxury goods and holy sites. We will study a large geographical area encompassing the British Isles, Europe, the Mediterranean, Central Asia, India, and East Africa and trace the connectivity of these lands in economic, political, religious, and artistic terms from the fourth to the fourteenth century C.E. The students will have two lectures and one discussion session per week. Depending on the size of the class, it is possible that a graduate student TA will run the discussion session. Our goal is to give a skills-oriented approach to the Middle Ages and to engage students in creative projects that will satisfy 1. Ways-Creative Expression requirement as well as one of the following two: Ways-Analytical Interpretive or Ways-Engaging Difference. Same as: ARTHIST 105B

DLCL 152A. DLCL Film Series: Bitter Laughter. 1 Unit.

The DLCL Film Series presents films around a new topic each quarter. Screenings include an introduction and discussion. Please check the DLCL website for the current schedule of films. Undergraduates and graduate students may enroll in one unit for credit. May be repeated for credit. Same as: DLCL 354A

DLCL 189A. Honors Thesis Seminar. 4 Units.

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

DLCL 189B. Honors Thesis Seminar. 2-4 Units.

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

DLCL 189C. Honors Thesis Seminar. 2-4 Units.

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

DLCL 197. Designing a Digital Community: Human Rights. 2 Units.

This course will focus on helping to design, conceptualize, and populate an international human rights website. No knowledge of web design or of human rights is necessary to get started on this project. We have technical assistance available, though hopefully this course will attract students with those skills as well. Similarly, we will be learning about human rights as we build the site, explore and share resources and ideas, and reflect on the content. Preliminary site viewable at teachinghumanrights.org. Same as: COMPLIT 197

DLCL 199. Honors Thesis Oral Presentation. 1 Unit.

For undergraduate majors in DLCL departments; required for honors students. Oral presentations and peer workshops. Regular advisory meetings required.

DLCL 202. Humanities+Design. 2 Units.

How might visualization tools effect the way Humanities scholars work in the digital age? Humanities research relies increasingly on digitized source material and, consequently, on data visualization as an interface for organizing and assessing as well as analyzing information. We will explore different ways of thinking about data visually, using visualization software under development to discover themes, questions and relationships. In an age where visual forms hold the force of persuasion, data visualization skills not only shape arguments but also help researchers engage critically with the information behind their analyses. Humanities+Design investigates the role of the humanities in the challenges of interpreting data - especially 'big data'. Each student will participate in the design of visualization tools for humanities research, learning about the design process and design theory as it applies to digital humanities research. The course is targeted to students interested in using visualization in their own work, as well as students new to data-driven research. All of our course meetings will take place in the at CESTA (Center for Spatial and Textual Analysis) on the 4th floor of Wallenberg Hall. There are no prerequisites for the class and the class is open to graduate students as well as advanced undergraduates.

DLCL 209. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures. Same as: CLASSICS 215, HISTORY 309G, RELIGST 204

DLCL 220. Humanities Education. 1 Unit.

Humanities Education explores issues concerning teaching and learning in the humanities, including research on student learning, innovation in pedagogy, the role of new technologies in humanities instruction, and professional issues for humanities teachers at all educational levels.

DLCL 222. Philosophy and Literature. 1 Unit.

The Focal Group in Philosophy and Literature brings together scholars and students from eight departments to investigate questions in aesthetics and literary theory, philosophically-inflected literary texts, and the form of philosophical writings. Fields of interest include both continental and analytic philosophy, as well as cognitive science, political philosophy, rational choice theory, and related fields.

DLCL 223. Renaissances. 1 Unit.

The Renaissances Group brings together faculty members and students from over a dozen departments at Stanford to consider the present and future of early modern literary studies (a period spanning the fourteenth through the seventeenth centuries). Taking seriously the plural form of the group's name, we seek to explore the early modern period from a wide range of disciplinary, cultural, linguistic, and geographical perspectives. Topic for 2012-14: "Nodes, Networks, Names."

DLCL 224. Workshop in Poetics. 1 Unit.

The Workshop in Poetics is concerned with the theoretical and practical dimensions of the reading and criticism of poetry. During the three years of its existence, the Workshop has become a central venue at Stanford enabling participants to share their individual projects in a general conversation outside of disciplinary and national confinements. The two dimensions that the workshop sees as urgent are: poetics in its specificity as an arena for theory and interpretive practice, and historical poetics as a particular set of challenges for the reader and scholar.

DLCL 225. Digital Humanities. 1 Unit.

The Digital Humanities Focal Group (DHFG) will promote faculty and graduate research in the digital humanities through lectures series, praxis workshops, curriculum, and the identification and development of digital humanities research projects, especially those eligible for grant-funding opportunities. DHFG sponsors a lecture series and convenes regular workshops alternating between praxis and theory. These activities provide fora in which faculty and graduate students can share work in progress, discuss the state of the field, and identify important research that should be shared with the DLCL and broader academic communities. Crucially, the DHFG will promote digital research on underrepresented literatures and cultures to counteract the English-language dominance of much work in the field.

DLCL 228. Introduction to Digital Humanities: Concepts, Technologies, Tools. 1-3 Unit.

In this course, we will explore the perspectives of scholars who have thought about what "digital humanities" means and the technologies and tools that are shaping new kinds of research, scholarship, and publishing. Topics will include history of the digital humanities, textual studies, electronic literature, computational and new media, and emerging work around text, image, and new media curation and visualization. This seminar is ideal for anyone interested in digital methods and digital in the humanities, teaching with new digital methods, or to learn about all the digital humanities projects at Stanford. This course is organized as a mix of seminar and workshop and will be featuring a new platform called "Lacuna Stories," designed for Stanford students, that presents multiple platforms, media, and texts to digitally engage with narratives surrounding 9/11; active engagement by all participants is expected. Students may contribute to the field with a creative final project that they develop over the course of the quarter if they select the 3-unit option.

Same as: COMPLIT 228D, COMPLIT 338D

DLCL 265. Histories and Futures of Humanistic Education: Culture and Crisis, Books and MOOCs. 5 Units.

Features of online education as they relate to the humanities and notions of engaged critical learning. Collaborative course, working in tandem with Professor Cathy Davidson's Duke course, *The History and Future of High Education*, using live chats, Google documents, and other forums to interact with students at Duke and other universities nationally. Each campus uses a syllabus linked to each instructor's angle into this general subject, but many readings and exercises in common. Seeing this as a critical moment in education, to connect this topic to its historical, cultural, political, and ethical implications. The Stanford course looks at early discussions about education and culture (Arnold's *Culture and Anarchy*) and then works through a key moment in the mid-20th century whose premises still have influence: the Two Cultures (humanities, sciences) debate. Radical responses to educational reform in France and the US in the late 60s, and the changing state of funding, value, and cultural critique in the late 20th and early 21st centuries. The idea of education as a personal, collective, and intellectual endeavor which is shaped by and shapes societies. Focus on the idea of the public good and the relation between education and a democratic society.

Same as: COMPLIT 265, EDUC 217X

DLCL 293. Literary Translation. 3-5 Units.

An overview of translation theories and practices over time. The aesthetic, ethical, and political questions raised by the act and art of translation and how these pertain to the translator's tasks. Discussion of particular translation challenges and the decision processes taken to address these issues. Coursework includes assigned theoretical readings, comparative translations, and the undertaking of an individual translation project.

DLCL 299. DLCL CS+ CAPSTONE. 2 Units.

Only DLCL/CS+ joint majors may enroll in this course.

DLCL 300. Medieval Methodologies. 3 Units.

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaeography will offer elementary training in these fundamental skills.

Same as: MUSIC 300C

DLCL 301. The Learning and Teaching of Second Languages. 3 Units.

Prepares DLCL graduate students to teach first- and second-year foreign languages. Participants learn about second-language acquisition research and participate in the initial stages of Oral Proficiency Interview (OPI) training.

DLCL 302. The Learning and Teaching of Second-Language Literatures. 1-3 Unit.

Focuses on the research on advanced level reading and writing in second language contexts with a special focus on upper-level cultural texts. Discussion of second language writing and reading assessment including a writing familiarization workshop. Participants will focus on their cognizant language and literature for the completion of their assignments. Prerequisite: DLCL 301.

DLCL 303. Language Program Management. 1-3 Unit.

Administrative Internship in Language Program Management. Experiences can include, but are not limited to, the following: Shadow faculty and staff in select areas of administration and supervision within the Language Center and DLCL; Placement testing and student advisement; Technology in teaching and learning; Processes for teacher observation and feedback; Procedures in staff supervision and Human Resources; Course scheduling, budgeting, staffing, and searches; Interface with external programs (e.g. BOSP, Bechtel, CTL).

DLCL 311. Professional Workshop. 1-2 Unit.

Meets regularly throughout the year to discuss issues in the professional study of literature. Topics include the academic job market and the challenges of research and teaching at different types of institutions. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.

DLCL 320. Humanities Education in the Changing University. 3 Units.

Advanced study in the humanities faces changes within fields, the university and the wider culture. Considers the debate over the status of the humanities with regard to historical genealogies and current innovations. Particular attention on changes in doctoral education. Topics include: origins of the research university; disciplines and specialization; liberal education in conflict with professionalization; literature and literacy education; interdisciplinarity as a challenge to departments; education policy; digital humanities; accountability in education, assessment and student-centered pedagogies.

Same as: COMPLIT 275, GERMAN 250

DLCL 321. Classical Seminar: Rethinking Classics. 4-5 Units.

Literary and philosophical texts from Antiquity (including Homer, the Greek tragedians, Plato, Aristotle, Virgil, and Augustine). In each case, we will examine the cultural contexts in which each text was composed (e.g. political regimes and ideologies; attitudes towards gender and sexuality; hierarchies of class and status; discourses on "barbarians" and resident aliens). We will study various theoretical approaches to these books in an effort to "rethink" these texts in the 21st century.

Same as: CLASSICS 244

DLCL 322. Medieval Seminar. 3-5 Units.

The cultural, literary, and artistic evolution of the Middle Ages. The barbarian invasions and the Germanic ethos, the Celtic heritage, and the monastic tradition. Romanesque art and architecture, pilgrimages, and the Crusades. Gothic aesthetics, chivalry and courtly love, scholasticism, and the rise of universities. The late Middle Ages, humanism, and the threshold of the Renaissance. Texts include: Beowulf, Mabinogion, Song of Roland, Chretien de Troyes' Lancelot and Yvain, Dante's Divine Comedy, Boccaccio's Decameron, and Chaucer's Canterbury Tales. 3-5 units.

DLCL 323. Early Modern Seminar. 3-5 Units.

Explores some of the key texts of European early modernity and the critical paradigms according to which the idea of the "Renaissance" has been formed, analyzed, and questioned since the 19th century. Will aim to provide a broad introduction to Early Modern studies from the point of view of the Italian Renaissance and its reception in different European contexts. Taught in English.

Same as: ITALIAN 220

DLCL 324. The Enlightenment. 3-5 Units.

The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

Same as: HISTORY 234, HISTORY 334, HISTORY 432A, HUMNTIES 324

DLCL 325. Modern Seminar. 3-5 Units.

The postmodern condition as post-WWII rupture in Western tradition; moral, political, cultural, and aesthetic dimensions. Sources include literature, philosophy, essays, films, and painting. Authors and artists include: Primo Levi, Hannah Arendt, Alain Resnais, Samuel Beckett, Georges Bataille, Michel Foucault, Theodor Adorno, David Riesman, Georges Perec, Juliet Mitchell, and Francis Bacon.

DLCL 354A. DLCL Film Series: Bitter Laughter. 1 Unit.

The DLCL Film Series presents films around a new topic each quarter. Screenings include an introduction and discussion. Please check the DLCL website for the current schedule of films. Undergraduates and graduate students may enroll in one unit for credit. May be repeated for credit.

Same as: DLCL 152A

DLCL 369. Introduction to Graduate Studies: Criticism as Profession. 3 Units.

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: COMPLIT 369, FRENCH 369, GERMAN 369, ITALIAN 369

DLCL 396. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.

Same as: CLASSICS 396, HISTORY 336E

Drama Courses

Earth Systems Courses

EARTHSYS 4. Evolution and Extinction: Introduction to Historical Geology. 4 Units.

Introduction to the history of the Earth, with a focus on processes that maintain or threaten habitability. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. One half-day field trip.

Same as: GES 4

EARTHSYS 8. The Oceans: An Introduction to the Marine Environment. 3 Units.

For non-majors and majors in earth science or environmental science. The major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis is on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems discussed include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, and near-shore dead zones. Lectures, multimedia presentations, and group activities.

EARTHSYS 9. Community-Based Internship Preparation Seminar. 1 Unit.

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do all assignments for 1 unit of credit. Students planning to take a community-based internship in future years are welcome to enroll.

Same as: URBANST 101

EARTHSYS 10. Introduction to Earth Systems. 4 Units.

For non-majors and prospective Earth Systems majors. Multidisciplinary approach using the principles of geology, biology, engineering, and economics to describe how the Earth operates as an interconnected, integrated system. Goal is to understand global change on all time scales. Focus is on sciences, technological principles, and sociopolitical approaches applied to solid earth, oceans, water, energy, and food and population. Case studies: environmental degradation, loss of biodiversity, and resource sustainability.

EARTHSYS 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.

The Rocky Mountain area, ecologically and geologically diverse, is being strongly impacted by changing land-use patterns, global and regional environmental change, and societal demands for energy and natural resources. This three-week field program emphasizes coupled environmental and geological problems in the Rocky Mountains and will cover a broad range of topics including the geologic origin of the American West from three billion years ago to the recent; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West that are related to changing land-use patterns and increased demand for its abundant natural resources. These broad topics are integrated into a coherent field study by examining earth/environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and mountainous region of Teton National Park, and the economic and environmental problems associated with gold mining and extraction of oil and gas in areas adjoining these national parks. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming, and horseback riding in the Dubois area of Wyoming. Students must arrive in Salt Lake City on Monday, Sept. 1. (Hotel lodging will be provided for the night of Sept. 1, and thereafter students will travel as a Sophomore College group.) We will return to campus on Sunday, Sept. 21. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

Same as: EESS 12SC, GES 12SC

EARTHSYS 13SC. People, Land, and Water in the Heart of the West. 2 Units.

Salmon River. Sun Valley. Pioneer Mountains. The names speak of powerful forces and ideas in the American West. Central Idaho - a landscape embracing snow-capped mountains, raging rivers, sagebrush deserts, farms, ranches, and resort communities - is our classroom for this field-based seminar led by David Freyberg, professor of Civil and Environmental Engineering, and David Kennedy, professor emeritus of History. This course focuses on the history and future of a broad range of natural resource management issues in the western United States. We will spend a week on campus preparing for a two-week field course in Idaho exploring working landscapes, private and public lands, water and fisheries, conservation, and the history and literature of the relationship between people and the land in the American West. After the first week spent on campus, we will drive to Idaho to begin the field portion of our seminar. In Idaho, we will spend time near Twin Falls, at Lava Lake Ranch near Craters of the Moon National Monument, in Custer County at the Upper Salmon River, and near Stanley in the Sawtooth National Forest. No prior camping experience is required, but students should be comfortable living outdoors in mobile base camps for periods of several days. Students will investigate specific issues in-depth and present their findings at the end of the course. Same as: CEE 11SC

EARTHSYS 14SI. Human and Environmental Rights from Farm to Fork. 1 Unit.

This course aims to understand the environmental and human rights implications of our modern globalized food system-from farm, to factory, to international commerce, and finally, to fork. Focus will be on the labor and environmental conditions of industrial agriculture, working conditions and environmental consequences of processing factories, the implications of international food commerce, the modern obesity crisis, and emerging solutions that aim to correct these problems.

EARTHSYS 18. Promoting Sustainability Behavior Change at Stanford. 2 Units.

Stanford Green Living Council training course. Strategies for designing and implementing effective behavior change programs for environmental sustainability on campus. Includes methods from community-based social marketing, psychology, behavioral economics, education, public health, social movements, and design. Students design a behavior change intervention project targeting a specific environmental sustainability-related behavior. Lectures online and weekly sections/workshops.

EARTHSYS 30. Ecology for Everyone. 4 Units.

Everything is connected, but how? Ecology is the science of interactions and the changes they generate. This project-based course links individual behavior, population growth, species interactions, and ecosystem function. Introduction to measurement, observation, experimental design and hypothesis testing in field projects, mostly done in groups. The goal is to learn to think analytically about everyday ecological processes involving bacteria, fungi, plants, animals and humans. The course uses basic statistics to analyze data; there are no math prerequisites except arithmetic. Open to everyone, including those who may be headed for more advanced courses in ecology and environmental science.

Same as: BIO 30

EARTHSYS 37N. Climate Change: Science & Society. 3 Units.

Preference to freshmen. How and why do greenhouse gases cause climate to change? How will a changing climate affect humans and natural ecosystems? What can be done to prevent climate change and better adapt to the climate change that does occur? Focus is on developing quantitative understanding of these issues rooted in both the physical and social sciences. Exercises based on simple quantitative observations and calculations; algebra only, no calculus.

EARTHSYS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March.

Same as: EESS 38N, GES 38N

EARTHSYS 39N. The Carbon Cycle: Reducing Your Impact. 3 Units.

Preference to freshmen. Changes in the long- and short-term carbon cycle and global climate through the burning of fossil fuels since the Industrial Revolution. How people can shrink their carbon footprints. Long-term sources and sinks of carbon and how they are controlled by tectonics and short-term sources and sinks and the interaction between the biosphere and ocean. How people can shrink their carbon footprints. Held at the Stanford Community Farm.

EARTHSYS 41N. The Global Warming Paradox. 3 Units.

Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earthquest; energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

EARTHSYS 42. The Global Warming Paradox II. 1 Unit.

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions of topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. Prerequisite: EESS 41N or EARTHSYS 41N or consent of instructor.

Same as: EESS 42

EARTHSYS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough. 3 Units.

Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.

Same as: EESS 46N

EARTHSYS 46Q. Environmental Impact of Energy Systems: What are the Risks?. 3 Units.

In order to reduce CO₂ emissions and meet growing energy demands during the 21st Century, the world can expect to experience major shifts in the types and proportions of energy-producing systems. These decisions will depend on considerations of cost per energy unit, resource availability, and unique national policy needs. Less often considered is the environmental impact of the different energy producing systems: fossil fuels, nuclear, wind, solar, and other alternatives. One of the challenges has been not only to evaluate the environmental impact but also to develop a systematic basis for comparison of environmental impact among the energy sources. The course will consider fossil fuels (natural gas, petroleum and coal), nuclear power, wind and solar and consider the impact of resource extraction, refining and production, transmission and utilization for each energy source.

Same as: GES 46Q

EARTHSYS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

Same as: CEE 50N, EESS 49N

EARTHSYS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays. 3 Units.

Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay.

Same as: EESS 56Q

EARTHSYS 57Q. Climate Change from the Past to the Future. 3 Units.

Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

Same as: EESS 57Q

EARTHSYS 61Q. Food and security. 3 Units.

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

Same as: EESS 61Q, INTNLREL 61Q

EARTHSYS 100. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

Same as: EESS 101, GES 101

EARTHSYS 101. Energy and the Environment. 3 Units.

Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution.

Recommended: MATH 21 or 42.

Same as: ENERGY 101

EARTHSYS 102. Renewable Energy Sources and Greener Energy Processes. 3 Units.

The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today's technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences.

Recommended: MATH 21 or 42.

Same as: ENERGY 102

EARTHSYS 103. Energy Resources. 3-5 Units.

Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities.

Optional discussion section for extra unit. CEE 173 is offered for 4-5 units; ES 103 is offered for 4-5 units; CEE 207A is offered for 3-5 units; instructor approval required for 3-unit option.

Same as: CEE 173A, CEE 207A

EARTHSYS 104. The Water Course. 3 Units.

The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues.

Same as: GEOPHYS 104

EARTHSYS 105. Food and Community: New Visions for a Sustainable Future. 3 Units.

Through this course students will learn about the community and outreach component of the urban gardening movement. Over the quarter students will learn about urban farming, about projects that work to increase access of the most underserved to fresh and local food, and about the challenges surrounding these efforts. The theme of the course will be stories- stories of food and community, of innovation, and of service. Students will learn through engaging in conversation with different leaders in the local food movement. Additionally, through hands-on learning and participation, students will become familiar with different types of community food projects in the Bay Area, including urban farms, free food giveaways, food banks, and gleaning projects. Service Learning Course (certified by Haas Center). Limited enrollment. May be repeated for credit.
Same as: EESS 105

EARTHSYS 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.

Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: BIO 105A

EARTHSYS 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.

Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: BIO 105B

EARTHSYS 106. World Food Economy. 5 Units.

The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.
Same as: ECON 106, EESS 106

EARTHSYS 107. Control of Nature. 3 Units.

Think controlling the earth's climate is science fiction? It is when you watch *Snowpiercer* or *Dune*, but scientists are already devising geoengineering schemes to slow climate change. Will we ever resurrect the woolly mammoth or even a T. Rex (think *Jurassic Park*)? Based on current research, that day will come in your lifetime. Who gets to decide what species to save? And more generally, what scientific and ethical principles should guide our decisions to control nature? In this course, we will examine the science behind ways that people alter and engineer the earth, critically examining the positive and negative consequences. We'll explore these issues first through popular movies and books and then, more substantively, in scientific research.
Same as: EESS 107

EARTHSYS 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision. 2 Units.

Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units.
Same as: CEE 109, ENVRINST 109

EARTHSYS 111. Biology and Global Change. 4 Units.

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.
Same as: BIO 117, EESS 111

EARTHSYS 112. Human Society and Environmental Change. 4 Units.

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1.
Same as: EESS 112, HISTORY 103D

EARTHSYS 113. Earthquakes and Volcanoes. 3 Units.

Is the "Big One" overdue in California? What kind of damage would that cause? What can we do to reduce the impact of such hazards in urban environments? Does "fracking" cause earthquakes and are we at risk? Is the United States vulnerable to a giant tsunami? The geologic record contains evidence of volcanic super eruptions throughout Earth's history. What causes these gigantic explosive eruptions, and can they be predicted in the future? This course will address these and related issues. For non-majors and potential Earth scientists. No prerequisites. More information at https://pangea.stanford.edu/research/CDFM/CourseDescriptions/GP_113_announcement.pdf.
Same as: GEOPHYS 90

EARTHSYS 115. Wetlands Ecology of the Pantanal Prefield Seminar. 2-3 Units.

This seminar will prepare students for their overseas field experience in the Pantanal, Brazil, the largest wetland in the world, studying wetlands ecology and conservation in situ. Students will give presentations on specific aspects of the Pantanal and lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. Additional topics include: logistics, health and safety, cultural sensitivity, geography and politics, and basic language skills; also, post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus. Students will have the opportunity to participate in a pilot study aimed at developing a series of innovative online curriculum based upon their field experience.

EARTHSYS 115T. Island Biogeography of Tasmania Prefield Seminar. 3 Units.

Islands are natural laboratories for studying a wide variety of subjects including biological diversity, cultural diversity, epidemiology, geology, climate change, conservation, and evolution. This field seminar focuses on Island Biogeography in one of the most extraordinary and well-preserved ecosystems in the world: Tasmania. Tasmanian dshy;shy;evils, wombats, and wallabies iquest; the names conjure up images of an exotic faraway place, a place to appreciate the incredibly diversity of life and how such striking forms of life came to be. This course will prepare students for their overseas seminar in Tasmania. Students will give presentations on specific aspects of the Tasmania and will lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. Additional topics to be addressed include: logistics, health and safety, group dynamics, cultural sensitivity, history, and politics. We will also address post-field issues such as reverse culture shock, and ways to consolidate and build up abroad experiences after students return to campus.

EARTHSYS 116. Ecology of the Hawaiian Islands. 4 Units.

Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program. Same as: BIO 116

EARTHSYS 117. Earth Sciences of the Hawaiian Islands. 4 Units.

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program. Same as: EARTHSCI 117, EESS 117

EARTHSYS 118. Heritage, Environment, and Sovereignty in Hawaii. 4 Units.

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life. Same as: ANTHRO 118

EARTHSYS 119. Will Work for Food. 1 Unit.

This is a speaker series class featuring highly successful innovators in the food system. Featured speakers will talk in an intimate, conversational manner about their current work, as well as about their successes, failures, and learnings along the way. Additional information can be found here: <http://feedcollaborative.org/speaker-series/>. Same as: EARTHSYS 219

EARTHSYS 121. Building a Sustainable Society: New Approaches for Integrating Human and Environmental Priorities. 3 Units.

"Building a Sustainable Society: New approaches to integrating human and environmental priorities" draws on economics, natural resources management, sociology and leadership science to examine theoretical frameworks and diverse case studies that illustrate the main drivers, core features and challenges of building a sustainable society where human beings and the natural environment thrive. Themes include collaborative consumption, the sharing economy, worker-owned cooperatives, community-corporate partnerships, cradle to cradle design, social entrepreneurship, impact investing, "beyond GDP" measures, and 21st century leadership. Critical perspectives, lectures and student-led discussions guide analysis of innovations within public, private and civic sectors globally, with emphasis on Latin America.

EARTHSYS 122. Paleobiology. 4 Units.

Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. Same as: GES 123

EARTHSYS 127. GIS for good: Applications of GIS for International Development and Humanitarian Assistance. 3-4 Units.

This service-learning course exposes students to geographic information systems (GIS) as a tool for exploring alternative solutions to complex environmental and humanitarian issues in the international arena. The project-based, interdisciplinary structure of this class gives primary emphasis to the use of GIS for field data collection, mapping, analysis and visualization that allows for multi-criteria assessment of community development. Those with no prior GIS experience will be required to take an introductory GIS workshop hosted by the Geospatial Center in Branner Library during the first two weeks of class. Same as: EESS 122, EESS 222

EARTHSYS 128. Evolutionary History of Terrestrial Ecosystems. 4 Units.

The what, when, and how do we know it regarding life on land iquest; including plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) iquest; and how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. Same as: GES 128, GES 228

EARTHSYS 129. Geographic Impacts of Global Change: Mapping the Stories. 4 Units.

Forces of global change (eg., climate disruption, biodiversity loss, disease) impart wide-ranging political, socioeconomic, and ecological impacts, creating an urgent need for science communication. Students will collect data for a region of the US using sources ranging from academic journals to popular media and create an interactive Story Map (<http://stanford.maps.arcgis.com/apps/StorytellingTextLegend/index.html?appid=dafe2393fd2e4acc8b0a4e6e71d0b6d5>) that merges the scientific and human dimensions of global change. Students will interview stakeholders as part of a community-engaged learning experience and present the Map to national policy-makers. Our 2014 Map is being used by the CA Office of Planning & Research. Same as: BIO 128

EARTHSYS 135. Podcasting the Anthropocene. 2 Units.

Identification and interview of Stanford researchers to be featured in an audio podcast. Exploration of interviewing techniques, audio storytelling, audio editing, and podcasting as a newly emerging media platform. Individual and group projects. Group workshops focused on preparation, review, and critiques of podcasts. Same as: EARTHSYS 235

EARTHSYS 138. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see internationalurbanization.org for details. Prerequisites: consent of the instructor(s).

Same as: IPS 274, URBANST 145

EARTHSYS 140. The Energy-Water Nexus. 3 Units.

Energy, water, and food are our most vital resources constituting a tightly intertwined network: energy production requires water, transporting and treating water needs energy, producing food requires both energy and water. The course is an introduction to learn specifically about the links between energy and water. Students will look first at the use of water for energy production, then at the role of energy in water projects, and finally at the challenge in figuring out how to keep this relationship as sustainable as possible. Students will explore case examples and are encouraged to contribute examples of concerns for discussion as well as suggest a portfolio of sustainable energy options.

Same as: GEOPHYS 80

EARTHSYS 141. Remote Sensing of the Oceans. 3-4 Units.

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 241, EESS 141, EESS 241, GEOPHYS 141

EARTHSYS 142. Remote Sensing of Land. 4 Units.

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 242, EESS 162, EESS 262

EARTHSYS 142A. Negotiating Sustainable Development. 3 Units.

How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

Same as: CEE 142A, CEE 242A, EARTHSYS 242A

EARTHSYS 144. Fundamentals of Geographic Information Science (GIS). 3-4 Units.

Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments.

Same as: EESS 164

EARTHSYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A

EARTHSYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B

EARTHSYS 151. Biological Oceanography. 3-4 Units.

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 251, EESS 151, EESS 251

EARTHSYS 152. Marine Chemistry. 3-4 Units.

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 252, EESS 152, EESS 252

EARTHSYS 155. Science of Soils. 3-4 Units.

Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology.

Same as: EESS 155

EARTHSYS 156. Soil and Water Chemistry. 1-4 Unit.

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 256, EESS 156, EESS 256

EARTHSYS 156M. Marine Resource Economics and Conservation. 5 Units.

Economic and ecological frameworks to understand the causes of and potential solutions to marine resource degradation. Focus on conservation of marine biodiversity and ecosystem-based management. Applications include: commercial and recreational fisheries, marine reserves, and offshore energy production.

Same as: ECON 156, HUMBIO 111M

EARTHSYS 158. Geomicrobiology. 3 Units.

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 258, EESS 158, EESS 258

EARTHSYS 160. Sustainable Cities. 4-5 Units.

Service-learning course that exposes students to sustainability concepts and urban planning as a tool for determining sustainable outcomes in the Bay Area. Focus will be on the relationship of land use and transportation planning to housing and employment patterns, mobility, public health, and social equity. Topics will include government initiatives to counteract urban sprawl and promote smart growth and livability, political realities of organizing and building coalitions around sustainability goals, and increasing opportunities for low-income and communities of color to achieve sustainability outcomes. Students will participate in team-based projects in collaboration with local community partners and take part in significant off-site fieldwork. Prerequisites: consent of the instructor.

Same as: URBANST 164

EARTHSYS 164. Introduction to Physical Oceanography. 4 Units.

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 164, CEE 262D, EESS 148

EARTHSYS 168. The Evolving Sphere of Food Security. 2 Units.

This seminar delves into a comprehensive new volume on food security written by an all-Stanford team of nineteen faculty and researchers. It explores the interconnections of food security with energy, water, climate, health, and national security, and examines the role of food and agricultural policies and their consequences in countries at different stages of development. Led by the editor of the book, with participation of several of the authors from across many disciplines. Prerequisite: ECON 106.

Admission is by application.

Same as: EARTHSYS 268

EARTHSYS 170. Environmental Geochemistry. 4 Units.

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor.

Same as: GES 170, GES 270

EARTHSYS 172. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 170, ANTHRO 270

EARTHSYS 173. Aquaculture and the Environment: Science, History, and Policy. 3 Units.

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.

Same as: EARTHSYS 273, EESS 173, EESS 273

EARTHSYS 174. Marine Biodiversity: Law, Science, and Policy. 3 Units.

Examination of the mechanisms that create marine biodiversity and the ways in which biodiversity and natural resources are linked. Introduction to the federal laws and policies that impact marine biodiversity and natural resources. Interactions between biological and political systems.

Same as: EARTHSYS 274

EARTHSYS 175. California Coast: Science, Policy, and Law. 3-4 Units.

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

Same as: CEE 175A, CEE 275A, EARTHSYS 275

EARTHSYS 176. Peninsula Open Space Trust Practicum: Community-Based Research for Open Space Management. 3 Units.

In this course, students will work directly on real-world open space management projects in partnership with the Peninsula Open Space Trust (POST), a non-profit organization dedicated to the conservation and preservation of open space, farmland and parkland in and around Silicon Valley. The unique patchwork of urban-to-rural land uses, property ownership, and ecosystems in our region poses numerous challenges and opportunities for regional conservation and environmental stewardship. Students will address a particular challenge through a faculty-mentored research project that will help achieve POST's property management and planning objectives. By focusing on a project driven by POSTiquest;s needs and carried out through engagement with the community, and with thorough reflection, study, and discussion about the roles of scientific, economic, and policy research in local-scale environmental decision-making, students will explore the underlying challenges and complexities of what it means to actually do community-engaged research for conservation and open space preservation in the real world. As such, this course will provide students with skills and experience in research design in conservation biology and ecology, community and stakeholder engagement, land use policy and planning, and the practical aspects of land and environmental management. The POST Practicum is a collaboration between the Woods Institute for the Environment and the Haas Center for Public Service.

EARTHSYS 176A. Open Space Practicum Independent Study. 1-2 Unit.

Additional practicum units for students intent on continuing their projects from EARTHSYS 176. Students who enroll in 176A must have completed EARTHSYS 176: The Peninsula Open Space Practicum: Community-Based Environmental Research for Open Space Management, or have consent of the instructors.

EARTHSYS 177. Interdisciplinary Research Survival Skills. 2 Units.

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 277, ENVRINST 177, ENVRINST 277

EARTHSYS 177C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.

(Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from thayden@stanford.edu. Same as: COMM 177C, COMM 277C, EARTHSYS 277C, ENVRES 277C

EARTHSYS 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings. Same as: CEE 179S, CEE 279S, EESS 179S

EARTHSYS 180B. Principles and Practices of Sustainable Agriculture. 3-4 Units.

Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing. Same as: EESS 280B

EARTHSYS 181. Urban Agriculture in the Developing World. 3-4 Units.

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application. Same as: EARTHSYS 281, EESS 181, EESS 281, URBANST 181

EARTHSYS 182. Ecological Farm Management. 1 Unit.

A project-based course emphasizing ways of doing it; in sustainable agricultural systems based at the new Stanford Educational Farm. Students will work individually and in small groups on farm projects of their choice facilitated and guided by the Educational Farm Director. Potential projects include: orchards, compost systems, pastured poultry, beekeeping, medicinal herbs, mushroom cultivation, native plants, etc. Same as: EESS 282

EARTHSYS 183. Food Matters: Agriculture in Film. 1 Unit.

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit. Same as: EARTHSYS 283, EESS 183, EESS 283

EARTHSYS 184. Climate and Agriculture. 3-4 Units.

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor. Same as: EARTHSYS 284, EESS 184, EESS 284

EARTHSYS 185. Feeding Nine Billion. 4-5 Units.

Feeding a growing and wealthier population is a huge task, and one with implications for many aspects of society and the environment. There are many tough choices to be made- on fertilizers, groundwater pumping, pesticide use, organics, genetic modification, etc. Unfortunately, many people form strong opinions about these issues before understanding some of the basics of how food is grown, such as how most farmers currently manage their fields, and their reasons for doing so. The goal of this class is to present an overview of global agriculture, and the tradeoffs involved with different practices. Students will develop two key knowledge bases: basic principles of crop ecology and agronomy, and familiarity with the scale of the global food system. The last few weeks of the course will be devoted to building on this knowledge base to evaluate different future directions for agriculture.

EARTHSYS 187. FEED the Change: Redesigning Food Systems. 2-3 Units.

Introductory course in design thinking and food system analysis offered through the FEED Collaborative. Targeted at upper-class undergraduates, this course provides a series of diverse, primarily hands-on experiences (design projects, field work, and storytelling) in which students both learn and apply the process of human-centered design to projects of real consequence in the food system. Students will also develop knowledge and basic tools for working effectively in teams and for analyzing complex systems. The goal of this course is to develop the creative confidence of students and, in turn, to work collaboratively with thought leaders in the local food system to design innovative solutions to the challenges they face. Admission is by application: <http://feedcollaborative.org/classes/>.

EARTHSYS 188. Social and Environmental Tradeoffs in Climate Decision-Making. 1-2 Unit.

How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoengineering approaches in an integrated context, culminating in a climate stabilization group project.

Same as: EARTHSYS 288

EARTHSYS 195. Natural Hazards and Risk Communication. 3 Units.

Introduction to the science behind natural hazards, the risks associated with these hazards, and effective methods of communicating them to a variety of audiences. Examination of methods of translation and communication. Investigation of the relative effectiveness of these methods for increasing preparedness and resiliency to natural hazards. Satisfies the Earth Systems WIM requirement.

EARTHSYS 197. Directed Individual Study in Earth Systems. 1-9 Unit.

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

EARTHSYS 199. Honors Program in Earth Systems. 1-9 Unit.**EARTHSYS 200. Sustaining Action: Research, Analysis and Writing for the Public. 3 Units.**

Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. Prerequisite: admission by application, available from instructor, thayden@stanford.edu. (Meets Earth Systems WIM requirement).

Same as: ENVRES 200

EARTHSYS 205. Navigating Wicked Marine Problems. 3 Units.

Commercial shipping is essential to international trade, consumer goods and the global economy, but can impact the marine environment. Vessel traffic schemes often overlap with important marine areas, creating unintended pressures and impacts to marine ecosystems, including whales. Ship strikes are a threat to endangered whales, and ship noise can affect important mating and feeding behavior. In this course, the issue of whale and vessel interactions will be used as a case study to help students identify threats, pressures, and policy responses of a complex, or "wicked," ocean-based problem. In project teams, students will complete a Pressure State Response analysis of the problem, with the goal of developing practical and professional skills necessary to participate in complex marine planning and decision-making in their post-graduate careers. Students will gain an opportunity to network with experts, scientists and professionals who have experience on the primary themes of the course. The deadline for enrollment for this course is Feb. 23. Contact lhgood@stanford.edu with interest.

EARTHSYS 207. Spanish in Science/Science in Spanish. 2 Units.

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology.

Same as: BIO 208, LATINAM 207

EARTHSYS 210A. Senior Seminar. 3 Units.

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

EARTHSYS 210B. Senior Seminar. 3 Units.

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

EARTHSYS 210C. Senior Seminar. 3 Units.

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

EARTHSYS 211. Fundamentals of Modeling. 3-5 Units.

Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language.

Prerequisite: Basic knowledge of statistics.

Same as: EESS 211

EARTHSYS 219. Will Work for Food. 1 Unit.

This is a speaker series class featuring highly successful innovators in the food system. Featured speakers will talk in an intimate, conversational manner about their current work, as well as about their successes, failures, and learnings along the way. Additional information can be found here: <http://feedcollaborative.org/speaker-series/>.

Same as: EARTHSYS 119

EARTHSYS 235. Podcasting the Anthropocene. 2 Units.

Identification and interview of Stanford researchers to be featured in an audio podcast. Exploration of interviewing techniques, audio storytelling, audio editing, and podcasting as a newly emerging media platform. Individual and group projects. Group workshops focused on preparation, review, and critiques of podcasts.

Same as: EARTHSYS 135

EARTHSYS 238. Land Use. 3 Units.

(Same as LAW 338.) This course focuses on the pragmatic (rather than theoretical) aspects of contemporary land use law and policy, including: nuisance as a land use tool and foundation for modern land use law; use and abuse of the "police power" (the legal basis for land use control); zoning flexibility; vested property rights, development agreements, and takings; redevelopment; growth control; and direct democracy. We explore how land use decisions affect environmental quality and how land use decision-making addresses environmental impacts. Special Instructions: All graduate students from other departments are encouraged to enroll, and no pre-requisites apply. Student participation is essential. Roughly two-thirds of the class time will involve a combination of lecture and classroom discussion. The remaining time will engage students in case studies based on actual land use issues and disputes. Elements used in grading: Attendance, class participation, writing assignments, and final exam.

EARTHSYS 241. Remote Sensing of the Oceans. 3-4 Units.

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, EESS 141, EESS 241, GEOPHYS 141

EARTHSYS 242. Remote Sensing of Land. 4 Units.

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, EESS 162, EESS 262

EARTHSYS 242A. Negotiating Sustainable Development. 3 Units.

How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

Same as: CEE 142A, CEE 242A, EARTHSYS 142A

EARTHSYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EESS 146A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A

EARTHSYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EESS 146B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B

EARTHSYS 250. Directed Research. 1-9 Unit.

Independent research related to student's primary track, carried out after the junior year, during the summer, and/or during the senior year. Student develops own project with faculty supervision. 10-15 page thesis. May be repeated for credit.

EARTHSYS 251. Biological Oceanography. 3-4 Units.

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 151, EESS 151, EESS 251

EARTHSYS 252. Marine Chemistry. 3-4 Units.

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, EESS 152, EESS 252

EARTHSYS 256. Soil and Water Chemistry. 1-4 Unit.

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 156, EESS 156, EESS 256

EARTHSYS 258. Geomicrobiology. 3 Units.

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, EESS 158, EESS 258

EARTHSYS 260. Internship. 1-9 Unit.

Supervised field, lab, or private sector project. May consist of directed research under the supervision of a Stanford faculty member, participation in one of several off campus Stanford programs, or an approved non-Stanford program relevant to the student's Earth Systems studies. Required of and restricted to declared Earth Systems majors. Includes 15-page technical summary research paper that is subject to iterative revision. (WIM).

EARTHSYS 268. The Evolving Sphere of Food Security. 2 Units.

This seminar delves into a comprehensive new volume on food security written by an all-Stanford team of nineteen faculty and researchers. It explores the interconnections of food security with energy, water, climate, health, and national security, and examines the role of food and agricultural policies and their consequences in countries at different stages of development. Led by the editor of the book, with participation of several of the authors from across many disciplines. Prerequisite: ECON 106. Admission is by application.

Same as: EARTHSYS 168

EARTHSYS 272. Antarctic Marine Geology. 3 Units.

For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

Same as: EESS 242

EARTHSYS 273. Aquaculture and the Environment: Science, History, and Policy. 3 Units.

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.
Same as: EARTHSYS 173, EESS 173, EESS 273

EARTHSYS 274. Marine Biodiversity: Law, Science, and Policy. 3 Units.

Examination of the mechanisms that create marine biodiversity and the ways in which biodiversity and natural resources are linked. Introduction to the federal laws and policies that impact marine biodiversity and natural resources. Interactions between biological and political systems.
Same as: EARTHSYS 174

EARTHSYS 275. California Coast: Science, Policy, and Law. 3-4 Units.

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.
Same as: CEE 175A, CEE 275A, EARTHSYS 175

EARTHSYS 277. Interdisciplinary Research Survival Skills. 2 Units.

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects.
Same as: EARTHSYS 177, ENVRINST 177, ENVRINST 277

EARTHSYS 277C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.

(Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from thayden@stanford.edu.
Same as: COMM 177C, COMM 277C, EARTHSYS 177C, ENVRES 277C

EARTHSYS 281. Urban Agriculture in the Developing World. 3-4 Units.

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.
Same as: EARTHSYS 181, EESS 181, EESS 281, URBANST 181

EARTHSYS 283. Food Matters: Agriculture in Film. 1 Unit.

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.
Same as: EARTHSYS 183, EESS 183, EESS 283

EARTHSYS 284. Climate and Agriculture. 3-4 Units.

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.
Same as: EARTHSYS 184, EESS 184, EESS 284

EARTHSYS 288. Social and Environmental Tradeoffs in Climate Decision-Making. 1-2 Unit.

How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoenvironmental approaches in an integrated context, culminating in a climate stabilization group project.
Same as: EARTHSYS 188

EARTHSYS 289A. FEED Lab: Innovating in the Local Food System. 3-4 Units.

Offered through the FEED Collaborative, this graduate-level course combines experiential learning in human-centered design, systems thinking and social entrepreneurship. Students will learn and apply these skills to projects that may include: sustainable food and farming technology, disruptive models of production and distribution, food justice, and/or the behavioral economics of eating. Students will benefit from close interaction with the teaching team, working on a multidisciplinary team of their peers, support from industry-leading project sponsors, and the varied perspectives of guest speakers. The goal of this course is to develop the creative confidence of students and, in turn, to work collaboratively with thought leaders in the local food system to design innovative solutions to the challenges they face. Admission is by application: <http://feedcollaborative.org/classes/>.

EARTHSYS 289B. FEED Lab: Innovating in the Local Food System. 3-4 Units.

Primarily a follow-on course to EARTHSYS 289A, this course is an experiential education platform that enables students already experienced in design thinking to collaborate with faculty and industry thought-leaders on projects of real consequence in the local food system. A select cohort of students will work in small, diverse teams and will interact closely with the teaching team in an intentionally creative and informal classroom setting. Students will deepen their skills in design thinking and social entrepreneurship by working on projects sponsored by leading innovators in the FEED Collaborative's network. Some projects may turn into summer internships or research projects for students interested in continuing their work. Admission is by application: <http://feedcollaborative.org/classes/>.

EARTHSYS 290. Master's Seminar. 2 Units.

Required of and open only to Earth Systems master's students. Reflection on the Earth Systems cotermin experience and development of skills to clearly articulate interdisciplinary expertise to potential employers, graduate or professional schools, colleagues, business partners, etc. Hands-on projects to take students through a series of guided reflection activities. Individual and small group exercises. Required, self-chosen final project encapsulates each student's MS expertise in a form relevant to his or her future goals (ie. a personal statement, research poster, portfolio, etc.).

EARTHSYS 292. Multimedia Environmental Communication. 3 Units.

Theory and practice of effective, accurate and engaging use of photography and audio and web video production in environmental communication. Emphasis on group project work and peer critiquing in each modality, including some out-of-class work time. Limited class size, preference to Earth Systems Master's students.

EARTHSYS 297. Directed Individual Study in Earth Systems. 1-9 Unit.

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

EARTHSYS 298. Earth Systems Book Review. 2 Units.

For Earth Systems master's students and advanced undergraduates only. Analysis and discussion of selected literary nonfiction books relevant to Earth systems topics. Examples of previous topics include political presentations of environmental change in the popular press, review of the collected works of Aldo Leopold, disaster literature, and global warming.

EARTHSYS 299. M.S. Thesis. 1-9 Unit.**EARTHSYS 323. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 182H, BIOHOPK 323H, EESS 323

Earth, Energy and Environmental Sciences Courses

EARTHSCI 1. Current Research in the Earth and Environmental Sciences. 1 Unit.

Primarily for freshmen and sophomores. An introduction to faculty and research areas in the School of Earth Sciences, including biogeochemistry, oceanography, paleobiology, geophysics, tectonics, geostatistics, soil science, hydrogeology, energy resources, earth surface processes, geochronology, volcanoes and earthquakes, and remote sensing. May be repeated for credit.

EARTHSCI 5. Geokids: Earth Sciences Education. 1 Unit.

Service learning through the Geokids program. Eight weeks of supervised teaching to early elementary students about Earth sciences. Hands-on teaching strategies for science standards-based instruction.

EARTHSCI 100. Research Preparation for Undergraduates. 1 Unit.

For undergraduates planning to conduct research during the summer with faculty in the School of Earth Sciences. Readings, oral presentations, proposal development. May be repeated for credit.

EARTHSCI 117. Earth Sciences of the Hawaiian Islands. 4 Units.

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTHSYS 117, EESS 117

EARTHSCI 191. GES Field Trips. 1 Unit.

Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit. See <http://pangea.stanford.edu/GES/undergraduates/courses/>.

Same as: GES 191

EARTHSCI 193. Natural Perspectives: Geology, Environment, and Art. 1 Unit.

Multi-day field trip that combines exploration of regional geology, ecology, and environmental history with guided drawing exercises. Weiqwest;ll visit several sites of geologic and environmental interest, discuss their formation and significance, and use drawing as tool for close observation. Students will gain an understanding of the natural processes shaping California, acquire new skills and techniques for artistic expression, and gain an appreciation for how scientific and aesthetic perspectives complement and enhance one another in the study of nature. No previous scientific or artistic experience is required.

EARTHSCI 200. Professional Development in Earth Science Education. 1 Unit.

For graduate students who wish to gain experience for careers in teaching and mentoring. May be repeated for credit.

EARTHSCI 201. Earth Science Course Enhancement. 3 Units.

For graduate students working in collaboration with a faculty member to develop and improve activities for courses within the School of Earth Sciences. Weekly meetings to discuss pedagogical strategies and give feedback on activities. May be repeated for credit.

EARTHSCI 202. PhD Students on the PhD. 1 Unit.

This seminar is designed for coterms and upperclassmen who are considering pursuing a PhD in earth science fields but want to know what that path really entails. Consisting of small-group discussions with current PhD students, this course will feature conversations on a range of PhD research topics and will also delve into the substance of the PhD experience itself. We will explore PhD students' programs and career paths: the milestones, processes, and issues that guide their decisions and shape their PhD experiences. Discussion themes will be determined partly in advance and partly based on the interests of participants and could include topics such as choosing a PhD program or research question, interdisciplinarity, community engagement, or work/life balance.

EARTHSCI 211. Introduction to Programming for Scientists and Engineers. 3 Units.

Basic usage of the Python and C/C++ programming languages are introduced and used to solve representative computational problems from various science and engineering disciplines. Software design principles including time and space complexity analysis, data structures, object-oriented design, decomposition, encapsulation, and modularity are emphasized. Usage of campus wide Linux compute resources: login, file system navigation, editing files, compiling and linking, file transfer, etc. Versioning and revision control, software build utilities, and the LaTeX typesetting software are introduced and used to help complete individual programming assignments and a final project. Prerequisite: Some previous experience with programming (does not need to be a formal course in programming).

Same as: CME 211

EARTHSCI 214. Software Design in Modern Fortran for Scientists and Engineers. 3 Units.

This course introduces software design and development in modern Fortran. Course covers the functional, object-oriented-, and parallel programming features introduced in the Fortran 95, 2003, and 2008 standards, respectively, in the context of numerical approximations to ordinary and partial differential equations; introduces object-oriented design and design schematics based on the Unified Modeling Language (UML) structure, behavior, and interaction diagrams; cover the basic use of several open-source tools for software building, testing, documentation generation, and revision control. Recommended: Familiarity with programming in Fortran 90, basic numerical analysis and linear algebra, or instructor approval.

Same as: CME 214

EARTHSCI 218. Communicating Science. 3 Units.

For undergraduates and graduate students interested in teaching science in local schools. Inquiry-based science teaching methods. How to communicate scientific knowledge and improve presentations. Six weeks of supervised teaching in a local school classroom. Prerequisite: course in introductory biology, geology, chemistry, or marine sciences.

EARTHSCI 219. OPINION WRITING IN THE SCIENCES. 1 Unit.

Part exposition, part reflection, part synthesis, research-driven opinion writing can be found everywhere from the op-ed pages of daily newspapers, to the commentary sections of journals such as *Nature* and *Science*, to the sort of wide-ranging reviews found in the *New York Review of Books*. In this course, advanced doctoral students will study the form, and work with the instructors to develop a publication-quality opinion essay on an aspect of their own field. Admission is limited and by application only. Contact thayden@stanford.edu.

EARTHSCI 251. Negotiation. 3 Units.

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

Same as: CEE 151, CEE 251

EARTHSCI 300. Earth Sciences Seminar. 1 Unit.

Required for incoming graduate students except coterm. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school's range of scientific interests and expertise; and introduce them to each other across departments and research groups. Panel discussions or faculty member presentations at each meeting. May be repeated for credit.

EARTHSCI 310. Computational Geosciences Seminar. 1 Unit.

Weekly lectures focusing on high-performance computing in geoscientific research by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit.

EARTHSCI 320. Methods of High-Performance Computing in GeoSciences. 1 Unit.

Workshop consisting of 8 lectures addressing topics necessary for high-performance computing research on the CEES cluster in the School of Earth Sciences. In addition to attending lectures students will be required to complete a short project related to high-performance computing.

EARTHSCI 400. Directed Research. 3 Units.

Independent research for graduate student projects.

EARTHSCI 401. Curricular Practical Training. 1 Unit.

Curricular Practical Training.

Earth, Energy, Environmental Sciences Courses

EEES 302. Challenges and Practices in Crossdisciplinary Research and Teaching. 1 Unit.

Required EEES core course. Presentations by Earth Sciences faculty. Pedagogical tools to present interdisciplinary concepts to a non-specialist audience.

EEES 400. Research in Earth, Energy, and Environmental Sciences. 1-15 Unit.

May be repeated for credit.

EEES 802. TGR Dissertation. 0 Units.

East Asian Studies Courses

EASTASN 94. The Rise of China in World Affairs. 3-5 Units.

This course examines the impact and implications of the rise of China in contemporary world politics from a historical and international relations perspective. It reviews China's halting progress into the international system, sketches the evolution of PRC foreign policy since 1949, and analyzes China's developmental priorities and domestic political context as they figure into Beijing's interactions with the world. It sketches American policy toward the PRC, and it assesses alternative approaches to dealing with China on such issues as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: EASTASN 294

EASTASN 97. The International Relations of Asia since World War II. 3-5 Units.

Asian international relations since World War II were dominated by the efforts of the newly independent nation-states of Asia, almost all of which had been colonies before the war, to establish and maintain sovereignty in a context of American and Soviet competition for influence in the region. This course traces the major developments of the period, including the Chinese civil war, the U.S. occupation of Japan, the division of Korea and the Korean War, the South and Southeast Asian independence struggles, the American and Soviet alliance systems, the Vietnam War, the strategic realignments that led to the end of the Cold War in Asia, the emergence of Central Asia, and the legacy of issues that the period has posed for the region today.

Same as: EASTASN 297

EASTASN 117. Health and Healthcare Systems in East Asia. 3-5 Units.

China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

Same as: EASTASN 217

EASTASN 120E. East Asian Internets. 4 Units.

This course examines the social, cultural, aesthetic, and political dimensions of internet culture in China, Japan, and the two Koreas. Working with web texts, social media, streaming music and video, and film and fiction engaging with online culture, we will trace the social impact of networked life in East Asia over the last three decades.

Same as: EASTASN 220E

EASTASN 151. Innovation-Based Economic Growth: Silicon Valley and Japan. 4 Units.

Innovation is essential for the growth of a matured economy. An important reason for Japan's economic stagnation over the past two decades was its failure to transform its economic system from one suited for catch-up growth to one that supports innovation-based economic growth. This course examines the institutional factors that support innovation-based economic growth and explores policies that may encourage innovation-based growth in Japan. The course is a part of a bigger policy implementation project that aims to examine the institutional foundations of innovation-based economic growth, to suggest government policies that encourage innovation-based growth in Japan, and to help implement such policies. The central part of the course will be several group research projects conducted by the students. Each student research project evaluates a concrete innovation policy idea. Each student research group is to report the findings to the class and prepare the final paper.

Same as: EASTASN 251, IPS 225

EASTASN 162. Seminar on the Evolution of the Modern Chinese State, 1550-Present. 3-5 Units.

This seminar will assess the evolving response of the late imperial, early Republican, Nanjing Republic, and the PRC regimes in response to China's changing international setting, to successive revolutions in warfare, and to fundamental economic, social and demographic trends domestically from the 16th century to present. It will assess the capacities of each successive Chinese state to extract resources from society and economy and to mobilize people behind national purposes, to elaborate centralized institutions to pursue national priorities, to marshal military forces for national defense and police forces to sustain domestic order, and to generate popular identities loyal to national authority.

Same as: EASTASN 262

EASTASN 189K. The Political Transition for Economic Development in East Asian: Government or Market?. 3 Units.

This course aims to understand the role of government and market in the process of economic development in East Asia and change in the role depending upon development stages, political ideology, and cultural traditions. The course will examine a couple of leading forces, market and government, in encouraging each national economy, and how the dynamic combination has been changed, is being changed, and will be changed. For this purpose, we will explore a political economic framework for analyzing the economic development stages; then concentrate on comparative and case studies; and try to seek informative hypotheses and propositions for East Asian experiences, and reach persuasive lessons which can be applied to other developing countries.

Same as: EASTASN 289K

EASTASN 191. Journal of East Asian Studies. 1 Unit. (Staff).

EASTASN 217. Health and Healthcare Systems in East Asia. 3-5 Units. China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

Same as: EASTASN 117

EASTASN 220E. East Asian Internets. 4 Units.

This course examines the social, cultural, aesthetic, and political dimensions of internet culture in China, Japan, and the two Koreas. Working with web texts, social media, streaming music and video, and film and fiction engaging with online culture, we will trace the social impact of networked life in East Asia over the last three decades.

Same as: EASTASN 120E

EASTASN 251. Innovation-Based Economic Growth: Silicon Valley and Japan. 4 Units.

Innovation is essential for the growth of a matured economy. An important reason for Japan's economic stagnation over the past two decades was its failure to transform its economic system from one suited for catch-up growth to one that supports innovation-based economic growth. This course examines the institutional factors that support innovation-based economic growth and explores policies that may encourage innovation-based growth in Japan. EASTASN 294. The Rise of China in World Affairs. 3-5 Units.

This course examines the impact and implications of the rise of China in contemporary world politics from a historical and international relations perspective. It reviews China's halting progress into the international system, sketches the evolution of PRC foreign policy since 1949, and analyzes China's developmental priorities and domestic political context as they figure into Beijing's interactions with the world. It sketches American policy toward the PRC, and it assesses alternative approaches to dealing with China on such issues as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: EASTASN 94

EASTASN 297. The International Relations of Asia since World War II. 3-5 Units.

Asian international relations since World War II were dominated by the efforts of the newly independent nation-states of Asia, almost all of which had been colonies before the war, to establish and maintain sovereignty in a context of American and Soviet competition for influence in the region. This course traces the major developments of the period, including the Chinese civil war, the U.S. occupation of Japan, the division of Korea and the Korean War, the South and Southeast Asian independence struggles, the American and Soviet alliance systems, the Vietnam War, the strategic realignments that led to the end of the Cold War in Asia, the emergence of Central Asia, and the legacy of issues that the period has posed for the region today.

Same as: EASTASN 97

EASTASN 300. Graduate Directed Reading. 1-7 Unit.

Independent studies under the direction of a faculty member for which academic credit may properly be allowed. For East Asian Studies M.A. students only.

EASTASN 330. Core Seminar: Issues and Approaches in East Asian Studies. 1 Unit.

For East Asian Studies M.A. students only.

EASTASN 390. Practicum Internship. 1 Unit.

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

EASTASN 801. TGR Project. 0 Units.

Economic Analysis Policy Courses

MGTECON 200. Managerial Economics. 4 Units.

This course covers microeconomic concepts relevant to managerial decision making. Topics include: demand and supply analysis; consumer demand theory; production theory; price discrimination; perfect competition; partial equilibrium welfare analysis; externalities and public goods; risk aversion and risk sharing; hidden information and signaling; moral hazard and incentives; game theory; oligopoly; and transaction cost economics.

MGTECON 203. Managerial Economics - Accelerated. 4 Units.

MGTECON 203 is the accelerated option in microeconomics for 1st year MBA students. It will cover the usual array of topics, with an emphasis on topics more useful for students of management (although the order in which the topics are covered will be different from that in 200). No previous background in economics is required or expected, but in comparison with MGTECON 200, less time will be spent in class on basic problems. Therefore, students choosing this option should be completely comfortable with calculus and linear algebra. A good diagnostic is to read Sections 3.5 and 3.6 (pp. 57-67) in Kreps, *Microeconomics for Managers*. If you find this easy, 203 is a good choice. If not, 200 is the right course for you. Students with extensive background in microeconomics should take one of the Advanced Applications options; in particular, MGTECON 203 is NOT a good fit for students who have an undergraduate major in economics.

MGTECON 209. MSx: Economics. 3 Units.

This course is an introduction to Microeconomics, focusing on microeconomic concepts relevant to managerial decision making. Topics include demand and supply, cost structure, price discrimination, perfect competition, externalities, and the basics of game theory. No prior Economics background is required but students who have not had courses in this area (or not had one in a very long time) may want to brush up on math prior to the start of classes.

MGTECON 249. Smart Pricing and Market Design. 2 Units.

This is the Advanced Applications option in the menu of courses that satisfy the Management Perspectives requirement in Optimization and Simulation Modeling (OSM). The course is tailored to students who already have command of basic optimization and simulation techniques, or have an advanced mathematical background that will allow them to catch up quickly. The focus of the course is on applying these techniques to a particular business domain: pricing mechanisms and market design. The pricing component of the course will handle both traditional topics, such as price differentiation, and more modern ones, such as dynamic pricing. In the market design component of the course, we will apply optimization and simulation techniques to such topics as auctions (e.g., designing auctions for selling online advertising slots) and matching (e.g., designing mechanisms for matching students to schools). No background in economics or in the pricing and market design topics mentioned above is required or expected.

MGTECON 300. Growth and Stabilization in the Global Economy. 4 Units.

This course gives students the background they need to understand the broad movements in the global economy. Key topics include long-run economic growth, technological change, wage inequality, international trade, interest rates, inflation, exchange rates, and monetary policy. By the end of the course, students should be able to read and understand the discussions of economic issues in *The Economist*, the *Wall Street Journal*, the *New York Times*, or the *Congressional Budget Office*.

MGTECON 330. Economics of Organization. 4 Units.

This is an advanced applications economics course that applies recent innovations and high-powered tools to organization and general management. MBA1 students must have a strong background in microeconomics to take the course and should consult with their advisors. The course is appropriate for MBA2 students who have taken either Mgtecon 200 or Mgtecon 203. The course objective is to equip managers with an extensive set of analytical and applicable tools for handling the following topics: organization for coordination, designing incentives for moral hazard, monitoring and private information, applications to scope, scale, global management and mergers, principles for allocating decision power, managing supplier relations, downstream controls, franchising and alliances, bargaining, high order reasoning, repeated interactions and reputation, holdups and strategizing with unawareness. These topics will be covered in a combination of lectures and cases.

MGTECON 331. Health Care Regulation, Finance and Policy. 3 Units.

This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the US. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

MGTECON 332. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.

For graduate students, and with permission of instructors, advanced undergraduates. This course provides the conceptual basis for understanding how to assess the effectiveness, costs, and cost effectiveness of health-care interventions. Students will gain an understanding of how to assess whether health-care interventions work, and if they work, whether they are worth what they cost. The course will cover principal evaluative techniques for health care, including, cost-effectiveness analysis, cost-benefit analysis, utility assessment, and decision analysis. Emphasis is on the practical application of these techniques. Group project presented at end of quarter. Guest lectures by experts from the medical school, entrepreneurs, pharmaceutical industry, and health care plans. The course content is relevant to researchers in health services and health policy, health-care managers, entrepreneurs, health-care consultants, and physicians.

MGTECON 334. The International Economy. 4 Units.

The objective of this course is to give students an understanding of what international trade policy means for business leaders. To do this, students will have to understand the economic forces that determine the patterns and consequences of international trade. We will analyze trade policy tools used by governments (e.g., tariffs, subsidies and quotas), and examine the role of industry and politics at the domestic and global level in applying these tools. This course will combine lecture, case studies and group interaction.

MGTECON 335. Statistics and Causality. 4 Units.

This is a course on methods for causal inference in statistics, with a particular focus on the use of randomized experiments and observational studies for making decisions under uncertainty. We will discuss some of the statistical methods, implementing them in R. No prior knowledge of R is required. We will discuss a number of detailed applications.

MGTECON 342. Business and Macroeconomics in Today's Global Economy. 3 Units.

This class applies the macroeconomic concepts that you've learned another course (e.g. in MgtEcon 300) to real-time current events. Just as you only really learn to speak a foreign language through immersion, the best way to understand macroeconomics is to use it intensively! In this class, there will be a new topic each week, chosen only days in advance to ensure timeliness. Examples may include "Janet Yellen's Monetary Policies" or "Economic Growth in Latin America" or "Thomas Piketty's New Book on Wealth Inequality." Students will divide into small groups, undertake research on a narrow question of their own choosing related to the general topic, and collectively write a 300-word blog entry to be posted on the (private) class blog at least 24 hours before class meets. Over the next day, students will read each others' entries. Finally, during class time, each group will lead a discussion of their blog post for 15-20 minutes. For more information about this course, please see <http://www.stanford.edu/~chadj/MacroToday.html> after January 15, 2015.

MGTECON 343. The Evolution of Finance. 4 Units.

This course discusses the financial crisis of 2008-9, developments since that time, and the future of finance. We consider how regulation, technology, and the changing world economy will create challenges and opportunities. We have guest speakers for about half of the classes. The list changes from year to year, but 2013's speakers included Tanya Beder, Sue Decker, Jacob Goldfield, Tom Kempner, Ana Marshall, Vincent Reinhart, Larry Summers, and Kevin Warsh.

MGTECON 364. Motivation in Theory and in Practice. 3 Units.

This course focuses on one question: How do organizations motivate their key employees to provide consummate effort? By consummate effort, we mean effort above and beyond what is normal or expected, with particular emphasis on cases where the key employees are knowledge workers performing ambiguous and creative tasks. We will begin with three weeks or so of twice-weekly class sessions, at which different theories of motivation will be explored as theories and as practiced in case studies. This will include both the economic theory of incentives, but also social psychological theories of motivation and, in particular, on when and how economic forces and social psychological forces come into conflict and when and how they can be marshaled together. During this initial three-week period, students in course will organize themselves into teams of 3 to 5 students. Each team will identify a organization or related group of organizations (say, several firms inside the same niche in an industry), and during weeks 4 through 7 of the quarter, each team will investigate how the organization(s) they are studying answer the basic question. Students will be expected to relate what they find to the theoretical constructs of the early part of the quarter. During this period, each team will meet at least weekly with the instructor to review progress achieved and to plan next steps. In the final two weeks or so (depending on the number of teams), teams will present what they have learned about the organizations they are studying to their peers. Each team will make a presentation of 45 minutes to an hour. These presentations should include a full analysis of the organization(s) (any relevant history, business model and strategy, and so forth). They should then answer the basic question, giving to the greatest extent possible tangible measures and evidence for their assertions. This will be followed by a Q&A from the other members of the class, exploring what the teams have presented. Each team will be expected to prepare a written "case-let" of their findings, to be circulated to other members of the class at least three days prior to the in-class discussion. Organizations to be studied must be existing organizations. Teams will NOT be allowed to present "designs" for organizations that they are in the process of founding or that they hope to found. There must be evidence---anecdotal at least, more systematic if possible---of how well the organization's approach to motivation is working. Organizations studied should consent to be "used" in this fashion, although you will be asked to try to gain permission for the case-lets and your presentations to be used more broadly in the GSB's curriculum. The instructor will attempt to "recruit" willing organizations, from which teams can choose, although it is equally preferable if not better for teams to identify on their own the organizations they will studied. Grades will be determined as follows: 20%--class participation in the first three weeks, with emphasis on contribution to case discussions. 20%--group-assigned grade based on the written case-let. 30%--group-assigned grade based on the oral (in class) presentation. 20%--participation in the discussion of the presentations of other groups. 10%--based on an individual "final exam," in which students will be asked to write a short report (three to five pages, double spaced, 12pt) evaluating what they learned, with emphasis on what they consider is important in answering the basic question, on the basis of the course experience. This report will be due on the last day of final exams, may be prepared off campus and emailed in. Students are free to discuss these matters with one another, but each student is expected to be the sole author of his/her "final exam." There are no formal prerequisites for this course, but students considering this course will be well prepared if they have taken a course in human resource management. This course is a Bass Seminar and is limited to enrollment of 25 students. Please note: I have a reputation for requiring a LOT of work from students. This reputation is deserved. I have every intention of enhancing my reputation in this regard, in this course, so caveat discipulus. (Unhappily, you cannot access course evaluation data on the number of hours that students report they work, so you will have to take my word for it: My courses are in the far upper tail of the distribution. You can access data on the question on "Sets High Expectations." And I urge you to read ALL the entries on me at Course Unofficial for MGTECON 200 and 203. If you have any questions, please contact me in the first instance via email, at kreps@stanford.edu.

MGTECON 381. Contemporary Economic Policy. 3 Units.

Economic issues permeate all that happens in government. This topics-based course will exam a variety of historic and current issues on the political agenda where economics is central to decision making. It is taught by faculty who served at the White House in either the Clinton or George W. Bush Administration.

MGTECON 512. The Economics of Internet Search. 2 Units.

This class will explore the economics of the internet search business. The class will consist of lectures, guest speakers, and short student presentations. The course will begin with an overview of internet search, including the technology and engineering as well as the role of search for consumers, in society and the internet industry. We will then study search as a platform market, considering the interaction between the different sides of the market (users, advertisers, and publishers) as well as competition across platforms on different sides of the market. The advertising marketplace will receive special focus, including the design of the auction. We will also study the role of search in the internet ecosystem, examining recent trends towards vertical integration and its impact on the development of independent internet products and services. Finally we will address search as a data-driven business. Throughout, the course will draw parallels to other internet platform businesses, using search as an in-depth case study through which broader themes can be understood.

MGTECON 513. Platform Competition in Digital Markets. 2 Units.

This class will analyze the economics of digital platform markets. The class format will consist of lectures, guest speakers, and student presentations. Concepts will be presented in the context of leading examples of internet and technology platforms such as online advertising, computing technology platforms (e.g. mobile), marketplaces, social networks, cloud computing, and financial technology platforms. The course will begin with economic definitions of platform markets, and it will review the most important insights from recent research in economic theory and strategy. It will then consider the role of scale economies and network effects in determining the dynamics of platform competition and long-run industry structure. Next, the class will consider key strategic decisions for firms, including entry strategies, vertical integration and exclusive deals.

MGTECON 514. Markets of Information. 2 Units.

Valuable information may be distributed among people. We will study the problems associated with identifying, retrieving and aggregating this information. We will turn to the existing solutions currently offered in the market and study their scope and the potential of these recent technologies. Along the way we will gain a better understanding of the various types and dimensions of valuable information. We will study how information flows and how it initially becomes distributed. We will then analyze the strategic aspects of locating information, information transmission, reliability and elicitation. Applications covered include: social networks, entertainment and media, rating systems, expert advice, "wisdom of the crowd" tools, sales forecasting, prediction markets and more.

MGTECON 535. Statistics and Causality. 2 Units.

Most statistical questions involving data ultimately are about causal effects. What is the effect of changing prices on demand? What is the effect of an advertising campaign on demand. In this course we discuss statistical methods for analyzing causal effects. We look at the analysis and design of randomized experiments. We also look at various methods that have been used to establish causal effects in observational studies. Students will develop the skills to assess causal claims and learn to ask the right questions and evaluate statistical analyses. You will carry out research projects and work with statistical software.

MGTECON 558. Technology, Innovation & Entrepreneurship Policy. 2 Units.

This economic policy compressed course will briefly examine a variety of government policies and how each influences technology, innovation, and entrepreneurship. We will examine a range of policy topics from the perspectives of both policymakers and the firms affected by these policies. Possible topics (subject to change) include: high-skilled immigration, the taxation of carried interest, net neutrality, carbon pricing, data privacy, global democracy / censorship, new drug/medical device approval, online education, and encryption. The course is aimed primarily at helping those interested in technology, entrepreneurial, or finance roles understand how policymakers think about and make decisions that affect these sectors. The course is taught by a former senior White House economic advisor to President George W. Bush.

MGTECON 591. Management Practices in Europe, the US and Emerging Markets. 1 Unit.

The course will review the results from a large management practices project involving Harvard, the London School of Economics, McKinsey & Company and Stanford. McKinsey & Company have developed a basic management practice evaluation tool - detailing the 18 key practices in firms - which has been used to evaluate almost 10,000 organizations in manufacturing, retail, healthcare and education across the US, Europe, Asia, Australasia and South America. These results provide a global insight into the basic management practices around monitoring, targets and talent management that firms adopt around the world, their link to performance, and the reasons for differences in these across countries. This will be supplemented with the results from more recent research with Accenture and the World Bank in India carrying out change-management interventions. nnnFull syllabus and lectures from 2011 available here: http://www.stanford.edu/~nbloom/Course_591.zip.

MGTECON 600. Microeconomic Analysis I. 4 Units.

This course provides an introduction to the foundations of modern microeconomic theory. Topics include choice theory, with and without uncertainty, consumer and producer theory, dynamic choice and dynamic programming, social choice and efficiency, and fundamentals of general equilibrium. Students interested in this course should consult the instructor by email: kreps@stanford.edu.

MGTECON 601. Microeconomic Analysis II. 4 Units.

This course studies the roles of information, incentives and strategic behavior in markets. The rudiments of game theory are developed and applied to selected topics regarding auctions, bargaining, and firms' competitive strategies; information economics; and contracting and market design.

MGTECON 602. Auctions, Bargaining, and Pricing. 4 Units.

This course covers auction theory, matching, and related parts of the literature on bargaining and pricing. Key papers in the early part of the course are Myerson and Satterthwaite on bargaining, Myerson on optimal auctions, and Milgrom and Weber's classic work. We then turn to markets in which complicated preferences and constraints, limitations on the use of cash, or variations in contract details among bidders play an important role. Emphasis is on matching markets such as the National Resident Matching Program and asset auctions such as the spectrum auctions.

MGTECON 603. Econometric Methods I. 4 Units.

This is the first course in the sequence in graduate econometrics. The course covers some of the probabilistic and statistical underpinnings of econometrics, and explores the large-sample properties of maximum likelihood estimators. You are assumed to have introductory probability and statistics and matrix theory, and to have exposure to basic real analysis. Topics covered in the course include random variables, distribution functions, functions of random variables, expectations, conditional probabilities and Bayes' law, convergence and limit laws, hypothesis testing, confidence intervals, maximum likelihood estimation, and decision theory.

MGTECON 604. Econometric Methods II. 3 Units.

This course presents a comprehensive treatment of econometric methods used in economics, finance, marketing, and other management disciplines. Among the topics covered are: the classical linear regression analysis, linear simultaneous equations systems, panel data models, generalized method of moments, selection models, and limited dependent variable models. This course uses Matlab or similar computational software, but previous experience with such software is not a prerequisite. This course assumes working knowledge of undergraduate econometrics, basic linear algebra, basic probability theory, and statistics that are covered in MGTECON 603. Those who did not take MGTECON 603 or similar should see the instructor.

MGTECON 605. Econometric Methods III. 4 Units.

This course completes the first-year sequence in econometrics. It develops nonlinear models in detail, as well as methods used to estimate nonlinear models, including nonparametric, semiparametric and moment-based estimators such as GMM. The instructor will discuss both the statistical properties of these estimators and how they are used in practice. Computational issues are explored in detail. Depending on student and instructor interest, we will consider advanced topics and applications, including: simulation methods and Bayesian estimators.

MGTECON 606. Microeconomic Theory for Non-Economist PhDs. 4 Units.

This course will be a first quarter PhD course in microeconomic theory, aimed at PhD students who do not plan to become professional economists. Relative to a course geared to economics PhDs the class will differ in two important ways. First, there will be almost no emphasis on proofs. Second, the topics covered will be broader than the standard set covered in say Econ 202.

MGTECON 608. Multiperson Decision Theory. 4 Units.

Students and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, signaling, and computation.

MGTECON 609. Applied Econometrics and Economic Research. 4 Units.

The primary objective of this course is to prepare students to evaluate and produce research in empirical microeconomics. The emphasis will be on the overall process of conducting such research: from defining a clear research question, to collecting suitable data, to selecting and executing an appropriate mode of econometric analysis. Students will be expected to read and discuss papers covering a variety of applied topics. Methodological issues will be discussed in depth wherever they arise, and especially where they are central to understanding a paper's implications, but methodology will not be the central focus of the course. Some of the topics to be covered in the course include: nonlinear pricing in imperfectly competitive markets; innovation and the diffusion of innovations; the economics of advertising; consumer information and product-market outcomes. Other topics will be selected based partly on student input.

MGTECON 610. Macroeconomics. 4 Units.

This course covers various topics in macroeconomics and is designed to expose students to macroeconomic methods, classic papers in the field, and the latest research at the frontier. The current focus is on economic growth. Using theoretical and empirical tools, we consider questions like: How do we understand long-run growth in per capita income? Why are some countries so much richer than others? Other topics include misallocation as a source of TFP differences, the direction of technical change, growth and the environment, the rise in health spending, patenting, and international trade. This course satisfies the GSB PhD macro requirement.

MGTECON 611. Open Economy Macroeconomics. 4 Units.

The goal of this course is to teach students how to use the tools of open economy macroeconomics to connect to the burgeoning literature on institutions in a way that helps them to frame interesting research questions in the area of stabilization, reform, and growth in developing countries. The growth rate of total factor productivity (TFP) plays an essential role in economic growth. In turn, two principal forces drive TFP growth: (1) changes in ideas (i.e. technological change) and (2) changes in institutions. This course will employ the tools of open economy macroeconomics to study the second of these two forces. Recent contributions in the literature focus on the impact of cross-country differences in initial institutions on long-run growth and development. Prominent examples of such institutional differences include the nature of the legal origins and property rights bequeathed to a country by its colonial masters. This is a PhD course in economics, but it is open to students from any discipline (i.e. Political Science, History, International Relations) who are willing to make the analytical investment that is necessary to understand and debate the issues in a logical, coherent, and systematic fashion.

MGTECON 614. Topics in Stabilization and Reform. 4 Units.

This course develops the essential tools of dynamic, open-economy macroeconomics for the purpose of analyzing policy changes in developing countries. The first half of the course develops the work-horse models needed to undertake an analytical study of stabilization and reform: the basic tools of dynamic optimization; dynamic models of the current account, investment, growth, and the real exchange rate; international asset pricing. The second half of the course explores analytical models of policy reform in developing countries: sovereign risk and investment, debt buybacks, moral hazard in international lending; inflation crises, balance of payments crises and stabilization; current account liberalization, capital account liberalization, and optimal sequencing of reforms; political economy of stabilization and adjustment.

MGTECON 615. Topics in Economics of Information. 3 Units.

The goal of this course is to introduce students to current research topics and open issues related to the role of information in markets and other economic mechanisms. Topics may include: information aggregation in prediction markets and other mechanisms, microstructure of financial markets, forecast testing, scoring mechanisms, information in auctions, information in e-commerce and novel marketplaces.

MGTECON 616. Topics in Game Theory. 3 Units.

This is an advanced game theory course and requires a basic background in game theory or an advanced applied game theory course. The course covers foundational topics such as type spaces, modeling reasoning and rationality, game forms, solution refinements and more. A collection of additional topics will be covered independently via problem solving assignments in workshop style meetings with student presentations.

MGTECON 620. Economics of Electronic Commerce and the Internet. 4 Units.

This course is designed to introduce students to research topics in electronic commerce and the economics of the internet. The primary audience is advanced graduate students in economics or closely related areas, but the course is also open to students from related fields such as computer science and operations provided students have completed graduate coursework in economics, game theory, and/or market design. The methodological focus is on applied economic theory models, empirical work, and field experiments. The course requires a literature review and research proposal, which will be presented to the class at the end of the term. Core topics include: economics of platform markets and multi-sided markets, with case studies including online advertising, online auctions, mobile computing, cloud computing, electronic and mobile payment systems, and media markets; markets for information; internet search, including specialized search platforms such as shopping and travel; the impact of the internet on the news media; and the impact of technological and business practice shifts on both old and new industries, including data-driven decision-making, machine learning, and increased reliance on experimentation. Other topics that may be selected according to student interest include social networks, social media, intellectual property and innovation, broader economic impacts of technological innovation, security, internet policy, the impact of the internet on education and health, privacy, and other regulatory issues surrounding the internet.

MGTECON 624. Dynamic Political Economy Theory. 4 Units.

This course is intended to be an introduction to dynamic political economy theory. We will cover research at the frontier of this field and some useful tools. Tools will be primarily dynamic game theory - including Markov models and models of reputation. Topics covered will include dynamic legislative bargaining, dynamic coalition formation, endogenous institutions, endogenous policy formation, and private politics.

MGTECON 628. Reading Group in Industrial Organization. 1 Unit.

This course meets weekly on Tuesdays at Noon. The primary purpose of the course is to read and discuss current working papers in Industrial Organization and related fields (e.g., Econometrics, Marketing, and Labor). Students are required to present papers a couple of times per quarter and both students and faculty may also present their own working papers.

MGTECON 629. Microeconomics Workshop. 3 Units.

Each week, a different economics faculty member will discuss his or her important and/or current research. The course is an important introduction to PhD level research topics and techniques. Attendance is mandatory.

MGTECON 640. Quantitative Methods for Empirical Research. 3 Units.

This is an advanced course on quantitative methods for empirical research. Students are expected to have taken a course in linear models before. In this course I will discuss modern econometric methods for nonlinear models, including maximum likelihood and generalized method of moments. The emphasis will be on how these methods are used in sophisticated empirical work in social sciences. Special topics include discrete choice models and methods for estimating treatment effects.

MGTECON 651. Natural Resource and Energy Economics. 4 Units.

Management and provision non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: fisheries problems and policy; energy industry market structure, pricing, and performance; and policies to facilitate transitions from non-renewable to renewable energy.

MGTECON 652. Personnel Economics. 3 Units.

This seminar will examine applications of labor economics to business issues and firms' practices. Material will include both theoretical and empirical work, and the syllabus will range from classics in Personnel Economics to current (unpublished) research. Some of the topics to be covered include, but are not limited to, compensation practices, assignment of decision rights, organizational structure, attracting, retaining, and displacing employees, and workplace practices (such as team-based organization, profit sharing, etc.).

MGTECON 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

MGTECON 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

MGTECON 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

Economics Courses

ECON 1. Principles of Economics. 5 Units.

The economic way of thinking and the functioning of a modern market economy. The behavior of consumers and firms. Markets for goods and inputs. Analysis of macroeconomic variables: output, employment, inflation, interest rate. Determination of long-run growth and short-term fluctuations. The role of government: regulation, monetary, and fiscal policy.

ECON IV. Principles of Economics. 5 Units.

The economic way of thinking and the functioning of a modern market economy. The behavior of consumers and firms. Markets for goods and inputs. Analysis of macroeconomic variables: output, employment, inflation, interest rate. Determination of long-run growth and short-term fluctuations. The role of government: regulation, monetary, and fiscal policy.

ECON 5. Economics in the News. 1 Unit.

Each week a different Econ faculty member will discuss recent, exciting developments in their field. A particular emphasis will be how economics informs policy debates. The course will provide a preview of upper division courses and research opportunities in economics. Prerequisite: Econ 1, Econ 1A or 1B.

ECON 10. Silicon Valley Meets Wall Street. 1 Unit.

Seminar in applied economics with focus on the microcosm of Silicon Valley, how growth companies are originated, managed and financed from start-up to IPO. Round-table discussion format. Applicable to those students with an interest in technology company formation, growth and finance including interaction with Wall Street. Enrollment limited to 10 students.

ECON 11N. Understanding the Welfare System. 3 Units.

Welfare reform passed by the Federal Government in 1996 heralded a dramatic step in how our nation designs and operates its programs that support poor families. The centerpiece of this legislation known as 'devolution' transferred much responsibility for these programs to the states. States had their first opportunity since the 'war on poverty' of the 1960s to undertake radical changes in setting up their public assistance programs. Recently, many of the reforms instituted in the 1990s are being hotly debated and in some aspects reversed. What flexibility did the states receive under welfare reform, and what considerations are relevant in exercising this flexibility? What selections have states made, and how are their programs and those of the federal government likely to evolve in the future? This seminar will address these questions, exploring how reforms changed welfare and who has been affected by these changes. In addition to covering the patchwork of different programs that currently constitute America's social safety net, the seminar will also scrutinize the makeup and trends in government spending and how our nation defines poverty and eligibility for income support. Moreover, the discussion will illustrate the role that economics plays in assessing the effectiveness of anti-poverty programs and the consequences on families' behavior. Students will participate in a project in which they develop their own recommendations for devising a safety net for poor families in America.

ECON 12. Investment Reflections from a Hedge Fund Career: Mindset & Meditation as Competitive Advantage. 1 Unit.

The class will attempt to relate the most important sources of competitive advantage during the instructor's fifteen years co-managing Scout Capital, a long-short hedge fund. The class will learn Scout's investment framework, in order to apply it to real historical cases. The cases are designed both to illustrate the investment framework in action, and to enable the student to experience the perceptual difficulties that confront professional investors. The class will discuss techniques for managing the mental fog that plagues most investors, with an emphasis on meditation. Students should be prepared to commit 15 minutes per day, every day, to meditation practice during the term of the course. Each class will contain a short guided meditation, and a short group reflection on students' meditation experiences.

ECON 13SC. A Random Walk Down Wall Street. 2 Units.

The title of this course is the title of one of the books that will be required summer reading. The course will introduce modern finance theory and cover a wide range of financial instruments: stocks, bonds, options, mutual funds, exchange traded funds, mortgage back securities, etc. Historical returns on different asset classes will be examined. The efficient market hypothesis and the case for and against index funds will be discussed. The course for 2015 will examine the ongoing policies to stimulate the economy, including the quantitative easing policy of the Federal Reserve. There will be coverage of global financial markets. We will try to reconcile the long-run return on stocks, bonds, and money market instruments with the capital asset pricing model. We will try to connect financial markets with the problems of the real economy including the entitlement programs. We will talk with venture capitalists, Federal Reserve officials, hedge fund and mutual fund managers, and those who manage large institutional endowments. Students will be expected to write a short paper and make an oral presentation to the class. A wide range of topics will be acceptable, including market regulation, the introduction of new financial instruments, the functioning of commodity futures markets, and evaluations of the federal government intervention in financial markets. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

ECON 17N. Energy, the Environment, and the Economy. 3 Units.

Examines the intimate relationship between environmental quality and the production and consumption of energy. Assesses the economics efficiency and political economy implications of a number of current topics in energy and environmental economics. Topics include: the economic theory of exhaustible resources, Greenhouse Gas Emissions (GHG) control (cap and trade mechanisms and carbon fees), GHG emissions offsets, the Strategic Petroleum Reserve (SPR), the "smart" transmission grid for electricity, nuclear energy and nuclear waste, the real cost of renewable energy, natural gas and coal-fired electricity production, the global coal and natural gas markets, Corporate Average Fuel Efficiency (CAFE) and Low-Carbon Fuel Standards (LCFS), Energy Efficiency Investments and Demand Response, and Carbon Capture and Sequestration (CCS). For all topics, there will be reading to explain the economics and engineering behind the topic and class discussion to clarify and elaborate on this interaction.

ECON 18A. The Washington Debate About American Competitiveness. 1 Unit.

One of the central challenges for policymakers is how to make sure the United States remains the world's strongest economy and continues to create good paying jobs. Discusses what the proper role of government should be when it comes to our economy by exploring the history of American economic thought dating back to Alexander Hamilton. Considers the perspective of classical economists, Keynesian economists, and economists identifying themselves as part of the innovation school of economics. Examines various policy alternatives concerning taxes, regulations, immigration, and investment that can foster economic growth.

ECON 18B. Silicon Valley Leaders' Take on America's Economic Future. 1 Unit.

The academic debates about economic policy often miss the perspective of real world business leaders who are navigating a complex, global economy. In this class, we will hear from technology leaders and CEOs from many prominent Silicon Valley companies. They will offer their take on repatriation, immigration, trade issues, and tax reform. We will explore whether there is a disconnect between Congress and Silicon Valley business leaders, and if so, how we can bridge that divide.

ECON 18C. Real World Policy Makers Discuss How the U.S. Can Compete in a Global Economy. 1 Unit.

Silicon Valley leaders and academic economists often do not understand the political constraints policy-makers face when it comes to economic decision-making. We will invite think tank leaders, political leaders, former administration officials, and labor leaders to shed light on what is driving the current economic thinking in Washington. We will explore how Washington views Silicon Valley, and what Silicon Valley companies can do to improve their perception in the Beltway. We also will discuss why Washington policy-makers matter to the future of the Valley, and what they can learn from business leaders here.

ECON 24N. Social Choice & Market Design. 3 Units.

The design of mechanisms for group decision making, addressing questions about how apartment mates should choose rooms and share the rent, how a government should select and pay its suppliers, how a town should elect a mayor, or how students and college ought to be matches to one another. The first three weeks include classic papers by two Nobel-prize winning scholars about matching students and about government procurement. We will ask questions such as: What are the provable properties of these mechanisms? Is it possible for individuals or groups to manipulate the mechanisms for their own advantage? The remaining weeks focus on group decisions that are guided by "voting" mechanisms, showing the inherent trade-offs and proving theorems about the incompatibility among some simple, desirable properties of mechanisms. The ideas treated in this class are being used today to design new mechanisms for voting, matching, auctions and other applications, based on an awareness of the formal properties that the mechanisms may have.

ECON 25N. Public Policy and Personal Finance. 3 Units.

The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.

Same as: PUBLPOL 55N

ECON 49. Managerial Economics. 5 Units.

Intermediate microeconomics, with a focus on topics and methods of interest to future managers. Topics include market pricing and price discrimination, incentives, signaling, implicit collusion, decision making under uncertainty, auctions and basic game theory. Use of calculus and math-based analysis. Topics overlap considerably with Econ 50 and Econ 51. Aimed at Juniors and Seniors with non-Econ majors. Does not fulfill Econ major requirements. Economics majors should take Econ 50 and Econ 51.

ECON 50. Economic Analysis I. 5 Units.

Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Monopoly in partial equilibrium. Economic tools developed from multivariable calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites taken for letter grades: Econ 1 or 1A or 1V, and Math 51 or CME 100 or CME 100A. Must be taken for a Letter grade if majoring/minoring in Economics.

ECON 51. Economic Analysis II. 5 Units.

Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities and public goods, intertemporal choice and asset markets, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariate calculus is used. Prerequisite: ECON 50.

ECON 52. Economic Analysis III. 5 Units.

Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy, and their effects on growth, employment, and inflation. Prerequisites: ECON 50.

ECON 101. Economic Policy Seminar. 5 Units.

Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: Econ 51 and 52, 102B, and two field courses. Some sections require additional prerequisites.

ECON 102A. Introduction to Statistical Methods (Postcalculus) for Social Scientists. 5 Units.

Probabilistic modeling and statistical techniques relevant for economics. Concepts include: probability trees, conditional probability, random variables, discrete and continuous distributions, correlation, central limit theorems, point estimation, hypothesis testing and confidence intervals for both one and two populations. Prerequisite: MATH 41 or equivalent.

ECON 102B. Applied Econometrics. 5 Units.

Hypothesis tests and confidence intervals for population variances, chi-squared goodness-of-fit tests, hypothesis tests for independence, simple linear regression model, testing regression parameters, prediction, multiple regression, omitted variable bias, multicollinearity, F-tests, regression with indicator random variables, simultaneous equation models and instrumental variables. Topics vary slightly depending on the quarter. Prerequisites: Econ 50 and Econ 102A or equivalent. Recommended: computer experience (course often uses STATA software to run regressions).

ECON 102C. Advanced Topics in Econometrics. 5 Units.

The evaluation problem. Identifying and estimating the effects of policies on outcomes of interest (e.g. tax rates on earnings, social security payments on unemployment duration). Identifying and estimating the effects of human capital and demographic variables on earnings and other labor market outcomes (e.g. experience and tenure on earnings, ethnicity and gender on unemployment duration). Topics: Instrumental variables estimation; limited dependent variable models (probit, logit, Tobit models); Panel data techniques (fixed and random effect models, dynamic panel data models), Discontinuity-based methods (Regression discontinuity design, Regression kink design). Prerequisite: Econ 102B.

ECON 106. World Food Economy. 5 Units.

The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.

Same as: EARTHYSYS 106, EESS 106

ECON 107. Causal Inference and Program Evaluation. 5 Units.

Methods for estimating and doing inference for causal effects. Discussion of randomized experiments, matching methods, the role of the propensity score, instrumental variables, regression discontinuity, and natural experiments. Theoretical aspects of these methods as well as detailed applications drawn from economics, political science, education, and health care. Prerequisite: Econ 102A or equivalent.

ECON 110. History of Financial Crises. 4 Units.

Financial crises are as old as financial markets themselves. There are many similarities between historical events. The recent credit crisis, for example, is far from unique. More often than not financial crises are the result of bubbles in certain asset classes or can be linked to a specific form of financial innovation. This course gives an overview of the history of financial crises, asset price bubbles, banking collapses and debt crises. We start with the Tulip mania in 1636 and end with the recent credit and debt crises. The purpose of the course is to understand the causes of past crises and to develop a conceptual framework that ties common elements together. We will discuss the lessons that we can draw for financial markets today. Prerequisites: Econ 50 or Econ 135.

ECON 111. Money and Banking. 5 Units.

The primary course goal is for students to master the logic, intuition and operation of a financial system - money, financial markets (money and capital markets, debt and equity markets, derivatives markets), and financial institutions and intermediaries (the Central Bank, depository institutions, credit unions, pension funds, insurance companies, venture capital firms, investment banks, mutual funds, etc.). In other words, how money/capital change hands between agents over time, directly and through institutions. Material will be both quantitative and qualitative, yet always highly analytical with a focus on active learning - there will be an approximately equal emphasis on solving mathematical finance problems (e.g. option pricing) and on policy analysis (e.g. monetary policy and financial regulation.) Students will not be rewarded for memorizing and regurgitating facts, but rather for demonstrating the ability to reason with difficult problems and situations with which they might not previously be familiar. Prerequisite: Econ 50, 52. Strongly recommended but not required: some familiarity with finance and statistics (e.g. Econ 135 or 140, Econ 102A).

ECON 112. Financial Markets and Institutions: Recent Developments. 5 Units.

The course covers innovations, challenges and proposed changes to the financial system. Topics include new mortgage products, foreclosure rules, securitization, credit ratings, credit derivatives, dealer networks, repo financing, implications for prudential regulation & monetary policy. Emphasis is on quantitative studies of these topics. Prerequisites: Econ 52, Econ 102B.

ECON 114. Economy and Economics of Ancient Greece. 5 Units.

(Formerly CLASSHIS 114.) Cultural and political background for Athens of the 5th and 4th century BC. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and Cons of utilitarianism in light of the ethical theories of Plato and Aristotle. Economy and economics of ancient Greece will be compared to the same of ancient China. There is an interesting parallel.
Same as: CLASSICS 183

ECON 116. American Economic History. 5 Units.

The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; emergence of American technology and business organization; economics of the Great Depression and the New Deal; post-World War II economic performance and social change; globalization, information technology, and inequality. Prerequisite: 1 or 1A or 1V.
Same as: AMSTUD 116, HISTORY 156

ECON 118. Development Economics. 5 Units.

The microeconomic problems and policy concerns of less developed countries. Topics include: health and education; risk and insurance; microfinance; agriculture; technology; governance. Emphasis is on economic models and empirical evidence. Prerequisites: 52, 102B.

ECON 119. The Russian Economy. 4-5 Units.

Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.
Same as: REES 219

ECON 121. Social Science Field Research Methods and Applications. 5 Units.

This course teaches the basics of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course first introduces observational field research and compares it with experimental field research. Significant attention will be devoted to explaining what can and cannot be learned each type of field research. The details of designing both types of field research projects will then be discussed. The basics theory of the design of statistical experiments will be introduced and applied. Topics covered include sample size selection, power and size of statistical hypothesis tests, sample selection bias and methods for accounting for it. Examples of best practice field research studies will be presented as well as examples of commonly committed errors. Practical aspects of field work will also be covered, including efficient and cost-effective data collection, data analysis, teamwork, and common ethical considerations. Students can apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 or 1A or 1V and either STATS 60 or Econ 102A or equivalent.
Same as: PUBLPOL 120, PUBLPOL 220

ECON 124. Economic Growth, Development, and Challenges of East Asia. 5 Units.

This course explores economic growth and development in East Asia and the region's current economic policy issues. For the purpose of this course, we will largely focus on China, Japan, and Korea. However, we will incorporate Southeast Asia when relevant. The first part of the course examines economic growth in East Asia and the development strategies pursued. Cross country comparisons will help draw similarities but also differences in the development processes. We will also discuss the validity of an East Asian model for economic growth. The second part of the course focuses on the specific factors relating to economic development, e.g., human capital, firms, infrastructure, institutions, democracy, political leaders, etc. We will also discuss the current challenges and policy issues. Readings will come from books, journal articles, reports, news articles, and case studies. Many of the readings will have an empirical component and students will be able to develop their understanding of how empirical evidence is presented in articles. Prerequisites: Econ 102B.

ECON 125. Economic Development, Microfinance, and Social Networks. 5 Units.

An introduction to the study of the financial lives of households in less developed countries, focusing on savings, credit, informal insurance, the expansion of microfinance, and social networks. Prerequisites- Econ 52 and 102B.

ECON 126. Economics of Health and Medical Care. 5 Units.

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.
Same as: BIOMEDIN 156, BIOMEDIN 256, HRP 256

ECON 127. Economics of Health Improvement in Developing Countries. 5 Units.

Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and ECON 102B.
Same as: MED 262

ECON 128. Economic Development: A Historical Perspective. 5 Units.

The course explores the process of economic development from a historical perspective. It draws on contemporary theories of economic development and the historical experience of various regions over the last millennium. The substantive focus is on the cultural and institutional and social foundations for economic growth. The starker focus is particularly on the Middle East, Europe and China. The course is conducted as a seminar based on in class discussion, readings, and students presentations. Limited Enrollment. Prerequisites: ECON 50, ECON 52, ECON 102B. Recommended: ECON 118.

ECON 132. Economics and Sports. 5 Units.

This course applies microeconomic analysis to professional and amateur sports. Appropriate examination of sports economics requires coverage of advanced fields of specialization within economics. These include industrial organization, labor economics, and public finance. Ultimately, the principal objective of the course is for students to have a more complete understanding of the economic issues affecting the world of sports. You will be able to comment intelligently on economic issues of sports that appear in the news media, such as the impact of the draft system, as well as assess and critique the opinions offered by journalists on, for example, the pay and performance of professional sportsmen and women. This is a unique opportunity to understand why there has been a recent explosion in economists looking both at the market of sports and using sports data to explain or test theories about the wider business world. Prerequisite: Econ 1.

ECON 135. Finance for Non-MBAs. 3 Units.

For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

Same as: MSE 245G

ECON 137. Decision Modeling and Information. 5 Units.

Effective decision models consider a decision maker's alternatives, information and preferences. The construction of such models in single-party situations with emphasis on the role of information. The course then evolves to two-party decision situations where one party has more information than the other. Models examined include: bidding exercises and the winner's curse, the Akerlof Model and adverse selection, the Principal-Agent model and risk sharing, moral hazard and contract design. Prerequisite: ECON 102A or equivalent. Recommended: Econ 50, Optimization and simulation in Excel.

ECON 139D. Directed Reading. 1-10 Unit.

May be repeated for credit.

ECON 140. Introduction to Financial Economics. 5 Units.

Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: ECON 51, ECON 102A.

ECON 141. Public Finance and Fiscal Policy. 5 Units.

What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic analysis, statistical evidence and historical and current fiscal policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget surpluses/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: ECON 51, ECON 52 (can be taken concurrently). Same as: PUBLPOL 107

ECON 143. Finance and Society for non-MBAs. 4 Units.

This interdisciplinary course will discuss the role of the financial system in the economy and its interactions with different parts of society. The course will introduce basic finance concepts, cover the basic economic principles essential for understanding the role of finance in the economy, provide an overview of the different institutions in the system, and discuss of policy issues around financial regulation. Topics to be discussed include: the basics of financial decisions and markets; from micro finance to global mega-banks: how and why finance can benefit society as well as endanger and harm; financial regulation: why and how; other people's money: the challenge of effective control, governance, and trust; the politics of banking and finance. Prerequisite: Econ 1. Same as: PUBLPOL 143

ECON 145. Labor Economics. 5 Units.

Analysis and description of labor markets. Determination of employment, unemployment, hours of work, wages. Welfare programs and work effort. Wage differentials by schooling, experience, gender, and race. Income inequality, changes in inequality, and differences in inequality. Employment contracts, labor unions, and bargaining. International comparisons. Prerequisites: ECON 51, ECON 102B.

ECON 146. Economics of Education. 5 Units.

How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market. The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: ECON 50, ECON 102B.

ECON 149. The Modern Firm in Theory and Practice. 5 Units.

Combines the latest theory and empirics on the modern firm. Theoretical topics will include transactions cost theory, contract theory and incentives. Applied topics include the organization of firms in US and internationally. Management practices around information systems, target setting and human resources. Focus on management practices in manufacturing, but also analyze retail, hospitals and schools, plus some recent field-experiments in developing countries. Prerequisites: Econ 51, ECON 102B.

ECON 150. Economic Policy Analysis. 4-5 Units.

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B.

Same as: PUBLPOL 104, PUBLPOL 204

ECON 152. The Future of Finance. 2 Units.

If you are interested in a career in finance or that touches finance (legal, regulatory, corporate, public policy), this course will give you a useful perspective. We will survey the players and current landscape of the global markets as the world continues to evolve from the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world and this will include guest-lecturer perspectives on where the greatest opportunities exist for students entering or touching the world of finance today. The course will also review, in a non-technical way, the basics of the financial derivatives and other quantitative techniques that are a core part of the global capital markets. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application found on the Public Policy website to the instructor at tbeder@stanford.edu. Please visit <https://publicpolicy.stanford.edu/academics/undergraduate/forms> to locate the Consent Application Form for this class. The form is located on the Public Policy website under "Academics" and "Forms." See Consent Application Form for submission deadline. Same as: ECON 252, PUBLPOL 364, STATS 238

ECON 153. Economics of the Internet. 5 Units.

Economic models and tools used to understand online market phenomena, including standards, network and platform economics, online transactions, advertising, auctions, information, communications, and networking. The contemporary economics literature on internet markets and mobile communications markets. Public policy issues in competition policy, communication policy, and support for innovation. Prerequisites: ECON 51 and ECON 102B.

ECON 154. Law and Economics. 4-5 Units.

This course explores the role of law in promoting economic welfare. Law has many meanings and many aspects, but some version of it is essential to cooperative human interaction and thus to civilization itself. Cooperation often is a positive-sum or welfare-enhancing activity, while competition among individuals, in contrast, is often zero- or negative-sum. Law, among its other functions, can serve as a mechanism to harmonize private incentives to achieve cooperative gains, to maintain an equitable division of those gains, and to deter "cheating." Economic analysis of law focuses on the welfare-enhancing incentive effects of law and law enforcement and on law's role in reducing the risks of cooperation by setting expectations of "what courts or the state will do" in various contingencies. Prerequisite: Econ 50.

Same as: PUBLPOL 106, PUBLPOL 206

ECON 155. Environmental Economics and Policy. 5 Units.

Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). Evaluation of policies addressing regional air pollution, global climate change, water allocation in the western U.S., and the use of renewable resources. Connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: ECON 50.

ECON 156. Marine Resource Economics and Conservation. 5 Units.

Economic and ecological frameworks to understand the causes of and potential solutions to marine resource degradation. Focus on conservation of marine biodiversity and ecosystem-based management. Applications include: commercial and recreational fisheries, marine reserves, and offshore energy production.

Same as: EARTHSYS 156M, HUMBIO 111M

ECON 157. Imperfect Competition. 5 Units.

The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: ECON 51.

ECON 158. Regulatory Economics. 5 Units.

Economics 158 examines public policies for dealing with problems arising in markets in which competitive forces are weak. The focus is on monopolies, oligopolies, cartels, and other environments where market mechanisms are unlikely to produce outcomes that benefit consumers more than the alternatives involving costly government intervention. The two main areas examined are competition policy and economic regulation. Competition policy refers to laws that define certain market behavior as illegal because it is harmful to competition or fails to provide consumer benefits that justify its costs to consumers. Economic regulation refers to policies in which government controls prices and/or decides the terms and conditions under which firms can participate in a market. A growing area of study and policy design is the introduction of market mechanisms into formerly regulated industries such as: telecommunications, electricity, airlines, railroads, postal delivery services and environmental regulation. Cross-listed with Law 220. Prerequisites: Econ 51 or equivalent.

ECON 159. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.

This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. In addition to examining economic issues and legal constraints, it will address the political economy of various emissions-reduction strategies. The course will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies and between new policies and pre-existing legal or regulatory frameworks; the role that jurisdictional or geographic scale can play in influencing the performance of climate-policy approaches; and numerical modeling and statistical analyses of climate-change policies. Cross-listed with Law 746. Prerequisites: Econ 50 & 51.

ECON 160. Game Theory and Economic Applications. 5 Units.

Introduction to game theory and its applications to economics. Topics: strategic and extensive form games, dominant strategies, Nash equilibrium, subgame-perfect equilibrium, and Bayesian equilibrium. The theory is applied to repeated games, voting, auctions, and bargaining with examples from economics and political science. Prerequisites: Working knowledge of calculus and basic probability theory.

ECON 165. International Finance. 5 Units.

Introduction to international macroeconomics. Topics: intertemporal approach to the current account, real and nominal exchange rate determination, fiscal and monetary policy in open economies, sovereign debt, crises in international financial markets. Prerequisite: ECON 52.

ECON 166. International Trade. 5 Units.

Different sources of comparative advantage in production and trade among nations. Aggregate gains from trade, winners and losers from globalization. International migration, outsourcing and multinational companies. Trade policy and international trade agreements. Theory, empirical evidence, and real-life anecdotes. Lectures supplemented by in-class debates on current topics from the popular press. Prerequisite: ECON 51.

ECON 180. Honors Game Theory. 5 Units.

Rigorous introduction to game theory and applications. Topics include solution concepts for static and dynamic games of complete and incomplete information, signaling games, repeated games, bargaining, and elements of cooperative game theory. Applications mainly from economics, but also political science, biology, and computer science. Prerequisites: Experience with abstract mathematics and willingness to work hard. No background in economics required.

ECON 182. Honors Market Design. 5 Units.

Rigorous introduction to the theory of matching and resource allocation, and its application to practical market design. Theory covers two-sided matching, "house allocation" problems, random assignment, and their variants. Applied topics include school choice, labor market, house allocation, and organ allocation for transplantation. Final paper required. Forms a sequence with ECON 180 and ECON 181, but can be taken independently. Prerequisites: Experience with abstract mathematics and willingness to work hard. No prior knowledge of economics is required, although basic knowledge in game theory is useful.

ECON 183. The Cardinal Fund. 1-3 Unit.

This is an experiential course that will cover the important concepts that underlying investment theory in Financial Economics. Students will manage an investment portfolio of at least \$1 million dollars. In doing so they will learn how risk and return are related in public capital markets. Students are expected to spend a substantial amount of time outside the classroom applying the knowledge they learn in the class. Prerequisites: Econ 51 (or IPS 204A, PubIPol 301A), Econ 102B (or Stats 141, Stats 110, CEE 203, Earthsys 160, Educ 200C, Linguist 277, Psych 252), Econ 140 (or Econ 135), Econ 190 (or MS&E 140).

ECON 190. Introduction to Financial Accounting. 5 Units.

How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.

ECON 191. Introduction to Cost Accounting. 5 Units.

Focuses on how managers use accounting information for decision making. Students will study product and service costing, activity based costing, performance management and evaluation, CVP analysis, forecasting, factors to be considered in pricing decision, capital investment analysis, and quality management and measurement.

ECON 198. Junior Honors Seminar. 5 Units.

Primarily for students who expect to write an honors thesis. Weekly sessions discuss writing an honors thesis proposal (prospectus), submitting grant applications, and completing the honors thesis. Readings focus on writing skills and research design. Students select an adviser, outline a program of study for their senior year, and complete a prospectus by the end of the quarter. Enrollment limited to 12. Same as: PUBLPOL 197

ECON 199D. Honors Thesis Research. 1-10 Unit.

In-depth study of an appropriate question and completion of a thesis of very high quality. Normally written under the direction of a member of the Department of Economics (or some closely related department). See description of honors program. Register for at least 1 unit for at least one quarter after your honors application is approved.

ECON 202. Microeconomics I. 2-5 Units.

(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.

ECON 202N. Microeconomics I For Non-Economics Ph.Ds. 2-5 Units.

Core Economics modules 1 and 2 for non-Economics PhD students. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.

ECON 203. Core Economics: Modules 5 and 6. 2-5 Units.

(Non-Economics graduate students register for 203N.) Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities and public goods. The theory of imperfect competition: static Bertrand and Cournot competition, dynamic oligopoly, entry decisions, entry deterrence, strategic behavior to alter market conditions. Limited enrollment. Prerequisite: ECON 202.

ECON 203N. 203 For Non-Economics Ph.D. Students. 2-5 Units.

Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: ECON 202N or consent of instructor.

ECON 204. Microeconomics III. 2-5 Units.

Social Choice, including Arrow's theorem, the Gibbard-Satterthwaite theorem, and the Vickrey-Clarke-Groves mechanism. The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. Competitive equilibrium and the core. Limited enrollment. Non-Econ students need permission of instructor to enroll. Prerequisite: ECON 203.

ECON 210. Macroeconomics I. 2-5 Units.

Dynamic economics applied to aggregate economic fluctuations and economic growth. Solving dynamic, stochastic rational expectation models using discrete time dynamic programming. Growth theory (neoclassical models, growth accounting, technical change, endogenous growth) using optimal control theory. Limited enrollment.

ECON 211. Core Economics: Modules 11 and 12. 2-5 Units.

Growth theory (neoclassical models, growth accounting, technical change, endogenous growth) using optimal control theory. Introduction to financial markets and uncertainty. Limited enrollment. Prerequisite: ECON 210.

ECON 212. Macroeconomics III. 2-5 Units.

General equilibrium with incomplete markets: precautionary savings; income, wealth, and consumption distribution; constrained efficiency. Endogenous market incompleteness: limited commitment, moral hazard, hidden income and hidden savings; recursive contracts. Optimal income taxation: the primal approach; taxation of capital income; optional taxation with heterogeneity; commitment and time inconsistency. Monetary theory and policy: time series techniques to characterize and evaluate policy; models with rational expectations and rigidities; the Lucas critique; time inconsistency; staggered price and wage setting; optimal policy rules; the term structure of interest rates. Limited enrollment. Prerequisites: ECON 203, ECON 211.

ECON 214. Development Economics I. 2-5 Units.

This is a two-part course bridging macro and micro development research. The first part covers the roles of institutions, ethnic conflict, and governance in economic development; and barriers to agricultural productivity in less developed countries. The second part focuses on dynamic models of growth and development, with a focus on migration; technological change; and the functioning of financial markets. Prerequisites: 202 or 202N, 270.

ECON 215. Economic Development II. 2-5 Units.

Microeconomic issues in less developed countries. Topics: health; education; gender; intra-household models; entrepreneurship; market institutions; non-market institutions; political economy. Prerequisites: 202 or 202N, 270.

ECON 216. Development Economics III. 2-5 Units.

Use of quantitative theory to understand various aspects of the growth and development process. Emphasis on family and demographic issues and their importance for development. Theoretical models of fertility and marriage decisions, and their empirical relevance. Unified growth theories: demographic transition and industrial revolution. Family institutions such as marriage payments and polygamy. The political economy of family-related institutions, e.g. the evolution of women's and children's rights. Female labor supply and development. Theories of disease and development. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272.

ECON 217. Topics in International Macroeconomics: Theory and Evidence for Latin America. 2-5 Units.

Banking systems, interest rates, regulatory policies, and the productivity of capital in developing countries. Controlling inflation: fiscal and monetary policies for macroeconomic stability. Currency crises, exchange rates, and the liberalization of foreign trade. Further applications to transitional socialist economies in Asia and E. Europe.

ECON 220. Political Economy I. 2-5 Units.

Theoretical models of political economy. Potential topics include: basic social choice theory, direct democracy, electoral competition, political accountability, legislative bargaining, lobbying, corruption, nondemocratic succession, conflict and arms races, and institutional change. Attention to economics implications, including taxation, redistribution, and public goods. Prerequisite: 203 recommended.

ECON 225. Economics of Technology and Innovation. 2-5 Units.

Graduate seminar on current research on the economics of innovation. Topics include the design of optimal patent policies, copyright policies, and the role of human capital (science, immigration, skill-biased technical change). Emphasis on empirical analyses of historical and contemporary data.

ECON 226. U.S. Economic History. 2-5 Units.

The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the American national system of technology; the Great Depression of the 30s; national economic performance in a globalizing world. Prerequisite: ECON 51 and ECON 52. Intended for graduate students.

ECON 227. European Economic History. 2-5 Units.

European economic history from middle ages to the twentieth century. Topics: competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; formation, function, and persistence of institutions and organizations; the role of institutions and organizations (e.g. apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the economics of migration; the changing economic role of the family. Use of economic theory in guiding hypothesis testing, as well as construction of new datasets and the execution of empirical analysis.

ECON 228. Institutions and Organizations in Historical Perspective. 2-5 Units.

The course integrates historical analysis and economic theory in evaluating the nature and role of institutions in economic and political outcomes. The motivating question is the factors determining economic and political developments in the long run and the historical focus is on the Middle East, Europe, and China over the last millennium. The course first examines various approaches for the study of institutions, their nature and dynamics and then focuses on detailed discussions of frontier research papers.

ECON 233. Advanced Macroeconomics I. 2-5 Units.

Topics in the theory and empirics of economic growth. For PhD-level students.

ECON 234. Advanced Macroeconomics II. 2-5 Units.

Modern macroeconomics of aggregate fluctuations in advanced economies, concentrating mainly on the U.S. Current research on sovereign debt, fiscal policy and financial flows, with emphasis on current events. Current research on persistent substandard performance, financial crises, excess unemployment, and other timely topics. The course will be organized around the detailed study of recent research papers. Half of the lectures will be given by guests specializing in macro fluctuations research.

ECON 235. Advanced Macroeconomics III. 2-5 Units.

Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.

ECON 236. Financial Economics I. 2-5 Units.

Tools: solving choice problems and equilibrium models with multiple risky assets, many agents, and frictions. Applications: household finance (including housing and mortgage choice); risk sharing and financial innovation; economies; trading volume; international capital flows and financial market integration. Prerequisites: 210, 211, 212.

ECON 237. Financial Economics II. 2-5 Units.

Topics in financial Economics. Discussion of recent academic papers on asset pricing. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance.

ECON 239D. Directed Reading. 1-10 Unit.

May be repeated for credit.

ECON 241. Public Finance and Taxation I. 2-5 Units.

Design of tax systems, transfers intended to alleviate poverty, the effect of taxes on earnings, fees intended to internalize externalities like pollution, school finance and other forms of fiscal federalism, local public goods such as schools. Students will learn to apply sophisticated applications of frontier applied econometric techniques including synthetic controls, regression discontinuity, advanced instrumental variables methods. Prerequisites: ECON 202-204, ECON 210, ECON 270, ECON 271, or equivalent with consent of instructor.

ECON 242. Public Finance and Taxation II. 2-5 Units.

Topics concerning public goods provision, government interventions into private insurance markets, adverse selection, and social insurance design. We also explore questions in the intersection of public and family economics such as the unit of taxation, and the interaction between social insurance and intra-family insurance. Prerequisites: 202, 203, 204, 210, 270, 271, or equivalent with consent of instructor. Recommended: 241.

ECON 246. Labor Economics I. 2-5 Units.

Topics in current applied microeconomic research including intertemporal labor supply models, public policy, program evaluation, job search, migration, consumption behavior. Student and faculty presentations.

ECON 247. Labor Economics II. 2-5 Units.

Recent topics in applied micro, focusing on papers from top journals (QJE, AER, JPE, Econometrica and REStud) over the last ten years. Broad overview of current topic and techniques in applied-micro research. Topics include inequality, polarization and skill-biased technical change, discrimination, technology adoption and the spread of information, management practices, field experiments, peer effects and academic spillovers. Combination of student and faculty presentations. Additional sessions on general presentations, paper writing and research skills to prepare for job market. Class trip to the NBER West-Coast labor meetings at the San Francisco Fed.

ECON 248. Labor Economics III. 2-5 Units.

Topics in current applied microeconomic research including skill-biased technical change, income distribution, program evaluation, job search, migration, consumption behavior. Student and faculty presentations.

ECON 249. Topics in Health Economics. 2-5 Units.

Course will cover various topics in health economics, from theoretical and empirical perspectives. Topics will include demand and supply in health insurance, healthcare provision, physicians' incentives, competition policy in healthcare markets, intellectual property in the context of pharmaceutical drugs, and the interaction between public and private sectors in healthcare markets. Key emphasis on recent work and empirical modelling. Prerequisites: Micro and Econometrics first year sequences (or equivalent).

ECON 250. Environmental Economics. 2-5 Units.

Theoretical and empirical analysis of sources of and solutions to environmental problems, with application to local pollution challenges and global environmental issues such as climate change. Topics include: analysis of market failure, choice of environmental policy instruments, integrating environmental and distortionary taxes, environmental policy making under uncertainty, valuing environmental amenities, and measuring /promoting sustainable development.

ECON 251. Natural Resource and Energy Economics. 2-5 Units.

Management and provision non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: fisheries problems and policy; energy industry market structure, pricing, and performance; and policies to facilitate transitions from non-renewable to renewable energy. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

ECON 252. The Future of Finance. 2 Units.

If you are interested in a career in finance or that touches finance (legal, regulatory, corporate, public policy), this course will give you a useful perspective. We will survey the players and current landscape of the global markets as the world continues to evolve from the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world and this will include guest-lecturer perspectives on where the greatest opportunities exist for students entering or touching the world of finance today. The course will also review, in a non-technical way, the basics of the financial derivatives and other quantitative techniques that are a core part of the global capital markets. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application found on the Public Policy website to the instructor at tbeder@stanford.edu. Please visit <https://publicpolicy.stanford.edu/academics/undergraduate/> forms to locate the Consent Application Form for this class. The form is located on the Public Policy website under "Academics" and "Forms." See Consent Application Form for submission deadline. Same as: ECON 152, PUBLPOL 364, STATS 238

ECON 253. Energy Markets: Theory and Evidence from Latin America. 2-5 Units.

What theory and practice around the world and in Latin America tell us about the design of energy markets; how distributional impacts and enforcement capabilities affect their implementation. Topics include: pricing in wholesale electricity markets, role of long-term contracting, auction design, evidence from spot and contract markets ; design of markets for pollution permits, alternative environmental policy instruments, evidence from existing and proposed carbon markets and others, imperfect information, adverse selection in opt-in provisions, effect on innovation, interaction between markets, market power. Advanced undergraduates and masters students are welcome to enroll.

ECON 257. Industrial Organization I. 2-5 Units.

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

ECON 258. Industrial Organization IIA. 2-5 Units.

Topics include theoretical and empirical analyses of adverse selection and insurance markets; empirical models of learning; vertical restraints and bundling; auctions.

ECON 259. Industrial Organization II B. 2-5 Units.

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; economics of antitrust and regulation, with focus on energy and environmental economics; the role of information asymmetries in markets: adverse selection and moral hazard, with focus on insurance and credit markets.

ECON 260. Industrial Organization III. 2-5 Units.

Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: ECON 257, ECON 258.

ECON 265. International Economics I. 2-5 Units.

International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

ECON 266. International Economics II. 2-5 Units.

This course covers an introduction to models of international trade and economic geography from both a theoretical and an empirical perspective.

ECON 267. Topics in International Trade. 2-5 Units.

Topics from the frontier of current international trade research, presented through recent theoretical and empirical papers. Firm heterogeneity in trade and firms' export decisions. Different types of foreign direct investment. Multinational firms and the interaction between international trade and the theory of the firm. Institutional frictions and their effects on trade and FDI activity. Course goal is to prepare students for doing research in international trade and related fields.

ECON 270. Intermediate Econometrics I. 2-5 Units.

Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

ECON 271. Intermediate Econometrics II. 2-5 Units.

Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis. Limited enrollment. Prerequisite: 270.

ECON 272. Intermediate Econometrics III. 2-5 Units.

Continuation of 271. Nonlinear estimation, qualitative response models, limited dependent variable (Tobit) models. Limited enrollment. Prerequisite: 271.

ECON 273. Advanced Econometrics I. 2-5 Units.

Possible topics: parametric asymptotic theory. M and Z estimators. General large sample results for maximum likelihood; nonlinear least squares; and nonlinear instrumental variables estimators including the generalized method of moments estimator under general conditions. Model selection test. Consistent model selection criteria. Nonnested hypothesis testing. Markov chain Monte Carlo methods. Nonparametric and semiparametric methods. Quantile Regression methods.

ECON 274. Advanced Econometrics II. 2-5 Units.

(Formerly 273B); Possible topics: nonparametric density estimation and regression analysis; sieve approximation; contiguity; convergence of experiments; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality; multiple hypothesis testing.

ECON 275. Time Series Econometrics. 2-5 Units.

Stochastic processes and concepts such as stationarity, ergodicity, and mixing. Inference with heteroskedastic and autocorrelated time series; autoregressive and moving average models; unit root processes and asymptotic analysis of such; tests for structural change; vector autoregressive models; cointegration; impulse response analysis; forecasting; ARCH and GARCH volatility models. Prerequisites: 270, 271.

ECON 276. Limited Dependent Variables. 2-5 Units.

(Formerly 274) Parametric and semi-parametric approaches to the estimation of econometric models with discrete or limited dependent variables. Maximum likelihood, linear and nonlinear panel data, duration models, rank estimation and index models, Bayesian approaches and MCMC, measurement error models, dynamic programming discrete choice analysis and dynamic discrete games. models. Prerequisite: ECON 273 or consent of instructor.

ECON 277. Behavioral and Experimental Economics III. 2-5 Units.

Economics 277 is a course for graduate students in the Economics department writing dissertations with behavioral or experimental components. Economics 277 is part of a three course sequence (along with Econ 278 & 279), which has two main objectives: 1) examining theories and evidence related to the psychology of economic decision making; 2) introducing methods of experimental economics, and exploring major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objectives of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

ECON 278. Behavioral and Experimental Economics I. 2-5 Units.

This is the first half of a three course sequence (along with Econ 277 & 279) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

ECON 279. Behavioral and Experimental Economics II. 2-5 Units.

This is part of a three course sequence (along with Econ 277 & 278) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

ECON 282. Contracts, Information, and Incentives. 2-5 Units.

Basic theories and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, design of mechanisms and markets with limited communication, long-term relationships under commitment and under renegotiation, property rights and theories of the firm.

ECON 283. Theory and Practice of Auction Market Design. 2-5 Units.

Basics of auction theory and recent contributions. Multi-item and combinatorial auctions. Robust auction design. Applied auction design with practical applications. Applied topics may include auctions for Internet advertising, radio spectrum auctions, securities markets, commodities, and complex procurements.

ECON 285. Matching and Market Design. 2-5 Units.

This is an introduction to market design, intended mainly for second year PhD students in economics (but also open to other graduates students from around the university and to undergrads who have taken undergrad market design). It will emphasize the combined use of economic theory, experiments and empirical analysis to analyze and engineer market rules and institutions. In this first quarter we will pay particular attention to matching markets, which are those in which price doesn't matter; do all of the work, and which include some kind of application or selection process. In recent years market designers have participated in the design and implementation of a number of marketplaces, and the course will emphasize the relation between theory and practice, for example in the design of labor market clearinghouses for American doctors, and school choice programs in a growing number of American cities (including New York and Boston), and the allocation of organs for transplantation. Various forms of market failure will also be discussed. Assignment: One final paper. The objective of the final paper is to study an existing market or an environment with a potential role for a market, describe the relevant market design questions, and evaluate how the current market design works and/or propose improvements on the current design.

ECON 286. Game Theory and Economic Applications. 2-5 Units.

Aims to provide a solid basis in game-theoretic tools and concepts, both for theorists and for students focusing in other fields. Technical material will include solution concepts and refinements, potential games, supermodular games, repeated games, reputation, and bargaining models. The class will also address some foundational issues, such as epistemic and evolutionary modeling. Prerequisite: 203 or consent of instructor.

ECON 288. Computational Economics. 2-5 Units.

Overview of numerical analysis. Computational approaches to solving economic problems, including dynamic programming, projection and perturbation. General equilibrium models, new Keynesian models, Krusell-Smith model, international trade models, and dynamic games. Numerical methods for large-scale applications (Smolyak, GSSA, EDS). Parallel computation, GPUs and supercomputers. Prerequisite: equivalent of first-year graduate core economics sequence.

ECON 289. Advanced Topics in Game Theory and Information Economics. 2-5 Units.

Topics course covering a variety of game theory topics with emphasis on market design, such as matching theory and auction theory. Final paper required. Prerequisites: ECON 285 or equivalent. ECON 283 recommended.

ECON 290. Multiperson Decision Theory. 4 Units.

Students and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.

ECON 291. Social and Economic Networks. 2-5 Units.

Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.

ECON 299. Practical Training. 1-10 Unit.

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

ECON 300. Third-Year Seminar. 1-10 Unit.

Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.

ECON 310. Macroeconomic Workshop. 1-10 Unit.

.

ECON 315. Development Workshop. 1-10 Unit.

.

ECON 325. Economic History Workshop. 1-10 Unit.

May be repeated for credit.

ECON 335. Experimental/Behavioral Seminar. 1-10 Unit.

Field seminar in experimental and behavioral economics.

ECON 341. Public Economics and Environmental Economics Seminar. 1-10 Unit.

Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies; their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation. Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: ECON 241 or consent of instructor.

ECON 345. Applications Workshop. 1-10 Unit.

.

ECON 354. Workshop in Law and Economics. 2-6 Units.

.

ECON 355. Industrial Organization Workshop. 1-10 Unit.

Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research paper, make a formal presentation, and lead a structured discussion.

ECON 365. International Trade Workshop. 1-10 Unit.

.

ECON 370. Econometrics Workshop. 1-10 Unit.

.

ECON 391. Microeconomic Theory Seminar. 1-10 Unit.

.

ECON 400. Ph.D. Dissertation. 1-15 Unit.

Pre-TGR dissertation research.(Staff).

ECON 801. TGR Project. 0 Units.

.

ECON 802. TGR Dissertation. 0 Units.

.

Education Courses

EDUC 11SC. Work and Family. 2 Units.

Examination into the forces behind the rise in women's paid work and subsequent changes in the workplace and in families. Topics include gendered division of labor, decisions about marriage and childrearing, economic issues, employers' role in structuring work and family, and public policy issues such as anti-discrimination laws, divorce laws, and subsidized child care.

EDUC 12SC. Hip Hop as a Universal Language. 2 Units.

This seminar-cipher considers the prospect of Hip Hop as a Universal Language. Hip Hop Culture has captured the minds of youth "all around the world, from Japan to Amsterdam" (like the homie Kurupt says), shaping youth identities, styles, attitudes, languages, fashions, and both physical and political stances. The field of global Hip Hop studies has emerged as scholars around the world grapple with what is arguably the most profound cultural, musical, and linguistic youth movement of the early 21st century. Participants in this seminar-cipher will be engaged in critical discussions around a particular constellation of concerns: Hip Hop Cultures, youth identities, the politics of language, race, and ethnicity, and the simultaneous processes of globalization and localization. Through the examination of various texts (scholarly readings, documentary films, guest speakers and artists), we span the Global Hip Hop Nation through scenes as diverse as Hong Kong's urban center, Germany's Mannheim inner-city district of Weststadt, the Brazilian favelas, the streets of Lagos and Dar es Salaam, and the hoods of the San Francisco Bay Area to explore Hip Hop's global linguistic flows.

EDUC 13SC. Language, Identity, and the Power of Public Discourse. 2 Units.

Have you ever engaged in a conversation with someone who sounds different than you expect? This course explores instances like those that highlight the interaction between language and identity and its implications for learning. The theme of language and identity emerges as significant because of the subtle yet powerful impact it has on our cultural interactions. We have an inherent expectation of how we expect people to communicate. Yet, do these expectations interfere with teaching and learning practices? Many individuals take seminars and classes that focus on teaching professional modes of communication and discourse. This course will offer a detailed examination of scholarship that investigates the power of the subtle messages embedded in language. In addition, to gain a sense of the power of these interactions in practice, we will engage in the following research activities: (a) Participants will engage in school site visits to examine these interactions in practice; (b) Participants will engage in critical interviews of broadcasters at a local television station to discuss the role of language and identity in their presentation; and (c) We will visit a recording studio to discuss the role of language and identity with local hip-hop producers and artists.

EDUC 14SC. Public Education and Schooling: The Great Equalizer or the Fiercely Competitive Field?. 2 Units.

Everyone seems to have an opinion about the American educational landscape. After all, we all have attended schools of various sorts, which help to shape our understandings about education. Yet, the political, social, and cultural terrains are ever-changing, especially within public education. This seminar will focus on some of the main current issues in U.S. urban schools. This course will take an interdisciplinary approach to examining major issues facing public schools today and to discussing effective policies and practices. There are two main components to the seminar: first, students will engage in a review of current educational research and policy; and second, they will conduct some service learning activity in a local, low-income public high school. In small groups, students will co-design projects that both draw on ideas generated from their readings and discussions and involve local high school students and educators. Through various lenses, we will survey the landscape of urban education in the United States and explore myriad theories or explanations for existing conditions, crises, and policies. Students will read a number of works that focus on the multiple environs of the educational system; the economy, the political context, the demands of accountability and standardization, residential patterns, and social and cultural relationships. Such explanations and issues may transcend U.S. boundaries and could be applicable in multiple contemporary urban education settings.

EDUC 32X. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations. Same as: AFRICAAM 32, AMSTUD 32, CSRE 32A, EDUC 432X, TAPS 32

EDUC 98X. Service Learning Practicum. 1 Unit.

For Alternative Spring Break program leaders. The skills and philosophical framework to develop and lead an ASB experience.

EDUC 100A. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar revolves around race, ethnicity, and higher education with a particular emphasis on Asian American issues. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

EDUC 100B. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar revolves around race, ethnicity, and higher education with a particular emphasis on Asian American issues. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit. Same as: FEMGEN 107B

EDUC 100C. EAST House Seminar: Current Issues and Debates in Education. 1-2 Unit.

"This is Water:" An Inquiry into the Culture at Stanford and Your Personal Values. In a commencement address at Kenyon College, David Foster Wallace shares the following story: "There are these two young fish swimming along, and they happen to meet an older fish swimming the other way, who nods at them and says, 'Morning, boys. How's the water?' And the two young fish swim on for a bit, and then eventually one of them looks over at the other and goes, 'What the hell is water?'" Wallace goes on to say that "the most obvious, important realities are often the ones that are hardest to see and talk about." In this class, we will explore the water that we are swimming in everyday: the culture at Stanford and our personal values. The two may be in resonance or in tension. Through a variety of readings and ethnographic activities, such as making observations and collecting cultural artifacts, we will become ethnographers of our own institution. We will supplement this inquiry with a personal archeology: digging out our own personal set of values and examining how they connect or conflict with "mainstream" culture at Stanford. This will involve a suite of practices that may prove useful in your everyday life: mindfulness practices, self-reflection prompts, and partner exercises all designed to help you access and articulate your personal values. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

EDUC 101. Introduction to Teaching and Learning. 4 Units.

This course is designed to help undergraduates explore career interests in education; it is the core course for the Undergraduate Minor in Education, and fulfills requirements for Honors in Education. The course considers the philosophy, history, politics, professional practice and social structures of teaching in the United States. Students will read and discuss teaching theory and research, participate in learning activities and visit school teaching sites, as well as examine and analyze artifacts and models of teaching.

EDUC 102. Examining Social Structures, Power, and Educational Access. 2-3 Units.

Goal is to prepare Education and Youth Development fellows for their work with adolescents in the Haas Center's pre-college summer programs and to define their role in addressing educational inequities in the summer programs and beyond.

EDUC 103A. Tutoring: Seeing a Child through Literacy. 3-4 Units.

Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). May be repeated for credit. Same as: EDUC 203A

EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students. Same as: AFRICAAM 106, CSRE 103B, EDUC 337

EDUC 105X. Introduction to Education Research for Undergraduates. 3 Units.

EDUC 105X explores types and purposes and products of education research. Broadly, this seminar course is designed to support Stanford undergraduates in exploring academic and career interests in education; specifically, this course satisfies requirements for the Education Minor, and supports students considering application to the Education Honors Program. In this course we consider what defines education research, and what factors make for quality research. Each week we will read current research by School of Education scholars and welcome the researcher-authors as guest speakers to the class. Students will identify an education topic of interest and write an educational literature review to that topic.

EDUC 106. Interactive Media in Education. 3-5 Units.
Workshop.**EDUC 109X. Educational Issues in Contemporary China. 3-4 Units.**

Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

Same as: EDUC 309X

EDUC 110. Sociology of Education: The Social Organization of Schools. 4 Units.

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 310, SOC 132, SOC 332

EDUC 111. The Young Adult Novel: A Literature For and About Adolescents. 4 Units.

For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminous program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.

EDUC 112X. Urban Education. 3-4 Units.

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, CSRE 112X, EDUC 212X, SOC 129X, SOC 229X

EDUC 113X. Gender and Sexuality in Schools. 1-3 Unit.

Issues at the intersection of queer theory and educational practice.

Experiences, rights, and responsibilities of lesbian, gay, bisexual, transgender, intersex, queer, and questioning students and teachers as members of marginalized or majority cultures.

EDUC 114N. Growing Up Bilingual. 3 Units.

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

Same as: CHILATST 14N, CSRE 14N

EDUC 115N. How to Learn Mathematics. 3 Units.

What is going on in mathematics education in the United States? Why do so many people hate and fear math? What contributes to the high levels of innumeracy in the general population? Why do girls and women opt out of math when they get a chance? In this seminar we will consider seminal research on math learning in K-12 classrooms, including a focus on equity. We will spend time investigating cases of teaching and learning, through watching videos and visiting schools. This seminar is for those who are interested in education, and who would like to learn about ways to help students (and maybe yourselves?) learn and enjoy mathematics. If you have had bad math experiences and would like to understand them better; and put them behind you; this seminar will be particularly good for you. The final project for this class will involve developing a case of one or more math learners, investigating their journeys in the world of math.

EDUC 116N. Howard Zinn and the Quest for Historical Truth. 3 Units.

With more than two million copies in print, Howard Zinn's *A People's History* is a cultural icon. We will use Zinn's book to probe how we determine what was true in the past. *A People's History* will be our point of departure, but our journey will visit a variety of historical trouble spots: debates about whether the US was founded as a Christian nation, Holocaust denial, and the "Birther" controversy of President Obama.

Same as: HISTORY 116N

EDUC 116X. Service Learning as an Approach to Teaching. 3 Units.

History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning.

EDUC 117. Research and Policy on Postsecondary Access. 3 Units.

The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).

Same as: EDUC 417

EDUC 118S. Designing Your Stanford. 2 Units.

DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to Design Thinking. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Admission to be confirmed by email to ACESS registered students prior to first class session. More information at www.designingyourstanford.org.

Same as: ME 104S

EDUC 120C. Education and Society. 4-5 Units.

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 220C, SOC 130, SOC 230

EDUC 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, LINGUIST 155

EDUC 123X. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor. Same as: AFRICAAM 130, CSRE 130, EDUC 322

EDUC 126A. Introduction to Public Service Leadership. 1-2 Unit.

Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.

EDUC 126B. Public Service Leadership Program Practicum. 1 Unit.

This course is for students in the Public Service Leadership Program offered through the Haas Center for Public Service. The PSLP Practicum provides an opportunity for PSLP students to reflect on their own leadership experiences and to learn from each other's leadership experiences while continuing to build a community of peer service leaders. The PSLP Practicum will meet every other week throughout the quarter.

EDUC 127X. The Wellbeing of Children in Immigrant Families. 2 Units.

This course will examine the many factors that affect the social, educational, and medical wellbeing of children in immigrant families. It will do so through a case study of the immigrant children who currently live in the Buena Vista Mobile Home Park in Palo Alto. The course will approach this issue from a Service-Learning perspective, and will be a collaboration between faculty and students from Stanford and the leaders of the Buena Vista residents association. The course will meet once a week for 90 minutes during the winter quarter. In addition, each student will spend 3-4 hours per week meeting with residents of the Buena Vista Mobile Home Park. To the extent possible, and with parents' knowledge and permission, students will interact with and get to know the children who live in the park, with a focus on children in school grades 6-12.

EDUC 128X. Professional and Leadership Development for Frosh. 1-2 Unit.

As frosh often have difficulty finding relevant job/internships at this early stage in their education, this course represents a more thorough and direct approach to professional and leadership development. As a small cohort within Stern Hall, we will begin early discussion of career interests and exploration, develop an understanding of individual leadership styles, and garner professional leadership skill sets relevant to myriad sectors and resources to aid in this process. Final projects will work toward off site visits during spring break to explore these sectors hands-on and discuss content learned in class with key industry leaders.

EDUC 130. Introduction to Counseling. 3 Units.

The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full efforts within reasonable time limits to improve their competence.

Same as: PSYCH 148

EDUC 131. Mediation for Dispute Resolution. 3 Units.

Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

Same as: PSYCH 152

EDUC 132N. Religion, Music and Identity. 3 Units.

Music is one of the most powerful artistic media in American culture. From coffee shops to shopping malls, it plays a crucial role in creating both common experiences and individual conceptions of self. Yet, music also has this powerful ability to seemingly transcend particular people, moments, or places. What is it about music that can so strongly anchor us to our own experiences, and paradoxically shake us loose from our mornings and wake us from our everyday lives? Lots of people have stories about music that evidences both of these tendencies. But nowhere else are these two, seemingly opposing qualities on display than in the music of religious communities. Whether we are talking about Gregorian chant, contemporary Christian worship music, Jewish cantillation of Sufi qawwali, music and musical style play a central role in the experience of ritual and in shaping how people understand themselves in relation to it. But what is it about music that fuels that experience? Does music have to be "religious" to do that kind of cultural work? Can you have a "religious" experience in a "secular" setting? The answer might depend on your relationship to the music you are hearing or playing. In this seminar, we are going to explore these questions by attending first and foremost to the sounds of religious life. We are going to begin by listening, and expand our understandings through readings and ethnographic fieldwork. Each of these modes of exploration will provide us with greater insight into the role that music plays in shaping religious experience and, in turn, how people understand themselves in relationship to both religion and music.

EDUC 133N. The Role of Language in Education and Society. 3 Units.

The goal of this course is to explore the various issues affecting educational policy and classroom practice in multilingual, multicultural settings. In this class we will examine US and international cases to illustrate more general concerns relating to learners' bilingual/multilingual development in formal educational settings. We begin at the macro level, looking at policy contexts and program structures, and move to the micro level to consider teaching and learning in the multilingual classroom. Throughout, we consider how discourses and identities are interwoven in multilingual education policy and practice. We will also consider the role of communities in implementing change in schools.

EDUC 134. Career and Personal Counseling. 3 Units.

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 234, PSYCH 192

EDUC 135X. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 335X, HUMBIO 26, MED 235

EDUC 136. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 306D, SOC 231

EDUC 136B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, CSRE 126B, EDUC 236B, PUBLPOL 126B

EDUC 139X. Educating Young STEM Thinkers. 3-5 Units.

The course will introduce students to the design thinking process, the national conversations about the future of STEM careers, and provide opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course will be both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 239X, ME 139, ME 231

EDUC 140. Honors Research. 1-5 Unit.

Provides opportunity for research in pursuit of senior honors theses.

EDUC 145. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: CSRE 243, EDUC 243

EDUC 146X. Perspectives on the Education of Linguistic Minorities. 3-4 Units.

Social, political, linguistic, and pedagogical issues associated with educating students who do not speak the language or language variety of the majority society. Focus is on the U.S.; attention to minorities elsewhere. American attitudes toward linguistic and racial minorities. Educational problems of linguistically different children and non-English- or limited-English-speaking children. Approaches to solving problems.

EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners. 3 Units.

Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.

EDUC 149. Theory and Issues in the Study of Bilingualism. 3-5 Units.

Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings.

Same as: EDUC 249

EDUC 155X. First Year Reflections Seminar. 1 Unit.

Restricted to first-year undergraduates; limited enrollment. There are two options for how to participate. You can either enroll in three class weekday sessions weeks 4, 5 & 6 or one Saturday section. These times provide a structured time for students to explore their identities, values, and the kind of lives they want to lead. Exercises and discussions led by faculty, staff, and upper-class student co-facilitators. Tuesday sessions will occur on 1/27, 2/3 & 2/10, Wednesday sessions will occur on 1/28, 2/4 & 2/11, Thursday sessions will occur on 1/29, 2/5 & 2/12, Saturday section is on 1/31, 2/7 OR 2/14 (Saturday sessions are longer and students only participate in one).

EDUC 157X. Education & Poverty: Research & Solutions. 1 Unit.

This year-long workshop focuses on current research regarding the relationship between poverty, schooling, and educational success. Invited speakers will discuss current research and strategies for improving the educational outcomes of low-income students. Students will read and discuss current research and discuss current strategies for improving education for low-income students. Students may enroll for one quarter at a time or for the entire year.

EDUC 165. History of Higher Education in the U.S.. 3-5 Units.

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 265, HISTORY 158C

EDUC 170X. Preparation for Independent Public Service Projects. 2 Units.

Open only to recipients of the Haas Summer Fellowship, which offers students the opportunity to initiate and carry out an innovative service project in collaboration with a community partner. Goal is to expand upon the work fellows did during the application process with respect to the feasibility and sustainability of their field projects.

EDUC 171. Early Childhood Education Practicum. 2-4 Units.

Restricted to students who participate in a service learning program focused on early math learning. Training for activities in preschool classrooms. Focus is on the teaching of math to young children, but also includes background on issues related to young children's cognitive, language, and social development; classroom management; cultural diversity; and early childhood education programs. May be repeated for credit.

EDUC 173. Gender and Higher Education: National and International Perspectives. 4 Units.

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 273, FEMST 173, SOC 173, SOC 273

EDUC 176X. The Design of Technologies for Casual Learning - Lab. 1 Unit.

Lab. Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term "casual" is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in "extreme informal" learning circumstances (while "on the go", "any time and any place"). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

EDUC 177A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, CSRE 177E, HUMBIO 29A

EDUC 177B. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177B, CSRE 177F

EDUC 177C. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177C, CSRE 177G

EDUC 178X. Latino Families, Languages, and Schools. 3-5 Units.

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling.

Same as: EDUC 270

EDUC 180. Directed Reading in Education. 1-15 Unit.

For undergraduates and master's degree students. (All Areas).

EDUC 180S. Pre-field Course for Alternative Spring Break. 1 Unit.

Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more inform.

EDUC 181. Multicultural Issues in Higher Education. 4 Units.

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

Same as: EDUC 381

EDUC 183X. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.

Same as: CHILATST 183X, EDUC 283X

EDUC 185. Master's Thesis. 1-15 Unit.

(all areas).

EDUC 187X. Math Mentoring: Working in the Zone with Learners. 1-2 Unit.

The course focuses on how the tutorial relationship can help students learn mathematics. The course will provide background theory and knowledge as well as provide practical approaches to tutoring, supports for targeting activities to students' needs, selection of materials and activities, and ways to assess the progress of the students and reflect on your own experience. Topics will include social theories of learning, teaching for understanding, and challenges of students who are English language learners. In addition to attending 4, two-hour workshop classes, 1 hour of tutoring is required each week. The course will meet 4 times during the quarter for workshops and discussions following Friday tutoring sessions. Students will submit assignments on the Coursework site on weeks that the course does not meet. A 1 unit section of the course will run in Winter and Spring quarters.

Same as: EDUC 397X

EDUC 189X. Language and Minority Rights. 3 Units.

Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages.

Same as: CHILATST 189W, CSRE 189W

EDUC 190. Directed Research in Education. 1-15 Unit.

For undergraduates and master's students. May be repeated for credit. (all areas).

EDUC 191X. Introduction to Survey Research. 3-4 Units.

Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.

Same as: EDUC 291X

EDUC 192A. Interpersonal Learning & Leadership: An Introduction to the RA Role. 2 Units.

Preparing students for roles as Resident and Community Assistants, "Intelligent Leadership" explores research on college student development, leadership and the complex dynamics of our changing society both within and outside the college environment. Participants will engage in course work that builds skills relevant to their positions and allow students to implement these skills in a real world environment. Through reflection, self-examination and engagement in interpersonal dynamics and analysis, students will examine how their peer group develops while at the university.

EDUC 192B. Interpersonal Learning & Leadership - Row Staff Class. 2 Units.

"Interpersonal Learning & Leadership - Row Staff Class" explores research on leadership and the complex dynamics of our changing society. Participants will engage in course work intended to build skills relevant to being on a Row Staff team. Students will practice self reflection, risk taking, facilitating, decision-making and group leadership. Students will develop strategies to build community and facilitate challenging conversations while creating a safe environment for their peers to do the same.

EDUC 193A. Listen Up! Core Peer Counseling Skills. 2 Units.

Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.

EDUC 193B. Peer Counseling in the Chicano/Latino Community. 1 Unit.

Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.

EDUC 193C. Psychological Well-Being On Campus: Perspectives Of The Black Diaspora. 1 Unit.

Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.

EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives. 1 Unit.

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

Same as: ASNAMST 193F

EDUC 193G. Psychological Well-Being on Campus: A Focus on Gender and Sexual Identities. 1 Unit.

This course examines mental health and psychological well-being across the spectrum of gender and sexual identities. It addresses the unique challenges that face LGBTQ-identified students, and provides tools for supporting peers as they navigate these challenges. Discussion topics include current conceptualizations of gender identity and sexual orientation, including sexual and gender fluidity; the intersection of queer identities with multiple identities such as ethnic/racial identity and faith/spirituality; unpacking stereotypes; queer relationships and sexuality, coming out and disclosure, and mental health issues.

Same as: FEMGEN 193G

EDUC 193N. Peer Counseling in the Native American Community. 1 Unit.

Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.

EDUC 193P. Peer Counseling at the Bridge. 1 Unit.

Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.

EDUC 193S. Peer Counseling on Comprehensive Sexual Health. 1 Unit.

Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).

EDUC 196X. The Design of Technologies for Casual Learning. 3 Units.

Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as an prototype platform. The term "casual" is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in "extreme informal" learning circumstances (while "on the go", "anytime and any place"). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

Same as: EDUC 396X

EDUC 197. Education, Gender, and Development. 4 Units.

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. Same as: FEMGEN 297, SOC 134

EDUC 199A. Undergraduate Honors Seminar. 3 Units.

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

EDUC 199B. Undergraduate Honors Seminar. 1 Unit.

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

EDUC 199C. Undergraduate Honors Seminar. 1 Unit.

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

EDUC 200A. Introduction to Data Analysis and Interpretation. 4 Units.

Primarily for master's students in the School of Education. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.

EDUC 200B. Introduction to Qualitative Research Methods. 4 Units.

(Formerly EDUC 151.) Primarily for master's students: An introduction to the core concepts and methods of qualitative research. Through a variety of hands-on learning activities, readings, field experiences, class lectures, and discussions, students will explore the processes and products of qualitative inquiry. This is a graduate level course. No undergraduates may enroll. Priority will be given to GSE students, and final enrollment depends on instructor approval after the first day of class.

EDUC 200C. Introduction to Statistical Methods in Education. 3-4 Units.

(Formerly EDUC 160.) Basic techniques in descriptive and inferential statistics for educational research will be covered with an emphasis on rigorous preparation for intermediate and advanced courses. Topics include central tendency, variance, probability, distributions, confidence interval, t-test, F-test, correlation, regression, and analysis of variance. Non-parametric statistics and graphical principles for data representation will also be addressed. Students will also be introduced to STATA in preparation for subsequent higher level courses.

EDUC 201. History of Education in the United States. 3-5 Units.

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: AMSTUD 201, HISTORY 158B

EDUC 202. Introduction to Comparative and International Education. 4-5 Units.

Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena.

EDUC 202I. International Education Policy Workshop. 4 Units.

This is a project-based workshop. Practical introduction to issues in educational policy making, education reform, educational planning, implementation of policy interventions, and monitoring and evaluation in developing country contexts. Preference to students enrolled in ICE/IEAPA, but open to other students interested in international development or comparative public policy with instructor's consent. Attendance at first class required for enrollment.

EDUC 203. The Anthropology of Education. 3-5 Units.

Learning across situations, organizations, institutions, and cultures. How and when people learn and where, with whom and for what and how answers to these questions change across the lifespan. Schools in relation to other settings in which learning takes place for children, adolescents, and adults. Apprenticeship, mentorship, and learning through observation and imitation.

EDUC 203A. Tutoring: Seeing a Child through Literacy. 3-4 Units.

Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). May be repeated for credit.

Same as: EDUC 103A

EDUC 204. Introduction to Philosophy of Education. 3 Units.

How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required.

Same as: PHIL 231

EDUC 205X. The Impact of Social and Behavioral Science Research on Educational Issues. 3 Units.

Ways in which research intersects with educational policy and practice. Emphasis is on behavioral, social, and cognitive traditions. Topics include early childhood education, early reading, science education, bilingual education, school desegregation, class size reduction, classroom organization, violence and juvenile crime, and affirmative action in higher education. Policy debates and how research informs or fails to inform deliberations and decisions in these areas.

EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction. 1 Unit.

Required for M.A. students in ICE and IEPA. Orientation to the M.A. program and research project; exploration of resources for study and research.

EDUC 206B. Applied Research Methods in International and Comparative Education II: Master's Paper Proposal. 1-3 Unit.

Required for M.A. students in ICE and IEPA. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph.

EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis. 1 Unit.

Required for M.A. students in ICE and IEPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph.

EDUC 206D. Applied Research Methods in International and Comparative Education IV: Master's Paper Workshop. 3 Units.

Conclusion of the M.A. program in ICE and IEPA; required of M.A. students. Reviews of students' research in preparation for their master's monograph.

EDUC 208B. Curriculum Construction. 3-4 Units.

The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. Service Learning Course (certified by Haas Center).

EDUC 209A. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.

This is a required course for all POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209A is focused on orienting students to the academic and extra-curricular aspects of the experience as quickly as possible, while helping them coalesce as a group and learn how to leverage each other's professional knowledge. Another goal is to help student define their graduate degree goals, so they can plan their year in a very intentional manner that will result in a project or experiences they can highlight during the required Spring quarter POLS Project Forum.

EDUC 209B. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.

This is a required course for all POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209B focuses on building career skills and exposing students to a range of education research, policy, and practice and begins helping students conceptualize and frame their Spring POLS Project.

EDUC 209C. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.

This is a required course for POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209C focuses on developing the POLS Project for the Spring Forum while continuing to develop career skills and expose students to a range of education research, policy, and practice.

EDUC 210X. Policy, Organization, and Leadership Studies Internship Workshop. 1-3 Unit.

Forum for POLS students to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. Fall Quarter is focused on understanding the intern's role within the larger organization. Winter Quarter is outward looking with a focus on understanding the broader fields the students' organizations reside within. Spring Quarter focus is on students learning from and being prepared to teach others.

EDUC 211X. Beyond Bits and Atoms - Lab. 1-3 Unit.

This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

Same as: CS 402L

EDUC 212X. Urban Education. 3-4 Units.

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, CSRE 112X, EDUC 112X, SOC 129X, SOC 229X

EDUC 213. Introduction to Teaching. 3-4 Units.

Key concepts in teaching and learning; teacher content knowledge and pedagogical content knowledge; student prior knowledge and preconceptions; cognition and metacognition; classroom culture, motivation, and management; teaching diverse populations; comparison of teaching models; analysis of teaching; standards, accountability, and assessment of learning; assessing teaching quality; online learning and teaching.

EDUC 214. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the iquest;black boxiquest; of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores iquest;museum culturesiquest;; representations of iquest;selfiquest; and iquest;otheriquest; within museums and institutional cultures of the museum world itself.

Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, NATIVEAM 134

EDUC 215X. LDT Internship Workshop. 1-3 Unit.

The required internship is a cornerstone of the LDT program. This course will provide students an opportunity to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. It will allow the program director to monitor the quality of the experience and provide timely advice and support as needed for an optimal learning experience. The course will meet several times each quarter, adjacent to LDT seminar (Fridays, 12-1). An internship agreement will be required at the beginning of the course signed by the faculty advisor, as well as a reflection paper at the end of the course. Students will take the course for 1 unit, unless they request additional units for unpaid internship hours.

EDUC 216. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, CSRE 216X, HISTORY 255E

EDUC 217X. Histories and Futures of Humanistic Education: Culture and Crisis, Books and MOOCs. 5 Units.

Features of online education as they relate to the humanities and notions of engaged critical learning. Collaborative course, working in tandem with Professor Cathy Davidson's Duke course, The History and Future of High Education, using live chats, Google documents, and other forums to interact with students at Duke and other universities nationally. Each campus uses a syllabus linked to each instructor's angle into this general subject, but many readings and exercises in common. Seeing this as a critical moment in education, to connect this topic to its historical, cultural, political, and ethical implications. The Stanford course looks at early discussions about education and culture (Arnold's Culture and Anarchy) and then works through a key moment in the mid-20th century whose premises still have influence: the Two Cultures (humanities, sciences) debate. Radical responses to educational reform in France and the US in the late 60s, and the changing state of funding, value, and cultural critique in the late 20th and early 21st centuries. The idea of education as a personal, collective, and intellectual endeavor which is shaped by and shapes societies. Focus on the idea of the public good and the relation between education and a democratic society.

Same as: COMPLIT 265, DLCL 265

EDUC 218. Topics in Cognition and Learning: Executive Function. 3 Units.

Executive function is a construct that is rapidly taking on an increasingly central role in bringing together current research in cognitive development, learning, education, and neuroscience. In this seminar we will examine the potential cross-fertilization of these fields of inquiry primarily by reviewing research on learning and individual differences in cognitive neuroscience that may hold relevance to education, as well as reviewing educational research that may hold implications for developmental cognitive neuroscience. This seminar course is designed to engage students in recent advances in this rapidly growing research area via discussions of both historical and late-breaking findings in the literature. By drawing on a breadth of studies ranging from cognitive development, cognitive neuroscience, and educational/training studies, students will gain an appreciation for specific ways interdisciplinary approaches can add value to specific programs of research.

EDUC 219E. The Creative Arts in Elementary Classrooms. 1 Unit.

For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.

EDUC 220A. Introduction to the Economics of Education. 4 Units.

The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit.

EDUC 220B. Introduction to the Politics of Education. 4 Units.

(Same as GSBGEN 349.) The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA).

EDUC 220C. Education and Society. 4-5 Units.

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 120C, SOC 130, SOC 230

EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations. 3-5 Units.

Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. This course is required for POLS students pursuing the PreK-12 concentration.
Same as: HISTORY 258E

EDUC 220Y. Introduction to the Economics of Education: Economics Section. 1-2 Unit.

For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A.

EDUC 221A. Policy Analysis in Education. 4-5 Units.

Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment.
Prerequisite: consent of instructor.

EDUC 222. Resource Allocation in Education. 4-5 Units.

Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions.

EDUC 223. Good Districts and Good Schools: Research, Policy, and Practice. 3-4 Units.

Recent studies of districts and schools that exceed expectations in producing desired results for students. Research methodologies, findings of studies, theories of change in reforming schools and districts and efforts to implement results. Components of good schools and districts. Required project studies a school or district to determine goodness. (SSPEP/APA, CTE).

EDUC 224. Social Entrepreneurship and Social Innovation. 2-4 Units.

(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills," such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

EDUC 224A. Social Entrepreneurship and Social Innovation. 3 Units.

(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills", such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government, or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

EDUC 224B. Social Entrepreneurship and Social Innovation. 2 Units.

(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills", such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

EDUC 225X. Business Concepts and Skills for the Social Sector. 3 Units.

Knowledge and tools for conceiving, building and sustaining successful endeavors in education and the broader social sector. Topics include social, organizational and business strategy, market research, financial analysis, communications, leadership and evaluation. Focus on integrating theory with practical applications. Especially beneficial to students who otherwise may not have exposure to topics taught in a business curriculum.

EDUC 226X. Curating Experience: Representation in and beyond Museums. 2-4 Units.

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience.

Same as: AMSTUD 226X, CSRE 226X

EDUC 227X. Education Policy in the United States. 3 Units.

The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy. This course intended for Master's students.

Same as: for Master's Students

EDUC 228E. Becoming Literate in School I. 2 Units.

First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates STEP Elementary Teacher program. Instructional methods, formats, and materials.

EDUC 228F. Becoming Literate in School II. 2 Units.

Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary program. Theories for guiding instruction and curricular choices.

EDUC 228G. Becoming Literate in School III. 2 Units.

Third in a three-course required sequence of reading and language arts theory and methodology for candidates in STEP Elementary Teacher program. Theories for guiding instruction and curricular choices.

EDUC 228H. Literacy, History, and Social Science. 1 Unit.

How elementary school teachers can teach history and social science within a literacy framework. Topics include: historical thinking, reading, and writing; current research; applying nonfiction reading and writing strategies to historical texts; using primary sources with elementary students; adapting instruction to meet student needs; state standards; evaluating curriculum; assessing student knowledge; developing history and social science units; and embedding history and social science into the general literacy curriculum.

EDUC 229A. Learning Design and Technology Seminar. 1 Unit.

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

EDUC 229B. Learning Design and Technology Seminar. 1 Unit.

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

EDUC 229C. Learning Design and Technology Seminar. 1 Unit.

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

EDUC 229D. Learning Design and Technology Seminar. 2-5 Units.

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

EDUC 230X. Social Enterprise. 4 Units.

(Same as STRAMGT 341.) Approaches for creating social value through a social enterprises including nonprofits, for-profits, and hybrid forms of organization. Perspectives include entrepreneur, CEO, funder, and board member. Topics include undertaking the social entrepreneurship process; mobilizing economic and human resources; achieving social objectives with commercial vehicles; crafting alliances; managing growth; measuring and managing performance; governing for excellence. Case studies. Student teams carry out field-based research in a significant strategic or operational issue of a social enterprise.

EDUC 231X. Knowing God: Learning Religion in Popular Culture. 4 Units.

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: AMSTUD 231X, JEWISHST 291X, RELIGST 231X

EDUC 232. Culture, Learning, and Poverty. 2-3 Units.

This course examines the categories and methods used to analyze and explain educational inequalities in the United States from 1950 to present. Approaches to theories of school failure and methods of intervention are distinguished by their ideas on the play of learning, language, cognition, culture, and social class in human development. Particular attention is given to the Culture of Poverty controversies of the 1960s and their recent emergence.

EDUC 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: AFRICAAM 233A, CSRE 233A

EDUC 233B. Adolescent Development and Mentoring in the Urban Context. 3 Units.

Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers' motivations; attributions about poverty, and the problem of prejudice.

EDUC 234. Career and Personal Counseling. 3 Units.

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 134, PSYCH 192

EDUC 235X. The Creative Arts in Schools and Classrooms. 2 Units.

Students work alongside teachers and performing artists to plan and implement classroom activities with elementary school children to prepare them for a Lively Arts performance. Background theory in education and arts education. Students develop a follow-up classroom activity for children in their own art form.

EDUC 236B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, CSRE 126B, EDUC 136B, PUBLPOL 126B

EDUC 236X. Beyond Bits and Atoms: Designing Technological Tools. 3-4 Units.

Practicum in designing and building technology-enabled curricula and hands-on learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. The course will focus on designing low-cost technologies, particularly for urban school in the US and abroad. We will explore theoretical and design frameworks from the constructionist learning perspective, critical pedagogy, interaction design for children. Same as: CS 402

EDUC 238X. Teacher Policies in Latin America. 3-5 Units.

We will explore the complex, challenging and often troubled world of teacher policy in Latin America. Education policy is an important instrument of change and the hope of many teachers and students. They affect the lives of many people and therefore their design, implementation and evaluation must have high academic and political rigor. The emphasis of this course is on the design and implementation of teacher policies in Latin America. We will focus on how to use empirical evidence to take into account the impact, feasibility and political complexities of designing and implementing teacher policy in LA.

EDUC 239X. Educating Young STEM Thinkers. 3-5 Units.

The course will introduce students to the design thinking process, the national conversations about the future of STEM careers, and provide opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course will be both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139X, ME 139, ME 231

EDUC 240. Adolescent Development and Learning. 5 Units.

How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP).

EDUC 241S. Organizational Learning. 2 Units.

(Same as OB 586.) How firms learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics.

EDUC 241X. Organizational Learning. 4 Units.

Why firms do not learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics. Readings include teaching notes, papers in psychology and organization theory, HBR articles, and *Moneyball* by Michael Lewis who discusses market-level mistakes in professional baseball.

EDUC 242. Language Use in the Chicano Community. 3-5 Units.

The significance and consequences of language diversity in the culture and society of the U.S. Experiences of non-English background individuals through focus on Spanish-English bilingual communities.

Same as: SPANLIT 206

EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: CSRE 243, EDUC 145

EDUC 244. Classroom Management and Leadership. 2 Units.

Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.

EDUC 244E. Elementary Classroom Leadership and Management. 1 Unit.

How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary only.

EDUC 244F. Elementary Classroom Leadership and Management. 1 Unit.

Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.

EDUC 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.

African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

Same as: AFRICAAM 245, CSRE 245

EDUC 246A. Secondary Teaching Seminar. 3 Units.

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

EDUC 246B. Secondary Teaching Seminar. 5 Units.

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

EDUC 246C. Secondary Teaching Seminar. 5 Units.

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP).

EDUC 246D. Secondary Teaching Seminar. 2-7 Units.

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

EDUC 246E. Elementary Teaching Seminar. 3 Units.

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

EDUC 246F. Elementary Teaching Seminar. 5-7 Units.

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

EDUC 246G. Elementary Teaching Seminar. 3 Units.

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

EDUC 246H. Elementary Teaching Seminar. 4 Units.

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

EDUC 247. Moral and Character Education. 3 Units.

Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today's schools; and contending theories concerning the goals of moral education.

EDUC 248X. Psychology of Pedagogy. 1-3 Unit.

How can methods and insights from psychology inform education practice, particularly in a higher education context? This course aims to develop your skills as critical consumers and producers of empirical findings on teaching and learning. Course involves a quarter-long project to develop a pedagogical research proposal, supplemented and informed by readings, guided discussions, and group workshops. Same as: PSYCH 277

EDUC 249. Theory and Issues in the Study of Bilingualism. 3-5 Units.

Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. Same as: EDUC 149

EDUC 250B. Statistical Analysis in Education: Regression. 4 Units.

Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.

EDUC 250C. Qualitative Analysis in Education. 4 Units.

Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.

EDUC 253X. Inequality, Society, and Education. 3-5 Units.

The course will focus on developing students' understanding of theory and research on several key issues in the relationship between education and inequality: 1) what are the recent patterns and trends in both economic and educational inequality? 2) what kinds of inequality (from a normative/philosophical perspective) should we worry about? 3) how do we measure educational inequality? 4) how are economic and educational inequality linked? 5) what policies/practices might reduce educational inequality? The course will be a graduate student seminar, with enrollment capped at 20-25. Same as: SOC 353X

EDUC 254S. Leadership in Diverse Organizations. 2 Units.

(Same as OB 593) This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. The class will address two primary questions: 1) What social and psychological obstacles limit people's ability to work effectively across identity-based differences? 2) What can you do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom. While the course focuses on dynamics of race and gender, there will be opportunities for students to explore a variety of other dimensions of identity and difference in organizations, including (but not limited to) sexual orientation, nationality, class, and religion. The course is intended for students who expect to work in culturally diverse groups or organizations and will be equally relevant to those who plan to work in the not-for-profit, public, and for-profit sectors.

EDUC 254X. Leadership in Diverse Organizations. 4 Units.

How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

EDUC 255A. Experimental Research Designs in Educational Research. 3-5 Units.

The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

EDUC 255B. Causal Inference in Quantitative Educational and Social Science Research. 3-5 Units.

Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.

Same as: SOC 257

EDUC 255C. Applied Quasi-Experimental Research in Education. 3-5 Units.

Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including individual fixed effects models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257. Same as: SOC 258

EDUC 256. Psychological and Educational Resilience Among Children and Youth. 4 Units.

Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

Same as: HUMBIO 149

EDUC 257A. Statistical Methods for Behavioral and Social Sciences. 3 Units.

For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

EDUC 257B. Statistical Methods for Behavioral and Social Sciences. 3 Units.

For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

EDUC 258. Literacy Development and Instruction. 3-5 Units.

Literacy acquisition as a developmental and educational process. Problems that may be encountered as children learn to read. How to disentangle home, community, and school instruction from development.

EDUC 259X. Application of Hierarchical Linear Models in Behavioral and Social Research. 4 Units.

The fundamental phenomenon of interest in educational research is the growth in knowledge and skills of individual students. Two facts - that children's growth is typically the object of inquiry and that such growth occurs in organizational settings - correspond to two of the most troublesome and persistent methodological problems in the social sciences: the measurement of change and the assessment of multi-level effects (also referred to as the unit of analysis problem). Although these two methodological problems have distinct, long-standing, and non-overlapping literatures, these problems, in fact, share a common cause - the inadequacy of traditional statistical techniques for the modeling of hierarchy.

EDUC 260X. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.

Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See <http://web.stanford.edu/~rag/stat209/>.

Prerequisite: intermediate-level statistical methods.

Same as: HRP 239, STATS 209

EDUC 261. Sociocultural Theories of Learning & Development: Vygotsky & Bakhtin. 3 Units.

Grounded in theories of Vygotsky and Bakhtin, this course will review commonly used, but often misunderstood, concepts about how context enters theories of learning and development. Topics will include: distinctions between development and learning; the place of culture in developing higher mental functions; the zone of proximal development, conceptions and misconceptions; contributions of activity theory; importance of heterogeneity and multivocality; and role of language in inquiry; ideological becoming inquiry; or idea development. Focus will be on using theory to guide research.

EDUC 262A. Curriculum and Instruction in English. 2 Units.

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP).

EDUC 262B. Curriculum and Instruction in English. 3 Units.

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

EDUC 262C. Curriculum and Instruction in English. 3 Units.

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP).

EDUC 263A. Curriculum and Instruction in Mathematics. 2 Units.

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

EDUC 263B. Curriculum and Instruction in Mathematics. 3 Units.

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

EDUC 263C. Curriculum and Instruction in Mathematics. 3 Units.

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

EDUC 263E. Quantitative Reasoning in Mathematics I. 2 Units.

First of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

EDUC 263F. Quantitative Reasoning in Mathematics II. 2-3 Units.

Second of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

EDUC 263G. Quantitative Reasoning in Mathematics III. 2 Units.

Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

EDUC 264A. Curriculum and Instruction in World Languages. 2 Units.

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP).

EDUC 264B. Curriculum and Instruction in World Languages. 3 Units.

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

EDUC 264C. Curriculum and Instruction in World Languages. 3 Units.

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP).

EDUC 264E. Methods and Materials in Bilingual Classrooms. 2 Units.

Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.

EDUC 265. History of Higher Education in the U.S.. 3-5 Units.

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 165, HISTORY 158C

EDUC 266X. Educational Neuroscience. 3 Units.

An introduction to the growing intersection between education research and emerging research on functional brain development. Students will probe the contributions and limitations of emerging theoretical and empirical contribution of neuroscience approaches to specific academic skills such as reading and mathematics, as well as exposure to general processes crucial for educational success, including motivation, attention, and social cognition. Final projects will explore these themes in the service of interventions designed to improve how these functions.

EDUC 267A. Curriculum and Instruction in Science. 2 Units.

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

EDUC 267B. Curriculum and Instruction in Science. 3 Units.

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

EDUC 267C. Curriculum and Instruction in Science. 3 Units.

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

EDUC 267E. Development of Scientific Reasoning and Knowledge. 2 Units.

For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.

EDUC 267F. Development of Scientific Reasoning and Knowledge II. 2 Units.

Continuation of 267E. Scientific knowledge and pedagogical skills for supporting science instruction. Topics include: how children build scientific understandings and what that understanding might look and sound like in young children; what school science is and how concepts are connected to the doing of it; physical, life, and earth science constructs.

EDUC 267G. Integrating the Garden into the Elementary Curriculum. 1 Unit.

This mini-course uses the garden and kitchen environments to provide teacher candidates with real-world contexts in which to explore some of the key issues that children face in health, nutrition, and sustainability. Teacher candidates will gain an understanding of how to integrate the various themes with content areas and standards and an appreciation for the importance of addressing children's health needs in an era when the country is facing increased obesity and other health problems.

EDUC 268A. Curriculum and Instruction in History and Social Science. 2 Units.

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

EDUC 268B. Curriculum and Instruction in History and Social Science. 3 Units.

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

EDUC 268C. Curriculum and Instruction in History and Social Science. 3 Units.

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

EDUC 268E. Elementary History and Social Science. 3-4 Units.

Teaching and learning history and social science in the elementary grades. What is included in the discipline and why it is important to teach. The development of historical thinking among children. How students learn and understand content in these disciplines.

EDUC 269X. The Ethics in Teaching. 1 Unit.

Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.

EDUC 270. Latino Families, Languages, and Schools. 3-5 Units.

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling.

Same as: EDUC 178X

EDUC 271X. Education Policy in the United States. 5 Units.

The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy. This course is intended for PhD students only. Other students may contact the instructor for permission to enroll.

Same as: PhD

EDUC 272X. Understanding and Creating Value-Added Measures of Teacher Effectiveness. 3 Units.

This seminar will explore a variety of approaches to measuring teacher effectiveness using student performance on state standardized tests. We will read the recent research literature on value-added estimation, addressing issues such as bias and measurement error. We also will use administrative data from two large districts to create and compare multiple value-added measures. The class assumes a comfort with OLS regression and basic programming in Stata.

EDUC 273. Gender and Higher Education: National and International Perspectives. 4 Units.

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 173, FEMST 173, SOC 173, SOC 273

EDUC 274X. School Choice: The Role of Charter Schools. 3 Units.

(Formerly EDUC 153X.) Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.

EDUC 275X. Leading U.S. Schools. 3-4 Units.

The landscape of schooling in the U.S. is dynamic and replete with ideologies, myths, and beliefs. Organizational theory, leadership theory, and empirical research are lenses through which students will develop a deeper and broader understanding of the similarities and differences among private schools, parochial schools, traditional K-12 schools, charter schools, and alternative schools. Students will connect theory and research to practice by visiting and learning about two or more schools of their choosing.

EDUC 276. Educational Assessment. 3 Units.

Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.

EDUC 277. Education of Immigrant Students: Psychological Perspectives. 4 Units.

Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity.

EDUC 278. Introduction to Issues in Evaluation. 3-4 Units.

Open to master's and doctoral students with priority to students in the School of Education. Focus is on the basic literature and major theoretical and practical issues in the field of program evaluation. Topics include: defining purpose, obtaining credible evidence, the role of the evaluator, working with stakeholder, values in evaluation, utilization, and professional standards. The course project is to design an evaluation for a complex national or international program selected by the instructor.

EDUC 279X. American Jewish History: Learning to be Jewish in America. 2-4 Units.

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units.

Same as: AMSTUD 279X, HISTORY 288D, JEWISHST 297X, RELIGST 279X

EDUC 280X. Learning & Teaching of Science. 3 Units.

This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.

Same as: PHYSICS 295

EDUC 281X. Technology for Learners. 3 Units.

How can we use technology to improve learning? Many hope that technology will make learning easier, faster, or accessible to more learners. This course explores a variety of different approaches to designing tools for learning, the theories behind them, and the research that tests their effectiveness. Topics include feedback, visualization, games, multimedia, tangible-digital interfaces, simulations, and more. Students will work on teams to identify a need, create a prototype, and design tests to understand its impact. Space is limited. Priority is given to masters students in Education and to masters / upper-level students in Human Computer Interaction.

EDUC 282X. The Politics of Knowledge in the Twentieth Century United States. 3-5 Units.

This course examines the relationship between social scientific knowledge and power in the modern United States. Topics include the emergence of social scientific disciplines, debates over objectivity, and professionalization. The course examines both how universities, philanthropic foundations, and the federal government have shaped knowledge production and how social science has influenced law, social and educational policy, and popular social thought.

EDUC 283. Child Development In and Beyond Schools. 2 Units.

(Formerly EDUC 144). How schools form a context for children's social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.

EDUC 283X. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.

Same as: CHILATST 183X, EDUC 183X

EDUC 284. Teaching and Learning in Heterogeneous Classrooms. 3 Units.

Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP).

EDUC 285. Supporting Students with Special Needs. 2-3 Units.

For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.

EDUC 286B. Second Language Acquisition Research. 4 Units.

Major research findings and theories in second language acquisition. Second language research and theories in formal and informal settings where a second language is learned.

EDUC 287X. Graduate Research Workshop on Psychological Interventions. 3 Units.

Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.

Same as: PSYCH 274

EDUC 288. Organizational Analysis. 4 Units.

Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.

Same as: SOC 366

EDUC 289. The Centrality of Literacies in Teaching and Learning. 3 Units.

(Formerly EDUC 166.) Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP).

EDUC 290. Instructional Leadership: Building Capacity for Excellent Teaching. 3-4 Units.

This course focuses on the role of leaders in designing, supporting and sustaining excellent teaching. How do leaders create the organizational conditions to focus attention on the technical core of instruction, curriculum and assessment. Course goals: 1) explore a variety of educational leadership approaches, 2) investigate the theory of action underlying these approaches to leadership and consider the implications for instructional practice and 3) develop understanding of the relationship between the leadership approach and the learning environment.

EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium. 1-3 Unit.

Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other's work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.

EDUC 291X. Introduction to Survey Research. 3-4 Units.

Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.

Same as: EDUC 191X

EDUC 292. Academic Writing for Clarity and Grace. 2-4 Units.

Students will acquire helpful writing strategies, habits, and critical faculties; increase their sense of writing as revision; and leave them with resources that will support them in their own lifelong pursuit of good writing. Students will work on revising their own papers and editing papers of other students. Class will focus on exercises in a variety of critical writing skills: framing, concision, clarity, emphasis, rhythm, action, actors, argument, data, quotations, and usage. Course enrollment limited to graduate students.

EDUC 293X. Church, State, & Schools: Issues in Education & Religion. 4 Units.

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: RELIGST 293X

EDUC 294X. History of the Learned Book. 3-5 Units.

The course takes full advantage of the university library's Special Collections to examine the key historic works contributing to the advancement of learning and the organization of knowledge. Beginning with medieval manuscripts and progressing through all areas of human inquiry during the age of print, the course explores the economic and educational history of learned publishing in the West, while examining what these historic artifacts reveal about developments in the structure and authority, production and circulation, technology and aesthetics, of learning and knowledge.

EDUC 295. Learning and Cognition in Activity. 3 Units.

Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.

Same as: PSYCH 261A

EDUC 296X. School Leadership. 3 Units.

Can one person really make a difference for all the students in a school? Accurate or not, that's the expectation faced by school principals. This course will give students practice in translating school improvement ideas into practice and also help them develop a personal vision for school improvement. For students in POLS or MA/MBA program in School of Education.

EDUC 297. Teaching and Learning in Higher Education. 3-4 Units.

This course is co-taught by Mariatte Denman, Associate Director of the Center on Teaching and Learning. It provides POLS students with an opportunity to focus on teaching and learning along with doctoral students from many disciplines throughout the university. Students watch and interview master teachers at Stanford, prepare a syllabus module for a workshop or class they might teach, and learn a range of effective pedagogical methods. Preparing an analytic paper is an alternative for those who do not want to prepare a syllabus module. The course is open not only to POLS students who expect to work in higher education, but also to students interested in K-12 education, and they may develop a teaching module for use in those schools.

Same as: CTL 297

EDUC 298. Seminar on Teaching Introductory Computer Science. 1 Unit.

Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

Same as: CS 298

EDUC 299. Educating for Equity and Democracy. 2 Units.

(Formerly EDUC 167.) Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP).

EDUC 302. Behavior Design: Connecting People to Nature. 3 Units.

Students learn Behavior Design and practice applying the methods to change human behavior in measurable ways. In this particular course, all projects will focus on one theme: Connecting people to nature.

EDUC 302X. Incentives In Education. 1-4 Unit.

Seminar. Theoretical and empirical literatures from psychology and economics that focus on group and individual incentives and their potential effects. Emphasis is on seminal experiments in psychology and the recent wave of economic field experiments that test the how individual incentives affect educational outcomes and intrinsic motivation.

EDUC 303X. Designing Learning Spaces. 3-4 Units.

Project-based. How space shapes personal interactions and affords learning opportunities in formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.

EDUC 304. Foundations and Contemporary Topics in Social-Educational Psychology. 2-4 Units.

At its core, social psychology is concerned with educational problems because it addresses the problem of how to change hearts and minds in lasting ways. This course explores the major ideas, theories, and findings of social psychology, their educational implications, and the insights they shed into how and when people change. There will be a focus on educational issues. Intersections with other disciplines, in particular social development and biology, will be addressed. Historical tensions and traditions, as well as classic studies and theories, will be covered. Graduate students from other disciplines, and advanced undergraduates, are welcome (class size permitting).

Same as: PSYCH 280

EDUC 306A. Economics of Education in the Global Economy. 5 Units.

Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development.

EDUC 306B. The Politics of International Cooperation in Education. 3-5 Units.

Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.

EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 136, SOC 231

EDUC 306Y. Economic Support Seminar for Education and Economic Development. 1 Unit.

Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A. (Carnoy).

EDUC 307X. Organizing for Diversity: Opportunities and Obstacles in Groups and Organizations. 3-4 Units.

Obstacles in organizations and groups that prevent people from participating, working effectively, and developing relationships in the context of diversity. How to create conditions in which diversity enhances learning and effectiveness? Experiential exercises; students experiment with conceptual and analytic skills inside and outside of the classroom.

EDUC 308X. Mobile Learning Technology for the Marginalized. 1-3 Unit.

Learning design principles as a basis for developing and evaluating mobile learning systems to address educational inequalities in underserved communities. Students analyze mobile learning scenarios, prototypes, and authoring tools while collaborating with research teams to develop a small-scale mobile empowerment scenario addressing education needs such as language, math, health, and civic and life skills in developing countries.

EDUC 309X. Educational Issues in Contemporary China. 3-4 Units.

Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

Same as: EDUC 109X

EDUC 310. Sociology of Education: The Social Organization of Schools. 4 Units.

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 110, SOC 132, SOC 332

EDUC 311X. Designing Learning for Development: Learning Theories, Technology Design and Social Change. 3 Units.

Perspectives on learning and human development as they relate to prior technological interventions in the development sphere. Case studies in the international development context; historical perspective on learning and development. Methods of inquiry useful in a design process engaging technology within a development framework.

EDUC 312B. Microsociology: Social Structure and Interaction. 4 Units.

How to interpret interpersonal situations using microsociological theories. Focuses on the role of intention, identity, routines, scripts, rituals, conceptual frameworks, talk and emotions in social interaction. Processes by which interactions reverberate outward to transform groups and social structures. Special consideration will be placed on organizational contexts like schools, workplaces and policy decision arenas.

Same as: SOC 224B

EDUC 313X. The Education of American Jews. 4 Units.

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Same as: JEWISHST 393X, RELIGST 313X

EDUC 315X. Race and Ethnicity in Society and Institutions. 1-5 Unit.

Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations.

Same as: SOC 347

EDUC 317X. Workshop: Networks, Histories, and Theories of Action. 1-2 Unit.

Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.

Same as: SOC 317W

EDUC 318X. The Discourses of Teaching Reading. 3-5 Units.

Students examine language, social relationships, and students' textual sense-making to further develop their conceptions of reading comprehension and their pedagogical practice as reading teachers. What it means to comprehend text; how classroom discourse matters in the development of textual understanding; and what understandings, purposes, and relationships should matter in classroom talk about text. Field work in which students facilitate small group text discussions for the duration of the quarter at a location of their choice.

EDUC 321. Analysis of Social Interaction. 4 Units.

Practicum on discourse, interactional, and cultural analysis of videotaped data. Analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student.

EDUC 321X. Leading Social Change: Educational and Social Entrepreneurship. 4 Units.

(Same as OB 385) The course provides an overview of different approaches to leading change in the social sector, drawing primarily, but not exclusively, on case examples in education. While there is a substantial need for innovation and visionary leadership in sectors such as education, social entrepreneurs who want to drive change must appreciate the significant barriers and unique opportunities presented by non-market forces in these sectors. The course will equip students with an appreciation for different mechanisms of change and theories of action as well as some of the challenges of initiating and sustaining meaningful change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact in the world, it is particularly (although not exclusively) appropriate for students in the joint MA/MBA program as well as those who will lead social change through nonprofit consulting or entrepreneurship.
Same as: OB 385

EDUC 322. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor.
Same as: AFRICAAM 130, CSRE 130, EDUC 123X

EDUC 323A. The Practice of Education Policy Analysis. 3-5 Units.

Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education.

EDUC 324X. The Ecology of Equality. 1-4 Unit.

A biweekly, one-hour workshop that meets throughout the full academic year. Designed for doctoral students and explores a range of issues pertaining to equity and equality in the United States and globally. Takes an interdisciplinary approach and intended for those who desire a deeper exploration of humanistic, social science and philosophical explanations for existing conditions, crises, and policies in society, as they pertain to various forms of social inequality—with a particular focus on race, ethnicity, class, gender, and sexuality.

EDUC 325A. Proseminar 1. 3 Units.

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

EDUC 325B. Proseminar 2. 3 Units.

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

EDUC 325C. Proseminar 3. 2-4 Units.

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

EDUC 326. Law, Litigation, and Educational Policy. 3 Units.

Same as LAW 364. Restricted to Education graduate students and Law students. Interplay among educational law and policy, administrative decision making, and practice. Issues include the relationship between schooling and the state, nature and scope of students' substantive and procedural rights inside the schoolhouse, and how law and litigation have advanced or stymied the goal of equality of educational opportunity.

EDUC 327A. The Conduct of Qualitative Inquiry. 3-4 Units.

Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.

Same as: SOC 331

EDUC 327C. The Conduct of Qualitative Inquiry. 1-4 Unit.

For doctoral students. Students bring research data for analysis and writing. Preference to those who have completed 327A.

EDUC 328. Topics in Learning and Technology: Core Mechanics for Learning. 3 Units.

Contents of the course change each year. The course can be repeated. In game play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core mechanics that can drive learning forward, and if so, how to build them into learning environments.

EDUC 328A. Topics in Learning and Technology: Designing Calm. 3 Units.

Contents of the course change each year. The course can be repeated. Stress silently but steadily damages physical and emotional well-being, relationships, productivity, and our ability to learn and remember. This highly experiential and project-oriented class will focus on designing interactive technologies to enable calm states of cognition, emotion, and physiology for better human health, learning, creativity and productivity.
Same as: CS 377D

EDUC 329X. Seminar on Teacher Professional Development. 1-4 Unit.

For master's and doctoral students. Theories, principles, and models of professional development. Issues include: different conceptions of teaching, practice, and development; what gets developed in professional development; pedagogies of professional development; structures to support teacher learning; evaluating professional development; and policy issues.

EDUC 330X. Teaching English Language Learners: Issues in Policy, Leadership, and Instruction. 3-4 Units.

Current perspectives and research on issues facing educators serving the English language learner population. Issues include federal education legislation, civil rights law, national Common Core Standards, content and language proficiency standards assessment and accountability, school improvement models, school structure, community engagement, addressing issues of long-term English learners, programming for newcomer ELLs, early childhood education, and promoting bilingualism.

EDUC 332. Theory and Practice of Environmental Education. 3 Units.

Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.

EDUC 333A. Understanding Learning Environments. 3 Units.

Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.

EDUC 333B. Imagining the Future of Learning: SparkTruck - Designing Mobile Interventions for Education. 4 Units.

Created at the d.school last year, SparkTruck has traveled over 15,000 miles across the USA, teaching thousands of kids how to build stuff and unleash their creativity. In this class, students will explore the potential of a mobile platform for affecting change in the educational ecosystem. Topics will include introductions to the design process, modern prototyping tools, and the complex education ecosystem. Students will work in teams in this project-based class, and an emphasis will be placed on real-world prototyping through hands-on field work in local schools. Interested and qualified students will have the opportunity to embark on a cross-country road trip in the SparkTruck this summer. Open to all graduate students and well-qualified undergrads of any major. Enrollment is limited. Apply at www.sparktruck.org/apply.

Same as: ME 376A

EDUC 334A. Youth and Education Law Project: Clinical Practice. 4 Units.

(Same as LAW 660A). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

EDUC 334B. Youth and Education Law Project: Clinical Methods. 4 Units.

(Same as LAW 660B). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation, or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees of the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

EDUC 334C. Youth and Education Law Project: Clinical Coursework. 4 Units.

(Same as LAW 660C). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation, or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

EDUC 334X. Education Advocacy Clinic. 2-10 Units.

(Same as LAW 660.) For students enrolled in the Education (M.A.) and Law (J.D.) joint degree program and those who already possess Law degrees only. Students participate in educational rights and reform work with clients and communities, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. May be repeated for credit. Prerequisite: consent of instructor.

EDUC 335X. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 135X, HUMBIO 26, MED 235

EDUC 336. Language, Identity, and Classroom Learning. 1-3 Unit.

As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.

EDUC 336A. Law and Public Policy: Issues in Implementation. 3 Units.

(Same as LAW 636.) This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process by the agencies and organizations charged with implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as "management-based regulation" and "evidence-based" social service delivery, gives broad discretion to street-level service providers but subjects them to intensive monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradable rights (e.g. pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the contours of public law doctrine and the nature of lawyering in the public sector. Lawyers in the public sector are increasingly drawing on skills of institutional design and monitoring of the kind associated with private sector transactional practice. This seminar will examine some of the emerging general themes of innovative policy implementation and look at a range of case studies. Topics will include the conditions under which financial and other rewards and sanctions are useful in bringing about desired behaviors, the pluses and minuses of the creation of markets as alternatives to government run programs, and efforts at improving implementation by improving management activities. Examples will be taken from both regulation and social services, and are likely to include environmental protection, education, child protective services, healthcare, food and workplace safety, nuclear power safety, and regulation of financial institutions. We will invite presentations by academics and practitioners.

EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: AFRICAAM 106, CSRE 103B, EDUC 103B

EDUC 338X. Innovations in Education. 3-4 Units.

Each year students in this course explore a new design challenge related to teaching. This year we will focus on creating school models. We welcome graduate students from a wide range of disciplines. Admission by application. Please see more information at <http://dschool.stanford.edu>.

EDUC 339. Advanced Topics in Quantitative Policy Analysis. 1-2 Unit.

For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.

EDUC 340. Psychology and American Indian Mental Health. 3-5 Units.

Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.

Same as: NATIVEAM 240

EDUC 341X. Urban School System Reform. 4 Units.

Strategies for large-scale reform of complex school systems. Case studies of urban school systems. Sources include approaches developed in management studies, organizational behavior, and school reform. Political and community contexts; the role of urban superintendents and administrators in creating reform strategies. Factors such as labor relations and the regulatory environment. Guest speakers.

EDUC 342. Child Development and New Technologies. 3 Units.

Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.

EDUC 343X. Navigating the Academic Profession. 1-2 Unit.

For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.

EDUC 345X. Adolescent Development and Schooling. 3-5 Units.

How the context of school and its relationship to other major context developments (family, peer group, and neighborhood) influence the social, emotional, and cognitive development of secondary school-aged youths. Metatheoretical approaches (mechanistic, organismic, developmental contextualist metamodels) and methods of conducting research on schooling and development (laboratory, survey, ethnographic, intervention). Topics: school transitions during adolescence; the role of school functioning in broader patterns of competence or distress; and how the organization of academic tasks, classrooms, and school environments as a whole can influence adolescent development. Focus is on middle and high school years. (PSE).

EDUC 346. Research Seminar in Higher Education. 4 Units.

Required for higher education students. Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups.

EDUC 347. The Economics of Higher Education. 4 Units.

Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

EDUC 348X. Policy and Practice in Science Education. 3-4 Units.

Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.

EDUC 350X. Workshop on New Research. 1 Unit.

This course will integrate attendance and participation at the research lectures given by visitors with separate, faculty-led workshops that discuss the presented study, its methodologies, and the research and policy contexts in which it is situated. This workshop will also provide an opportunity for professional development relevant to academic publishing and effective presentation.

EDUC 351A. Statistical Methods for Longitudinal Data. 2-3 Units.

Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning, development, aging, and the effects of interventions. Topics include: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. See <http://web.stanford.edu/~rag/stat222/>. Prerequisite: intermediate statistical methods.

Same as: STATS 222

EDUC 351B. Statistical Issues in Testing and Assessment. 2-3 Units.

The new book by Howard Wainer, "Uneducated Guesses: Using Evidence to Uncover Misguided Education Policies" is the basis for this seminar. Also included will be supporting research literature and data analysis activities for topics such as college admissions, methods for missing data, assessment of achievement gaps, and the use of value-added analysis. See <http://www-stat.stanford.edu/~rag/ed351B/>.

EDUC 351C. Workshop in Technical Quality of Educational Assessments and Accountability. 3 Units.

Topics include: determinations of accuracy for individual scores and group summaries; design and reporting of educational assessments; achievement instruments in state-level accountability systems; and policy implications of statistical properties. See <http://www.stanford.edu/~rag/>.

EDUC 353C. Problems in Measurement: Generalizability Theory. 3 Units.

Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications.

EDUC 354. School-Based Decision Making. 4 Units.

Leadership and organizational issues. Leadership as it plays out in the pragmatic demands and tensions of site-level decision processes. Interdependence of several factors critical to school achievement and equity outcomes: governance, culture, instruction, resource alignment, data/inquiry, community engagement. School decision-making as a capacity-building process.

EDUC 355X. Higher Education and Society. 3 Units.

For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.

EDUC 356. Street History: Learning the Past in School and Out. 3-5 Units.

Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?.

Same as: HISTORY 337C

EDUC 357. Science and Environmental Education in Informal Contexts. 3-4 Units.

There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.

EDUC 358X. Learning, Sharing, Publishing, and Intellectual Property. 1-4 Unit.

The educational, historical, legal, economic, technical, and ethical issues entailed in the digital-era openness and sharing of intellectual properties associated with learning (including books, websites, games, journals, etc.). The skills and knowledge for finding, developing, and evaluating resources at all educational levels, based on a grasp of the opportunities and challenges of increasing access to learning in this way. As part its global focus on open learning, the course will be run in conjunction with the OpenKnowledge MOOC "Changing the Global Course of Learning" (<https://class.stanford.edu/courses/Education/OpenKnowledge/Fall2014/about>), offering students the option of both experiencing and studying a MOOC on this theme, which is being co-taught in Mexico, Ghana, Canada, and the U.S. (Stanford and Fordham) in English and Spanish.

EDUC 359B. Science Learning. 2-3 Units.

For doctoral students interested in science education and literacy in school subjects.

EDUC 359C. Science Literacy. 2-3 Units.

The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

EDUC 359F. Research in Mathematics Education: Conducting Inquiry. 2-4 Units.

This seminar will serve as both a workshop for developing participants' own professional trajectories as mathematics education scholars and a forum for discussion on key issues related to conducting research and making an impact in the field of mathematics education. Participants will be invited to share their own research and to engage in discussions about possible impact. This seminar is restricted to mathematics education students.

EDUC 360X. Developmental Psychopathology and Resilience. 3-4 Units.

In this course students will learn about theoretical, methodological, and empirical issues pertaining to developmental psychopathology and resilience of children and adolescents. The course focuses on (1) current conceptual and empirical issues; (2) cognitive, affective, and motivational processes that underlie some of the most salient childhood mental health symptoms and disorders; (3) family, school, and cultural factors that contribute to developmental psychopathology and resilience; and (4) cutting-edge analytic methods that are currently employed in studies of developmental psychopathology and resilience.

EDUC 361. Workshop: Networks and Organizations. 1-3 Unit.

For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis. Same as: SOC 361W

EDUC 362X. The Science Curriculum: Values and Ideology in a Contested Terrain. 2-4 Units.

The issue of what should be taught in schools is a site of contestation where issues of beliefs, values and ideologies emerge. This course will use the school science curriculum and the history of its development to explore the common positions adopted and argued for in approaching curriculum development. Course will help students develop a knowledge of curriculum reform in school science and a deeper understanding of the arguments that have shaped its present form and their historical antecedents.

EDUC 364. Cognition and Learning. 3-4 Units.

Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

EDUC 365. Social, Emotional, and Personality Development. 3 Units.

Limited to doctoral students in DAPS and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

EDUC 366X. Learning in Formal and Informal Environments. 3 Units.

How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web publications, and books. Collaborative written or multimedia research project in which students observe and document a non-school learning environment.

EDUC 367. Cultural Psychology. 3-5 Units.

(Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, crosscultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

EDUC 368. Cognitive Development in Childhood and Adolescence. 3-4 Units.

This course aims to broaden and deepen students' understanding of cognitive development from the prenatal period through adolescence. It will examine various theoretical, methodological, and empirical issues pertaining to different domains of cognitive development, such as neurobiological plasticity, infant cognition, theory of mind, memory, language, and executive functions. Throughout the course, as we survey research findings, we will discuss (1) methods that researchers have employed in their study of cognitive development; (2) limitations of current research and directions for future research; and (3) translation of research findings for practitioners and policymakers.

EDUC 370X. Graduate Workshop: Feminist, Gender, and Sexuality Studies. 1-3 Unit.

Theory, methods, and research in feminist, gender, and sexuality studies, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies, feminist pedagogy and career development issues. Restricted to doctoral students. Repeatable for credit. Required for PhD Minors in Feminist, Gender, and Sexuality Studies (3 quarters min.). Same as: FEMGEN 299

EDUC 371X. Social Psychology and Social Change. 2-3 Units.

The course is intended an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome. Interested students should contact Shannon Brady (stbrady@stanford.edu). Same as: PSYCH 265

EDUC 373X. Teaching in the Humanities-Research into Adolescent Literacy. 3-5 Units.

Relatively little attention has been paid to the role of humanities courses in teaching both general and disciplinary skills in reading and writing. With the growth of small schools, more middle and high school teachers find themselves teaching 'Humanities' courses. This seminar will explore what it means to teach the humanities, with special attention to how such courses can develop disciplinary reading and writing skills. Course will investigate how we develop tools to assess teaching and learning in the humanities.

EDUC 374. Philanthropy and Civil Society. 1-3 Unit.

Cross-listed with Law (LAW 781), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: POLISCI 334, SOC 374

EDUC 375A. Seminar on Organizational Theory. 5 Units.

The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

Same as: MSE 389, SOC 363A

EDUC 375B. Seminar on Organizations: Institutional Analysis. 3-5 Units.

Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

Same as: SOC 363B

EDUC 376. State Theory and Educational Policy. 4 Units.

The relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations.

EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education.

Sources include scholarly articles, cases, and historical materials.

Same as: GSBGEN 346, PUBLPOL 317, SOC 377

EDUC 377B. Strategic Management of Nonprofits. 4 Units.

(Same as STRAMGT 368). Strategic, governance, and management issues facing nonprofit organizations and their leaders in the era of venture philanthropy and social entrepreneurship. Development and fundraising, investment management, performance management, and nonprofit finance. Case studies include smaller, social entrepreneurial and larger, more traditional organizations, including education, social service, environment, health care, religion, NGOs, and performing arts.

EDUC 377C. Strategic Philanthropy. 3 Units.

(Also GSBGEN 381). Appropriate for any student driven to effect positive social change from either the for-profit or nonprofit sector, Strategic Philanthropy (GSBGEN 381/ EDUC 377C) will challenge students to expand their own strategic thinking about philanthropic aspiration and action. In recent decades, philanthropy has become an industry in itself - amounting to over \$300 billion in the year 2012. Additionally, the last decade has seen unprecedented innovation in both philanthropy and social change. This course explores the key operational and strategic distinctions between traditional philanthropic entities, such as community foundations, private foundations, and corporate foundations; and innovative models, including funding intermediaries, open-source platforms, technology-driven philanthropies, and venture philanthropy partnerships. Course work will include readings and case discussions that encourage students to analyze both domestic and global philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, knowledge management, policy change, and board governance. Guest speakers will consist of high profile philanthropists, foundation presidents, social entrepreneurs and Silicon Valley business leaders creating new philanthropic models. The course will culminate in an individual project in which students will complete a business plan for a \$10 million private foundation.

EDUC 377D. Strategic Leadership of Nonprofits. 4 Units.

Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership. Same as: STRAMGT 378

EDUC 378X. Seminar on Social Change Processes and Organizations. 3-4 Units.

Theories of social change and influence processes within and through organizations. Social change organizations. The interaction of philanthropic institutions and other social change organizations within civil society. Meso-level theories of change.

EDUC 379X. Educational Inequality: Legal and Social Science Perspectives. 3-5 Units.

This class will examine the issue of inequality in primary and secondary education, particularly with respect to race and socioeconomic status, from the perspectives of both law and social science. The course will distinguish between inequality in terms of inputs versus outputs, presenting the empirical evidence about each and the relationship between the two. The course will explore the history of legal and policy responses to persistent inequality, and consider the challenge of contemporary educational inequality and survey the competing policy approaches, from desegregation to increased and redistributed funding to efforts to improve instructional quality, to centralized accountability and testing to market-based solutions. Same as: LAW 505

EDUC 380. Supervised Internship. 1-15 Unit.

.

EDUC 381. Multicultural Issues in Higher Education. 4 Units.

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship. Same as: EDUC 181

EDUC 382. Student Development and the Study of College Impact. 4 Units.

The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.

EDUC 386. Leadership and Administration in Higher Education. 2 Units.

Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts. Case study analysis of the problems and challenges facing today's higher education administrators.

EDUC 387A. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: SOC 311A

EDUC 387B. Workshop: Comparative Systems of Educational and Political Systems. 1-5 Unit.

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: SOC 311B

EDUC 387C. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.

Analysis of quantitative and longitudinal data on national educational systems and political structures. Prerequisite: consent of instructor. May be repeated for credit.

Same as: SOC 311C

EDUC 388A. Language Policies and Practices. 2 Units.

For STEP teacher candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political, and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners' growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP).

EDUC 388F. Introduction to Academic Language. 1 Unit.

This course will provide opportunities for pre-service teachers to begin to develop an understanding of language uses, forms, and mechanics through application of a functional approach to academic language. By exploring language structures (phonology, morphology, syntax, semantics) as well as language-in-use (pragmatics and discourse), teacher candidates will be able to better recognize linguistic demands and challenges of students in the classroom.

EDUC 389X. Race, Ethnicity, and Language. 3-4 Units.

This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of "doing race" through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics. Prerequisite: consent of instructor.

Same as: ANTHRO 320A, LINGUIST 253

EDUC 390X. Learning Analytics and Computational Modeling in Social Science. 3-4 Units.

Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy.

Same as: CS 424M

EDUC 391X. Engineering Education and Online Learning. 3 Units.

An introduction to best practices in engineering education and educational technology, with a focus on online and blended learning. In addition to gaining a broad understanding of the field, students will experiment with a variety of education technologies, pedagogical techniques, and assessment methods.

Same as: EE 396

EDUC 392X. The Political Economy of Global Higher Education. 3-4 Units.

The course is intended to introduce students to the analysis of higher education and higher educational change in an international context, reviewing critically the current literature and showing how social scientists study higher education using quantitative and qualitative tools. The course will present a model of studying change, review political, sociological, and economic theories applied to higher education, and focus on four important case studies of higher education in the developing world: Brazil, Russia, India, and China, known also as the BRIC countries.

EDUC 393. Proseminar: Education, Business, Politics. 3 Units.

Overview of the field of education for joint degree (M.B.A./M.A.) students.

EDUC 394X. Research in Progress Seminar. 1 Unit.

This seminar will provide a forum where graduate students could discuss prospective research ideas, present ongoing research, and consider theoretical issues of broad interest to the field. In this research in progress seminar students are expected to present ongoing research and have a discussion about it -- or a specific research article related to it --, with the purpose of eliciting feedback from the instructor and other seminar participants.

EDUC 395. Scholarly Writing in Education and the Social Sciences. 3-5 Units.

Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.

EDUC 396X. The Design of Technologies for Casual Learning. 3 Units.

Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as an prototype platform. The term "casual" is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in "extreme informal" learning circumstances (while "on the go", "anytime and any place"). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

Same as: EDUC 196X

EDUC 397X. Math Mentoring: Working in the Zone with Learners. 1-2 Unit.

The course focuses on how the tutorial relationship can help students learn mathematics. The course will provide background theory and knowledge as well as provide practical approaches to tutoring, supports for targeting activities to students' needs, selection of materials and activities, and ways to assess the progress of the students and reflect on your own experience. Topics will include social theories of learning, teaching for understanding, and challenges of students who are English language learners. In addition to attending 4, two-hour workshop classes, 1 hour of tutoring is required each week. The course will meet 4 times during the quarter for workshops and discussions following Friday tutoring sessions. Students will submit assignments on the Coursework site on weeks that the course does not meet. A 1 unit section of the course will run in Winter and Spring quarters.

Same as: EDUC 187X

EDUC 398X. Market-Based Education Reforms. 2 Units.

(Same as GSBGEN 577). This seminar course examines market-based education reforms and evidence on their impacts. Topics considered in depth will include public school choice, charter schools, vouchers, incentives for students and teachers, and accountability. We will pay special attention to the design and operation of education markets, the politics and legal challenges of market-based school reform, and methods for evaluating reform initiatives. The course will draw on cases both within the United States and internationally.

EDUC 399A. Designing Surveys. 1-2 Unit.

This workshop/course is designed for students who are designing a survey for use in a research project. The workshop content draws on relevant cognitive processing theories and research (on comprehension, retrieval, judgment, and reporting). In addition to some readings and a few lectures, this workshop is designed to be highly interactive and practical. By the end of the course students will have designed and pilot tested their survey instrument. Course may be repeated for credit.

EDUC 399X. Mixed Methods Research. 3 Units.

This advanced course will address the theory and practice of mixing inquiry methodologies in social inquiry. The course will cover: 1) selected roots of the contemporary interest in mixing methods, 2) conceptualizations of mixed methods design and analysis, and 3) challenges of mixed methods practice.

EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences. 1 Unit.

Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.

EDUC 401B. Mini Courses in Methodology: Stata. 1 Unit.

The computer as research tool. Statistical software Stata for data analysis, including t-tests, correlation, ANOVA, and multivariate linear regression.

EDUC 401C. Data Analysis Examples Using R. 1 Unit.

We will do basic and intermediate level data analysis examples, like those that students will have seen in their courses, in R. nExamples include: descriptive statistics and plots, group comparisons, correlation and regression, categorical variables, multilevel data.nSee <http://web.stanford.edu/~rag/ed401/>.

EDUC 401D. Multilevel Modeling Using R. 1 Unit.

Multilevel data analysis examples using R. Topics include: two-level nested data, growth curve modeling, generalized linear models for counts and categorical data, three-level analyses. For more information, see course website: <http://web.stanford.edu/~rag/ed401d/>.

EDUC 403X. Education's Digital Future. 1 Unit.

This course provides an intellectual framework for understanding the revolution in digital learning. It has three broad themes: the evolving state of knowledge on digital learning; the roles of education in modern societies; and the digital transformation of modern life generally. The course will convene over three quarters. All three themes will be addressed during each quarter. Students may enroll for a single quarter and/or participate in all three quarters for the most comprehensive overview.

EDUC 404X. Topics in Brazilian Education: Public Policy and Innovation for the 21st Century. 1-2 Unit.

The objective of this seminar is to provide students from different backgrounds an opportunity to learn about current issues and debates on Brazilian education. The seminar will cover topics on the history of Brazilian education; an overview of current school reforms at the federal level; educational assessments; education and economic growth; educational equity; teacher labor market; technology and education; early childhood; and higher education to Brazil.

EDUC 405X. Teaching the Humanities. 3 Units.

This course, designed for graduate students in the humanities and education, explores approaches to teaching the humanities at both the secondary and collegiate levels, with a focus on the teaching of text, and how the humanities can help students develop the ability to read and think critically. The course explores purposes and pedagogical approaches for teaching humanities through a variety of texts and perspectives. The course is designed as an opportunity for doctoral students in the Humanities both to enrich their own teaching, and to broaden their understanding of professional teaching opportunities, including community college and secondary school teaching.

EDUC 406X. Perspectives on Teacher Learning and Lesson Study. 2-4 Units.

Seminar. Based on peer collaboration, lesson study helps to create professional communities among teachers and support their learning. Research literature, teacher thinking and beliefs, teacher professional development, and conceptual frameworks.

EDUC 407X. Lytics Seminar. 1-4 Unit.

This course is a survey of research methods with applications in online learning. The methods covered are very interdisciplinary, including an introduction to machine learning, text/discourse analysis, causal modeling, and psychometrics. Broader question in research methodology are also covered, including how to formulate a good research question, when to use qualitative or quantitative methods, and the relative merits of theory-driven confirmatory vs. exploratory research. The goal of this course is to support researchers in the online learning space and other fields in their research endeavors.

EDUC 409X. Managing to Outcomes in Education and Other Sectors. 2 Units.

Whether as students, taxpayers, or philanthropists, we share an interest that schools, government agencies, and nonprofit organizations effectively achieve their intended outcomes. This course asks how stakeholders and managers can assess these institutions' performance and commitment to continuous improvement. This seemingly technocratic question is often the center of political controversy, as it is today in criticisms of the student assessments required by No Child Left Behind and of "value-added" assessments of teacher performance.nnEver mindful that performance management is a graveyard of good intentions, we will study the practical aspects of institutional change - including leadership, accountability, learning, and culture ?- that often account for the difference between success and failure. We start with the presumption that you can't manage what you can't measure, but managers can usually measure only proxies rather than ultimate outcomes. In addition to the inevitable slippage between the proxies and ultimate outcomes, there is a tension between using assessments for learning and improvement, on the one hand, and for accountability, incentives, and penalties, on the other. Moreover, people have incentives to "game" any performance evaluation system.nnWe will examine the challenges of managing to outcomes in various contexts, focusing particularly on students' and teachers' performance, but also including the performance of selected government agencies (e.g., police and welfare departments), nonprofit organizations, and foundations. We will focus on the interconnections among strategic planning, performance budgeting, and performance management. We will also look at experiments with new funding vehicles that depend on measuring outcomes, such as social impact bonds, conditional cash transfers, and pay for performance schemes in healthcare and other sectors.

EDUC 411X. Early Childhood Education. 1-4 Unit.

This course addresses a broad set of topics that have implications for developmentally appropriate and effective early childhood education. It begins with children's social, emotional and cognitive development and issues related to poverty, culture and language. We will also examine research evidence on effective instruction for young children, evaluations of preschool interventions, and several current policy debates.

EDUC 412X. Organization Studies Research Workshop. 1-2 Unit.

For graduate students whose research is rooted in organization theory. Participants to present and receive feedback on their work including paper drafts, proposals and dissertation chapter. Sources include recent scholarship. May be repeated for credit.

EDUC 417. Research and Policy on Postsecondary Access. 3 Units.

The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).

Same as: EDUC 117

EDUC 419X. Academic Achievement of Language Minority Students. 3-5 Units.

Emphasis is on the current state of knowledge in the research literature and comparisons to students' experiences and observations in bilingual education, English as a second language, reading instruction, cultural issues in education, and research methods.

EDUC 421X. Powerful Ideas for Learning Sciences and Technology Design. 1-3 Unit.

This course is intended as a graduate level seminar that provides in-depth readings and discussions, Professor Roy Pea's professional reflections, and student essay-writing on topics examined in Dr. Pea's select publications and associated influential writings.

EDUC 424. Introduction to Research in Curriculum and Teacher Education. 2-5 Units.

Required for first-year CTE doctoral students. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper.

EDUC 425X. Advanced Topics in Research on Self and Stigma. 1-3 Unit.

This course focuses on the relevance of self, identity, and stigmatization to understanding and remedying social problems. A key focus will be on how interactions between the self-system and social systems (e.g. schools, workplaces, institutions) drive outcomes over time, including educational and economic inequality. More broadly, class discussion and readings will address a social psychological analysis of intervention and change.

EDUC 432X. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, CSRE 32A, EDUC 32X, TAPS 32

EDUC 437. Curricular Practical Training. 1 Unit.

"Curricular Practical Training" independent study sections specifically created for international students in F-1 Visa Status who wish to receive credit and to be paid for internships.

EDUC 445X. Entrepreneurial Approaches to Education Reform. 2 Units.

(Same as STRAMGT 535) This course will investigate the ways in which entrepreneurs have and could transform K-12 public schooling in the United States, a \$650 billion dollar industry that has a direct and long-term effect on the nation's economy, democracy and culture. We will explore how human capital solutions, new schools, and technology products can all dramatically improve student learning and solve pain points. We will study a variety of ways to evaluate the efficacy, scalability, and financial sustainability of entrepreneurial enterprises serving students, families, educators and administrators in public education. The course will feature for-profit, not-for-profit, as well as double-bottom-line organizations. This course is suitable for students aspiring to be entrepreneurs, leaders in entrepreneurial organizations, leaders in educational organizations, donors or investors. Gloria Lee is a serial education entrepreneur who co-founded Aspire Public Schools, Teaching Channel, and Yu Ming Charter School. She is currently Chief Operating Officer at NewSchools Venture Fund. This course was designed to be taken in tandem with STRAMGT 537: Leading Change in Public Education and the courses will be highly complementary in approach.

EDUC 447X. Leading Change in Public Education. 2 Units.

(Same as STRAMGT 537) American public education is in crisis. What will it take to get it back on track? As in all large-scale enterprises in need of transformative change, leadership matters greatly. This course focuses on what it takes from a strategic and extremely practical perspective to lead change in public education at the systems level. We will meet some of the most exciting educational leaders in public education today and dissect their leadership styles, strategies, innovations and solutions. We will look for lessons from traditional U.S. districts, successful charter management organizations, and international perspectives to determine what it takes to be an effective leader in education reform. Students will debate the strategies and efficacy of how different leaders approached systems-level change, and will form their own working hypotheses of what is needed to help transform the American education system. The course will end with a look at education fellowship programs and other ways for Stanford graduates to take on meaningful leadership roles in K-12 education reform. Dan Katzir worked for Bain & Company, Teach for America, and Sylvan Learning Systems before joining The Broad Foundation as its founding managing director. He is an experienced case study teacher and the editor of *The Redesign of Urban School Systems* (Harvard University Press, 2013). This course was designed to be taken in tandem with STRAMGT 535: Entrepreneurial Approaches to Education Reform and the courses will be highly complementary in approach.

EDUC 453. Doctoral Dissertation. 1-15 Unit.

For doctoral students only. (all areas).

EDUC 465. Seminar in the Pedagogy of Teacher Education. 3 Units.

For doctoral students interested in working in teacher education. Pedagogical approaches, including the use of modeling and simulations and hypermedia materials. Theoretical considerations of how teachers learn to teach.

EDUC 466. Doctoral Seminar in Curriculum Research. 2-4 Units.

Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review.

EDUC 470. Practicum. 1-15 Unit.

For advanced graduate students. (all areas).

EDUC 480. Directed Reading. 1-15 Unit.

For advanced graduate students. (all areas).

EDUC 490. Directed Research. 1-15 Unit.

For advanced graduate students. (all areas).

EDUC 493. Workshop in Design and Analysis of Comparative Studies. 1-3 Unit.

A workshop for second-year and later students with data analysis or research design activities including dissertation planning or analysis. Readings and exercises developed around participating student research. Topics have included: multilevel data analysis, within-subjects designs, and implementation of matching methods for comparing non-equivalent groups. Various computing customs accommodated. See <http://web.stanford.edu/~rag/ed493/>. Prerequisite: intermediate statistical methods course work.

EDUC 496. Research in History and Social Science Education. 3-5 Units.

For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation. Same as: HISTORY 464E

EDUC 801. TGR Project. 0 Units.

For advanced graduate students. Instructor consent required. (all areas).

EDUC 802. TGR Dissertation. 0 Units.

For advanced graduate students. Instructor consent required. (all areas).

Education as Self Fashioning Courses

ESF 1. Education as Self-Fashioning: The Active, Inquiring, Beautiful Life. 7 Units.

Moving through history from the Rome of the Emperor Hadrian, to the city-states of Renaissance Italy, to the 18th century republic of the United States, we will examine how self-made men fashioned themselves and their surroundings by educating themselves broadly. We will ask how a liberal education made their active careers richer and more transformational. We will also take up the great debate on whether a liberal education or vocational training is the surest path to advancement. We will engage this debate through the works of W.E.B. Du Bois and Booker T. Washington but consider today's struggle over the same issues; a struggle that engrosses both highly industrialized and developing societies.

ESF 1A. Education as Self-Fashioning: The Active, Inquiring, Beautiful Life. 7 Units.

Moving through history from the Rome of the Emperor Hadrian, to the city-states of Renaissance Italy, to the 18th century republic of the United States, we will examine how self-made men fashioned themselves and their surroundings by educating themselves broadly. We will ask how a liberal education made their active careers richer and more transformational. We will also take up the great debate on whether a liberal education or vocational training is the surest path to advancement. We will engage this debate through the works of W.E.B. Du Bois and Booker T. Washington but consider today's struggle over the same issues; a struggle that engrosses both highly industrialized and developing societies.

ESF 2. Education as Self-Fashioning: How to Become a Global Citizen or the German Tradition of Bildung. 7 Units.

This course considers education not as training in external knowledge or skills but as a lifelong process of development and growth in which an individual cultivates her or his spiritual, cultural and social sensibilities. This concept of education - education as a formative and transformative process in the development of the self - is called Bildung in German and has a long tradition reaching back to the Middle Ages. The term first appears in the writings of the mystic Meister Eckhart who defines it as self-composure which he regards as a crucial stage in our spiritual development. The concept of Bildung takes on a secular meaning in the Reformation, when Ulrich von Hutten first coined the phrase that has become Stanford's motto: Die Luft der Freiheit weht. (The wind of freedom is blowing). What he meant is that the cultivation of oneself leads to the freedom of thought, freedom to act, freedom to assert oneself as an individual, freedom to access knowledge, and freedom to determine one's own role in society. This idea of education as an internal and transformative process is central to debates in the nineteenth century (both in Germany and the United States) in which self-reflection is seen as key to the cultivation of an individual's identity and to her or his role as a member of society. In this course we will read reflections on education as self-fashioning by some of the greatest German thinkers spanning from the Middle Ages to the present. We will also enjoy some contemporary parodies of such reflections. These readings and our discussions will help us to understand Stanford undergraduate education as a transformative process of self-realization in our global society.

ESF 2A. Education as Self-Fashioning: How to Become a Global Citizen or the German Tradition of Bildung.. 7 Units.

This course considers education not as training in external knowledge or skills but as a lifelong process of development and growth in which an individual cultivates her or his spiritual, cultural and social sensibilities. This concept of education - education as a formative and transformative process in the development of the self - is called Bildung in German and has a long tradition reaching back to the Middle Ages. The term first appears in the writings of the mystic Meister Eckhart who defines it as self-composure which he regards as a crucial stage in our spiritual development. The concept of Bildung takes on a secular meaning in the Reformation, when Ulrich von Hutten first coined the phrase that has become Stanford's motto: "Die Luft der Freiheit weht". We will also enjoy some contemporary parodies of such reflections. These readings and our discussions will help us to understand Stanford undergraduate education as a transformative process of self-realization in our global society.

ESF 3. Education as Self-Fashioning: How to be a Public Intellectual. 7 Units.

Can education impart more than bookish learning? This is the question that critics have posed since the European Renaissance. Through their reflections, these critics posited an alternative ideal of education that prepared the student for life outside the academy. Over the centuries, this ideal would evolve into what we would today call an iquest;intellectualquest; iquest; but this modern concept only captures a part of what earlier writers thought learning could achieve. In this course, we will focus on how education can prepare students to engage in public debates and the role that the university can play in public learning.

ESF 3A. Education as Self-Fashioning: How to be a Public Intellectual. 7 Units.

Can education impart more than bookish learning? This is the question that critics have posed since the European Renaissance. Through their reflections, these critics posited an alternative ideal of education that prepared the student for life outside the academy. Over the centuries, this ideal would evolve into what we would today call an intellectual quest; but this modern concept only captures a part of what earlier writers thought learning could achieve. In this course, we will focus on how education can prepare students to engage in public debates and the role that the university can play in public learning.

ESF 4. Education as Self-Fashioning: Learning to Change. 7 Units.

Does education entail changing the self? How much? Why should I change my life? How do I discover that I need to change? Who can rightly tell me how to change? What difference does it make? These and related questions have been around for a long time, yet that makes them no easier to answer today than 2500 years ago. In the 5th century BCE, Socrates found that his answers--based on his own will to change--proved troublesome, and ultimately fatal. His follower, the philosopher Plato, transformed the Socratic exploration into idiosyncratic utopian visions that sought to change the conditions of life--and so make Socrates' fate unrepeatable. Plato's own followers, from Aristotle onward, found new ways to explain, enact, or evade change. Not until the end of antiquity, however, do we find, in Augustine of Hippo (354-430 CE), someone as explicitly and passionately committed to personal change as the early Greek thinker. Bookended by the major figures of the Athenian seeker and the North African, this course will lead students to analyze and compare their own tentative answers with the ideas on self-fashioning that can be found in a range of ancient texts. Students will demonstrate their grasp of the material through a variety of exercises, including a research paper, discourse analyses, and responses in persona.

ESF 4A. Education as Self-Fashioning: Learning to Change. 7 Units.

Does education entail changing the self? How much? Why should I change my life? How do I discover that I need to change? Who can rightly tell me how to change? What difference does it make? These and related questions have been around for a long time, yet that makes them no easier to answer today than 2500 years ago. In the 5th century BCE, Socrates found that his answers--based on his own will to change--proved troublesome, and ultimately fatal. His follower, the philosopher Plato, transformed the Socratic exploration into idiosyncratic utopian visions that sought to change the conditions of life--and so make Socrates' fate unrepeatable. Students will demonstrate their grasp of the material through a variety of exercises, including a research paper, discourse analyses, and responses in persona.

ESF 5. Education as Self-Fashioning: Thinking Like a Philosopher. 7 Units.

The Ancient Greek aphorism "Know thyself"; is a centerpiece of wisdom. But knowing one's own mind is not easy, in part because it is not a matter of simply looking inward to find one's proclivities and beliefs; it seems one must look outward to the issues and questions the world presents, and know what one thinks about them. Knowing oneself is in part a matter of knowing one's way around as a thinker, where that is a matter of knowing how to think about issues, when to trust one's judgment and when to withhold it. Fashioning or making oneself into a better (more acute, more sensitive, more judicious) reasoner is something philosophy as a discipline holds out as a promise. In this course, we will take up the first task of becoming better reasoners about a select handful of persistent problems; we will at the same time reflect on what it is that philosophical thinking is, and how it might shape us as thinkers.

ESF 5A. Education as Self-Fashioning: Thinking Like a Philosopher. 7 Units.

The Ancient Greek aphorism "Know thyself" is a centerpiece of wisdom. But knowing one's own mind is not easy, in part because it is not a matter of simply looking inward to find one's proclivities and beliefs; it seems one must look outward to the issues and questions the world presents, and know what one thinks about them. In this course, we will take up the first task of becoming better reasoners about a select handful of persistent problems; we will at the same time reflect on what it is that philosophical thinking is, and how it might shape us as thinkers.

ESF 6. Education as Self-Fashioning: The Wind of Freedom. 7 Units.

Stanford's unofficial motto, "the wind of freedom blows," engraved in German on the university seal, invites us to ponder freedom in the context of education. What is the relation between freedom and the "liberal" arts? Does studying free your mind? Does free will even exist? If so, how does education help you develop its potential? This course will look at various authors -- from antiquity through the 20th century -- who have thought about the blessings, burdens, and obligations of human freedom. Beginning with Eve in the Garden of Eden, we will explore how exercising freedom in your personal choices and conduct not only determines your fate as an individual but carries with it a measure of responsibility for the world. We will place special emphasis on the implications of such responsibility in our own time.

ESF 6A. Education as Self-Fashioning: The Wind of Freedom. 7 Units.

Stanford's unofficial motto, "the wind of freedom blows," engraved in German on the university seal, invites us to ponder freedom in the context of education. What is the relation between freedom and the "liberal" arts? Does studying free your mind? Does free will even exist? If so, how does education help you develop its potential? This course will look at various authors -- from antiquity through the 20th century -- who have thought about the blessings, burdens, and obligations of human freedom. Beginning with Eve in the Garden of Eden, we will explore how exercising freedom in your personal choices and conduct not only determines your fate as an individual but carries with it a measure of responsibility for the world. We will place special emphasis on the implications of such responsibility in our own time.

ESF 7. Education as Self-Fashioning: The Transformation of the Self. 7 Units.

Socrates famously claimed that the unexamined life is not worth living. Socrates and other ancient thinkers examined themselves and found that they did not match up to their own ideals. They thus set out to transform themselves to achieve a good and happy life. What is the good life? How do we change ourselves to live a good and happy life? How do literature and philosophy help us to understand ourselves and to achieve our social, ethical, and personal ideals? In this class, we examine Socrates and Augustine's lives and ideas. Each struggled to live a good and happy life. In each case, they urge us to transform ourselves into better human beings. The first half of the course focuses on the Athenian Socrates, who was put to death because he rejected traditional Greek ideals and proclaimed a new kind of ethical goodness. The second half focuses on the North African Augustine, an unhappy soul who became a new man by converting to Christianity. These thinkers addressed questions and problems that we still confront today: What do we consider to be a happy life? Do we need to be good and ethical people to live happily? Is there one correct set of values? How do we accommodate other people's beliefs? Is it possible to experience a transformation of the self? How exactly do we change ourselves to achieve our higher ideals?.

ESF 7A. Education as Self-Fashioning: The Transformation of the Self. 7 Units.

Socrates famously claimed that the unexamined life is not worth living. Socrates and other ancient thinkers examined themselves and found that they did not match up to their own ideals. They thus set out to transform themselves to achieve a good and happy life. What is the good life? How do we change ourselves to live a good and happy life? How do literature and philosophy help us to understand ourselves and to achieve our social, ethical, and personal ideals? In this class, we examine Socrates and Augustine's lives and ideas. Is there one correct set of values? How do we accommodate other people's beliefs? Is it possible to experience a transformation of the self? How exactly do we change ourselves to achieve our higher ideals?.

ESF 8. Education as Self-Fashioning: Recognizing the Self and Its Possibilities. 7 Units.

Some philosophers have argued that we have privileged and direct access to our inner selves. If this were true, it would make self-knowledge perhaps the easiest sort of knowledge to obtain. But there are many considerations that mitigate against this view of self-knowledge. Consider, for example, the slave who is so oppressed that he fully accepts his slavery and cannot even imagine the possibility of freedom for himself. Such a slave fails to recognize his own capacity for freedom and autonomous self-governance. Though the slave is perhaps the extreme case, many people, it seems, fail to recognize the full range of possibilities open to them. In this course, we shall examine both some of the ways in which one's capacity for self-recognition may be distorted and undermined and the role of education in enabling a person to fully recognize the self and its possibilities. What constrains the range of possibilities we see as really open to us? Contrary to the Cartesian, we shall argue that full self-recognition is an often a hard-won achievement. And we shall ask how education might function to give us a less constricted and more liberating sense of the self and its possibilities. We will consider such questions through the lens of philosophy, literature and psychology.

ESF 8A. Education as Self-Fashioning: Recognizing the Self and Its Possibilities. 7 Units.

Some philosophers have argued that we have privileged and direct access to our inner selves. If this were true, it would make self-knowledge perhaps the easiest sort of knowledge to obtain. But there are many considerations that mitigate against this view of self-knowledge. Consider, for example, the slave who is so oppressed that he fully accepts his slavery and cannot even imagine the possibility of freedom for himself. And we shall ask how education might function to give us a less constricted and more liberating sense of the self and its possibilities. We will consider such questions through the lens of philosophy, literature and psychology.

ESF 50. Education as Self-Fashioning Lecture Series. 1 Unit.

One-unit lecture series featuring prominent intellectuals lecturing on the nature and meaning of liberal education (associated with Education as Self-Fashioning.) NOTE: students enrolled in the 7-unit ESF course should NOT add this course to their study list; this 1-unit course is only for non-ESF students who wish to enroll in the lecture series only. Lectures will constitute an ongoing, campus-wide conversation about the aims of liberal education that extends the "First Lecture" featured in New Student Orientation.

Electrical Engineering Courses

EE 10N. How Musical Instruments Work. 3 Units.

Musical instruments, as well as being fun to play, are excellent examples of science, engineering, and the interplay between the two. How does an instrument make sound? Why does a trumpet sound different from a guitar, a flute, or a bell? We will examine the principles of operation of wind, string, percussion, and electronic instruments hands-on in class. Concepts to be investigated include waves, resonators, understanding and measuring sound spectra and harmonic structure of instruments, engineering design of instruments, the historical development of instruments, and the science and engineering that make them possible. Prerequisites: high school math and physics. Recommended: some experience playing a musical instrument.

EE 10SC. Mathematics of the Information Age. 2 Units.

The world may be made of earth, wind, fire, and water, but it runs on information. What is information? How do we measure it, manipulate it, send it, and protect it? Why has everything gone digital and what does this mean? The mathematics of the Information Age is part of your everyday life, from imaging to the Internet. We will discuss the elements of information theory and how information is represented in different ways for different purposes. We will work with the mathematical representation of signals from the classical functions of trigonometry to the spectrum of a general signal. This course will help you understand some of the profound ways mathematics is used to shape and direct these aspects of the modern world. There will be regular assignments, readings, a research project, and a presentation on a topic of your choice that goes beyond the class material.

EE 14N. Things about Stuff. 3 Units.

Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they elucidate broadly applicable scientific principles. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves.

EE 15N. The Art and Science of Engineering Design. 3 Units.

The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures in designing a term project of their choice over the quarter. The second part of each lecture will consist of outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final design, (2) it presents the different functions that people play in a project, and (3) it gives students a chance to consider what role in a project would be best suited to their interests and skills.

EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes. 3 Units.

Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manoharan in that it emphasizes laboratory work and an experimental student-designed project. Prerequisites: high-school physics.

EE 21N. What is Nanotechnology?. 3 Units.

Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman ("There's Plenty of Room at the Bottom"), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: *Engines of Creation: The Coming Era of Nanotechnology* by Eric Drexler, and *Prey* by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilities of nanotechnology.

EE 22N. Medical Imaging Systems. 3 Units.

Preference to freshmen. The technology of major imaging modalities used for disease diagnosis: x-ray, ultrasound, and magnetic resonance; their history, societal impact, and clinical applications. Field trips to a medical center and an imaging research lab. Term paper and presentation. Prerequisites: high school physics and calculus.

EE 23N. Imaging: From the Atom to the Universe. 3 Units.

Preference to freshmen. Forms of imaging including human and animal vision systems, atomic force microscope, microscope, digital camera, holography and three-dimensional imaging, telescope, synthetic aperture radar imaging, nuclear magnetic imaging, sonar and gravitational wave imaging, and the Hubble Space telescope. Physical principles and exposure to real imaging devices and systems.

EE 27N. Electronics Rocks. 3 Units.

Electronics pervades our lives, yet we often feel obliged to let a device function as it was intended. This course is about not being intimidated by voiding a warranty and modding some commercial gadget and about being confident enough to build something cool from scratch. To get there, we will study the basics of "how things work" via "dissection and discussion" and discuss how to hack/mod but focus primarily how to scratch build. Students will be mentored and encouraged to work, in teams, to design and develop a substantial project based on embedded microprocessors and custom circuits as needed. Typical projects include (but are not limited to) microcontrollers such as the Arduino, LED's, sensors, wireless connections to the network or a laptop, and software/firmware as needed. Examples include programmable, color-changing wireless juggling balls, a self-healing mesh-networked hide-and-seek game, and a glowing plasma based clock built from surplus Soviet vacuum tubes and a modern microprocessor. Prerequisites: good hand-eye coordination, intelligence, teamwork skills, curiosity and humility.

EE 41. Physics of Electrical Engineering. 5 Units.

How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. Prerequisites: Physics 43. Same as: ENGR 40P

EE 46. Engineering For Good: Save the World and Have Fun Doing It. 3 Units.

Projects that provide immediate and positive impact on the world. Focus is on global health by learning from experts in this field. Students work on real-world projects with help from members of NGOs and social entrepreneurial companies as part of the hand-on learning experience. Prerequisite: ENGR 40 or EE 122A or CS 106B or consent of instructor.

EE 47. Press Play: Interactive Device Design. 3 Units.

Introduction to the human-centered and technical workings behind interactive devices ranging from cellphones and video controllers to smart cars and appliances. Students build a working MP3 player prototype of their own design, using embedded microcontrollers, digital audio decoders and component sensors, and other electronic hardware. Topics include electronics prototyping, interface prototyping, sensors and actuators, micro-controller development, physical prototyping, and user testing. Prerequisite: CS106A and X or consent of instructor.

EE 60N. Man versus Nature: Coping with Disasters Using Space Technology. 4 Units.

Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. GER:DB-EngrAppSci. Same as: GEOPHYS 60N

EE 65. Modern Physics for Engineers. 3 Units.

This course introduces the core ideas of modern physics that enable applications ranging from solar energy and efficient lighting to the modern electronic and optical devices and nanotechnologies that sense, process, store, communicate and display all our information. Though the ideas have broad impact, the course is widely accessible to engineering and science students with only basic linear algebra and calculus through simple ordinary differential equations as mathematics background. Topics include the quantum mechanics of electrons and photons (Schrödinger's equation, atoms, electrons, energy levels and energy bands; absorption and emission of photons; quantum confinement in nanostructures), the statistical mechanics of particles (entropy, the Boltzmann factor, thermal distributions), the thermodynamics of light (thermal radiation, limits to light concentration, spontaneous and stimulated emission), and the physics of information (Maxwell's demon, reversibility, entropy and noise in physics and information theory). Pre-requisite: Physics 41. Pre- or co-requisite: Math 53 or CME 102.

EE 92A. Making and Breaking Things. 1 Unit.

This course will feature weekly visiting speakers who will guide class members through the hands-on process of assembling or dissection novel interactive devices and products. The course is meant to provide students hands-on experience with component sensing and computing technologies, a working knowledge of different materials and methods used in modern-day prototyping and manufacture, and exposure to people engaged in designing novel devices within the field of interactive device design. Activities will feature a wide and evolving range of domains such as textile sensors, hacking wireless radio, making LED light sculptures, taking apart toys, shape deposition modeling and more.

EE 100. The Electrical Engineering Profession. 1 Unit.

Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management.

EE 101A. Circuits I. 4 Units.

First of two-course sequence. Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. Prerequisite: ENGR40 or ENGR40M is useful but not strictly required.

EE 101B. Circuits II. 4 Units.

Second of two-course sequence. MOS large-signal and small-signal models. MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, and feedback. Prerequisite: EE101A, EE102A.

EE 102A. Signal Processing and Linear Systems I. 4 Units.

Concepts and tools for continuous- and discrete-time signal and system analysis with applications in signal processing, communications, and control. Mathematical representation of signals and systems. Linearity and time invariance. System impulse and step responses. System frequency response. Frequency-domain representations: Fourier series and Fourier transforms. Filtering and signal distortion. Time/frequency sampling and interpolation. Continuous-discrete-time signal conversion and quantization. Discrete-time signal processing. Prerequisite: MATH 53 or CME 102.

EE 102B. Signal Processing and Linear Systems II. 4 Units.

Continuation of EE 102A. Concepts and tools for continuous- and discrete-time signal and system analysis with applications in communications, signal processing and control. Analog and digital modulation and demodulation. Sampling, reconstruction, decimation and interpolation. Finite impulse response filter design. Discrete Fourier transforms, applications in convolution and spectral analysis. Laplace transforms, applications in circuits and feedback control. Z transforms, applications in infinite impulse response filter design. Prerequisite: EE 102A.

EE 103. Introduction to Matrix Methods. 4-5 Units.

Introduction to applied linear algebra with emphasis on applications. Vectors, norm, and angle; linear independence and orthonormal sets. Matrices, left and right inverses, QR factorization. Least-squares and model fitting, regularization and cross-validation, time-series prediction, and other examples. Constrained least-squares; applications to least-norm reconstruction, optimal control, and portfolio optimization. Newton methods and nonlinear least-squares. Prerequisites: MATH 51 or CME 100. Same as: CME 103

EE 107. Networked Systems. 3 Units.

Networks form the interconnect that stitch together our digital and physical lives. They underpin cloud computing, our mobile connectivity, as well as the means to connect the large number of sensors that will pervade our physical surroundings. This class will provide hands on introduction to how networks at these different scales are designed, from datacenters to embedded low power networks. Students will learn these concepts through a project that involves building a wireless network from the ground up using software radios. Students will also learn how to use these networks to build embedded applications (e.g. wireless controlled network of drones, localization systems using WiFi). The goal is to introduce students to larger concepts in electrical engineering and computer systems: the role of abstraction and layering, building reliable systems out of unreliable components and dynamic sharing of scarce resources. Prerequisites: EE 102A or ENGR 40M.

EE 108. Digital System Design. 4 Units.

Digital circuit, logic, and system design. Digital representation of information. CMOS logic circuits. Combinational logic design. Logic building blocks, idioms, and structured design. Sequential logic design and timing analysis. Clocks and synchronization. Finite state machines. Microcode control. Digital system design. Control and datapath partitioning. Lab. Undergraduates must enroll for 4 units. *In Autumn, enrollment preference is given to EE majors. Formerly EE 108A.

EE 109. Digital Systems Design Lab. 4 Units.

The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 25; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X.

EE 114. Fundamentals of Analog Integrated Circuit Design. 3-4 Units.

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Differential circuits, frequency response, and feedback will also be covered. Performance evaluation using computer-aided design tools. Undergraduates must take EE 114 for 4 units. Prerequisite: 101B. GER:DB-EngrAppSci. Same as: EE 214A

EE 116. Semiconductor Device Physics. 3 Units.

The fundamental operation of semiconductor devices and overview of applications. The physical principles of semiconductors, both silicon and compound materials; operating principles and device equations for junction devices (diodes, bipolar transistor, photo-detectors). Introduction to quantum effects and band theory of solids. Prerequisite: ENGR 40. Corequisite: 101B.

EE 118. Introduction to Mechatronics. 4 Units.

Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mechatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Prerequisites: ENGR 40, CS 106, or equivalents. Same as: ME 210

EE 122A. Analog Circuits Laboratory. 3 Units.

The course covers practical applications of mixed-signal circuits, including simple amplifiers, filters (passive, op-amp, switched-capacitor and digital-signal-processor-based), oscillators, power supplies, sensors and interface (input/output) circuits. Practical design skills, computer-aided design, and circuit fabrication and debugging are core topics. The design process is learned through proposing, designing, simulating, building, debugging, and demonstrating a substantial and novel team project. Radio frequency and largely digital projects not suitable for EE 122. Prerequisite: basic electronics laboratory experience with solid working knowledge of circuit analysis, Fourier and Laplace methods.

EE 122B. Introduction to Biomedical Electronics. 3 Units.

EE122B is a laboratory course covering the design and realization of key components and architectures of modern biomedical electronics systems, their application in clinical and research measurements, and practical matters in their safe reduction to practice. Material in each topic area begins with an overview of the underlying physiology. Details are presented beginning with the molecular, cellular, organ-level origins of the biosignals, followed by the relevant transduction principles, nature of the signals (amplitude, frequency spectrum, etc.), and their processing and clinical use. Specific engineering topics include safety in biomedical instruments, fundamentals of analog/digital conversion and filtering techniques for biosignals, typical transducers (biopotential, electrochemical, temperature, pressure, acoustic, movement), applications (cardiovascular medicine, neurology, pulmonology, etc.) and interfacing circuits. Prerequisite: EE122A or equivalent hands-on mixed-signal design experience and solid working knowledge of EE122A topics (see course description).

EE 124. Introduction to Neuroelectrical Engineering. 3 Units.

Fundamental properties of electrical activity in neurons, technology for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical systems. Topics: action potential generation and propagation, neuro-MEMS and measurement systems, experimental design and statistical data analysis, information encoding and decoding, clinical diagnostic systems, and fully-implantable neural prosthetic systems design. Prerequisite: EE 101A and EE 102A.

EE 133. Analog Communications Design Laboratory. 3-4 Units.

Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminial EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A. Same as: EE 233

EE 134. Introduction to Photonics. 4 Units.

Photonics, optical components, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication, sensor and imaging systems. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project on confocal microscopy or other method of sensing or analyzing biometric data. Laboratory experiments. Prerequisite: 41 or equivalent.

EE 136. Introduction to Nanophotonics and Nanostructures. 3 Units.

Electromagnetic and quantum mechanical waves and semiconductors. Confining these waves, and devices employing such confinement. Localization of light and applications: metallic mirrors, photonic crystals, optical waveguides, microresonators, plasmonics. Localization of quantum mechanical waves: quantum wells, wires, and dots. Generation of light in semiconductors: spontaneous and stimulated emission, lasers, and light emitting diodes. Devices incorporating localization of both electromagnetic and quantum mechanical waves such as resonant cavity quantum well lasers and microcavity-based single photon sources. System-level applications such as optical communications, biochemical sensing, and quantum cryptography. Prerequisite: basic familiarity with electromagnetic and quantum mechanical waves and semiconductors at the level of EE 41 or equivalent.

EE 142. Engineering Electromagnetics. 3 Units.

Introduction to electromagnetism and Maxwell's equations in static and dynamic regimes. Electrostatics and magnetostatics: Gauss's law, Coulomb's law, Faraday's law, Ampere's law, Biot-Savart's laws. Electric and magnetic potentials. Boundary conditions. Electric and magnetic field energy. Electrodynamics: Wave equation; Electromagnetic waves; Phasor form of Maxwell's equations. Solution of the wave equation in 1D free space: Wavelength, wave-vector, forward and backward propagating plane waves. Poynting's theorem. Propagation in lossy media, skin depth. Reflection and refraction at planar boundaries, total internal reflection. Solutions of wave equation for various 1D-3D problems: Electromagnetic resonators, waveguides periodic media, transmission lines. Formerly EE 141. Pre-requisites: Phys 43 or EE 42, CME 100, CME 102 (recommended).

EE 151. Sustainable Energy Systems. 3 Units.

Energy demand is expected to grow by 30% by 2025, while at the same time the European Union is demanding a carbon footprint at 1990 levels. We examine energy flow in the US and Europe, and deduce from it a strategy for sustainable growth. Potential solutions include distributed small scale networked energy generation, solar energy, wind and water, as well as nuclear energy. A systems perspective allows optimization. Fundamental concepts will be demonstrated in class through hands-on experiments.

EE 152. Green Electronics. 4 Units.

Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This course examines this technology and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. Topics include power converter topologies, periodic steady-state analysis, control, motors and drives, photovoltaic systems, and design of magnetic components. The course involves a hands-on laboratory and a substantial final project. Required: EE101B, EE102A, EE108A. Recommended: ENGR40 or EE122A.

EE 153. Power Electronics. 3-4 Units.

Addressing the energy challenges of today and the environmental challenges of the future will require efficient energy conversion techniques. This course will discuss the circuits used to efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The components used in these circuits (e.g., diodes, transistors, capacitors, inductors) will also be covered in detail to highlight their behavior in a practical implementation. A lab will be held with the class where students will obtain hands on experience with power electronic circuits. Formerly EE 292J. Same as: EE 253

EE 168. Introduction to Digital Image Processing. 3-4 Units.

Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formation and enhancement, imaging systems, perspective, morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming.

EE 169. Introduction to Bioimaging. 3 Units.

Bioimaging is important for both clinical medicine, and medical research. This course will provide an introduction to several of the major imaging modalities, using a signal processing perspective. The course will start with an introduction to multi-dimensional Fourier transforms, and image quality metrics. It will then study projection imaging systems (projection X-Ray), backprojection based systems (CT, PET, and SPECT), systems that use beam forming (ultrasound), and systems that use Fourier encoding (MRI). Prerequisites: EE102A, EE102B.

EE 178. Probabilistic Systems Analysis. 4 Units.

Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus.

EE 179. Analog and Digital Communication Systems. 3 Units.

This course covers the fundamental principles underlying the analysis, design and optimization of analog and digital communication systems. Design examples will be taken from the most prevalent communication systems today: cell phones, Wifi, radio and TV broadcasting, satellites, and computer networks. Analysis techniques based on Fourier transforms and energy/power spectral density will be developed. Mathematical models for random variables and random (noise) signals will be presented, which are used to characterize filtering and modulation of random noise. These techniques will then be used to design analog (AM and FM) and digital (PSK and FSK) communication systems and determine their performance over channels with noise and interference. Prerequisite: 102A. Not offered AY 14-15, and students are encouraged to enroll in EE 107 instead.

EE 180. Digital Systems Architecture. 3-4 Units.

The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Formerly EE 108B. Prerequisite: CS107 (required) and EE108 (recommended but not required).

EE 190. Special Studies or Projects in Electrical Engineering. 1-15 Unit.

Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading. Course may be repeated for credit.

EE 191. Special Studies and Reports in Electrical Engineering. 1-15 Unit.

Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190. Course may be repeated for credit.

EE 191A. Special Studies and Reports in Electrical Engineering. 1 Unit.

EE191A is part of the Accelerated Calculus for Engineers program. Independent work under the direction of a faculty member given for a letter grade only. EE 191A counts as a Math one unit seminar course: it is this unit that constitutes the ACE program.

EE 191W. Special Studies and Reports in Electrical Engineering. 3-10 Units.

WIM-version of EE 191. For EE students using special studies (e.g., honors project, independent research project) to satisfy thenwriting-in-major requirement. A written report that has gone through revision with an advisor is required. An advisor from the Writing Center is recommended. Same as: WIM

EE 192X. Stanford's Little Box Challenge. 1-15 Unit.

IGoogle has announced the "Littlebox" competition to build the smallest possible 2kW inverter. This challenge provides an ideal opportunity to provide a number of exciting educational and design opportunities for engineering students. The first few class meetings will be lecture format describing the competition and the work that has been done to date: Mechanical modeling, Matlab model, Buck and unfolding bridge designs. In parallel, students will be matched in teams for studies that need to be done: DC-Link implementation, QR-topology, Multi-level Approaches, Control implementation, GaN implementation, SiC investigations, Capacitor studies, Inductor studies, Thermal Design, EMI study, Etc. The problems span many topics: embedded and control systems design, power electronics, digital and analog design, programming in C & FPGAs, mechanical and thermal design and testing. We welcome motivated undergraduate and graduate students with a variety of backgrounds. Same as: EE 292X

EE 202. Electrical Engineering in Biology and Medicine. 3 Units.

Open to all. Primarily biological in nature, introduction to the physiological and anatomic aspects of medical instrumentation. Areas include patient monitoring, imaging, medical transducers, the unique aspects of medical electronic systems, the socio-economic impact of technology on medical care, and the constraints unique to medicine. Prerequisite: familiarity with circuit instrumentation techniques as in 101B.

EE 203. The Entrepreneurial Engineer. 1 Unit.

Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E. May be repeated for credit.

EE 204. Business Management for Electrical Engineers and Computer Scientists. 3 Units.

For graduate students with little or no business experience. Leading computer, high-tech, and Silicon Valley companies and their best practices. Tools and frameworks for analyzing decisions these companies face. Corporate strategy, new product development, marketing, sales, distribution, customer service, financial accounting, outsourcing, and human behavior in business organizations. Case studies. Prerequisite: graduate standing.

EE 204S. Business Management for Electrical Engineers and Computer Scientists. 3 Units.

For SCPD students; see EE204.

EE 212. Integrated Circuit Fabrication Processes. 3 Units.

For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford's Nanofabrication laboratory. Process simulators illustrate concepts. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410.

EE 213. Digital MOS Integrated Circuits. 3 Units.

Looks a little more deeply at how digital circuits operate, what makes a gate digital, and how to "cheat" to improve performance or power. To aid this analysis we create a number of different models for MOS transistors and choose the simplest one that can explain our the circuit's operation, using both hand and computer analysis. We explore static, dynamic, pulse-mode, and current mode logic, and show how they are used in SRAM design. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues are also covered. Formerly EE 313. Prerequisites: EE 101B, EE 108A. Recommended: EE 271.

EE 214A. Fundamentals of Analog Integrated Circuit Design. 3-4 Units.

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Differential circuits, frequency response, and feedback will also be covered. Performance evaluation using computer-aided design tools. Undergraduates must take EE 114 for 4 units. Prerequisite: 101B. GER:DB-EngrAppSci. Same as: EE 114

EE 214B. Advanced Analog Integrated Circuit Design. 3 Units.

Analysis and design of analog integrated circuits in advanced MOS and bipolar technologies. Device operation and compact modeling in support of circuit simulations needed for design. Emphasis on quantitative evaluations of performance using hand calculations and circuit simulations; intuitive approaches to design. Analytical and approximate treatments of noise and distortion; analysis and design of feedback circuits. Design of archetypal analog blocks for networking and communications such as broadband gain stages and transimpedance amplifiers. Prerequisites: EE114/214A.

EE 216. Principles and Models of Semiconductor Devices. 3 Units.

Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.

EE 222. Applied Quantum Mechanics I. 3 Units.

Emphasis is on applications in modern devices and systems. Topics include: Schrödinger's equation, eigenfunctions and eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, operator approach to quantum mechanics, Dirac notation, angular momentum, hydrogen atom, calculation techniques including matrix diagonalization, perturbation theory, variational method, and time-dependent perturbation theory with applications to optical absorption, nonlinear optical coefficients, and Fermi's golden rule. Prerequisites: MATH 52 and 53, PHYSICS 65 (or PHYSICS 43 and 45).

EE 223. Applied Quantum Mechanics II. 3 Units.

Continuation of 222, including more advanced topics: quantum mechanics of crystalline materials, methods for one-dimensional problems, spin, systems of identical particles (bosons and fermions), introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.

EE 225. Biochips and Medical Imaging. 3 Units.

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies. Same as: MATSCI 382, SBIO 225

EE 228. Basic Physics for Solid State Electronics. 3 Units.

Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics.

EE 230. Biophotonics: Light in Biology. 3 Units.

This course will provide an introduction to the use of optics in biology, primarily focusing on microscopy from an engineering perspective (i.e., the focus of the course is more on technology than biology). Course material will be interspersed with labs to provide hands-on experience with common techniques in modern microscopy (e.g., brightfield, fluorescence, confocal and phase contrast microscopy). Background in college physics strongly recommended. Programming experience with Matlab required.

EE 233. Analog Communications Design Laboratory. 3-4 Units.

Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminous EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A. Same as: EE 133

EE 234. Photonics Laboratory. 3 Units.

Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 242 or equivalent. Recommended: EE 236A.

EE 236A. Modern Optics. 3 Units.

Geometrical optics, aberrations, optical instruments, radiometry. Ray matrices and Gaussian beams. Wave nature of light. Plane waves: at interfaces, in media with varying refractive index. Diffraction and Fourier optics. Interference, single-beam interferometers (Fabry-Perot), multiple-beam interferometers (Michelson, Mach-Zehnder). Polarization, Jones and Stokes calculus. Formerly EE 268. Prerequisites: EE 141 or familiarity with electromagnetism and plane waves.

EE 236AL. MODERN OPTICS - LABORATORY. 1 Unit.

The Laboratory Course allows students to work hands-on with optical equipment to conduct five experiments that compliment the lecture course. Examples are Gaussian Beams and Resonators, Interferometers, and Diffraction.

EE 236B. Guided Waves. 3 Units.

Maxwell's equations, constitutive relations. Kramers-Kronig relations. Modes in waveguides: slab, rectangular, circular. Photonic crystals, surface plasmon modes. General properties of waveguide modes: orthogonality, phase and group indices, group velocity dispersion. Chirped pulse propagation in dispersive media and its connection to Gaussian beam propagation. Time lens. Waveguide technologies: glass, silicon, III-V semiconductor, metallic. Waveguide devices: fibers, lasers, modulators, arrayed waveguide gratings. Scattering matrix description of passive optical devices, and constraints from energy conservation, time-reversal symmetry and reciprocity. Mode coupling, directional couplers, distributed-feedback structures. Resonators from scattering matrix and input-output perspective. Micro-ring resonators. Formerly EE 235. Prerequisites: EE 236A and EE 242 or familiarity with differential form of Maxwell's equations.

EE 236C. Lasers. 3 Units.

Atomic systems, spontaneous emission, stimulated emission, amplification. Three- and four-level systems, rate equations, pumping schemes. Laser principles, conditions for steady-state oscillation. Transverse and longitudinal mode control and tuning. Exemplary laser systems: gas (HeNe), solid state (Nd:YAG, Ti:sapphire) and semiconductors. Elements of laser dynamics and noise. Formerly EE231. Prerequisites: EE 236B and familiarity with modern physics and semiconductor physics. Recommended: EE 216 and EE 223 (either may be taken concurrently).

EE 237. Solar Energy Conversion. 3 Units.

Basics of solar energy conversion in photovoltaic devices. Solar cell device physics: electrical and optical. Crystalline silicon, thin film and multi-junction solar cells. Solar system issues including module assembly, inverters, and micro-inverters. Concentrated solar power. Flip classroom model is used supplementing classroom lectures with short videos. Guest speakers include distinguished engineers, entrepreneurs and venture capitalists actively engaged in solar industry. Recommended: EE116, EE216.

EE 242. Electromagnetic Waves. 3 Units.

Continuation of 141. Maxwell's equations. Plane waves in lossless and lossy media. Skin effect. Flow of electromagnetic power (Poynting's theorem). Reflection and refraction of waves at planar boundaries. Snell's law and total internal reflection. Reflection and refraction from lossy media. Guided waves. Parallel-plate and dielectric-slab waveguides. Hollow wave-guides, cavity resonators, microstrip waveguides, optical fibers. Interaction of fields with matter and particles. Antennas and radiation of electromagnetic energy. Prerequisite: 141 or PHYSICS 120.

EE 243. Semiconductor Optoelectronic Devices. 3 Units.

Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductor optoelectronic materials and heterostructures. Devices include: optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 or equivalent.

EE 247. Introduction to Optical Fiber Communications. 3 Units.

Fibers: single- and multi-mode, attenuation, modal dispersion, group-velocity dispersion, polarization-mode dispersion. Nonlinear effects in fibers: Raman, Brillouin, Kerr. Self- and cross-phase modulation, four-wave mixing. Sources: light-emitting diodes, laser diodes, transverse and longitudinal mode control, modulation, chirp, linewidth, intensity noise. Modulators: electro-optic, electro-absorption. Photodiodes: p-i-n, avalanche, responsivity, capacitance, transit time. Receivers: high-impedance, transimpedance, bandwidth, noise. Digital intensity modulation formats: non-return-to-zero, return-to-zero. Receiver performance: Q factor, bit-error ratio, sensitivity, quantum limit. Sensitivity degradations: extinction ratio, intensity noise, jitter, dispersion. Wavelength-division multiplexing. System architectures: local-area, access, metropolitan-area, long-haul. Prerequisites: 102A, 242 or consent of instructor.

EE 248. Fundamentals of Noise Processes. 3 Units.

Fundamentals of statistic, Fourier analysis, statistical and quantum mechanics, and linear and nonlinear circuit theory. Thermal, quantum and 1/f noise in resistors, pn junctions, lasers, and parametric amplifiers. Energy efficiency (bit/photon) and spectral efficiency (bit/s/Hz) in coherent and single photon optical communications. Protocols and security in quantum cryptography. Decoherence of qubits in quantum computation. Prerequisites: elementary device, circuit, and electromagnetic waves to the level of 101A,B and 242.

EE 251. High-Frequency Circuit Design Laboratory. 3 Units.

Students will study the theory of operation of instruments such as the time-domain reflectometer, sampling oscilloscope and vector network analyzer. They will build on that theoretical foundation by designing, constructing and characterizing numerous wireless building blocks in the upper-UHF range (e.g., up to about 500MHz), in a running series of laboratory exercises that conclude in a final project. Examples include impedance-matching and coupling structures, filters, narrowband and broadband amplifiers, mixers/modulators, and voltage-controlled oscillators.

EE 252. Antennas. 3 Units.

This course aims to cover the theory, simulation, and hands-on experiment in antenna design. Topics include: basic parameters to describe the performance and characteristics of an antenna, link budget analyses, solving the fields from a Hertzian dipole, duality, equivalence principle, reciprocity, linear wire antenna, circular loop antenna, antenna array, slot and patch antennas, helical antennas, wideband antennas, size reduction techniques, wideband small antennas, and circularly polarized (CP) small antennas. Students will learn to use a commercial electromagnetic stimulator in lab sessions. A final project is designed to solve a research antenna design problem in biomedical area or wireless communications. Prerequisite: EE 141 or Physics 120 or equivalent. Enrollment capacity limited to 25 students.

EE 253. Power Electronics. 3-4 Units.

Addressing the energy challenges of today and the environmental challenges of the future will require efficient energy conversion techniques. This course will discuss the circuits used to efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The components used in these circuits (e.g., diodes, transistors, capacitors, inductors) will also be covered in detail to highlight their behavior in a practical implementation. A lab will be held with the class where students will obtain hands on experience with power electronic circuits. Formerly EE 292J. Same as: EE 153

EE 254. Advanced Topics in Power Electronics. 3 Units.

In this course, we will study the practical issues related to the practical design of power electronic converters. We will also explore the trade-offs involved in selecting among the different circuits used to convert ac to dc, dc to ac and back to dc over a wide range of power levels suitable for different applications. In Advanced Topics in Power Electronic, as a multidisciplinary field, we will discuss power electronics circuits, extraction of transfer functions in Continuous and discontinuous conduction mode, voltage and current control of power converters, design of input/output filters to meet Electro Magnetic Interference specifications, layout of power electronics circuits and put this knowledge in a very practical context.

EE 256. Numerical Electromagnetics. 3 Units.

Principles and applications of numerical techniques for solving practical electromagnetics problems. Finite-difference time-domain (FDTD) method and finite-difference frequency-domain (FDFD) method for solving 2D and 3D Maxwell's equations. Numerical analysis of stability, dispersion, and dissipation. Perfectly matched layer (PML) absorbing boundaries. Total-field/scattered-field (TF/SF) method. Interaction of electromagnetic waves with dispersive and anisotropic media. Homework assignments require programming and the use of MATLAB or other equivalent tools. Prerequisite: 242 or equivalent.

EE 257. Applied Optimization Laboratory (Geophys 258). 3-4 Units.

Application of optimization and estimation methods to the analysis and modeling of large observational data sets. Laboratory exercises using inverse theory and applied linear algebra to solve problems of indirect and noisy measurements. Emphasis on practical solution of scientific and engineering problems, especially those requiring large amounts of data, on digital computers using scientific languages. Also addresses advantages of large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing observational systems such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prerequisites: Programming with high level language. Recommended: EE261, EE263, EE178, ME300 or equivalent.

Same as: GEOPHYS 258

EE 261. The Fourier Transform and Its Applications. 3 Units.

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, basic linear algebra, Comfort with sums and discrete signals, Fourier series at the level of 102A.

EE 262. Two-Dimensional Imaging. 3 Units.

Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: EE261. Recommended: EE278, EE279.

EE 263. Introduction to Linear Dynamical Systems. 3 Units.

Applied linear algebra and linear dynamical systems with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.

Same as: CME 263

EE 264. Digital Signal Processing. 3-4 Units.

This is a course on digital signal processing techniques and their applications. Topics include: review of DSP fundamentals; discrete-time random signals; sampling and multi-rate systems; oversampling and quantization in A-to-D conversion; properties of LTI systems; quantization in fixed-point implementations of filters; digital filter design; discrete Fourier Transform and FFT; spectrum analysis using the DFT; and parametric signal modeling. The course will also discuss applications of DSP in areas such as speech and audio processing, autonomous vehicles, and software radio. An optional (1 unit) project will provide a hands-on opportunity to explore the application of DSP theory to practical real-time applications. Prerequisite: EE102A and EE102B or equivalent.

EE 265. Digital Signal Processing Laboratory. 3-4 Units.

Applying 102A,B to real-world signal processing applications. Lab exercises use a programmable DSP to implement signal processing tasks. Topics: A/D conversion and quantization, sampling theorem, Z-transform, discrete-time Fourier transform, digital filter design and implementation, spectral analysis, rate conversion, wireless data communication, and OFDM receiver design. Prerequisites: 102A,B. Recommended: 261.

EE 266. Stochastic Control. 3 Units.

Introduction to stochastic control, with applications taken from a variety of areas including supply-chain optimization, advertising, finance, dynamic resource allocation, caching, and traditional automatic control. Markov decision processes, optimal policy with full state information for finite-horizon case, infinite-horizon discounted, and average stage cost problems. Bellman value function, value iteration, and policy iteration. Approximate dynamic programming. Linear quadratic stochastic control. Formerly EE365. Prerequisites: EE 263, EE 178 or equivalent.

Same as: MSE 251

EE 271. Introduction to VLSI Systems. 3 Units.

Provides a quick introduction to MOS transistors and IC fabrication and then creates abstractions to allow you to create and reason about complex digital systems. It uses a switch resistor model of a transistor, uses it to model gates, and then shows how gates and physical layout can be synthesized from Verilog or SystemVerilog descriptions. Most of the class will be spent on providing techniques to create designs that can be validated, are low power, provide good performance, and can be completed in finite time. Prerequisites: 101A, 108A and 108B; familiarity with transistors, logic design, Verilog and digital system organization.

EE 272. Design Projects in VLSI Systems. 3-4 Units.

An introduction to mixed signal design. Working in teams you will create a small mixed-signal VLSI design using a modern design flow and CAD tools. The project involves writing a Verilog model of the chip, creating a testing/debug strategy for your chip, wrapping custom layout to fit into a std cell system, using synthesis and place and route tools to create the layout of your chip, and understanding all the weird stuff you need to do to tape-out a chip. Useful for anyone who will build a chip in their Ph.D. Pre-requisites: EE271 and experience in digital/analog circuit design.

EE 273. Digital Systems Engineering. 3 Units.

Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: EE101A and EE108A. Recommended: EE114/214A.

EE 278. Introduction to Statistical Signal Processing. 3 Units.

Review of basic probability and random variables. Random vectors and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Formerly EE 278B. Prerequisites: EE178 and linear systems and Fourier transforms at the level of EE102A,B or EE261.

EE 279. Introduction to Digital Communication. 3 Units.

Digital communication is a rather unique field in engineering in which theoretical ideas have had an extraordinary impact on the design of actual systems. The course provides a basic understanding of the analysis and design of digital communication systems, building on various ideas from probability theory, stochastic processes, linear algebra and Fourier analysis. Topics include: detection and probability of error for binary and M-ary signals (PAM, QAM, PSK), receiver design and sufficient statistics, controlling the spectrum and the Nyquist criterion, bandpass communication and up/down conversion, design trade-offs: rate, bandwidth, power and error probability, coding and decoding (block codes, convolutional coding and Viterbi decoding). Prerequisites: 179 or 261, and 178 or 278.

EE 282. Computer Systems Architecture. 3 Units.

Course focuses on how to build modern computing systems, namely notebooks, smartphones, and data centers, covering primarily their hardware architecture and certain system software aspects. For each system class, we cover the system architecture, processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability. We will also cover topics such as interactions with system software, virtualization, solid state storage, and security. The programming assignments allow students to explore performance/energy tradeoffs when using heterogeneous hardware resources on smartphone devices. Prerequisite: EE108B. Recommended: CS 140.

EE 283B. Embedded Wireless Systems. 3 Units.

The structure and implementation of hardware/software systems for low power embedded sensors; how to build hardware/software systems that can run unattended for years on small batteries. Topics: hardware trends, energy profiles, execution models, sensing, aggregation, storage, application requirements, allocation, power management, resource management, scheduling, time synchronization, programming models, software design, and fault tolerance. Students discuss papers and research a final project building working systems on low-power embedded devices.

EE 284. Introduction to Computer Networks. 3 Units.

Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

EE 284B. Advanced Topics in Networking. 3-4 Units.

Classic papers, new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent. Same as: CS 244

EE 287A. Computer and Network Security. 3 Units.

For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system security, application security (web, apps, databases), malware, privacy, and security for mobile devices. Course projects focus on building reliable code. Prerequisite: 110. Recommended: basic Unix. Same as: CS 155

EE 290A. Curricular Practical Training for Electrical Engineers. 1 Unit.

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

EE 290B. Curricular Practical Training for Electrical Engineers. 1 Unit.

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

EE 290C. Curricular Practical Training for Electrical Engineers. 1 Unit.

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

EE 290D. Curricular Practical Training for Electrical Engineers. 1 Unit.

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

EE 292B. Micro and Nanoscale Biosensing for Molecular Diagnostics. 3 Units.

The course covers state-of-the-art and emerging bio-sensors, biochips, microfluidics, which will be studied in the context of molecular diagnostics. Students will briefly learn the relevant biology, biochemistry, and molecular biology pertinent to molecular diagnostics. Students will also become equipped with a thorough understanding of the interfaces between electronics, fluidics, and molecular biology. Topics will include microfluidics and mass transfer limits, electrode-electrolyte interfaces, electrochemical noise processes, biosensor system level characterization, determination of performance parameters such as throughput, detection limit, and cost, integration of sensor with microfluidics, and electronic readout circuitry architectures. Emphasis will be placed on in-depth quantitative design of biomolecular sensing platforms.

EE 292C. Chemical Vapor Deposition and Epitaxy for Integrated Circuits and Nanostructures. 1 Unit.

Fundamental aspects of CVD are initially considered, first focusing on processes occurring in the gas phase and then on those occurring on the surface. Qualitative understanding is emphasized, with minimal use of equations. Adding energy both thermally and by using a plasma is discussed; atomic-layer deposition is briefly considered. Examples of CVD equipment are examined. The second portion of the tutorial examines layers deposited by CVD. The focus is on group IV semiconductors; especially epitaxial and heteroepitaxial deposition, in which the crystal structure of the depositing layer is related to that of the substrate. Polycrystalline silicon and the IC interconnect system are then discussed. Finally, the use of high-density plasmas for rapid gap filling is contrasted with alternative CVD dielectric deposition processes.

EE 292H. Engineering and Climate Change. 1 Unit.

The purpose of this seminar series course is to help students and professionals develop the tools to apply the engineering mindset to problems that stem from climate change, in order to consider and evaluate possible stabilizing, remedial and adaptive approaches. This course is not a crash course on climate change or policy. Instead it will focus on learning about and discussing climate problems that seem most likely to benefit from the engineering mindset. Each week Dr. Field and/or a guest speaker will lead a short warm-up discussion/activity and then deliver a talk in his/her area of expertise. It will wrap up with small-group and full-class discussions of related challenges/opportunities and possible engineering-oriented solutions. nClass members are asked to do some background reading before each class and to submit a question before each lecture. May be repeated for credit.

EE 292I. Insanely Great Products: How do they get built?. 1 Unit.

Great products emerge from a sometimes conflict-laden process of collaboration between different functions within companies. This Seminar seeks to demystify this process via case-studies of successful products and companies. Engineering management and businesspeople will share their experiences in discussion with students. Previous companies profiled: Apple, Intel, Facebook, and Genentech -- to name a few. Previous guests include: Jon Rubinstein (NeXT, Apple, Palm), Diane Greene (VMware), and Ted Hoff (Intel). Pre-requisites: None.

EE 292K. Intelligent Energy Projects. 3 Units.

Energy systems must have the intelligence to cope with rapid changes in energy supply, demand, distribution, and storage. This course is a project course focusing on a selected areas of intelligent energy systems: Demand Response, Optimal Power Flow and Locational Marginal Pricing, energy systems monitoring, control analysis of distribution systems, and associated system architecture. Prerequisites: Consent of instructor. Basic probability (EE 278), optimization (EE 364A), Matlab and C++ programming. Experience with cvx a plus.

EE 292L. Nanomanufacturing. 3 Units.

Fundamentals of nanomanufacturing technology and applications. Topics include recent developments in process technology, lithography and patterning. Technology for FinFET transistors, NAND flash and 3D chips. Manufacturing of LEDs, thin film and crystalline solar cells. Flip classroom model is used supplementing classroom lectures with short videos. Guest speakers include distinguished engineers, entrepreneurs and venture capitalists actively engaged in nanomanufacturing. Prerequisite: background in device physics and process technology. Recommended: EE116, EE216, EE212.

EE 292M. Parallel Processors Beyond Multi-Core Processing. 2 Units.

The current parallel computing research emphasizes multi-cores, but there are alternative array processors with significant potential. This hands-on seminar focuses on SIMD (Single-Instruction, Multiple-Data) massively parallel processors, with weekly programming assignments. Topics: Flynn's Taxonomy, parallel architectures, the K-SIMD simulator, principles of SIMD programming, parallel sorting with sorting networks, string comparison with dynamic programming (edit distance, Smith-Waterman), arbitrary-precision operations with fixed-point numbers, reductions, vector and matrix multiplication, asynchronous algorithms on SIMD ("SIMD Phase Programming Model"), Mandelbrot set, analysis of parallel performance. Prerequisites: EE108B and EE282. Recommended: CS140.

EE 292P. Power Management Integrated Circuits. 3 Units.

Analysis of power management architectures and circuits in CMOS VLSI technology. Circuit-level design of integrated linear voltage regulators and highly-efficient switching power converters. Overview of significant topics: high-frequency converters, switched capacitor converters, battery chargers, digital control and layout of power converters. Prerequisite: EE214A or equivalent.

EE 292T. SmartGrids and Advanced Power Systems Seminar. 1-2 Unit.

A series of seminar and lectures focused on power engineering. Renowned researchers from universities and national labs will deliver bi-weekly seminars on the state of the art of power system engineering. Seminar topics may include: power system analysis and simulation, control and stability, new market mechanisms, computation challenges and solutions, detection and estimation, and the role of communications in the grid. The instructors will cover relevant background materials in the in-between weeks. The seminars are planned to continue throughout the next academic year, so the course may be repeated for credit. Same as: CEE 272T

EE 292X. Stanford's Little Box Challenge. 1-15 Unit.

IGoogle has announced the "Littlebox" competition to build the smallest possible 2kW inverter. This challenge provides an ideal opportunity to provide a number of exciting educational and design opportunities for engineering students. The first few class meetings will be lecture format describing the competition and the work that has been done to date: Mechanical modeling, Matlab model, Buck and unfolding bridge designs. In parallel, students will be matched in teams for studies that need to be done: DC-Link implementation, QR-topology, Multi-level Approaches, Control implementation, GaN implementation, SiC investigations, Capacitor studies, Inductor studies, Thermal Design, EMI study, Etc. The problems span many topics: embedded and control systems design, power electronics, digital and analog design, programming in C & FPGAs, mechanical and thermal design and testing. We welcome motivated undergraduate and graduate students with a variety of backgrounds. Same as: EE 192X

EE 293A. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Same as: ENERGY 293A, MATSCI 156, MATSCI 256

EE 293B. Fundamentals of Energy Processes. 3 Units.

For seniors and graduate students. Covers scientific and engineering fundamentals of renewable energy processes involving heat. Thermodynamics, heat engines, solar thermal, geothermal, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45. Same as: ENERGY 293B

EE 300. Master's Thesis and Thesis Research. 1-15 Unit.

Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade 'N' is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate. Course may be repeated for credit.

EE 303. Autonomous Implantable Systems. 3 Units.

Integrating electronics with sensing, stimulation, and locomotion capabilities into the body will allow us to restore or enhance physiological functions. In order to be able to insert these electronics into the body, energy source is a major obstacle. This course focuses on the analysis and design of wirelessly powered catheter-deliverable electronics. Emphases will be on the interaction between human and electromagnetic fields in order to transfer power to the embedded electronics via electromagnetic fields, power harvesting circuitry, electrical-tissue interface, and sensing and actuating frontend designs. Prerequisites: EE 252 or equivalent.

EE 304. Neuromorphics: Brains in Silicon. 3 Units.

This course introduces neuromorphic system design, starting at the device level, going through the circuit level, and ending up at the system level. At the device level, it covers MOS transistor operation in the subthreshold region. At the circuit level, it covers silicon neuron and synapse design. And at the system level, it covers reroutable interconnection. At the end of the course, you will understand how various neuromorphic architectures request; area and energy use scale with network size. Prerequisites: EE114 & EE108A. Same as: BIOE 313

EE 308. Advanced Circuit Techniques. 3 Units.

Design of advanced analog circuits at the system level, including switching power converters, amplitude-stabilized and frequency-stabilized oscillators, voltage references and regulators, power amplifiers and buffers, sample-and-hold circuits, and application-specific op-amp compensation. Approaches for finding creative design solutions to problems with difficult specifications and hard requirements. Emphasis on feedback circuit techniques, design-oriented thinking, and hands-on experience with modern analog building blocks. Several designs will be built and evaluated, along with associated laboratory projects.

EE 309. Semiconductor Memory Devices and Technology. 3 Units.

The functionality and performance of ULSI systems are increasingly dependent upon the characteristics of the memory subsystem. This course introduces the student to various memory devices: SRAM, DRAM, NVRAM (non-volatile memory). This course will cover various aspects of semiconductor memories, including basic operation principles, device design considerations, device scaling, device fabrication, memory array addressing and readout circuits. Various cell structures (e.g. 1T-1C, 6T, 4T, 1T-1R, 0T-1R, 1S-1R, floating gate FLASH, SONOS, NROM), and memory organization (open bit-line, folded bit-line, NAND, NOR, cross-point etc.). This course will include a survey of new memory concepts (e.g. magnetic tunnel junction memory (MRAM, SST-RAM), ferroelectric memory (FRAM), phase change memory (PCM), metal oxide resistive switching memory (RRAM), nanoconductive bridge memory (CBRAM)). Offered Alternate years. Pre-requisite: EE 216. Preferred: EE 316.

EE 310. Integrated Circuits Technology and Design Seminar. 1 Unit.

State-of-the-art micro- and nanoelectronics, nanotechnology, advanced materials, and nanoscience for device applications. Prerequisites: EE216, EE316. May be repeated for credit.

EE 311. Advanced Integrated Circuits Technology. 3 Units.

What are the practical and fundamental limits to the evolution of the technology of modern MOS devices and interconnects? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of MOS devices and back-end (interconnect and contact) processing. What are future device structures and materials to maintain progress in integrated electronics? MOS front-end and back-end process integration. Prerequisites: EE212, EE216 or equivalent.

EE 314A. RF Integrated Circuit Design. 3 Units.

Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: EE214B.

EE 314B. Advanced RF Integrated Circuit Design. 3 Units.

Analysis and design of modern communication circuits and systems with emphasis on design techniques for high-frequency (into mm-wave) ICs. Topics include MOS, bipolar, and BiCMOS high-frequency integrated circuits, including power amplifiers, extremely wideband amplifiers, advanced oscillators, phase-locked loops and frequency-translation circuits. Design techniques for mm-wave silicon ICs (on-chip low-loss transmission lines, unilateralization techniques, in-tegrated antennas, harmonic generation, etc) will also be studied. Prerequisite: EE314A or equivalent course in RF or microwave.

EE 315A. VLSI Signal Conditioning Circuits. 3 Units.

Design and analysis of integrated circuits for active filters, precision gain stages, and sensor interfaces in CMOS VLSI technology. Operational transconductance amplifiers; sampled-data and continuous-time analog filters. Analysis of noise and amplifier imperfections; compensation techniques such as correlated double sampling. Sensor interfaces for micro-electromechanical and biomedical applications. Layout techniques for analog integrated circuits. Prerequisites: EE214B.

EE 315B. VLSI Data Conversion Circuits. 3 Units.

Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS VLSI technology. Fundamental circuit elements such as sampling circuits and voltage comparators. Circuits and architectures for Nyquist-rate and oversampling analog-to-digital and digital-to-analog conversion; digital decimation and interpolation filters. Examples of calibration and digital enhancement techniques. Prerequisite: EE 214B. Recommended: EE 315A.

EE 316. Advanced VLSI Devices. 3 Units.

In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent.

EE 319. Advanced Nanoelectronic Devices and Technology. 3 Units.

Recent advances in materials science, device physics and structures, and processing technology, to extend VLSI device scaling towards atomistic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano patterning. Prerequisites: 216, 316.

EE 320. Nanoelectronics. 3 Units.

This course covers the device physics and operation principles of nanoelectronic devices, with a focus on devices for energy-efficient computation. Topics covered include devices based on new nanomaterials such as carbon nanotubes, semiconductor nanowires, and 2D layered materials such as graphene; non-FET based devices such as nanoelectromechanical (NEM) relay, single electron transistors (SET) and resonant tunneling diodes (RTD); as well as FET-based devices such as tunnel FET. Devices targeted for both logic and memory applications are covered. Prerequisites: Undergraduate device physics, EE222, EE216, EE316. Recommended courses: EE223, EE228, EE311.

EE 323. Energy in Electronics. 3 Units.

This course examines energy in modern nanoelectronics, from fundamentals to system-level issues. Topics include fundamental aspects like energy transfer through electrons and phonons, ballistic limits of current and heat, meso- to macroscale mobility and thermal conductivity. The course also examines applied topics including power dissipation in nanoscale devices (FinFETs, phase-change memory, nanowires, graphene, nanotubes), circuit leakage, thermal breakdown, thermometry, heat sinks, and thermal challenges in densely integrated systems.

EE 327. Properties of Semiconductor Materials. 3 Units.

Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semi-classical transport theory, semi-conductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination that are the foundations of modern transistors and optoelectronic devices. Prerequisites: EE216 or equivalent.

EE 328. Physics of Advanced Semiconductor Devices. 3 Units.

Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, HJ-bipolar transistors, HJ-FETs, nanostructures, tunneling, single electron transistor and photonic devices. Use of SENTARUS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research. Prerequisite: 216. Recommended: 316.

EE 329. The Electronic Structure of Surfaces and Interfaces. 3 Units.

Physical concepts and phenomena for surface science techniques probing the electronic and chemical structure of surfaces, interfaces and nanomaterials. Microscopic and atomic models of microstructures; applications including semiconductor device technology, catalysis and energy. Physical processes of UV and X-ray photoemission spectroscopy, Auger electron spectroscopy, surface EXAFS, low energy electron diffraction, electron/photon stimulated ion desorption, scanning tunneling spectroscopy, ion scattering, energy loss spectroscopy and related imaging methods; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor. Same as: PHOTON 329

EE 331. Biophotonics: Light in Medicine and Biology. 3 Units.

Current topics and trends in the use of light in medicine and for advanced microscopy. Course begins with a review of relevant optical principles (basic physics required). Key topics include: light-tissue interactions; sensing and spectroscopy; contrast-enhanced imaging; super-resolution and label-free microscopy; medical applications of light for diagnostics, in-vivo imaging, and therapy; nanophotonics and array technologies. Open to non-majors; programming experience (Matlab and/or C) required.

EE 332. Laser Dynamics. 3 Units.

Dynamic and transient effects in lasers including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, pulse shaping. Formerly EE 232. Prerequisite: 236C.

EE 334. Micro and Nano Optical Device Design. 3 Units.

Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: EE 242 or equivalent.

EE 336. Nanophotonics. 3 Units.

Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Sub-wavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: Electromagnetic theory at the level of 242. Same as: MATSCI 346

EE 340. Optical Micro- and Nano-Cavities. 3 Units.

Optical micro- and nano-cavities and their device applications. Types of optical cavities (microdisks, microspheres, photonic crystal cavities, plasmonic cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical cavities, including low-threshold lasers, optical modulators, quantum information processing devices, and bio-chemical sensors. Prerequisites: Advanced undergraduate or basic graduate level knowledge of electromagnetics, quantum.

EE 345. Optical Fiber Communication Laboratory. 3 Units.

Experimental techniques in optical fiber communications and networking. Experimental investigation of key optical communications components including fibers, lasers, modulators, photodiodes, optical amplifiers, and WDM multiplexers and demultiplexers. Fundamental optical communications systems techniques: eye diagrams, BER measurements, experimental evaluation of nonlinearities. Prerequisites: Undergraduate physics and optics.

EE 346. Introduction to Nonlinear Optics. 3 Units.

Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric-dipole susceptibilities. Free and forced waves; phase matching; slowly varying envelope approximation; dispersion, diffraction, space-time analogy. Harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation. Raman and Brillouin scattering; nonlinear processes in optical fibers. Prerequisites: 242, 236C.

EE 348. Advanced Optical Fiber Communications. 3 Units.

Optical amplifiers: gain, saturation, noise. Semiconductor amplifiers. Erbium-doped fiber amplifiers. System applications: preamplified receiver performance, amplifier chains. Raman amplifiers, lumped vs. distributed amplification. Group-velocity dispersion management: dispersion-compensating fibers, filters, gratings. Interaction of dispersion and nonlinearity, dispersion maps. Multichannel systems. Wavelength-division multiplexing components: filters, multiplexers. WDM systems, crosstalk. Time, subcarrier, code and polarization-division multiplexing. Comparison of modulation techniques: differential phase-shift keying, phase-shift keying, quadrature-amplitude modulation. Comparison of detection techniques: noncoherent, differentially coherent, coherent. Prerequisite: 247.

EE 349. Advanced Topics in Nano-Optics and Plasmonics. 3 Units.

Electromagnetic phenomena at the nanoscale. Dipolar interactions between emitters and nanostructures, weak and strong coupling, surface plasmon polaritons and localized plasmons, electromagnetic field enhancements, and near-field coupling between metallic nanostructures. Numerical tools will be taught and used to simulate nano-optical phenomena.

EE 355. Imaging Radar and Applications. 3 Units.

Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278, EE279. Same as: GEOPHYS 265

EE 356. Resonant Power Converters and Magnetic Design. 3 Units.

In this course, we will study the design of Resonant power converters which are capable of operating at higher frequencies than their hard-switch counterparts. Resonant converters are found in high performance applications where high control bandwidth and high power density are required. We will also explore practical design issues and trade off in selecting converter topologies in high performance application. We will discuss the design and modeling of high frequency magnetic elements, gate drives and resonant snubbers.

EE 359. Wireless Communications. 3-4 Units.

This course will cover advanced topics in wireless communications for voice, data, and multimedia. Topics include: an overview of current and future wireless systems; wireless channel models including path loss, shadowing, and statistical multipath channel models; fundamental capacity limits of wireless channels; digital modulation and its performance in fading and intersymbol interference; techniques to combat fading including adaptive modulation, diversity, and multiple antenna systems (MIMO); techniques to combat intersymbol interference including equalization, multicarrier modulation (OFDM), and spread spectrum; and an overview of wireless network design. Prerequisite: 279 or instructor consent.

EE 360. Multiuser Wireless Systems and Networks. 3 Units.

Design, analysis, and fundamental limits. Topics include multiuser channel capacity, multiple and random access techniques, interference mitigation, cellular system design, ad hoc wireless network design, sensor networks, "green" wireless networks, cognitive radios, and cross-layer design. Prerequisite: EE 359.

EE 364A. Convex Optimization I. 3 Units.

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability.

Same as: CME 364A, CS 334A

EE 364B. Convex Optimization II. 3 Units.

Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Monotone operators and proximal methods; alternating direction method of multipliers. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Course requirements include project. Prerequisite: 364A.

Same as: CME 364B

EE 367. Computational Imaging and Display. 3 Units.

Spawned by rapid advances in optical fabrication and digital processing power, a new generation of imaging technology is emerging: computational cameras at the convergence of applied mathematics, optics, and high-performance computing. Similar trends are observed for modern displays pushing the boundaries of resolution, contrast, 3D capabilities, and immersive experiences through the co-design of optics, electronics, and computation. This course serves as an introduction to the emerging field of computational imaging and displays. Students will learn to master bits and photons.

Same as: CS 448I

EE 368. Digital Image Processing. 3 Units.

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students learn to apply material by implementing and investigating image processing algorithms in Matlab and optionally on Android mobile devices. Term project. Recommended: EE261, EE278.

Same as: CS 232

EE 369A. Medical Imaging Systems I. 3 Units.

Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: EE 261.

EE 369B. Medical Imaging Systems II. 3 Units.

Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: EE 261.

EE 369C. Medical Image Reconstruction. 3 Units.

Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.

EE 371. Advanced VLSI Circuit Design. 3 Units.

Design of high-performance digital systems, the things that cause them to fail, and how to avoid these problems. Topics will focus on current issues including: wiring resistance and how to deal with it, power and Gnd noise and regulation, clock (or asynchronous) system design and how to minimize clocking overhead, high-speed I/O design, energy minimization including leakage control, and structuring your Verilog code to result in high-performance, low energy systems. Extensive use of modern CAD tools. Prerequisites: 271 and 313, or consent of instructor.

EE 373A. Adaptive Signal Processing. 3 Units.

Learning algorithms for adaptive digital filters. Self-optimization. Wiener filter theory. Quadratic performance functions, their eigenvectors and eigenvalues. Speed of convergence. Asymptotic performance versus convergence rate. Applications of adaptive filters to statistical prediction, process modeling, adaptive noise canceling, adaptive antenna arrays, adaptive inverse control, and equalization and echo canceling in modems. Artificial neural networks. Cognitive memory/human and machine. Natural and artificial synapses. Hebbian learning. The Hebbian-LMS algorithm. Theoretical and experimental research projects in adaptive filter theory, communications, audio systems, and neural networks. Biomedical research projects, supervised jointly by EE and Medical School faculty. Recommended: EE263, EE264, EE278.

EE 373B. Adaptive Neural Networks. 3 Units.

Artificial neural networks. Feedforward layered networks. Backpropagation algorithm. Recurrent neural networks. Autoassociative neural networks. Principal component analysis. Clustering algorithms. Applications of neural networks to pattern recognition, speech recognition, adaptive control, nonlinear adaptive filtering, and cognitive memory. Modeling human memory. Design of human-like memory for computers, with applications to face recognition, image processing, and complex control. Continuation of research projects begun in 373A. Prerequisite: 373A.

EE 376A. Information Theory. 3 Units.

The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178 or STATS 116, or equivalent. Same as: STATS 376A

EE 376B. Network Information Theory. 3 Units.

Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A. Same as: STATS 376B

EE 376C. Universal Schemes in Information Theory. 3 Units.

Universal schemes for lossless and lossy compression, channel coding and decoding, prediction, denoising, and filtering. Characterization of performance limitations in the stochastic setting: entropy rate, rate-distortion function, channel capacity, Bayes envelope for prediction, denoising, and filtering. Lempel-Ziv lossless compression, and Lempel-Ziv based schemes for lossy compression, channel coding, prediction, and filtering. Discrete universal denoising. Compression-based approach to denoising. The compound decision problem. Prerequisites: EE278, EE376A, EE376B.

EE 376D. Wireless Information Theory. 3 Units.

Information theory forms the basis for the design of all modern day communication systems. The original theory was primarily point-to-point, studying how fast information can flow across an isolated noisy communication channel. Until recently, there has been only limited success in extending the theory to a network of interacting nodes. Progress has been made in the past decade driven by engineering interest in wireless networks. The course provides a unified overview of this recent progress made in information theory of wireless networks. Starting with an overview of the capacity of fading and multiple-antenna wireless channels, we aim to answer questions such as: What is the optimal way for users to cooperate and exchange information in a wireless network? How much benefit can optimal cooperation provide over traditional communication architectures? How can cooperation help to deal with interference between multiple wireless transmissions? Formerly EE361. Prerequisites: EE376A.

EE 377. Information Theory and Statistics. 3 Units.

Information theoretic techniques in probability and statistics. Fano, Assouad, and Le Cam methods for optimality guarantees in estimation. Large deviations and concentration inequalities (Sanov's theorem, hypothesis testing, the entropy method, concentration of measure). Approximation of (Bayes) optimal procedures, surrogate risks, f -divergences. Penalized estimators and minimum description length. Online game playing, gambling, no-regret learning. Prerequisites: EE 376A (or equivalent) or STATS 300A. Same as: STATS 311

EE 378A. Statistical Signal Processing. 3 Units.

Random signals in electrical engineering. Discrete-time random processes: stationarity and ergodicity, covariance sequences, power spectral density, parametric models for stationary processes. Fundamentals of linear estimation: minimum mean squared error estimation, optimum linear estimation, orthogonality principle, the Wold decomposition. Causal linear estimation of stationary processes: the causal Wiener filter, Kalman filtering. Parameter estimation: criteria of goodness of estimators, Fisher information, Cramer-Rao inequality, Chapman-Robbins inequality, maximum likelihood estimation, method of moments, consistency, efficiency. ARMA parameter estimation: Yule-Walker equations, Levinson-Durbin algorithm, least squares estimation, moving average parameter estimation, modified Yule-Walker method for model order selection. Spectrum estimation: sample covariances, covariance estimation, Bartlett formula, periodogram, periodogram averaging, windowed periodograms. Prerequisites: EE 278.

EE 378B. Inference, Estimation, and Information Processing. 3 Units.

Techniques and models for signal, data and information processing, with emphasis on incomplete data, non-ordered index sets and robust low-complexity methods. Linear models; regularization and shrinkage; dimensionality reduction; streaming algorithms; sketching; clustering, search in high dimension; low-rank models; principal component analysis. Applications include: positioning from pairwise distances; distributed sensing; measurement/traffic monitoring in networks; finding communities/clusters in networks; recommendation systems; inverse problems. Prerequisites: EE278 and EE263 or equivalent. Recommended but not required: EE378A.

EE 379. Digital Communication. 3 Units.

Modulation: linear, differential and orthogonal methods; signal spaces; power spectra; bandwidth requirements. Detection: maximum likelihood and maximum a posteriori probability principles; sufficient statistics; correlation and matched-filter receivers; coherent, differentially coherent and noncoherent methods; error probabilities; comparison of modulation and detection methods. Intersymbol interference: single-carrier channel model; Nyquist requirement; whitened matched filter; maximum likelihood sequence detection; Viterbi algorithm; linear equalization; decision-feedback equalization. Multi-carrier modulation: orthogonal frequency-division multiplexing; capacity of parallel Gaussian channels; comparison of single- and multi-carrier techniques. Prerequisite: EE102B, EE278.

EE 380. Colloquium on Computer Systems. 1 Unit.

Live presentations of current research in the design, implementation, analysis, and applications of computer systems. Topics range over a wide range and are different every quarter. Topics may include fundamental science, mathematics, cryptography, device physics, integrated circuits, computer architecture, programming, programming languages, optimization, applications, simulation, graphics, social implications, venture capital, patent and copyright law, networks, computer security, and other topics of related to computer systems. May be repeated for credit.

EE 382C. Interconnection Networks. 3 Units.

The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.

EE 382E. Advanced Multi-Core Systems. 3 Units.

In-depth coverage of the architectural techniques used in modern, multi-core chips for mobile and server systems. Advanced processor design techniques (superscalar cores, VLIW cores, multi-threaded cores, energy-efficient cores), cache coherence, memory consistency, vector processors, graphics processors, heterogeneous processors, and hardware support for security and parallel programming. Students will become familiar with complex trade-offs between performance-power-complexity and hardware-software interactions. A central part of CS316 is a project on an open research question on multi-core technologies. Prerequisites: EE 108B. Recommended: CS 149, EE 282. Same as: CS 316

EE 384A. Internet Routing Protocols and Standards. 3 Units.

Local area networks addressing and switching; IEEE 802.1 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: interior gateways (RIP, OSPF) and exterior gateways (BGP); multicast routing; multiprotocol label switching (MPLS). Routing in mobile networks: Mobile IP, Mobile Ad Hoc Networks (MANET), Wireless Mesh Networks. Prerequisite: EE 284 or CS 144.

EE 384B. Multimedia Communication over the Internet. 3 Units.

Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264), TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Emphasis will be placed on advances in network infrastructure and new services (VoIP, IPTV, Peer-to-peer communications, etc.) Prerequisite: 284 or CS 144. Recommended: 384A.

EE 384C. Wireless Local and Wide Area Networks. 3 Units.

Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. IEEE 802.11s Mesh Networks. IEEE 802.16 (WiMAX) network architecture and protocols: Physical Layer (OFDMA) and Media Access Control Layer. Current research papers in the open literature. Prerequisite: EE 284 or CS 244A.

EE 384E. Networked Wireless Systems. 3 Units.

Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284.

Same as: CS 244E

EE 384M. Network Science. 3 Units.

Modern large-scale networks consist of (i) Information Networks, such as the Web and Social Networks, and (ii) Data Centers, which are networks interconnecting computing and storage elements for servicing the users of an Information Network. This course is concerned with the mathematical models and the algorithms used in Information Networks and Data Centers. Prerequisite: EE178 or CS365.

EE 384S. Performance Engineering of Computer Systems & Networks. 3 Units.

Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queueing networks and congestion management, dynamic programming and task/processor scheduling, network dimensioning and optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability.

EE 384X. Packet Switch Architectures. 3 Units.

The theory and practice of designing packet switches, such as Internet routers, and Ethernet switches. Introduction: evolution of switches and routers. Output queued switches: motivation and methods for providing bandwidth and delay guarantees. Switching: output queueing, parallelism in switches, distributed shared memory switches, input-queued switches, combined input-output queued switches, how to make fast packet buffers, buffered crossbar switches. Scheduling input queued crossbars: connections with bipartite graph matching, algorithms for 100% throughput, practical algorithms and heuristics. Looking forward: Architectures and switches for data center networks. Prerequisites: EE284 or CS 244A. Recommended: EE 178 or EE 278 or STAT 116.

EE 385A. Robust and Testable Systems Seminar. 1-4 Unit.

Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be repeated for credit. Prerequisite: consent of instructor.

EE 386. Robust System Design. 3 Units.

Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: 108A,B, 282.

EE 387. Algebraic Error Control Codes. 3 Units.

Theory and implementation of algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra.

EE 387A. Advanced Topics in Cryptography. 3 Units.

Topics: Pseudo randomness, multiparty computation, pairing-based and lattice-based cryptography, zero knowledge protocols, and new encryption and integrity paradigms. May be repeated for credit. Prerequisite: 255.

EE 390. Special Studies or Projects in Electrical Engineering. 1-15 Unit.

Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading. May be repeated for credit.

EE 391. Special Studies and Reports in Electrical Engineering. 1-15 Unit.

Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390. May be repeated for credit.

EE 392AA. Advanced Digital Transmission. 3 Units.

This course will develop insights into fundamentals and design of state-of-the-art physical-layer transmission systems. Specific attention will be paid to transmission in non-ideal environments with limited spectra and spatial interference. A theory of parallel channels is used to develop multi-carrier methods, vector coding, and generalized decision-feedback approaches. Students will be expected to design and analyze performance of systems operating close to fundamental limits for a variety of practical channels, wireline or wireless. Prerequisites: EE379 or equivalent; understanding of probability, random processes, digital signal processing (including basic matrix and matlab skills).

EE 392E. VLSI Signal Processing. 3 Units.

DSP architecture design. Study of circuit and architecture techniques in energy-area-performance space, design methodology based on a data-flow graph model that leads to hardware implementation. We explore automated wordlength reduction, direct and recursive filters, time-frequency analysis and other examples. The project focuses on architecture exploration for selected DSP algorithms. Useful for algorithm designers who consider hardware constraints and for circuit designers who prototype DSP algorithms in hardware. Prerequisites: EE102B and EE108A; Recommended: EE264 and EE271.

EE 392F. Logic Synthesis of VLSI Circuits. 3 Units.

Similar to former 318. Solving logic design problems with CAD tools for VLSI circuits. Exact and heuristic algorithms for logic synthesis. Representation and optimization of combinational logic functions (encoding problems, binary decision diagrams) and of multiple-level networks (algebraic and Boolean methods, don't-care set computation, timing verification, and optimization); and modeling and optimization of sequential functions and networks (retiming), semicustom libraries, and library binding. Prerequisites: familiarity with logic design, algorithm development, and programming.

EE 392I. Seminar on Trends in Computing and Communications. 1 Unit.

Lectures series and invited talks on current trends in computing and communications, and ongoing initiatives for research and open innovation. This year's focus on evolving cloud computing architectures and their impact on the enterprise; big data trends and rise of the third platform; software as a service; wireless and cellular network architectures; mobility and mobile data proliferation; open mobile platforms (e.g. Android); multi-homed mobile networking, associated data communication and mobile resource trade-offs, and system implementation in smartphones and Android devices.

EE 392L. Modern Cellular Communication Systems. 3 Units.

Theoretical and practical aspects of design, development, and implementation of modern cellular communication systems including principles, requirements and constraints of system design and deployment using examples from real-life cellular systems. Topics include radio access network protocols; homogenous and heterogeneous network architectures; power, mobility, and interference management; spectrum allocations; network capacity and user throughput; multi-antenna transmission techniques; RF and baseband signal processing; unicast and broadcast multimedia services; multi-radio platforms; and future trends in cellular communications. Suggested prerequisites: EE359, EE264, EE279, and EE278 or equivalents.

EE 392N. INTELLIGENT ENERGY SYSTEMS. 1 Unit.

The key systems engineering steps for design of automated systems in application to of existing and future intelligent energy systems. Existing design approaches and practices for the energy systems. Every second lecture of the course will be a guest lecture discussing the communication system design for a certain type of energy system. They will alternate with guest lectures discussing the on-line analytical functions.

EE 392P. Nanoscale Device Physics. 3 Units.

The course develops an understanding of nanoscale devices relevant to information manipulation: electronic drawing on ballistic, single electron, quantum confinement, and phase transitions such as ferroelectric, metal-insulator, and structural; magnetic employing field-switching, spin-torque and spin Hall; photonic using photonic bandgaps and non-linearities; and mechanical employing deflection, torsion and resonance. The physical phenomena that these connect to are electron-phonon effects in dielectrics, mesoscopic and single-electron phenomena, phase transitions, magnetic switching, spin-torque effect, Casimir effect, plasmonics, and their coupled interactions. Prerequisites: EE 216 or equivalent. Recommended: EE 222.

EE 392Q. Parallel Processors Beyond Multicores Processing. 3 Units.

The current parallel computing research emphasizes multi-cores, but there are alternative array processors with significant potential. This hands-on course focuses on SIMD (Single-Instruction, Multiple-Data) massively parallel processors. Topics: Flynn's Taxonomy, parallel architectures, Kestrel architecture and simulator, principles of SIMD programming, parallel sorting with sorting networks, string comparison with dynamic programming (edit distance, Smith-Waterman), arbitrary-precision operations with fixed-point numbers, reductions, vector and matrix multiplication, image processing algorithms, asynchronous algorithms on SIMD ("SIMD Phase Programming Model"), Mandelbrot set, analysis of parallel performance.

EE 392R. Analog-to-Digital Conversion. 3 Units.

This course teaches the theoretical and practical aspects of designing analog-to-digital and digital-to-analog converters. During this course sampling and amplitude discretization theory are reviewed. Several converters and building blocks are analyzed on electronic circuit level and suitability for various systems is considered. Specific properties and their application are shown. Next to Nyquist converters also oversampled and noise-shaping topologies are re-viewed. Impact of mismatch of components is extensively discussed. Prerequisites: EE214B or equivalent.

EE 392T. Seminar in Chip Test and Debug. 1 Unit.

Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binsplit modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371).

EE 392X. Power Electronics Control and Energy-Aware Design. 3 Units.

The course surveys control techniques for power management and renewable energy sources. The overall aim is to provide a broad overview on control and power electronics for intelligent energy management. Specific topics include: (1) Systematic discussion of concepts underlying control techniques and relevant design/optimization methods, (2) Impact of the power conversion topology and the quality of the passive components on control effectiveness, and (3) Power architecture and control issues relevant to system level optimization in photovoltaic applications.

EE 395. Electrical Engineering Instruction: Practice Teaching. 1-15 Unit.

Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course taught in parallel by an experienced instructor. Enrollment limited.

EE 396. Engineering Education and Online Learning. 3 Units.

An introduction to best practices in engineering education and educational technology, with a focus on online and blended learning. In addition to gaining a broad understanding of the field, students will experiment with a variety of education technologies, pedagogical techniques, and assessment methods.

Same as: EDUC 391X

EE 398A. Image and Video Compression. 3 Units.

Replaces EE398. The principles of source coding for the efficient storage and transmission of still and moving images. Entropy and lossless coding techniques. Run-length coding and fax compression. Arithmetic coding. Rate-distortion limits and quantization. Lossless and lossy predictive coding. Transform coding, JPEG. Subband coding, wavelets, JPEG2000. Motion-compensated coding, MPEG. Students investigate image and video compression algorithms in Matlab or C. Term project. Prerequisites: EE261, EE278.

EE 400. Thesis and Thesis Research. 1-15 Unit.

Limited to candidates for the degree of Engineer or Ph.D. May be repeated for credit.

EE 402A. Topics in International Technology Management. 1 Unit.

Theme for Autumn 2014 is *request; New Trends in Start-Up Company Acceleration: Toward the Rise of the Global Start-Up*. *request; The series features new incubator and accelerator programs in Silicon Valley and select Asia economies that promote early development of international business operations by start-up companies. How can start-up companies cope with the challenges of business globalization? What are the implications of these new models of incubation for the future of Asia economies and for Silicon Valley? Distinguished speakers from industry and government. May be repeated for credit. Please see syllabus for specific requirements, which may differ from those of other seminars at Stanford.*

EE 402S. Topics in International Advanced Technology Research. 1 Unit.

Theme for Spring 2013 is a survey of industry interests related to Ph.D. research in EE. Views from venture investors, corporate executives, and others in regard to mid-term future market demands in application areas such as cloud computing and analytics, energy and cleantech, robotics, transportation, medical devices and systems, etc. Perspectives into identifying and selecting a dissertation topic and maximizing the impact of research in industry and the academic world. Presentations and discussions by industry and university experts.

EE 402T. Entrepreneurship in Asian High-Tech Industries. 1 Unit. Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia. Course may be repeated for credit.

EE 410. Integrated Circuit Fabrication Laboratory. 3-4 Units. Fabrication, simulation, and testing of a submicron CMOS process. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and electrical testing. Students also simulate the CMOS process using process simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow. Taught in the Stanford Nanofabrication Facility (SNF). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: EE 212, EE 216, consent of instructor.

EE 412. Advanced Nanofabrication Laboratory. 3 Units. Experimental projects and seminars on integrated circuit fabrication using epitaxial, oxidation, diffusion, evaporation, sputtering, and photolithographic processes with emphasis on techniques for achieving advanced device performance. May be repeated for additional credit. Prerequisites: ENGR341 or EE410 or consent of instructor.

EE 414. RF Transceiver Design Laboratory. 3 Units. Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: EE 314, EE 251.

EE 464. Semidefinite Optimization and Algebraic Techniques. 3 Units. This course focuses on recent developments in optimization, specifically on the use of convex optimization to address problems involving polynomial equations and inequalities. The course covers approaches for finding both exact and approximate solutions to such problems. We will discuss the use of duality and algebraic methods to find feasible points and certificates of infeasibility, and the solution of polynomial optimization problems using semidefinite programming. The course covers theoretical foundations as well as algorithms and their complexity. Prerequisites: EE364A or equivalent course on convex optimization.

EE 469B. RF Pulse Design for Magnetic Resonance Imaging. 3 Units. Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.

EE 801. TGR Project. 0 Units.

EE 802. TGR Dissertation. 0 Units. May be repeated for credit.

Energy Resources Engineering Courses

ENERGY 11SC. Energy in the Southwest. 2 Units.

We will examine the technical, social, and political issues surrounding energy management and use in the West, using California, Nevada, and Arizona as our field laboratory. Students will explore a number of energy narratives, such as: Who supplies our energy and from what sources? How is it transported? Who distributes to users and how do they do it? Water for energy and energy for water; two intertwined natural resources; Meeting carbon emission goals by 2020; Conflicts between desert ecosystems and renewable energy development. We will place particular emphasis on renewable energy sources and the water-energy nexus, a critically important issue for the arid and semi-arid southwest. Central to the course will be field exploration in northern and southern California, as well as neighboring areas in Arizona and Nevada, to tour sites such as wind and solar facilities, geothermal plants, hydropower pumped storage, desalination plants, water pumping stations, a liquid fuels distribution operations center, and California's Independent System Operator. Students will have the opportunity to meet with community members and with national, state, and regional authorities to discuss Western energy challenges and viable solutions. We will also take advantage of Stanford's own energy systems with site visits to the new energy facilities. Woven throughout will be an introduction to the basics of energy and energy politics through discussions, lectures, and with the help of guest speakers. Over the summer, students will be responsible for assigned readings, online interactive materials, and relevant recent news articles. Participants will return to Stanford by September 19. Travel expenses during the course will be provided (except incidentals) by the Bill Lane Center for the American West and Sophomore College.

Same as: CEE 16SC, POLISCI 25SC

ENERGY 24. Making Molehills out of Mountains: Energy and Development in Appalachia. 1 Unit.

Preparation for Alternative Spring Break trip to examine the past, present, and future role of energy in Appalachia. Positive and negative impacts of energy production; meetings with energy industry leaders, community groups, and policymakers. The larger role of energy development and energy issues in society. May be repeated for credit.

ENERGY 101. Energy and the Environment. 3 Units.

Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42.

Same as: EARTHSYS 101

ENERGY 101A. Energizing California. 1 Unit.

A weekend field trip featuring renewable and nonrenewable energy installations in Northern California. Tour geothermal, bioenergy, and natural gas field sites with expert guides from the Department of Energy Resources Engineering. Requirements: One campus meeting and weekend field trip. Enrollment limited to 25. Freshman have first choice.

ENERGY 102. Renewable Energy Sources and Greener Energy Processes. 3 Units.

The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today's technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences.

Recommended: MATH 21 or 42.

Same as: EARTHSYS 102

ENERGY 104. Transition to sustainable energy systems. 3 Units.

This course explores the transition to a sustainable energy system at large scales (national and global), and over long time periods (decades). Explores the drivers of global energy demand and the fundamentals of technologies that can meet this demand sustainably. Focuses on constraints affecting large-scale deployment of technologies, as well as inertial factors affecting this transition. Problems will involve modeling global energy demand, deployment rates for sustainable technologies, technological learning and economics of technical change. Recommended: ENERGY 101, 102.

ENERGY 110. Engineering Economics. 3 Units.

The success of energy projects and companies is judged by technical, economic and financial criteria. This course will introduce concepts of engineering economy, e.g., time value of money, life cycle costs and financial metrics, and explore their application to the business of energy. We will use case studies, business school cases and possibly industry guest lecturers. Examples from the hydrocarbon businesses that dominate energy today will provide the framework for the analysis of both conventional and renewable energy.

ENERGY 120. Fundamentals of Petroleum Engineering. 3 Units.

Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media.

Same as: ENGR 120

ENERGY 120A. Flow Through Porous Media Laboratory. 1 Unit.

Laboratory measurements of permeability and porosity in rocks. Applications to subsurface fluid mechanics. Course is intended as an accompaniment to Energy 120.

ENERGY 121. Fundamentals of Multiphase Flow. 3 Units.

Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.

Same as: ENERGY 221

ENERGY 123. When Technology Meets Reality; An In-depth Look at the Deepwater Horizon Blowout and Oil Spill. 1 Unit.

The Deepwater Horizon blowout and spill in April 2010 occurred on one of the most advanced deepwater drilling rigs in the world operated by one of the most experienced companies. In this course we will look at and discuss the technologies and management practices involved in deepwater drilling and discuss how an accident like this happens and what could have been done differently to avoid it. We will focus on the Horizon and also look briefly at other high profile industrial and technological accidents.

ENERGY 125. Modeling and Simulation for Geoscientists and Engineers. 3 Units.

Hands-on. Topics include deterministic and statistical modeling applied to problems such as flow in the subsurface, atmospheric pollution, biological populations, wave propagation, and crustal deformation. Student teams define and present a modeling problem.

ENERGY 130. Well Log Analysis I. 3 Units.

For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.

ENERGY 141. Seismic Reservoir Characterization. 3-4 Units.

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112.

Same as: ENERGY 241, GEOPHYS 241A

ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.

Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

Same as: ENERGY 246, GES 246

ENERGY 153. Carbon Capture and Sequestration. 3-4 Units.

CO₂ separation from syngas and flue gas for gasification and combustion processes. Transportation of CO₂ in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO₂. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

Same as: ENERGY 253

ENERGY 154. Energy in Transition: Technology, Policy and Politics. 2 Units.

The \$6 trillion dollar global energy sector is in the midst of change; increasing global demand, retiring energy assets, and abundant technology choices are creating an atmosphere of commercial dynamism. What is clear is that decision-making in the energy sector is not simply based on technology attributes. Through the lenses of TECHNOLOGY, POLICY AND POLITICS, this class will consider how new and improved energy technologies actually make their way into the marketplace in the real world.

ENERGY 155. Undergraduate Report on Energy Industry Training. 1-3 Unit.

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.

ENERGY 158. Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull. 3 Units.

This research-based seminar will evaluate the impact of market interventions in commercializing four segments of our energy mix: wind, photovoltaics, lighting, and batteries. To accelerate the development of new technologies to reduce greenhouse gas emissions and improve national security, governments use policies like direct R&D funding, financial incentives or penalties, mandatory targets or caps, and performance standards to create market conditions that favor emerging technologies. Findings outlining the most effective mix of interventions over time will be submitted for publication. Enrollment limited to 12 graduate and co-term students. Those interested please email a paragraph to cathzoi@stanford.edu by September 16, 2013 expressing why you want to take part and research experience you can bring to the seminar.

ENERGY 160. Modeling Uncertainty in the Earth Sciences. 3 Units. Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS and Petrel. Project homework. Prerequisites: algebra (CME 104 or equivalent), introductory statistics course (CME 106 or equivalent). Same as: ENERGY 260

ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties. 3 Units. Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. Same as: ENERGY 267

ENERGY 171. Energy Infrastructure, Technology and Economics. 3 Units. Oil and gas represents more than 50% of global primary energy. In delivering energy at scale, the industry has developed global infrastructure with supporting technology that gives it enormous advantages in energy markets; this course explores how the oil and gas industry operates. From the perspective of these established systems and technologies, we will look at the complexity of energy systems, and will consider how installed infrastructure enables technology development and deployment, impacts energy supply, and how existing infrastructure and capital invested in fossil energy impacts renewable energy development. Prerequisites: Energy 101 and 102 or permission of instructor. Same as: ENERGY 271

ENERGY 175. Well Test Analysis. 3 Units. Lectures, problems. Application of solutions of unsteady flow in porous media to transient pressure analysis of oil, gas, water, and geothermal wells. Pressure buildup analysis and drawdown. Design of well tests. Computer-aided interpretation.

ENERGY 180. Oil and Gas Production Engineering. 3 Units. Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Same as: ENERGY 280

ENERGY 191. Optimization of Energy Systems. 3-4 Units. Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A, CS 106B). Same as: ENERGY 291

ENERGY 192. Undergraduate Teaching Experience. 1-3 Unit. Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.

ENERGY 193. Undergraduate Research Problems. 1-3 Unit. Original and guided research problems with comprehensive report. May be repeated for credit.

ENERGY 194. Special Topics in Energy and Mineral Fluids. 1-3 Unit. May be repeated for credit.

ENERGY 199. Senior Project and Seminar in Energy Resources. 3-4 Units. Individual or group capstone project in Energy Resources Engineering. Emphasis is on report preparation. May be repeated for credit.

ENERGY 201. Laboratory Measurement of Reservoir Rock Properties. 3 Units. In this course, students will learn methods for measuring reservoir rock properties. Techniques covered include core preservation and sample preparation; Rock petrography; Interfacial tension of fluids; Measurement of contact angles of fluids on reservoir media; Capillary pressure measurement and interpretation; Absolute and effective porosities; Absolute permeability; Multiphase flow including relative permeability and residual saturation. The class will be 1 3-hour lecture/lab per week, with readings and weekly assignments. A field trip to a professional core characterization lab may be included.

ENERGY 202. Petroleum Industry Performance Management. 1 Unit. Coming up with the right technical solution is only the beginning iquest; it must be implemented. The art and science of Performance Management. How to guarantee results with Leading and Lagging KPIquest;s (Key Performance Indicators). Assessment using the FAIRTM Model (Focus, Accountability, Involvement, Response). Operating RhythmTM: Business Reviews, Boardwalks, One-Pagers, Handover, and Crew Talks. Project management iquest;s implementation plans, milestones, and clear deliverables. Sustainability. After Action Reviews (AAR iquest;s). Continuous Improvement (CI). Coaching iquest;s GROW Model (Goal, Reality, Options, Will). The ABC Model (Antecedent iquest; Behavior iquest; Consequence). Students will solve three Case Studies with these tools; the instructor will present the actual solution iquest; what worked, what didn iquest;t, and why.

ENERGY 212. Advanced Programming for Scientists and Engineers. 3 Units. Advanced topics in software programming, debugging, and performance optimization are covered. The capabilities and usage of common libraries and frameworks such as BLAS, LAPACK, FFT, PETSc, and MKL/ACML are reviewed. Computer representation of integer and floating point numbers, and interoperability between C/C++ and Fortran is described. More advanced software engineering topics including: representing data in files, application checkpoint/restart, signals, unit and regression testing, and build automation. The use of debugging tools including static analysis, gdb, and Valgrind are introduced. An introduction to computer architecture covering processors, memory hierarchy, storage, and networking provides a foundation for understanding software performance. Profiles generated using gprof and perf are used to help guide the performance optimization process. Computational problems from various science and engineering disciplines will be used in individual and group assignments. Prerequisites: CME 200/ME 300A and CME 211 or equivalent level of programming proficiency in Python and C/C++. Same as: CME 212

ENERGY 221. Fundamentals of Multiphase Flow. 3 Units. Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities. Same as: ENERGY 121

ENERGY 222. Advanced Reservoir Engineering. 3 Units.

Lectures, problems. General flow equations, tensor permeabilities, steady state radial flow, skin, and succession of steady states. Injectivity during fill-up of a depleted reservoir, injectivity for liquid-filled reservoirs. Flow potential and gravity forces, coning. Displacements in layered reservoirs. Transient radial flow equation, primary drainage of a cylindrical reservoir, line source solution, pseudo-steady state. May be repeated for credit. Prerequisite: 221.

ENERGY 223. Reservoir Simulation. 3-4 Units.

Fundamentals of petroleum reservoir simulation. Equations for multicomponent, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206.

ENERGY 224. Advanced Reservoir Simulation. 3 Units.

Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation, upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.

ENERGY 225. Theory of Gas Injection Processes. 3 Units.

Lectures, problems. Theory of multicomponent, multiphase flow in porous media. Miscible displacement: diffusion and dispersion, convection-dispersion equations and its solutions. Method of characteristic calculations of chromatographic transport of multicomponent mixtures. Development of miscibility and interaction of phase behavior with heterogeneity. May be repeated for credit. Prerequisite: CME 200.

ENERGY 226. Thermal Recovery Methods. 3 Units.

Theory and practice of thermal recovery methods: steam drive, cyclic steam injections, and in situ combustion. Models of combined mass and energy transport. Estimates of heated reservoir volume and oil recovery performance. Wellbore heat losses, recovery production, and field examples.

ENERGY 227. Enhanced Oil Recovery. 3 Units.

The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.

ENERGY 230. Advanced Topics in Well Logging. 3 Units.

State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

ENERGY 240. Geostatistics. 2-3 Units.

Geostatistical theory and practical methodologies for quantifying and simulating spatial and spatio-temporal patterns for the Earth Sciences. Real case development of models of spatial continuity, including variograms, Boolean models and training images. Estimation versus simulation of spatial patterns. Loss functions. Estimation by kriging, co-kriging with secondary data. Dealing with data on various scales. Unconditional and conditional Boolean simulation, sequential simulation for continuous and categorical variables. Multi-variate geostatistical simulation. Probabilistic and pattern-based approaches to multiple-point simulation. Trend, secondary variable, auxiliary variable and probability-type constraints. Quality control techniques on generated models. Workflows for practical geostatistical applications in mining, petroleum, hydrogeology, remote sensing and environmental sciences. prerequisites: Energy 160/260 or basic course in data analysis/statistics. Same as: GES 240

ENERGY 241. Seismic Reservoir Characterization. 3-4 Units.

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112.

Same as: ENERGY 141, GEOPHYS 241A

ENERGY 242. Topics in Advanced Geostatistics. 3-4 Units.

Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran. Same as: EESS 263

ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.

Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

Same as: ENERGY 146, GES 246

ENERGY 247. Stochastic Simulation. 3 Units.

Characterization and inference of statistical properties of spatial random function models; how they average over volumes, expected fluctuations, and implementation issues. Models include point processes (Cox, Poisson), random sets (Boolean, truncated Gaussian), and mixture of Gaussian random functions. Prerequisite: 240.

ENERGY 251. Thermodynamics of Equilibria. 3 Units.

Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.

ENERGY 252. Chemical Kinetics Modeling. 3 Units.

Fundamentals of chemical reaction kinetics in homogeneous and heterogeneous reaction systems from a molecular perspective. Development and application of the theory of chemical kinetics, including collision, transition state, and surface reactivity approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions.

ENERGY 253. Carbon Capture and Sequestration. 3-4 Units.

CO₂ separation from syngas and flue gas for gasification and combustion processes. Transportation of CO₂ in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO₂. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis. Same as: ENERGY 153

ENERGY 255. Master's Report on Energy Industry Training. 1-3 Unit.

On-the-job training for master's degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit. Prerequisite: consent of adviser.

ENERGY 256. Electronic Structure Theory and Applications to Chemical Kinetics. 3 Units.

Fundamentals of electronic structure theory as it applies to chemical reaction kinetics in homogeneous and heterogeneous reaction systems. Development and application of the theory of chemical kinetics, including traditional and harmonic transition state theories. Relationships between thermodynamics and kinetics to overall mechanism predictions. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions. DFT calculations for catalysis applications are also covered. Prerequisite: quantum mechanics. Same as: CHEMENG 444

ENERGY 259. Presentation Skills. 1 Unit.

For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, text design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.

ENERGY 260. Modeling Uncertainty in the Earth Sciences. 3 Units.

Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS and Petrel. Project homework. Prerequisites: algebra (CME 104 or equivalent), introductory statistics course (CME 106 or equivalent). Same as: ENERGY 160

ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties. 3 Units.

Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. Same as: ENERGY 167

ENERGY 269. Geothermal Reservoir Engineering. 3 Units.

Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.

ENERGY 271. Energy Infrastructure, Technology and Economics. 3 Units.

Oil and gas represents more than 50% of global primary energy. In delivering energy at scale, the industry has developed global infrastructure with supporting technology that gives it enormous advantages in energy markets; this course explores how the oil and gas industry operates. From the perspective of these established systems and technologies, we will look at the complexity of energy systems, and will consider how installed infrastructure enables technology development and deployment, impacts energy supply, and how existing infrastructure and capital invested in fossil energy impacts renewable energy development. Prerequisites: Energy 101 and 102 or permission of instructor. Same as: ENERGY 171

ENERGY 273. Special Topics in Energy Resources Engineering. 1-3 Unit.**ENERGY 275. Quantitative Methods in Basin and Petroleum System Modeling. 1-3 Unit.**

Examine the physical processes operating in sedimentary basins by deriving the basic equations of fundamental, coupled geologic processes such as fluid flow and heat flow, deposition, compaction, mass conservation, and chemical reactions. Through hands-on computational exercises and instructor-provided "recipes," students will deconstruct the black box of basin modeling software. Students write their own codes (Matlab) as well as gain expertise in modern finite-element modeling software (PetroMod, COMSOL). Same as: GES 256

ENERGY 280. Oil and Gas Production Engineering. 3 Units.

Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Same as: ENERGY 180

ENERGY 281. Applied Mathematics in Reservoir Engineering. 3 Units.

The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green's functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.

ENERGY 284. Optimization and Inverse Modeling. 3 Units.

Treatment of deterministic and stochastic optimization, gradient-based optimization, polytope method, generalized least squares, non-linear least squares and confidence intervals by numerical methods and bootstrap. Adjoint method for gradient calculation. Genetic algorithms and simulated annealing. Development of proxy functions using regression techniques and neural networks. Application of optimization methods to solving non-linear inverse problems. Bayesian method, rejection sampling, metropolis sampling, uncertainty quantification. Parameterization of high-dimensional problems through various expansion techniques. Examples of various Earth sciences inverse problems including flow and wave equations. Requirements: CME 106 and 200 (or equivalent courses).

ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery. 1 Unit.

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.

ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation. 1 Unit.

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.

ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes. 1 Unit.

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor.

ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis. 1 Unit.

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor. (Horne).

ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting. 1 Unit.

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.

ENERGY 285G. Geothermal Reservoir Engineering Research Seminar. 1 Unit.

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.

ENERGY 285S. Smart Fields Research Seminar: Horizontal Well Technology. 1 Unit.

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in Smart Fields (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.

ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media. 3 Units.

How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anisotropy on solver efficiency and accuracy. MATLAB programming and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.

ENERGY 291. Optimization of Energy Systems. 3-4 Units.

Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A, CS 106B).

Same as: ENERGY 191

ENERGY 293A. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units.

Same as: EE 293A, MATSCI 156, MATSCI 256

ENERGY 293B. Fundamentals of Energy Processes. 3 Units.

For seniors and graduate students. Covers scientific and engineering fundamentals of renewable energy processes involving heat. Thermodynamics, heat engines, solar thermal, geothermal, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45.

Same as: EE 293B

ENERGY 293C. Energy from Wind and Water Currents. 3 Units.

This course focuses on the extraction of energy from wind, waves and tides. The emphasis in the course is technical leading to a solid understanding of established extraction systems and discussion of promising new technologies. We will also cover resource planning and production optimization through observations and computer simulations. The course includes at least one weekend field trip, and may include experiments in wind tunnel and/or flume. Prerequisites: CEE 176B or EE 293B, programming experience, understanding of fluid mechanics, electrical systems, and engineering optimization.

ENERGY 295. Quantitative environmental assessment of energy systems. 1 Unit.

Graduate seminar on quantitative environmental assessment of energy technologies. Assessment methods for analyzing multi-device and multi-technology energy systems (e.g., full energy production request; pathways request;). Methodological coverage includes process-model life cycle assessment (LCA), energy embodied request; in materials, energy return on energy invested, and cumulative exergy consumption. Exploration of theoretical modeling of multi-technology systems using matrix formulations. Tools used include MATLAB and openLCA life cycle assessment software. Prerequisites: linear algebra and some programming experience helpful (e.g., CS 106A-B).

ENERGY 300. Graduate Directed Reading. 1-7 Unit.

Independent studies under the direction of a faculty member for which academic credit may properly be allowed.

ENERGY 301. The Energy Seminar. 1 Unit.

Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit. Same as: CEE 301

ENERGY 355. Doctoral Report on Energy Industry Training. 1-3 Unit.

On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of adviser.

ENERGY 359. Teaching Experience in Energy Resources Engineering. 1 Unit.

For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.

ENERGY 360. Advanced Research Work in Energy Resources Engineering. 1-10 Unit.

Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.

ENERGY 361. Master's Degree Research in Energy Resources Engineering. 1-6 Unit.

Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total. (Staff).

ENERGY 362. Engineer's Degree Research in Energy Resources Engineering. 1-10 Unit.

Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

ENERGY 363. Doctoral Degree Research in Energy Resources Engineering. 1-10 Unit.

Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.

ENERGY 365. Special Research Topics in Energy Resources Engineering. 1-15 Unit.

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

ENERGY 369. Practical Energy Studies. 1-3 Unit.

Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.

ENERGY 801. TGR Project. 0 Units.

.

ENERGY 802. TGR Dissertation. 0 Units.

.

Engineering Courses

ENGR 10. Introduction to Engineering Analysis. 4 Units.

Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses. Prerequisite: AP Physics and AP Calculus or equivalent.

ENGR 14. Intro to Solid Mechanics. 4 Units.

Introduction to engineering analysis using the principles of engineering solid mechanics. Builds on the math and physical reasoning concepts in Physics 41 to develop skills in evaluation of engineered systems across a variety of fields. Foundational ideas for more advanced solid mechanics courses such as ME80 or CEE101A. Interactive lecture sessions focused on mathematical application of key concepts, with weekly complementary lab session on testing and designing systems that embody these concepts. Limited enrollment, subject to instructor approval. Pre-requisite: Physics 41.

ENGR 15. Dynamics. 4 Units.

The application of Newton's Laws to solve 2-D and 3-D static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and equations of motion, with application to mechanical, biomechanical, and aerospace systems. Computer numerical solution and dynamic response. Prerequisites: Calculus (differentiation and integration) such as MATH 41; and ENGR 14 (statics and strength) or a mechanics course in physics such as PHYSICS 41.

ENGR 20. Introduction to Chemical Engineering. 3 Units.

Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. Same as: CHEMENG 20

ENGR 25B. Biotechnology. 3 Units.

Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent courage. Same as: CHEMENG 25B

ENGR 25E. Energy: Chemical Transformations for Production, Storage, and Use. 3 Units.

An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. Same as: CHEMENG 25E

ENGR 30. Engineering Thermodynamics. 3 Units.

The basic principles of thermodynamics are introduced in this course. Concepts of energy and entropy from elementary considerations of the microscopic nature of matter are discussed. The principles are applied in thermodynamic analyses directed towards understanding the performances of engineering systems. Methods and problems cover socially responsible economic generation and utilization of energy in central power generation plants, solar systems, refrigeration devices, and automobile, jet and gas-turbine engines.

ENGR 31. Chemical Principles with Application to Nanoscale Science and Technology. 4 Units.

Preparation for engineering disciplines emphasizing modern technological applications of solid state chemistry. Topics include: crystallography; chemical kinetics and equilibria; thermodynamics of phase changes and reaction; quantum mechanics of chemical bonding, molecular orbital theory, and electronic band structure of crystals; and the materials science of basic electronic and photonic devices. Prerequisite: AP 4 or 5 Chemistry, or equivalent, or successful completion of CHEM 31x placement test, or college chemistry background in stoichiometry, periodicity, Lewis and VSEPR structures, dissolution/precipitation and acid/base reactions, gas laws, and phase behavior.

ENGR 40. Introductory Electronics. 5 Units.

Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Frequency response of linear circuits, including basic filters, using phasor analysis. Digital logic fundamentals, logic gates, and basic combinatorial logic blocks. Lab. Lab assignments. Enrollment limited to 200.

ENGR 40A. Introductory Electronics. 3 Units.

Abbreviated version of E40, for students not pursuing degree in Electrical Engineering. Instruction to be completed in the first seven weeks of the quarter. Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Lab. Lab assignments. Enrollment limited to 200.

ENGR 40M. An Intro to Making: What is EE. 3-5 Units.

Is a hands-on class where students learn to make stuff. Through the process of building, you are introduced to the basic areas of EE. Students build a "useless box" and learn about circuits, feedback, and programming hardware, a light display for your desk and bike and learn about coding, transforms, and LEDs, a solar charger and an EKG machine and learn about power, noise, feedback, more circuits, and safety. And you get to keep the toys you build.

ENGR 40P. Physics of Electrical Engineering. 5 Units.

How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. Prerequisites: Physics 43.

Same as: EE 41

ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis. 4 Units.

The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials.

ENGR 50E. Introduction to Materials Science, Energy Emphasis. 4 Units.

Materials structure, bonding and atomic arrangements leading to their properties and applications. Topics include electronic, thermal and mechanical behavior; emphasizing energy related materials and challenges.

ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

ENGR 60. Engineering Economy. 3 Units.

Fundamentals of economic analysis. Interest rates, net present value, and internal rate of return. Applications to personal and corporate financial decisions. Mortgage evaluation, insurance decision, hedging/risk reduction, project selection, capital budgeting, and investment valuation. Effects of taxes on personal and business decisions. Investment decisions under uncertainty and utility theory. Please see <http://www.stanford.edu/class/engr60>. Prerequisites: precalculus and elementary probability.

ENGR 62. Introduction to Optimization. 4 Units.

Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: CME 100 or MATH 51.

Same as: MSE 111

ENGR 70A. Programming Methodology. 3-5 Units.

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: CS 106A

ENGR 70B. Programming Abstractions. 3-5 Units.

Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: CS 106B

ENGR 70X. Programming Abstractions (Accelerated). 3-5 Units.

Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects.

Prerequisite: excellence in 106A or equivalent, or consent of instructor. Same as: CS 106X

ENGR 80. Introduction to Bioengineering. 4 Units.

Broad but rigorous overview of the field of bioengineering, centered around the common theme of engineering analysis and design of biological systems. Topics include biomechanics, systems and synthetic biology, physical biology, biomolecular engineering, tissue engineering, and devices. Emphasis on critical thinking and problem solving approaches, and quantitative methods applied to biology. 4 units, Spr (Cochran).

Same as: BIOE 80

ENGR 90. Environmental Science and Technology. 3 Units.

Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems.

Same as: CEE 70

ENGR 100. Teaching Public Speaking. 3 Units.

The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

ENGR 103. Public Speaking. 3 Units.

Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.

ENGR 105. Feedback Control Design. 3 Units.

Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent.

ENGR 110. Perspectives in Assistive Technology (ENGR 110). 1-3 Unit.

Seminar and student project course. Explores the medical, social, ethical, and technical challenges surrounding the design, development, and use of technologies that improve the lives of people with disabilities and older adults. Guest lecturers include engineers, clinicians, and individuals with disabilities. Tours of local facilities, assistive technology faire, and movie screening. Juniors, seniors, and graduate students from any discipline welcome. Enrollment limited to class capacity of 45. 1 unit for seminar attendance only (CR/NC) or individual project (letter grade). 3 units for students who pursue a team-based assistive technology project. Projects can be continued as independent study in Spring Quarter. See <http://enr110.stanford.edu/>. Service Learning Course (certified by Haas Center for Public Service).

Same as: ENGR 210

ENGR 113A. Solar Decathlon 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213A

ENGR 113B. Solar Decathlon 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213B

ENGR 113C. Solar Decathlon 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213C

ENGR 113D. SOLAR DECATHLON 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213D

ENGR 115. Design the Tech Challenge. 2 Units.

Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit.

Same as: ENGR 215

ENGR 118. Cross-Cultural Design for Service. 3 Units.

Students spend the summer in China working collaboratively to use design thinking for a project in the countryside. Students learn and apply the principles of design innovation including user research, ideation, prototyping, storytelling and more in a cross cultural setting to design a product or service that will benefit Chinese villagers. Students should be prepared to work independently in a developing region of China, to deal with persistent ambiguity, and to work with a cross-cultural, diverse team of students on their projects. Applications for Summer 2012 were due in March.

ENGR 120. Fundamentals of Petroleum Engineering. 3 Units.

Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media.

Same as: ENERGY 120

ENGR 129. The Internet in Global Context. 4 Units.

Explore how the technologies of global connectivity are reshaping the relationships between nations, companies, and citizens, and, in turn, how nations, companies, and citizens are themselves reshaping those technologies to fit and promote their own interests. Also will examine three broad themes that arise out of the first analysis: technological determinism, technological solutionism, and technological regulation. Finally, will consider the implications of our study for what it means to be a technology professional and a citizen. Open only to students who are studying in one of the Bing Overseas Studies programs. Permission number from the instructor required for enrollment.

ENGR 130. Science, Technology, and Contemporary Society. 4-5 Units.

Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology.

ENGR 131. Ethical Issues in Engineering. 4 Units.

Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment.

ENGR 140A. Leadership of Technology Ventures. 3-4 Units.

First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).

ENGR 140B. Leadership of Technology Ventures. 1-2 Unit.

Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.

ENGR 140C. Leadership of Technology Ventures. 2-3 Units.

Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.

ENGR 145. Technology Entrepreneurship. 4 Units.

How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? Mentor-guided project focused on developing students' startup ideas, immersion in nuances of innovation and early stage entrepreneurship, case studies, research on the entrepreneurial process, and the opportunity to network with Silicon Valley's top entrepreneurs and venture capitalists. For undergraduates of all majors who seek to understand the formation and growth of high-impact start-ups in areas such as information, energy, medical and consumer technologies. No prerequisites. Limited enrollment.

ENGR 150. Data Challenge Lab. 1-6 Unit.

In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, exploratory data analysis, data visualization, and predictive modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

ENGR 154. Vector Calculus for Engineers. 5 Units.

Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Introduction to linear algebra: matrix operations, systems of algebraic equations, methods of solution and applications. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's theorem, divergence, and Stokes' theorem; theorems. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. Note: Students enrolled in section 100-02 and 100A-02 are required to attend the discussion sections on Thursdays 5:15-6:45. Same as: CME 100

ENGR 155A. Ordinary Differential Equations for Engineers. 5 Units.

Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and nonlinear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. Same as: CME 102

ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers. 5 Units.

Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. Same as: CME 104

ENGR 155C. Introduction to Probability and Statistics for Engineers. 3-4 Units.

Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR 154 or MATH 51. Same as: CME 106

ENGR 159Q. Japanese Companies and Japanese Society. 3 Units.

Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. Same as: MATSCI 159Q

ENGR 192. Engineering Public Service Project. 1-2 Unit.

Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See <http://soe.stanford.edu/publicservice>. May be repeated for credit. Prerequisite: consent of instructor.

ENGR 199. Special Studies in Engineering. 1-15 Unit.

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor.

ENGR 199W. Writing of Original Research for Engineers. 1-3 Unit.

Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation.

ENGR 202S. Writing: Special Projects. 1 Unit.

Writing tutorial for students working on non-course projects such as theses, journal articles, and conference papers. Weekly individual conferences.

ENGR 202W. Technical Writing. 3 Units.

How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science.

ENGR 205. Introduction to Control Design Techniques. 3 Units.

Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab.

ENGR 206. Control System Design. 3-4 Units.

Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order; linearization by differential actuation and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105.

ENGR 207A. Linear Control Systems I. 3 Units.

Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205.

ENGR 207B. Linear Control Systems II. 3 Units.

Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: EE 263.

ENGR 209A. Analysis and Control of Nonlinear Systems. 3 Units.

Introduction to nonlinear phenomena: multiple equilibria, limit cycles, bifurcations, complex dynamical behavior. Planar dynamical systems, analysis using phase plane techniques. Describing functions. Lyapunov stability theory. SISO feedback linearization, sliding mode control. Design examples. Prerequisite: 205.

ENGR 210. Perspectives in Assistive Technology (ENGR 110). 1-3 Unit.

Seminar and student project course. Explores the medical, social, ethical, and technical challenges surrounding the design, development, and use of technologies that improve the lives of people with disabilities and older adults. Guest lecturers include engineers, clinicians, and individuals with disabilities. Tours of local facilities, assistive technology faire, and movie screening. Juniors, seniors, and graduate students from any discipline welcome. Enrollment limited to class capacity of 45. 1 unit for seminar attendance only (CR/NC) or individual project (letter grade). 3 units for students who pursue a team-based assistive technology project. Projects can be continued as independent study in Spring Quarter. See <http://engr110.stanford.edu/>. Service Learning Course (certified by Haas Center for Public Service). Same as: ENGR 110

ENGR 213. Solar Decathlon. 1-4 Unit.

Open to all engineering majors. Project studio for all work related to the Solar Decathlon 2013 competition. Each student will develop a personal work plan for the quarter with his or her advisor and perform multidisciplinary collaboration on designing systems for the home or pre-construction planning. Work may continue through the summer as a paid internship, as well as through the next academic year. For more information about the team and the competition, please visit solardecathlon.stanford.edu.

ENGR 213A. Solar Decathlon 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113A

ENGR 213B. Solar Decathlon 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113B

ENGR 213C. Solar Decathlon 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113C

ENGR 213D. SOLAR DECATHLON 2015. 3 Units.

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113D

ENGR 215. Design the Tech Challenge. 2 Units.

Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit. Same as: ENGR 115

ENGR 231. Transformative Design. 3-5 Units.

Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains. Prerequisite: consent of instructor. Design Institute class; see <http://dschool.stanford.edu>. Same as: ANTHRO 332

ENGR 240. Introduction to Micro and Nano Electromechanical Systems. 3 Units.

Miniaturization technologies now have important roles in materials, mechanical, and biomedical engineering practice, in addition to being the foundation for information technology. This course will target an audience of first-year engineering graduate students and motivated senior-level undergraduates, with the goal of providing an introduction to M/NEMS fabrication techniques, selected device applications, and the design tradeoffs in developing systems. The course has no specific prerequisites, other than graduate or senior standing in engineering; otherwise, students will require permission of the instructors.

ENGR 245. The Lean LaunchPad: Getting Your Lean Startup Off the Ground. 3-4 Units.

Apply the "Lean Startup" principles; "business model canvas," "customer development" and "Agile Engineering" to prototype, test, and iterate your idea while discovering if you have a profitable business model. This is the class adopted by the NSF and NIH as the Innovation Corps. Apply and work in teams. Info sessions held in November and December. Team applications required in December. Proposals can be software, hardware, or service of any kind. Projects are experiential and require incrementally building the product while talking to customers/partners each week. Prerequisite: interest and passion in exploring whether a technology idea can become a real company. Limited enrollment.

ENGR 250. Data Challenge Lab. 1-6 Unit.

In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, exploratory data analysis, data visualization, and predictive modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

ENGR 280. From Play to Innovation. 2-4 Units.

Focus is on enhancing the innovation process with playfulness. The class will be project-based and team-centered. We will investigate the human "state of play" to reach an understanding of its principal attributes and how important it is to creative thinking. We will explore play behavior, its development, and its biological basis. We will then apply those principles through design thinking to promote innovation in the corporate world. Students will work with real-world partners on design projects with widespread application. This course requires an application. You can find the application here: dschool.stanford.edu/classes.

ENGR 281. d.media 4.0 - Designing Media that Matters. 2-3 Units.

Design practicum; project-based. Explore the why & how of designing media. What motivates our consumption of media, what real needs linger beneath the surface? How do you design a new media experience? Join us and find out. The world is Changing, What Are You Going to Do About It? In the shift from a consumer culture to a creative society has old media institutions collapsing while participatory media frameworks are emerging. Media designers of all types have an opportunity and responsibility to make this change positive. 3 Projects explore: Communication Design, Digital Interaction, User Motivations. Admission by application. See dschool.stanford.edu/classes for more information.

ENGR 290. Graduate Environment of Support. 1 Unit.

For course assistants (CAs) and tutors in the School of Engineering tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.

ENGR 298. Seminar in Fluid Mechanics. 1 Unit.

Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.

ENGR 299. Special Studies in Engineering. 1-15 Unit.

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.

ENGR 311A. Women's Perspectives. 1 Unit.

Master's and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.

ENGR 311B. Designing the Professional. 1 Unit.

How to Get a Life as well as a PhD: Seminar open to ALL doctoral students (Humanities, Sciences and Engineering). Apply principles of design thinking to designing your professional life following Stanford. Topics include: Introduction to "design thinking", a framework for vocational wayfinding and locating profession within life overall; tools to investigate multiple professional paths. Creation of personal "Odyssey Plan" to innovate multiple prototypes for post-PhD professional launch.

ENGR 312. Science and Engineering Course Design. 2-3 Units.

For students interested in an academic career and who anticipate designing science or engineering courses at the undergraduate or graduate level. Goal is to apply research on science and engineering learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement. Same as: CTL 312

ENGR 313. Topics in Engineering and Science Education. 1-2 Unit.

This seminar series focuses on topics related to teaching science, technology, engineering, and math (STEM) courses based on education research. Each year focuses on a different topic related to STEM education. This course may be repeated for credit each year. This year we will explore how to design assessments and give feedback to facilitate student learning through a series of discussions, in-class activities and guest lectures based on current STEM education literature. Throughout the quarter, there will be several opportunities for directly practicing and applying STEM education strategies to specific teaching goals in your field.

ENGR 341. Micro/Nano Systems Design and Fabrication. 3-5 Units.

Laboratory course in micro and nano fabrication technology that combines lectures on theory and fundamentals with hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.

ENGR 342. MEMS Laboratory II. 3-4 Units.

Emphasis is on tools and methodologies for designing and fabricating N/MEMS-based solutions. Student interdisciplinary teams collaborate to invent, develop, and integrate N/MEMS solutions. Design alternatives fabricated and tested with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.

ENGR 350. Data Impact Lab. 1-6 Unit.

In this lab, multi-disciplinary teams of students tackle high-impact, unsolved problems for social sector partners. Teams receive mentorship and coaching from Stanford faculty, domain experts, and data science experts from industry. Sample projects include innovations for: poverty alleviation in the developing world, local government services, education, and healthcare. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

English Courses

ENGLISH 1. History and Theory of Novel Group. 1 Unit.

This reading group, organized by the Undergraduate Initiative of the Center for the Study of the Novel (CSN), is intended for undergraduates interested in the study of the novel. The group will meet four times in the Spring Quarter, to discuss works by major theorists of the novel, including Lukacs, Watt, Bakhtin, Barthes, Foucault, Moretti, Sedgwick, and others. Discussions will be led by CSN's graduate coordinators, Elena Dancu (DLCL) and Mark Taylor (English). All readings will be available on CourseWork.

Same as: DLCL 1

ENGLISH 1D. Dickens Book Club. 1 Unit.

Through the academic year, we will read one Dickens novel, one number a week for 19 weeks, as the Victorians would have done as they read the serialized novel over the course of 19 months. The group gets together once a week for an hour and a half to discuss each number, to look carefully at the pattern that the author is weaving, to guess, as the Victorians would have done, what might be coming next, and to investigate the Victorian world Dickens presents. We look carefully at themes, characters, metaphorical patterns, and scenes that form Dickens' literary world, and spend increasing time evaluating the critique that Dickens levels at Victorian life. The weekly gatherings are casual; the discussion is lively and pointed.

ENGLISH 9CE. Creative Expression in Writing. 3 Units.

Primary focus on giving students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests.

ENGLISH 9CT. Special Topics in Creative Expression. 3 Units.

Focus on a particular topic or process of creative expression. Primary focus on giving students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests.

ENGLISH 15SC. The New Millennium Mix: Crossings of Race & Culture. 2 Units.

Recently, The New York Times and the National Geographic have hailed the "new face of America" as young, global, and hybrid. The NY Times gave this demographic a name: Generation E.A. (Ethnically Ambiguous). Our course examines the political and aesthetic implications of Generation E.A., and the hot new vogue for all things mixed. Galvanized by the 2000 census with its "mark one or more" (MOOM) racial option, dozens of organizations, websites, affinity and advocacy groups, modeling and casting agencies, television pilots, magazines, and journals--all focused on multi-racial/multi-cultural experiences--have emerged in the last few years. We will analyze representations of mixed race and multiculturalism in law, literature, history, art, performance, film, comedy, and popular culture. These cultural and legal events are changing the way we talk and think about race. nImportantly, our seminar also broadens this discussion beyond race, exploring how crossings of the color-line so often intersect with other aspects of experience related to gender, religion, culture, or class.nField trips, films, communal lunches, and interactive assignments help us explore the current controversies over mixed-race identification and, more generally, the expressive and political possibilities for representing complex identities. Requirements include three two- to three-page analytical writing assignments, a presentation that can include an optional artistic or media component, and a final group-designed project. nIf you are a citizen of the 21st century, this class is for and about you. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

ENGLISH 17SI. Muggles, Mermaids, and Metaphors: Race in Harry Potter. 1-2 Unit.

How do divisions between wizards and Muggles or purebloods and Muggle-borns reflect race in our own society? How are books, films, and fan creations coloured by characters, and consumers, experiences of race? And how can understanding literature be relevant to social change? This course is designed to introduce students with no prior background in CSRE to race-critical approaches to literature and pop culture. Some familiarity with the Harry Potter series is preferred.

ENGLISH 18SI. From Canon to 'Fanon': Fan Fiction and the Democratization of Literature. 1-2 Unit.

Fan fiction has been called one of the great unsung popular literary movements of the past fifty years. Long in existence but increasingly mainstream, the genre has emerged onto the 21st-century literary landscape as a cultural force to be reckoned with. This course will treat fan fiction as a legitimate genre of literature worthy of academic attention and analysis. We will examine both text and context, considering tropes and style of 'fanfic' as well as cultural impact and influence. Key themes of the course include intertextuality, reader-response criticism, new literacies, and fanfic as a medium for narrative expansion and transgression.

ENGLISH 21. Introduction to American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 121.) An exploration of the diverse political, racial, social, and aesthetic questions which inform works of American literature from the early national period to the late twentieth century.

Same as: AMSTUD 121, ENGLISH 121

ENGLISH 23. American Literature and Culture to 1855. 3-5 Units.

(English majors and others taking 5 units, register for ENGLISH 123 or AMSTUD 150). A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War.

Same as: AMSTUD 150, ENGLISH 123

ENGLISH 43. Introduction to African American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history.

Same as: AFRICAAM 43, AMSTUD 143, ENGLISH 143

ENGLISH 43A. American Indian Mythology, Legend, and Lore. 3-5 Units.

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

Same as: ENGLISH 143A, NATIVEAM 143A

ENGLISH 47N. Sports and Culture. 3 Units.

Stanford has the most successful student-athlete program in the country (maybe ever) and athletics are an enormously important aspect of Stanford's student culture. This course looks in depth at sports in American culture. Through film, essays, fiction, poetry and other media, we will explore an array of topics including representations of the athlete, violence, beauty, the mass media, ethics, college sports, race and gender.

ENGLISH 48N. The American Songbook and Love Poetry. 3 Units.

A study of performances (Billie Holiday, Frank Sinatra etc) of songs by classic American composers (Porter, Rogers and Hart, Cohen).

ENGLISH 51N. The Sisters: Poetry & Painting. 3 Units.

Poetry and painting have often been called the "sister arts". Why? Sometimes a poem or a painting stands out to us, asking that we stay with it, that we remember it, although we cannot exactly say why. Poems have a way of making pictures in the mind, and paintings turn "rhymes" amid the people, places, and things they portray. Each is a concentrated world, inviting an exhilarating closeness of response: why does this line come first? Why does the artist include that detail? Who knows but that as we write and talk about these poems and pictures we will be doing what John Keats said a painter does: that is, arriving at a "trembling delicate and snail-horn perception of Beauty." Each week explore the kinship between a different pair of painter and poet and also focuses on a particular problem or method of interpretation. Some of the artist/poet combinations we will consider: Shakespeare and Caravaggio; Jorie Graham and (the photographer) Henri Cartier-Bresson; Alexander Pope and Thomas Gainsborough; William Wordsworth and Caspar David Friedrich; Christina Rossetti and Mary Cassatt; Walt Whitman and Thomas Eakins; Thomas Hardy and Edward Hopper.

ENGLISH 65N. Contemporary Women Fiction Writers. 3 Units.

Preference to freshmen. Novels and story collections addressing childhood, coming of age, and maturity; love, sexuality, orientation; the experience of violence and the politics, domestic and global, of women's lives. Texts include Gordimer, Eisenberg, Latiolais, Munro, O'Brien, and others.

ENGLISH 79N. The Renaissance: Culture as Conflict. 3 Units.

Focus is on the Renaissance not as a cultural rebirth but as a scene of cultural conflict. Course materials are selected from Renaissance art, history, philosophy, politics, religion, and travel writing; authors include More, Luther, Erasmus, Machiavelli, Michelangelo, Montaigne, Shakespeare. Among the conflicts we will explore are: old (world)/new (world), wealth/poverty, individual/collectivity, manuscript/print, religion/secularism, Catholicism/Protestantism, monarchism/republicanism, femininity/masculinity, heterosexuality/homosexuality.

ENGLISH 81. Philosophy and Literature. 5 Units.

(Formerly CLASSGEN 81) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track; majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English. Same as: CLASSICS 42, COMPLIT 181, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

ENGLISH 90. Fiction Writing. 5 Units.

The elements of fiction writing: narration, description, and dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1 (waived in summer quarter).

ENGLISH 90V. Fiction Writing. 5 Units.

Online workshop course that explores the ways in which writers of fiction have used language to examine the world, to create compelling characters, and to move readers. We will begin by studying a selection of stories that demonstrate the many techniques writers use to create fictional worlds; we'll use these stories as models for writing exercises and short assignments, leading to a full story draft. We will study figurative language, character and setting development, and dramatic structure, among other elements of story craft. Then, each student will submit a full draft and receive feedback from the instructor and his/her classmates. This course is taught entirely online, but retains the feel of a traditional classroom. Optional synchronous elements such as discussion and virtual office hours provide the student direct interaction with both the instructor and his/her classmates. Feedback on written work is requested; both offered to and given by the student is essential to the course and creates class rapport.

ENGLISH 91. Creative Nonfiction. 5 Units.

(Formerly 94A.) Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content.

ENGLISH 92. Reading and Writing Poetry. 5 Units.

Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit.

ENGLISH 94. Creative Writing Across Genres. 5 Units.

For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92.

ENGLISH 100A. Literary History I. 5 Units.

First in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas, and aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes.

ENGLISH 100B. Literary History II. 5 Units.

Second in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes.

ENGLISH 100C. Literary History III. 5 Units.

Third in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes.

ENGLISH 102. Chaucer. 5 Units.

An introduction to Chaucer's writings, including *The Canterbury Tales*, *The Book of the Duchess*, and *The Parliament of Fowls*. Readings in Middle English. No prior knowledge of Middle English or medieval literature is expected.

ENGLISH 106E. Dante and Aristotle. 5 Units.

Focuses on Dante and Aristotle's writings about the cosmos, love, and the good. Readings will include Dante's *Commedia*, Aristotle's *Nicomachean Ethics* and *De caelo*, Aquinas's *Summa theologiae*, and Richard of St. Victor's *Benjamin Minor*. All readings will be in English.
Same as: PHIL 193D

ENGLISH 111B. Medieval Romance. 5 Units.

Romance emerges as a distinct genre in the Middle Ages, defined not just by love stories but by quests and battles and otherworldly creatures. Study of its origins and development, focusing on Middle English texts. About half of the class will be devoted to Chaucer, including some of the "Canterbury Tales" and "Troilus and Criseyde". Readings include some Arthurian literature: "Sir Gawain and the Green Knight", as well as popular romances such as "Sir Orfeo" and "Floris and Blancheflour". No knowledge of Middle English or medieval literature is expected.

ENGLISH 113L. Latin 500-1600 CE. 5 Units.

The aim of the course is to familiarize students with medieval Latin and neo-Latin through a reading of various short texts drawn from philosophical, religious, political, historical, and literary works. Students will devote most of their efforts to preparing translations for class. We shall also discuss some peculiarities of post-classical Latin grammar.
Prerequisite: CLASSLAT 1, 2 & 3, or equivalent.
Same as: CLASSICS 6L, PHIL 113L, PHIL 213L, RELIGST 173X

ENGLISH 115A. Shakespeare and Modern Critical Developments. 5 Units.

Approaches include gender studies and feminism, race studies, Shakespeare's geographies in relation to the field of cultural geography, and the importance of religion in the period.

ENGLISH 115C. Hamlet and the Critics. 5 Units.

Focus is on Shakespeare's *Hamlet* as a site of rich critical controversy from the eighteenth century to the present. Aim is to read, discuss, and evaluate different approaches to the play, from biographical, theatrical, and psychological to formalist, materialist, feminist, new historicist, and, most recently, quantitative. The ambition is to see whether there can be great literature without (a) great (deal of) criticism. The challenge is to understand the theory of literature through the study of its criticism.
Same as: TAPS 151C

ENGLISH 118. Literature and the Brain. 5 Units.

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?.
Same as: ENGLISH 218, FRENCH 118, FRENCH 318, PSYCH 118F

ENGLISH 121. Introduction to American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 121.) An exploration of the diverse political, racial, social, and aesthetic questions which inform works of American literature from the early national period to the late twentieth century.

Same as: AMSTUD 121, ENGLISH 21

ENGLISH 122A. Austen and Woolf. 5 Units.

Reading of three novels by Jane Austen; arguably the most influential and gifted of British female novelists; and three novels by Virginia Woolf, whose debt to Austen was immense. Topics include the relationship between women writers and the evolution of the English novel; the extraordinary predominance of the marriage plot in Austen's fiction (and the various transformations Woolf works on it); each novelist's relationship to the cultural and social milieu in which she wrote.

ENGLISH 123. American Literature and Culture to 1855. 3-5 Units.

(English majors and others taking 5 units, register for ENGLISH 123 or AMSTUD 150). A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War.
Same as: AMSTUD 150, ENGLISH 23

ENGLISH 124. The American West. 5 Units.

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, HISTORY 151, POLISCI 124A

ENGLISH 125B. Make It New: Literature of the Jazz Age. 3-5 Units.

Introduction to modernism through a survey of its major writers and the world in which they wrote. We will look at poets like T.S. Eliot and Gertrude Stein who changed the language, prose-writers like James Joyce and Ernest Hemingway who changed the story, painters like Pablo Picasso and Henri Matisse who changed the view, and populists like Louis Armstrong and Charlie Chaplin who changed the scene. Along the way we will think about the basic questions of modernism: Who was involved? How did they interact? And perhaps most importantly, what features make their work modernist? With brief but lively introductions to this world, students will gain entry into academic habits of mind through authors and artists they already love.

ENGLISH 126D. Victorian Sex. 5 Units.

How can we make sense of a culture of extraordinary sexual repression that nevertheless seemed fully preoccupied with sex? Examination of the depictions of sex in Victorian literary and cultural texts. Authors include: Collins, Braddon, the Brownings, Swinburne, Stoker and Wilde.
Same as: FEMGEN 126D

ENGLISH 129. The Grotesque: Studies in the Bizarre and Unnatural. 5 Units.

Investigation of the history of the grotesque in literature, art and film from the eighteenth century until today. What kinds of messages or ideas can be better conveyed by the grotesque than by the beautiful? What techniques and tactics have been developed by authors seeking to shock or surprise us? And why are we, as an audience, attracted to representations of objects or events which seem designed to repel us? Together, we will study renditions of the Grotesque in literature (*Grimmsquest; Fairy Tales*, Poequest;s short stories, and Hoffmانيquest;s *The Sandman*), film (Murnauquest;s *Nosferatu*) and theoretical writing (Freud and Nietzsche).

ENGLISH 143. Introduction to African American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history.

Same as: AFRICAAM 43, AMSTUD 143, ENGLISH 43

ENGLISH 143A. American Indian Mythology, Legend, and Lore. 3-5 Units.

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

Same as: ENGLISH 43A, NATIVEAM 143A

ENGLISH 144A. Writing and Fighting: Literature of the First World War One Hundred Years On. 5 Units.

2014 marks the hundredth anniversary of the Great War, the 'war to end all wars' and the war that infamously was meant to be over in four months and dragged on for four blood-soaked years. This course will introduce students to the wide literary production, especially the poetic and novelistic output, borne by the experience of war to demonstrate the intimate relationship between political, cultural and aesthetic crises of the 1914-1918 period. Wide access to newly available online text and film archives will be central to our examinations.

ENGLISH 146. Development of the Short Story: Continuity and Innovation. 5 Units.

Exploration of the short story form's ongoing evolution as diverse writers address love, death, desire. Maupassant, D.H. Lawrence, Woolf, Flannery O'Connor, Hurston, and others. Required for Creative Writing emphasis. All majors welcome.

ENGLISH 146C. Hemingway, Hurston, Faulkner, and Fitzgerald. 5 Units.

While Hemingway and Fitzgerald were flirting with the expatriate avant-garde in Europe, Hurston and Faulkner were performing anthropological field-work in the local cultures of the American South. Focus on the tremendous diversity of concerns and styles of four writers who marked America's coming-of-age as a literary nation with their multifarious experiments in representing the regional and the global, the racial and the cosmopolitan, the macho and the feminist, the decadent and the impoverished.

Same as: AMSTUD 146C

ENGLISH 150. Poetry and the Internet. 5 Units.

How has contemporary poetry been transformed by the Internet and other new media. How have poets responded to the new media forms, from Facebook to Twitter, that now absorb the attention of so many people? How have poets utilized the torrents of information accessible to them with a few keystrokes? Focus will mostly be on poetry written after 2000; secondary readings will draw from literary criticism, media theory, and sociology.

ENGLISH 150D. Women Poets. 5 Units.

The development of women's poetry from the 17th to the 20th century. How these poets challenge and enhance the canon, amending and expanding ideas of tone, voice and craft, while revising societal expectations of the poet's identity. Poets include Katharine Philips, Letitia Barbauld, Elizabeth Barrett Browning, Charlotte Mew, Sylvia Plath, and Adrienne Rich.

Same as: FEMGEN 150D

ENGLISH 151F. Angelheaded Hipsters: Beat Writers of San Francisco and New York. 5 Units.

Reading of central writers of the Beat movement (Ginsberg, Kerouac, di Prima, Snyder, Whalen) as well as some related writers (Creeley, Gunn, Levertov). Issues explored include NY and SF, Buddhism and leftist politics, poetry and jazz. Some exposure to reading poems to jazz accompaniment. Examination of some of the writers and performers growing out of the Beats: Bob Dylan, rock music, especially from San Francisco, and jazz.

ENGLISH 152C. The JFK Era and American Literature. 5 Units.

Few U.S. presidents have exerted so great a fascination on the national and global post-World War II imagination as John F. Kennedy. As the 2013's semi-centennial anniversary of Kennedy's assassination attests, the production of films, television and multimedia programs, biographies, conspiracy theories, academic studies, and literary texts about the iconic JFK and his fabled, thousand-day presidency continues unabated. In this course, we will explore the attention Kennedy has drawn from writers and filmmakers like Norman Mailer, Lorraine Hansberry, Don DeLillo, Oliver Stone, Mario Vargas Llosa, and Stephen King.

Same as: AMSTUD 152C

ENGLISH 152G. Harlem Renaissance. 5 Units.

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context.

Same as: AFRICAAM 152G, AMSTUD 152G

ENGLISH 152K. Mixed-Race Politics and Culture. 5 Units.

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AFRICAAM 226, AMSTUD 152K, CSRE 152K

ENGLISH 153A. James Joyce. 5 Units.

A close reading of Joyce's works, including *Dubliners*, *A Portrait of the Artist as a Young Man*, *Ulysses*, and *Finnegans Wake*. We will also read *Stephen Hero*, the abandoned draft of *A Portrait*, *Giacomo Joyce*, several of Joyce's speeches, letters and poems, and the play *Exiles*. We'll devote some attention to his biographies, and also watch clippings from the two film versions of *Ulysses*: Joseph Strick's *Ulysses*:(1967) and Sean Walsh's *Bloom* (2004). We will read some of the classics of Joyce criticism (Wilson, Levin, Lukacs), as well as later, more contemporary approaches (Jameson, Moretti, Duffy, Gibson, Wicke, Latham, Rubenstein, Walkowitz).

ENGLISH 153D. Cybernetics; or Control and Communication in the Postwar Novel. 5 Units.

The title of this course plays on Norbert Wiener's highly influential 1948 book, *Cybernetics; or Control and Communication in the Animal and the Machine*. Though hardly remembered today, the field that it inaugurated, cybernetics, enjoyed a non-specialist following that was nearly unprecedented in the history of science, influencing philosophy, social science, and literature and the arts in particular. This course will track the influence of key cybernetic concepts entropy, information, feedback, control upon four US novels published after 1960.

ENGLISH 154J. Prep Schools, Frat Houses, and Hogwarts: The Campus in 20th & 21st Century Literature. 3-5 Units.

This course examines the representation of campus life across a variety of media and genres: from Willa Cather's *My Antonia*; *The Professor*; *House* (1925) to Todd Phillips's *Old School* (2003) to Vampire Weekend's *Harvest Brunch*; *Quest*; *Campus* (2008) and beyond. By studying the evolution of the campus over the twentieth and twenty-first centuries, we will explore how artists dealt with the school as an increasingly unavoidable part of modern experience. Why do artists rebel so vehemently against the school system? Why do schools like teaching novels that are all about how terrible schools are? What can and can't we learn in class?

ENGLISH 157E. Murder: A Course on Narrative Representation. 3-5 Units.

While murder often kicks off light, popular fictions like *Sherlock* or *Poirot*, it is also often central to more philosophical representations of the darkest, most antisocial extremes of the human psyche. In this course, we consider this intriguing range of murder's narrative function and meaning. We study how representational strategies and genre conventions inform audience expectations and responses; analyze how plot and style interact; and discuss the slippery lines between nonfiction, true crime, and fiction. By the end of the course, students should have a working understanding of key concepts from narratology, genre studies, and reader response criticism.

ENGLISH 157G. Gaming and Literature: Exploring Connections between Interactive Media and Literary Analysis. 5 Units.

Whether struggling as dragon born or raiding ancient tombs, character and story in video games are crucial to an immersive experience. Whether by design or imagination, we vest ourselves in the challenges and puzzles in stories of alien attack, myth and magic, and constructed worlds. Literature and gaming are converging, transforming pixels into rich environments where gamers spend months or years. This course connects characteristics of games and select literary works, guiding analyses of story-driven, active game systems. Students explore story development and critical processes for the synthesis of various game types, and explore social issues connecting games and society.

ENGLISH 160. Poetry and Poetics. 5 Units.

Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through diction, imagery, and technical elements of verse.

ENGLISH 161. Narrative and Narrative Theory. 5 Units.

An introduction to stories and storytelling--that is, to narrative. What is narrative? When is narrative fictional and when non-fictional? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How has storytelling changed over time? Focus on various forms, genres, structures, and characteristics of narrative.

ENGLISH 162W. Writing Intensive Seminar in English. 5 Units.

Small literature-based, writing-intensive seminars taught by advanced graduate students in the English Ph.D. program. The goal will be to produce a high-quality final research paper. Courses will be oriented around a single text or a small group of texts in conversation with a larger spectrum of scholarship and knowledge in literary criticism and theory, film, painting, or material culture. The small format will allow undergraduates to receive detailed commentary and one-on-one feedback on their writing. Same as: WISE

ENGLISH 163D. Shakespeare: The Ethical Challenge. 5 Units.

Was the eighteenth century right in proclaiming Shakespeare to be the greatest moral philosopher? What are the ethical challenges Shakespeare's major plays still pose for us? Can we divorce ethical decisions from the contingencies of experience? We will ask a series of normative ethical questions (to do with pleasure, power, old age, self-sacrifice, and truth telling) and attempt to answer them in relation to the dramatic situation of Shakespeare's characters on the one hand and our own cultural situation on the other. The ethical challenge of Shakespearean drama will be set against selected readings in ethical theory. Same as: TAPS 163D

ENGLISH 164. Senior Seminar. 5 Units.

Small-class format focused on the close reading of literary texts and analysis of literary criticism. This class answers the questions: How do literary critics do what they do? What styles and gambits make criticism vibrant and powerful? Goal is to examine how one goes about writing a lucid, intelligent, and convincing piece of literary criticism based on original research.

ENGLISH 164C. Senior Capstone Seminar. 5 Units.

Do you want to reflect critically on your time in the English Major? Do you want to design your own Senior Seminar project? This course is writing intensive, and involves the proposal, cultivation, and production of a 15-page student-designed research paper that consolidates the arc of a compelling literary critical interest. Substitutes for the Senior Seminar. Open to all English seniors who wish to write a long critical essay (we cannot at this time accept creative writing capstones).

ENGLISH 168. Imagining the Oceans. 5 Units.

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Authors read might include Cook, Equiano, and Steinbeck; Defoe, Verne, Stevenson, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Films by Painlevé; and Bigelow. Seminar co-ordinated with a spring 2015 Cantor Arts Center public exhibition. Visits to Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Same as: COMPLIT 168, FRENCH 168

ENGLISH 172C. Easy Riders and Migrant Laborers: American Mobility in Literature and Film. 3-5 Units.

The open road; a quintessential American image. This seminar explores the stories of open space, social mobility, and renewed possibilities that pervade American literature, film, and culture. What accounts for the pull of the open road? What roles have these stories played in American identity? We'll pursue and complicate these ideas, examining how differences of class, race, gender, and national origin inflect them. The focus will be the twentieth century, a period that witnessed the rise of U.S. global power, mass immigration, and the freeway. Authors/directors include Jack Kerouac, Dennis Hopper, Tomasa's Rivera, Bharati Mukherjee, Ridley Scott, and Simon Ortiz.

ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: CSRE 196C, PSYCH 155, SOC 146, TAPS 165

ENGLISH 172E. The Literature of the Americas. 5 Units.

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes--the Harlem Renaissance, the Beats, magic realism, Noigandres--in unaccustomed conversation with each other.

Same as: AMSTUD 142, COMPLIT 142, CSRE 142

ENGLISH 175C. Literature and Culture of the American Landscape. 5 Units.

This course examines a wide range of American literary engagements with nature: as a determinant of national character and destiny; as a source of spiritual, sexual, and moral revitalization; as a battleground for the survival of races and ethnicities; as a molding mechanism of citizenship and gender; as the basis of a national art and culture; and as a resource for exploitation or preservation.

ENGLISH 182J. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such iquest;awakenings.iquest; The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's iquest;seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's iquest;cognitive iquest;presence.iquest; in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically iquest;rewrites.iquest; one of Donne's major poems from the female perspective. This can be, in Rich's words, an iquest;awakening.iquest; for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's iquest;Othello.iquest; Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's iquest;1960's play, iquest;Who iquest;Afraid of Virginia Woolf?iquest;.

Same as: FEMGEN 112, FEMGEN 212

ENGLISH 183F. Introduction to Critical Theory. 5 Units.

An introduction to critical theory, beginning with some of the defining moments of its history in the 20th century, to current developments in the field in the context of the contemporary global skepticism of humanistic critique, both in its institutional capacity and within the larger public sphere. Texts by Louis Althusser, Michel Foucault, Helene Cixous, Michael Hardt and Antonio Negri, Edward Said, David Lodge and others.

ENGLISH 184. The Novel, the Global South. 5 Units.

Literary inventiveness and social significance of novelistic forms from the Great Depression to the present.

Same as: COMPLIT 123

ENGLISH 184C. Data and Knowledge in the Humanities. 5 Units.

How different disciplines understand and use data, and how skills such as interpretation and critical thought work with data to create knowledge. How the introduction of mathematics reshaped disciplines like cosmology and sociology in the past and how, in the present, the humanities are facing the same challenges with the emergence of fields such as spatial history and the digital humanities. In addition to readings and class discussion, this course will also feature guest lectures from scholars from different disciplines, including the natural and social sciences, who will discuss how their fields create knowledge from data.

ENGLISH 184H. Text Technologies: A History. 5 Units.

Beginning with cave painting, carving, cuneiform, hieroglyph, and other early textual innovations, survey of the history of writing, image, sound, and byte, all text technologies employed to create, communicate and commemorate. Focus on the recording of language, remembrance and ideas explicating significant themes seen throughout history; these include censorship, propaganda, authenticity, apocalypticism, technophobia, reader response, democratization and authority. The production, transmission and reception of tablet technology, the scroll, the manuscript codex and handmade book, the machine-made book, newspapers and ephemera; and investigate the emergence of the phonograph and photograph, film, radio, television and digital multimedia. The impact of these various text technologies on their users, and try to draw out similarities and differences in our cultural and intellectual responses to evolving technologies. STS majors must have senior status to enroll in this senior capstone course.

Same as: STS 200D

ENGLISH 186. Tales of Three Cities: New York, Chicago, Los Angeles. 5 Units.

How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century.

Same as: AMSTUD 186

ENGLISH 189A. Dead White Men on Trial: Feminism and the Novel. 3-5 Units.

The determination of gender is a form of reading: reading bodies, reading gestures, reading histories. In the spirit of that feminist insight, this course will offer an introduction to feminism through fiction and criticism that thematizes reading in its diverse forms. Students will explore the relationship between interpretation and experience, identity and performance, from both the social feminist angle and the literary-critical angle. We will acquaint ourselves with foundational feminist novels, from *Jane Eyre* to *To the Lighthouse* to *Their Eyes Were Watching God*, and pair them with critical theory that addresses feminism in conversation with race, class, ability, and sexual orientation. Students will be encouraged to consider contemporary applications of the historical thought, and will have the option of writing a final paper that analyzes a contemporary text of their choice. The class will also require short writing assignments that will develop students' facility with argumentation and academic essay forms.

ENGLISH 190. Intermediate Fiction Writing. 5 Units.

May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91.

ENGLISH 190F. Fiction into Film. 5 Units.

Workshop. For screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90.

ENGLISH 190G. The Graphic Novel. 5 Units.

Interdisciplinary. Evolution, subject matter, form, conventions, possibilities, and future of the graphic novel genre. Guest lectures. Collaborative creation of a graphic novel by a team of writers, illustrators, and designers. Prerequisite: consent of instructor.

ENGLISH 190H. The Graphic Novel. 5 Units.

Continuation of English 190G. Interdisciplinary. Evolution, subject matter, form, conventions, possibilities, and future of the graphic novel genre. Guest lectures. Collaborative creation of a graphic novel by a team of writers, illustrators, and designers. Prerequisite: consent of instructor.

ENGLISH 190T. Special Topics in Intermediate Fiction Writing. 5 Units.

Focus on a particular topic or process. Work includes aspects of reading short stories and novels, writing at least 30-50 pages of fiction, and responding to peers' work in workshop. May be repeated for credit. Prerequisite: 91 or 90.

ENGLISH 190V. Reading for Writers. 5 Units.

Taught by the Stein Visiting Fiction Writer. Prerequisite: 90.

ENGLISH 191. Intermediate Creative Nonfiction. 5 Units.

Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90.

ENGLISH 192. Intermediate Poetry Writing. 5 Units.

May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92.

ENGLISH 192V. The Occasions of Poetry. 5 Units.

Taught by the Mohr Visiting Poet. Prerequisite: 92.

ENGLISH 194. Individual Research. 5 Units.

See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research.

ENGLISH 195W. Writing Center Peer Tutor Seminar. 3 Units.

For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work. Same as: PWR 195, PWR 295

ENGLISH 196A. Honors Seminar: Critical Approaches to Literature. 5 Units.

Overview of literary-critical methodologies, with a practical emphasis shaped by participants' current honors projects. Restricted to students in the English Honors Program.

ENGLISH 197. Seniors Honors Essay. 1-10 Unit.

In two quarters.

ENGLISH 198. Individual Work. 1-5 Unit.

Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without consent. Group seminars are not appropriate for 198.

ENGLISH 198A. CS+English ePortfolio. 1-3 Unit.

Students will begin planning and assembling materials for the joint major capstone project (to be completed in the senior year). Designed to be taken in the junior year for three quarters. During the first and second quarters, students should enroll in one unit. In the first two quarters, students will survey the field of digital humanities and start compiling an ePortfolio that showcases their favorite work in literature and programming, reflections on the two fields, and begin to develop plans for the capstone project. For the third quarter, students should enroll in three units. The central goal for the third quarter is completion of an adviser-approved proposal for the capstone project (to be completed in the senior year). In this course students will refine your proof-of-concept from the previous quarter and deliver the ePortfolio.

ENGLISH 198L. Individual Work: Levinthal Tutorial. 5 Units.

Undergraduate writers work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.

ENGLISH 199. Senior Independent Essay. 1-10 Unit.

Open, with department approval, to seniors majoring in non-Honors English who wish to work throughout the year on a 10,000 word critical or scholarly essay. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.

ENGLISH 201. The Bible and Literature. 5 Units.

Differences in translations of the Bible into English. Recognizing and interpreting biblical allusion in texts from the medieval to modern periods. Readings from the Bible and from British, Canadian, American, and African American, and African literature in English.

ENGLISH 202. History of the Book. 5 Units.

Taught in the Department of Special Collections, the course examines the book as both a developing concept and as a material object, from scroll to codex, from manuscript to print, from cold type to electronic medium. Basic bibliographical and paleographical techniques will be taught, and readings in history and theory will be discussed. Attention will focus particularly on the use of books, and hence on the history of reading practices, including marginalia and other marks of ownership. Students will be expected to develop their own projects from among the riches of Stanford's rare book collection. The final project may be a collaborative one, with contributions by the class as a whole. This has typically been the preparation of an edition of a manuscript or piece of ephemera in Stanford's collection.

ENGLISH 218. Literature and the Brain. 5 Units.

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?. Same as: ENGLISH 118, FRENCH 118, FRENCH 318, PSYCH 118F

ENGLISH 234G. Narrating the British Empire. 4-5 Units.

This course will explore the historical and cultural reality of the British Empire in a global and comparative context, through works of fiction and non-fiction, history, memoir and a range of cultural chronicles. What relationship did British colonialism have with modernity and the European Enlightenment, and with neoliberalism and globalization that followed decolonization? Texts: CLR James's *Beyond a Boundary*, Jamaica Kincaid's *A Small Place*, Nirad Chaudhuri's *The Autobiography of an Unknown Indian*, Alan Paton's *Cry, The Beloved Country*, Witi Ihimaera's *Dear Miss Mansfield*.

Same as: HISTORY 234G, HISTORY 334G

ENGLISH 239B. Literature and Social Online Learning. 3-5 Units.

Study, develop, and test new digital methods, games, apps, interactive social media uses to innovate how the humanities can engage and educate students and the public today. Exploring well-known literary texts, digital storytelling forms and literary communities online, students work individually and in interdisciplinary teams to develop innovative projects aimed at bringing literature to life. Tasks include literary role-plays on Twitter; researching existing digital pedagogy and literary projects, games, and apps; reading and coding challenges; collaborative social events mediated by new technology. Minimal prerequisites which vary for students in CS and the humanities; please check with instructors.

Same as: COMPLIT 239B, CS 27

ENGLISH 250. Poetry, Transhistorically. 5 Units.

The course considers representative works by ten poets from the Renaissance to the present. Each set of poems is framed by a problem in poetics such as artifice and sound, the making of voice, the meaning of lyric, and the nature of historicist and biographical interpretation. Shakespeare, Gray, Wordsworth, Whitman, E.B. Browning, Yeats, H.D., Olson, Wolcott, and Hejinian; and readings in recent poetic theory.

ENGLISH 290. Advanced Fiction Writing. 5 Units.

Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop.

ENGLISH 292. Advanced Poetry Writing. 5 Units.

Focus is on generation and discussion of student poems, and seeking published models for the work.

ENGLISH 300A. Advanced Paleography. 5 Units.

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: CLASSICS 216, HISTORY 315, RELIGST 329X

ENGLISH 303. Experiment and the Novel. 5 Units.

A double exploration of experiment in the novel from 1719 into the 19th century. Taking off from Zola's "The Experimental Novel," consideration of the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the usual sense of departures from standard practice, consideration of works that seem to break away from techniques of "realism" devised prior to 1750, with "Robinson Crusoe" as the representative of that mode.. Texts by: Defoe, Sterne, Walpole, Godwin, Lewis, Goethe, and Shelley.

Same as: COMPLIT 353A

ENGLISH 303C. The Networks of Enlightenment. 5 Units.

In this course, we will use the emerging methods of social network analysis to investigate imaginative worlds of eighteenth-century literature and the role that social connections play in the Enlightenment. Together we will read and analyze Restoration comedies (*The Man of Mode*), eighteenth-century tragedies (*Venice Preserved*), Gothic novels (*The Castle of Otranto*) and early social novels (*Evelina*). We will identify and study the shapes of the relationships in these texts as we use networking tools, such as iGraph and Gephi, to visualize the social world of the text. Previous technical experience is not required as this course also serves as a method-based introduction to network analysis in the humanities.

ENGLISH 305H. Readings in Close Reading. 5 Units.

The difference between reading and reading closely. Is close reading a specific method of literary criticism or theory, or does it describe a sensibility that can accompany any interpretation? Categories and frameworks for this ubiquitous, often undefined critical practice. Traditions of close reading: formalism, psychoanalysis, ideological critique, and hermeneutics. Focus is on Freud, Empson, Barthes, de Man and contemporary critics.

ENGLISH 308B. Gilded Age American Literature. 5 Units.

Introduction to the creative innovations and the political tensions that stemmed from the formation of a multicultural society during the age of industrialization. We will attempt to place literary works in their historical and cultural contexts, while also surveying recent critical and theoretical developments in areas such as Realism, Naturalism, Regionalism, Minority and Race Studies, and so on.

ENGLISH 310. The Transatlantic Renaissance. 5 Units.

The emergence of a transatlantic culture in the early modern period. How is the Renaissance of Europe and England fashioned in a conversation with the cultural forms and material realities of the colonial Americas? And how do colonial writings expand and complicate the available understanding of the Renaissance? Readings in Columbus, More, Hakluyt, Spenser, Shakespeare, the Inca Garcilaso de la Vega.

Same as: COMPLIT 332

ENGLISH 314. Epic and Empire. 5 Units.

Focus is on Virgil's *Aeneid* and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

Same as: COMPLIT 320A

ENGLISH 314E. English Drama Before Shakespeare. 5 Units.

English dramatic and theatrical culture from the mystery cycles of the late medieval period to the establishment of professional playhouses in late sixteenth-century London. Different dramatic genres (interludes, moralities, farces, tragedies, comedies, histories, pastoral plays), performance venues (streets, households, inns, schools, universities, court, playhouses), and dramatic traditions (classical, native, continental European) will be represented. Authors (of those who have names) range from Medwall, Skelton, Heywood, Preston, and Edwards to Lyly, Kyd, Greene, Peele, and Marlowe.

Same as: TAPS 341E

ENGLISH 327. Genres of the Novel. 5 Units.

Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukacs, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. *PLEASE NOTE: Course for graduate students only.*

Same as: COMPLIT 327, FRENCH 327

ENGLISH 332. Ancients, Moderns, and Postmoderns. 5 Units.

Literary critics and art historians depend on accounts of modernity, post-modernity, and antiquity that are normative even as they claim to be historicist. We will ask what needs these accounts have served historically, what their theoretical consequences are, and how we should write cultural criticism today. Readings will range from the renaissance to the present, with an emphasis on the historicist turn of the late eighteenth century. Authors may include Petrarch, Winckelmann, Schiller, the Schlegels, Hegel, Nietzsche, Benjamin, Lyotard, and Jameson.

ENGLISH 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukacs, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students.

Same as: GERMAN 300, MTL 334A

ENGLISH 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.

Same as: COMPLIT 334B, MTL 334B

ENGLISH 338. The Gothic in Literature and Culture. 5 Units.

This course examines the Gothic as both a narrative subgenre and an aesthetic mode, since its 18th century invention. Starting with different narrative genres of Gothic expression such as the Gothic novel, the ghost tale, and the fantastic tale by writers such as Walpole, Radcliffe, Sade, Poe, and E.T.A. Hoffmann, the course goes on to ask how the Gothic sensibility permeates a wide range of 19th century cultural phenomena that explore the dark side of Enlightenment, from Romantic poetry and art to melodrama, feuilleton novels, popular spectacles like the wax museum and the morgue. If time permits, we will also ask how the Gothic is updated into our present in popular novels and cinema. Critical readings will examine both the psychology of the Gothic sensibility and its social context, and might be drawn from theorists such as Benjamin, Freud, Lacan, Kristeva, and Zizek. Same as: COMPLIT 338, FRENCH 338

ENGLISH 362E. Uncle Tom's Cabin and the Archive. 5 Units.

Introduction to the theories, methods, and politics of the archive in literary studies, using "Uncle Tom's Cabin" and its extensive archives as the frame. Investigation of this novel's forms of circulation, contexts, visual and material culture, adaptations, and revisions will be supported and challenged both by readings in the theories and politics of the archive (including Derrida, Foucault, and Spivak) and the development of research skills in traditional and digital archives.

ENGLISH 362F. Transnational American Studies. 5 Units.

Exploration of the transnational turn in American Studies, focusing on how transnational perspectives enrich and complicate our understanding of American literature, history and the arts. Readings include recent work in transnational American Studies. Topics include experiments with ways of using digital technology to allow archival materials in different locations to be in conversation with each other.

ENGLISH 362G. African American Modernism. 5 Units.

A course exploring the aesthetic continuities and divergences, the artistic collaborations and political arguments, between Harlem Renaissance and Modernist writers across the color line in the first half of the twentieth century.

ENGLISH 363D. Feminist Theory: Thinking Through/With/About the Gendered Body. 5 Units.

Organized around a series of case studies, this graduate feminist theory course will consider issues related to the complex relationship between sex, gender, sexuality, biological reproduction, violence, and social power. It is a core course for the PhD minor in Feminist, Gender, and Sexuality Studies. Enrollment is limited to PhD-level students.

Same as: FEMGEN 363D

ENGLISH 368A. Imagining the Oceans. 5 Units.

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painleveacute; and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.

Same as: COMPLIT 368A, FRENCH 368A

ENGLISH 373C. Text of Shakespeare. 5 Units.

The Shakespearean text from script and performance to quartos, folios, editions, and back to script and performance. What has constituted a "good" text of Shakespeare, and what is bad about "bad" quartos? The ethics and politics of editing; the relation of editorial practice to stage practice on the one hand, and to what we want Shakespeare to be on the other? Plays with multiple original texts will be studied: "Romeo and Juliet, Hamlet, King Lear".

ENGLISH 376C. Tragic Form and Political Theory. 5 Units.

Tragic form and political theory have in common a profound interest in the conflictual foundation of human society. This course will explore how the two intellectual approaches define the actors of conflict, its causes, and its possible [or impossible] resolution.

Same as: COMPLIT 376C, PHIL 376C

ENGLISH 383A. The Ballad Tradition. 3-5 Units.

This team-taught cross-disciplinary course traces the history and aesthetics of the ballad in German, English, and Scottish literature, from the 18th century to the early 20th century. No knowledge of German is required, but reading knowledge is a plus.

Same as: COMPLIT 227A, GERMAN 200

ENGLISH 384D. The Palliser Novels. 5 Units.

Readings include Anthony Trollope's six Palliser novels, *Can You Forgive Her?* (1864), *Phineas Finn* (1869), *The Eustace Diamonds* (1873), *Phineas Redux* (1874), *The Prime Minister* (1876) and *The Duke's Children* (1879). Topics include: writing in serial; writing across the novel form; Victorian realism; the family saga and multi-volume characterization.

ENGLISH 390. Graduate Fiction Workshop. 3 Units.

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

ENGLISH 392. Graduate Poetry Workshop. 3 Units.

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

ENGLISH 394. Independent Study. 1-10 Unit.

Preparation for first-year Ph.D. qualifying examination.

ENGLISH 395. Ad Hoc Graduate Seminar. 1-5 Unit.

Three or more graduate students who wish in the following quarter to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.

ENGLISH 396. Introduction to Graduate Study for Ph.D. Students. 5 Units.

Required for first-year graduate students in English. The major historical, professional, and methodological approaches to the study of literature in English.

ENGLISH 396L. Pedagogy Seminar I. 2 Units.

Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

Same as: COMPLIT 396L

ENGLISH 396P. Publication Workshop: The Article. 3-5 Units.

A practical and theoretical study of the genre of the journal article, with critical reflection on its status as a gateway to academic professionalization and as a highly specialized form of public address. We will be reading articles published over the last decade across a diverse range of journals, focusing on issues surrounding methodology, style, tone, and audience. Participants will also work on developing an already polished piece of writing into the form of an article potentially publishable by a peer-reviewed publication. Admission by application in Winter quarter.

ENGLISH 396R. Old and Modern(ist) Reading Group. 2 Units.

This two-quarter-long reading group will alternate from week-to-week between Old English Biblical and Elegaic Poetry and David Jones's twentieth-century transnational Modernist masterpiece, "Anathemata" (which W. H. Auden called very probably the finest long poem written in English in this century). Students can choose to join biweekly for just Old English (in the original language) or just David Jones, or complete both sets of allied reading.

ENGLISH 398. Research Course. 1-18 Unit.

A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.

ENGLISH 398L. Literary Lab. 2-5 Units.

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.

Same as: COMPLIT 398L

ENGLISH 398R. Revision and Development of a Paper. 4-5 Units.

Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.

ENGLISH 398W. Orals, Publication and Dissertation Workshop. 2 Units.

For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, publishing articles, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.

ENGLISH 399. Thesis. 1-10 Unit.

For M.A. students only. Regular meetings with thesis advisers required.

ENGLISH 802. TGR Dissertation. 0 Units.

English for Foreign Students Courses

EFSLANG 197. Directed Study. 1-3 Unit.**EFSLANG 397. Directed Study. 1-3 Unit.****EFSLANG 683P. Workshop in Pronunciation for International Students. 2-3 Units.**

(1-2 units). Provides support in the development of clear, comprehensible English pronunciation. Includes attention to individual sounds as well as stress, rhythm, and intonation. Students taking the course for 3 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

EFSLANG 683R. Workshop in Reading and Vocabulary for International Students. 1-2 Unit.

(1-2 units). Provides support in the development of English reading skills for academic purposes, including work on comprehension, speed, and critical interpretation, along with strategies for improving vocabulary. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

EFSLANG 683S. Workshop in Oral Communication for International Students. 1-2 Unit.

(1-2 units) Provides support in the development of listening and speaking skills in English, including academic listening, small group discussion, oral presentation, and intercultural communication. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

EFSLANG 683W. Workshop in Written Communication for International Students. 1-2 Unit.

(1-2 units). Provides support in the development of English writing skills for non-natives. Writing assignments are negotiated with the instructor and may include practice in composition, SAT or TOEFL writing, and writing university application essays and statements of purpose. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

EFSLANG 684A. Language and Culture of Sports in the USA. 1-2 Unit.

Provides an overview of American sports culture, focusing on three of the most popular sports: basketball, baseball, and American football. Through an introduction to their rules and histories, students gain familiarity with the unique language patterns that surround discussions of sports, as well as the many sports-related metaphors and idioms in non-sports conversations in business and everyday life. Students learn and practice relevant language forms across all skills. Students taking the course for 2 units will have additional individual assignments and a 50-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

EFSLANG 684M. Language and Culture of Multimedia Communication. 1-2 Unit.

) Develops students' abilities to read, analyze, understand and produce multimedia and multimodal writing for digital contexts. Students will learn how to read, analyze, and understand the content and the patterns of language typically used in different types of multimodal writing (writing that uses words, images, video, and/or music). Students will create multimedia compositions for digital contexts. Students taking the course for 2 units will have additional individual assignments and a 50-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

EFSLANG 684S. Language and Culture of Silicon Valley. 1-2 Unit.
Provides an overview of Silicon Valley's unique culture and language patterns via exposure to authentic materials, such as blogs and videos, and interaction with students and professionals in local industry. Participants learn and practice language forms characteristic of this region across all skills. Those taking the course for 2 units will have additional individualized assignments and a 50-minute tutorial each week. Limited to visiting non-native English speaking undergraduates and students in the High School Summer College program. (1-2 units).

EFSLANG 687X. American Language and Culture: Silicon Valley First Session. 3 Units.

Closed enrollment. Intensive English language and U.S. culture program. Enrollment limited to 14.

EFSLANG 687Y. American Language and Culture: Silicon Valley, Second Session. 3 Units.

Closed enrollment. Intensive English language and U.S. culture program. Enrollment limited to 14. Course may be repeated once.

EFSLANG 688. Intensive English and Academic Orientation for Foreign Graduate Students. 6 Units.

Goal is to prepare incoming international graduate students for full-time study. Academic orientation and instruction in academic writing, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14. Course may be repeated once.

EFSLANG 688A. Intensive Spoken English. 3 Units.

For current graduate students. Includes work on listening, oral presentation, discussion, and conversational interaction. May fulfill any two of the following EFS requirements, subject to approval by the EFS Director: EFSLANG 690A, 690B, 691, 693B.

EFSLANG 688B. Intensive Academic Writing. 3 Units.

For current graduate students. Focus on academic writing, with some work in reading and vocabulary development. Engineering, science, humanities, and social science students prepare a research paper; business students write one or more case studies. Fulfills requirement for EFSLANG 697 or 698A, subject to approval by the EFSLANG Director.

EFSLANG 688V. Intensive English and Academic Orientation for Stanford Visiting Scholars. 5 Units.

Goal is to improve English proficiency and introduce the university environment. Writing, pronunciation, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14.

EFSLANG 689A. Exploring the Language and Culture of Sports in the USA. 1 Unit.

Develops familiarity with three of the most popular sports in the United States: football, baseball, and basketball. Beginning with an overview of the rules of each game and its history, students are introduced to the patterns of language that surround sports culture and pervade American communication even outside sports-related interactions. Students examine academic and popular sources on sports, focusing on the language of sports culture, metaphors, and idioms that occur in daily English language use through practice of the language forms both inside and outside the classroom. Intended for current graduate students and graduate summer visitors.

EFSLANG 689B. Building Communication Skills through Improvisation. 1 Unit.

Focus on building a range of English communication skills through improvisation activities. Participants explore theatrical techniques that teach collaboration, spontaneity, team building, storytelling, and confident public speaking with connections to academic, professional, and personal situations. Course is co-taught by an improvisation expert and an ESL instructor. No previous improvisation or theater experience necessary.

EFSLANG 689E. Learning English on Your Own. 1 Unit.

Independent English language learning. Learning strategies and objectives, setting and maintaining practice schedules, and evaluating progress. Focus is on exploiting web-based resources. Individual meetings.

EFSLANG 689H. American Humor. 1 Unit.

Analysis of jokes, humorous stories, and situations through modern media. Practice in advanced listening comprehension and English idioms.

EFSLANG 689L. Living in the USA. 1 Unit.

Life and relationships outside the University classroom. Goal is to familiarize international students with the cultural expectations and forms of language use in a variety of situations in the University community and in other social situations. Enrollment limited to 14.

EFSLANG 689P. Pronunciation. 2 Units.

The sounds of English, and stress, intonation, and rhythm patterns important to natural-sounding speech. Enrollment limited to 14.

EFSLANG 689S. Exploring Silicon Valley Language and Culture. 1 Unit.

Focus on developing communicative skills in the context of Silicon Valley with its unique culture and language patterns. Through analysis and discussion of language and content from authentic materials, such as popular blogs and videos, students gain familiarity with local norms for interacting with the people who live and work in this region. Includes topics relevant to entrepreneurs, tech professionals, and students as well as a short individual project. Intended for both new and continuing international graduate students.

EFSLANG 689T. Interacting in California's Vineyard Culture. 1 Unit.

Focuses on communicative skills in the context of California's renowned wine culture. Emphasis on the language of wine using appropriate terminology, and interacting knowledgeably with restaurant and retail wine staff. Topics include learning the fundamentals of vineyard techniques, varietal characteristics, tasting techniques, drinking and ordering etiquette. Course is co-taught by a wine expert and an ESL instructor. Class consists of a short interactive lecture, a communicative activity such as role playing, and a tasting of four specially selected wines. Participants must be at least 21 years old. Fee.

EFSLANG 689V. Vocabulary and Idiom. 1 Unit.

Building vocabulary for academic success. Idiomatic language, and what idioms and metaphors reflect about American culture. Enrollment limited to 14.

EFSLANG 689W. Working in the USA. 1 Unit.

The language and culture of the workplace. Goal is to familiarize international students with the cultural expectations of situations in the business setting and in social situations related to business.

EFSLANG 690A. Interacting in English. 1-3 Unit.

Strategies for communicating effectively in social and academic settings. Informal and formal language used in campus settings, including starting and maintaining conversations, asking questions, making complaints, and contributing ideas and opinions. Simulations and discussions, with feedback on pronunciation, grammar, and usage. Enrollment limited to 14.

EFSLANG 690B. Academic Discussion. 1-3 Unit.

Skills for effective participation in classroom settings, seminars, and research group meetings. Pronunciation, grammar, and appropriateness for specific tasks. Feedback on language and communication style. Enrollment limited to 14. May be repeated once for credit. Prerequisite: EFSLANG 690A or consent of instructor.

EFSLANG 690C. Advanced Interacting in English. 1-3 Unit.

Communication skills for extended discourse such as storytelling and presenting supported arguments. Development of interactive listening facility and overall intelligibility and accuracy. Goal is advanced fluency in classroom, professional and social settings. Identification of and attention to individual patterned errors. May be repeated once for credit. Prerequisite: EFSLANG 690B or consent of instructor. Enrollment limited to 14.

EFSLANG 691. Oral Presentation. 1-3 Unit.

For advanced graduate students. Practice in academic presentation skills; strategy, design, organization, and use of visual aids. Focus is on improving fluency and delivery style, with videotaping for feedback on language accuracy and usage. Enrollment limited to 14. May be repeated once for credit.

EFSLANG 692. Speaking and Teaching in English. 1-3 Unit.

For non-native speakers who must teach in English. Focus is on developing clarity, intelligibility, and effectiveness through weekly presentations simulating actual teaching assistant responsibilities. Enrollment limited to 14. May be repeated once for credit.

EFSLANG 693A. Listening Comprehension. 1-3 Unit.

Strategies for effective listening in an academic setting, focusing on identifying key ideas in lectures. Practice in understanding words and phrases commonly encountered in classroom settings. Computer-based exercises for comprehension of rapid, natural speech. Enrollment limited to 14.

EFSLANG 693B. Advanced Listening Comprehension, and Vocabulary Development. 1-3 Unit.

Listening strategies and vocabulary for understanding English in academic and non-academic contexts. Discussion and interpretation of communicative intent. Computer-based and video exercises across a range of genres; individual project. May be repeated once for credit. Prerequisite: EFSLANG 693A or consent of instructor.

EFSLANG 693R. Graduate Reading and Vocabulary Development. 1-3 Unit.

Strategies for improving graduate and professional academic reading comprehension and critical analysis. Focus on applying specific techniques for different reading purposes. Expansion of both general and field-specific academic vocabulary and idioms. Includes individual reading projects.

EFSLANG 694. English for Business, Industry and Professional Life. 1-3 Unit.

For advanced graduate students. Task-based practice of language appropriate for professional settings in industry and related teamwork. Simulation of the roles of manager, applicant, subordinate, and coworker. Prerequisite: EFSLANG 693A, or consent of instructor. Enrollment limited to 14.

EFSLANG 695A. Pronunciation and Intonation. 1-3 Unit.

Recognition and practice of American English sounds, stress, and intonation patterns for greater comprehension and intelligibility. Analysis of problem areas. Biweekly tape assignments and tutorials. May be repeated once for credit. Enrollment limited to 14.

EFSLANG 695B. Advanced Pronunciation and Intonation. 1-3 Unit.

Continuation of EFSLANG 695A, focusing on American English sounds, stress, rhythm, and intonation patterns. Emphasis is on self-monitoring, integrated with short presentations. Biweekly tape assignments and tutorials. Enrollment limited to 14. May be repeated for credit three times. Prerequisite: EFSLANG 695A.

EFSLANG 696. Understanding American Humor. 1-3 Unit.

Recognizing rhetorical devices, jokes, and character types common to spoken humor in film and television programs. Crosscultural discussion. Prerequisite: EFSLANG 690B, EFSLANG 693B or consent of the instructor. Repeatable once for credit. Enrollment limited to 14.

EFSLANG 697. Writing Fundamentals. 1-3 Unit.

Focus is on improving grammatical accuracy and vocabulary, building fluency, and learning the structure and conventions of English correspondence, reports, and short academic papers. Enrollment limited to 14.

EFSLANG 698A. Writing Academic English. 1-3 Unit.

Strategies and conventions for graduate writing. Emphasis is on fluency, organization, documentation, and appropriateness for writing tasks required in course work. Enrollment limited to 14. May be repeated once for credit.

EFSLANG 698B. Advanced Graduate Writing. 1-3 Unit.

Focus on clarity, accuracy, and appropriate style. For graduate students experienced in English writing and currently required to write for courses and research. Class meetings and individual conferences. Prerequisite: EFSLANG 698A. Enrollment limited to 14. May be repeated once for credit.

EFSLANG 698C. Writing and Presenting Research. 1-3 Unit.

For advanced graduate students completing major research projects. Revising and editing strategies for preparing papers, conference abstracts, and poster presentations. Adapting content and style to different audiences. Students present their research with participant feedback. Enrollment limited to 14. May be repeated once for credit. Prerequisite: EFSLANG 698B and EFSLANG 691 or consent of instructor.

Environment and Resources Courses

ENVRES 200. Sustaining Action: Research, Analysis and Writing for the Public. 3 Units.

Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. Prerequisite: admission by application, available from instructor, thayden@stanford.edu. (Meets Earth Systems WIM requirement).

Same as: EARTHSYS 200

ENVRES 215. Digital Storytelling for Researchers. 1-3 Unit.

A starting point in multimedia storytelling for graduate students who are actively involved in research. Students gain project-based experience in still photography, audio podcasting, online slideshows and web video production and editing, enabling them to record and report their own research stories from the lab and field. Enrollment limited, consent of the instructor required.

ENVRES 225. E-IPER Current Topics Seminar. 1 Unit.

For E-IPER Ph.D and Joint M.S. students only. Weekly presentations of E-IPER students' research and other program-related projects. Occasional guest speakers. Individual or team presentation, active participation, and regular attendance required for credit. May be taken for credit a maximum of two times.

ENVRES 230. Field Survey Data Collection & Analysis. 3 Units.

In this course we will examine a range of issues related to the collection and analysis of survey data. Topics will include initiating a survey, designing an instrument, conducting enumeration, converting data from questionnaires to digital files, data analysis, empirical modeling and presenting results. Technical components will also be highly focused on application and implementation, and while prior training in econometrics would be useful, it will not be a prerequisite. The course will be tailored so that some of the specific topics covered will be based on the needs and interests of the students.

ENVRES 238. Commercial Agriculture Seminar. 1 Unit.

Practical survey of the agriculture industry with a focus on the US. Speakers are agricultural practitioners, including executives from commercial farming, agriculture private equity funds, agricultural equipment and seed suppliers, food marketing and retail companies, and novel early-stage ag tech companies. By the end, students will have a high-level grasp of real-world agricultural operations from planting, to harvest, to retail sales in the grocery store and obtain a greater understanding/appreciation of the food we eat every day. May be repeated for credit.

ENVRES 240. Environmental Decision-Making and Risk Perception. 1-3 Unit.

Mobilizing successful conservation efforts to mitigate climate change and preserve both local and global ecosystems requires a new way of thinking. This course will investigate the barriers to pro-environmental behavior and the heuristics and biases that cloud our ability to respond effectively to environmental problems, using insights from behavioral economics, neuroeconomics, and environmental risk perception. Emphasis on interdisciplinary applications of recent research, and implications for environmental policymaking and persuasive messaging.

ENVRES 250. Environmental Governance. 3 Units.

This interdisciplinary course presents an overview of environmental governance through an examination of how and why societies manage the relationships between human beings and the natural world. By comparing regulatory, community-based, and incentive-based environmental management systems, we address why certain environmental problems are managed as they are, and what approaches to environmental management are more (or less) successful. Designed for graduate students and upper-level undergraduates with some exposure to both the natural sciences (ecology/environmental chemistry), and the social sciences (anthropology, economics, political science, or sociology). A pre-course incoming survey is required.

Same as: CEE 277C

ENVRES 255. Innovative Transportation Systems. 3 Units.

Research seminar. Evaluation of the technologies and business model innovations that are transforming our transportation system. Study of existing examples like Tesla, Uber, Lyft, Rideshare, ZipCar, the Google self-driving car, Urban Engines. Identification of additional technologies, business model changes, and economic productivity opportunities to reduce fuel/energy use, increase asset utilization, reduce congestion and accidents. Part of a year long sequence that will lead to pilots jointly with companies to test new innovations. Students are encouraged but not required to enroll in the entire sequence which will include pilot design in the winter and pilot launch in the spring with potential option for summer internships at participating companies. Prerequisite: innovation, engineering, or modeling course.

ENVRES 256. Innovative Transportation Systems 2. 3 Units.

Pilot project workshop course. Building on fall quarter transportation research seminar, this course will develop a set of pilot projects jointly with transport companies (uber, Caltrain, Hovee, etc), cities (SF, Palo Alto, Mountain View), and large employers (Google, Apple, Facebook, Stanford). Pilots will incorporate technologies and business model innovations that are transforming our transportation system such as ride, car, and bike sharing, transit apps and intermodal optimization, electric vehicles, and demand management programs. Pilots will test economics, user behavior and choices, incentive systems, and new business models. Goal is to identify and scale opportunities to improve transport economic productivity, increase convenience and choice/flexibility, reduce fuel/energy use, increase asset utilization, reduce congestion and accidents, broaden access and simplify commuting. Part of a year long sequence but open to new students - no prerequisites. Spring quarter class will launch and assess pilots and create options for internships in companies to scale projects.

ENVRES 265. The Changing Electricity Resource Mix: The Rise of Distributed Solar, Storage, and Demand Response. 3 Units.

Research seminar. Evaluation of the technologies, regulatory frameworks, and business models that are starting to transform power systems. Examination of the technical characteristics and economics of distributed solar generation, storage, demand response, and grid management. Investigation of how policy and regulation can inhibit or accelerate deployment of new generation and demand-side resources. Participants will identify >10 utilities who could target meeting 35% of their energy needs through a combination of distributed solar, storage, and demand response. First part of a year-long sequence that will create real-world test beds for innovations that can address major resource challenges - in this case, the changing power system. The entire sequence will include identifying utility pilot sites in the fall, securing utility participation and then engaging in pilot design in the winter, launching pilots in the field in the spring, and the option for summer internships at participating utilities. Enrollment by application only and limited to 12 Masters and PhD students. Recommended Prerequisites: ENERGY 102, CEE 173, CEE 207, EARTHSYS 103 (or other energy technology background).

ENVRES 266. The Changing Electricity Resource Mix: The Rise of Distributed Solar, Storage, and Demand Response. 3 Units.

Research seminar. Based on evaluation of the technologies, regulatory frameworks, and business models that are starting to transform power systems undertaken in ENVRES 265, participants in this course will design pilot projects to be implemented in cooperation with utility partners and with the support of technology providers, policy makers and NGOs. Pilot projects may include applications of distributed solar generation, storage, demand response, and grid operations. This course is the second part of a year-long sequence that will create real-world test beds for innovations that can address major resource challenges - in this case, the changing power system. The pilots designed in this course will be launched in the field in the spring, with the option for summer internships at participating utilities. Results will be documented and published so that learning can be shared and innovative solutions can be replicated by others. Enrollment by application only and limited to 16 Masters and PhD students. Required prerequisite: ENVRES 265 (or by special permission from instructor).

ENVRES 267. The Changing Electricity Resource Mix: The Rise of Distributed Solar, Storage, and Demand Response. 3 Units.

Research seminar -- continuation of ENVRES 265 and 266. As part of Stanford's Energy Transformation Collaborative, participants implement pilot projects in cooperation with utility partners and with the support of technology providers, policy makers and NGOs. Projects include applications of distributed solar generation, storage, demand response, energy efficiency and grid operations. This course is the third part of a year-long sequence designed to create real-world test beds for innovations that can address major resource challenges - in this case, the changing power system. The pilots will be launched in the field in the spring, with the potential for summer internships at participating utilities. Results will be documented and published so that learning can be shared and innovative solutions can be replicated by others. Enrollment available to ENVRES 266 participants only (or by special permission from instructor).

ENVRES 270. Graduate Practicum in Environment and Resources. 1-5 Unit.

Opportunity for E-IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets US CIS requirements for off-campus employment with endorsement from designated school official.

ENVRES 275. The Practice of Mining and Its Social and Environmental Context. 2 Units.

Seminar focused on one of the world's oldest industries: mining. Mining is a major industrial process that underpins the provision of many of the resources that we use in our daily lives; it is also a process that has defined landscapes and communities in sometimes positive and often negative ways. Mining is often neglected in balanced discussions of resource use and sustainability, and this course aims to give students context to help ensure that its lessons are not forgotten.

ENVRES 277C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.

(Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from thayden@stanford.edu. Same as: COMM 177C, COMM 277C, EARTHSYS 177C, EARTHSYS 277C

ENVRES 280. Introduction to Environmental Science. 2 Units.

For E-IPER Joint M.S. students only. This course functions as a gateway for E-IPER Joint M.S. students to learn about the variety of environmental science conducted by the program's affiliated faculty. Topics include oceans, green chemistry, water policy, energy, and others. Students engage in problem solving related to the application of science to business, law, and the conservation of natural resources.

ENVRES 290. Capstone Project Seminar in Environment and Resources. 1-3 Unit.

Required for E-IPER Joint M.S. students. Propose, conduct and publicly present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required. 3 total units required; can all be taken during one quarter or divided over two sequential quarters.

ENVRES 300. Introduction to Resource, Energy and Environmental Economics. 3 Units.

Examination of environmental, energy and natural resource management problems through the lens of economics, with an emphasis on hands-on practical problem-solving. Topics include market failure, cost-benefit analysis, finance, risk & uncertainty, non-market valuation, regulation, green accounting, rent, renewable resources, exhaustible resources, including energy, and biodiversity. Prerequisite: proficiency in multivariate calculus. Knowledge of basic microeconomics helpful but not essential. Open only to PhD students.

ENVRES 315. Environmental Research Design Seminar. 1 Unit.

Required core course for first year E-IPER Ph.D. students; optional for Joint M.S. students; other graduate students with instructor's permission. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in ENVRES 320. Designing Environmental Research. Topics parallel the ENVRES 320 syllabus. Corequisite: ENVRES 320.

ENVRES 320. Designing Environmental Research. 3-4 Units.

Required core course restricted to first year E-IPER Ph.D. students. Research design options for causal inference in environmentally related research. Major philosophies of knowledge and how they relate to research objectives and design choices. Identification of critical elements within a broad range of research designs. Evaluation of the types of research questions for which different designs are suited, emphasizing fit between objectives, design, methods, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.

ENVRES 330. Research Approaches for Environmental Problem Solving. 3 Units.

Required core course for first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, a preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: ENVRES 398 with a faculty member chosen to explore a possible dissertation topic.

ENVRES 340. E-IPER PhD Writing Seminar. 1-2 Unit.

Restricted to second year E-IPER PhD students only. Actively pursue one or more writing goals relevant to this stage in their graduate studies in a structured setting. Set specific writing goals, create and follow a plan for reaching these goals, and receive substantive feedback on their written products from their peers. Examples of writing products include, but are not limited to, the student's dissertation proposal, E-IPER Fields of Inquiry essay, a literature review, or a grant or fellowship application. By the end of the course, students are expected to have completed or have made substantial progress toward their writing goal.

ENVRES 380. Collaborating with the Future: Launching Large Scale Sustainable Transformations. 3-4 Units.

This project-based d.school class combines Design Thinking Processes, Behavioral Sciences, and elements of Diffusion Theory. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create value on environmental, societal, and economic fronts. We encourage students to use this class as a launching pad for real initiatives. Primarily meant for Graduate Students. (Especially qualified/motivated Seniors will be considered). Admission to the class is through an application process which ends on March 3. Please find instructions and applications at <https://dschool.stanford.edu/groups/largetransformations/>.

ENVRES 398. Directed Individual Study in Environment and Resources. 1-9 Unit.

Under supervision of an E-IPER affiliated faculty member on a subject of mutual interest. Joint M.S. students must submit an Independent Study Agreement for approval.

ENVRES 399. Directed Research in Environment and Resources. 1-15 Unit.

For advanced graduate students. Under supervision of an E-IPER affiliated faculty member. Joint M.S. students must submit an Independent Study Agreement for approval.

ENVRES 410. Ph.D. Qualifying Tutorial. 1 Unit.

For Ph.D. students only. Under supervision of an E-IPER affiliated faculty member.

ENVRES 801. TGR Project. 0 Units.

.

ENVRES 802. TGR Dissertation. 0 Units.

.

Environmental Earth System Sciences Courses

EESS 10SC. In the Age of the Anthropocene: Coupled-Human Natural Systems of Southeast Alaska. 2 Units.

Southeast Alaska is often described as America's "last frontier," embodying a physical reality of the "pristine" that was once revered by the early romantics and founders of the modern conservation movement throughout Western North America. Although endowed with more designated Wilderness land than any other state, Alaska remains a working landscape: a mixed cash-subsistence economy where communities rely upon the harvest and export of natural resources. Here, ecosystem services remain tangible, and people living in communities that are unconnected by roads confront questions of sustainability on a daily basis. This field-based course introduces students to the global questions of land use change and sustainable resource management in the American West through the place-based exploration of Southeast Alaska. Focused on four key social-ecological challenges -- fisheries, forestry, tourism, and energy -- the coupled human-natural systems of Southeast Alaska provide a unique lens for students to interpret broader resource management and conservation issues. The curriculum balances field explorations and classroom lectures with community exploration in which students will engage with fishermen, hatchery workers, forest managers, loggers, mill owners, tour operators, tourists, city officials, citizens, and Native residents. Students will catch their own salmon, walk through old-growth and logged forests, kayak next to glacial moraines, and witness the impacts of human activities, both local and global, on the social-ecological systems around them. In the context of rapidly changing ecosystems, students will confront the historical, ecological, and economic complexities of environmental stewardship in this region. By embedding their experiences within frameworks of land change science, land-ocean interactions, ecosystem ecology, and natural resource management and economics, students will leave this course ready to apply what they have learned to the global challenges of sustainability and conservation that pervade systems far beyond Alaska. This course is co-sponsored by the School of Earth Sciences and takes place in Sitka, Alaska. Students arrange for their arrival in Seattle, WA on August 30; all subsequent travel is made possible by Sophomore College and the School of Earth Sciences.

EESS 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.

The Rocky Mountain area, ecologically and geologically diverse, is being strongly impacted by changing land-use patterns, global and regional environmental change, and societal demands for energy and natural resources. This three-week field program emphasizes coupled environmental and geological problems in the Rocky Mountains and will cover a broad range of topics including the geologic origin of the American West from three billion years ago to the recent; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West that are related to changing land-use patterns and increased demand for its abundant natural resources. These broad topics are integrated into a coherent field study by examining earth/environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and mountainous region of Teton National Park, and the economic and environmental problems associated with gold mining and extraction of oil and gas in areas adjoining these national parks. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming, and horseback riding in the Dubois area of Wyoming. Students must arrive in Salt Lake City on Monday, Sept. 1. (Hotel lodging will be provided for the night of Sept. 1, and thereafter students will travel as a Sophomore College group.) We will return to campus on Sunday, Sept. 21. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

Same as: EARTHSYS 12SC, GES 12SC

EESS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March.

Same as: EARTHSYS 38N, GES 38N

EESS 42. The Global Warming Paradox II. 1 Unit.

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions of topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. Prerequisite: EESS 41N or EARTHSYS 41N or consent of instructor.

Same as: EARTHSYS 42

EESS 43. The Global Warming Paradox III. 1 Unit.

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions explore topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. May be repeat for credit.

EESS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough. 3 Units.

Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.

Same as: EARTHSYS 46N

EESS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

Same as: CEE 50N, EARTHSYS 49N

EESS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays. 3 Units.

Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay.

Same as: EARTHSYS 56Q

EESS 57Q. Climate Change from the Past to the Future. 3 Units.

Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

Same as: EARTHSYS 57Q

EESS 60. Food, Water and War: Life on the Mekong. 1 Unit.

Preparatory course for Bing Overseas Studies summer course in Cambodia. Prerequisite. Requires instructor consent.

EESS 61Q. Food and security. 3 Units.

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

Same as: EARTHSYS 61Q, INTNLREL 61Q

EESS 101. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

Same as: EARTHSYS 100, GES 101

EESS 105. Food and Community: New Visions for a Sustainable Future. 3 Units.

Through this course students will learn about the community and outreach component of the urban gardening movement. Over the quarter students will learn about urban farming, about projects that work to increase access of the most underserved to fresh and local food, and about the challenges surrounding these efforts. The theme of the course will be stories- stories of food and community, of innovation, and of service. Students will learn through engaging in conversation with different leaders in the local food movement. Additionally, through hands-on learning and participation, students will become familiar with different types of community food projects in the Bay Area, including urban farms, free food giveaways, food banks, and gleaning projects. Service Learning Course (certified by Haas Center). Limited enrollment. May be repeated for credit.

Same as: EARTHSYS 105

EESS 106. World Food Economy. 5 Units.

The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.

Same as: EARTHSYS 106, ECON 106

EESS 107. Control of Nature. 3 Units.

Think controlling the earth's climate is science fiction? It is when you watch *Snowpiercer* or *Dune*, but scientists are already devising geoengineering schemes to slow climate change. Will we ever resurrect the woolly mammoth or even a T. Rex (think Jurassic Park)? Based on current research, that day will come in your lifetime. Who gets to decide what species to save? And more generally, what scientific and ethical principles should guide our decisions to control nature? In this course, we will examine the science behind ways that people alter and engineer the earth, critically examining the positive and negative consequences. We'll explore these issues first through popular movies and books and then, more substantively, in scientific research.

Same as: EARTHSYS 107

EESS 111. Biology and Global Change. 4 Units.

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.

Same as: BIO 117, EARTHSYS 111

EESS 112. Human Society and Environmental Change. 4 Units.

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1.

Same as: EARTHSYS 112, HISTORY 103D

EESS 117. Earth Sciences of the Hawaiian Islands. 4 Units.

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTHSCI 117, EARTHSYS 117

EESS 118. Understanding Natural Hazards, Quantifying Risk, Increasing Resilience in Highly Urbanized Regions. 3 Units.

Integrating the science of natural hazards, methods for quantitatively estimating the risks that these hazards pose to populations and property, engineering solutions that might best ameliorate these risks and increase resilience to future events, and policy and economic decision-making studies that may increase long-term resilience to future events. Panel discussions by outside experts exploring the science, engineering, policy, and economics that underly the hazards, risks, and strategies for increasing resilience. Group assignments to evaluate the way in which natural hazards, and human population and developing interact in megacities to produce risk, and what strategies might be adopted in each area to reduce risks posed by the specific hazards faced by these urban areas.

Same as: EESS 218, GEOPHYS 118, GEOPHYS 218, GES 118, GES 218

EESS 122. GIS for good: Applications of GIS for International Development and Humanitarian Assistance. 3-4 Units.

This service-learning course exposes students to geographic information systems (GIS) as a tool for exploring alternative solutions to complex environmental and humanitarian issues in the international arena. The project-based, interdisciplinary structure of this class gives primary emphasis to the use of GIS for field data collection, mapping, analysis and visualization that allows for multi-criteria assessment of community development. Those with no prior GIS experience will be required to take an introductory GIS workshop hosted by the Geospatial Center in Branner Library during the first two weeks of class.

Same as: EARTHSYS 127, EESS 222

EESS 141. Remote Sensing of the Oceans. 3-4 Units.

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, EARTHSYS 241, EESS 241, GEOPHYS 141

EESS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EARTHSYS 246A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A

EESS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EARTHSYS 246B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B

EESS 148. Introduction to Physical Oceanography. 4 Units.

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 164, CEE 262D, EARTHSYS 164

EESS 151. Biological Oceanography. 3-4 Units.

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 151, EARTHSYS 251, EESS 251

EESS 152. Marine Chemistry. 3-4 Units.

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, EARTHSYS 252, EESS 252

EESS 155. Science of Soils. 3-4 Units.

Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology.

Same as: EARTHSYS 155

EESS 156. Soil and Water Chemistry. 1-4 Unit.

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 156, EARTHSYS 256, EESS 256

EESS 158. Geomicrobiology. 3 Units.

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, EARTHSYS 258, EESS 258

EESS 162. Remote Sensing of Land. 4 Units.

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, EARTHSYS 242, EESS 262

EESS 164. Fundamentals of Geographic Information Science (GIS). 3-4 Units.

Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments.

Same as: EARTHSYS 144

EESS 173. Aquaculture and the Environment: Science, History, and Policy. 3 Units.

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.

Same as: EARTHSYS 173, EARTHSYS 273, EESS 273

EESS 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings.

Same as: CEE 179S, CEE 279S, EARTHSYS 179S

EESS 181. Urban Agriculture in the Developing World. 3-4 Units.

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, EARTHSYS 281, EESS 281, URBANST 181

EESS 183. Food Matters: Agriculture in Film. 1 Unit.

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

Same as: EARTHSYS 183, EARTHSYS 283, EESS 283

EESS 184. Climate and Agriculture. 3-4 Units.

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.

Same as: EARTHSYS 184, EARTHSYS 284, EESS 284

EESS 208. Topics in Geobiology. 1 Unit.

Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

Same as: GES 208

EESS 211. Fundamentals of Modeling. 3-5 Units.

Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language.

Prerequisite: Basic knowledge of statistics.

Same as: EARTHSYS 211

EESS 212. Measurements in Earth Systems. 3-4 Units.

Restricted to EESS first-year, graduate students. Techniques to track biological, chemical, and physical processes operating across the San Francisco Creek watershed, encompassing upland, aquatic, estuarine, and marine environments. Topics include gas and water flux measurement, assessment of microbiological communities, determination of biological productivity, isotopic analysis, soil and water chemistry determination, and identification of rock strata and weathering processes.

EESS 214. Introduction to geostatistics and modeling of spatial uncertainty. 3-4 Units.

Introduction of fundamental geostatistical tools for modeling spatial variability and uncertainty, and mapping of environmental attributes. Additional topics include sampling design and incorporation of different types of information (continuous, categorical) in prediction. Assignments consist of small problems to familiarize students with theoretical concepts, and applications dealing with the analysis and interpretation of various data sets (soil, water pollution, atmospheric constituents, remote sensing) primarily using Matlab. No prior programming experience is required. Open to graduates. Open to undergraduates with consent from the instructor. 3-credit option includes midterm/final or student-developed project. 4-credit option requires both. Prerequisite: College-level introductory statistics.

EESS 215. Earth System Dynamics. 2 Units.

This is a graduate level course that examines the dynamics of the Earth System from an integrated perspective. Lectures introduce the physical, biogeochemical, ecological, and human dimensions of the Earth System, with emphasis on feedbacks, thresholds and tipping points. Human interactions with climate and land systems are emphasized in order to enable in-depth exploration of Earth System dynamics. Lab projects focus on a region of the globe for which rich coordinated data sources exist and complex Earth System dynamics dominate the environment.

EESS 216. Terrestrial Biogeochemistry. 3 Units.

Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

Same as: BIO 216

EESS 217. Climate of the Cenozoic. 3 Units.

For upper-division undergraduate and graduate students. The paleoclimate of the Cenozoic and how climate changes in the past link to the carbon cycle. Topics include long- and short-term records of climate on continents and oceans, evidence for and causes of hyperthermal events, how the Earth's climate has responded in increased carbon dioxide in the atmosphere. Guest speakers, student presentations.

EESS 218. Understanding Natural Hazards, Quantifying Risk, Increasing Resilience in Highly Urbanized Regions. 3 Units.

Integrating the science of natural hazards, methods for quantitatively estimating the risks that these hazards pose to populations and property, engineering solutions that might best ameliorate these risks and increase resilience to future events, and policy and economic decision-making studies that may increase long-term resilience to future events. Panel discussions by outside experts exploring the science, engineering, policy, and economics that underly the hazards, risks, and strategies for increasing resilience. Group assignments to evaluate the way in which natural hazards, and human population and developing interact in megacities to produce risk, and what strategies might be adopted in each area to reduce risks posted by the specific hazards faced by these urban areas.

Same as: EESS 118, GEOPHYS 118, GEOPHYS 218, GES 118, GES 218

EESS 219. Climate Variability during the Holocene: Understanding what is Natural Climate Change. 3 Units.

Many elements of the debate about attribution of modern climate change to man-made influences hinge on understanding the past history of climate as well as forcing functions such as solar output, volcanism, and "natural" trace gas variability. Interest in Holocene reconstructions of past climate and forcing functions has surged in the last 20 years providing a robust literature set for discussion and analysis. The goal of this class is to provide graduate students with a view of the archives available for Holocene paleoenvironmental analysis, the tracers that are used, and the results thus far. We will also explore the world of data-model comparisons and examine the role that paleorecords play in the IPCC reports. The class will consist of some lectures as well as many class discussions based on assigned readings.

EESS 220. Physical Hydrogeology. 4 Units.

(Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

Same as: CEE 260A

EESS 221. Contaminant Hydrogeology and Reactive Transport. 4 Units.

For earth scientists and engineers. Environmental, geologic, and water resource problems involving migration of contaminated groundwater through porous media and associated biogeochemical and fluid-rock reactions. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and reactive transport modeling using geochemical transport software. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology EESS 220 / CEE 260A (Gorelick) or equivalent. Recommended: course work in environmental chemistry or geochemistry (e.g., one or more of the following: EESS 155, EESS 156/256 GES 90, GES 170/279, GES 171, CEE 177 or CEE 270).

Same as: CEE 260C, GES 225

EESS 222. GIS for good: Applications of GIS for International Development and Humanitarian Assistance. 3-4 Units.

This service-learning course exposes students to geographic information systems (GIS) as a tool for exploring alternative solutions to complex environmental and humanitarian issues in the international arena. The project-based, interdisciplinary structure of this class gives primary emphasis to the use of GIS for field data collection, mapping, analysis and visualization that allows for multi-criteria assessment of community development. Those with no prior GIS experience will be required to take an introductory GIS workshop hosted by the Geospatial Center in Branner Library during the first two weeks of class.

Same as: EARTHSYS 127, EESS 122

EESS 227. Modern Turbidite Systems as Analogues for Deep-water Petroleum Plays. 3 Units.

This seminar is designed for earth science upperclassmen and graduate students. Marine geophysical and geological techniques will be used to illustrate and understand source-to-sink characteristics of modern turbidite systems. The course will examine a wide variety of small-scale base-of-apron (km) to large-scale (100's of km) sand-rich to mud-rich systems. New research on mass transport deposits, hybrid beds, and turbidite paleoseismology will be presented. Variations in turbidite system architecture, that are dependent upon tectonic setting, sediment supply, climate, sea level change, and contour currents will be discussed. The utility and pitfalls of model-driven approaches are also explored.

Same as: GES 227

EESS 240. Advanced Oceanography. 3 Units.

For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute.

EESS 241. Remote Sensing of the Oceans. 3-4 Units.

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, EARTHSYS 241, EESS 141, GEOPHYS 141

EESS 242. Antarctic Marine Geology. 3 Units.

For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

Same as: EARTHSYS 272

EESS 244. Marine Ecosystem Modeling. 3 Units.

This course will provide the practical background necessary to construct and implement a 2-dimensional (space and time) numerical model of a simple marine ecosystem. Instruction on computer programming, model design and parameterization, and model evaluation will be provided. Throughout the 10-week course, each student will develop and refine their own multi-component marine ecosystem model. Instructor consent required.

EESS 245. Advanced Biological Oceanography. 3-4 Units.

For upper-division undergraduates and graduate students. Themes vary annually but include topics such as marine bio-optics, marine ecological modeling, and phytoplankton primary production. May be repeated for credit. Enrollment by instructor consent only.

EESS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EARTHSYS 246A, EESS 146A, GEOPHYS 146A, GEOPHYS 246A

EESS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EARTHSYS 246B, EESS 146B, GEOPHYS 146B, GEOPHYS 246B

EESS 249. Marine Stable Isotopes. 3 Units.

This course will provide an introduction to stable isotopes biogeochemistry with emphasis on applications in marine science. We will cover fundamental concepts of nuclear structure and origin of elements and isotopes, and stable isotopic fractionation. We will discuss mass spectrometry techniques, mass independent fractionation, clumped isotopes, mass balance and box models. Applications of these concepts to studies of ocean circulation, marine carbon and nitrogen cycles, primary productivity, and particle scavenging will also be discussed.

EESS 250. Elkhorn Slough Microbiology. 3 Units.

(Formerly GES 270.) The microbial ecology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifestyles associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

EESS 251. Biological Oceanography. 3-4 Units.

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent. Same as: EARTHSYS 151, EARTHSYS 251, EESS 151

EESS 252. Marine Chemistry. 3-4 Units.

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, EARTHSYS 252, EESS 152

EESS 253S. Hopkins Microbiology Course. 3-12 Units.

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

Same as: BIO 274S, BIOHOPK 274, CEE 274S

EESS 255. Microbial Physiology. 3 Units.

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry.

EESS 256. Soil and Water Chemistry. 1-4 Unit.

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 156, EARTHSYS 256, EESS 156

EESS 258. Geomicrobiology. 3 Units.

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, EARTHSYS 258, EESS 158

EESS 259. Environmental Microbial Genomics. 1-3 Unit.

The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extraction and cloning of DNA from natural microbial assemblages. Topics include microbial energy generation and nutrient cycling, genome structure, gene function, physiology, phylogenetic and functional diversity, evolution, and population dynamics of uncultured communities.

EESS 260. Advanced Statistical Methods for Earth System Analysis. 3 Units.

Introduction for graduate students to important issues in data analysis relevant to earth system studies. Emphasis on methodology, concepts and implementation (in R), rather than formal proofs. Likely topics include the bootstrap, non-parametric methods, regression in the presence of spatial and temporal correlation, extreme value analysis, time-series analysis, high-dimensional regressions and change-point models. Topics subject to change each year. Prerequisites: STATS 110 or equivalent.

Same as: STATS 360

EESS 261. Molecular Microbial Biosignatures. 1-3 Units.

Critical reading and discussion of literature on molecular biosignatures as indicators of microbial life and metabolisms in modern and ancient environments. Focus will be primarily on recalcitrant lipids that form chemical fossils and topics covered will include biosynthetic pathways of these lipids, their phylogenetic origins, their physiological roles in modern organisms, and their occurrence throughout the geological record. Recommended: microbiology and organic chemistry.

EESS 262. Remote Sensing of Land. 4 Units.

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, EARTHSYS 242, EESS 162

EESS 263. Topics in Advanced Geostatistics. 3-4 Units.

Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran. Same as: ENERGY 242

EESS 270. Analyzing land use in a globalized world. 3 Units.

This is a graduate level course that examines the dynamics of land use in relation to the multiple dimensions of globalization. The objective is to understand and analyze how the expansion of global trade, the emergence of new global actors, and public and private regulations affect land use changes. Beyond getting a better understanding of the dynamics of land use change, the course will enable students to better understand how to effectively influence land use change, from different vantage points: government, NGO, information broker, corporate actor. The main emphasis is on tropical regions. Lectures introduce various topics related to theories, practical cases, and evaluation tools to better understand and analyze contemporary land use dynamics. Data analyses will be conducted in the lab section, based on case studies.

EESS 273. Aquaculture and the Environment: Science, History, and Policy. 3 Units.

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.

Same as: EARTHSYS 173, EARTHSYS 273, EESS 173

EESS 280B. Principles and Practices of Sustainable Agriculture. 3-4 Units.

Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

Same as: EARTHSYS 180B

EESS 281. Urban Agriculture in the Developing World. 3-4 Units.

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, EARTHSYS 281, EESS 181, URBANST 181

EESS 282. Ecological Farm Management. 1 Unit.

A project-based course emphasizing ways of doing things in sustainable agricultural systems based at the new Stanford Educational Farm. Students will work individually and in small groups on farm projects of their choice facilitated and guided by the Educational Farm Director. Potential projects include: orchards, compost systems, pastured poultry, beekeeping, medicinal herbs, mushroom cultivation, native plants, etc.

Same as: EARTHSYS 182

EESS 283. Food Matters: Agriculture in Film. 1 Unit.

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

Same as: EARTHSYS 183, EARTHSYS 283, EESS 183

EESS 284. Climate and Agriculture. 3-4 Units.

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.

Same as: EARTHSYS 184, EARTHSYS 284, EESS 184

EESS 292. Directed Individual Study in Environmental Earth System Science. 1-10 Unit.

Under supervision of an Environmental Earth System Science faculty member on a subject of mutual interest.

EESS 300. Climate studies of terrestrial environments. 3 Units.

This course will consist of a weekly seminar covering topics of interest in Cenozoic climate. The course examines the interactions between the biosphere, atmosphere and geosphere and how these interactions influence climate. The course will cover classic and seminal papers on the controls of the oxygen, hydrogen, and carbon isotopes of the hydrosphere, atmosphere and biosphere and how they are expressed in paleoclimate proxies. Seminar will consist of reading and discussion of these papers. Students will be responsible for presenting papers. Grades will be determined by class participation. (Chamberlain).

EESS 301. Topics in Environmental Earth System Science. 1 Unit.

Current topics, issues, and research related to interactions that link the oceans, atmosphere, land surfaces and freshwater systems. May be repeated for credit.

EESS 305. Climate Change: An Earth Systems Perspective. 2 Units.

A graduate-level, seminar-style class on climate change structured around the IPCC's AR5. Significant reading load and a weekly talks by a rotating roster of contributing and lead authors from the IPCC. The focus will be on the physical science basis, adaptation and impacts (working groups 1 and 2), with some material drawn from mitigation (working group 3).

EESS 306. From Freshwater to Oceans to Land Systems: An Earth System Perspective to Global Challenges. 2 Units.

Within this class we will have cover Earth System processes ranging from nutrient cycles to ocean circulation. We will also address global environmental challenges of the twenty-first century that include maintaining freshwater resources, land degradation, health of our oceans, and the balance between food production and environmental degradation. Weekly readings and problem sets on specific topics will be followed by presentations of EESS faculty and an in-depth class discussion. EESS first year students have priority enrollment.

EESS 307. Research Proposal Development and Delivery. 2 Units.

In this class students will learn how to write rigorous, high yield, multidisciplinary proposals targeting major funding agencies. The skills gained in this class are essential to any professional career, particularly in research science. Students will write a National Science Foundation style proposal involving testable hypotheses, pilot data or calculations, and broader impact. Restricted to EESS first-year, graduate students.

EESS 310. Climate and Energy Seminar. 3 Units.

This course examines the links between climate change policy and other regulation of the energy sector in the U.S. context. In the electricity sector, these policies are likely to be closely interconnected, yet they are often considered in isolation. We will evaluate the impacts of energy, air pollution, and water pollution regulations on US greenhouse gas emissions from the energy sector. We will also examine how state regulatory activities aimed at reducing greenhouse gas emissions in the electricity sector are likely to have co-benefits for air and water pollution.

EESS 311. Seminar in Advanced Applications of Remote Sensing. 1 Unit.

In this seminar course, we will invite the pioneering scientists from academia and leading experts from the industry to share their applications of remote sensing technology, with a focus on terrestrial use (e.g. agriculture and forestry). In each independent seminar, speakers will present the basic technology and focus on applications with case studies. Students will gain insight into a variety of remote sensing applications in both academia and industry. No prior remote sensing knowledge is required, and each seminar is independent. Attendance is required to receive credit.

EESS 318. Global Land Use Change to 2050. 2-3 Units.

An exploration of the fundamental drivers behind long term shifts in the demand for, and supply of, land for agriculture, forestry and environmental uses over the next four decades. Topics include trends in food and bioenergy demand, crop productivity on existing and potential croplands, water and climate constraints, non-extractive uses such as carbon sequestration, and the role of global trade and public policies. Students will lead discussions of weekly readings and perform simple numerical experiments to explore the role of individual drivers of long run global land use.

EESS 322A. Seminar in Hydrogeology. 1 Unit.

Current topics. May be repeated for credit. Autumn Quarter has open enrollment, For Winter Quarter, consent of instructor is required.

EESS 322B. Seminar in Hydrogeology. 1 Unit.

Current topics. May be repeated for credit. Prerequisite: consent of instructor.

EESS 323. Stanford at Sea. 16 Units.

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 182H, BIOHOPK 323H, EARTHSYS 323

EESS 330. Advanced Topics in Hydrogeology. 1-2 Unit.

Topics: questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.

EESS 342. Geostatistics. 1-2 Unit.

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

EESS 342B. Geostatistics. 1-2 Unit.

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

EESS 342C. Geostatistics. 1-2 Unit.

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

EESS 363F. Oceanic Fluid Dynamics. 3 Units.

Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

Same as: CEE 363F

EESS 364F. Advanced Topics in Geophysical Fluid Dynamics. 2-3 Units.

A seminar-style class covering the classic papers on the theory of the large-scale ocean circulation. Topics include: wind-driven gyres, mesoscale eddies and geostrophic turbulence, eddy-driven recirculation gyres, homogenization of potential vorticity, the ventilated thermocline, subduction, and the abyssal circulation. Prerequisite: EESS 363F or CEE 363F. Recommended: EESS 246B.

Same as: CEE 364F

EESS 385. Practical Experience in the Geosciences. 1 Unit.

On-the-job training, that may include summer internship, in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. May be repeated for credit.

EESS 398. Current Topics in Ecosystem Modeling. 1-2 Unit.

.

EESS 400. Graduate Research. 1-15 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

EESS 801. TGR Project. 0 Units.

.

EESS 802. TGR Dissertation. 0 Units.

.

Ethics in Society Courses

ETHICSOC 10SC. The Meaning of Life: Moral and Spiritual Inquiry through Literature. 2 Units.

Short novels and plays will provide the basis for reflection on ethical values and the purpose of life. Some of the works to be studied are F. Scott Fitzgerald's *The Great Gatsby*, George Bernard Shaw's *Major Barbara*, Hermann Hesse's *Siddhartha*, Jane Smiley's *Good Will*, Robert Bolt's *A Man for All Seasons*, John Steinbeck's *Of Mice and Men*, and Nadine Gordimer's *None to Accompany Me*. We will read for plot, setting, character, and theme using a two-text method; looking at the narrative of the literary work and students' own lives, rather than either deconstructing the literature or relating it to the author's biography and psychology. The questions we will ask have many answers. Why are we here? How do we find meaningful work? What can death teach us about life? What is the meaning of success? What is the nature of true love? How can one find balance between work and personal life? How free are we to seek our own destiny? What obligations do we have to others? We will draw from literature set in the United States and elsewhere; secular and religious world views from a variety of traditions will be considered. The authors chosen are able to hold people up as jewels to the light, turning them around to show all of their facets, both blemished and pure, while at the same time pointing to any internal glow beneath the surface. Classes will be taught in a Socratic, discussion-based style. Study questions will accompany each reading and provide a foundation for class discussion. Grading will be based 50 percent on class participation, 25 percent on one-page reflection papers on reading assignments, and 25 percent on a four-page final paper due on September 15. Field trips will include an overnight camping experience.

ETHICSOC 15R. U.S. Human Rights NGOs and International Human Rights. 1 Unit.

(Same as LAW 782) Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario. Same as: IPS 271A, MED 225, POLISCI 203

ETHICSOC 20. Introduction to Moral Philosophy. 5 Units.

A survey of moral philosophy in the Western tradition. What makes right actions right and wrong actions wrong? What is it to have a virtuous rather than a vicious character? What is the basis of these distinctions? Why should we care about morality at all? Our aim is to understand how some of the most influential philosophers (including Aristotle, Kant, and Mill) have addressed these questions, and by so doing, to better formulate our own views. No prior familiarity with philosophy required. Same as: PHIL 2

ETHICSOC 102R. Ethics of Jihad. 5 Units.

Why choose jihad? An introduction to Islamic ethics. Focus on ways in which people have chosen, rejected, or redefined jihad. Evaluation of the norms in moments of ethical and political choice. Topics include jihad in the age of 1001 Nights, jihad in the Arab Renaissance, jihad in Bin Laden's sermons, and the hashtag #MyJihad. All readings and discussion in English. Same as: COMPLIT 171

ETHICSOC 131S. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.

This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx.

Same as: POLISCI 131L

ETHICSOC 133. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]

Same as: CSRE 178, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

ETHICSOC 136R. Introduction to Global Justice. 4 Units.

Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

Same as: INTNLREL 136R, PHIL 76, POLISCI 136R, POLISCI 336

ETHICSOC 170. Ethical Theory. 4 Units.

A more challenging version of Phil 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more.

Same as: PHIL 170, PHIL 270

ETHICSOC 171. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

ETHICSOC 174A. Moral Limits of the Market. 4 Units.

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: PHIL 174A, PHIL 274A, POLISCI 135P

ETHICSOC 174L. Betrayal and Loyalty, Treason and Trust. 2 Units.

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 274L, PHIL 174L, PHIL 274L

ETHICSOC 178M. Introduction to Environmental Ethics. 4-5 Units.

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.

Same as: ETHICSOC 278M, PHIL 178M, PHIL 278M, POLISCI 134L

ETHICSOC 180M. Collective Action Problems: Ethics, Politics, & Culture. 3-4 Units.

When acting on one's own, it is often easy to know what the morally right action is. But many moral problems arise from the fact that many individuals act together leading to dilemmas, in which what is individually rational is collectively irrational. For example, the collective result of our consumption decisions is to warm the planet. But individual decisions seem to have no effect on climate change. Such collective action situations give rise to moral questions: Are individuals required to take their contributions to wider systemic effects into account? Does it make a difference whether or not others are doing their share, for example with regard to fighting global poverty? In many cases, the best solution for collective action problems are institutions. But when these are deficient or non-existing, what should individuals do? Do they have a duty to assist in building institutions, and what would this duty imply in practical terms? Interdisciplinary perspective, reading authors from philosophy, politics, economics and sociology such as Elinor Ostrom, Peter Singer or Liam Murphy, relating to current questions such as global poverty and climate change. No background assumed; no mathematical work required.

Same as: PHIL 73, POLISCI 131A, PUBLPOL 304A

ETHICSOC 182M. Business Ethics. 4 Units.

What do people mean when they say, "it's just business"? Do they mean that there are no moral norms in business or do they mean that there are special moral norms in business that differ from those of personal relationships and other spheres of social activity? In this class we will examine ethical questions that arise in the domain of business. We will ask, for example: What does the market reward and what should it reward? What are the moral responsibilities of a business owner in a competitive environment? Is it acceptable to employ "sweatshop labor"? How do the moral responsibilities of a business owner differ from that of a policy maker? What information does a seller (or buyer) have a moral duty to disclose? In real estate, is a strategic default morally wrong? How much government regulation of Wall Street is morally justified? We will use the writings of Plato, Aristotle, Cicero, J. S. Mill, Marx, Jevons and Menger, Hayek, Walzer, and Sandel, among others, to help us answer these questions. We will see, for example, what Aristotle thought about day trading.

Same as: PHIL 74

ETHICSOC 183M. Family, Friends, and Groups: The Ethics of Association. 4 Units.

The practice of associating with others is a fundamental part of human existence. We cultivate friendships, we grow up in families, we work for nonprofit associations or businesses, we join social movements and sport clubs, and we participate in political associations with our fellow citizens. This seminar explores the ethical dimensions of association. What grounds a right to freedom of association? Do we have, beyond a right, also a duty to participate in associational life? Do we have special obligations towards our friends, family members, or fellow-citizens that we do not have toward strangers? To what extent should the internal life of private associations, such as families or churches, be regulated by the state? Should the state support, through tax-exemptions and subsidies, the nonprofit associations of civil society? Can a state exclude non-citizens, such as immigrants, in the same way in which a private club excludes non-members? These questions have wide-ranging implications for contemporary political and legal debates.

Same as: POLISCI 132C

ETHICSOC 185M. Contemporary Moral Problems. 4-5 Units.

This course addresses a range of important moral issues from a philosophical perspective. The primary aims of the course are to encourage students to think about difficult moral questions in the careful and systematic way characteristic of philosophical inquiry, and to help students develop the analytical skills necessary to do this. Questions to be covered include: What, and how much, are we obligated to do in order to aid the global poor? What are our obligations in cases such as the causation of climate change, in which our individual contributions (e.g. our personal greenhouse gas emissions) appear to make no difference to the badness of the outcome? How can we owe obligations to future people who do not yet exist, and what are our obligations to them? Is abortion morally wrong or morally permissible? Could it even be morally required? Can we be obligated to procreate? Or, might procreation be seriously morally problematic? What is racism, and what makes it wrong? What does it mean to be tolerant, and why might we think that tolerance is a good thing? Is there a deep tension between a commitment to feminist ideals and a commitment to multiculturalism?.

Same as: PHIL 72, POLISCI 134P

ETHICSOC 190. Ethics in Society Honors Seminar. 3 Units.

For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

Same as: PHIL 178

ETHICSOC 199. Independent Studies in Ethics in Society. 1-15 Unit.

May be repeated for credit.

ETHICSOC 200A. Ethics in Society Honors Thesis. 1-5 Unit.

Limited to Ethics in Society honors students, who must enroll once in 200A and once in 200B. Students enrolling in 200A for less than 5 units must get approval from the faculty director.

ETHICSOC 200B. Ethics in Society Honors Thesis. 1-5 Unit.

Limited to Ethics in Society honors students, who must enroll once in 200A and once in 200B. Students enrolling in 200B for less than 5 units must get approval from the faculty director.

ETHICSOC 200C. Ethics in Society Honors Thesis. 1-5 Unit.

Limited to Ethics in Society honors students, with special approval from the program faculty director.

ETHICSOC 201R. The Ethics of Storytelling: The Autobiographical Monologue in Theory, in Practice, and in the World. 4 Units.

Recently a theatrical monologist gained notoriety when it was revealed that key aspects of one of his "autobiographical" stories had been fabricated. In this class another autobiographical monologist -- who has himself lied many times in his theater pieces, without ever getting caught -- will examine the ethics of telling our life stories onstage. Does theatrical "truth" trump factual truth? We will interrogate several autobiographical works, and then -- through autobiographical pieces created in class -- we will interrogate ourselves.

Same as: TAPS 158L, TAPS 358L

ETHICSOC 202. EMOTIONS: MORALITY AND LAW. 2 Units.

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Pauliquest;s contrast between law and love, or Nietzscheiquest;s idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 302, PHIL 177B, PHIL 277B

ETHICSOC 202R. Ethics and Politics. 5 Units.

A discussion of critical ethical issues faced by American and other national leaders. Case studies of 20th- and 21st-century decisions, including those involved with violence (e.g., the use of drone missiles or torture to extract information from enemies), whistle-blowing in government (e.g., decisions to expose what was known about 9/11 in advance), disobedience of those in authority (e.g., Daniel Ellsberg's release of the Pentagon Papers), policies on distributing scarce goods in society (e.g. rationing health care), policies involving justice and equal treatment (e.g. affirmative action or gay marriage), policies regarding life and death (e.g., abortion and euthanasia laws), and others. Students will debate some of the key issues, relying on ethical principles that will be discussed each week, and develop their own case studies.

Same as: POLISCI 223F

ETHICSOC 203R. Ethics in Real Life: How Philosophy Can Make Us Better People. 4 Units.

Socrates thought that philosophy was supposed to be practical, but most of the philosophy we do today is anything but. This course will convince you that philosophy actually is useful outside of the classroom--and can have a real impact on your everyday decisions and how to live your life. We'll grapple with tough practical questions such as: 'Is it selfish if I choose to have biological children instead of adopting kids who need homes?' 'Am I behaving badly if I don't wear a helmet when I ride my bike?' 'Should I major in a subject that will help me make a lot of money so I can then donate most of it to overseas aid instead of choosing a major that will make me happy?' Throughout the course, we will discuss philosophical questions about blame, impartiality, the force of different 'shoulds,' and whether there are such things as universal moral rules that apply to everyone.

Same as: PHIL 90E

ETHICSOC 205R. JUST AND UNJUST WARS. 2 Units.

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751.

Same as: ETHICSOC 305R, PHIL 205R, PHIL 305R

ETHICSOC 206R. Science, Power and Democracy. 5 Units.

This course investigates the relationship between science and democracy, and between knowledge and power, in the modern world. Topics covered include the epistemic properties of democratic institutions; the question of expertise in democratic politics; the role of values in science and public policy; the relationship between democracy and technology; and the relationship between democracy and the social sciences. We also analyze a number of concrete issues at the intersection of politics and science, including climate change and biomedical research. The course is interdisciplinary in method and content, with readings ranging across political theory, philosophy, history, and the social sciences.

Same as: POLISCI 231D

ETHICSOC 207R. Democratic Accountability and Transparency. 5 Units.

This course critically examines two related democratic values, accountability and transparency. We begin with historical perspectives on accountability, tracing its centrality to democratic politics to ancient Athens and early modern debates about the nature and function of political representation. But the bulk of the course deals with contemporary issues and problems: how should we conceive of accountability, both conceptually and normatively, and what is its relationship to other values such as transparency and publicity? What forms of accountability are appropriate for modern democratic politics? Is accountability only for elites, or should ordinary citizens be accountable to one another? In what contexts are transparency and publicity valuable, and when might we instead find their operation counter-productive and troubling? Readings draw from canonical texts as well as contemporary political theory, philosophy, and political science.

Same as: POLISCI 231T

ETHICSOC 232T. Theories of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. Readings in political philosophy, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S.

Same as: POLISCI 236, POLISCI 236S

ETHICSOC 233R. The Ethics of Religious Politics. 5 Units.

Is it possible for a deeply committed religious person to be a good citizen in a liberal, pluralistic democracy? Is it morally inappropriate for religious citizens to appeal to the teachings of their tradition when they support and vote for laws that coerce fellow citizens? Must the religiously committed be prepared to defend their arguments by appealing to 'secular reasons' ostensibly accessible to all 'reasonable' citizens? What is so special about religious claims of conscience and expression that they warrant special protection in the constitution of most liberal democracies? Is freedom of religion an illusion when it is left to ostensibly secular courts to decide what counts as religion? Exploration of the debates surrounding the public role of religion in a religiously pluralistic American democracy through the writings of scholars on all sides of the issue from the fields of law, political science, philosophy, and religious studies.

Same as: RELIGST 233

ETHICSOC 234R. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.

The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, and the law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: Ebola; Facebook's mood manipulation research and teen suicides from social media bullying; Google's European "right to be forgotten" and driverless cars; Space X (Elon Musk's voyages to Mars); ISIS' interaction with international NGOs; sexual assault on U.S. university campuses and in the U.S. military; the ethics of corporate social responsibility (through companies such as L'Oreal, Whole Foods and Walmart); corporate and financial sector scandals; and non-profit sector ethics challenges. Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities beyond speaking in class). Strong emphasis on critical thinking and testing ideas in real-world contexts. There will be a limited number of openings above the set enrollment limit of 40 students. If the enrollment limit is reached, students wishing to take the course should contact Dr. Susan Liautaud at susan11@stanford.edu. The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with Public Policy 103E), and Science, Technology and Society and satisfies the Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. *Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Same as: PUBLPOL 134, PUBLPOL 234

ETHICSOC 237. Civil Society and Democracy in Comparative Perspective. 5 Units.

A cross-national approach to the study of civil societies and their role in democracy. The concept of civil society--historical, normative, and empirical. Is civil society a universal or culturally relative concept? Does civil society provide a supportive platform for democracy or defend a protected realm of private action against the state? How are the norms of individual rights, the common good, and tolerance balanced in diverse civil societies? Results of theoretical exploration applied to student-conducted empirical research projects on civil societies in eight countries. Summary comparative discussions. Prerequisite: a course on civil society or political theory. Students will conduct original research in teams of two on the selected nations. Enrollment limited to 18. Enrollment preference given to students who have taken PoliSci 236S/EthicSoc 232T.

Same as: POLISCI 237S

ETHICSOC 237M. Politics and Evil. 5 Units.

In the aftermath of the Second World War, the political theorist Hannah Arendt wrote that the problem of evil will be the fundamental question of postwar intellectual life in Europe. This question remains fundamental today. The acts to which the word evil might apply: genocide, terrorism, torture, human trafficking, etc. The rhetoric of evil also remains central to American political discourse, both as a means of condemning such acts and of justifying preventive and punitive measures intended to combat them. In this advanced undergraduate seminar, we will examine the intersection of politics and evil by considering works by philosophers and political theorists, with occasional forays into film and media. The thinkers covered will include: Hannah Arendt, Immanuel Kant, Niccolò Machiavelli, Friedrich Nietzsche, and Michael Walzer.

Same as: POLISCI 237M

ETHICSOC 274L. Betrayal and Loyalty, Treason and Trust. 2 Units.

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 174L, PHIL 174L, PHIL 274L

ETHICSOC 275R. Roads Not Taken, 1880-1960. 4 Units.

This course is intended to illuminate ideas about justice, freedom, equality, democracy, peace, and social conflict, and to raise persisting questions about such topics as the role of violence in politics through looking at the ideas of America writers such as Edward Bellamy, W.E.B. DuBois, Eugene Debs, Jane Addams, Emma Goldman, John Dewey and Reinhold Niebuhr.

Same as: AMSTUD 275R, PHIL 275R, POLISCI 335L

ETHICSOC 276R. Religion and Politics: a Latin American Perspective. 4 Units.

Religion has traditionally been banished from politics in some places in Latin America. Religious symbols may not be displayed in public buildings, political discourse is expected to be free from all religious content, and religious ministers are not allowed to run for public office, among other measures. This course examines the political motivation for this kind of policies towards religion taking a comparative perspective with American and French variants of secularism.

Same as: ETHICSOC 376R, PHIL 176C, PHIL 276C

ETHICSOC 278M. Introduction to Environmental Ethics. 4-5 Units.

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.

Same as: ETHICSOC 178M, PHIL 178M, PHIL 278M, POLISCI 134L

ETHICSOC 280. Transitional Justice, Human Rights, and International Criminal Tribunals. 3-5 Units.

Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

Same as: INTNLREL 180A, IPS 280

ETHICSOC 301. Conflicts, Ethics, and the Academy. 1-3 Unit.

(Same as LAW 684) This experimental course looks at conflicts of interest and ethical issues as they arise within academic work. The participants will be drawn from schools and departments across the University in the hope that they will offer different examples of, and perspectives on, the issues we discuss. Topics will include the conflicts that arise from sponsored research, including choices of topics, shaping of conclusions, and nondisclosure agreements; issues of informed consent with respect to human subjects research, and the special issues raised by research conducted outside the United States; the ethics of the classroom and conflicts of interest implicating professor-student relationships. Representative readings will likely include Marcia Angell's work, *Drug Companies and Doctors: A Story of Corruption*, N.Y. Rev. Books, Jan. 15, 2009, and *Is Academic Medicine for Sale?* 342 N. Engl. J. Med. 1516 (2000) (and responses); William R. Freudenburg, *Seeding Science, Courting Conclusions: Reexamining the Intersection of Science, Corporate Cash, and the Law*, 20 *Sociological Forum* 3 (2005); Max Weber, *Science as a Vocation*; legal cases; the movie "Inside Job"; and conflict of interest policies adopted by various universities and professional organizations. The course will include an informal dinner. The goal of the course is to have students across disciplines think about the ethical issues they will confront in an academic or research career. Non-law students should enroll in ETHICSOC 301.

ETHICSOC 302. EMOTIONS: MORALITY AND LAW. 2 Units.

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 202, PHIL 177B, PHIL 277B

ETHICSOC 303R. Ethics, Economics and the Market. 4 Units.

Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.

Same as: PHIL 375, POLISCI 434A

ETHICSOC 304. Moral Minds: What Can Moral Psychology Tell Us About Ethics. 2 Units.

SAME AS LAW744. Recent psychological advances in our understanding of the cognitive and social origins of morality cast a new light on age-old questions about ethics, such as: How did our moral sense evolve in our species? How does it develop over our lifetime? How much does our culture, religion, or politics determine our moral values? What is the role of intuition and emotion in moral judgment? How "logical" is moral judgment? How do other people's moral choices affect us? Does character matter or is behavior entirely dictated by the situations we find ourselves in? If it is purely situational, are we morally responsible for anything? How far will we go to convince ourselves that we are good and moral? Barbara Fried and Benoit Monin will review empirical answers to these questions suggested by behavioral research, and lead discussions on their implications for ethics. Students enrolled in the course will be selected through an application process. The application can be found at <http://web.stanford.edu/~arnewman/MoralMinds.fb>, and is due at 11:59 p.m. on November 14, 2014.

Same as: PSYCH 264

ETHICSOC 305R. JUST AND UNJUST WARS. 2 Units.

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. ETHICSOC 330R. Social and Political Philosophy of Hegel and Marx. 4 Units.

Same as: PHIL 330, POLISCI 330

ETHICSOC 376R. Religion and Politics: a Latin American Perspective. 4 Units.

Religion has traditionally been banished from politics in some places in Latin America. Religious symbols may not be displayed in public buildings, political discourse is expected to be free from all religious content, and religious ministers are not allowed to run for public office, among other measures. This course examines the political motivation for this kind of policies towards religion taking a comparative perspective with American and French variants of secularism.

Same as: ETHICSOC 276R, PHIL 176C, PHIL 276C

Family and Community Medicine Courses

FAMMED 199. Undergraduate Directed Reading and Research in Family and Community Medicine. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

FAMMED 210. The Healer's Art. 1 Unit.

Explores the human dimensions of medicine, creating a firm foundation for meeting the challenging demands of medical training and practice. Based on curriculum developed by Dr. Rachel Naomi Remen at UCSF. (For details/evaluations see http://ishiprograms.org/programs-medical_educators.html). Medical students and faculty participate together in an innovative discovery model process that enables an in-depth sharing of experience, beliefs, aspirations and personal truths. Topics include deep listening, presence, acceptance, loss, grief, healing, relationship, encounters with awe and mystery, finding meaning, service, and self-care practices. No papers/exams. May be repeated for credit.

FAMMED 213. Medical Tai Chi. 1 Unit.

Tai chi is a recognized form of complimentary and alternative medicine. Class is intended to promote student health and well-being and to decrease stress, depression, and anxiety through tai chi practice. Course focuses on weekly practice and analysis of the literature/research regarding health benefits of tai chi.

FAMMED 219. Mind-Body Medicine. 1 Unit.

A small group (8-10) of medical students experientially exploring of the interconnections among human capacities such as thought, emotion, belief, attitudes, and physical health. Review and practice of specific skills (including mindfulness exercises, meditation, imagery, visualization, body awareness, autogenics, and biofeedback) to enhance self-awareness, self-expression, and stress management. Readings relevant to mind-body medicine made available. Anticipated benefits to class participants include discovering and mobilizing their capacity to participate in valuable and proven methods of self knowledge and stress reduction, while dealing with the frustrations and alienation that many students experience in medical school and beyond.

FAMMED 241. Assistantship in Family and Community Medicine. 6-12 Units.

An in-depth experience with a family physician preceptor following the first year of the pre-clinical curriculum. The student applies during the first year to participate in the summer following completion. Application is through the Center for Family and Community Medicine (avjohn@stanford.edu). Placements with family physicians' practices throughout California.

FAMMED 243. Introduction to Integrative Medicine. 1 Unit.

Presentations by local, national, and international experts in various modalities of integrative medicine commonly used by patients in the US, including mind-body medicine (biofeedback, clinical hypnosis, meditation, yoga); traditional whole systems of medicine (traditional Chinese medicine, Ayurveda); biological therapies (botanical medicine, supplements, herbal medicine); manipulative therapies (chiropractic, massage); and acupuncture. Lectures focus on evidence supporting the potential value of various treatment modalities and explanations of both the traditional and proposed scientific mechanisms of actions. Most classes include an experiential portion.

Same as: ANES 243

FAMMED 244. Ethnicity and Medicine. 1-3 Unit.

Weekly lecture series. Examines the linguistic, social class, and cultural factors that impact patient care. Presentations promote culturally sensitive health care services and review contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. 1 unit requires weekly lecture attendance, completion of required readings, completion of response questions; 2 units requires weekly lecture attendance and discussion session, completion of required readings and weekly response questions; additional requirement for 3 units (HUMBIO only) is completion of a significant term paper Only students taking the course for 3 units may request a letter grade.

Same as: HUMBIO 121E

FAMMED 245. Women and Health Care. 1 Unit.

Lecture series. Topics of interest to women as health care consumers and providers. The historical role of women in health care; current and future changes.

FAMMED 250. Interprofessional Management of Population Health with Advanced Computer Technology. 3 Units.

For MD students who wish to have sustained early clinical experience throughout pre-clerkship years. Focuses on providing students with foundational health coaching and population health management training skills necessary to join an interprofessional care team. Students integrate into and contribute to the learning health system, helping to improve the health of patients on a population level and learning iteratively the processes of quality improvement. It is preferred that students enroll continuously for one year minimum and subsequently enroll in a reinforcing complimentary continuity clerkship experience. Prerequisite: instructor consent; brief application required.

FAMMED 252. Medicine & Horsemanship: An Outdoor, Equine Assisted Learning Course for Doctor-Patient Relationship. 1 Unit.

An outdoor experience working with horses to develop interpersonal skills for the clinician-patient and peer-peer relationship. A challenge throughout a clinical career is to conduct relationships with patients and colleagues in a manner that is professional, perceptive, confident, and authentic. Horses mirror and magnify our intentions and behaviors. Working with horses requires sensitivity to nonverbal cues, discrimination in the quality and amount of physical contact, and an awareness of one's emotional state, all important skills for relating to patients. Horses give non-judgmental feedback about our personal communication and leadership styles and our ability to operate from a place of empathy and kindness. The course also teaches how to recognize subjectivity in judgment and how to overcome fear and immobility in the face of uncertainty. No riding is required and no previous horse experience is assumed. Open to anyone with direct patient care responsibility, space permitting. Limit 12 students.

FAMMED 280. Early Clinical Experience in Family and Community Medicine. 1-3 Unit.

Provides an observational experience for pre-clinical students as determined by the instructor and student. Prerequisite: consent of instructor.

FAMMED 281. L-CHAMP Longitudinal Community Health Advocacy Medical Partnership. 3 Units.

Collaborative course between the Office of Community Health, Family and Community Medicine, Practice of Medicine, student-led Primary Care Progress group, and community partners. Focus on creating and expanding authentic community-based clinical experiences for medical students across their four years of medical education. Topics include health coaching/clinical skills development, service-learning, pre-clerkship education integration, community-based clerkship integration.

FAMMED 292. Clinical Skills Maintenance Experience. 3 Units.

(Formerly FAMMED 311) For MSTP students and other Stanford Medical students obtaining combined M.D./Ph.D. degrees through non-MSTP programs only. Students are assigned to a primary care clinic within medicine, family medicine or pediatrics, or a specialty clinic that can offer similar experiences. Continuity of mentorship is the first priority and is desired for reinforcement of basic medical skills; continuity of patients is also desirable, but second priority. Students attend clinic one morning or afternoon per week for two contiguous quarters of the year in which they defend their Ph.D.theses (minimum 10 clinics per quarter). Each four hour clinic session the student: (1) obtains the history of a clinic patient; (2) conducts a physical exam; (3) formulates a differential diagnosis or problem list; (4) presents the patient to her/his clinic preceptor; and (5) prepares a write-up of the case. The clinic preceptor observes and provides guidance for the student's history taking and physical examination skills and critiques the differential diagnosis, verbal presentation, and write-up. The student is guided in the use of the computerized medical record and is asked to progressively integrate this information into the review of the patient history. The clinical preceptor reviews the results of the student's Micro-CPX, Mini-CPX, POM course evaluations, and E4C Mentor evaluations and uses this information to address any perceived weaknesses. The preceptor provides verbal and written performance evaluations to the student and a standardized evaluation becomes part of the student's record. The director of the E4C-MSTP program reviews, on a regular basis, the written performance evaluations of each student taking this course.. Deficits are to be identified and addressed before the student enters clinical training.

FAMMED 299. Directed Reading in Family and Community Medicine. 1-18 Unit.

Students organize an individualized study program in family and community medicine. Prerequisite: consent of instructor.

FAMMED 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

FAMMED 399. Graduate Research. 1-18 Unit.

Students interested in conducting research in a specific area of family and community medicine undertake investigations sponsored by the faculty instructor. Prerequisite: consent of instructor.

Feminist, Gender, and Sexuality Studies Courses

FEMGEN 5C. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.

(Same as History 105C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: HISTORY 5C, HUMBIO 178T, SOMGEN 205

FEMGEN 6W. Service-Learning Workshop on Human Trafficking Part I. 3-4 Units.

Two-quarter service-learning workshop to accompany course, "Human Trafficking: Historical, Legal, and Medical Perspectives." Considers purpose and practice of service learning. Provides training for students' work in community. Examines current scope of human trafficking in Bay Area, pressing concerns, capacity and obstacles to effectively address them. Students work with community partners dedicated to confronting human trafficking and problems it entails on a daily basis. Must currently be enrolled in or have previously taken History 5C/105C (FEMGEN 5C/105C, HUMBIO 178T, SOMGEN 205, INTNLREL 105C). Same as: HISTORY 6W

FEMGEN 7W. Service-Learning Workshop on Human Trafficking Part II. 3 Units.

Prerequisite: History 6W. Two-quarter service-learning workshop to accompany course, "Human Trafficking: Historical, Legal, and Medical Perspectives." Considers purpose and practice of service learning. Provides training for students' work in community. Examines current scope of human trafficking in Bay Area, pressing concerns, capacity and obstacles to effectively address them. Students work with community partners dedicated to confronting human trafficking and problems it entails on a daily basis. Must currently be enrolled in or have previously taken History 5C/105C ((FEMGEN 5C/105C, HUMBIO 178T, SOMGEN 205, INTNLREL 105C). Same as: HISTORY 7W

FEMGEN 9SI. A Road to Diversity inclusion: Learning to Embrace the Intersection of Identities within Athletics. 1 Unit.

This course explores the interaction of one's identities within the context of athletics. With an emphasis on the importance of self-awareness and story telling, we will navigate how all identities intersect and affect the privilege we receive within current society. We will specifically look at how race, ethnicity, sexual orientation, religion, socioeconomic status, mental health, and disabilities interact with our identity as athletes. A Road to Diversity Inclusion: Learning to Embrace the Intersection of Identities within Athletics will help athletes find their voice and use it for positive social change within their communities.

FEMGEN 10A. BAY AREA DOMESTIC WORKERS: RIGHTS: A GRASSROOTS CAMPAIGN FOR SOCIAL JUSTICE. 1 Unit.

In this Alternative Spring Break course and trip, we will examine how our society and institutions allow for and perpetuate the exploitation and oppression of domestic workers. Historically, domestic workers have largely been excluded from basic labor protections. We cannot think critically about the issues domestic workers face without considering the roles of gender, race and ethnicity, immigration status, and language play in the industry. We will use a conceptual framework based on citizenship and reproductive labor theory to address themes in the context of Bay Area migrant women of color who are vehemently campaigning for equal labor rights. Through collaborations with domestic worker organizations based in San Francisco and Oakland, ASB participants will learn how this movement seeks to transform the domestic work industry through multilingual and multicultural alliances.

FEMGEN 14N. Imagining India: Art, Culture, Politics in Modern India. 3 Units.

This course explores history via cultural responses in modern India. We will examine a range of fiction, film and drama to consider the ways in which India emerges through its cultural productions. The course will consider key historical events such as the partition of the subcontinent, independence from British rule, Green Revolution, Emergency, liberalization of the Indian economy, among others. We will reflect on epochal historical moments by means of artistic responses to these events. For example, Ritwik Ghatak's experimental cinema intervenes into debates around the Bengal partition; Rohinton Mistry's novel, *A Fine Balance* grapples with the suspension of civil liberties during the emergency between 1975-77; Rahul Varma's play *Bhopal* reflects on the Bhopal gas tragedy, considered the world's worst industrial disaster. Students will read, view and reflect on the aesthetic and historical texts through their thoughtful engagement in class discussions and written essays. They will also have opportunities to imaginatively respond to these texts via short creative projects, which could range from poems, monologues, solo pieces, web installations, etc. Readings will also include Mahashweta Devi, Amitav Ghosh, Girish Karnad, Jhumpa Lahiri, Manjula Padmanabhan, Salman Rushdie, Aparna Sen, among others.

Same as: TAPS 14N

FEMGEN 17. Gender and Power in Ancient Greece. 4 Units.

(Formerly CLASSGEN 17.) Introduction to the sex-gender system of ancient Greece, with comparative material from modern America. How myths, religious rituals, athletics, politics and theater reinforced gender stereotypes and sometimes undermined them. Skills: finding clues, identifying patterns and making connections amongst the components of a strange and beautiful culture very different from our own. Weekly participation in a discussion section is required.

Same as: CLASSICS 32

FEMGEN 24. Sexuality, Gender, and Religion. 2 Units.

From ancient times to the present, religious texts, authority figures, adherents, and critics have had a great deal to say about sexuality and gender, with powerful impacts in personal, social and political spheres. Today these debates are more wide ranging and public than ever. In this lecture and discussion series, distinguished scholars from within and beyond Stanford will consider how sexuality and gender become issues; religious issues; in Judaism, Islam, Christianity, Hinduism, and Buddhism.

Same as: RELIGST 24

FEMGEN 24N. Sappho: Erotic Poetess of Lesbos. 4-5 Units.

(Formerly CLASSGEN 24N.) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.

Same as: CLASSICS 16N

FEMGEN 29S. The Animal Other: Humans and Animals in Western History. 5 Units.

Enter a world in which war was waged not by tanks but on horseback and oceans brimmed with fantastic monsters. This class explores the animal-human divide in Western cultural history through topics including: the rise of natural history; the centralized state and its relationship to nature; monstrosity and witchcraft; the ethics of metaphor; scapegoating, sexism, racism; history of animal-rights. Students will have the opportunity to help curate a Green Library exhibition on this subject. The course fulfills the departmental Sources and Methods requirement.

Same as: HISTORY 29S

FEMGEN 36N. Gay Autobiography. 4 Units.

Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences?

Same as: HISTORY 36N

FEMGEN 52N. Spoken Sexuality: Language and the Social Construction of Sexuality. 3 Units.

The many ways language is used in the construction of sexuality and sexual identity. How language is used as a resource for performing and perceiving sexual identity. Drawing on linguistic analyses of pronunciation, word choice, and grammar, questions such as: Is there a gay accent? Why isn't there a lesbian accent? How do transgendered people modify their linguistic behavior when transitioning? How are unmarked (heterosexual) identities linguistically constructed? Sexuality as an issue of identity, as well as of desire. Iconic relations between elements of language such as breathy voice quality and high pitch, and aspects of desire such as arousal and excitement. How language encodes ideologies about sexuality; how language is used to talk about sexuality in public discourses about gay marriage and bullying, as well as in personal narratives of coming out. How language encodes dominant ideologies about sexuality, evident in labels for sexual minorities as well as terminology for sex acts. Discussions of readings, explorations of how sexuality is portrayed in popular media, and analyses of primary data. Final research paper on a topic of student choice.

Same as: LINGUIST 52N

FEMGEN 54N. African American Women's Lives. 3-4 Units.

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, AMSTUD 54N, CSRE 54N, HISTORY 54N

FEMGEN 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: AMSTUD 63N, CSRE 63N, HISTORY 63N

FEMGEN 65S. Intimate Frontiers: Race, Gender, and Colonialism in the American West. 5 Units.

Historians have increasingly recognized the American West as a place of empire and settler colonialism. This course will explore the colonial dimensions of the 19th century American West through a variety of sources produced in the most "intimate" spaces on North America's multicultural frontier: in homes, missions, boardinghouses, schools, mining camps, courtrooms, and more. By examining how the intimate shaped everyday lives, we will pay special attention to how ambiguous concepts like race, gender, class, sexuality, and national identity coalesced. The course fulfills the departmental Sources and Methods requirement.

Same as: CSRE 65M, HISTORY 65S

FEMGEN 86Q. Love as a Force for Social Justice. 3 Units.

Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of agape love. How love is conceptualized across cultures; agape love as the basis of many religions; different kinds of love; the biology of love; love in action for social justice; the languages of love, including art, literature, music, and poetry. Emphasis is on blog writing, participation, and oral presentation.

Same as: HUMBIO 86Q

FEMGEN 93. Late Imperial China. 3 Units.

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINLIT 93, HISTORY 93

FEMGEN 94S. Muscle Men and Iron Girls: Sex and Masculinity in Chinese and American History. 5 Units.

How is masculinity represented and experienced in different cultural contexts? How do gender, sexuality, race, and class inform the construction of American and Chinese masculinities? How do historians use primary sources to make arguments? Examines visual and textual sources including magazines, photographs, propaganda posters, legal cases and film. Analyzes transnational history of masculinity in China and the United States from the late 1800s to the present. Topics include bodybuilding, martial arts, female masculinity, homosexuality, Cold War, and 1960s social movements. The course fulfills the departmental Sources and Methods requirement.

Same as: HISTORY 94S

FEMGEN 101. Introduction to Feminist Studies. 4-5 Units.

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, CSRE 108, TAPS 108

FEMGEN 103. Feminist Theories and Methods Across the Disciplines. 2-5 Units.

(Graduate Students register for PHIL 253 or FEMGEN 203) Concepts and questions distinctive of feminist and LGBT scholarship and how they shape research: gender, intersectionality, disciplinarity and interdisciplinarity, standpoint, "queering," postmodern critiques, postcolonial critiques. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor.

Same as: FEMGEN 203, PHIL 153, PHIL 253

FEMGEN 103S. Native American Women, Gender Roles, and Status. 5 Units.

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures.

Same as: CSRE 103S, NATIVEAM 103S

FEMGEN 104A. Junior Seminar and Practicum. 1 Unit.

Preference to and required of Feminist Studies majors; others require consent of instructor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Developing the relationship between potential projects and their academic focus in the major.

FEMGEN 104B. Senior Seminar and Practicum. 2 Units.

Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.

FEMGEN 105. Honors Work. 1-15 Unit.

(Staff).

FEMGEN 105C. Human Trafficking: Historical, Legal, and Medical Perspectives. 5 Units.

(Same as HISTORY 5C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: HISTORY 105C, INTNLREL 105C

FEMGEN 107A. Ripped from the Headlines: Current Feminist, Gender, and Sexuality Issues and Questions. 1-2 Unit.

Discussion of current issues and questions related to Feminist, Gender, and Sexuality Studies.

FEMGEN 107B. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar revolves around race, ethnicity, and higher education with a particular emphasis on Asian American issues. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

Same as: EDUC 100B

FEMGEN 107C. You're Majoring in What?! Why Feminism is Still Relevant. 1-2 Unit.

Stanford Feminist Study alum and community activists will join this weekly seminar to share how studying feminism has helped them professionally. Together speakers and students will explore answers to questions such as: iquest;Why study feminism, sexuality, or gender studies?iqu; iquest;Why is feminism still relevant?iqu;.

FEMGEN 107G. Sisterhood, Brotherhood, & Gender Identity: The Histories, Stories, and Constructs of Greek Life. 1 Unit.

In this course, we will explore the history, the development, the critiques and praise of sororities and fraternities. We will pay particular attention to how gender and sexuality are framed in those discussions; ones by outsiders as well as ones by insiders. How do Greek organizations present their activities and goals? What values and roles do they highlight during recruitment? Who joins them? What expectations are there for participants? What are the perceived benefits that come with joining? What does it mean to be a fraternity brother; or a sorority sister; in modern Greek organizations? How are sorority women and fraternity men discussed by outsiders? How do the stereotypes of Greek life impact perceptions of individuals as well as particular sororities and fraternities? To consider these questions, we will look at historical documents and analyze how groups described themselves as they were establishing; we will also analyze recent documents (websites, books, etc.) to consider current ways organizations describe themselves, their activities, and their values. We will use both to consider how the messages created by and about Greek organizations shape public perceptions as well as individuals' experiences of gender and sexuality identity.

FEMGEN 108. Internship in Feminist Studies. 1-5 Unit.

Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Service Learning Course (certified by Haas Center). Feminist, Gender, and Sexuality Majors may not receive 108 credit for their required practicum, as they are to sign up for FEMGEN 104 A & B instead. Prerequisites: Course work in Feminist, Gender, and Sexuality Studies, written proposal and application form submitted for approval by program office, written consent of faculty sponsor. Course may be taken 3 times total, for a max of 15 units.

FEMGEN 109. Looking Back, Moving Forward: Raising Critical Awareness in Gender and Sports. 3 Units.

In 1972, Title IX legislation opened up a vast range of opportunities for women in sports. Since then, women's sports have continued to grow yet the fight for recognition and equality persists. Simply put, men's sports are more popular than women's--so much so, in fact, that people often make the hierarchical distinction between "sports" and "women's sports." But what would it take to get more women's sports featured on ESPN or more female athletes on the cover of Sports Illustrated? And, given the well-documented corruption at the highest levels of men's sports, should such an ascent in popularity be the goal for women's sports? This course will map out and respond to the multifaceted issues that emerge when women enter the sports world. Throughout the quarter, we will explore the fight for gender equality in sports through historical, cultural, and rhetorical lenses.

Same as: FEMGEN 209

FEMGEN 110X. Introduction to Comparative Queer Literary Studies. 3-5 Units.

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, COMPLIT 310, FEMGEN 310X

FEMGEN 111. Transnational Reproductive Politics. 3-5 Units.

This course examines the issues and debates surrounding women's reproduction in a transnational framework, including birth control, abortion, surrogacy, prenatal diagnosis, labor and delivery, menstruation, sex trafficking, and the reproductive justice movement. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad.

Same as: AMSTUD 111

FEMGEN 112. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening; for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's Othello. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960 play, *A Raisin in the Sun*. Same as: ENGLISH 182J, FEMGEN 212

FEMGEN 115. Queer Reading and Queer Writing in Early Modern England. 5 Units.

Considers the possibility of identifying queer reading and writing practices in early modern England as well the theoretical and historical obstacles such a project necessarily encounters. Focus on the role which Renaissance discourses of desire continue to play in our negotiations of homo/erotic subjectivity, identity politics, and sexual and gender difference. Study of Renaissance queerness in relation to the classical tradition on the one hand and the contemporary discourses of religion, law, and politics on the other. Readings include plays, poems, and prose narratives as well as letters, pamphlets, and ephemeral literature. Both major and minor authors will be represented.

FEMGEN 120. Queer Raza. 3-5 Units.

Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and other structures of power? How do these texts reinforce or contest stereotypes and the "ideal" bodies of national identity? How do these texts produce queerness as a web of social relations?.

Same as: CHILATST 120, ILAC 287

FEMGEN 123. Sex and Love in Modern U.S. Society. 3 Units.

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: SOC 123, SOC 223

FEMGEN 124. Challenging Sex and Gender Dichotomies in Medicine. 1 Unit.

Explores and challenges the traditional physiological bases for distinguishing human males from females, as well as the psychosocial factors that play a role in experiencing and expressing gender and sexuality. Topics include the influence of sociocultural (gender) norms and behaviors on human biology, the interactions of sex and gender on medical outcomes, the importance of understanding the spectrum of sex, gender, and sexuality in clinical practice.

Same as: FEMGEN 224, SOMGEN 257

FEMGEN 126D. Victorian Sex. 5 Units.

How can we make sense of a culture of extraordinary sexual repression that nevertheless seemed fully preoccupied with sex? Examination of the depictions of sex in Victorian literary and cultural texts. Authors include: Collins, Braddon, the Brownings, Swinburne, Stoker and Wilde.

Same as: ENGLISH 126D

FEMGEN 129. Critical Issues in International Women's Health. 4 Units.

Women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on women's capacity to exercise their human rights including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor.

Same as: HUMBIO 129

FEMGEN 130. Sex and Gender in Judaism and Christianity. 3 Units.

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.

Same as: JEWISHST 120, RELIGST 130

FEMGEN 138. Violence Against Women: Theory, Issues, and Prevention. 3-4 Units.

[Technical error is capping enrollment prematurely; come to first day of class] Course offers an interdisciplinary feminist perspective on the causes of gender violence, addresses the multi-leveled approaches to ending gender violence, and explores the relationship between violence against women and other forms of oppression: racism, economic exploitation, heterosexism and social class. Framework examines institutional barriers maintaining gender violence in our culture and considers multi-dimensional solutions. Students from every discipline, women and men, apply theoretical perspectives to professional goals and an optional service-learning project. Service Learning Course (certified by Haas Center).

Same as: FEMGEN 238

FEMGEN 139. Rereading Judaism in Light of Feminism. 4 Units.

During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.

Same as: JEWISHST 139

FEMGEN 140A. Destroying Dichotomies: Exploring Multiple Sex, Gender, and Sexual Identities. 3-5 Units.

This course is designed to broaden the student's awareness of the human experience by introducing scholarly debates about sex, gender and sexual identities and expressions. We will consider the socially constructed nature of sex, gender and sexuality and examine the history and community of those who identify as intersexual, transgender, homosexual, bisexual, asexual, pansexual and/or queer through texts, discussion, films, and class presentations.

FEMGEN 140D. LGBT/Queer Life in the United States. 4-5 Units.

An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

Same as: FEMGEN 240D, HISTORY 257C

FEMGEN 140H. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CHILATST 168, CSRE 168

FEMGEN 140P. Queer Art and Performance. 4-5 Units.

Examines the late 19th, 20th and 21st century forms of performance--including examples from drama, theater, cabaret, and performance art -- through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: TAPS 164T, TAPS 364T

FEMGEN 142. Sociology of Gender. 5 Units.

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.

Same as: FEMGEN 242, SOC 142, SOC 242

FEMGEN 144. History of Women and Gender in Science, Medicine and Engineering. 5 Units.

(Same as HISTORY 44. Majors and others taking 5 units, enroll in HISTORY 144.) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What efforts are underway globally to transform research institutions so that both men's and women's careers can flourish? How have science and medicine studied and defined males and females? How can we harness the creative power of gender analysis to enhance knowledge and spark innovation?. Same as: HISTORY 144

FEMGEN 144X. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders. Same as: ASNAMST 144, CSRE 144

FEMGEN 145. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented; and, at times, contested; by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division. Same as: AMSTUD 145M, ARTHIST 145, ARTHIST 345

FEMGEN 150. Sex, Gender, and Power in Modern China. 3-5 Units.

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English. Same as: CHINGEN 150, CHINGEN 250, FEMGEN 250

FEMGEN 150A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials. Same as: ANTHRO 150A, REES 250A

FEMGEN 150D. Women Poets. 5 Units.

The development of women's poetry from the 17th to the 20th century. How these poets challenge and enhance the canon, amending and expanding ideas of tone, voice and craft, while revising societal expectations of the poet's identity. Poets include Katharine Philips, Letitia Barbauld, Elizabeth Barrett Browning, Charlotte Mew, Sylvia Plath, and Adrienne Rich. Same as: ENGLISH 150D

FEMGEN 152. 'Tis all in pieces: Space and Gender on the Threshold of the Modern World. 5 Units.

These dramatic words, spoken by the British poet John Donne, signal the onset of the Early Modern world and the profound reconfigurations of space and related structures of thought, including conceptions of the self and the encoding of gender roles. We will explore the vibrant Early Modern world in the context of space and representations of gender, sexuality, and race as manifest in unprecedented literary and artistic forms, such as Shakespeare's *Othello*; Marlowe's *Doctor Faustus*; the poetry of John Donne, the art of Michelangelo and Caravaggio as well as key historical and cultural texts. And we will visit the Cantor Arts Center (on campus) for a guided tour and lecture on art and perspective. We also will read and discuss selected texts from the modern world, such as Samuel Beckett's *Waiting for Godot*; and poetry and commentary by Adrienne Rich, to study both changes and continuities with the Early Modern period. We will consider the vital cognitive role of the reader or viewer in the formation of particular instances of artistic form, including recent--and highly thought-provoking--material from the neurosciences and cognitive studies. Note: Instructor will consider changes in meeting times/days to accommodate student schedules if feasible. Please send request to: hbrooks@stanford.edu. Same as: FEMGEN 252

FEMGEN 153Q. Creating the Gendered Story. 4-5 Units.

Exploration of novels, stories, memoirs and micro-narratives in which gender plays a major role. The texts are by writers of varied genders and sexual orientations as well as varied class, racial and national backgrounds. Written assignments present a mixture of academic and creative options.

FEMGEN 154. Black Feminist Theory. 5 Units.

This course will examine black feminist theoretical traditions, marking black women's analytic interventions into sexual and pleasure politics and reproduction, critical culture and race theory, citizenship, identity, power and agency, representation, and questions of the body. Exploring concepts such as intersectionality, controlling images, the politics of respectability and the particularities of a black feminist liberation politics, we will look to black feminist scholars, activists, and artists from the 19th century to today. Same as: AFRICAAM 154

FEMGEN 155. The Changing American Family. 4 Units.

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change. Same as: FEMGEN 255, SOC 155, SOC 255

FEMGEN 156. Happiness, Well-Being, Gender. 1-3 Unit.

Exploring the meaning and attainment of psychological well-being and happiness, this course will address gender differences in well-being and approaches that can be used by all individuals to improve their state of happiness and well-being. Course literature will be drawn primarily from social, clinical, and positive psychology, but will be drawn from other disciplines as well. Students will actively engage with course material by critiquing studies, discussing research, and applying methods for improving well-being to their daily lives. Same as: PSYCH 129

FEMGEN 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing. Same as: AMSTUD 156H, HISTORY 156G

FEMGEN 156X. Language and Gender. 4 Units.

The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required. Same as: LINGUIST 156

FEMGEN 157. Language as Social and Political Activism: Feminist and LGBTQ Social and Political Movements. 3-5 Units.

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement or Women's Suffrage, gain a voice and eventually enact change? In the mediascape of today, where everyone with access to a computer has voice, how does a movement like Occupy Wall Street change the national conversation? How do written and verbal choices of the movements impact their success? In this course, students will write and revise their own arguments in order to best understand the writing in these movements and to best produce future work for social change. We will examine the role of rhetoric; the use of argument to persuade; and social movements working toward social justice.

Same as: AMSTUD 157X, FEMGEN 257

FEMGEN 157P. Allyship: Challenging Privilege and Doing Solidarity in Movements for Collective Liberation. 2-4 Units.

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AFRICAAM 157P, AMSTUD 157P, CSRE 157P

FEMGEN 158. Black Queer Theory. 5 Units.

This course takes a multifaceted approach to black queer theory, not only taking up black theories of gender and queer sexuality, but queer theoretical interrogations of blackness and race. The course will also examine some of the important ways that black queer theory reads and is intersected with issues like affect, epistemology, space and geography, power and subjectivity, religion, economy, the body, and the law, asking questions like: How have scholars critiqued the very language of queer and the ways it works as a signifier of white marginality? What are the different spaces we can find queer black relationality, eroticism, and kinship? How do we negotiate issues like trans*misogyny or tensions around gender and sexuality in the context of race? Throughout the course, students will become versed in foundational and emerging black queer theory as we engage scholars like Sharon Holland, Cathy Cohen, Hortense Spillers, Marlon B. Ross, Aliyyah Abdur-Rahman, Barbara Smith, Roderick Ferguson, Robert Reid-Pharr, E. Patrick Johnson, and many others. Students will also gain practice applying black queer theory as an interpretive lens for contemporary social issues and cultural production including film, music, art, and performance.

Same as: AFRICAAM 158

FEMGEN 160. Rethinking the Ballerina. 4 Units.

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, TAPS 160, TAPS 260

FEMGEN 161. Women in Modern America. 4-5 Units.

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: AMSTUD 161, CSRE 162, HISTORY 161

FEMGEN 168. Writing for the Stage and Screen. 4 Units.

This is a script analysis and film criticism course from the vantage point of the scriptwriter -- both playwrights and screenplay writers. We will do comparative analysis of films that were adapted from plays and use published plays and/or student-authored plays to write original script adaptations. Students will also develop short video films based on a segment of such adaptations. May be repeated for credit.

Same as: TAPS 168

FEMGEN 177. Writing for Performance: The Fundamentals. 5 Units.

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, TAPS 177, TAPS 277

FEMGEN 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what facts can offer.

Same as: CSRE 179C, CSRE 279C, TAPS 179C, TAPS 279C

FEMGEN 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 179G, CSRE 279G, TAPS 279G

FEMGEN 181A. Gender in the Middle East: Iran, Turkey, and Egypt. 4 Units.

This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women's status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women's lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.

Same as: ANTHRO 181A

FEMGEN 183. Re- Imagining American Borders. 5 Units.

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity.

Same as: AMSTUD 183, CSRE 183

FEMGEN 187. Romance, Desire, and Sexuality in Modern Japanese Literature. 3-4 Units.

This class is structured around three motifs: love suicide (as a romantic ideal), female desire, and same-sex sexuality. Over the course of the quarter we will look at how these motifs are treated in the art and entertainment from three different moments of Japanese history: the Edo period (1615-1868), the modern period (1920-65), and the contemporary period (1965-present). We will start by focusing on the most traditional representations of these topics. Subsequently, we will consider how later artists and entertainers revisited the conventional treatments of these motifs, informing them with new meanings and social significance. We will devote particular attention to how this material comments upon issues of gender, sexuality, and human relationships in the context of Japan. Informing our perspective will be feminist and queer theories of reading and interpretation.

Same as: JAPANGEN 187, JAPANGEN 287

FEMGEN 188Q. Imagining Women: Writers in Print and in Person. 4-5 Units.

Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects.

Same as: CSRE 188Q

FEMGEN 191Q. Writing Women's Lives. 2 Units.

Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.

FEMGEN 193. Late Imperial China. 5 Units.

(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: HISTORY 193

FEMGEN 193G. Psychological Well-Being on Campus: A Focus on Gender and Sexual Identities. 1 Unit.

This course examines mental health and psychological well-being across the spectrum of gender and sexual identities. It addresses the unique challenges that face LGBTQ-identified students, and provides tools for supporting peers as they navigate these challenges. Discussion topics include current conceptualizations of gender identity and sexual orientation, including sexual and gender fluidity; the intersection of queer identities with multiple identities such as ethnic/racial identity and faith/spirituality; unpacking stereotypes; queer relationships and sexuality, coming out and disclosure, and mental health issues.

Same as: EDUC 193G

FEMGEN 195. Directed Reading. 1-15 Unit.

May be repeated for credit. (Staff).

FEMGEN 199A. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of Instructor.

FEMGEN 199B. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

FEMGEN 199C. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

FEMGEN 203. Feminist Theories and Methods Across the Disciplines. 2-5 Units.

(Graduate Students register for PHIL 253 or FEMGEN 203) Concepts and questions distinctive of feminist and LGBT scholarship and how they shape research: gender, intersectionality, disciplinarity and interdisciplinarity, standpoint, "queering," postmodern critiques, postcolonial critiques. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor.

Same as: FEMGEN 103, PHIL 153, PHIL 253

FEMGEN 205. Songs of Love and War: Gender, Crusade, Politics. 3-5 Units.

Analysis of medieval love, satirical and Crusade lyrics of the troubadours. Study of deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Course readings include medieval treatises on lyric and modern translations of the troubadour tradition. Works by Ovid, Bernart de Ventadorn, Bertran de Born, La Comtessa de Dia, Thibaut de Champagne, Raimon Vidal, Dante, and Pound. Taught in English. Course includes a lab component for creation of multi-media translation projects: trobar. stanford.edu.

Same as: FRENCH 205

FEMGEN 206. Global Medical Issues Affecting Women. 1 Unit.

This course probes the principal issues affecting women and girls medically around the world. Through interactive discussions, guest lectures, case studies, and academic readings, students become acquainted with the most critical challenges to women's health globally, and use selected analytical tools to assess how these may be addressed efficiently, cost-effectively, and sustainably. Topics include women's cancer, birth control, infertility, female genital mutilation, midwifery, obstetric fistula, breastfeeding, violence against women, and women's representation in biomedical research. The aim is to cultivate in students a nuanced appreciation of women's unique needs, roles, and challenges in the contemporary global health landscape.

Same as: SOMGEN 206

FEMGEN 208B. Women Activists' Response to War. 4-5 Units.

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.

Same as: HISTORY 208B, HISTORY 308B

FEMGEN 209. Looking Back, Moving Forward: Raising Critical Awareness in Gender and Sports. 3 Units.

In 1972, Title IX legislation opened up a vast range of opportunities for women in sports. Since then, women's sports have continued to grow yet the fight for recognition and equality persists. Simply put, men's sports are more popular than women's--so much so, in fact, that people often make the hierarchical distinction between "sports" and "women's sports." But what would it take to get more women's sports featured on ESPN or more female athletes on the cover of *Sports Illustrated*? And, given the well-documented corruption at the highest levels of men's sports, should such an ascent in popularity be the goal for women's sports? This course will map out and respond to the multifaceted issues that emerge when women enter the sports world. Throughout the quarter, we will explore the fight for gender equality in sports through historical, cultural, and rhetorical lenses.

Same as: FEMGEN 109

FEMGEN 212. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's *Othello*. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960 play, *Who's Afraid of Virginia Woolf?*

Same as: ENGLISH 182J, FEMGEN 112

FEMGEN 216. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, HISTORY 216, HISTORY 316

FEMGEN 221B. The 'Woman Question' in Modern Russia. 5 Units.

Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia.

Same as: HISTORY 221B

FEMGEN 223X. The Politics of Gender in the United States. 5 Units.

Gender is one of the most recognizable and important identities in daily life. Yet it has been paid scant attention by political scientists in terms of its role on access to political power, opinion formation, group identity politics, election outcomes, and political representation. This class provides a survey of the literature on gender in American politics. We begin with the interdisciplinary research on the social construction of gender to understand what gender is and is not. Throughout the course we will use these theories to analyze and critique the approaches of quantitative research on gender politics.

Same as: POLISCI 223

FEMGEN 224. Challenging Sex and Gender Dichotomies in Medicine. 1 Unit.

Explores and challenges the traditional physiological bases for distinguishing human males from females, as well as the psychosocial factors that play a role in experiencing and expressing gender and sexuality. Topics include the influence of sociocultural (gender) norms and behaviors on human biology, the interactions of sex and gender on medical outcomes, the importance of understanding the spectrum of sex, gender, and sexuality in clinical practice.

Same as: FEMGEN 124, SOMGEN 257

FEMGEN 226A. Queer Literature and Film. 3-5 Units.

Close analysis of major works of LGBTQ literature, film, and visual art from the 1890s to today. Students will gain deeper knowledge and appreciation of historical and contemporary forms of queer representation in various national literatures, film, and visual art; understand relevant social and political debates; and gain a basic knowledge of feminist and queer theory. Course will include an optional online component to reach out to the public (class website queerlitfilm.wordpress.com, social media).

Same as: COMPLIT 226A

FEMGEN 230. Human Sexual Diversity in Medical Practice. 1-3 Unit.

(Same as SOMGEN 130/FEMGEN 230X; undergraduates who wish to fulfill the GER requirement should enroll in SOMGEN 130/FEMGEN 230X.) Goal is the development of personal and professional skills to interact with people across the diverse range of human sexuality, including sexual orientation and gender identity, age (pediatric to geriatric), sociocultural & religious values, medical issues (e.g. hormonal therapy, disabilities, such as spinal cord injury, etc). Features guest speakers representing a range of sexualities, including asexuality, polyamory and kink, as well as medical professionals and researchers specializing in a diversity of sexuality topics. Attendance (in-class feedback) requirements. Enrollment for 3 units requires attendance at two sessions per week and in-class presentation requirements; enrollment for 2 units requires attendance at two sessions per week.

Same as: SOMGEN 230

FEMGEN 230X. Human Sexual Diversity in Medical Practice. 3 Units.

(Same as SOMGEN 230/FEMGEN 230). Goal is the development of personal and professional skills to interact with people across the diverse range of human sexuality, including sexual orientation and gender identity, age (pediatric to geriatric), sociocultural & religious values, medical issues (e.g. hormonal therapy, disabilities, such as spinal cord injury, etc). Features guest speakers representing a range of sexualities, including asexuality, polyamory and kink, as well as medical professionals and researchers specializing in a diversity of sexuality topics. Attendance (in-class feedback) requirements.

Same as: SOMGEN 130

FEMGEN 236. Literature and Transgression. 3-5 Units.

Close reading and analysis of erotic-sexual and aesthetic-stylistic transgression in selected works by such authors as Baudelaire, Wilde, Flaubert, Rachilde, Schnitzler, Kafka, Joyce, Barnes, Eliot, Bataille, Burroughs, Thomas Mann, Kathy Acker, as well as in recent digital literature and online communities. Along with understanding the changing cultural, social, and political contexts of what constitutes "transgression" or censorship, students will gain knowledge of influential theories of transgression and conceptual limits by Foucault, Blanchot, and contemporary queer and feminist writers.

Same as: COMPLIT 236

FEMGEN 237. Medical Impact of Sexual and Relationship Abuse Throughout the Life Course. 1 Unit.

Provides an overview of the acute and chronic physical, mental, and emotional trauma from sexual abuse through the perspective of the survivor and the offender. The experience of sexual abuse varies for each individual with respect to age, gender, sexual identity, ethnicity, and many other societal factors. Focuses on investigating sexual abuse within various populations from a medical perspective. Discusses the physical, psychological, behavioral, and medical implications of sexual abuse for each demographic explored in the course, along with prevention efforts that would be most effective in these populations.

Same as: SOMGEN 237

FEMGEN 238. Violence Against Women: Theory, Issues, and Prevention. 3-4 Units.

[Technical error is capping enrollment prematurely; come to first day of class] Course offers an interdisciplinary feminist perspective on the causes of gender violence, addresses the multi-leveled approaches to ending gender violence, and explores the relationship between violence against women and other forms of oppression: racism, economic exploitation, heterosexism and social class. Framework examines institutional barriers maintaining gender violence in our culture and considers multi-dimensional solutions. Students from every discipline, women and men, apply theoretical perspectives to professional goals and an optional service-learning project. Service Learning Course (certified by Haas Center).

Same as: FEMGEN 138

FEMGEN 240D. LGBT/Queer Life in the United States. 4-5 Units.

An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

Same as: FEMGEN 140D, HISTORY 257C

FEMGEN 241. Sex and Gender in Human Physiology and Disease. 2-3 Units.

Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. Undergraduate students must enroll for 3 units.

Same as: HUMBIO 140, MED 240

FEMGEN 242. Sociology of Gender. 5 Units.

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.

Same as: FEMGEN 142, SOC 142, SOC 242

FEMGEN 250. Sex, Gender, and Power in Modern China. 3-5 Units.

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English.

Same as: CHINGEN 150, CHINGEN 250, FEMGEN 150

FEMGEN 252. 'Tis all in pieces: Space and Gender on the Threshold of the Modern World. 5 Units.

These dramatic words, spoken by the British poet John Donne, signal the onset of the Early Modern world and the profound reconfigurations of space and related structures of thought, including conceptions of the self and the encoding of gender roles. We will explore the vibrant Early Modern world in the context of space and representations of gender, sexuality, and race as manifest in unprecedented literary and artistic forms, such as Shakespeare's *Othello*; Marlowe's *Doctor Faustus*; the poetry of John Donne, the art of Michelangelo and Caravaggio as well as key historical and cultural texts. And we will visit the Cantor Arts Center (on campus) for a guided tour and lecture on art and perspective. We also will read and discuss selected texts from the modern world, such as Samuel Beckett's *Waiting for Godot*; and poetry and commentary by Adrienne Rich, to study both changes and continuities with the Early Modern period. We will consider the vital cognitive role of the reader or viewer in the formation of particular instances of artistic form, including recent—and highly thought-provoking—material from the neurosciences and cognitive studies. Note: Instructor will consider changes in meeting times/days to accommodate student schedules if feasible. Please send request to: hbrooks@stanford.edu. Same as: FEMGEN 152

FEMGEN 255. The Changing American Family. 4 Units.

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

Same as: FEMGEN 155, SOC 155, SOC 255

FEMGEN 256. Current Controversies in Women's Health. 2-3 Units.

Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. Undergraduates must enroll in HumBio 125 for 3 units. PhD minor in FGSS, enroll in FEMGEN 256 for 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units. Spring.

Same as: HUMBIO 125, OBGYN 256

FEMGEN 257. Language as Social and Political Activism: Feminist and LGBTQ Social and Political Movements. 3-5 Units.

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement or Women's Suffrage, gain a voice an eventually enact change? In the mediascape of today, where everyone with access to a computer has voice, how does a movement like Occupy Wall Street change the national conversation? How do written and verbal choices of the movements impact their success? In this course, students will write and revise their own arguments in order to best understand the writing in these movements and to best produce future work for social change. We'll examine the role of rhetoric; the use of argument to persuade; in social movements working toward social justice.

Same as: AMSTUD 157X, FEMGEN 157

FEMGEN 258. Topics in the History of Sexuality: Sexual Violence in America. 4-5 Units.

This undergraduate/graduate colloquium explores recent historical interpretations of the history of sexuality, with a focus on sexual violence. The readings cover changing definitions and laws, cultural representations, and the role of gender, race, and age in the construction of rape and other forms of sexual violence. Topics include slavery; incest, seduction, and statutory rape reform; the racialization of rape and the anti-lynching movement; street harassment; men and boys as victims; war and conquest; and feminist responses to rape.

Same as: AMSTUD 258, CSRE 192E, FEMGEN 358, HISTORY 258, HISTORY 358

FEMGEN 260. Disability, Gender, & Identity. 5 Units.

Course explores visible and invisible disabilities, focusing on issues of gender and identity. The course emphasizes psychological as well as physical health, cross-cultural variables, diversity of disability experiences, legal and political aspects, work and home accommodations, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance.

Same as: AMSTUD 260, FEMGEN 360, HUMBIO 141

FEMGEN 260X. Journeys in Women's Health and Sex and Gender in Medicine. 1 Unit.

Sponsored by the Stanford WSDM Center. Course focuses on health research on women and sex differences in medicine, acknowledges the "wisdom" of research and education on sex (e.g. chromosomes, gonads, gonadal hormones) and gender (sociocultural) factors influencing health. Brings alumni to share their professional journeys in the world of Women and Sex Differences in Medicine. Meets Women's Health Scholarly Concentration Requirement.

Same as: INDE 260

FEMGEN 272E. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration.

Same as: AMSTUD 272E, CHILATST 172, CSRE 172H, HISTORY 272E, HISTORY 372E

FEMGEN 293B. Queer History in Comparative Perspective. 4-5 Units.

Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

Same as: FEMGEN 393B, HISTORY 293B, HISTORY 393B

FEMGEN 297. Education, Gender, and Development. 4 Units.

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes.

Same as: EDUC 197, SOC 134

FEMGEN 299. Graduate Workshop: Feminist, Gender, and Sexuality Studies. 1-3 Unit.

Theory, methods, and research in feminist, gender, and sexuality studies, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies, feminist pedagogy and career development issues. Restricted to doctoral students. Repeatable for credit. Required for PhD Minors in Feminist, Gender, and Sexuality Studies (3 quarters min.).

Same as: EDUC 370X

FEMGEN 310X. Introduction to Comparative Queer Literary Studies. 3-5 Units.

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, COMPLIT 310, FEMGEN 110X

FEMGEN 313. Performance and Performativity. 1-4 Unit.

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specularity/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

Same as: TAPS 313

FEMGEN 314. Performing Identities. 4 Units.

This course focuses on "the performance of identities" as the concept pertains to U.S. women of color. The foundational text, *This Bridge Called My Back* (Moraga, Anzaldúa, eds.), in its 4th and 2015 edition, will serve as the basis for an intergenerational conversation on U.S. Third World and Transnational and Queer Feminisms with an emphasis on lived experience and the performance of everyday life. Theoretical work will revolve around the concept of *queer theory in the flesh*; initially introduced in *Bridge* in 1981 and its significance to performance theory, queer and feminist theory and political practice. In addition to *Bridge*, texts may include recent anthologies on women of color feminisms and the writings by a variety of scholars, e.g. Norma Alarco, Jacqui Alexander, Alicia Arraza, Anne Cheng, E. Patrick Johnson, Chandra Mohanty, Ann Pellegrini, Ramona Rivera-Severa, Chela Sandoval & Hortense Spillers. A final project *performing identity*; as *theory in the flesh*; is required, along with a written *metacommentary*. As part of the class project students will help organize a campus-wide event, featuring local original contributors to *Bridge* and offering students the opportunity to exchange *in the flesh*; with women of color performers, artists, activists and scholars. Same as: TAPS 314

FEMGEN 358. Topics in the History of Sexuality: Sexual Violence in America. 4-5 Units.

This undergraduate/graduate colloquium explores recent historical interpretations of the history of sexuality, with a focus on sexual violence. The readings cover changing definitions and laws, cultural representations, and the role of gender, race, and age in the construction of rape and other forms of sexual violence. Topics include slavery; incest, seduction, and statutory rape reform; the racialization of rape and the anti-lynching movement; street harassment; men and boys as victims; war and conquest; and feminist responses to rape.

Same as: AMSTUD 258, CSRE 192E, FEMGEN 258, HISTORY 258, HISTORY 358

FEMGEN 360. Disability, Gender, & Identity. 5 Units.

Course explores visible and invisible disabilities, focusing on issues of gender and identity. The course emphasizes psychological as well as physical health, cross-cultural variables, diversity of disability experiences, legal and political aspects, work and home accommodations, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance.

Same as: AMSTUD 260, FEMGEN 260, HUMBIO 141

FEMGEN 363D. Feminist Theory: Thinking Through/With/About the Gendered Body. 5 Units.

Organized around a series of case studies, this graduate feminist theory course will consider issues related to the complex relationship between sex, gender, sexuality, biological reproduction, violence, and social power. It is a core course for the PhD minor in Feminist, Gender, and Sexuality Studies. Enrollment is limited to PhD-level students.

Same as: ENGLISH 363D

FEMGEN 389E. Queer of Color Critique: Race, Sex, Gender in Cultural Representations. 3-5 Units.

Examines major questions and issues that arise in considering race, sex, and gender together. Focus on critical and theoretical texts queering ethnic and diaspora studies and bringing race and ethnicity into queer studies. Close reading of texts in a variety of media negotiating racialized sexualities and sexualized identities. How is desire racialized? How is racial difference produced through sex acts? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and structures of power?.

Same as: CSRE 289E, ILAC 389E

FEMGEN 393B. Queer History in Comparative Perspective. 4-5 Units.

Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

Same as: FEMGEN 293B, HISTORY 293B, HISTORY 393B

FEMGEN 395. Graduate Independent Study. 1-15 Unit.

Students pursue a special subject of investigation under supervision of an affiliated faculty member. May be repeated for credit.

FEMGEN 444. Graduate Research Seminar: Gender in Science, Medicine, and Engineering. 5 Units.

Theory and practice of gender in STEM. 1. "Fix the Numbers of Women" focuses on increasing women's participation; 2. "Fix the Institutions" promotes gender equality in careers through structural change in research organizations; 3. "Fix the Knowledge" or "gendered innovations" stimulates excellence in science and technology by integrating gender analysis into research. Seminar explores harnessing the creative power of gender analysis to enhance knowledge and spark innovation.

Same as: HISTORY 444

Film Production Courses

FILMPROD 12AX. Write and Shoot: Narrative Filmmaking. 2 Units.

Write and Shoot: Narrative Filmmaking is a hybrid writing/production course that guides students through the process of completing a 2-3 minute narrative film. Students will write scripts for short fiction films, and then, by filming them, learn to apply the fundamentals of digital video production. Initial classwork will include visual writing exercises, DSLR cinematography instruction, script work, and basic fiction film production. Students will continue on in groups of three to develop, film, edit, and critique 2-3 minute narrative films based on a shared class theme or narrative premise. This course is truly INTENSIVE and requires a significant amount of work (including nights and weekends) outside of class and daily deadlines for submission of creative work.

FILMPROD 101. Screenwriting. 5 Units.

Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.

Same as: FILMPROD 301

FILMPROD 103. Adaptation. 4 Units.

A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative choices made in adaptation to film. Source materials will include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. A weekly film screening is a requirement of the course.

FILMPROD 104. Visual Writing. 4 Units.

A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of script pages. Open to all majors; may substitute for ENGL 190F prerequisite for FP101.

FILMPROD 105. Script Analysis. 4 Units.

Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.

Same as: FILMPROD 305

FILMPROD 106. Image and Sound: Filmmaking for the Digital Age. 3 Units.

Despite the rise of emerging forms like two-minute YouTube videos, six second Vines, or interactive storytelling modules, many core principles of visual storytelling remain unchanged. In this hands-on film production class students will learn a broad set of filmmaking fundamentals (basic history, theory, and practice) and will apply them creating film projects using tools such as iPhones, consumer cameras and FCPX.

FILMPROD 110. Advanced Screenwriting. 5 Units.

Advanced writing workshop in which students develop and complete a feature-length screenplay. Prerequisites: FP101 Screenwriting and approval of the instructor. Enrollment is limited.

FILMPROD 114. Introduction to Film and Video Production. 5 Units.

Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing. Enrollment limited to 12 students. Priority to junior/senior Film & Media Studies majors.

FILMPROD 117. ADVANCED VIDEO PRODUCTION. 5 Units.

This course introduces the fundamentals of digital video production. Special emphasis is placed on the development of interview and observational sync-sound filming techniques. Students acquire hands-on experience in shooting, sound recording, lighting, and editing. Critiques of creative work emphasizes the conceptual, aesthetic, and technical aspects of digital video production. Prerequisite: Filmprod 114 or Filmprod 10AX.

FILMPROD 301. Screenwriting. 5 Units.

Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.

Same as: FILMPROD 101

FILMPROD 305. Script Analysis. 4 Units.

Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.

Same as: FILMPROD 105

FILMPROD 400. Film/Video Writing and Directing. 4 Units.

Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.

FILMPROD 401. Nonfiction Film Production. 4 Units.

Restricted to M.F.A. documentary students. 16mm production techniques and concepts. Final project is a short black-and-white film with multitrack sound design. Prerequisite: consent of instructor.

FILMPROD 402. Digital Video. 4 Units.

Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.

FILMPROD 403. Advanced Documentary Directing. 4 Units.

Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.

FILMPROD 404. Advanced Video Production. 4 Units.

Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in documentary video production. Prerequisite: consent of instructor.

FILMPROD 405. Producing Practicum. 4 Units.

Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.

FILMPROD 406A. Documentary M.F.A. Thesis Seminar I. 4 Units.

Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.

FILMPROD 406B. Documentary M.F.A. Thesis Seminar II. 4 Units.

Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.

FILMPROD 408. CULTURE/CINEMA/SENSATION. 5 Units.

This course brings together a critical introduction to works of ethnographic film (i.e. films concerned primarily with the representation of culture) and a selective exploration of works of avant-garde film (i.e. films concerned with, among other dimensions, the possibilities of cinema) in order to consider the conceptual and aesthetic foundations/provocations of sensory ethnography, a neologism for an approach to cinema that seeks the new, the open-ended, the corporeal, the sensorial, and the affective.

FILMPROD 801. TGR Project. 0 Units.

Film Studies Courses

FILMSTUD 4. Introduction to Film Study. 5 Units.

Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema.

FILMSTUD 4S. Language of Film. 3 Units.

This course familiarizes students with various elements of film language (cinematography, editing, sound, etc.) and introduces them to a range of approaches to cinematic analysis (authorship, genre, close formal reading, socio-historical considerations). Different types of films (narrative, documentary, and experimental) will be surveyed. Classical narrative cinema will be compared with alternative modes of story-telling.

FILMSTUD 6. Introduction to Digital Media. 5 Units.

Media beyond the horizon of cinema and television present unique problems of definition and analysis. Taking the digital - information represented as discrete values - as a reasonable approximation of the mechanics and fantasies of computation, course surveys theoretical approaches to code, networks, and cyberculture. Taking familiar formations like web sites and video games as objects by which to learn how thinkers have understood and envisioned emerging media from the mid-20th century to the present. Students to develop own methodological tools for becoming more critical users of digital media. COMM 1B can be taken in substitution of FILMSTUD 6 when the course is not being offered.

FILMSTUD 7. Introduction to Television Studies. 5 Units.

Television is arguably the most influential and ubiquitous mass medium of the last half century. Because of its familiarity and popularity, it is also often the medium most overlooked, dismissed, and maligned. Drawing from the history of television and of television scholarship, this course builds a theoretical framework for understanding this pivotal cultural form. Course covers interdisciplinary approaches to studying TV texts, TV audiences, and TV industries, including questions of the boundaries of television (from independent and avant-garde video to convergence). In the process students develop methodological tools as critical television viewers.

FILMSTUD 100A. History of World Cinema I, 1895-1929. 4 Units.

From cinema's precursors to the advent of synchronized sound.
Same as: FILMSTUD 300A

FILMSTUD 100B. History of World Cinema II, 1930-1959. 4 Units.

The impact of sound to the dissolution of Hollywood's studio system.
Same as: FILMSTUD 300B

FILMSTUD 100C. History of World Cinema III, 1960-Present. 4 Units.

From the rise of the French New Wave to the present.
Same as: FILMSTUD 300C

FILMSTUD 101. Fundamentals of Cinematic Analysis. 4 Units.

The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. Course can be repeated twice for a max of 8 units.
Same as: FILMSTUD 301

FILMSTUD 102. Theories of the Moving Image. 4 Units.

Major theoretical arguments and debates about cinema: realism, formalism, poststructuralism, feminism, postmodernism, and phenomenology.
Prerequisites: FILMSTUD 4.
Same as: FILMSTUD 302

FILMSTUD 104. Introduction to the Movies- How Movies Are Developed, Produced, Marketed and Exhibited. 4 Units.

How are movies created? How are scripts developed and selected for production? How are films actually made and marketed? How are they shown in various media? Who decides what in all of these processes and what information do the decision-makers rely on? This course will follow the life cycle of a movie, from its inception as an idea, article, book, etc., to its release in theaters and other media as a finished product. Guest speakers will discuss the evolution of the film industry, creative development of scripts, how deals are structured to acquire intellectual property, film finance, and how movies are physically produced and then marketed, distributed and exhibited in theaters and in other media. We will use two films as case studies: *The Chronicles of Narnia*; *Voyage of the Dawn Treader* and *Chasing Mavericks*.
Same as: FILMSTUD 304

FILMSTUD 110. Science Fiction Cinema. 4 Units.

Science fiction film's sense of wonder depends upon the development and revelation of new ways of seeing. The American science fiction film emphasizes the fundamental activity of human perception, its relation to bodily experience and the exploration of other worlds, new cities, and other modes of being, in such new technological spaces as the cyberspaces of the information age. It is perhaps the Hollywood genre most directly concerned with the essence of cinema itself.
Same as: FILMSTUD 310

FILMSTUD 110N. Darkness in Light: The Filmic Imagination of Horror. 3 Units.

Preference to freshmen. From its beginnings, the cinema evinced an affinity with the phantom realm of specters, ghosts, and supernatural beings. Not only does horror have deep and diverse roots in the international history of film; it emerges as a trope of film itself, as a medium of shadows, dematerialized presence, life drained of substance. Overview of filmic imaginations of horror with a focus on the U.S., Europe, and Japan. Theories of horror, from the fantastic to the uncanny; unpacking these in light of key moments in the genre's development. The merits of vampires versus zombies. Ongoing debates through the lens of horror about cinematic representation, from Andre Bazin's idea of the mummy complex to Linda Williams' thesis of body genres to Jeffrey Sconce's notion of haunted media. Introduction to film analysis and interpretation; no prior experience in film studies required. Required weekly screening.

FILMSTUD 114. Introduction to Comics. 4 Units.

The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groensteen. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.
Same as: FILMSTUD 314

FILMSTUD 115. Documentary Issues and Traditions. 4 Units.

Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content.
Same as: FILMSTUD 315

FILMSTUD 116. International Documentary. 4 Units.

Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.
Same as: FILMSTUD 316

FILMSTUD 133. Contemporary Chinese Auteurs. 4 Units.

New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.
Same as: FILMSTUD 333

FILMSTUD 136. Gender and Sexuality in Chinese Cinema. 4 Units.

Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.
Same as: FILMSTUD 336

FILMSTUD 140. Film Aesthetics: Editing. 4 Units.

Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.
Same as: FILMSTUD 340

FILMSTUD 141. Music Across Media: Music Video to Postclassical Cinema. 4 Units.

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 341, MUSIC 185, MUSIC 385

FILMSTUD 145. Politics and Aesthetics in East European Cinema. 4 Units.

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film.

Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

Same as: FILMSTUD 345

FILMSTUD 146. Art Animation. 2-4 Units.

While anime has spread around the world, Japanese art animators have been busy developing a parallel tradition, built from a more personal, experimental, and idiosyncratic approach to the medium. Looking closely at key works from major artists in the field, this course explores art animation from a variety of perspectives: animation scene; philosophical attempts to account for animated movement; and art animation's unique perspective on Japanese culture.

Same as: JAPANGEN 152, JAPANGEN 252

FILMSTUD 150. Cinema and the City. 4 Units.

Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.

Same as: FILMSTUD 350

FILMSTUD 157. Film Noir from Bogart to Mulholland Drive. 4 Units.

Why did prosperous mid-20th-century America produce a dark cinema of hard-boiled characters, gritty urban settings, stark high-contrast lighting, and convoluted plots? Key examples and the recent legacy of film noir: 40s and 50s Hollywood movies featuring anti-heroes, femmes fatales, shattered dreams, violence, and a heaviness of mood. Film noir's influences included pulp fiction; B-movie production-budgets; changes in Hollywood genres; left-populist aesthetic movements; a visual style imported by European eacute;migreacute; directors; innovations in camera and film technology; changes in gender roles; combat fatigue; and anxieties about the economy, communism and crime. Directors, writers, cinematographers and actors. Film viewings, readings and analyses.

Same as: FILMSTUD 357

FILMSTUD 164A. Technology and the Visual Imagination. 4 Units.

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 164A, ARTHIST 364A, FILMSTUD 364A

FILMSTUD 165A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165A, ARTHIST 365A, FILMSTUD 365A

FILMSTUD 167B. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each weekquest;s theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 167, ARTHIST 367, FILMSTUD 367B

FILMSTUD 181Q. Alternative Viewpoints: Black Independent Film. 4 Units.

Preference to sophomores. Do you want to learn more about independent film as it was practiced in major urban centers by young filmmakers?

This class focuses on major movements by groups such as the Sankofa Film Collective and the L.A. Rebellion. Learn how to analyze film and to discuss the politics of production as you watch films by Spike Lee, Julie Dash, Melvin Van Peebles, Ngozi Onwurah and more. We will discuss representation, lighting, press material, and of course the films themselves. This course includes a workshop on production, trips to local film festivals and time to critique films frame-by-frame. It matters who makes film and how they do so. When you have completed this class you will be able to think critically about "alternative viewpoints" to Hollywood cinema. You will understand how independent films are made and you will be inspired to seek out and perhaps produce or promote new visions.

FILMSTUD 245B. History and Politics in Russian and Eastern European Cinema. 5 Units.

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

Same as: FILMSTUD 445B, REES 301B

FILMSTUD 250B. Bollywood and Beyond: An Introduction to Indian Film. 3-4 Units.

A broad engagement with Indian cinema: its relationship with Indian politics, history, and economics; its key thematic concerns and forms; and its adaptation of and response to global cinematic themes, genres, and audiences. Locating the films within key critical and theoretical debates and scholarship on Indian and world cinemas. Goal is to open up what is often seen as a dauntingly complex region, especially for those who are interested in but unfamiliar with its histories and cultural forms.

Same as: COMPLIT 247, GLOBAL 250

FILMSTUD 251. Media in Transition. 5 Units.

In a culture obsessed with new media, we are bombarded with hype about the present as a revolutionary phase of convergence. But everything old was once new, and pioneering media of the past also had to negotiate existing technologies, ideologies, and fantasies. This seminar is organized around case studies of transitional media moments from the long 20th century, including proto-cinema, ham radio, early television, hypertext, and digital film. In exploring the material and discursive aspects of remediation through theoretical, historical, and media archaeological readings, we will ask: what is a medium and how do they emerge and evolve.

FILMSTUD 290. Movies and Methods: Films of Stanley Kubrick. 5 Units.

Open to graduate students and advanced undergraduates with permission of the instructor; capstone course for majors (senior seminar). Topics vary year to year. Focus is on historiography and theory. Limited enrollment. Permission code needed in order to enroll.

Same as: FILMSTUD 490

FILMSTUD 297. Honors Thesis Writing. 1-5 Unit.

May be repeated for credit.

FILMSTUD 299. Independent Study: Film and Media Studies. 1-15 Unit.

May be repeated for credit.

FILMSTUD 300A. History of World Cinema I, 1895-1929. 4 Units.

From cinema's precursors to the advent of synchronized sound.

Same as: FILMSTUD 100A

FILMSTUD 300B. History of World Cinema II, 1930-1959. 4 Units.

The impact of sound to the dissolution of Hollywood's studio system.

Same as: FILMSTUD 100B

FILMSTUD 300C. History of World Cinema III, 1960-Present. 4 Units.

From the rise of the French New Wave to the present.

Same as: FILMSTUD 100C

FILMSTUD 301. Fundamentals of Cinematic Analysis. 4 Units.

The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. Course can be repeated twice for a max of 8 units.

Same as: FILMSTUD 101

FILMSTUD 302. Theories of the Moving Image. 4 Units.

Major theoretical arguments and debates about cinema: realism, formalism, poststructuralism, feminism, postmodernism, and phenomenology.

Prerequisites: FILMSTUD 4.

Same as: FILMSTUD 102

FILMSTUD 304. Introduction to the Movies- How Movies Are Developed, Produced, Marketed and Exhibited. 4 Units.

How are movies created? How are scripts developed and selected for production? How are films actually made and marketed? How are they shown in various media? Who decides what in all of these processes and what information do the decision-makers rely on? This course will follow the life cycle of a movie, from its inception as an idea, article, book, etc., to its release in theaters and other media as a finished product. Guest speakers will discuss the evolution of the film industry, creative development of scripts, how deals are structured to acquire intellectual property, film finance, and how movies are physically produced and then marketed, distributed and exhibited in theaters and in other media. We will use two films as case studies: *The Chronicles of Narnia*; *Voyage of the Dawn Treader* and *Chasing Mavericks*.

Same as: FILMSTUD 104

FILMSTUD 310. Science Fiction Cinema. 4 Units.

Science fiction film's sense of wonder depends upon the development and revelation of new ways of seeing. The American science fiction film emphasizes the fundamental activity of human perception, its relation to bodily experience and the exploration of other worlds, new cities, and other modes of being, in such new technological spaces as the cyberspaces of the information age. It is perhaps the Hollywood genre most directly concerned with the essence of cinema itself.

Same as: FILMSTUD 110

FILMSTUD 314. Introduction to Comics. 4 Units.

The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groensteen. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.

Same as: FILMSTUD 114

FILMSTUD 315. Documentary Issues and Traditions. 4 Units.

Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content.

Same as: FILMSTUD 115

FILMSTUD 316. International Documentary. 4 Units.

Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.

Same as: FILMSTUD 116

FILMSTUD 332. East Asian Cinema. 4 Units.

Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the silent to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Im Kwon-taek.

FILMSTUD 333. Contemporary Chinese Auteurs. 4 Units.

New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.

Same as: FILMSTUD 133

FILMSTUD 336. Gender and Sexuality in Chinese Cinema. 4 Units.

Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.

Same as: FILMSTUD 136

FILMSTUD 340. Film Aesthetics: Editing. 4 Units.

Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.

Same as: FILMSTUD 140

FILMSTUD 341. Music Across Media: Music Video to Postclassical Cinema. 4 Units.

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 141, MUSIC 185, MUSIC 385

FILMSTUD 345. Politics and Aesthetics in East European Cinema. 4 Units.

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film.

Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

Same as: FILMSTUD 145

FILMSTUD 350. Cinema and the City. 4 Units.

Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.

Same as: FILMSTUD 150

FILMSTUD 355. Comics and the City. 4 Units.

Urban history and life informs the history, stories, structures and aesthetics of the comics, coinciding with the emergence of the modern metropolis in America and Europe and is rooted in the same industrial, commercial, and social transformations. Comics and cartoons were fixtures of urbane humor publications of the 19th century and became a valued fixture of the American newspaper in the very earliest part of the 20th. The characters in early comic strips were often denizens of the urban world, whether immigrants fresh off the boat or the nouveau riche. Many strips were grounded in quotidian urban experience. Later comics use the city as setting, aesthetic, and metaphor. The mean streets of Jacques Tardi's noirish cities about the rather sunnier and shinier example of Superman's Metropolis. Science fiction comics and manga give us the impacted and often destructed cities of the future. The graphic novel adaptation of Paul Auster's *City of Glass* maps the grid pattern of the comics page onto the gridded streets of Manhattan. Chris Ware's *Building Stories* series uses one apartment building to follow the myriad and sometimes intersecting lines found therein. Assigned readings include many comics alongside urban and comics scholarship. Artists to be considered include Outcault, Swinnerton, McCay, Eisner, Katchor, Tatsumi, Doucet, Tardi, Otomo, Hergeacute;, Mazzuchelli, Chaykin, Miller, Ware, Pekar, Crumb, Gloeckner.

FILMSTUD 357. Film Noir from Bogart to Mulholland Drive. 4 Units.

Why did prosperous mid-20th-century America produce a dark cinema of hard-boiled characters, gritty urban settings, stark high-contrast lighting, and convoluted plots? Key examples and the recent legacy of film noir: 40s and 50s Hollywood movies featuring anti-heroes, femmes fatales, shattered dreams, violence, and a heaviness of mood. Film noir's influences included pulp fiction; B-movie production-budgets; changes in Hollywood genres; left-populist aesthetic movements; a visual style imported by European eacute;migreacute; directors; innovations in camera and film technology; changes in gender roles; combat fatigue; and anxieties about the economy, communism and crime. Directors, writers, cinematographers and actors. Film viewings, readings and analyses.

Same as: FILMSTUD 157

FILMSTUD 364A. Technology and the Visual Imagination. 4 Units.

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 164A, ARTHIST 364A, FILMSTUD 164A

FILMSTUD 365A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165A, ARTHIST 365A, FILMSTUD 165A

FILMSTUD 367B. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 167, ARTHIST 367, FILMSTUD 167B

FILMSTUD 402. Frankfurt School & Film Theory. 5 Units.

Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema.

FILMSTUD 404. Postwar American Avant Garde Cinema. 5 Units.

History and theory of post-WW II American independent and experimental film. Emphasis is on issues of audiovisual form, structure, and medium specificity. Films and writings include Maya Deren, Stan Brakhage, Michael Snow, and Hollis Frampton.

FILMSTUD 406. Montage. 5 Units.

Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistic, semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.

FILMSTUD 410A. Documentary Perspectives I. 4 Units.

Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

FILMSTUD 410B. Documentary Perspectives II. 4 Units.

Restricted to M.F.A. documentary film students. Continuation of 410A. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

FILMSTUD 414. Comics. 5 Units.

Long derided as neither literature nor art, the medium of comics, with its complex juxtapositions of word and image and of images with one another, is increasingly understood as a supple and sophisticated mode of communication and expression. Dynamic new work is appearing on a weekly basis, and lavish reprint projects have made comics history more available for study and pleasure. This seminar simultaneously explores the aesthetic and historical parameters of the medium as well as the shape of comics scholarship. As comics are something of a hybrid form, the seminar will necessarily be interdisciplinary in approach. The treatment of time, rhythm, and tempo will be considered alongside explorations of line, panel, sequence, page, story, and seriality. The flexibility of the medium will be encountered by reading broadly in comic strips (humorous and dramatic), superheroes, undergrounds and independents, political satire and pedagogy, autobiography, experimental works, and children's comics, as well as recent iterations of the graphic novel.

FILMSTUD 436. Chinese Cinema. 5 Units.

Course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.

FILMSTUD 442. Hollywood Musical. 5 Units.

Physical, emotional, aesthetic, and social liberation mark this most colorful of film genres. Musicals are a place for staging issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

FILMSTUD 445B. History and Politics in Russian and Eastern European Cinema. 5 Units.

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Same as: FILMSTUD 245B, REES 301B

FILMSTUD 458. The Face on Film. 5 Units.

The seminar will discuss the workings of the face: as privileged object of representation, as figure of subjectivity, as mode and ethic of address, through film theory and practice. How has the cinema responded to the mythic and iconic charge of the face, to the portrait's exploration of model and likeness, identity and identification, the revelatory and masking play of expression, the symbolic and social registers informing the human countenance? At this intersection of archaic desires and contemporary anxieties, the face will serve as our medium by which to reconsider, in the cinematic arena, some of the oldest questions on the image. Among the filmmakers and writers who will inform our discussion are Aumont, Balaacutis, Barthes, Bazin, Bresson, Doane, Dreyer, Epstein, Hitchcock, Koerner, Kuleshov, Warhol, and others.

FILMSTUD 465. American Avant-Garde. 5 Units.

TBD.

FILMSTUD 490. Movies and Methods: Films of Stanley Kubrick. 5 Units.

Open to graduate students and advanced undergraduates with permission of the instructor; capstone course for majors (senior seminar). Topics vary year to year. Focus is on historiography and theory. Limited enrollment. Permission code needed in order to enroll. Same as: FILMSTUD 290

FILMSTUD 620. Area Core Examination Preparation. 5 Units.

For Art History Ph.D. candidates. Prerequisite: consent of instructor.

FILMSTUD 660. Independent Study. 1-15 Unit.

For graduate students only. Approved independent research projects with individual faculty members.

FILMSTUD 660E. Extended Seminar. 4 Units.

May be repeated for credit. (Staff).

Finance Courses

FINANCE 121. Undergraduate Finance Research and Discussion Seminar. 1 Unit.

This seminar is designed to provide some experience with research methods and topics in finance, and to assist undergraduates with career interests in financial research, whether academic or not, with preparation for those careers. The seminar meetings are weekly and discussion based, covering a range of issues and methods in financial economics. Students are expected to prepare a 30-minute research presentation once during the quarter.

FINANCE 201. Managerial Finance. 4 Units.

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, payout policy, the use and valuation of derivative securities, and risk management. This course is targeted to those students who are new to finance and for those with little quantitative background.

FINANCE 204. Managerial Finance - Accelerated. 4 Units.

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, the use and valuation of derivative securities (e.g., options and convertible securities), and risk management. This accelerated course is designed for those students who are relatively new to finance but who possess solid quantitative skills.

FINANCE 211. Corporate Finance: Applications, Techniques, and Models. 3 Units.

The focus of this basic course is on the corporate financial manager and how he/she reaches decisions. Topics include: financial modelling; financing methods of various sorts; capital investment; exchange-rate risk management; acquisitions; buyouts; and dealing with financial distress. In addition to corporations, both domestic and foreign, one session will be devoted to financing a non-profit. The course is designed as a natural follow-up to the Winter Quarter Managerial Finance course, and will draw on things learned in that course. F-211 embraces both the big picture and rigorous financial analysis. It is applied, but within a conceptual valuation-oriented framework. The primary vehicle of instruction is the case method, supplemented with lectures. The emphasis throughout is on making a decision on the basis of well supported analyses. Class participation is important, and cold calls will occur with regularity.

FINANCE 214. Accelerated Corporate Finance: Applications, Techniques, and Models. 3 Units.

The focus of this course is to apply the fundamental ideas and tools of corporate finance to real-world corporate decisions. This course (in either its basic or accelerated format) is designed to be the second course in a standard finance sequence; that is, it is designed to be the natural follow-up to the Winter Managerial Finance course. This course will develop and extend standard tools and techniques of financial analysis, valuation, and model-building, and apply these methods to a wide range of cases. Case topics will include capital structure, valuation, mergers and acquisitions, private equity and venture capital, international finance, hostile takeovers and leveraged buyouts, financial distress and bankruptcy. Students will be expected to develop detailed model-based analyses for the cases using the tools and techniques we develop in this course, and to employ their analyses to reach and defend specific recommendations for these cases.

FINANCE 221. Finance for Non-MBAs. 3 Units.

This course, intended for graduate students and advanced undergraduates, covers the foundations of finance with applications in corporate finance and investment management. It discusses many of the major financial decisions made by managers and investors, emphasizing the process of valuation. Topics include criteria for making investment decisions, risk and return, market efficiency, capital structure, and the valuation of derivative securities (e.g., options). The course also provides coverage of the major financial instruments issued by corporations. Prerequisite: ability to use spreadsheets, knowledge of basic probability and statistics concepts, including random variables, expected value, variance, covariance, and simple estimation and regression. For registration questions about this course, please contact the Graduate School of Business at academic_operations@gsb.stanford.edu.

FINANCE 229. MSx: Finance. 4 Units.

This course covers the foundations of corporate finance including the management of liquidity, capital structure, financial forecasting, dividend policy, financial distress, cost of capital and capital budgeting. It discusses the major financial decisions made by corporate managers and the impact of those decisions on investors and the value of the firm. Topics include criteria for understanding the valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the role of derivative securities including options. The course also provides coverage of the role of financial markets in the operations of the firm.

FINANCE 310. Managerial Finance - Advanced. 4 Units.

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will tackle most of the important financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, payout policy, the use and valuation of derivative securities (e.g., options and convertible securities), and risk management. This advanced course is targeted to those with a strong background in finance and (at least) solid quantitative skills.

FINANCE 319. Private Equity Investing Seminar. 4 Units.

This seminar focuses on private equity investing, including investments with control, buyouts, and minority investments at various stages in a company's life. Private equity investing activity has grown significantly over the past decade. This seminar explores selected topics in private equity investing for those MBA students who take the corequisite course FINANCE 321, Investment Management and Entrepreneurial Finance. Private equity includes both established and early stage companies. The course extends and deepens the entrepreneurial finance area for those with an interest in private equity, venture capital and principal investing, taking a global view. Utilization will be made of original case studies and lecture-discussions, building on the framework of FINANCE 321. The Seminar meets with outstanding investors. All those registered in F321.1 will also be registered in F319. See yellow Term Sheet put in MBA Boxes in early May. All those registered in F321.2 will also be registered in F329. See yellow Term Sheet.

FINANCE 320. Debt Markets. 4 Units.

This course is intended for those who plan careers that may involve debt financing for their businesses or other investments, or involve trading or investing in debt instruments and their derivatives, including money-market instruments including central bank deposits, government bonds, repurchase agreements, interest-rate swaps, mortgage-backed securities (MBS), corporate bonds, structured credit products, and credit derivatives. We will emphasize institutional features of the markets, including trading, pricing, and hedging. There is a special focus on distressed debt. Most lectures will start with a cold-called student presentation of an un-graded short homework calculation. There will also be a series of graded homework, an in-class mid-term, and about six graded 'pop quizzes' of 10 minutes or less.

FINANCE 321. Investment Management and Entrepreneurial Finance. 3 Units.

Equity investment in companies, common stocks, early/growth stage ventures, deals, partnerships, hedge funds, or other entrepreneurial opportunities will be immediately or eventually important for most MBAs—either on the investing side or on the fund-raising financing side. This investment course discusses many practical and conceptual factors influencing the analysis and value of companies and deals, including publicly listed and private equity investments, and on success of investment approaches. The focus of this course is on quoted and private equity investments and on entrepreneurial finance. The format of the class is primarily case discussions and lecture discussions led by the professor and investors/principals who were involved in the case. This course enables MBA students to learn a broad investing skill-set and to study outstanding investors. See yellow Term Sheet put in MBA Boxes in early May.

FINANCE 322. Financial Intermediaries and Capital Markets. 4 Units.

This course focuses on financial markets, institutions, and instruments. We consider when and how firms raise capital through the life cycle, beginning with the capital-raising decisions and transactions for young firms and then discussing the decisions facing older, listed firms. We concentrate mainly on the firm's perspective while also considering the perspective of financial intermediaries. Issues to be considered in this course include the role of financial intermediaries like banks, the decision to go public, the pricing and role of investment banks in IPOs, bank debt, project finance, public debt, private placements, securitizations, convertibles, and markets for junk bonds.

FINANCE 324. Practical Corporate Finance. 4 Units.

The focus of this course is to apply the fundamental ideas of corporate finance to real-world problems. This course is a follow-up to the Fall course in Managerial Finance in which the basics of finance and valuation were covered. We will explore both how to make the acquired knowledge practical as well as to deepen our understanding of the core principles of finance. During the course we will analyze cases covering a wide range of topics such as capital structure, private equity and venture capital, mergers and acquisitions, hostile takeovers and leveraged buyouts, as well as bankruptcy and financial distress. These cases provide an opportunity to bridge the gap between theory and real-life situations. Students are expected to develop their own spreadsheets and provide recommendations based on their analysis of the case material. This course was formerly known as FINANCE 224. An accelerated version of this course is offered as FINANCE 331.

FINANCE 326. Derivative Securities. 4 Units.

This course is an introduction to options, futures and other derivative securities. The goal is to learn a core set of principles that underlie the pricing and use of derivatives. In particular, we will cover the valuation and use, both for risk management and for speculation, of forwards, futures, swaps, and options; the Black-Scholes option-pricing formula; delta-hedging; credit derivatives; financial risk management; and the role of derivatives in the recent financial crisis.

FINANCE 327. Financial Markets. 4 Units.

The aim of this course is to develop a thorough understanding of financial markets. We explore how investors make decisions about risk and return, how financial markets price risky assets in equilibrium, and how financial markets can sometimes malfunction. The course puts particular emphasis on the role of real-world imperfections that are absent from the standard textbook view of financial markets. For example, we explore the role of illiquidity: Why are there liquid markets for some types of assets but not for others? Why does liquidity often disappear in times of market turmoil? We will also study recent insights from behavioral finance about investor psychology and market inefficiencies. Moreover, we will look at financial innovations such as credit-default swaps, securitization, and hedge funds that play important roles in financial markets these days. We use cases to develop these topics in the context of practical decision-problems in the areas of asset allocation, risk management, and financing.

FINANCE 329. Investment Seminar. 4 Units.

"Global Principal Investing/Hedge Funds" is a seminar on selected topics in masterful investing in publicly traded and private equity/venture capital investments, with focus on the principal's point of view. We study hedge funds and mutual funds and meet with outstanding investors. The scope and context is global including emerging markets. The Seminar is taught by a founding director of one of the largest international investment funds. All those registered in F321.1 will also be registered in F319. See yellow Term Sheet put in MBA Boxes in early May. All those registered in F321.2 will also be registered in F329. See yellow Term Sheet.

FINANCE 330. Investment Management: Asset Allocation and Asset/Manager Selection. 4 Units.

This course covers strategic and tactical asset allocation in investment portfolios as well as specific asset and manager selection issues. We consider challenges that are unique to the various asset classes that comprise broad-based portfolios, including: public equities, fixed income securities, private equity (both buyout and venture capital), hedge funds, and real assets (real estate, energy, timber, and commodities). We also consider challenges that are specific to various geographies (e.g., domestic, developed international and emerging markets) across the various asset classes. The portfolio optimization framework employed considers the perspective of different types of investors that vary along such dimensions as risk preference, investment horizon, tolerance for illiquidity, tax status, social objectives, and special asset-specific relationship, information or skill advantages. More specifically, our framework considers: tradeoffs between seeking diversification to control risks, and making concentrated bets where there appears to be outsized return prospects (whether due to one-off proprietary investment opportunities or the market appearing to value certain sectors improperly); tradeoffs between passive investment (at low administrative cost and complexity) and active investment designed to produce premium returns (despite the incremental cost and complexity); distinctions between investing as principals and delegating to managers, and the importance of aligning incentives among all parties; the importance of liquidity in driving the pricing, risk and expected returns to various asset classes and the importance of identifying which parties are natural suppliers of liquidity and which the natural demanders; the importance of effective underwriting and ongoing monitoring of investment opportunities; the importance of tax considerations in the pricing and expected returns to various asset classes; and the importance of identifying which parties form the natural clientele in each asset class. For a number of the sessions, we will invite domain experts to add spice and depth to a portion of the class discussion.

FINANCE 331. Practical Corporate Finance. 4 Units.

(Note: this course was formerly known as FIN 230) The main aim of this course is to enable students to apply the fundamental ideas of finance to problems in the area of corporate finance with all the complexities the real world entails. The course is a follow-up to the Fall Managerial Finance course where students learnt basics of valuation techniques and various finance applications. We will explore both how to make all this knowledge practical as well as how to deepen our knowledge of fundamental finance ideas. The main focus of this course is on the corporate financial manager and how he/she reaches decisions as to investments, dividends and financing of all sorts. Topics include leveraged buyouts, hostile takeovers, private equity financing and venture capital, financial distress and bankruptcy, mergers and acquisitions, managing working capital. The cases will be used to motivate our discussion of how to bridge the gap between rigorous finance theory and its application to practical problems in corporate finance. The course is case-based and more advanced than FINANCE 324. "Advanced" means that we will discuss a lot of subtle qualitative issues as well as explore deeper fundamental applications of core finance ideas. The course is intensive and will require students to prepare carefully all cases, read and understand a lot of materials, and actively participate in the class discussion. The main teaching method is cold calling.

Same as: Accelerated

FINANCE 332. Finance and Society. 3 Units.

This interdisciplinary course will discuss the role of the financial system within the broader economy and the interactions between the financial industry and the rest of society. The course will provide an overview of the financial system, cover the basic economic principles essential for understanding the role of finance in the economy, and discuss of policy issues around financial regulation. It seeks to mix students from GSB, Law School, Public Policy, Economics, Political Science, and other departments. Topics to be discussed include: * The financial system, from microfinance to global megabanks: how and why finance can benefit society as well as endanger and harm. * Financial regulation: why and how? * Other people's money: the challenge of effective control, governance, and trust. * The politics of banking and finance. * Ethical issues in finance.

FINANCE 335. Corporate Valuation, Governance and Behavior. 4 Units.

This course will develop a detailed knowledge of corporate valuation techniques, together with an understanding of the role such valuations play in a wide range of corporate financing decisions. First, the course will carefully consider different valuation techniques, the assumptions that underlie each of these methods, how they are applied in practice, how they are related to one another, and how to decide which method of valuation is appropriate for a given application. After developing these tools, they will then be applied to a wide range of corporate finance settings. Among the applications to be considered are mergers and acquisitions, international valuation, corporate governance, financial distress, agency conflicts, asymmetric information, and overvaluation. For all of these applications, this course will emphasize the central importance of valuation to understanding observed phenomena and to guiding optimal decision making, as well as the unique challenges to valuation posed by the particular application.

FINANCE 336. The Finance of Retirement and Pensions. 4 Units.

The financial economics of how retirement is financed, particularly in the US. Topics: basic finance concepts necessary for understanding individual retirement savings. Properties of financial instruments such as bonds and stocks. Optimization of individual retirement account or 401(k) portfolios. Defined benefit pensions. Measuring defined benefit pension liabilities. Impact of defined benefit pension liabilities on corporate, state, and local budgeting. The economics of national retirement policy including Social Security and government treatment of private retirement savings.

FINANCE 341. Modeling for Investment Management. 3 Units.

This course will combine practical and up-to-date investment theory with modeling applications. Understanding beautiful theory, without the ability to apply it, is essentially useless. Conversely, creating state-of-the-art spreadsheets that apply incorrect theory is a waste of time. Here, we try to explicitly combine theory and application. The course will be divided into 6 modules, or topics. The first day of each module will be a lecture on an investment topic. Also provided is a team modeling project on the topic. The second day of each module will be a lab. The lab day will begin with modeling concepts (tips) designed to help you use Excel to implement the module's investment topic. After the tips are provided, the remainder of the lab day is devoted to teams working on their modeling project and allowing for Q&A. On the third day of each module will be presentations and wrap-up.

FINANCE 345. History of Financial Crises. 4 Units.

Financial crises are as old as financial markets themselves. There are many similarities between historical events. The recent credit crisis, for example, is far from unique. More often than not financial crises are the result of bubbles in certain asset classes or can be linked to a specific form of financial innovation. This course gives an overview of the history of financial crises, asset price bubbles, banking collapses and debt crises. We start with the Tulip mania in 1636 and end with the recent credit and debt crises. The purpose of the course is to understand the causes of past crises and to develop a conceptual framework that ties common elements together. We will discuss the lessons that we can draw for financial markets today.

FINANCE 346. Institutional Money Management. 3 Units.

The object of this course is to study the money management industry from the perspective of the user --- an investor who wants to invest money. This course will study the main components of the money management industry: mutual funds, hedge funds, private equity funds and venture capital funds. It will also examine important users of the industry such as non profits, endowments and defined benefit pension funds. The emphasis of the course will not be on how fund managers make money, but rather on how the industry is organized, how managerial skill is assessed, how compensation is determined, and how economic rents are divided between managers and investors. The course will explore how competitive market forces interact with managerial skill and other market frictions to give rise to the observed organization of the industry.

FINANCE 347. Money and Banking. 3 Units.

This course is designed to help students understand the connections between money (the Federal Reserve), financial markets, and the macroeconomy. How are interest rates determined, and how does the Federal Reserve conduct monetary policy? What economic factors drive the yield curves in different bond markets? We will pay particular attention to the banking system, with an eye toward understanding the function and importance of banks. Topics will include the role of the Federal Reserve as a lender of last resort during the recent, and prior, financial crises, unconventional monetary policy tools such as quantitative easing and forward guidance. We discuss the role of the government in regulating the financial sector, paying particular attention to capital requirements for banks. We will often begin class with a discussion of current macro-financial market events in the context of our course coverage. The course is appropriate for anyone trying to gain a macroeconomic perspective on capital markets, from investors to bankers, or those simply interested in the linkages between interest rates, banks and the economy. Given the topics we cover, the course will also be interesting to those who want a better understanding of the 2007-2009 financial crisis and the ongoing Federal Reserve experiment in unconventional monetary policy.

FINANCE 350. Corporate Financial Modeling. 4 Units.

The course will take the perspective of a mid-level manager or decision-maker who is responsible for collecting, analyzing, and utilizing financial information in the context of a major transaction. We will integrate theories presented throughout courses in the core, particularly accounting and finance, and take a hands-on approach to understand how the theory is implemented in practice. The focus of the course will be on developing critical financial modeling skills, understanding best practices, and recognizing common pitfalls. Students will work on a series of cases and build models that can be used for earnings and pro-forma financial statement forecasts, valuation, the assessment of financing needs, merger analysis, and LBO evaluation. Students will also gain experience presenting financial models and critically assessing them. By the conclusion of the course, students will develop the skills to construct complex financial models and the logical frameworks to utilize them for various organizational applications. [Note: This course is geared toward students relatively new to financial modeling; those with extensive financial modeling backgrounds may be better served by an alternative course.].

FINANCE 351. Advanced Corporate Financial Modeling. 4 Units.

Students will engage in the development of corporate financial modeling cases and solutions. Students will also develop materials to aid others in building financial models, and serve as case leaders during lab workshops. Extensive background in financial modeling and experience with Excel is required.

FINANCE 361. Behavioral Finance. 4 Units.

This course provides an introduction to behavioral finance, a discipline which integrates insights from psychology into the study of financial decisions and markets. There will be a focus on understanding the psychological underpinnings of financial decision-making as well as the institutional frictions that may allow these psychological mechanisms to influence economic outcomes. Applications include the pricing of assets relative to fundamental value, trading strategies, managerial behavior, and household savings and investment decisions. Conceptual issues will be emphasized through a mix of case discussions and lectures, and quantitative exercises will serve to develop analytical tools for making financial choices.

FINANCE 373. Entrepreneurial Finance. 4 Units.

This is a course about the financial decision-making process for start-up firms. The course takes a two-pronged approach: First, we develop tools and concepts of corporate finance related to modeling, valuation, control, and investment decisions within an entrepreneurial context. Second, we use cases with firms at different stages of their life cycle from initial angel or venture capital investments through exit decisions, to see the issues that arise when these principles are applied in practice. In some cases we take the viewpoint of the entrepreneur and in others the viewpoint of the investor. After all, as an entrepreneur, you cannot negotiate effectively without understanding the investor's motivations. Conversely, you cannot evaluate a potential investment opportunity without appreciating the entrepreneur's perspective and incentives. Finally, we explore new developments in entrepreneurial finance such as crowdfunding and early liquidity provision.

FINANCE 377. China's Financial System. 4 Units.

This course is a survey of China's financial system, including its banking industry, monetary policy structure, and financial markets (bonds, derivatives, equities, foreign exchange, and related markets). The goal is an integrated view of how capital, risk, and liquidity are intermediated within China and cross-border, by comparison with more developed financial systems. Recent history and current trends (including liberalization of markets) will be emphasized. Coverage will be through lectures, reading of both primary source documents and secondary (journalistic and analyst) commentary, as well as a range of speakers who are subject matter experts. Students will participate actively in class discussion, make a 5-minute topical presentation, and submit a short (10-page) paper.nn.

FINANCE 381. Private Equity in Frontier Markets: Creating a New Investible Asset Class. 4 Units.

In 2001, Jim O'Neil of Goldman Sachs wrote a research note which underscored the importance of so-called Emerging Markets to a well-balanced investment portfolio. Still today, most investors have little or no investment exposure beyond North America, Europe, Japan and more recently India, China and Brazil. All of this is just beginning to change. The not yet fully formed investment category called frontier market private equity is emerging and within the next decade is likely to be an asset class of its own. Private equity investments are being made in southeast Asia, in MENA (Middle East/ North Africa), in sub-Saharan countries beyond South Africa and in Latin America. Even fund of funds are appearing across these markets. At the same time, investors face a world of diminished returns expectations in developed economies just as aging demographics and the need for continued growth, innovation and infrastructure renewal places increasing demands for payout. Suffice it to say, investors will be looking beyond traditional asset classes and geographies for sources of return. This new course is designed to expose you to the still emerging, not yet fully formed world of frontier market private equity. To set the context we will start by reviewing the fundamentals of economic growth and development globally. In addition we will discuss the fundamental concepts involved in constructing and evaluating the performance of a large scale investment portfolio. We will then review cases on the elements of the private equity cycle/process and specifically address the special demands of frontier markets in general. We will also focus on issues that are specific to various markets (e.g. Nigeria, Vietnam, etc.). Students taking the course will be given the opportunity to make important contributions to the knowledge base of this still very young field by working in small teams to research topics of personal and general interest, the results of which will be reported to the rest of the class.

FINANCE 385. Angel and Venture Capital Financing for Entrepreneurs and Investors. 4 Units.

This course covers all the stages of funding for early stage high-growth companies, from seed funding to venture capital rounds to a successful exit. We will concentrate on how entrepreneurs and investors make and should make important decisions. Examples of issues that we will cover are: How can entrepreneurs raise funding successfully? What are typical mistakes entrepreneurs make in raising capital and negotiating with investors? How to choose your investor? How to pitch to an investor? How do angels and VCs generate and process their deal flow and select companies? How are VCs involved in business decisions such as recruiting talent and replacing CEOs? What are the important provisions of financial contracts between VCs and founders? How to value early-stage companies? The course is very applied and mostly case-based. We will discuss a lot of nitty-gritty details that is a must for founders and investors. As a part of the course, students will work on their business ideas, pitch to classmates and a group of top VCs in the Valley. This VCs will work with student groups as VC advisors and we will simulate the VC partner meetings. We will have a lot of speakers and case protagonists, founders, angels, and VCs. No prior knowledge of the VC industry is needed.

FINANCE 555. Private Wealth Management and Private Investing. 2 Units.

The Private Wealth Management and Private Investing course will address issues that relate to the management of personal assets as opposed to institutional investing. It will cover the historical origins and growth of private wealth management, investment planning, risk management, inter-generational transfers of wealth, philanthropy and tax planning. Classes will focus on case studies and various readings. Two instructors will lead the class, one from the GSB and one from the private wealth management industry. Most classes will be augmented by visits from professionals in the wealth management and private banking business. Active class participation and a group project are required.

FINANCE 559. The World of Investing. 1 Unit.

This is a 9-week speaker series, exposing students to the world of first-class public market investors. Each week will have a different visitor describing their investment philosophy, strategy and experience. Full attendance is a requirement to pass the course. Absences must be explicitly excused.

FINANCE 562. Financial Trading Strategies. 2 Units.

The purpose of this course is to familiarize students with the different types of trading strategies employed by various money management institutions. These financial trading strategies are used to manage the risk and return profiles of specific portfolios. Throughout the sessions, students will be challenged to understand and explore the application and implementation of these different strategies. Trading simulations employed on the Rotman Interactive Trader and Rotman Portfolio Manager (using real market data and computer generated data) will be used extensively in this course as a way to learn and test different strategies. All classes will be held in the new Real-time Analytics and Investment Lab (RAIL), located on the third floor of the Bass Building (B312). Students are expected to attend all sessions. Graded are based on in-class simulation results, class participation, and two written assignments. This course is designed to have a fast learning curve and is a pre-requisite for FIN563, the advanced extension of this course.

FINANCE 563. Financial Trading Strategies 2. 2 Units.

This course is an extension of FIN562, Financial Trading Strategies. Students will expand on introductory topics from the Financial Trading Strategies Course and be required to build extensive live-market models and risk management models. Class discussions will closely link current market events and pricing anomalies to theoretical and simulated markets and we will closely study the deviations between them.

FINANCE 587. Private Equity - An Overview of the Industry. 2 Units.

This 2-unit elective at the GSB is an analytical review and overview of private equity partnerships. The course looks at all aspects of private equity investing and may be of interest to five groups of students: (i) students who aspire to be employed in private equity as a career; (ii) students who plan to be employed by operating companies that are owned by private equity firms; (iii) students who may invest in private equity partnerships as a limited partner; (iv) students who find private equity to be an interesting part of the financial community in general (v) students who expect to participate in corporate business development or mergers and acquisitions. The course will meet for nine classes, most for a duration of 90 minutes. One class will be a mock investment review committee presentation as a final project.

FINANCE 620. Financial Markets I. 3 Units.

This course is an introductory PhD level course in financial economics. We begin with individual choice under uncertainty, then move on to equilibrium models, the stochastic discount factor methodology, and no-arbitrage pricing. We will also address some empirical puzzles relating to asset markets, and explore the models that have been developed to try to explain them.

FINANCE 621. Financial Markets II. 4 Units.

This course continues F620 and covers a number of main concepts in market microstructure. Among the topics that are covered are (i) Rational Expectations models and their foundations (ii) strategic trading models (iii) models of market and funding liquidity. In addition to the discussion of theoretic models time will be allotted to empirical applications.

FINANCE 622. Dynamic Asset Pricing Theory. 4 Units.

This course is an introduction to multiperiod models in finance, mainly pertaining to optimal portfolio choice and asset pricing. The course begins with discrete-time models for portfolio choice and security prices, and then moves to a continuous-time setting. The topics then covered include advanced derivative pricing models, models of the term structure of interest rates, the valuation of corporate securities, portfolio choice in continuous-time settings, and general-equilibrium and over-the-counter asset pricing models. Students should have had some previous exposure to general equilibrium theory and some basic courses in investments. Strong backgrounds in calculus, linear algebra, and probability theory are recommended. Problem assignments are frequent and, for most students, demanding. Prerequisite: F620 or permission of instructor.

FINANCE 624. Corporate Finance Theory. 4 Units.

This course considers a wide range of topics in theoretical corporate finance (broadly interpreted). Topics include capital structure decisions, agency conflicts in the firm, dividend policy, security design, optimal financial contracting, the theory of the firm, the market for corporate control, and banking and financial intermediation, among others. The primary focus is on how asymmetric information, agency conflicts, strategic interactions, and incomplete contracting affect corporate financial decision-making. The course aims both to familiarize students with influential papers and current research, and to promote new research ideas in the area.

FINANCE 625. Empirical Asset Pricing. 4 Units.

This course is an introduction to empirical research in asset pricing. The focus of the course is on the interplay between financial economic theory, econometric method, and that analysis of financial market data. Topics include tests of asset pricing models, return predictability in time-series and cross-section, empirical studies of asset market imperfections, and studies of individual and professional investor behavior. Class discussions will draw on textbooks/monographs and original articles and working papers.

FINANCE 626. Advanced Corporate Finance. 3 Units.

This is a course on contemporary theoretical and empirical issues in corporate finance. Building upon the first-year courses in corporate finance theory and empirical methods in finance, we will examine issues in asset pricing applications to corporate finance, dynamic capital structure (dynamic financing decisions), financial distress, financing and investment interactions, and behavioral corporate finance. Both conceptual economic frameworks and econometric methods will be developed as needed. A requirement for this course is that students complete two written projects, one theoretical and one empirical, and at least one of these projects will be presented to the class.

FINANCE 628. Finance Pre-Seminar Reading Course. 1 Unit.

Finance Pre-Seminar Reading.

FINANCE 630. Empirical Corporate Finance. 3 Units.

This course provides an introduction to empirical research in corporate finance, with an emphasis on the application of cross-sectional and panel data econometric techniques for causal inference. Topics include investment policy, entrepreneurship and innovation, financing decisions, firm ownership, corporate governance, managerial incentives, financial contracting, and the structure and internal organization of firms. The course assumes knowledge of econometrics at the level of MGTECON 603.

FINANCE 632. Empirical Dynamic Asset Pricing. 4 Units.

This course explores the interplay between dynamic asset pricing theory, statistical assumptions about sources of risk, and the choice of econometric methods for analysis of asset return data. Therefore, the lectures will be a blend of theory, econometric method, and critical review of empirical studies. Both arbitrage-free and equilibrium preference-based pricing models will be discussed, with particular emphasis given to recent developments and outstanding puzzles in the literature. The prerequisites for F632 are MGTECON 603 - 604, Finance 620, Finance 622, and Finance 625. In particular, I will assume familiarity with dynamic asset pricing theory, at the level of F622; and large-sample theory for least-squares, generalized method-of-moments, and maximum likelihood estimation methods. We will review these methods in the context of specific applications, but this material will not be developed in depth.

FINANCE 633. Advanced Empirical Corporate Finance. 4 Units.

This class is devoted to recent developments in the empirical corporate finance literature. Topics include: financial contracting, liquidation and renegotiation, taxation and capital structure, the role of labor markets, leveraged buyouts, executive compensation, the causes and consequences of the financial crisis, and implications of finance for the public sector. The class is very interactive. Many of the sessions will consist of student presentations about the papers from the reading list. We will also further explore empirical methods relevant for applied research in corporate finance, with a focus on identification and panel data issues.

FINANCE 635. Advanced Topics in Empirical Asset Pricing. 3 Units.

This course will survey current research topics in empirical asset pricing. The emphasis will be on giving students exposure to active research areas and open questions rather than well-established areas and empirical techniques. Topics may include liquidity, capital market frictions, money management, volatility, investment-based asset pricing, return predictability, bubbles, and consumption-macro asset pricing models.

FINANCE 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

FINANCE 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

FINANCE 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

French General Courses

French Language Courses

FRENLANG 1. First-Year French, First Quarter. 5 Units.

Proficiency-based. Development of discourse appropriate in French and Francophone contexts.

FRENLANG 1A. Accelerated First-Year French, Part 1. 5 Units.

Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into FRENLANG 1A on the placement test or who are familiar with another Romance language. FRENLANG 2A fulfills the University foreign language requirement. Prerequisite: Placement Test.

FRENLANG 1G. Accelerated First-Year Business French, Part 1. 4 Units.

For GSB students only. Limited enrollment.

FRENLANG 2. First-Year French, Second Quarter. 5 Units.

Continuation of FRENLANG 1. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite: Placement Test, FRENLANG 1 or equivalent.

FRENLANG 2A. Accelerated First-Year French, Part 2. 5 Units.

Continuation of FRENLANG 1A. Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into FRENLANG 1A on the placement test or who are familiar with another Romance language. Fulfills the University foreign language requirement. Prerequisite: FRENLANG 1A, Placement Test.

FRENLANG 2G. Accelerated First-Year Business French, Part 2. 4 Units.

For GSB students only. Limited enrollment.

FRENLANG 3. First-Year French, Third Quarter. 5 Units.

Continuation of FRENLANG 2. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite: Placement Test, FRENLANG 2 or equivalent. Fulfills the language requirement.

FRENLANG 3G. Accelerated First-Year Business French, Part 3. 4 Units.

For GSB students only. Limited enrollment.

FRENLANG 5A. Intensive First-Year French, Part A. 5 Units.

Same as FRENLANG 1. Accelerated. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

FRENLANG 5B. Intensive First-Year French, Part B. 5 Units.

Same as FRENLANG 2. Continuation of 5A. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

FRENLANG 5C. Intensive First-Year French, Part C. 5 Units.

Same as FRENLANG 3. Continuation of 5B. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Fulfills the University language requirement. Prerequisite 2 or 5B.

FRENLANG 10. Beginning French Oral Communication. 2 Units.

For students who have completed FRENLANG 2 or equivalent. Emphasis is on speaking skills, vocabulary, and pronunciation. May be repeated once for credit.

FRENLANG 15. Intermediate French Oral Communication. 2 Units.

For students who have completed the first-year language requirement. May be repeated once for credit.

FRENLANG 15S. Intermediate Conversation: French in Everyday Life. 3 Units.

Same content as 15. May be repeated once for credit. Prerequisite: one year of college French or equivalent.

FRENLANG 20A. France and Francophonie. 2 Units.

Second-year French conversation based on themes from the regions of France and the Francophone world. Intermediate-level speaking skills and advanced-level functions. Topics include travel, food, and crosscultural comparisons. Students returning from study abroad programs are encouraged to enroll. May be repeated once for credit. Prerequisite: FRENLANG 21C or equivalent.

FRENLANG 20B. French Cinema. 2 Units.

Second-year French conversation based on films. Intermediate-level speaking skills and advanced-level functions. Themes include: French filmmakers, stars, and trends. Required film viewing in and outside class in French. May be repeated once for credit. Prerequisite: FRENLANG 21C or equivalent.

FRENLANG 20C. Contemporary French Language. 2 Units.

Second-year French conversation. Intermediate-level speaking skills and advanced-level functions for formal and informal situations. Useful for students planning to travel or study abroad. May be repeated once for credit. Prerequisite: FRENLANG 21C or equivalent.

FRENLANG 21C. Second-Year French: Cultural Emphasis, First Quarter. 4-5 Units.

Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: Placement Test, one year of college French.

FRENLANG 22C. Second-Year French: Cultural Emphasis, Second Quarter. 4-5 Units.

Continuation of FRENLANG 21C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: Placement Test, FRENLANG 21C.

FRENLANG 23C. Second-Year French: Cultural Emphasis, Third Quarter. 4-5 Units.

Continuation of FRENLANG 22C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: placement Test, FRENLANG 22C.

FRENLANG 24C. Second-Year French: Literary Texts. 3-4 Units.

Proficiency oriented. Discussion, writing, reading, and listening comprehension based on literary texts. Prerequisite: 23.

FRENLANG 24R. Second-Year French: International Relations, Political Science, and Economics Emphasis. 3-4 Units.

Proficiency-based. Discussion, writing, reading, and listening comprehension based on political, economic, and social topics. Prerequisite: 23.

FRENLANG 50S. Reading French. 2-4 Units.

Same content as 50.

FRENLANG 60A. Beginning French Conversation. 1 Unit. (AU).**FRENLANG 60B. Intermediate French Conversation. 1 Unit. (AU) (Staff).****FRENLANG 60C. Advanced French Conversation. 1 Unit.****FRENLANG 60D. French Viticulture. 1 Unit.**

See <http://stanfordmaisonfrancaise.wordpress.com> Prerequisite: 21 or older. (AU).

FRENLANG 60E. French Cooking. 1 Unit. (AU).**FRENLANG 60F. French Cinema. 1 Unit.**
May be repeated for credit. (AU).**FRENLANG 60N. French cheese. 1 Unit.****FRENLANG 60P. Advanced Viticulture. 1 Unit.**

Prerequisite: Completion of 60D. (AU).

FRENLANG 60T. Teaching French Conversation. 1 Unit. (AU).

FRENLANG 120. Advanced French Oral Communication. 3 Units. Speaking skills and functions including narration, description, supporting opinions, and hypothesizing about current events and issues in France. May be repeated once for credit. Prerequisites: FRENLANG 23C or equivalent.

FRENLANG 121. Introduction to French Texts. 3-4 Units.

Readings of major literary figures and themes from medieval times to the present. Prerequisite: 23. Recommended: 124.

FRENLANG 122. Introduction to French Culture and Civilization. 3-4 Units.

Discussion of French art, geography, history, political change, and social institutions. Prerequisite: 23 or equivalent.

FRENLANG 123. French Creative Writing. 3-4 Units.

Advanced. Model texts introduce students to genres and styles; review of grammar and vocabulary. Discussion of original writing by students. Prerequisite: 23 or equivalent.

FRENLANG 124. Mastering Advanced French Grammar: Grammar through Contemporary Literature and Culture. 4-5 Units.

Required for students majoring or minoring in French; recommended for students planning to take literature courses. Review of difficulties in French. Grammatical and logical analysis. Prerequisite: FRENLANG 23C or equivalent.

FRENLANG 125. French Phonetics. 3-4 Units.

For majors and other students who plan to enroll in advanced courses. Study and practice of the French language sound system. Language lab. Prerequisite: 23 or equivalent.

FRENLANG 199. Language Specials. 1-5 Unit.

Prerequisite: consent of instructor.

FRENLANG 205A. Intensive First-Year French for Stanford Grads, Part A. 3-5 Units.

Equivalent to FRENLANG 5A. For Stanford graduate students only. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.

FRENLANG 205B. Intensive First-Year French for Stanford Grads, Part B. 3-5 Units.

Equivalent to FRENLANG 5B. For Stanford graduate students only. Continuation of 205A. Accelerated. Written exercises, compositions, conversational practice, and daily work. Prerequisite 205B or equivalent. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205A or equivalent.

FRENLANG 205C. Intensive First-Year French for Stanford Grads - Part C. 3-5 Units.

Equivalent to FRENLANG 5B. For Stanford graduate students only. Continuation of 205B. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205B or equivalent.

FRENLANG 250. Reading French. 4 Units.

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.

FRENLANG 250S. Reading French. 2-4 Units.

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.

FRELANG 394. Graduate Studies in French Conversation. 1-3 Units.
Prerequisite: consent of the instructor.

FRELANG 395. Graduate Studies in French. 1-5 Unit.
Prerequisite: consent of instructor.

French Literature Courses

French Literature Courses

FRENCH 60S. Advanced Conversation Salon. 1 Unit.

This course provides students with the opportunity to practice speaking French at the advanced level. Recreating the atmosphere of a French salon, participants will develop greater oral proficiency through discussions of literature, film, politics, and contemporary culture. Please note that all Maison Franccedil;aise courses take place at the Maison Franccedil;aise and begin during Week 2 of the quarter. Prerequisite: FRELANG 23C or equivalent.

FRENCH 75N. Narrative Medicine and Near-Death Experiences. 3 Units.

Even if many of us don't fully believe in an afterlife, we remain fascinated by visions of it. This course focuses on Near-Death Experiences and the stories around them, investigating them from the many perspectives pertinent to the growing field of narrative medicine: medical, neurological, cognitive, psychological, sociological, literary, and filmic. The goal is not to understand whether the stories are veridical but what they do for us, as individuals, and as a culture, and in particular how they seek to reshape the patient-doctor relationship. Materials will span the 20th century and come into the present. Taught in English.

Same as: ITALIAN 75N

FRENCH 112. Oscar Wilde and the French Decadents. 3-5 Units.

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmeacute;, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wildeiquest;s Salomeacute;, Picture of Dorian Gray, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: COMPLIT 112, COMPLIT 312, FRENCH 312

FRENCH 118. Literature and the Brain. 5 Units.

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?.

Same as: ENGLISH 118, ENGLISH 218, FRENCH 318, PSYCH 118F

FRENCH 120. Coffee and Cigarettes: The Making of French Intellectual Culture. 4-5 Units.

Examines a quintessential French figure "l'intellectuel" from a long-term historical perspective. We will observe how this figure was shaped over time by such other cultural types as the writer, the artist, the historian, the philosopher, and the moralist. Proceeding in counter-chronological order, from the late 20th to the 16th century, we will read a collection of classic French works. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Taught in French; readings in French.

FRENCH 122. Nation in Motion: Film, Race and Immigration in Contemporary French Cinema. 3-5 Units.

An examination of the current debates in France regarding national identity, secularism, and the integration of immigrants, notably from the former colonies. Confronts films' and other media's visual and discursive rhetorical strategies used to represent ethnic or religious minorities, discrimination, citizens' resistance to government policies, inter-racial marriages, or women's rights within immigrant communities. By embodying such themes in stories of love, hardships, or solidarity, the motion pictures make the movements and emotions inherent to immigration tangible: to what effect? Taught in French. Films in French with English subtitles. Additional paper for students enrolled in 235.

Same as: CSRE 65

FRENCH 123. Word and Image: Collaboration through the Ages. 3-5 Units.

This course examines how verbal descriptions of objects change over time, and represent how the individual relates to the world. How do they embody common ideals, individual desires, or social anxieties? We will study descriptions of various animate and inanimate objects in texts that reflect key cultural and literary values in French literary history, such as medieval objects of war and love, the description of the Renaissance woman, and the nineteenth-century Gothic cathedral. Taught in French.

FRENCH 124. The View from Paris: Key Moments in French Culture. 4 Units.

An intellectually intense, document-based approach to the identity of French culture, made palpable through five moments in the history of Paris (which, more perhaps than any other capital in the western world, has been the center and focus of that nation's productivity. Readings and subsequent discussions will focus on the following contexts in Paris's past: 12th/13th century: the University of Paris as a center of Christian spirituality, intellect, and passion; 17th century: the performance of tragedy on the stages of the city; comedies at the Court of Versailles; 1794: the moment of Terror in the French Revolution and a turning point towards a new form of political life; 1889: Eiffel Tower and World Expo, Paris as the first City of Modernity; 1958: Geacute;neacute;ral de Gaulle assumes power: de-colonization, Existentialism, and France's new identity within Europe. Offered as a part of the Gateways to the World program. Taught in English.

FRENCH 125. Religion, The Self, and Society in 20th-Century French Novels and Film. 3-5 Units.

Survey course on religion, the self, and society in 20th-century French novels and film. Readings may include: Gide, Camus, and Bernanos for the novels, and films by Robert Bresson and others. Taught in French.

FRENCH 126. Fiction, Economics and the Postcolonial. 3-5 Units.

This course applies a humanistic and social scientific approach to economic processes. We will study works of fiction from Francophone Africa: novels, films and comics, which show how fiction provides socio-cultural interpretations of economic phenomena. We will also look at the economy as an elaborate fictional construct that has a direct impact on the real world. Finally, we will look at the conflict between economic development and social justice in postcolonial societies. nThemes include: postcolonialism, modernity, African socialism, capitalism, neoliberalism, globalization, the sacred, immigration, hip hop, social justice etc. Selected texts and films from: Ousmane Sembegrave;ne, Frantz Fanon, Djibril D. Mambety, Aminata Sow Fall, Fatou Diome, Alphonse Mendy, Jean Joseph Goux, Gayatri Spivak, Jean-Pierre Dupuy, Jean and John Comaroff, Zein-Elabdin and Charuscheela etc. Taught in French.

FRENCH 127. Fatal Attractions: A Brief History of Passion in the French Tradition. 4 Units.

Why is French culture so often associated with love and romance? This course examines romantic love—from the earliest romances written in French in the Middle Ages to its cinematic representations in the 21st century. We'll focus on the most passionate and controversial stories, exploring the problems posed by religion, class, race, and sexual orientation. We'll also look at the ways in which romantic love can be a trope in French culture, or a rhetorical instrument used to re-imagine personal awakenings, political situations, or one's relationship to the spiritual or to art. The approach is inter disciplinary, and students will study novels, theater, opera, and cinema. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Taught in French.

FRENCH 128. Revolutionary Moments in French Thought. 3-5 Units.

French intellectual and political culture has often been associated with revolutionary attempts to break free from the hold of tradition. Indeed, the concept of "revolution" has itself become a French tradition of sorts. Over the last 500 years, these revolutions have taken place in a number of arenas. In philosophy, Reneacute; Descartes challenged all traditional learning and defined new principles that were central to the so-called iquest;Revolution of the Mind.iquest; In religion, Enlightenment thinkers not only advocated the toleration of different faiths but also questioned the veracity of Christianity and of all theistic worldviews. In politics, the French Revolution redefined the very concept of a political revolution and set the stage for modern conceptions of sovereignty. French socialist thinkers of the 19th century, in turn, reshaped the ways their contemporaries thought about socio-economic arrangements. Finally, 20th-century existentialists have attempted to rethink the very purpose of human existence. In this course, we will explore these and other seminal revolutionary moments that not only transformed French society, but that also had implications for European and, indeed, global culture. Taught in English, readings in English.

Same as: HISTORY 239K

FRENCH 130. Introduction to Medieval and Renaissance French Literature. 4 Units.

Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics (*La Chanson de Roland*), medieval romances (*Tristan, Chreacute;tien de Troyes' Yvain*), post-Petrarchan poetics (*Du Bellay, Ronsard, Labeacute;*), and prose humanists (*Rabelais, Montaigne*). Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

FRENCH 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France. 4 Units.

The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings include *Corneille, Moligrave;re, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges*. Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

FRENCH 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France. 4 Units.

This course will explore several of the most important texts of 19th- and 20th-century French literature. The aim of the course will be understanding stylistic and thematic experimentation in its historical/cultural context, with a focus on the theme of transgression : moral, political, and social. We will read works in all major literary genres (poetry, prose, and drama) and will discuss prominent movements such as Realism, Romanticism, Symbolism, Decadentism, and Existentialism through the works that best define them. Readings include *Constant, Balzac, Baudelaire, Mallarmeacute;*, Rimbaud, Flaubert, Maupassant, Jarry, Gide, Apollinaire, Breton, Yourcenar, Sartre. All readings, discussion, and assignments are in French.

FRENCH 133. Literature and Society in Africa and the Caribbean. 4 Units.

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts, as well as excerpts of Francophone theater. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Required readings include: Aimeacute; Ceacute;saire, "Cahier d'un retour au pays natal," Albert Memmi, "La Statue de Sel," Kaouther Adimi, "L'envers des autres", Maryse Condeacute;," "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", "Rome plutocirc;t sue Vous". Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: AFRICAAM 133, JEWISHST 143

FRENCH 145. French Theatromania: From Great Classics to Private Theater in 17th & 18th Century France. 3-5 Units.

For French majors and minors. Explore the French passion for theater in the 17th and 18th centuries, from the great classics to private theater. A selection of plays from the official and the private repertory will be used to illustrate the evolution of French theater as a genre and to discuss its role in the sociopolitical shifts of the period. All readings, discussions, and assignments will be in French.

FRENCH 145B. Africa in Atlantic Writing, 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (*Adichie, Condeacute;*, *Olinto*), prose poetry (*Ceacute;saire, Neto, Walcott*), theoretical reflection (*Fanon, Glissant*), reportage (*Gide, Gourevitch*), ethnography (*Leiris, Ouologuem*) and autobiography (*Barack Obama*).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 345B

FRENCH 150. Season and Off-Season of North-African Cinema and Literature. 3-5 Units.

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, language metissage and hybridization, ethnic interactions, gender relations, collective imagination and collective memory, nationalism, popular culture, religion, urbanism, post-colonialism, migration, and the Arab Spring will be covered. Special attention will be given to Moroccan cinema, and to the notions of francophone/maghrebi/"beur"/diasporic cinema and literature. Readings from *Franz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Reda Bensaïma, Assia Djebar, Colette Fellous, Abdelkebir Khatibi, Michel de Certeau, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb*. Movies include *Viva Laldjeacute;rie, Rome plutot que vous, Les Sabots en or, Les Silence des Palais, Halfaouine, Satin Rouge, Le Chant des Marieacute;es, and Mort agrave; Vendre*. Taught in French. Films in French and Arabic with English subtitles.

Same as: FRENCH 350

FRENCH 151. Performing the Middle Ages. 3-5 Units.

Through an analysis of medieval love, satirical and Crusade lyrics in the Old Occitan, Old French, and Galician-Portuguese traditions, we will study deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Special attention will be given to the transmission of vernacular song from live performance to manuscripts. Authors include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtessa de Dia, Thibaut de Champagne, Dante, and Pound. Taught in English. Same as: DLCL 121

FRENCH 154. Film & Philosophy. 4 Units.

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English.

Same as: COMPLIT 154A, ITALIAN 154, PHIL 193C, PHIL 293C

FRENCH 168. Imagining the Oceans. 5 Units.

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Authors read might include Cook, Equiano, and Steinbeck; Defoe, Verne, Stevenson, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Films by Painleveacute; and Bigelow. Seminar co-ordinated with a spring 2015 Cantor Arts Center public exhibition. Visits to Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park.

Same as: COMPLIT 168, ENGLISH 168

FRENCH 181. Philosophy and Literature. 5 Units.

(Formerly CLASSGEN 81) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English. Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

FRENCH 190Q. Parisian Cultures of the 19th and Early 20th Centuries. 4 Units.

Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and avant garde cultures. Illustrated with slides. Taught in English.

FRENCH 199. Individual Work. 1-12 Unit.

Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.

FRENCH 204. Revolutions in Prose: The 19th-Century French Novel. 3-5 Units.

The French Revolution was not just a haunting memory in nineteenth-century France: it was the decisive structure around which French politics, but also French culture and the arts more generally, were centered. As some historians have argued, the French Revolution might not even have really "ended" until 1880. In this course, we will examine both literary representations of the French Revolution, as well as the literary analyses of a society constantly dealing with the fears (or hopes) of a new Revolution. Primary readings by Stendhal, Balzac, Flaubert, Zola. Taught in French.

FRENCH 205. Songs of Love and War: Gender, Crusade, Politics. 3-5 Units.

Analysis of medieval love, satirical and Crusade lyrics of the troubadours. Study of deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Course readings include medieval treatises on lyric and modern translations of the troubadour tradition. Works by Ovid, Bernart de Ventadorn, Bertran de Born, La Comtessa de Dia, Thibaut de Champagne, Raimon Vidal, Dante, and Pound. Taught in English. Course includes a lab component for creation of multi-media translation projects: trobar. stanford.edu.

Same as: FEMGEN 205

FRENCH 206. The "Renaissance" of the Twelfth Century. 3-5 Units.

This course examines key intellectual, social and political developments in Europe during the twelfth century, and inquires after the afterlife of the "Renaissance" into the thirteenth century. Readings include works of literature (Chretien de Troyes, lyric poetry of troubadours and Minnesinger, fables such as Roman de Renart), philosophy (Peter Abelard and scholasticism), and studies about the rise of the Gothic architectural style. The course takes up the Fourth Lateran Council and the history of the crusading movement in the first half of the thirteenth century. Taught in English.

FRENCH 210. Representation and Theatre Culture in 20th Century France. 5 Units.

This course will examine some major French playwrights such as Alfred Jarry, Eugene Ionesco, Samuel Beckett, Jean Genet, Jean Tardieu, Albert Camus or Jean Anouilh in their global cultural environment. Discussion in English; French majors read in French.

Same as: TAPS 353

FRENCH 211. Emile Zola. 3-5 Units.

A comprehensive introduction to and historical analysis of Emile Zola's literary work as foundational for the late-nineteenth century literary movement that we call "Naturalism." The analysis of Zola's novels will be embedded in the historical situation of France in the transition from the Second Empire to the Third Republic, with special emphasis on the epistemological situation of that time. Knowledge of French desirable but participation through English translations will be possible.

Same as: COMPLIT 211A

FRENCH 213. When the World Spoke French: Kings, Writers, and Philosophers, 1630-1789/Old Regime France. 4-5 Units.

Starting in the mid-17th century, France became the cultural trendsetter for most of Europe and parts of the world. How did French culture impose itself as culture tout court? We will examine the importance of politics, literature, and philosophy in this process. Readings will include Corneille, Descartes, Pascal, Racine, Moliere, Montesquieu, Voltaire, Rousseau, Diderot, and Beaumarchais. Taught in French; readings in French.

FRENCH 214. Pirandello, Sartre, and Beckett. 3-5 Units.

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 281E, COMPLIT 381E, FRENCH 314, ITALIAN 214, ITALIAN 314

FRENCH 218. Skepticism and Atheism in Early-Modern French Thought. 4-5 Units.

Religious belief was a fundamental part of early-modern life, and the proposition that human beings could not prove God's existence had profound implications for all realms of human experience. This course will explore the complex relationship between philosophical skepticism and religious belief in early-modern Europe (particularly France) and investigate how these heterodox philosophies transformed the understanding of humanity's interaction with the surrounding world. We will begin by looking at the origins of religious unbelief and the revival of Pyrrhonian skepticism in the 16th century. By placing the atheists and the skeptics in dialogue with their deist and Christian opponents, we will see how these ideas evolved over the course of the 17th and 18th centuries and consider the influence of these subversive theories on the social and political fabric of Europe. Taught in English. Readings in French (English translations available).

FRENCH 219. The Renaissance Body in French Literature and Medicine. 3-5 Units.

If the Renaissance is famous for discovering unknown continents and ancient texts the body too was a new territory of conquest. How did literature respond to the rise of an anatomical gaze in the arts and in medicine and how did it stage the aesthetic religious philosophical and moral issues related to such a promotion or deconstruction of the body? Does literature aim at representing the body or does it use it instead as a ubiquitous signifier for intellectual emotional and political ideas? The locus of desire, pleasure and disease, the body also functioned as a reminder of human mortality and was caught in the web of gender issues, religious controversies and new norms of behavior. Texts from prose fiction (Rabelais) poetry (Scève Ronsard Labeau; D'Aubigné;) essays (Montaigne) and emblem literature. Extra documents include music scores tapestries paintings philosophical and anatomical plates from medical treatises. Taught in English. Visit the Web site: renaissancebodyproject.stanford.edu. Same as: FRENCH 319

FRENCH 221. Conceiving Other Worlds: Travel Narrative and Science Fiction in Early-Modern France. 4-5 Units.

This course will concentrate on the important role of science fiction and travel literature in early-modern France. Although these narratives were intended to describe distant worlds and different ways of living, they frequently revealed more about the aspirations, hopes, and concerns of the cultures in which they originated than about their actual subject matter. Authors frequently sought to determine the identity and uniqueness of their own cultures by contrasting them against the 'otherness' of their imagined subjects. Similarly, by describing either utopian or dystopian civilizations, writers attempted to highlight the problems that plagued their own societies. Among other texts, we will read selections from Montaigne's 'Essais,' Cyrano de Bergerac's 'L'Autre monde ou les tats et empires de la Lune,' Huygens's 'Nouveau traite; de la pluralite; des mondes,' Fontenelle's 'Entretiens sur la pluralite; des mondes,' Voltaire's 'Micromegas,' Bougainville's 'Voyage autour du monde,' and Diderot's 'Supplement au voyage de Bougainville.' Taught in English. Readings in French (English translations available).

FRENCH 222. Was Deconstruction an Illusion?. 3-5 Units.

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified - or the result of a misunderstanding.

FRENCH 223. 17th-Century French Theatre. 3-5 Units.

In this course, taught in French, we will explore theater from different angles including literary theory (the different dramatic genres), aesthetics (the classical representation) and cultural theories (the social function of theatre under absolutism). A new approach to acting will be considered, i.e. the many connections between theatre and possession. Amongst the authors considered, we will include Rotrou, Corneille, Cyrano de Bergerac, Racine, Molière and Regnard. Taught in French.

FRENCH 224. Leopardi, Baudelaire, and Modernity. 3-5 Units.

A close reading of Giacomo Leopardi's *Canti* and Charles Baudelaire's *Flowers of Evil* and *Paris Spleen* in the context of 19th-century Europe. Discussion of the poetry will be enriched by selections from their essays on literature and art and by notes from the Zibaldone and *Mon coeur mis à nu*. Key themes and concepts include language, imagination, "noia," "spleen," and the oppositions between nature and civilization, modernity and antiquity. Taught in English.

Same as: FRENCH 324, ITALIAN 224, ITALIAN 324

FRENCH 225. Introduction to Medieval French Literature. 5 Units.

Introduction to the premodern period of French literature through the interpretation of major works (*La Chanson de Roland*; *Beauvoir* and Thomas, *Tristan*; *lais* of Marie de France; *romans* of Chretien de Troyes; *Le Roman de la Rose*). Special attention given to the socio-cultural contexts in which these works were composed and first received, and to the emergence of the concept of writing as a self-defining act. Study of Old French language and the material aspects of a medieval work. Taught in English.

FRENCH 227. Paris: The Making of a Modern Icon. 3-5 Units.

Few places have been as heavily romanticized and mythologized as Paris. To many observers, Paris and its attractions serve as icons of modernity itself. By engaging with fiction, film, journalism, painting, photography, poetry, song, and other media, we will trace how different people at different times have used Paris as both backdrop and main protagonist, and we'll consider how the city itself has incorporated and rebelled against such representations. The scope of our inquiry will stretch from the late 18th century to the present, covering a host of topics, figures, and sites: from the French Revolution to the protests of May '68, from Baudelaire to Hemingway, from the Impressionists to the Situationists. Taught in English. Same as: HISTORY 239E, URBANST 142

FRENCH 228. Science, Technology, and Society in the Face of the Looming Disaster. 3-5 Units.

The major topic will be the indeterminacy regarding the survival of humankind. With the advent of the atomic bomb humankind became potentially the maker of its own demise. Will combine a number of significant case studies (environmental disasters, industrial catastrophes, threat of nuclear devastation, technological risks) with the lessons drawn from a form of literature that is at the intersection of STS and the Humanities, in particular the early warnings made by such thinkers as Ivan Illich, Martin Heidegger, Hans Jonas, Günther Anders, and Hannah Arendt.

Same as: ITALIAN 228, POLISCI 233F

FRENCH 228E. Getting Through Proust. 3-5 Units.

Selections from all seven volumes of "In Search of Lost Time". Focus on issues of personal identity (perspective, memory, life-narrative); interpersonal relations (friendship, love, homosexuality, jealousy, indirect expression); knowledge (objective truth, subjective truth, necessary illusions); redemption (enchantment, disenchantment, re-enchantment); aesthetics (music, painting, fiction); and Proust's own style (narrative sequence, sentence structure, irony, metaphor, metonymy, metalepsis). Taught in English; readings in French or English.

FRENCH 229. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer.
Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, HUMBIO 175L, MED 234

FRENCH 230. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English.
Same as: FRENCH 330, ITALIAN 227, ITALIAN 327

FRENCH 233. French Political Thought From Rousseau to the Present. 3-5 Units.

An overview of the current awakening of French political thought as it is grounded in a new reading of the great classics of French social thought, from Rousseau to Tocqueville and Benjamin Constant. Readings of Lefort, Castoriadis, Louis Dumont, Ricoeur, Furet, Manent, Ferry, Renaut, Gauchet, Raynaud, etc. Discussions in French and in English.

FRENCH 234. Courtly Love: Deceit and Desire in the Middle Ages. 3-5 Units.

A comparative seminar on medieval love books and their reception. We will examine and question the notion of "amour courtois," which arose in the lyrics and romances of medieval France and was codified in Romantic-era criticism. Primary readings will be enriched by thinking about this notion through the lens of modern theories of desire, such as those of Girard, Lacan, and Žižek. Conducted in English with readings in translation.
Same as: COMPLIT 221A, ITALIAN 234

FRENCH 237. Cultural Contact in Medieval French Literature. 3-5 Units.

Introduction to medieval French literature through the analysis of representations of cross-cultural contact in historical perspective. Class conducted in French. Readings in modern French translation (with occasional reference to Old French) and in English. Readings include *La Chanson de Roland*; *Le Charroi de Nicir;mes*; *La Prise d'Orange*; *Le Conte de Floire et Blancheflor*; and *Chreacut;e;tien de Troyes, Cligeacut;e;s*. No previous knowledge of Old French or medieval literature is expected; willingness to engage with historical texts and questions required.

FRENCH 242. Beyond Casablanca: North African Cinema and Literature. 3-5 Units.

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, exile, language message, race and gender relations, collective memory, parallax, nationalism, laiciteacut;e;, religion, emigration and immigration, and the Arab Spring will be covered. Special attention will be given to judeo-maghrebi history, and to the notions of francophone / maghrebi / "beur" / diasporic cinema and literature. Readings from Frantz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Colette Fellous, Abdelkebir Khatibi, Leila Sebbar, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include *Viva Laldjeacut;e;rie*, *Tenja*, *Le Chant des Marieacut;e;s*, *Franccedil;aise*, *Bled Number One*, *Omar Gatlato*, *Casanegra*, *La Saison des Hommes*. Taught in French. Films in French and Arabic with English subtitles.
Same as: COMPLIT 247F, JEWISHST 242

FRENCH 245. French Political Thought From Rousseau to the Present. 3-5 Units.

An overview of the current awakening of French political thought as it is grounded in a new reading of the great classics of French social thought, from Rousseau to Tocqueville and Benjamin Constant. Readings of Lefort, Castoriadis, Louis Dumont, Ricoeur, Furet, Manent, Ferry, Renaut, Gauchet, Raynaud, etc. Readings in French. (Translations in English will be made available whenever possible.) Discussions in French and in English.
Same as: POLISCI 336C

FRENCH 248. Literature, History and Memory. 3-5 Units.

Analysis of literary works as historical narratives. Focus on the relationship history, fiction, and memory as reflected in Francophone literary texts that envision new ways of reconstructing or representing ancient or immediate past. Among questions to be raised: individual memory and collective history, master narratives and alternatives histories, the role of reconstructing history in the shaping or consolidating national or gender identities. Readings include fiction by Glissant, Kane, Condeacut;e;, Schwarz-Bart, Djebbar, Perec, as well as theoretical texts by Ricoeur, de Certeau, Nora, Halbwachs, White, Echevarriacut;a. Taught in French.
Same as: COMPLIT 250

FRENCH 251. Writing, Memory, and Self-Fashioning. 3-5 Units.

Writing is not a mere recording of the past, but a selection and reinvention of our experiences. We will look at how writing is central to the philosophical project of fashioning the self, even as it reveals that much of what we call the self is a fictional construct. Materials include fiction and memoirs (Primo Levi, Michel Tournier, Melania Mazzucco, Jonathan Littell), and theoretical works in philosophy (Bergson, James, Freud, Jung, Derrida, Wyschogrod, Nehamas), psycholinguistics, and neuroscience. Taught in English.
Same as: ITALIAN 251

FRENCH 253. Honoré de Balzac. 3-5 Units.

Working through a selection of novels by the author widely considered as a founder of western (19th-century) "Literary Realism." Balzac's will be contextualized within his life and the French culture and literature of his time. We will also approach, from a philosophical point of view, the emergence and functions of "Literary Realism." Another focus will be Balzac's work as exemplary of certain traditions within Literary Criticism (particularly Marxist Literary Criticism). Taught in English.
Same as: COMPLIT 253

FRENCH 254. Was Deconstruction an Illusion?. 3-5 Units.

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified acirc;## or the result of a misunderstanding. Participation through English translations is possible.
Same as: COMPLIT 254A

FRENCH 258. The Great War: WWI in Literature, Film, Art, and Memory. 3-5 Units.

This course concerns how writers, artists, and other cultural producers understood and represented the traumas of the First World War and its aftermath. Rather than tracing a political or military history of the conflict, we will focus on how the horrors of War (both in the trenches and on the home front) fostered broader social and cultural shifts, as people questioned the very foundations of European civilization. Most specifically, we'll explore the connections between the War and the emergence of post-War modernist movements, as writers and artists created new works to help them make sense of the catastrophe and the new world it wrought. Though France provides our starting point, we'll also travel beyond the Hexagon to incorporate other views and major works. Course readings will be in English, though students may elect to read works in French if they wish. Same as: FRENCH 358, HISTORY 231C, HISTORY 332C

FRENCH 260. Italy, France, and Postcolonialism. 3-5 Units.

The starting point for our seminar is the question of how postcolonial thought enhances our possible understandings of Italy - as a nation, as a territorial unit coalescing cultural parts that remain disparate to this day, and as a population that has not come fully to terms with its fascist history, its crimes in World War II, or the atrocities it perpetrated as a colonizing state. The Italian case is unusual compared to others, in that the country's colonial past in north and east Africa is still being uncovered after a long period of public silence and government suppression; and what might be called the postcolonial Italian project has begun only recently, driven by a distinct minority of scholars, 'migrant' authors, and activists. French cultural politics and history are often taken as a point of reference from which to analyze Italian phenomena. In this case, we will make use of the French postcolonial tradition as a point of both comparison and differentiation. Among other things, we will focus on the different meanings of 'postcolonial' in a country that is strongly centralized (France) and another which is unremittingly fragmented (Italy). As just one example, we will scrutinize how Gramsci's work has been understood in Anglophone and Francophone criticism (cultural studies, Subaltern studies, and so on), as opposed to how it may be read in its original Italian context, where it concerned subalterns within the nation-state. Asking what is postcolonial, for whom, when, and where?, ultimately our goal is to discern the specific contours of Italy's postcolonialism by juxtaposing it with France's, and to simultaneously ask what light can be shed on French postcolonial particularities by placing it in this dialogue. Beginning with fundamental historical readings (Gramsci, Fanon, Memmi) and touching on some early Anglophone postcolonial critics (Said, Bhabha), the seminar will then be structured around key literary and theoretical readings from Italy and France. Ideally, readings will be in the original language, but as often as possible they will be selected such that they will be accessible in English translation as well. Taught in English.

Same as: ITALIAN 260

FRENCH 265. The Problem of Evil in Literature, Film, and Philosophy. 3-5 Units.

Conceptions of evil and its nature and source, distinctions between natural and moral evil, and what belongs to God versus to the human race have undergone transformations reflected in literature and film. Sources include Rousseau's response to the 1755 Lisbon earthquake; Hannah Arendt's interpretation of Auschwitz; Guumlnther Anders' reading of Hiroshima; and current reflections on looming climatic and nuclear disasters. Readings from Rousseau, Kant, Dostoevsky, Arendt, Anders, Jonas, Camus, Ricoeur, Houellebeck, Girard. Films by Lang, Bergman, Losey, Hitchcock.

Same as: POLISCI 338E

FRENCH 271. Thinking Modernity: Montaigne to Lafayette. 3-5 Units.

From the times of the religious wars to those of Louis XIV, a series of French thinkers played a major role in the speculations that helped establish the norms of what is now thought of as "Western modernity." We will look at some of these, especially their moral and political philosophy in the contexts of a centralizing growth toward bureaucratic absolutist monarchy, of increasing colonization and imperialist urges, of growing intolerance (leading eventually to the Revocation of the Edict of Nantes - more or less simultaneous in 1685 with the promulgation of the *Code noir*, seeking to control the treatment of slaves in the colonies). We shall also be interested in the complex "development" of the modern western "individual," of new notions of "truth," ethical conduct, the politics of authoritarian individualism, the aesthetics of "taste," and the perplexities of gender politics. Closely examining a number of works, we will look at the interplay between these contexts and the epistemology, psychology, ethics and politics that gradually became normative. Authors from among: Montaigne, Gournay, Descartes, Pascal, Hobbes (*De cive*), Cyrano, Madame de Lafayette, but participants may wish to bring other authors to the table. Taught in French.

FRENCH 275. Twentieth-Century French Thought: Literature, Politics, and Intellectual History. 3-5 Units.

This course will introduce students to the major intellectual and historical movements of twentieth-century France. We will consider the impact of key events (including WWI, the rise of fascism, the Nazi occupation, and May '68) on literary and intellectual life. Special importance will be placed on existentialism, structuralism, leftism, and feminism. Students will read a variety of literary, philosophical, and political essays. Taught in French.

FRENCH 277. Literature and the Self in Twentieth-Century France. 3-5 Units.

In this course, we will explore how the different discoveries concerning the self during the XXth Century (throughout philosophy, politics or psychoanalysis) do reflect in the domain of literature. Nouveau roman, autobiography, auto fiction or self references will be amongst the themes explored in class. Our main texts will be taken out of the official list issued by the French Department. Taught in French.

FRENCH 284. Nineteenth-Century French Realism: Classic Novels and Contemporary Interpretations. 3-5 Units.

This course will read three great novels of the French 19th century: Stendhal's *Le rouge et le noir*; Balzac's *Le Pevgrave;re Goriot*; Flaubert's *Madame Bovary*. These texts are the classics of "Realism." But this course intends to complicate the genre designation. "Realist" novels are richer and deeper than any "objective recording" of external and internal events could capture. They are visionary, poetic, and politically explosive. Reading them today requires us to stretch beyond what many critics have asserted about them, and indeed beyond what the novels asserted about themselves. That will be a significant objective of our analysis. Taught in French.

FRENCH 293A. Topics in French Literature and Philosophy. 2 Units.

Five-week course. May be repeated for credit. Taught in French.

FRENCH 293B. Topics in French Literature and Philosophy. 2 Units.

Five-week course. May be repeated for credit. Taught in French.

FRENCH 312. Oscar Wilde and the French Decadents. 3-5 Units.

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmeacute;, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde; Salomeacute;, Picture of Dorian Gray, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: COMPLIT 112, COMPLIT 312, FRENCH 112

FRENCH 314. Pirandello, Sartre, and Beckett. 3-5 Units.

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 281E, COMPLIT 381E, FRENCH 214, ITALIAN 214, ITALIAN 314

FRENCH 316. Understanding and Staging Molière Theatre. 3-5 Units.

Devoted to an in depth analysis of Molière's major plays, as well as a study of contemporary productions of his work. Taught in French.

Same as: TAPS 368S

FRENCH 318. Literature and the Brain. 5 Units.

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts?

Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?.

Same as: ENGLISH 118, ENGLISH 218, FRENCH 118, PSYCH 118F

FRENCH 319. The Renaissance Body in French Literature and Medicine. 3-5 Units.

If the Renaissance is famous for discovering unknown continents and ancient texts the body too was a new territory of conquest. How did literature respond to the rise of an anatomical gaze in the arts and in medicine and how did it stage the aesthetic religious philosophical and moral issues related to such a promotion or deconstruction of the body? Does literature aim at representing the body or does it use it instead as a ubiquitous signifier for intellectual emotional and political ideas? The locus of desire, pleasure and disease, the body also functioned as a reminder of human mortality and was caught in the web of gender issues, religious controversies and new norms of behavior. Texts from prose fiction (Rabelais) poetry (Scegrave; ve Ronsard Labeacute; D'Aubigneacute;) essays (Montaigne) and emblem literature. Extra documents include music scores tapestries paintings philosophical and anatomical plates from medical treatises. Taught in English. Visit the Web site: renaissancebodyproject.stanford.edu.

Same as: FRENCH 219

FRENCH 320. The Posthumanistic Subject. 3-5 Units.

The course will examine the need to rethink the traditional western idea of the strong subject. Through close readings of works by Agamben, Braidotti, Derrida, Deleuze, Hall, Haraway, Latour, Wolfe, among others, this course will explore posthumanist theories of individual and collective subjectivity that challenge traditional ways of defining the human and the non-human subject/person and promote fundamental reconsideration of issues such as agency, autonomy, essence, freedom, dignity, otherness, substance, personhood, sociality, and life itself. The course would consider, how we can empower the subject and community in order to develop a desired model of participatory democracy. Prerequisite: graduate standing or consent of instructor.

FRENCH 324. Leopardi, Baudelaire, and Modernity. 3-5 Units.

A close reading of Giacomo Leopardi's *Canti* and Charles Baudelaire's *Flowers of Evil* and *Paris Spleen* in the context of 19th-century Europe. Discussion of the poetry will be enriched by selections from their essays on literature and art and by notes from the *Zibaldone* and *Mon coeur mis a grave; nu*. Key themes and concepts include language, imagination, "noia," "spleen," and the oppositions between nature and civilization, modernity and antiquity. Taught in English.

Same as: FRENCH 224, ITALIAN 224, ITALIAN 324

FRENCH 327. Genres of the Novel. 5 Units.

Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukacs, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. *PLEASE NOTE: Course for graduate students only.*.

Same as: COMPLIT 327, ENGLISH 327

FRENCH 328. Literature, Narrative, and the Self. 3-5 Units.

The role of narrative in the well-lived life. Are narratives necessary? Can they, and should they, be literary? When might non-narrative approaches, whether literary or otherwise, be more relevant? Is unity of self something given, something to be achieved, or something to be overcome? Readings from Aristotle, Montaigne, Schopenhauer, Nietzsche, Camus, Sartre, MacIntyre, G. Strawson, Velleman; Ricoeur, Brooks; Shakespeare, Stendhal, Musil, Levi, Beckett, Morrison; film. Taught in English.

Same as: COMPLIT 328, ITALIAN 328

FRENCH 330. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Leacut;vi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Leacut;vi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English.

Same as: FRENCH 230, ITALIAN 227, ITALIAN 327

FRENCH 331. The Craft of Confession and Its Cultural Contexts. 5 Units.

Course examines medieval treatises and literature relating to the practice of confession as well as modern examples, with a focus on medieval concern with a sincere and authentic confession in theological, ethical, and aesthetic terms. Study includes expressions of subjectivity, institutional frameworks of confession, and the phenomenon as an instrument for political activity such as crusade. Texts: Augustine's *Confessions*, pastoral treatises, Aquinas, Arthurian romances concerning the grail legend, crusade lyric, and Foucault; films such as Dreyer and martyrdom videos. Taught in French.

FRENCH 335A. Animism and Alter-Native Modernities. 5 Units.

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour).

Same as: ANTHRO 335A, REES 335A

FRENCH 338. The Gothic in Literature and Culture. 5 Units.

This course examines the Gothic as both a narrative subgenre and an aesthetic mode, since its 18th century invention. Starting with different narrative genres of Gothic expression such as the Gothic novel, the ghost tale, and the fantastic tale by writers such as Walpole, Radcliffe, Sade, Poe, and E.T.A. Hoffmann, the course goes on to ask how the Gothic sensibility permeates a wide range of 19th century cultural phenomena that explore the dark side of Enlightenment, from Romantic poetry and art to melodrama, feuilleton novels, popular spectacles like the wax museum and the morgue. If time permits, we will also ask how the Gothic is updated into our present in popular novels and cinema. Critical readings will examine both the psychology of the Gothic sensibility and its social context, and might be drawn from theorists such as Benjamin, Freud, Lacan, Kristeva, and Zizek. Same as: COMPLIT 338, ENGLISH 338

FRENCH 339A. Technologies of Extinctions: Ecocides and Genocides. 5 Units.

This course will explore the relationship between history, ecological evolution and mass killing in the age of humanly caused species extinction. It will explore the universalization of the notion of the Jewish Holocaust, its use to integrate into genocide studies the Native American "spiritual" holocaust, the Japanese nuclear holocaust and the Rwandan genocide, and the ethical dilemmas posed by the ideas of biotic, animal and ecological holocausts. Anthropology and history of genocides and extinctions as well as posthumanist, multispecies theories will provide theoretical frames for the course.

Same as: ANTHRO 339A

FRENCH 345B. Africa in Atlantic Writing. 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condeacute;, Olinto), prose poetry (Ceacute;saire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Oulougem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B

FRENCH 350. Season and Off-Season of North-African Cinema and Literature. 3-5 Units.

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, language metissage and hybridization, ethnic interactions, gender relations, collective imagination and collective memory, nationalism, popular culture, religion, urbanism, post-colonialism, migration, and the Arab Spring will be covered. Special attention will be given to Moroccan cinema, and to the notions of francophone/maghrebi/"beur"/diasporic cinema and literature. Readings from Franz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Reda Bensmaia, Assia Djebar, Colette Fellous, Abdelkebir Khatibi, Michel de Certeau, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include *Viva Laldjeacute;rie*, *Rome plutot que vous*, *Les Sabots en or*, *Les Silence des Palais*, *Halfaouine*, *Satin Rouge*, *Le Chant des Marieacute;es*, and *Mort agrave; Vendre*. Taught in French. Films in French and Arabic with English subtitles.

Same as: FRENCH 150

FRENCH 358. The Great War: WWI in Literature, Film, Art, and Memory. 3-5 Units.

This course concerns how writers, artists, and other cultural producers understood and represented the traumas of the First World War and its aftermath. Rather than tracing a political or military history of the conflict, we focus on how the horrors of War (both in the trenches and on the home front) fostered broader social and cultural shifts, as people questioned the very foundations of European civilization. Most specifically, we'll explore the connections between the War and the emergence of post-War modernist movements, as writers and artists created new works to help them make sense of the catastrophe and the new world it wrought. Though France provides our starting point, we'll also travel beyond the Hexagon to incorporate other views and major works. Course readings will be in English, though students may elect to read works in French if they wish. Same as: FRENCH 258, HISTORY 231C, HISTORY 332C

FRENCH 368A. Imagining the Oceans. 5 Units.

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painleveacute; and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.

Same as: COMPLIT 368A, ENGLISH 368A

FRENCH 369. Introduction to Graduate Studies: Criticism as Profession. 3 Units.

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: COMPLIT 369, DLCL 369, GERMAN 369, ITALIAN 369

FRENCH 395. Philosophical Reading Group. 1 Unit.

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English. Same as: COMPLIT 359A, ITALIAN 395

FRENCH 398. Intensive Reading in French/Italian. 10 Units.

Enrollment is limited to French/Italian Ph.D. students. Course is designed for French/Italian Ph.D. students to prepare for department milestone exams.

Same as: ITALIAN 398

GSB General Interdisciplinary Courses

GSBGEN 10SC. Lives of Consequence. 2 Units.

This course examines how exceptionally creative individuals from a variety of domains (including the arts, sciences, politics, technology, and society) found a sense of purpose in their lives and then successfully pursued that purpose. In the creative domain, for example, we examine the lives of filmmaker George Lucas, Apple CEO Steve Jobs, lifestyle designer Martha Stewart, and master chef Thomas Keller. In the political sphere, we examine the lives of Margaret Thatcher, Martin Luther King, and Robert F. Kennedy. We also explore the work of individuals engaged in philanthropic efforts around the globe, including Melinda Gates and Paul Farmer. We complement the study of these individuals, and others, with a variety of readings from the social science literature on happiness, meaning, and creativity. Students interested in psychology, philosophy, creativity, the arts and sciences, or business should find the course particularly useful and engaging. Students, working individually and in small groups, will have a chance to apply the course concepts to their own lives, using a series of reflective writing exercises. Students will complete an independent research project on a topic or person of interest to them. They will make a presentation to the class on the basis of their research. The course is designed to be highly discussion-oriented and interactive. Students may take this course for either a letter grade or on a pass/fail basis. Letter grades for the course will be based upon the quality of the independent library research and class presentation, along with the quality and consistency of class participation. Both components (research and class participation) are equally weighted.

GSBGEN 111Q. Seminar in Entrepreneurial Communication. 3 Units.

College campuses have been the incubators for thousands of new business ventures. What makes the difference between a successful entrepreneur and an initial failure out of the gate? It's often not the quality of the idea, but rather the ability of the entrepreneurs to successfully communicate their vision to potential investors, employees, and customers. This seminar will explore successful and failed entrepreneurial communication. Students will learn the basics of persuasive oral and written communication, and then apply these principles to their own ideas.

GSBGEN 112Q. Leading Out Loud: an Exploration of Leadership Communication through an LGBT Lens. 3 Units.

Students of all sexual orientations are invited to apply for this unique new seminar looking at the distinct challenge LGBT leaders have faced in communicating effectively. Through the years, many individuals have led the struggle for gay rights and inclusion through a variety of different communication strategies and tactics; some were successful while others were not. This seminar course will explore some of the key leaders in the LGBT community and how they chose to communicate. Together we will search through a variety of film clips, transcripts, news reports, and other historical elements to see how the message, media, and moments work together. A number of guest speakers will also share their perspective on what it means to "Lead Out Loud." Heterosexual identified students as well as LGBT students are encouraged to apply; in fact, we seek to have a true diversity of opinions in the room as we explore this topic. All students will benefit from this exploration of how to communicate about controversial, sensitive, and personal subjects with greater strength and purpose.

GSBGEN 113N. The Economic Survival of the Performing Arts. 3 Units.

Even the most artistically accomplished and well-managed performing arts organizations--symphony orchestras, operas, dance companies, and many theaters--tend to live on the edge financially. In fact, most performing arts groups are organized as nonprofit organizations, because they cannot make enough money to cover costs and survive as profit-seeking businesses. In this seminar we will explore the reasons for the tension between artistic excellence and economic security, drawing on the experience of performing arts organizations in the United States and in countries (whose governments have adopted quite different policies toward the arts). Using economic concepts and analysis that we develop in the seminar, you will first examine the fundamental reasons for the economic challenges faced by performing arts organizations. In later sessions, we will consider and evaluate alternative solutions to these challenges in the United States and other countries. The seminar may include meetings with managers and/or trustees of arts organizations. By the end of the seminar, you will be able to assess the economic condition of an arts organization, evaluate alternative strategies for its survival, and understand the consequences of alternative government policies toward the arts. During the early part of the course, you will prepare two short papers on topics or questions that I will suggest. Later, you will prepare a longer paper applying concepts learned to one of the performing arts or a particular arts organization that interests you. You will submit that paper in stages, as you learn about concepts and issues that are relevant to your analysis. There will also be a final exam.

GSBGEN 199. Curricular Practical Training for PhD Students. 1 Unit.

GSB students are eligible to report on work experience that is relevant to their core studies under the direction of the Director of the PhD Program. Registration for this work must be approved by the Director of the PhD Program and is limited to students who present a project which in judgment of the Advisor may be undertaken to enhance the material learned in PhD courses. It is expected that this research be carried on by the student with a large degree of independence and the expected result is a written report, due at the end of the quarter in which the course is taken. Because this course runs through the summer, reports are due the 2nd week of October. Units earned for this course do not meet the requirements needed for graduation.

GSBGEN 202. Critical Analytical Thinking. 3 Units.

The Critical Analytical Thinking (CAT) seminar helps develop and hone the skills needed to analyze complex issues, to formulate well-reasoned arguments and to evaluate others' arguments. In sections of 18 students or less, you will analyze, write about, and debate a set of topics that exemplify the types of problems contemporary managers regularly confront. CAT will enhance your ability to identify critical issues when exploring challenging business and policy problems. The emphasis will be on developing reasoned positions and making valid, evidenced-based arguments that support those positions.

GSBGEN 203. Global Strategy. 1 Unit.

The economies of the world are ever more closely linked. Record levels of international trade and investment are achieved every year. Cross-border mergers and acquisitions are booming. The foreign exchange markets handle trillions of dollars of volume daily. Offshore provision of services has grown immensely. Host governments and non-governmental organizations operating internationally affect how companies do business far from their home bases and close to home. Nearly all businesses today are somehow connected to the world economy, and it is quite likely that the process of globalization will continue apace. To succeed as a leader in your career, you will need to be able to think systematically about the challenges and opportunities brought about by globalization. This course is designed to help you develop as a leader in this international environment. Our objectives are to help you: 1. To develop an analytic framework that you can use to understand how countries are different or similar in ways that matter to the globalization of business. 2. To understand how corporate strategies can deal with these differences and similarities, resulting in competitive advantage.

GSBGEN 208. Ethics in Management. 2 Units.

With leadership comes responsibility. This course explores the numerous ethical duties faced by managers and organizations. It combines analytical frameworks with the latest findings on human behavior to inform a wide range of ethical decisions and strategies. Readings include case studies, insights from experimental psychology and economics, and excerpts from or about major works of moral philosophy. Through online and in-class exercises, discussions, and personal reflection, you will reveal and assess your ethical intuitions, compare them with more explicit modes of ethical thought, and learn how to use ethics in business settings. A diverse set of ethical viewpoints will be considered with an emphasis on not only their implications for ethical behavior but also on the social and cognitive pitfalls that undermine the ability of business leaders to fulfill their ethical duties.

GSBGEN 239. MSx: Executive Communication Strategies. 2 Units.

Communication is crucial to the success of all leaders, but as you climb within an organization the ability to write and speak effectively is magnified. This course will explore how individuals can develop and execute effective communication strategies for a variety of business settings. This course introduces the essentials of communication strategy and persuasion at an executive level. We will study: audience analysis, communicator credibility, message construction and delivery. Deliverables will include written documents and oral presentations and you will present both individually and in a team. You will receive continuous feedback to improve your communication effectiveness. Through this highly interactive course, you will see why ideas, data and advocacy are combined for a professional, persuasive presentation. This practical course helps students at all levels of communication mastery develop confidence in their speaking and writing through weekly presentations and assignments, lectures and discussions, guest speakers, simulated activities, and filmed feedback. This section is specifically designed with the needs of a senior leader in mind and is only open to Sloan Students. Students who elect to take this course in the fall should not also take strategic communication in the winter or spring; the courses will have sufficient overlap in concepts and assignments.

GSBGEN 259. MSx: Ethics. 1 Unit.

With leadership comes responsibility. This course explores the numerous ethical duties faced by managers and organizations. It combines analytical frameworks with the latest findings on human behavior to inform a wide range of ethical decisions and strategies. Readings include case studies, insights from experimental psychology and economics, and excerpts from or about major works of moral philosophy. Through online and in-class exercises, discussions, and personal reflection, you will reveal and assess your ethical intuitions, compare them with more explicit modes of ethical thought, and learn how to use ethics in business settings. A diverse set of ethical viewpoints will be considered with an emphasis on not only their implications for ethical behavior but also on the social and cognitive pitfalls that undermine the ability of business leaders to fulfill their ethical duties.

GSBGEN 299. The Core Curriculum in the Workplace. 1 Unit.

GSB students are eligible to report on work experience that is relevant to their core studies under the direction of the Senior Associate Dean responsible for the MBA Program. Registration for this work must be approved by the Assistant Dean of the MBA Program and is limited to students who present a project which, in judgment of the Advisor, may be undertaken to enhance the material learned in the first year core required courses. It is expected that this research be carried on by the student with a large degree of independence and the expected result is a written report, typically due at the end of the quarter in which the course is taken. Specific assignment details and deadline information will be communicated to enrolled students. Units earned for this course do not meet the requirements needed for graduation.

GSBGEN 306. Real Estate Investment. 4 Units.

The major objective of this course is to provide the student with an understanding of the fundamentals of real estate investment. The course covers land economics, market analysis, finance, taxation, investment analysis, investment vehicles, real estate risk, development and urban design. Major land uses are discussed including apartments, retail, office, and industrial. The course is designed for students with limited or no background in real estate.

GSBGEN 313. Advanced Seminar on Social Entrepreneurship and Global Poverty. 3 Units.

As an "advanced" seminar, this course is designed for students with strong backgrounds or interests in social entrepreneurship as a tool for solving social problems. The learning format is based on active engagement. For most of the classes, students will be required to lead off the class discussions. The ultimate goal of this course is to make students (and the instructor) smarter about the strengths and limits of social entrepreneurship as a tool for social change. To this end, we will focus on global poverty reduction as a testing ground. During this process we will explore different theories, concepts, frameworks, and guidelines for effective social entrepreneurship to see whether, when and how these help. The course is organized into three modules. The first focuses on how social entrepreneurship fits in a broader framework of social change and social innovation. The second module provides a brief overview of issues, debates, and theories about poverty and development. The third module focuses on specific entrepreneurial interventions aimed at addressing some of the conditions that keep people poor or make them poor. This course allows us to dig into the complexities and challenges of effective social entrepreneurship. It will be taught in a discussion style. The reading will be demanding. So if you are not prepared to dig into the reading or to engage in active discussion, or if you don't feel like you bring relevant knowledge to add to the mix of discussion, this is not the course for you. It is not meant to be an introduction to social entrepreneurship. If everyone contributes, we will all emerge from the course with new perspectives and frameworks for advancing practice in this field. Only take this course if you are ready for an intellectual adventure and ready to make the investment it requires. This course will be taught by Greg Dees, his bio can be found here: <http://www.caseatduke.org/about/caseteam/#greg>.

GSBGEN 314. Creating High Potential Ventures in Developing Economies. 4 Units.

GSB314 - Creating High Potential Ventures in Developing Economies (4 Units)
 Note: Students who only want to participate in the seminar/discussion portion of the class and not do a team-based project (see details below) may enroll in GSB514 for 2 units.
 This course addresses the distinctive challenges and opportunities of launching high-potential new ventures in developing economies. Developing economies are attractive targets for entrepreneurs because many are just starting to move up the growth curve, and they offer low-cost operating environments that can be great development labs for potentially disruptive innovations. They increase in attractiveness when their political institutions stabilize and they become more market-friendly. At the same time, developing economies pose serious challenges. Pioneering entrepreneurs take on significant risks to gain early mover advantages. Specifically, entrepreneurs will not be able to count on the same kind of supportive operating environments that we take for granted in the developed world. They often face cumbersome permit and licensing processes, poorly developed financial and labor markets, problematic import and export procedures, unreliable local supply chains, weak infrastructure, corruption, currency risks, limited investment capital, lack of financial exits and more. This course is designed to help would-be entrepreneurs - both founders and members of entrepreneurial teams - better understand and prepare for these issues as they pursue the opportunities and address the challenges to start, grow, and harvest their ventures in these environments.
 GSB314 combines a seminar/discussion format (Tuesdays) with a team-based project (Thursdays). For the Tuesday sessions, students will read about and discuss the key challenges described above and potential solutions. Guests will describe their own startup and investing experiences in developing economies and answer questions. A framework based on the recently published World Economic Forum (WEF) report on "Entrepreneurial Ecosystems Around the Globe and Company Growth Dynamics" will be used to structure the course. Each student will prepare a short paper on a topic of interest from this portion of the course.
 The Thursday sessions is a team-based exercise for students who either have a specific idea or want to join a team of classmates to pursue more deeply an understanding of the team's country of focus and an initial investigation of the idea's viability. Students must come in willing to be team players and do the work necessary to complete this exercise over the full quarter. Each team member's contributions will be assessed by fellow teammates. Teams will be formed before the start of class or on the first day at the latest. The team will describe, in a final presentation, the challenges and opportunities in their country using the WEF framework. The final presentation will also include the team's thoughts on the viability of their proposed venture and how it capitalizes on their country's assets and addresses its challenges. A detailed business plan is not required; however, specific recommendations and plans for next steps that would be carried out during a 3 to 6 month field and market research study in the country will be part of the final presentation.

GSBGEN 315. Strategic Communication. 4 Units.

Business leaders have marketing strategies, expansion strategies, finance strategies, even exit strategies. Successful leaders, however, also have communication strategies. This course will explore how individuals and organizations can develop and execute effective communication strategies for a variety of business settings.
 This course introduces the essentials of communication strategy and persuasion: audience analysis, communicator credibility, message construction and delivery. Deliverables will include written documents and oral presentations and you will present both individually and in a team. You will receive feedback to improve your communication effectiveness. In the final team presentation, your challenge is to craft an oral presentation that will persuade your audience to accept your strategic recommendations. By doing this, you will see why ideas, data and advocacy are combined for a professional, persuasive presentation.
 This practical course helps students develop confidence in their speaking and writing through weekly presentations and assignments, lectures and discussions, guest speakers, simulated activities, and videotaped feedback. An important new feature of this course is that a team of external communications coaches work in concert with the professor to ensure that students get rigorous and individualized coaching and feedback.
 In this course you will learn to:
 - Create communication strategies at an individual and organizational level
 - Develop clearly organized and effective presentations and documents
 - Diagnose and expand your personal writing and oral delivery style
 - Adapt your delivery style to different material and audiences
 - Enhance oral delivery through effective visual aids
 Students at all levels of comfort and expertise with public speaking and business writing will benefit from this course. Waitlists have been long for this course and you're encouraged to keep that in mind as you make your super round selections.

GSBGEN 317. Reputation Management: Strategies for Successful Communicators. 3 Units.

Successful leaders have to conceive, author, rebuild, pivot, differentiate, and finally maintain a personal reputation to make a lasting, recognizable and powerful identity. Reputation Management will explore how you can effectively communicate to create, adapt and maintain your personal reputation. Your reputation remains fluid as you navigate your career decisions and interact with different professionals along your journey. The course is designed along three interlocking elements: reputation management literature, relevant case studies, and curated guest speakers. Students will learn the fundamentals of strategic corporate communication and the risk of not managing reputation effectively. These frameworks will be extended with specific case studies to illustrate where individuals, groups, and firms have faced the challenge of managing reputation effectively. We will focus on both traditional and virtual components of communication including the relevancy of online reputation management. Finally we will invite well-known leaders from a range of industries who have built and sustained their reputations, through effective communication. Each leader has had to manage their reputations in the public eye, and alongside their peers, supervisors, and employees. Guests will be invited to discuss their conscious and unplanned strategies of how to successfully communicate the kind of person, leader, innovator, or public figure they strive to be. Students will benefit from a rich blend of frameworks, cases, and speakers enabling them to successfully enter the work force and create their own, personal reputations. Students will create a case study drawn from their own experience (or personal network), of a reputation dilemma. A final assignment requires students to articulate their own reputation using any media of the student's choosing and share that with others in the course. Throughout the course students will post at least one blog drawn from class concepts and respond to posts by peers in the class.

GSBGEN 319. Advanced Topics in Philanthropy. 3 Units.

We will explore selected topics including: the roles of the philanthropic and nonprofit sectors in society; the justifications for tax-subsidized philanthropy; whether giving to the poor is morally obligatory or discretionary; barriers to the practice of strategic philanthropy; evaluating philanthropic outcomes; impact investing; alternative legal and organizational structures to carry out philanthropic programs, including donor-advised funds, direct giving, support organizations and foundations; and whether foundations should be designed and run to exist in perpetuity or to spend down corpus over a finite lifetime. The course will be structured around the perspective of a high net worth individual who has decided to devote substantial resources to philanthropy and wishes to decide which philanthropic goals to pursue and how best to achieve them. Although there are no formal prerequisites for the course, we will assume that students have experience working at a foundation, nonprofit organization, impact investing fund, or similar organization, or have taken an introductory course in strategic philanthropy such as GSBGEN 381. (There is sufficient overlap with Paul Brest's Autumn course, *Measuring and Improving the Impact of Social Enterprises* (GSBGEN 322), that students taking that course should not enroll in this one.) Finally, you should be forewarned that this course has a fair amount of reading - not more than is common in undergraduate and graduate courses, but more than is typical for MBA courses in the GSB.

GSBGEN 322. Measuring and Improving the Impact of Social Enterprises. 3 Units.

This course focuses on actionable measurement in government, nonprofit organizations, market-based social enterprises, philanthropy, and impact investing. **Actionable** means that the measurement is used by managers, investors, and other stakeholders in making decisions. The course explores the intersection of several ideas that seem to be in some tension with each other. (1) You can't manage what you can't measure. (2) Measurement is expensive and its results are often ignored. (3) "Not everything that counts can be counted and not everything that can be counted counts" (apocryphally attributed to Einstein). (4) "The more any quantitative social indicator is used for decision making, the more subject it will be to corruption pressures and the more apt it will be to distort and corrupt the social processes it is intended to monitor." (Campbell's Law). Specifically the course will include: Logic models, theories of change, strategic planning, monitoring, and evaluation. Measuring the social impact of governments, non-governmental organizations, and market-based social enterprises, and asking how philanthropists and impact investors can assess their own impact. Corporate social responsibility, socially responsible investing, and impact investing. Performance measurement, performance contracting, and social impact bonds. Techniques for improving the behavior and accountability of individuals and organizations. The classes will be taught mainly through business school case studies, which place the students in the position of CEOs, managers, and investors called upon to make major decisions.

GSBGEN 324. Leading with Mindfulness and Compassion. 3 Units.

The course explores the role of mindfulness and compassion in the workplace, and the contribution of these qualities to leadership. Topics addressed will include: How can mindfulness enhance clarity in purpose and productivity? What is the connection between mindfulness and compassion? Is compassion in the business world a strength or a weakness? Are compassion and profit motives fundamentally incompatible, or can they support each other? What does compassionate leadership look like? Can mindfulness and compassion be trained at the individual level, and built into company policy? How does self-compassion support effective leadership and recovery from setbacks? Guests from the corporate or non-profit sectors will discuss the challenges of integrating mindfulness and compassion into business strategy and the work environment. Guests from the scientific field will discuss research on mindfulness and compassion as they relate to real-world challenges. Participants in the course will engage with exercises from evidence-based programs targeting the development of mindfulness and the various facets of compassion.

GSBGEN 332. Sustainable Energy: Business Opportunities and Public Policy. 3 Units.

This course examines trends and opportunities in the sustainable energy sector with a particular focus on low carbon energy. We examine these trends in the context of technological change, emerging business opportunities and the parameters set by public policy. Specific topics to be examined include: The State of the Global Cleantech Industry- The Impact of Regulatory Policies and Tax Subsidies- Cost Competitiveness of Alternative Energy Technologies- VC Perspective on Sustainable Energy Start-ups- Project Finance- Fossil Fuels and Carbon Capture n-Renewable Energy, including Solar PV and Biofuels- Energy Efficiency and Storage. Preliminary course syllabus: www.bit.ly/1jehaA9.

GSBGEN 334. Family Business. 3 Units.

Family-controlled private and public companies are the dominant form of enterprise worldwide. Despite their prominence, teaching and research have traditionally focused on analyzing the widely-held model of the firm. This course explores the challenges and opportunities faced by family firms. It is taught by Leo Linbeck III, Lecturer since 2005 at the GSB and President and CEO of Aquinas Companies, LLC. The course balances managerial perspectives with general frameworks. The course is intended for four main audiences: (1) Students whose family owns a business. (2) Students who are considering working for a family firm. (3) Students who are interested in acquiring a private firm either directly (search funds, minority investments, etc) or indirectly (private equity, etc). (4) Students who seek to consult or provide professional services to closely held firms or their owners (wealth management solutions, management consulting, etc). The main objectives of this course are three. First, to understand the challenges and characteristics of family firms. Second, to provide a coherent and consistent set of tools to evaluate the most relevant decisions faced by family firms. Third, to focus on decision-making. The course uses a combination of case studies, guest speakers, lectures, and student presentations to explore the central ideas of the course.

GSBGEN 335. Clean Energy Project Development and Finance. 3 Units.

This case study-oriented course will focus on the critical skills needed to evaluate, develop, finance (on a non-recourse basis), and complete standalone energy and infrastructure projects. The primary course materials will be documents from several representative projects - e.g. wind and carbon capture - covering key areas including market and feasibility studies, environmental permitting and regulatory decisions, financial disclosure from bank and bond transactions, and construction, input, and offtake contracts. Documents from executed transactions are highly customized. By taking a forensic approach, looking at several different deals, we can learn how project developers, financiers, and lawyers work to get deals over the finish line that meet the demands of the market, the requirements of the law, and (sometimes) broader societal goals.

GSBGEN 336. Energy Markets and Policy. 4 Units.

Transforming the global energy system to reduce climate change impacts, ensure security of supply, and foster economic development of the world's poorest regions depends on the ability of commercial players to deliver the needed energy at scale. Technological innovation is a necessary but not sufficient condition for this to occur. The complex institutional frameworks that regulate energy markets in the United States and around the world will play a major role in determining the financial viability of firms in the energy sector. In this course we survey the institutional contexts for energy enterprises of all types and consider what kinds of business models work in each setting. We study in detail how markets function for carbon (assessing the advantages and disadvantages of different policy tools and considering in particular California's implementation of A.B. 32); electricity (with extensive discussion of wholesale electricity markets, energy trading, and issues of market power); renewable energy technologies (focusing on ways to manage intermittency and on how renewable energy businesses respond to government incentives); nuclear power (as a case study of how the regulatory process affects investment decisions); oil and natural gas (treating both conventional and unconventional resources and emphasizing the key role of risk management in an industry characterized by uncertainty and high capital requirements); transportation fuels (discussing biofuels incentives, fuel efficiency standards, and other policy tools to lower carbon intensity); and energy for low-income populations, for which affordability and distribution pose special challenges. A primary teaching tool in the course is a game-based simulation of California's electricity markets under cap and trade. Student teams play the role of power companies and compete to maximize return by bidding generation into electricity markets and trading carbon allowances. The objective of the course is to provide a robust intellectual framework for analyzing how a business can most constructively participate in any sector like energy that is heavily affected by government policy. Instructors: Frank A. Wolak, Director, Program on Energy and Sustainable Development; Mark Thurber, Associate Director, Program on Energy and Sustainable Development.

GSBGEN 337. Business Collaboration to Promote a Sustainable Food System. 3 Units.

This goal of this class is to redesign our food system through project-based, experiential education and entrepreneurship. Projects will focus on food justice, sustainable food and farming technology and disruptive models of production and distribution. The class will scale change by providing creative spaces and resources for students, faculty, and community partners to learn and apply design thinking to real-world opportunities in the food system.

GSBGEN 340. Financial Crises in the U.S. and Europe. 4 Units.

This lecture course will explore the U.S. financial crisis of 2008 and the European debt crisis of 2011-13. We will examine the causes of both crises, policies implemented during the crisis, and options for reform. This is an economic policy course rather than a pure economics course. It will focus on the practical intersection of economics, financial markets and institutions, policy, and politics. Topics we will examine include the following for the 2008 crisis: Did a global savings glut, international savings flows, or Fed policy cause the credit bubble? What caused the housing and mortgage bubbles? How does a bad mortgage turn into a toxic financial asset? Why and how did large financial institutions fail? What's the difference between a solvency crisis and a liquidity crisis? What is Too Big To Fail? Is it real? Why was Bear Stearns bailed out but not Lehman? Was the global financial system on the verge of meltdown in September 2008? How? Why? What was the TARP? The TALF? The CPP? The stress tests? What can we learn from comparing the US financial crisis with that in other major economies? How effective were various policy tools during the crisis? How have policies enacted and implemented since the crisis changed the outlook for the future? For the European debt crisis we will examine: The fiscal and economic situations in various European countries; The structures and history of the Eurozone; Policy options to address problems in troubled European economies; The interaction between European financial institutions and European governments; Options for longer-term reform of the Eurozone. There will be no exams. Students will write two individual memos and a group memo.

GSBGEN 346. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Same as: EDUC 377, PUBLPOL 317, SOC 377

GSBGEN 347. Education Policy in the United States. 3 Units.

This course is designed to introduce major policies defining the U.S. education system today. The policy areas we will cover include, but are not limited to, governance, accountability, choice, finance, and personnel policies for K-12 education. We will also briefly address early childhood education and higher education. We will concern ourselves with policies made at the federal, state, and local levels and consider the implications of these policies for students, families, and communities. We will discuss the goals of policies and the extent to which the intention, implementation and ultimate effects of the policies align.

GSBGEN 348. The Economics of Higher Education. 4 Units.

Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

GSBGEN 349. Introduction to the Politics of Education. 4 Units.

The relationships between political and economic analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, policy efficiency, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA).

GSBGEN 350. International Internship. 1-2 Unit.

.

GSBGEN 356. Dynamics of the Global Wine Industry. 4 Units.

This course will examine the world of wine with a fresh and contemporary lens. It will explore the market dynamics of this fascinating global industry. The goal of the course is to provide insight into the branding, marketing, and distribution dynamics that shape what consumers can buy and consume with a focus on the strategies of some of the world's leading wine brands. Attention will also be paid to the legal, regulatory, and market dynamics that define the U.S. wine industry as well as to issues of contested authenticity in the world of wine.

GSBGEN 359. Leading Your Life. 3 Units.

This course takes conventional managerial perspectives on the "strategic leadership" of organizations and applies them to the design and management of your life. Fundamental notions of "purpose" and "vision" are translated to the personal level in the form of "dreams" and "aspirations." Basic elements of strategy such as "scope" and "competitive advantage" are applied to help you evaluate fundamental choices about how you lead your life. Constructs such as "priorities," "commitments" and "resource allocation" all have analogues in individual life - as does the core objective of performance and success. The class begins with a hard-nosed and broad-based self-assessment of the quality of your life along a variety of dimensions including relationships, career, money, spirituality and health. Based on this assessment you will develop a strategy and a set of concrete goals for enhancing the quality of your life in targeted domains. The course consists of five intensive sessions designed to help you develop the skills and knowledge- but more importantly the insight and capacity - to be more strategic (in best sense of the term) and effective in how you lead your personal and professional life - meaning actively guiding, stewarding, and driving your results to create a life that is truly exceptional. Substantively, the course draws on a variety of different traditions including existential, humanistic, and positive psychology; personal growth, adult development, and the human potential movement; as well as the practice of life and executive coaching. Central themes and learning objectives include: * The development of self-awareness, self-acceptance, and self-control * An understanding of the power of choice and "authoring" one's life * The essential role of dreams and aspirations * The art and discipline of knowing and speaking your truth * The challenges and self-limiting impact of negative thoughts and self-theories * Developing a stance towards oneself and others that is rooted in grace and wisdom NB: While we expect the class to be helpful and of interest to a wide range of students, it involves a substantial commitment of time and emotional and intellectual energy. It is not for the faint of heart or those who are ambivalent about introspection, feedback, or constructive confrontation.

GSBGEN 360. Sports Business Management. 4 Units.

This course will examine the diverse management challenges facing the sports industry. The course will cover issues at the league level, the team level, the athlete/agent level, and the college level. The diverse constituencies with interests in sports issues (athletes, fans, media companies, advertisers, and legislators to name a few) will be discussed. Sports issues at a global level (the IOC) and both U.S. and outside U.S. will be covered. There will be coverage of evolving business ventures related to the sports industry (such as venture backed sports companies and sports networks). A key focus is on how the sports industry is similar to and different from other industries. Key concepts underlying the course are: value creation/value sharing; revenue ecosystem; virtuous circles and vicious circles; disruptive technologies; growth facilitators and growth inhibitors; leveragable assets/inherited liabilities; and entrepreneurship/new product innovations. Over 80% of the sessions typically will include a guest co-lecturer from the sporting industry.

GSBGEN 363. Fiscal Policy. 4 Units.

One of every five dollars in the American economy will be spent by the federal government this year. This course will examine how federal spending, taxes, deficits and debt affect the U.S. economy and global financial markets, and how the economy affects the federal budget. We will look inside the federal budget to understand entitlement spending, what causes it to grow so fast, how it could be reformed, and why that's so hard to do. We'll understand where the money goes -- how much goes to infrastructure, education, housing, health care, energy and the environment, parks, scientific research, national defense, and other needs. We'll look at the stimulus vs. austerity debate, both within the U.S. and between the U.S. and Europe. We'll look beyond partisan battle lines and explore various fiscal philosophies that sometimes split the political parties. We'll cover the federal budget process from developing the President's budget to enacting individual spending and tax bills, and discuss process reforms including spending and deficit reduction targets, a balanced budget amendment, and line item veto. We'll cover the major players in the budget debate and understand where the big and small budget decisions are made. We'll look at federal taxation, where the money comes from, how it affects the economy, and how it might be restructured. We'll examine the recommendations of the President's budget commission and see if we can predict what will become of its recommendations. And we'll see if we, as a class, can solve our nation's fiscal problems as Washington has so far been unable to do.

GSBGEN 370. Social Innovation Project. 2 Units.**GSBGEN 376. Work and Family. 3 Units.**

This course examines the strategies that highly educated women and men use to combine work and family and the strategies that managers and policy makers can use to help others strike a balance. Topics include the tradeoffs in becoming a stay-at-home parent, the economic value of unpaid labor, the consequences of balancing two high-powered careers and children, the economics of marriage, fertility, child care, and elder care, the gendered division of labor in the home, time-management, workplace innovations, and policy initiatives. Guest speakers add their own perspectives on these issues and describe the roles their organizations play.

GSBGEN 380. Real Estate Private Equity Investing. 4 Units.

This course is intended for any student interested in a career in managing, developing, or investing in real estate or private equity. The course covers cases involving the perspectives of general partners and limited partners; the attributes of successful real property investment firms; analyses of investment portfolios and individual transactions, primarily in the private equity real estate category. Cases will be global. Objectives include: How to construct a private real estate portfolio; How to assess the risks in projects and portfolios; How to perform relative value analyses of differing investments; How to manage troubled investments (when to "hold 'em and when to fold 'em"); How to manage a general partner firm. The course is divided into three modules with special emphasis on real estate financial analysis for transactions and portfolios. The first module will focus on portfolio construction issues and how to quantify whether the investor has been successful. The second module will focus on underwriting individual transactions and applying a relative value construct in determining the more attractive investments. The second module will also focus on the management of troubled investments, including deciding when to "double down" and how to protect investments already in place. The third module will address how general partners manage their firms.

GSBGEN 381. Strategic Philanthropy. 3 Units.

Appropriate for any student driven to effect positive social change from either the for-profit or nonprofit sector, Strategic Philanthropy will challenge students to expand their own strategic thinking about philanthropic aspiration and action. In recent decades, philanthropy has become an industry in itself - amounting to over \$300 billion in the year 2012. Additionally, the last decade has seen unprecedented innovation in both philanthropy and social change. This course explores the key operational and strategic distinctions between traditional philanthropic entities, such as community foundations, private foundations, and corporate foundations; and innovative models, including funding intermediaries, open-source platforms, technology-driven philanthropies, and venture philanthropy partnerships. Course work will include readings and case discussions that encourage students to analyze both domestic and global philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, knowledge management, policy change, and board governance. Guest speakers will consist of high profile philanthropists, foundation presidents, social entrepreneurs and Silicon Valley business leaders creating new philanthropic models. The course will culminate in an individual project in which students will complete a business plan for a \$10 million private foundation.

GSBGEN 382. Thinking Like a Lawyer. 3 Units.

Open to all non-law graduate students at the University, this course will provide non-law students an analytical framework for understanding the core concepts of the law and familiarize students with how lawyers analyze and structure their work. This course will be taught by Vice Dean Mark Kelman and Law School faculty in their areas of expertise, with one to two classes devoted to each topic. It will introduce students to some of the foundational principles of law and will review topics such as contracts, litigation, intellectual property, securities and employment law. No previous study of law or legal systems is required and there are no pre-requisites. It will be offered in the Winter 2012-13 quarter (1/8/13 - 3/13/13), with lectures twice weekly on Tuesdays and Thursdays from 1:30 - 3:00 pm at the Law School. Additional mandatory TA-led discussion sections will be taught on Tuesday and Thursday - students must also attend one of these TA sessions each week. Students will indicate their availability for specific sections on forms passed out at the first lecture. Readings and assignments will be posted to Coursework; there is no textbook. Grading: The class is graded on a pass/fail basis. There will be no final exam, but completion of problem sets on various topics as well as attendance at discussion sections will be used to determine grading. All students must complete 4 problem sets. Two specific problem sets are required of all students and the other assignments can be chosen from a list of available assignments.

GSBGEN 390. Individual Research. 1-4 Unit.

Need approval from sponsoring faculty member and GSB Registrar.

GSBGEN 392. Modern Military Strategy: the Changing Face of War. 2 Units.

The course's goal is to introduce students to the complexities of military strategy in the modern era. We will cover a variety of types of warfare, ranging from early modern wars, through the great wars of the twentieth century to the strategic challenges posed by present-day counterinsurgency and low-intensity conflicts. Military planners are required to act fast in an uncertain and highly lethal environment. We will examine how, and why, they react to innovations that completely transform their worlds, and try to understand what makes such strategic responses successful. In so doing, we will explore the interlocking relations between strategy and economics, technology, ideology, state apparatuses, and various forms of armed organizations. Course requirements: Students are required to submit 2 assignments: a mid-term project analyzing a successful military strategy, and a final project. The final project will be based on an in-class simulation of a strategic military campaign. Students will be required to submit individual analyses of the simulation, and present their analyses in class.

GSBGEN 393. Practicum in Applied Philanthropy: Achieving Impact from a Major Gift. 3 Units.

Giving away money well--i.e., achieving genuine planned impact in a measurable way--turns out to be as hard or harder than earning or investing it. In this seminar, students will decide how and to which nonprofit organization they will make a real \$100,000 donation. The students, guided by the instructor, will choose what readings and resources to draw on in making their decisions from a bibliography provided as well as other sources they develop. They will also discover, debate, discuss and decide what evaluation approach approach to use as well as what decision-making process to apply. Students are likely to be asked to research and present knowledge on relevant topics. And a final presentation to a donor trying to decide whether to fund part of the \$100,000 is likely also.

GSBGEN 507. Impact Investing in the United States and Other Developed Markets. 2 Units.

In the past decade the notion of impact investing has gained substantial popularity. But what is impact investing and what do impact investors actually do? This course will explore the current role of impact investing in developed economies, with particular focus on the United States. We will review the history of the field and explore the concept of a continuum of risk and impact. The course is designed to examine the practice of impact investing from multiple perspectives. It will broadly cover impact investing across multiple asset classes with a focus on venture capital impact investing. Selected practitioners from leading firms, organizations and portfolio companies will join for a portion of a number of classes to provide first-hand insight. The creation and measurement of social impact while answering financial return expectations, as well as the Limited Partner perspective in impact investing will also comprise a key part of the course's intellectual underpinning. Assignments are created to mimic the real-world tasks and challenges in impact investing, debate the issues that those in the field grapple with today and encourage students to explore how the industry can expand. There will be a final project and presentation for the course. Classes will include both presentation and dialogue, with frequent student participation strongly encouraged. Ideally, at the conclusion of the course, you will not only understand the qualitative aspects of impact investing and the role of metrics, but also the basic financial analysis that underlies investments made across numerous asset classes and in particular venture capital.

GSBGEN 508. Deals II. 2 Units.

This course applies economic concepts to the practice of structuring contracts. The course extends over two quarters, meeting three hours per week the first quarter and two hours per week the second quarter. Students enrolled in the course must take both quarters. All or most of the first quarter is spent in a traditional classroom setting, discussing economics articles and case studies of actual contracts that illustrate the concepts described in the articles. Beginning either at the end of the first quarter or the beginning of the second quarter until the end of the course (the "deals" segment of the course), the class explores the connection between economic theory and contracting practice by studying specific current deals. Students, divided into groups, study a deal beginning in the first quarter. Then, during the deals segment of the course, each group gives a presentation of its deal to the class. The following week, a lawyer or other participant in the deal will come to class and lead a discussion of the deal. When it works, the students' and the practitioners' analyses are mutually enlightening. The course examines new deals each year. Deals that studied over the years have included movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, and corporate reorganizations.

GSBGEN 510. Taking Stock and Moving Forward. 1 Unit.

This spring quarter elective is designed to help you prepare for a challenging, fulfilling, and meaningful future. GSBGEN 510 seeks to:nn1). Provide you with the opportunity and tools to take stock of what you have learned about yourself as a person and as a leader over the last 18 months at the GSBnn2).Expose you to research on personal and professional development and help you apply it nn3). Encourage you to reflect on what matters most to you, personally and professionally, and begin to determine how to achieve it, and nn4). Prepare you for the challenges and transition immediately ahead and, in so doing, learn how to manage life's big transitions in the future. nn nnWe will address four major life and career themes: nnn- Learning from Choices nn- Fulfillment and Meaningnn- Failure and Resilience nn- Transitions and Renewal nnnThis class is limited to 36 students. Each class will begin with conceptual input and an overview of that session's topic in the main classroom. Students will then be divided into three twelve-person break-out groups during the remainder of the class time. These groups are NOT T-groups, for those of you who took Interpersonal Dynamics, but rather discussion groups. Discussion will be of a reflective and personal nature. Each group will have 2 Group Leaders who are experienced executive coaches specializing in helping people through life and career transitions.

GSBGEN 512. Funding Social Impact: Methods and Measurement. 2 Units.

The past decade has seen an increasing interest in impact investments, which seek to generate financial returns at the same time as they have social (or environmental) impact. But how does an investor actually achieve impact? We explore this question through a framework that requires that the investee enterprise itself has net positive impact and that the investor's financial or other contribution increases that impact. We consider the challenges of measuring an enterprise's impact, and then turn to assessing the value added by investors, fund managers, and other intermediaries. The course will be taught mainly through case studies that consider investments in different asset classes ranging from those that expect below-market returns to ones that expect risk-adjusted market returns or better. We will look at investments at various stages, from R&D to start-ups to mature enterprises and entire sectors, considering the role of subsidies (for better or worse) and how an enterprise's social mission can be protected upon exit, and also will examine social impact bonds. The course is taught by Paul Brest, <http://www.law.stanford.edu/profile/paul-brest>. With its focus on assessing impact, it has a different mission than Matt Bannick's winter quarter course, *New Business Models in the Developing World*, which examines enterprises serving the base of the pyramid, and David Chen's spring quarter course, *Impact Investing: Strategies and Tools*, which broadly examines the domain of impact investments with emphasis on those yielding market returns. Students will find only slight overlap among the three courses.

GSBGEN 514. Creating High Potential Ventures in Developing Economies. 2 Units.

GSB514 - Creating High Potential Ventures in Developing Economies (2 Units)nnNote: Students who want to work on a team to investigate a specific new venture idea in addition to participating in the seminar/discussion sessions (see details below) should enroll in GSB314 for 4 units. nnThis course addresses the distinctive challenges and opportunities of launching high-potential new ventures in developing economies. Developing economies are attractive targets for entrepreneurs because many are just starting to move up the growth curve, and they offer low-cost operating environments that can be great development labs for potentially disruptive innovations. They increase in attractiveness when their political institutions stabilize and they become more market-friendly. At the same time, developing economies pose serious challenges. Pioneering entrepreneurs take on significant risks to gain early mover advantages. Specifically, entrepreneurs will not be able to count on the same kind of supportive operating environments that we take for granted in the developed world. They often face cumbersome permit and licensing processes, poorly developed financial and labor markets, problematic import and export procedures, unreliable local supply chains, weak infrastructure, corruption, currency risks, limited investment capital, lack of financial exits and more. This course is designed to help would-be entrepreneurs - both founders and members of entrepreneurial teams - better understand and prepare for these issues as they pursue the opportunities and address the challenges to start, grow, and harvest their ventures in these environments. nnGSB514 is a seminar/discussion format in which students will read about and discuss the key challenges described above and potential solutions. Guests will describe their own startup and investing experiences in developing economies and answer questions. A framework based on the recently published World Economic Forum (WEF) report on "Entrepreneurial Ecosystems Around the Globe and Company Growth Dynamics" will be used to structure the course. Each student will prepare a short paper on a topic of interest from the course.

GSBGEN 515. Essentials of Strategic Communication. 2 Units.

Successful leaders understand the power of authentic, memorable communication.nnnThis course uses the lens of oral communication and presentations, to introduce the essential elements of the strategic communication strategies that make authentic, memorable communication work.nnnFocusing on oral communication and presentation, we introduce the essentials of communication strategy and persuasion: audience analysis, message construction, communicator credibility, and delivery.nnnDeliverables include written documents, focusing on individual and team presentations, with students receiving continuous feedback to improve their communication effectiveness, and to sharpen their authentic leadership voice.nn nnThis highly interactive, practical course, is focused on feedback to help students at all levels of communication mastery develop confidence in their speaking and writing. Course includes presentations, assignments, lectures, discussions, simulated activities, in-class feedback, and filmed feedback.nn nnIn this course you will learn to:nn-Recognize strategically effective communicationnn-Implement the principles of strategic communication across different platformsnn-Develop clearly organized and effective presentations and documentsnn-Diagnose and expand, your personal authentic communication stylennnAs you make your super round selection, keep in mind that wait lists have been long for this course.

GSBGEN 516. Using Neuroscience to Influence Human Behavior. 1 Unit.

Why is it so difficult to change human behavior? Why is it that more than 80% of individuals who sign up for fitness classes drop out within a few weeks, even a few days? Why is it that despite the dramatic increase in devices and apps that are geared for changing behaviors, people still struggle to adopt and maintain new behaviors? The issue is not about a desire to change—it is about using the right methods and techniques to bring about habit change. The primary goal of this seminar is to gain a rich understanding of changing behaviors through frameworks and concepts that are grounded in neuroscience. In this seminar, we will examine (1) ways of characterizing different domains of behavior change, each requiring different methods and techniques, (2) why methods that often work in one domain are often unsuccessful in others and (3) how companies create habits in users and how one can leverage the power of technology to bring about behavior change.

GSBGEN 518. Dynamics of the Global Wine Industry. 2 Units.

This course will examine the world of wine with a fresh and contemporary lens. It will explore the market dynamics of this fascinating global industry. The goal of the course is to provide insight into the branding, marketing, and distribution dynamics that shape what consumers can buy and consume with a focus on the strategies of some of the world's leading wine brands. Attention will also be paid to the legal, regulatory, and market dynamics that define the U.S. wine industry as well as to issues of contested authenticity in the world of wine.

GSBGEN 520. The Frinky Science of the Human Mind. 2 Units.

The exponential growth in our understanding of the workings of the human brain has led to a rather startling and maybe embarrassing (even depressing) conclusion. While the human brain is unique among species in its ability to strategize, conceptualize, hypothesize, etc., it is now undeniable that most of our decisions, behaviors and experiences are shaped by instinctual brain systems. Thus, constituting the broad goals of this seminar, it behooves us to first understand the workings of the instinctual brain and then leverage this understanding to craft solutions for real-world issues from the vantage points of the "firm" as well as an individual, a leader and an innovator. Topics that will be covered from your vantage point include leadership skills including being effective at influencing key stakeholders within and outside the firm and being effective at making decisions, personal as well as professional. Topics that will be covered from the firm's vantage point include crafting superior value propositions at the decision as well as the experience phases of the "customer" journey, fostering an innovative organizational culture and developing incentives to increase employee engagement.

GSBGEN 521. Managing Under Uncertainty. 2 Units.

Uncertainty with changing opportunity shapes investment planning whether in financial firms, corporations or entities such as pension funds, venture capital and private equity, and, in particular, in non-traded assets or securities. We will develop an approach to understanding (1) capital allocation issues; (2) capital structure planning; (3) optimization policies with changing opportunity sets and adjustment costs; and, (4) the selection of levels of risk taking. These relate to what is needed to manage uncertainty. The following three areas: (1) developing feedback mechanisms to assist planning; (2) reporting mechanisms for management and investors; and, (3) compensation planning and business structure, relate to managerial effectiveness under uncertainty. These internal risks must be integrated with external risks such as geopolitical issues and fiscal and monetary policies in a global setting. I plan to introduce each of these from my theoretical and applied perspective. I will provide selective reading on each topic and a list of questions to provide follow on discussion. Students will work with me to flesh out not only the answers to these questions, but also provide additional questions and discover additional readings that are germane to expanding understanding and to following developments in each of these areas.

GSBGEN 524. Leading with Mindfulness and Compassion. 2 Units.

The course explores the role of mindfulness, self-compassion and compassion in the workplace, and the contribution of these qualities to leadership. Topics addressed will include: How can mindfulness enhance clarity in purpose and productivity? What is the connection between mindfulness and compassion? Is compassion in the business world a strength or a weakness? Are compassion and profit motives fundamentally incompatible, or can they support each other? What does compassionate leadership look like? Can mindfulness and compassion be trained at the individual level, and built into company policy? How does self-compassion support effective leadership and recovery from setbacks? Participants in the course will engage with exercises from evidence-based programs targeting the development of mindfulness and the practical application of the skills of self-awareness, self-compassion, and perspective taking in the context of work and relationships.

GSBGEN 525. From Business Concept to Business Plan. 1 Unit.

This entrepreneurship course is designed to teach students the basic processes and tasks required to construct a business plan en route to the creation of a new venture. The course is designed not only for students with immediate entrepreneurial aspirations, but for any student considering being involved in an entrepreneurial venture at any point in his or her career. The course is organized around a number of business concepts that we have selected. With your team, you will study one of the concepts, analyze it and evolve it into a business plan. The class comprises multiple student teams, each working on a different business concept. Each team will also review and critique the work of the other two teams.

GSBGEN 526. Finding the Right Match: Jobs, School, and Love. 1 Unit.

We will analyze markets that match people to other parties. We will spend one day each on the job market, higher education, and life partners. We will investigate the following issues: Can we expect a competitive environment to lead to an efficient outcome? If not, why are there "market failures"? What is the role of hidden information in the market? How can the problems in the market be solved? What are the business opportunities in this market? Do entrepreneurs entering the market make it operate better or worse? We will spend one day each on job markets, higher education, and dating/marriage markets. Each of these three days will be divided into three sections: Section 1: Lay out an underlying economic concept related to the market (such as Network Externalities, Signaling, Adverse Selection, or Search Theory) Section 2: Analyze a case or a few mini-cases focusing on players in the relevant market. Section 3: Discussion with a guest from the relevant industry. The fourth day will be a set of shorter analyses of other matching markets, potentially including pets, car sharing, apartment rentals, and the like. Also, if any students in the class have a related business idea they would like to share and discuss, we will analyze that for part of the final day. To determine whether you would be interested in the class, it may be useful to look at the instructor's book *Everything I Ever Needed to Know About Economics I Learned From Online Dating* (you can look inside on Amazon or find excerpts, articles, and videos online if you Google Paul Oyer book). Only one day of the class will focus on dating/partners, but the book will give you a sense of the types of issues we will address on any given day.

GSBGEN 527. Successful Creativity and the MBA Mind: A Scientific Framework for Engaging Personal Creativity. 1 Unit.

Creativity is one of the most coveted attributes of successful business leaders. It is also among the most widely sought attributes that innovative companies like Facebook, Google and Apple are looking for when they hire. Yet, creativity remains a mystery to many individuals. Who has it and who doesn't? Can it be learned? How do successful creators really think and work? Is there anything different or special about the way they organize their lives and manage their work? This new Week 0 course will engage these provocative questions and others. We will explore what recent research tells us about the roots of creativity and its developmental course over the life-span. We will also examine some of the prevalent myths regarding the nature of creativity. The course will take a variety of approaches to mastering these topics, including reviewing the latest academic research (including some of my own work in this area). These ideas will be illustrated, moreover, by provocative and inspiring case studies. You will also have an opportunity to think about your own personal creativity and how to develop it further. The course is designed to be very intellectually engaging, as well as offer you an opportunity for self-reflection lively discussion.

GSBGEN 528. Creativity, Problem Solving, and Innovation. 2 Units.

This course is designed to expose second-year MBAs to research on creativity in problem-solving. The course has straightforward practical goals: it will explore ways in which individuals, groups, and organizations can become more creative, in useful ways. In order to do this effectively, we will study hard-nosed research on problem-solving. We will not read articles entitled "The five-fold path to creativity." If there really were recipes or algorithms for reliably increasing creativity, I would certainly teach them. (Or more likely, I wouldn't need to: they would routinely be taught in the core curriculum of every MBA program.) Instead, we will study what cognitive and social scientists have discovered about novelty and effectiveness in problem-solving. Some of this work--e.g., Scott Page's examination of the value of cognitive diversity in teams--will have relatively direct action-implications. The pragmatic implications of other research--e.g., on organizational norms for resolving conflict--will be more indirect. Because the course's practical goal is easy to state but hard to achieve, some patience is required. As indicated above, we will study creativity at three levels: individuals, groups and organizations. Because there is pretty good evidence that different kinds of factors are prominent at these different levels, the course's approach is multi-disciplinary. We will read articles and books by cognitive psychologists and cognitive scientists, social psychologists, organization theorists, and perhaps historians who have studied industrial innovation. Disciplinary boundaries are irrelevant: any work that articulates a significant claim about pragmatically useful creativity and backs up that claim with a good argument is grist for our mill. Because the course focuses on creativity that makes a difference--i.e., that ultimately makes some organizational stakeholder better off--we will also study how innovations get selected. This inevitably means studying how new ideas get criticized and sometimes discarded. This process is less fun than generating new ideas, but given that brand-new ideas are usually flawed in one way or another, critical and hard-headed scrutiny of innovations is vital. Hence, we will examine psychological, political, and organizational obstacles to the effective criticism and evaluation of novel solutions, and we will also look at some ideas on how these obstacles might be reduced. Classes will be run seminar-style: they'll focus on examining the readings closely and critically. Understanding what a study does not establish is sometimes just as important as understanding what it does establish. Hence, I will expect everyone to read carefully; skimming won't cut it. This effort will probably result in a rather deep and sophisticated comprehension of the topic. Given the importance of creativity and innovation in modern organizations, that should be adequate return for hard effort.

GSBGEN 529. Leading With Agility. 2 Units.

Can you actually prepare for unexpected make or break career challenges you will face in the years ahead? By definition, the future is unpredictable, but understanding and grappling with the types of challenges seasoned leaders describe as the toughest they've faced can help to prepare one for the emotional demands that come with increasingly broad leadership responsibilities. Those challenges include role and team transitions, confrontations and conflicts, turning around poor performance (in individuals or groups), and recruiting or developing talent. This class will draw from a collection of video cases, role plays and exercises, based on real-life examples that are the product of hundreds of interviews conducted with leaders by the school's Center for Leadership Development and Research. The goal is to help students prepare for some of the gut-wrenching choices they will make in leadership roles, while evaluating how their mental and emotional responses influence their own managerial judgment.

GSBGEN 530. Learning from Experience. 1 Unit.

It is commonly believed that experience is a great teacher. But is it? Do we always learn what we can or should from experience? Research on this question suggests that the answer is no. Often we do not learn all that experience has to teach us and often the lessons we draw from experience are the wrong ones. This seminar examines what research suggests about how managers and others learn and don't; learn from experience. Among the questions we will consider are: (1) How does experience teach? (2) What are the impediments to learning from experience? (3) How can we learn better from our experiences? (4) How can we have better learning experiences; that is, design and structure our experience and that of others so that it produces better learning?.

GSBGEN 531. Global Trip Leadership. 2 Units.

This course is open only to leaders of the Service Learning Trips or Global Study Trips. The course will meet nine times only on Tuesdays (because of the limited time and the fact that the course is experientially based, attendance at all classes are required). In addition, students will meet with a Master Coach just before their trip to review how they are operating as a team. There will be a final lunch meeting in January where the Winter Trip leaders will share their experience with the Spring Trip leaders. The purpose of this course is to help trip leaders in the planning and conducting of the trip so as to maximize the learning for the trip participants and the trip leaders as well as increasing the overall success of the trip. A range of topics will be covered including: articulating a vision for the trip, developing their team as a high performing team, making quality decision, resolving interpersonal issues (within the team and with participants), understanding how to make full use of the faculty member and dealing with the myriad of issues that are likely to arise. Class time will mainly be spent discussing and role-playing a series of short cases that have been developed around issues that have come up in past trips. These role plays will be the basis of peer feedback. The cases will be supplemented by short lectures to provide the conceptual underpinning. There will be a very modest reading list.

GSBGEN 532. Cleantech: Business Fundamentals and Public Policy. 2 Units.

This course examines trends and opportunities in the cleantech sector with a particular focus on low carbon energy and carbon emission reductions. We examine these trends in the context of changing technology, economic fundamentals, and public policy. A particular focus of the course will be on the role of regulation and tax subsidies in determining the cost competitiveness of clean energy sources. Specific topics and industries to be analyzed include: Expanding role of Natural Gas in Electricity Generation; Carbon Capture by Fossil Fuel Power Plants; Solar PV industry; Cellulosic Biofuels; Energy Efficiency; Clean Energy Policies and Investment in China.

GSBGEN 533. Sustainability as Market Strategy. 2 Units.

The increasing social emphasis on environmental sustainability creates both dilemmas and opportunities for firms. Recognizing that sustainability means a focus on not just the environment, but also on broader issues of corporate social responsibility, we will examine the ways in which some companies are developing a "sustainability strategy." We will also consider the way in which companies are profiting from such a strategy with an eye toward understanding the conditions under which such a strategy can generate profits for firms. We will also focus on the way in which many companies are partnering with non-governmental organizations to develop business strategies that focus not only on profits, but also on the environment and social responsibility.

GSBGEN 535. Emerging Network-Based Consumer Services. 1 Unit.

This seminar considers the economics, development, and growth of emerging networks that use technology to connect people (typically sharing a purpose) to one another. Each day of the seminar will focus on a different company (or a few companies) and a different theme. The set of companies is preliminary, and is shown here just to illustrate a potential example.
 nn- Network Platforms/Zynga: Zynga is one of the leading and most advanced network-based consumer services. It has been struggling recently with growth and monetization on Facebook. We'll examine Zynga's business model, Zynga as an application vs. Zynga as a platform, and the choices Zynga has made along the way.
 nn- Metrics/LinkedIn: We'll examine the use of metrics to track application growth, engagement and monetization. We'll also compare the use of a proprietary social graph vis-a-vis Facebook's, considering the choices made by LinkedIn vs. a few Facebook apps.
 nn- Growth and Evolution: We'll discuss how network-based consumer services can grow and evolve their business models using a few company examples.
 nn- Monetization/Pinterest: We'll analyze interest and content networks, focusing on how they may be monetized vis-a-vis Facebook.
 nnSome of the seminar topics overlap topics covered in OIT 256 or OIT 356. Students who took one of these courses will not be allowed to take this course.

GSBGEN 537. The Role of Business in Sustainable Food Systems. 1 Unit.

The food system in the United States has contributed to a number of societal and ecological problems, from increasing rates of diet- and food-related illnesses, to "food deserts" in our inner cities, to the loss of farmland to urban sprawl, to agricultural chemical runoff into our water sources, to unjust farm labor practices, to the overuse of antibiotics, to an enormous amount of food waste, to questionable animal husbandry practices, and more generally to a diminishing level of diversity among the people, plants, and animals on whom we rely for our sustenance. These problems create both dilemmas and opportunities for business. This course will focus on how some companies (both for-profit and non-profit) are working to try to repair the damaged food system in the United States. Topics include (but are not limited to): organic and biodynamic agriculture, the economic demise of the family farm, the health effects of our current system of food production and the habits it has engendered, and opportunities for entrepreneurship and new modes of food distribution. We will have several guest speakers, field trips, and cooking/food preparation workshops and demonstrations.

GSBGEN 538. Energy Policy, Markets, and Climate Change. 2 Units.

This course will consider world energy markets as well as national and international policy challenges for the energy sector, in the context of climate change and its probable impacts. Case studies, readings, and class discussions will explore the history of fossil fuel price changes and their effects on trade, the influence of subsidies and tax incentives on the prospects for renewable alternative sources, and the role of governments in setting import and export policies. The class will consider such questions as: What policies are adopted when energy developments confront other land values, or are associated with human or environmental risks? What role do Public Utility Commissions play and how do international agreements influence the sector? How do new technologies for improving energy yield, building efficiency, and transportation affect use? What is the role of regulation in establishing patterns of energy use? Cases may require students to play such roles as: (1) an executive director of an environmental non-governmental organization considering approval for construction of a large solar-thermal facility in the Mojave Desert; (2) the chief executive officer of a company drilling shale deposits for natural gas developing his case for a governor; (3) a Senator evaluating her position on converting a port to permit US coal to be exported to China.

GSBGEN 541. Problem-Solving and Creativity. 2 Units.

This is a project-based course on problem solving and creativity. It is expected that everyone who takes the class will work on some significant problem that's currently ongoing (e.g., the design of part of a complex project, a difficult negotiation over a new venture). The course is designed to achieve two goals. First, it will give you tools that should increase the probability that you'll make (hopefully substantial) progress on your problem. Second, it will introduce you to research that explains why it's sensible to try those tools on hard problems---i.e., the point of those tools.
 nPlease note that the first goal is stated rather cautiously. There are good reasons for this. I expect that most students will be working on hard problems. (Everyone in the class will be getting help from classmates on their particular problem; why bother your peers with an easy problem that you could solve yourself?) An important idea in cognitive science, Newell's Law, says that magic doesn't exist: if a problem-solving method is powerful (very likely to solve a certain type of problem), then it only works on a narrow class of problems. So... this course will not give you tools that are both powerful and general. It can't: such tools don't exist. Happily, improving your problem-solving skills, at least in certain domains, is possible, and that's what the course aims to do.
 nProgress on hard problems usually requires help from friends and colleagues. Virtually all researchers of creativity agree that most innovations that are both bold and useful involve multiple problem solvers. This course will implement this important pattern by requiring every student to help some classmate with their problem. Carrying out this help will be an important part of your grade.
 nAnother important empirical regularity in the field of innovation is that when problems are hard many (perhaps most) candidate-solutions don't work out. It's easy to accept that about other people's ideas; about my own, not so much. So a vital component of effective problem-solving is tough-minded evaluation. This implies rejecting bad ideas or bad parts of a would-be solution. Hence, at the end of the course you will be required to evaluate the progress that a classmate has made on his/her problem and to explain your assessment. (For obvious reasons you will not evaluate the same person you're helping.)
 nIn sum, every student will do three things in this course: generate new ways to make some progress on a problem of their own choosing; help somebody else work on their project; evaluate somebody's progress.

GSBGEN 542. How to Tell a Story. 1 Unit.

"Tell me the facts and I'll learn. Tell me the truth and I'll believe. But tell me a story and it will live in my heart forever." Stories are all around us. Stories move us, make us feel alive, inspire us to be more than we would be otherwise. As famed screenwriting coach and author of the screenwriting bible, *Story*, McKee says: "Story is not only our most prolific art form, but rivals all activities - work, play, eating, exercise - for our waking hours. We tell and take in stories as much as we sleep - and even then we dream." ** Despite our love for stories, most of us leave stories to "storytellers" - fiction writers, journalists, and film makers. But we all have this skill. We simply need to hone it. The question is - how can we hone it? In this seminar, we will break down the basic elements of storytelling, elucidate the power of the verbal as well as the visual, and discuss how storytelling helps build brands and organizations. For the final project, you will create tell a 3 minute story about (a) your organization, (b) your brand, or (c) you. Thus, the goals for this class: (1) Understand what makes bad stories, okay stories, and great stories. (2) Learn how to create storyboards. (3) Gain practice in crafting and telling a compelling 3 minute story about yourself. You will get feedback by filmmakers on what went well, went poorly, and how to take the story to level further. ** Robert McKee, *Story*, (Regan Books: 1997), p. 11.

GSBGEN 543. The Power of Stories in Business. 2 Units.

In this class, we will illuminate the power of story in business by revealing the key elements of storytelling, discussing the power of the verbal as well as the visual, and uncovering how storytelling helps build brands and organizations that align their brand value proposition with their internal culture. This skill is important if you are a new venture trying to build a reputation, or you are an established company trying to grow and innovate.

GSBGEN 544. The Role of the Modern General Counsel. 2 Units.

The news is filled with reports of one corporate crisis after another - names like BP, Goldman Sachs, Bank of America, AIG, Siemens, Toyota, and issues like backdating, bribery, antitrust violations, insider trading, procurement fraud, health and safety violations, consumer class actions and the like. And often the cry is heard - where are the lawyers? This course explores the evolution of the role of the general counsel of major American public companies and, more broadly, the expanding role of in-house counsel. These are the lawyers in the trenches, on the front lines of American businesses. Each week, we'll review another dimension of the general counsel's job. We'll consider how general counsel today play an important role on the executive team of major companies and explore the different ways in which general counsels manage large corporate legal departments and direct functional legal areas like litigation, IP, corporate and securities, M&A, environmental and employment law. We will also examine the professional responsibilities and legal obligations of the general counsel -- including the delicate and sometimes conflicting reporting relationships to the CEO and the board of directors -- and consider how an in-house legal department fits into a corporation's organizational structure and how it supports the company's operating units on a day-to-day basis. We will explore the general counsel's role in internal investigations, regulatory investigations and compliance programs, and governmental affairs. We will also consider current practices in how in-house lawyers select, collaborate with and evaluate outside counsel. The class will meet weekly and we will invite current and former general counsels to join us occasionally for our discussions. Each student will be expected to participate actively in class discussions, and will be required to complete two projects, each in collaboration with three other students and submitted as a team, presenting how the team would address a complex set of legal and business issues. The course grade will be based 1/3 on class participation and 1/3 on each of the two team projects.

GSBGEN 548. Crafting Your Life Story. 1 Unit.

This new seminar explores how the "life stories" we tell ourselves influence the choices we make in life, including the personal and professional choices we make, the ambitions we pursue - and, ultimately, our very success. Together, we will look at the science and art of what might be called "generative autobiography" - finding the particular life story that helps you pursue a more consequential and meaningful life. In developing this idea, you will learn to identify the essential elements of a great life story. You will learn how to craft a better, more creative life story for yourself, and you'll learn also how to tell your life story more effectively to other people in order to engage them more deeply and lead them more effectively. The course will include a series of outstanding readings from psychology, philosophy and literature on how to think more creatively about the life you are living now - and the life you hope to live going forward. One distinctive feature of this new seminar will be the extensive use of materials from award-winning films to illustrate the major themes and dilemmas of telling a good life story. We will examine the lives of a number of fascinating high achievers from business, science, politics and the arts. The course also includes several exercises designed to help you craft, refine, and project your life story. The seminar will be very discussion-oriented and very engaging!

GSBGEN 550. Issues in Leadership. 2 Units.

This seminar will explore the nature and role of leadership in organizations. We will examine such questions as (1) What is leadership? (2) Why is it important? (3) What is it that leaders actually do? (4) How do they do it? (5) How are leaders developed? (6) Why do leaders succeed or fail? (7) What about your potential for leadership and your strategy for developing it? Our primary objective in this seminar is to achieve a deeper understanding of the nature and role of leadership in organizations. Our approach will be to examine a small sample of the literature, together with the amazing story of Ernest Shackleton and his Endurance crew, and then to probe several key questions through lively class discussion. The discussion, informed by the readings and also by our collective experiences, will seek to develop some general principles and observations about leadership - particularly about how you might better develop yourself as a leader.

GSBGEN 551. Innovation and Management in Health Care. 2 Units.

The health care system accounts for over 17% of US GDP and is one of the fastest growing segments of the economy. This two unit class focuses on the interplay and tension between the main players in the health care field - providers of health care services (individual doctors, group practices, integrated health care systems), payors (insurances companies, employers, consumers, and government), patients, and innovator companies (biopharma, medical device, diagnostics, and health care IT). The course is designed for students with a broad diversity of backgrounds and interests who want to better understand the health care business and system. No prior experience in the health care or medical field is assumed or needed. The focus of the class will be primarily on the US health care system, but there will be limited discussion of non-US systems as well. The course is divided into four modules: n1. An overview of the US Health Care System and the interplay between payers, providers, and innovators n2. Provider delivery models, health care information technology, and incentive structures n - The relationship between quality, cost, and access n - Integrated systems and fee for service models n - New IT technologies, including electronic data records n - The role of information and incentives n3. Innovator business models and issues n - Financing and managing new product development and portfolio management n - Clinical trial management and gaining regulatory approval n - Marketing, communication and sales strategies (both physician and patient communication and sales) to drive product adoption and gain third party reimbursement n - Business models to drive innovation n4. Health care reform and technological innovations n The class will be taught primarily from the perspective of a business person operating a company rather than that of a policy maker, academic, or investor. While there will be a few lectures to provide background and frameworks for course topics, most classes will involve a case discussion and prominent guest speakers from the health care industry. Past speakers have included CEOs and senior executives from Genentech, UnitedHealth, Intermountain Health, Genomic Health, PracticeFusion, GE, Safeway, Gilead, Intuitive Surgical, and Venrock. n The class is taught by Rob Chess, a health care entrepreneur, Chairman of Nektar Therapeutics, and a lecturer at the GSB since 2003.

GSBGEN 552. Winning Writing. 2 Units.

This two-week, six-session workshop will offer techniques and practical in-class exercises for writing better -- better memos, emails, feedback for colleagues, news releases, responses to media questions, opinion pieces and social-media postings. Glenn Kramon, a senior editor who has helped New York Times reporters win 10 Pulitzer Prizes, will teach the course along with accomplished journalists with expertise in powerful, persuasive writing for business. They will provide not only helpful tips but constructive feedback on students' work, which will be completed mostly in class. They will also share thoughts on how best to work with the news media.

GSBGEN 553. Intrapreneurship for Sustainability: Driving Environmental Change from Within Corporations. 2 Units.

An organizational change approach to the development and introduction of new corporate strategies and product lines that have a sustainability benefit. Students will be given the opportunity to work on real-world cases to help them effectively incorporate sustainability strategy into their chosen career path. n Learning Objectives: na. Articulate the sustainability challenges facing today's corporation in terms that will make executives receptive to action nb. Employ organizational change management techniques to spur environmentally-friendly product and process innovation nc. Expand the repertoire of techniques for priming the market for new sustainability offerings nd. Refine collaboration skills within multi-disciplinary teams ne. Improve oral and written presentation skills for executive audiences n This class is appropriate for those seeking positions within large enterprises or business consultancies, or those seeking to refine their thinking on social entrepreneurship.

GSBGEN 554. Savvy: Crafting Effective Communication. 1 Unit.

This course is designed for individuals interested in improving their communication skills. As a leader, you will spend the majority of your time communicating with others - team members, subordinates, clients, and other constituents. Right now, you probably don't spend much time thinking about the way you communicate, nor are you likely, in the corporate setting, to get honest feedback on the messages you send. Yet the quality of your communications will have a large impact on your overall effectiveness. This class will help you appreciate the nature and complexity of communication and provide guidelines for both improving your communication style and recognizing the unique styles of others. n The class is based on the assumption that organizations are fundamentally political entities, and interpersonal influence through communication is a key mechanism by which things get done. Effective leaders don't simply lead by fiat - they often must influence and persuade others to go along with their ideas. In each session, we'll consider a number of well-studied tactics of interpersonal communication. For each tactic, we'll talk about why it works, when it works best, and what its limitations might be. We'll discuss how you can put these approaches to work in order to support your attempts at persuasion and how to resist them as an unwilling target of persuasion. n After taking this course, you will be better able to: (1) identify strategies for crafting effective communication in the form of everyday conversation, written work, and public presentations, (2) develop techniques for building strong, long-term alliances with your colleagues, and (3) become more persuasive in advancing an agenda, acquiring resources, or eliciting compliance from others. These skills will be invaluable to you throughout your career.

GSBGEN 555. Designing Empathy-Based Organizations. 1 Unit.

Organizations are often designed for efficiency or optimization of workflow, not for user empathy. How do you design for both? This pop-up class is geared toward the design (or redesign) for empathy-based organizations. It will teach early-stage leaders about the three basic levers they have for organizational design/re-design: organizational culture, organizational structure (informal and formal), and organizational routines. Emphasis will be placed on how to align these levers to facilitate communication and to structure workflows for empathy-based organizations. The class will work with a fast-growing, design-driven startup, which will articulate to students its goals as a business, as well as its challenges in designing the business. Students will interview and observe multiple stakeholders from diverse teams and use design thinking to address uncovered needs and insights with respect to organizational design.

GSBGEN 557. Authenticity in Markets: The Case of the Wine Industry. 1 Unit.

Evidence has mounted that consumer care about issues of authenticity in many kinds of markets. This seminar explores the meanings of authenticity in market contexts. It emphasizes the idea that authenticity attaches as much or more to the characteristics and actions of producers than to characteristics of products. Although these issues arise in many kinds of markets, they are especially intense for food and drink. So the seminar emphasizes these contexts, especially the wine industry. In wine production we see battles over the soul of wine, what it means for a wine to provide an authentic representation of terroir, national traditions, and so forth. Especially interesting for understanding authenticity is the recent success of biodynamic producers.

GSBGEN 561. Sports Business Financing. 2 Units.

Course examines investment and financing issues that face a diverse set of participants in the sports industry (defined very broadly). A key theme is using general financial concepts to better structure decision making in the sports industry. Specific topics illustrate the broad set of perspectives considered: Player Payroll Financial Dynamics; Asset Appreciation Opportunities; Assessing the Value of Players (& General Managers); Investment Syndicates in Sports; Investing in Startup Leagues ; Financial Valuation of Sporting Clubs; Financial/Strategy Analysis for a Mixed Martial Arts (MMA) Venture; and On-Line Sports Venture Evaluation. One hand in requires feedback to the CEO's of several new sporting ventures about ways to expand their opportunity set; the CEO's come to a class and present their venture. The second hand in is a case study of a sports investment where there was sizable value creation or value destruction. Each session typically is co-taught with an industry visitor.

GSBGEN 562. Sports Marketing. 2 Units.

This Sports Marketing course combines (a) a focus on key marketing themes (such as branding, customer attraction/retention, and celebrity power) and (b) an analysis of marketing in diverse areas of the sporting industry: the league level, the team level, the player level, the network level, the advertiser level, the sponsor level, the fan level, and the media level. The nine sessions cover the following: Corporate Sponsorship; Online Marketing; Events as Brand Building Investments; Marketing to Youth; Sports/Entertainment Nexus; Club Marketing Strategies; Brand Revitalization & Strengthening; Motor Sports Marketing; Marketing in a Web 2.0/Social Networking World. Each session is typically taught with an industry visitor.

GSBGEN 564. The Entertainment Industry - An Intersection of Art and Commerce. 2 Units.

In this seminar we will explore the intersection of art and commerce in the entertainment industry. We will look at creating films and television programming that are artistically meaningful and/or have the potential for commercial success. Films are also increasingly used as a tool for social change, and we will examine this power. The entertainment industry is one of enormous importance - both from a business and cultural standpoint, and has influence in virtually every sphere of our society. Sometimes the industry can seem baffling, mercurial, and characterized more by madness than method. But despite its uncertainties, Hollywood does have its own rules, rhythms, methods and strategies - and examining and evaluating them will be a key part of this seminar. This is a time when old formulas are being reconsidered or jettisoned, and emergent technologies are bringing further changes - and tracking and analyzing them, will also be part of the class. As a writer, producer, director in film and television, I will also bring my own experiences into the classroom, where I'll discuss my work (including directing, writing, acquiring financing, producing films, executive producing a network series, etc.), and its rewards and challenges, and look at these experiences thorough the intersection of the business and creative sides of the industry. The students in the seminar, working either individually or in small groups, will be asked to generate and present proposals for projects that have artistic and/or commercial merit, and we will examine how they may best fit into the industry - to gain widespread distribution or have social influence. The seminar will cover the entertainment industry from multiple angles and be very discussion oriented.

GSBGEN 565. Political Communication: How Leaders Become Leaders. 2 Units.

Politics, perhaps like no other arena, provides a rich and dramatic laboratory for studying the art and science of influential communication. Whether it is a local school bond election or a Congressional race, a Presidential debate or a State of the Union Address, the demanding communications of politics provide insights into our own strengths and gaps as a communicator and leader. Political campaigns, by their very nature, are highly visible, oriented toward very specific objectives, and increasingly leverage a variety of new media platforms. They are often emotionally charged, and rife with conflict and drama. The principles of political communications transcend politics, and are useful guides for leaders in business, the non-profit community, as well as government. How candidates, elected officials, and leaders in all kinds of organizations communicate vision, values, and experience, as well as how they perform in very fluid environments, not the least of which may be during a crisis, has a great deal to do with their career success. In its seventh year, this highly interactive course allows students to explore both theory and practice behind effective positioning and presentation. Students will analyze and evaluate both successful and unsuccessful communications strategies of political campaigns and candidates. They will explore historic examples of US Presidential debates, from Nixon/Kennedy to the present. Further they will experience political events as they happen -- with each class drawing lessons from political developments around the nation and the world. Students will also hone their own strategic communications skills in a activities requiring both written and spoken communication. This is not a course in political science, American government, or in public speaking. However, the engaged student will gain insights into those areas as well. The course is taught by David Demarest, Vice President of Public Affairs for Stanford University. Demarest has broad communications experience across the public and private sector in financial services, education, and government. After serving as Assistant U.S. Trade Representative, and Assistant Secretary of Labor in the Reagan Administration, in 1988 he served as Communications Director for Vice President George H. W. Bush's successful presidential campaign. He then became a member of the White House senior staff as White House Communications Director. After leaving government in 1993, he spent the next decade leading communications for two Fortune 50 companies, before coming to Stanford in 2005.

GSBGEN 566. Real-Life Ethics. 2 Units.

GSBGEN 566 will be an elective course offered to 2nd-year MBA and MSx students. The goal of this course is to improve students' judgment in confronting ethical situations encountered in the normal course of business activities. Classes use the Socratic method to examine ethical questions and build analytical skills. The course aims to sharpen moral reasoning and build judgment without favoring a particular position. The course will be taught by Mark Leslie and Peter Levine, Lecturers, and will include additional guest lecturers in many of the specific areas. The course, which will be case-based, will involve frequent student-to-student and student-to-instructor role-playing. Cases will be drawn from a wide selection of business situations, including such topics as raising venture capital, managing major industrial customers, product distribution agreements, board of director fiduciary conflicts, developing financial instruments, senior management mutiny, etc. This class is for two GSB credits and will be graded on a pass/fail basis. Sixty percent of the final grade will be derived from classroom performance; the remainder will be based on a final written assignment.

GSBGEN 567. SEEDing Change: Approaches and Innovations in Poverty Alleviation. 2 Units.

This Bass Seminar is an opportunity to help lay the foundation for the GSB's new initiative on poverty alleviation in developing economies, the Stanford Institute for Innovation in Developing Economies (nicknamed SEED). Following an introduction to the major approaches to poverty alleviation and the role of entrepreneurial activity, the course will be a student-driven seminar. Groups of students will work on focused projects of their choosing within the confines of SEED's mission, which is to stimulate, develop, and disseminate research and innovations that enable entrepreneurs, managers, and leaders to alleviate poverty in developing economies. A particular focus will be given to exploring and assessing the different ways in which SEED can most effectively help entrepreneurs in developing countries grow and scale. Project deliverables can take a variety of forms, including business plans, proofs of concept, case studies, teaching notes, etc.

GSBGEN 568. Managing Difficult Conversations. 2 Units.

This elective 2-credit course is offered to 2nd-year, 3rd-year, and 4th-year Medical students, Residents, and Fellows, and to 2nd-year MBA students who aspire to improve their ability to deal effectively with difficult interpersonal situations. The course will be taught at Stanford Medical School by H. Irving Grousbeck, Consulting Professor of Management, Stanford Graduate School of Business, with assistance from Dr. Charles G. Prober, Senior Associate Dean for Medical Education. Teaching techniques that have been successful in helping business school students improve their ability to manage difficult conversations will be used. The course, which will be case-based, will involve frequent student-to-student and student-to-instructor role-playing in actual medical situations. Physician-experts often will be present to participate as class guests. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. There will be seven classes held on Wednesdays beginning September 24th and concluding on November 12th. (No class on October 22) Each class will begin promptly at 12:35 and end at 2:05, without a break. Due to the abbreviated nature of the class (7 sessions), students will be expected to attend all classes unless excused in advance. Class preparation will include reading of assigned cases; analysis of the cases and recommendations as to how to confront specific difficult conversations (consistent with assigned study questions); and reading of assigned background material. While optional, it is suggested that students form regular study groups. For GSB students, 50% of the final grade will depend on classroom performance; the remainder will be based on a final written assignment of no more than 6 pages. GSB students will be graded on a Pass/Fail basis. The course will be ungraded for Medical School students, Residents and Fellows. All students will be expected to complete the written assignment. Class size will be limited to 35 students per the following: (1) a maximum of 15 MBA2 students and (2) a maximum of 20 2nd-year, 3rd-year and 4th-year Medical Students, Residents, and Fellows.

GSBGEN 569. Online Financial Training for Managers and Entrepreneurs in Developing Economies. 2 Units.

Growing and scaling a successful business demands familiarity and comfort with financial principles and decision-making. Yet particularly in developing countries, where the need for growth is greatest, a large fraction of the population, and entrepreneurs and managers in particular, lack this basic knowledge. The goal of this project-based seminar is for teams of students to develop education modules for teaching financial literacy to entrepreneurs in developing economies. We will partner with on the ground organizations who work directly with these entrepreneurs, and who can provide feedback on the user's needs and market validation for project teams' approaches. We will examine research on the effectiveness of credit-linked training and review some existing programs offering similar training. Students will be expected to deliver a short training video at the end of the course.

GSBGEN 571. Becoming a Leader: Managing Early Career Challenges. 2 Units.

This course is based on a large number of interviews with MBA grads who have been out of the GSB for 4-10 years. These interviews identified a set of common early career challenges that young MBAs faced--and the lessons they learned from these. This 10-session course is based on these critical transitions, formative experiences, and personal conflicts that characterize the challenges young leaders face. The course objective is to help current students better understand some of the pitfalls they are likely to face as they become leaders and to avoid the career-limiting mistakes that these can bring.

GSBGEN 572. The Art of Damage Control. 2 Units.

In the Information Age, there are two kinds of leaders, institutions, and organizations: those who have been hit with a crisis and those who haven't been around very long. And of those who have confronted a crisis, the landscape has a few winners, but is crowded with losers who simply did not have what it took to survive the crisis. Crisis is a constant state of nature in our age and if you do not effectively fight back, in the modern spin cycle, you will no longer have your brand, your image, or your reputation. This course will cover the strategies, techniques, and art of damage control. The course will also explore the five fundamental elements responsible for why we live in a state of crisis: the proliferation of media outlets communicating information; the speed in which information travels; the erosion of trust from society related to the quality of information received; the capacity to selectively leverage information; and the community nature of how information is developed and shared. Building from an analysis of these elements, we will explore methods of surviving and thriving in this environment. The course will also offer detailed approaches to managing one's way through a crisis. We will provide case studies of those who failed to master the art of damage control whose mistakes endangered the survival of their company and/or their careers. We will also study cases where those in a crisis handled it deftly. By considering, analyzing, and reviewing these techniques, it is hoped the students will learn how best manage the crisis - and what it takes to survive. The course will co-taught by Chris Lehane and Bill Guttentag. Chris Lehane is one of the nation's leading political consultants with a particular expertise in damage control. He was a Special Assistant Counsel to President Bill Clinton where he was responsible for helping to manage the Clinton White House's damage control operation and later served as Vice President Al Gore's Press Secretary, and has been a top advisor to many who have run for President, Senate, Governor or other elected offices, both in the US and internationally. He consults for numerous Fortune 500 Companies, professional sports leagues and teams, Hollywood studios and high profile individuals. Bill Guttentag is a narrative and documentary film writer, producer, director who has been teaching at the GSB since 2001. He is a two-time Oscar winner, his films have played extensively in the US and internationally, and have premiered at a number of prominent film festivals including Sundance and Cannes. Lehane and Guttentag are the co-authors of *Masters of Disaster: The 10 Commandments of Damage Control*. The book will be published this fall by Palgrave/Macmillan and will serve as the principal text for this course.

GSBGEN 574. Effective Virtual Communication: Presenting via the web, video, and teleconference. 2 Units.

Ever wonder if your online audience is paying attention to your web presentation or meeting? Have you wanted more engagement from your participants? Communicating virtually - using conference or video calls, web tools, and mobile devices is very challenging. Yet more and more communication is happening with presenter and audience connecting electronically. Informed by scholarly research and industry best practices, this workshop will provide a hands-on, practical introduction to immediately applicable techniques that will help you prepare and deliver engaging, participative, and impactful virtual presentations. Specifically, you will learn techniques for confidently delivering virtual presentations, how to create content that invites engagement, and how to facilitate speaker-audience interactions that invite collaboration without losing control. We will also cover best practices for responding to audience input and questions that will amplify your message and for handling challenging interactions and questions. With these virtual-presenting skills, you will feel more confident presenting and your audience will be more connected and engaged.

GSBGEN 575. Leadership and Crisis Management. 2 Units.

During this class, you will: * Challenge your basic beliefs about the nature of crisis * Learn to scan your business practices for political and social risks * Anticipate and prepare for potential crises * Explore techniques for successfully solving problems in high-pressure crisis situations characterized by complex decision environments, time-pressure, high stakes, unanticipated events, and information overload * Develop strategies for managing stakeholders, public opinion, media relations, and public officials * Integrate your crisis management approach into your overall business strategy.

GSBGEN 576. Work and Family. 2 Units.

This course examines the strategies that highly educated women and men use to combine work and family and the strategies that managers and policy makers can use to help others strike a balance. Topics include the tradeoffs in becoming a stay-at-home parent, the economic value of unpaid labor, the consequences of balancing two high-powered careers and children, the economics of marriage, fertility, child care, and elder care, the gendered division of labor in the home, time-management, workplace innovations, and policy initiatives. Guest speakers add their own perspectives on these issues and describe the roles their organizations play.

GSBGEN 578. Decisions About the Future. 2 Units.

How should you decide between now and the future? This course will cover the descriptive and prescriptive theories of intertemporal choice in psychology and economics. Topics will include financial decision making, social (who should you marry?), environmental, and health. The goal of the course is to maximize the long term happiness and effectiveness of yourself and others. Grading will be based on: class participation, a decision diary (in three parts), and an exam.

GSBGEN 580. Management of Real Estate Investment Portfolios. 2 Units.

This course is intended for any student interested in a career in managing, developing, or investing in real estate. The course covers cases involving the perspectives of general partners and limited partners; the attributes of successful real property investment firms; analyses of investment portfolios and individual transactions, primarily in the private equity real estate category. Cases will be global. Objectives include: How to construct a private real estate portfolio; How to assess the risks in projects and portfolios; How to perform relative value analyses of differing investments; How to manage troubled investments (when to "hold 'em and when to fold 'em"). The course is divided into three modules with special emphasis on real estate financial analysis for transactions and portfolios. The first module will focus on portfolio construction issues and how to quantify whether the investor has been successful. The second module will focus on underwriting individual transactions and applying a relative value construct in determining the more attractive investments. The third module will focus on the management of troubled investments, including deciding when to "double down" and how to protect investments already in place.

GSBGEN 585. Social Innovation through Corporate Social Responsibility. 2 Units.

This course accepts that the (CSR) movement linking business, communities and sustainability has moved past the stage of debate. The last decade has seen an increased awareness in regard to environmental and social issues that has found its way up the corporate ladder and into company boardrooms. How companies incorporate CSR programs and strategies, however, is varied and diverse. The course will utilize reading assignments, case analysis and/or company presentations to provide an overview of CSR, the frameworks and models for developing a CSR strategy and the growing utilization of cross-sector partnerships in CSR and innovation efforts. Particular focus will be on cutting edge business strategies for squaring social and environmental responsibilities with competitive demands. The latter part of the course will examine the role of cross-sector partnerships as a critical lever. Cross-sector collaboration is increasingly desirable as a strategy for addressing many of society's problems; however, research evidence indicates that it is hardly easy. Guests will bring to life the challenges and rewards in working collaboratively to implement social change.

GSBGEN 586. Poverty, Entrepreneurship, and Development. 2 Units.

Global poverty is a problem that persists on a massive scale, and its persistence may itself be a major impediment to growth in emerging economies. Recent years have seen a blossoming interest in socially innovative approaches to alleviating poverty and stimulating economic growth in emerging economies. In this short course, we will explore different conceptualizations of the problem of global poverty, the potential role of entrepreneurship in helping to address it, as well as the strengths and weaknesses of different approaches. Some possible areas of focus include: * Different conceptualizations of the main drivers of persistent, extreme poverty * The challenges to entrepreneurship posed by the institutional environments of emerging economies * The appropriate role of entrepreneurship as a means of addressing the concerns of the poor * The pros and cons of different models (e.g., venture philanthropy, social enterprise, non-profit) * Ethical issues and concerns associated with different strategies In addition to reading and in-class discussion, the course will also draw on the expertise and experiences of one or more guest speakers.

GSBGEN 587. Survive and Thrive: The Art of Navigating Crucial Conversations. 2 Units.

Careers are enjoyed in the good times but truly made when challenging situations are successfully managed throughout every business cycle. Individuals who both perform well and communicate effectively in tense situations, gain the attention of senior management and are relied upon to deliver. A key to this success is the ability to successfully navigate crucial conversations. Crucial conversations are those which not only have a bearing on your firm and business but, also can also enhance or destroy your own personal reputation and credibility by poorly communicated situation analysis, facts and the mode in which you deliver information. Sometimes these conversations take place in minutes while others evolve over the course of days and weeks. Regardless, a professional's ability to read the "tea leaves" and execute a communication plan to address is vitally important to long term career success. This highly interactive course will take you through a series of business inflection points in a simulated firm where you will be expected to navigate different situations and make quick decisions both as an individual and as part of a team. Students can expect to leave this course with a heightened sense of their own gifts as communicators, a greater understanding of the research around effective communication, and specific tools and tactics to use throughout their career when faced with pivotal situations. Attendance at all six sessions is required to pass this course and participation counts for half the grade. Students will regularly give and receive feedback with their peers on their ability to apply course concepts in the simulation as it unfolds. While no prerequisite exists for this course, we expect that students seeking fundamentals of communication consider other course offerings. This course relies on students who are already reasonably comfortable communicating in high-stakes settings seeking greater mastery and nuance in their communication. Required pre-reading will provide the theoretical frameworks and case background necessary for the six-session simulation. One final reflection paper will be due within a week after the final class session. The balance of each student's grade is based on their participation and learning within the simulation and the depth and quality of their feedback to peers. This course is co-created and co-taught by JD Schramm and Steve Mellas. Schramm brings over a decade of MBA communication teaching and coaching to the course along with more than 15 years of professional experience in healthcare, financial services, and education. He founded the GSB's Mastery Initiative and co-founded LOWKeynotes. He is a sought out speaker and coach with two talks in the TED library. Mellas serves as a principal at AQR Capital in Greenwich CT where he oversees operations. Prior to joining AQR he worked for Goldman Sachs as a Managing Director in the Investment Management Division with responsibility for Asset Management Operations worldwide. Before that Mellas was with Morgan Stanley where he managed fixed income trading operations. Schramm and Mellas have teamed up on a number of highly ranked courses at NYU Stern since 2005 and hatched this latest collaboration while delivering a Mastery workshop for the GSB in January 2012.

GSBGEN 598. Stanford-Tsinghua Exchange Program. 2 Units.

This course is open only to students participating in the Stanford-Tsinghua Exchange Program and is required of those students. Requirements include researching and reporting on companies to be visited, attending lectures in preparation for the China visit, attending lectures at Tsinghua, and carrying out and reporting on a project with one or more Tsinghua student. Offered Pass/No Pass only. 2 units. Winter quarter.

GSBGEN 635. Neuroscience for Business and Economics. 4 Units.

A growing number of scholars in business and economics are turning to neuroscience for new theoretical insights and new methodologies. This seminar will explore how findings from neuroscience can inform research in business and economics. The objectives of this course are for students to: Gain an understanding of the basic theories of neuroscience. Gain an understanding of the basic methodologies of neuroscience, including behavioral paradigms, eye-tracking, and fMRI. Survey the key literature at the intersection of business, economics, and neuroscience. Learn how to critically reflect on and evaluate research that uses principles from neuroscience. Learn how to design experiments that utilize principles from neuroscience.

GSBGEN 641. Advanced Empirical Methods. 3 Units.

This course covers various advanced quantitative methods with applications in marketing and economics. Topics include simulation-based estimation, dynamic decision processes, and other topics relating to empirical models of demand and supply. The course stresses the conceptual understanding and application of each technique. Students will learn to apply these techniques using Matlab or an equivalent language.

GSBGEN 645. Communication Strategies for Scholars. 2 Units.

Educators must be experts in their subject matter, but also effective scholarly communicators. This course will examine the theories for effective communication in the wide range of settings that PhDs will encounter: seminars, academic conferences, job talks, and ultimately in the classroom. This course will provide PhD candidates with the opportunity to practice course principles in simulated communication settings and receive direct and filmed feedback on their performance. Students will benefit from participating in observations of GSB classes (within and beyond their discipline), readings on current education and communication theory and practice, class discussion, and visits from GSB professors. Learning Objectives: By the end of this course students will: Understand the essentials of oral communication in scholarly settings. Understand the fundamentals of business education including syllabus development, classroom instruction, case method teaching, assessment and grading. Understand and practice the essential elements of effective presentations - the verbal, vocal, and visual aspects of oral presentation. Articulate essential distinctions of teaching undergraduate, graduate (including MBA), and executive education students, and how to adapt their approach for these audiences. Demonstrate effectiveness as a presenter and growth in the ability to plan and present content in a variety of simulated settings from benchmark to final mock class. Apply course content to job talks, conference presentations, and other professional settings beyond the classroom. Evaluate peers and other educators on their ability to practice effective teaching and presentation delivery.

GSBGEN 646. Behavioral Decision Making. 3 Units.

This seminar examines research on the psychology of judgment and choice. Although the normative issue of how decisions should be made is relevant, the descriptive issue of how decisions are made is the main focus of the course. Topics of discussion include choice, judgment heuristics and biases, decision framing, prospect theory, mental accounting, context effects, task effects, regret, and other topics. The goal of the seminar is twofold: to foster a critical appreciation of existing knowledge in behavioral decision theory, to develop the students' skills in identifying and testing interesting research ideas, and to explore research opportunities for adding to that knowledge.

GSBGEN 652. Online Research Methods. 2 Units.

This course will cover the practicalities of running research on the internet, including: online research tools, experimental design, online process measures, subject pool selection, detecting and dealing with inattentive participants, basic programming techniques, debugging, data organization, and data cleaning. Class time and assignments will take a hands-on approach, giving you direct experience and practice. There will be two main projects, both of which should be useful for your research. The first will be creating a personal web page (or, if you already have a web page that you like, you can substitute a different project). The second assignment will be designing and running an online experiment with a dynamic component. Grading will be based on these projects, as well as class participation and small weekly assignments.

GSBGEN 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

GSBGEN 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

GSBGEN 697. Research Fellows Practicum. 1-6 Unit.

.

GSBGEN 698. Doctoral Practicum in Teaching. 1 Unit.

Doctoral Practicum in Teaching.

GSBGEN 699. Doctoral Practicum in Research. 1 Unit.

Doctoral Practicum in Research.

GSBGEN 802. TGR Dissertation. 0 Units.

.

Same as: ACCT 802, FINANCE 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

Genetics Courses

GENE 104Q. Law and the Biosciences. 3 Units.

Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

GENE 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

GENE 200. Genetics and Developmental Biology Training Camp. 1 Unit.

Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.

Same as: DBIO 200

GENE 202. Human Genetics. 4 Units.

Utilizes lectures and small group activities to develop a working knowledge of human genetics as applicable to clinical medicine. Basic principles of inheritance, risk assessment, and population genetics are illustrated using examples drawn from diverse areas of medical genetics practice including prenatal, pediatric, adult and cancer genetics. Practical aspects of molecular and cytogenetic diagnostic methods are emphasized. Existing and emerging treatment strategies for single gene disorders are also covered. Prerequisites: basic genetics.

GENE 205. Advanced Genetics. 3 Units.

For PhD students in any of the Biosciences Departments and Programs at Stanford University. Emphasis on developing the ability to solve problems using genetic ideas and methods, to understand the nature and reliability of genetic inference, and to apply genetic reasoning to biological research. Weekly paper discussions based on original research papers that define or illustrate the ideas and techniques covered in the lecture.

GENE 209. Current Topics in Human, Population, and Statistical Genomics. 2 Units.

Intensive seminar/workshop. Topics, drawn from current and past literature, may include: assessing and population genetic analysis of genomic variation; genome-to-phenome mapping; reconstructing demographic history from genome sequence data; domestication genomics; host-pathogen genome evolution; detecting signatures of selection; experimental design in human genetics; linkage and association mapping; ethical and social issues in human, plant, and animal genetics research. Emphasis on analysis and logic or experimental and observational genomics research. Faculty-led discussion with evaluation of response papers, problem sets, and intensive course project. May be repeated for credit.

GENE 210. Genomics and Personalized Medicine. 3 Units.

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200. Same as: DBIO 220

GENE 211. Genomics. 3 Units.

The goal of this course is to explore how different experimental strategies are applied to a variety of biological questions. By experimental strategy, we refer to both the general method and the logic with which the method is applied. An underlying theme of the course is that each strategy we discuss can be applied to problems that cut across different disciplines, for example immunology, cancer biology, or embryology. Genome evolution, organization, and function; technical, computational, and experimental approaches; hands-on experience with representative computational tools used in genome science; and a work knowledge of the scripting language Python.

GENE 212. Introduction to Biomedical Informatics Research Methodology. 3 Units.

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor. Same as: BIOE 212, BIOMEDIN 212, CS 272

GENE 213. Neurogenetics Core. 1 Unit.

For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neurosciences students. Intensive introduction to genetics. Classical and modern genetics with an emphasis on their application to neurosciences research. Topics include: model organisms, genetic screens, genome editing, genetically-encoded tools, GWAS, next-generation sequencing, epigenetics, genetic interactions, human genetics, and neurological disease genetics. Interactive class with student-led discussions, presentations, and group work, including next-generation sequencing workshops and data analysis tutorials. Limited enrollment.

GENE 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units. Same as: BIOE 214, BIOMEDIN 214, CS 274

GENE 215. Frontiers in Biological Research. 1 Unit.

Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker's primary research literature. Students meet with the speaker after the seminar to discuss their research and future directions, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research. Same as: BIOE 215, DBIO 215

GENE 217. Translational Bioinformatics. 4 Units.

(Same as BIOMEDIN 217, CS 275) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

GENE 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience. Same as: MI 218, PATH 218

GENE 221. Current Issues in Aging. 2 Units.

Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203, 205 or BIOS 200.

GENE 224. Principles of Pharmacogenomics. 3 Units.

Introduction to the relevant pharmacology, genomics, experimental methods for high-throughput measurements (sequencing, expression, genotyping), analysis methods for GWAS, chemoinformatics, and natural language processing. Review of key gene classes (cytochromes, transporters, GPCRs), key drugs for which genetics is critical (warfarin, clopidogrel, statins, NSAIDs, neuropsychiatric drugs and cancer drugs). Also reviews resources for pharmacogenomics (PharmGKB, Drugbank, CMAP, and others) as well as issues in doing clinical implementation of pharmacogenomics testing. Reading of key papers, including student presentations of this work. Problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, BIO 42, BIO 43, BIO 44X, BIO 44Y or consent of instructor. Same as: BIOMEDIN 224

GENE 232. Advanced Imaging Lab in Biophysics. 4 Units.

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232

GENE 233. The Biology of Small Modulatory RNAs. 2 Units.

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal. Same as: MI 233, PATH 233

GENE 234. Fundamentals of RNA Biology. 2 Units.

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students. Same as: MI 234, PATH 234

GENE 235. C. Elegans Genetics. 2 Units.

Genetic approaches to *C. elegans*, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

GENE 241. Biological Macromolecules. 3-5 Units.

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only. Same as: BIOE 241, BIOPHYS 241, SBIO 241

GENE 243. Intellectual Property: Scientific Evidence in Patent Litigation. 3 Units.

(Same as LAW 343) Open to clinical MD and graduate students. Explores the role of scientific experts in patent infringement litigation. In other areas of the law where scientific experts are used -- medical malpractice, environmental law, criminal law -- the science itself is often in dispute. In patent cases, however, the parties generally agree on the science. This affects the relationship between the lawyer and the expert and the substantive content of their interactions. Patent experts need to be able to explain science to the judge and jury. But they also must help the litigators choose which legal issues to press and which to concede, and to be aware of how the complications of the science might help, hurt, obscure or reveal how the law should be applied to the facts. The class examines judicial decisions and trial documents involving scientific evidence in patent litigation, followed by work in teams on final projects: simulations of expert testimony in a patent case. Simulations are performed at the end of the quarter before panels of practicing patent lawyers. Prerequisite: graduate students must have completed their required coursework and have TGR status.

GENE 244. Introduction to Statistical Genetics. 3 Units.

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor.
Same as: STATS 344

GENE 245. Statistical and Machine Learning Methods for Genomics. 3 Units.

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.
Same as: BIO 268, BIOMEDIN 245, CS 373, STATS 345

GENE 260. Supervised Study. 1-18 Unit.

Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

GENE 271. Human Molecular Genetics. 4 Units.

For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics and genomics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and human disease; mitochondrial genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; variant curation; gene therapy, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course.

GENE 272. Introduction to Medical Genetics. 2-3 Units.

For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics practice, including taking a family history, modes of inheritance and risk assessment, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.

GENE 273. Introduction to Clinical Genetics Testing. 1 Unit.

For genetic counseling students, medical students, residents, and fellows. Uses a combination of case based assignments, laboratory observation and didactic lectures to introduce the laboratory concepts of cytogenetics, molecular genetics and biochemical genetics, and to illustrate common genetic conditions that are commonly diagnosed through genetic testing, introducing students to skills in case preparation, management and presentation.

GENE 274A. A Case Based Approach to Clinical Genetics. 2 Units.

For genetic counseling students, graduate students in genetics, medical students, residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

GENE 274B. A Case Based Approach to Clinical Genetics. 2 Units.

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders. This course is a continuation of GENE 274A, but may be taken individually with instructor permission.

GENE 275. Role Play and Genetic Counseling Observations. 2 Units.

Students role play aspects of genetic counseling sessions and learn through clinical observations. Observation includes genetic counseling sessions in prenatal, pediatric, and cancer settings.

GENE 276. Genetic Counseling Clinical Rotations. 4-7 Units.

For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

GENE 278. Prenatal Genetic Counseling. 1 Unit.

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening.

GENE 279. Pediatric and Adult Genetic Counseling. 1 Unit.

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions, assessment of child development and medical history in the context of a genetic workup, the pediatric genetics medical examination, dysmorphology, introduction to laboratory genetic testing, development of a differential diagnosis, and resources for case management and family support.

GENE 280. Metabolic Genetic Counseling. 1 Unit.

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

GENE 281. Cancer Genetic Counseling. 1 Unit.

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

GENE 282A. Genetic Counseling Research Seminar. 1 Unit.

For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

GENE 282B. Genetic Counseling Research Seminar. 1 Unit.

For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A.

GENE 283. Genetic Counseling Research. 1-8 Unit.

Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite: GENE 282.

GENE 284. Medical Genetics Seminar. 1-2 Unit.

Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit.

GENE 285A. Genetic Counseling Seminar. 2-3 Units.

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor.

GENE 285B. Genetics Counseling Seminar. 2 Units.

Year-long seminar primarily for genetic counseling students. Winter: the impact of chronic illness and genetic disease in a developmental manner.

GENE 285C. Genetic Counseling Seminar. 2 Units.

Year-long seminar primarily for genetic counseling students. Spring: applying therapeutic counseling approaches to the practice of genetic counseling.

GENE 286. Advanced Genetic Counseling Seminar. 2 Units.

For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics will be included. Must be taken for 3 quarters. Prerequisites: GENE 285 A,B,C and 276.

GENE 287. CARDIOVASCULAR GENETICS. 1 Unit.

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellow; genetic counseling students should take this course in conjunction with their cardiovascular genetics rotation. Topics include: Basic cardiology principles, including relevant anatomy and physiology; diagnosis, management and genetic testing as it relates to common inherited cardiovascular conditions in both the pediatric and adult setting; predictive genetic testing issues specific to inherited cardiovascular conditions; psychologic issues related to sudden death conditions. This course is designed for genetic counseling students, medical students, residents, post-doctoral fellows and nurses interested in inherited cardiovascular conditions.

GENE 299. Directed Reading in Genetics. 1-18 Unit.

Prerequisite: consent of instructor.

GENE 399. Graduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

GENE 801. TGR Project. 0 Units.

.

GENE 802. TGR Dissertation. 0 Units.

.

Geological Environmental Sciences Courses

GES 1A. Introduction to Geology: The Physical Science of the Earth. 5 Units.

For non-majors or prospective majors in the Earth Sciences. Lectures, hands-on laboratories, and three one-day weekend field trips. Focus is on the physical and chemical processes of heat and mass transfer within the earth and its fluid envelopes, including deep-earth, crustal, surface, and atmospheric processes. Topics include the dynamics of and interactions between the inner earth, plate tectonics, surface processes, and atmospheric processes such as climate change and global warming. Only one of GES 1A, 1B, or 1C may be taken for credit. Prerequisites: MATH 19 or equivalent.

GES 1B. Introduction to Geology. 4 Units.

For non-majors and prospective majors or minors in the Earth Sciences. Introduction to physical geology. Lectures and lab exercises focus on understanding the dynamics of Earthquakes; ongoing physical and chemical processes. Major themes include plate tectonics, the rock cycle, the hydrologic cycle, and mineral resources. We will employ local CA geology, current events, and the state-of-the-art to drive discussions on landscapes, hazards, and economics. Only one of GES 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry.

GES 1C. Introduction to Geology: Dynamic Earth. 4 Units.

For non-majors or prospective majors in the Earth Sciences. Integrated lecture-lab includes hands-on activities and local field trips. Focus is on reading the dynamic geological landscape, with an emphasis on California—primarily Bay Area—geology. Topics include plate tectonics, earthquakes and volcanoes, Earth materials, geologic time, stream processes, and climate change over geologic time. Only one of GES 1A, 1B, or 1C may be taken for credit.

GES 4. Evolution and Extinction: Introduction to Historical Geology. 4 Units.

Introduction to the history of the Earth, with a focus on processes that maintain or threaten habitability. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. One half-day field trip. Same as: EARTHYSYS 4

GES 5. Living on the Edge. 1 Unit.

A weekend field trip along the Pacific Coast. Tour local beaches, geology, and landforms with expert guides from the Department of Geological and Environmental Sciences. Enjoy a BBQ dinner and stay overnight in cabins along the Santa Cruz coast. Get to know faculty and graduate students in the Earth Sciences. Requirements: Two campus meeting and weekend field trip to Pacific Coast. Enrollment limited to 25. Freshman have first choice.

GES 8. Oceanography: An Introduction to the Marine Environment. 3 Units.

For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents.

GES 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.

The Rocky Mountain area, ecologically and geologically diverse, is being strongly impacted by changing land-use patterns, global and regional environmental change, and societal demands for energy and natural resources. This three-week field program emphasizes coupled environmental and geological problems in the Rocky Mountains and will cover a broad range of topics including the geologic origin of the American West from three billion years ago to the recent; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West that are related to changing land-use patterns and increased demand for its abundant natural resources. These broad topics are integrated into a coherent field study by examining earth/environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and mountainous region of Teton National Park, and the economic and environmental problems associated with gold mining and extraction of oil and gas in areas adjoining these national parks. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming, and horseback riding in the Dubois area of Wyoming. Students must arrive in Salt Lake City on Monday, Sept. 1. (Hotel lodging will be provided for the night of Sept. 1, and thereafter students will travel as a Sophomore College group.) We will return to campus on Sunday, Sept. 21. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

Same as: EARTHSYS 12SC, EESS 12SC

GES 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March.

Same as: EARTHSYS 38N, EESS 38N

GES 39N. Forensic Geoscience: Stanford CSI. 3 Units.

Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper.

GES 40N. Diamonds. 3 Units.

Preference to freshmen. Topics include the history of diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth's deep interior and the origins of the solar system. Diamond's unique materials properties and efforts in synthesizing diamonds.

GES 42N. Landscapes and Tectonics of the San Francisco Bay Area. 4 Units.

Active faulting and erosion in the Bay Area, and its effects upon landscapes. Earth science concepts and skills through investigation of the valley, mountain, and coastal areas around Stanford. Faulting associated with the San Andreas Fault, coastal processes along the San Mateo coast, uplift of the mountains by plate tectonic processes, and landsliding in urban and mountainous areas. Field excursions; student projects.

GES 43Q. Environmental Problems. 3 Units.

Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste.

GES 46Q. Environmental Impact of Energy Systems: What are the Risks?. 3 Units.

In order to reduce CO₂ emissions and meet growing energy demands during the 21st Century, the world can expect to experience major shifts in the types and proportions of energy-producing systems. These decisions will depend on considerations of cost per energy unit, resource availability, and unique national policy needs. Less often considered is the environmental impact of the different energy producing systems: fossil fuels, nuclear, wind, solar, and other alternatives. One of the challenges has been not only to evaluate the environmental impact but also to develop a systematic basis for comparison of environmental impact among the energy sources. The course will consider fossil fuels (natural gas, petroleum and coal), nuclear power, wind and solar and consider the impact of resource extraction, refining and production, transmission and utilization for each energy source. Same as: EARTHSYS 46Q

GES 50Q. The Coastal Zone Environment. 3 Units.

Preference to sophomores. The oceanographic, geological, and biological character of coastal zone environments, including continental shelves, estuaries, and coastal wetlands, with emphasis on San Francisco Bay. Five required field trips examine estuarine and coastal environments, and agencies and facilities that manage these resources. Students present original research. Prerequisite: beginning course in Biology such as BIOSCI 51, Chemistry such as CHEM 30 or 31, Earth Sciences such as GES 1 or 2, or Earth Systems such as EARTHSYS 10.

GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact. 3 Units.

Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology.

GES 90. Introduction to Geochemistry. 3-4 Units.

The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry.

GES 101. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

Same as: EARTHSYS 100, EESS 101

GES 102. Earth Materials: Introduction to Mineralogy. 4 Units.

The minerals and materials that comprise the earth and their uses in modern society. How to identify, classify, and interpret rock-forming minerals. Emphasis is on information provided by common minerals about the nature of the Earth's interior and processes such as magmatism and metamorphism that operate there, as well as the major processes of weathering and erosion that link plate tectonics to earth cycles. Required lab section. Prerequisite: introductory geology course. Recommended: introductory chemistry.

GES 103. Earth Materials: Rocks in Thin Section. 3 Units.

Use of petrographic microscope to identify minerals and common mineral associations in igneous, metamorphic, and sedimentary rocks. Crystallization histories, mineral growth and reaction relations, deformation textures in metamorphic rocks, and provenance of siliciclastic rocks. Prerequisite 102.

GES 104. Introduction to Petrology. 4 Units.

The origin of different rock types as a function of geologic and plate tectonic setting. How to identify rocks and interpret their conditions of formation. Required lab section. Prerequisite: introductory geology course; GES102.

Same as: GES 204

GES 105. Introduction to Field Methods. 3 Units.

Two-week, field-based course in the White Mountains of eastern California. Introduction to the techniques for geologic mapping and geologic investigation in the field: systematic observations and data collection for lithologic columns and structural cross-sections. Interpretation of field relationships and data to determine the stratigraphic and deformational history of the region. Prerequisite: GES 1, recommended: GES 102.

GES 107. Journey to the Center of the Earth. 3 Units.

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 184, GEOPHYS 274, GES 207

GES 110. Structural Geology and Tectonics. 3-5 Units.

Theory, principles, and practical techniques to measure, describe, analyze, and interpret deformation-related structures on Earth. Collection of fault and fold data in the field followed by lab and computer analysis; interpretation of geologic maps and methods of cross-section construction; structural analysis of fault zone and metamorphic rocks; measuring deformation; regional structural styles and associated landforms related to plate tectonic convergence, rifting, and strike-slip faulting; the evolution of mountain belts and formation of sedimentary basins. Prerequisite: GES 1, calculus. Recommended: 102.

GES 111. Fundamentals of Structural Geology. 3 Units.

Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress; elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51.

Same as: CEE 195

GES 115. Engineering Geology and Global Change. 3 Units.

The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor.

Same as: CEE 196

GES 118. Understanding Natural Hazards, Quantifying Risk, Increasing Resilience in Highly Urbanized Regions. 3 Units.

Integrating the science of natural hazards, methods for quantitatively estimating the risks that these hazards pose to populations and property, engineering solutions that might best ameliorate these risks and increase resilience to future events, and policy and economic decision-making studies that may increase long-term resilience to future events. Panel discussions by outside experts exploring the science, engineering, policy, and economics that underly the hazards, risks, and strategies for increasing resilience. Group assignments to evaluate the way in which natural hazards, and human population and developing interact in megacities to produce risk, and what strategies might be adopted in each area to reduce risks posed by the specific hazards faced by these urban areas.

Same as: EESS 118, EESS 218, GEOPHYS 118, GEOPHYS 218, GES 218

GES 119. A Solar System Odyssey: Introduction to Planetary Geology. 3 Units.

How could planetary bodies such as Earth, Moon and Mars form so close together, with such similar starting products have such drastically different outcomes? Did Mars ever have standing water? Does Europa have a subsurface ocean teeming with life? In this course, you will study the formation and evolution of planets and moons, and how differences such as mass and composition have led to a diverse selection of terrain. Through our exploration of selected topics in planetary geology (volcanism, cratering, tectonics), we will actively debate contemporary controversies in planetary geology. GES 1 required or permission of the instructor.

GES 120. Planetary and Early Biological Evolution Seminar. 2-3 Units.

Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

Same as: GES 220

GES 121. What Makes a Habitable Planet?. 3 Units.

Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

Same as: GES 221

GES 122. Planetary Systems: Dynamics and Origins. 3-4 Units.

(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition, structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.

GES 123. Paleobiology. 4 Units.

Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. Same as: EARTHSYS 122

GES 128. Evolutionary History of Terrestrial Ecosystems. 4 Units.

The what, when, and how do we know it regarding life on land; including plants, fungi, invertebrates, and vertebrates (yes, dinosaurs); and how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. Same as: EARTHSYS 128, GES 228

GES 130. Soil Physics and Hydrology. 3 Units.

The occurrence, distribution, circulation, and reaction of water at the surface and within the near surface. Topics: precipitation, evapotranspiration, infiltration and vadose zone, groundwater, surface water and streamflow generation, and water balance estimates. Current and classic theory in soil physics and hydrology. Urban, rangeland, and forested environments.

GES 131. Hydrologically-Driven Landscape Evolution. 3 Units.

Materials of the Earth and hydrologically driven landscape processes. Topics: hillslope hydrology, weathering of rocks and soils, erosion, flow failures, mass wasting, and conceptual models of landscape evolution. Current and classic theory in geomorphology.

GES 150. Senior Seminar: Issues in Earth Sciences. 3 Units.

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review. Same as: GEOPHYS 199

GES 151. Sedimentary Geology and Petrography: Depositional Systems. 4 Units.

Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103.

GES 163. Introduction to Isotope Geochemistry. 3 Units.

Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry. Same as: GES 263

GES 170. Environmental Geochemistry. 4 Units.

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor.

Same as: EARTHSYS 170, GES 270

GES 171. Geochemical Thermodynamics. 3 Units.

Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: GES 102.

GES 180. Igneous Processes. 4 Units.

For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. Prerequisite 102, 103, or consent of instructor.

GES 181. Metamorphic Processes. 3-5 Units.

For juniors, seniors, and beginning graduate students in Earth Sciences. Thermodynamics and phase equilibria of multiple component systems; use of phase equilibria to determine pressure and temperature of metamorphic assemblages; geochronology of metamorphic rocks; heat flow in the lithosphere; links between tectonics and metamorphism; and the role of heat and mass transfer in the Earth's crust and mantle. Labs emphasize identification of metamorphic rocks and minerals for common pelitic and basic rocks and interpretation of rock textures. May be taken for 3 units without lab. Prerequisites: 102, 103, or consent of instructor.

GES 183. California Desert Geologic Field Trip. 1 Unit.

Field seminar. Three class meetings during Winter quarter followed by a 6-day field trip over Spring Break to Mojave Desert, Death Valley, and Owens Valley. Basin-and-range faulting, alluvial fans, playas, sand dunes, metamorphic rocks, granites of the Sierra Nevada, lava flows and the deposits of supervolcanic eruptions, hot springs, ore deposits, and desert landscapes. Involves camping and some hiking. Recommended: introductory geology. Enrollment limited to 25 students; preference given to freshman and sophomores; additionally graduate students in the School of Earth Sciences.

GES 184. Field Seminar on Eastern Sierran Volcanism. 1 Unit.

For nonmajors and prospective majors in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.

GES 185. Volcanology. 3-4 Units.

For juniors, seniors, and beginning graduate students in earth sciences. Eruptive processes that create volcanic deposits and landforms; relation to physical properties of magmas. Volcanic hazards and the effects of eruptions on climate; volcanic-hosted geothermal systems and mineral resources. Required 4-day field trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada. Those taking the class for 4 units will complete a 3-hour weekly lab involving hand specimen and thin section identification and interpretation, which emphasizes recognizing types of lavas and products of explosive eruptions. Prerequisite: 1, for those taking the course for 3 units; 103 and 104 or equivalent for those taking the course for 4 units.

GES 190. Research in the Field. 3 Units.

Two to three-week long courses that provide students with the opportunity to collect data in the field as part of a team-based investigation of research questions or topics under the expert guidance of knowledgeable faculty and graduate students. Topics and locations vary. May be taken multiple times for credit. Prerequisites: GES 1, GES 102, GES 105.

GES 191. GES Field Trips. 1 Unit.

Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit. See <http://pangea.stanford.edu/GES/undergraduates/courses/>.

Same as: EARTHSCI 191

GES 192. Undergraduate Research in Geological and Environmental Sciences. 1-10 Unit.

Field-, lab-, or literature-based. Faculty supervision. Written reports. May be repeated for credit.

GES 197. Senior Thesis. 3-5 Units.

For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.

GES 198. Special Problems in Geological and Environmental Sciences. 1-10 Unit.

Reading and instruction under faculty supervision. Written reports. May be repeated for credit.

GES 199. Honors Program. 1-10 Unit.

Research on a topic of special interest. See "Undergraduate Honors Program" above. May be repeated for credit.

GES 204. Introduction to Petrology. 4 Units.

The origin of different rock types as a function of geologic and plate tectonic setting. How to identify rocks and interpret their conditions of formation. Required lab section. Prerequisite: introductory geology course; GES102.

Same as: GES 104

GES 204A. Extraordinary Glimpses of Past Life. 1 Unit.

Soft bodied fossils are a major source of information on the history of life. Focus on exceptional preservation and the factors that contribute to and control it. Topics include: exceptionally preserved biotas, experimental taphonomy, ediacaran death masks, Burgess Shale-type preservation, the Herefordshire fossils, Mazon Creek, fossils in glass, the preservation of color, and conodonts.

GES 206. Topics in Organismal Paleobiology. 2-3 Units.

Seminar course covering an area of structural biology, physiology, and ecology relevant to understanding the fossil record. Topic will change each time the course is offered. Examples of potential topics are biomineralization, fluid mechanics, biomechanics, taphonomy & biochemical preservation, and photosynthesis in air and water.

GES 207. Journey to the Center of the Earth. 3 Units.

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 184, GEOPHYS 274, GES 107

GES 208. Topics in Geobiology. 1 Unit.

Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

Same as: EESS 208

GES 210. Geologic Evolution of the Western U.S. Cordillera. 1-3 Unit.

The geologic and tectonic evolution of the U.S. Cordillera based on its rock record through time. This region provides good examples of large-scale structures and magmatic activity generated during crustal shortening, extension, and strike-slip faulting and affords opportunity to study crustal-scale processes involved in mountain building in context of plate tectonic motions.

GES 211. Topics in Regional Geology and Tectonics. 2-3 Units.

May be repeated for credit.

GES 212. Topics in Tectonic Geomorphology. 2 Units.

For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit.

GES 213. Topics in Sedimentary Geology. 2 Units.

For upper division undergraduates and graduate students. Topics vary each year but the focus is on current developments and problems in sedimentary geology, sedimentology, and basin analysis. These include issues in deep-water sediments, their origin, facies, and architecture; sedimentary systems on the early Earth; and relationships among tectonics, basin development, and basin fill. May be repeated for credit.

GES 214. Topics in Paleobiology. 2 Units.

For upper division undergraduates and graduate students. Topics vary each year; focus is on paleontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary histories of primary producers and consumers; and the quality of the fossil record. Term paper. May be repeated for credit.

GES 215. Structural Geology and Rock Mechanics. 4 Units.

Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relationships; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

Same as: CEE 297R, GEOPHYS 251

GES 216. Rock Fracture Mechanics. 3 Units.

Principles and tools of elasticity theory and fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, solution surfaces, and other natural structures in rock. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, and fluid flow in the earth's crust with applications to crustal deformation, structural geology, petroleum geology, engineering, and hydrogeology. Prerequisite: 215 or equivalent.

GES 217. Faults, Fractures, and Fluid Flow. 3 Units.

Process-based approach to rock failure; the microstructures and overall architectures of the failure products including faults, joints, solution seams, and types of deformation bands. Fluid flow properties of these structures are characterized with emphasis on sealing and transmitting of faults and their role in hydrocarbon flow, migration, and entrapment. Case studies of fracture characterization experiments in aquifers, oil and gas reservoirs, and waste repository sites. Guest speakers; weekend field trip. Prerequisite: first-year graduate student in Earth Sciences.

GES 218. Understanding Natural Hazards, Quantifying Risk, Increasing Resilience in Highly Urbanized Regions. 3 Units.

Integrating the science of natural hazards, methods for quantitatively estimating the risks that these hazards pose to populations and property, engineering solutions that might best ameliorate these risks and increase resilience to future events, and policy and economic decision-making studies that may increase long-term resilience to future events. Panel discussions by outside experts exploring the science, engineering, policy, and economics that underly the hazards, risks, and strategies for increasing resilience. Group assignments to evaluate the way in which natural hazards, and human population and developing interact in megacities to produce risk, and what strategies might be adopted in each area to reduce risks posed by the specific hazards faced by these urban areas.

Same as: EESS 118, EESS 218, GEOPHYS 118, GEOPHYS 218, GES 118

GES 220. Planetary and Early Biological Evolution Seminar. 2-3 Units.

Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

Same as: GES 120

GES 221. What Makes a Habitable Planet?. 3 Units.

Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

Same as: GES 121

GES 222. Planetary Systems: Dynamics and Origins. 3-4 Units.

(For students with a strong background in mathematics and the physical sciences; other should register for 122.) Motions of planets, moons, and small bodies; energy transport in planetary systems; meteorites and the constraints they provide on the formation of the solar system; asteroids and Kuiper belt objects; comets; planetary rings; planet formation; and extrasolar planets. In-class presentation of student papers.

GES 223. Reflection Seismology Interpretation. 1-4 Unit.

The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit.

Prerequisite: 222, or consent of instructor.

Same as: GEOPHYS 183, GEOPHYS 223

GES 224. Modeling Transport and Transformations in the Environment. 2-3 Units.

An introduction to geochemical and reactive transport modeling using Geochemist's Workbench and other appropriate models. Working knowledge of geochemical and hydrologic principles is assumed. Throughout the quarter the students will use the principles and tools to develop and analyze an environmental problems as part of a simulated consulting exercise. Topics covered include contaminant transport, mineral dissolution/precipitation and aquifer microbiology. An additional focus of the course will be to develop presentation skills through practice, feedback and discussions. Prerequisites: Either EESS 221 (CEE 260C) or EESS 220 (CEE 260A) and either GES 90, 170, or 171, or permission from instructors.

GES 225. Contaminant Hydrogeology and Reactive Transport. 4 Units.

For earth scientists and engineers. Environmental, geologic, and water resource problems involving migration of contaminated groundwater through porous media and associated biogeochemical and fluid-rock reactions. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and reactive transport modeling using geochemical transport software. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology EESS 220 / CEE 260A (Gorelick) or equivalent. Recommended: course work in environmental chemistry or geochemistry (e.g., one or more of the following: EESS 155, EESS 156/256 GES 90, GES 170/279, GES 171, CEE 177 or CEE 270).

Same as: CEE 260C, EESS 221

GES 226. At the intersection of geochemistry, sedimentary geology, and paleobiology. 3 Units.

Recent work in geochemistry, sedimentary geology, and paleobiology increasingly supports the notion that common geological factors control long-term biogeochemical cycles, the erosion and deposition of sedimentary rocks, and the evolution of the marine biosphere. During this course students will read and discuss recent primary literature addressing the possible mechanisms underlying these patterns. Questions addressed will include: Why do sedimentary rock area and biodiversity covary? How are these records linked to biogeochemical cycles, as inferred from the stable isotope compositions of elements such as carbon and sulfur? What are the relative roles of biotic interactions vs. physical environmental changes in shaping the macroevolutionary history of life?.

GES 227. Modern Turbidite Systems as Analogues for Deep-water Petroleum Plays. 3 Units.

This seminar is designed for earth science upperclassmen and graduate students. Marine geophysical and geological techniques will be used to illustrate and understand source-to-sink characteristics of modern turbidite systems. The course will examine a wide variety of small-scale base-of-apron (km) to large-scale (100's of km) sand-rich to mud-rich systems. New research on mass transport deposits, hybrid beds, and turbidite paleoseismology will be presented. Variations in turbidite system architecture, that are dependent upon tectonic setting, sediment supply, climate, sea level change, and contour currents will be discussed. The utility and pitfalls of model-driven approaches are also explored.

Same as: EESS 227

GES 228. Evolutionary History of Terrestrial Ecosystems. 4 Units.

The what, when, and how do we know it regarding life on land; including plants, fungi, invertebrates, and vertebrates (yes, dinosaurs); and how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction.

Same as: EARTHSYS 128, GES 128

GES 237. Surface and Near-Surface Hydrologic Response. 3 Units.

Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

Same as: CEE 260B

GES 238. Soil Physics. 3 Units.

Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.

GES 240. Geostatistics. 2-3 Units.

Geostatistical theory and practical methodologies for quantifying and simulating spatial and spatio-temporal patterns for the Earth Sciences. Real case development of models of spatial continuity, including variograms, Boolean models and training images. Estimation versus simulation of spatial patterns. Loss functions. Estimation by kriging, co-kriging with secondary data. Dealing with data on various scales. Unconditional and conditional Boolean simulation, sequential simulation for continuous and categorical variables. Multi-variate geostatistical simulation. Probabilistic and pattern-based approaches to multiple-point simulation. Trend, secondary variable, auxiliary variable and probability-type constraints. Quality control techniques on generated models. Workflows for practical geostatistical applications in mining, petroleum, hydrogeology, remote sensing and environmental sciences. prerequisites: Energy 160/260 or basic course in data analysis/statistics.
Same as: ENERGY 240

GES 246. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.

Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.
Same as: ENERGY 146, ENERGY 246

GES 248. The Petroleum System: Investigative method to explore for conventional & unconventional hydrocarbons. 1 Unit.

How the petroleum system concept can be used to more systematically investigate how hydrocarbon fluid becomes an unconventional accumulation in a pod of active source rock and how this fluid moves from this pod to a conventional pool. How to identify, map, and name a petroleum system. The conventional and unconventional accumulation as well as the use of modeling.

GES 249. Petroleum Geochemistry in Environmental and Earth Science. 3 Units.

How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinery processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude oil or oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time.

GES 250. Sedimentation Mechanics. 3-4 Units.

The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

GES 251. Sedimentary Basins. 3 Units.

Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151.

GES 252. Sedimentary Petrography. 4 Units.

Siliciclastic sediments and sedimentary rocks. Research in modern sedimentary mineralogy and petrography and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Topics vary yearly. Prerequisite: 151 or equivalent.

GES 253. Petroleum Geology and Exploration. 3 Units.

The origin and occurrence of hydrocarbons. Topics: thermal maturation history in hydrocarbon generation, significance of sedimentary and tectonic structural setting, principles of accumulation, and exploration techniques. Prerequisites: 110, 151. Recommended: GEOPHYS 223.

GES 254. Carbonate Sedimentology. 3-4 Units.

Processes of precipitation and sedimentation of carbonate minerals with emphasis on marine systems. Topics include: geographic and bathymetric distribution of carbonates in modern and ancient oceans; genesis and environmental significance of carbonate grains and sedimentary textures; carbonate rocks and sediments as sources of geochemical proxy data; carbonate diagenesis; changes in styles of carbonate deposition through Earth history; carbonate depositional patterns and the global carbon cycle. Lab exercises emphasize petrographic and geochemical analysis of carbonate rocks including map and outcrop scale, hand samples, polished slabs, and thin sections.

GES 255. Basin and Petroleum System Modeling. 3 Units.

For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, paleontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253.

GES 256. Quantitative Methods in Basin and Petroleum System Modeling. 1-3 Unit.

Examine the physical processes operating in sedimentary basins by deriving the basic equations of fundamental, coupled geologic processes such as fluid flow and heat flow, deposition, compaction, mass conservation, and chemical reactions. Through hands-on computational exercises and instructor-provided "recipes," students will deconstruct the black box of basin modeling software. Students write their own codes (Matlab) as well as gain expertise in modern finite-element modeling software (PetroMod, COMSOL).

Same as: ENERGY 275

GES 257. Clastic Sequence Stratigraphy. 3 Units.

Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of seismic and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises.

GES 258. Introduction to Depositional Systems. 3 Units.

The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

GES 259. Stratigraphic Architecture. 1 Unit.

The stratigraphic architecture of deposits associated with a spectrum of depositional environments, using outcrop and subsurface data. Participants read and discuss selected literature.

GES 260. Laboratory Methods in Organic Geochemistry. 2-3 Units.

Knowledge of components in geochemical mixtures to understand geological and environmental samples. The presence and relative abundance of these compounds provides information on the biological source, depositional environment, burial history, biodegradation, and toxicity of organic materials. Laboratory methods to detect and quantify components of these mixtures. Methods for separation and analysis of organic compounds in geologic samples: extraction, liquid chromatography, absorption by zeolites, gas chromatography and gas chromatography-mass spectrometry. Student samples considered as material for analysis. Prerequisite: GES 249 or consent of instructor.

GES 261. Physics and Chemistry of Minerals and Mineral Surfaces. 4 Units.

The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

GES 262. Thermodynamics and Disorder in Minerals and Melts. 3 Units.

The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties such as enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as nuclear magnetic resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities; and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are related to atomic-scale views of structure. A general view of geothermometry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics.

GES 263. Introduction to Isotope Geochemistry. 3 Units.

Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

Same as: GES 163

GES 264. Mathematical Modeling in Biogeochemistry. 3 Units.

The basics of translating a conceptual model into a numerical model is presented. Emphasis on building models, box modeling, methods of solving models. Lab exercises draw from examples in biogeochemistry, including modeling global biogeochemical cycles, sediment biogeochemistry, and microbial processes.

GES 266. Managing Nuclear Waste: Technical, Political and Organizational Challenges. 3 Units.

The essential technical and scientific elements of the nuclear fuel cycle, focusing on the sources, types, and characteristics of the nuclear waste generated, as well as various strategies for the disposition of spent nuclear fuel - including reprocessing, transmutation, and direct geologic disposal. Policy and organizational issues, such as: options for the characteristics and structure of a new federal nuclear waste management organization, options for a consent-based process for locating nuclear facilities, and the regulatory framework for a geologic repository. A technical background in the nuclear fuel cycle, while desirable, is not required.

Same as: IPS 266

GES 267. Solution-Mineral Equilibria: Theory. 3 Units.

Procedures for calculating and evaluating the thermodynamic properties of reversible and irreversible reactions among rock-forming minerals and aqueous solutions in geologic systems. Emphasis is on the generation and utility of phase diagrams depicting solution-mineral interaction relevant to phase relations associated with weathering diagenetic, hydrothermal, and metamorphic processes, and the prediction of temperature, pressure, and the chemical potential of thermodynamic components compatible with observed mineralogic phase relations in geologic outcrops. Individual research topics. Prerequisite: 171.

GES 270. Environmental Geochemistry. 4 Units.

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor.

Same as: EARTHSYS 170, GES 170

GES 272. Biomineralization. 3 Units.

The functional properties of many animal and plant skeletons are dependent largely on mineralization. The relationship between mineralization processes and adaptation for all the animal phyla is reviewed. The sedimentologic contribution of mineralized skeletons, especially in carbonate reefs and pelagic sedimentation is considered. Synthesis of organic matrix and the composite nature of many animal and plant skeletons, and their development and morphogenesis are described. The mechanisms of crystal nucleation and growth are considered. The macroevolutionary history of biomineralization, and mass extinctions and the diversification of well skeletonized groups in the geologic record are considered.

GES 273. Isotope Geochemistry Seminar. 1-3 Unit.

Current topics including new analytical techniques, advances in isotopic measurements, and new isotopic approaches and systems. May be repeat for credit for total completion of 5 and total unit allowed 15.

GES 275. Electron Probe Microanalytical Techniques. 2-3 Units.

The practical and theoretical aspects of x-ray generation and detection, and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to 8.

GES 276. Earth's Weathering Engine. 3 Units.

The complex interactions between the chemical, biological, hydrologic and tectonic process that control the chemical and isotopic flux of material to the oceans, and ultimately the long-term composition of both the atmosphere and the hydrosphere. Through a literature review and discussions students will identify key outstanding questions regarding global chemical weathering fluxes. Through data collection, data analysis, and application of appropriate modeling tools students will produce novel analyses and conclusions regarding the operation of the Earth's weathering engine. Permission of instructor required.

GES 277. Flood Basalts and Mass Extinctions. 3 Units.

Recent work in geochronology and paleobiology supports the temporal coincidence of the eruption of continental flood basalts with mass extinction in the marine and terrestrial realms. The mechanisms and timescale of flood basalt eruptions, their likely environmental and biological consequences, and the evidence for flood basalt eruptions as the triggers of many mass extinction events. Sources include recent primary literature.

GES 278. Mantle Processes. 1-3 Unit.

The mantle is the largest reservoir on Earth and is fundamental to a variety of plate tectonic processes, from convection to the generation of crust. This course reviews current knowledge of the mantle based on the geochemistry and rheology of rocks derived from the upper mantle. Focus is on processes at ocean ridges and subduction zones. The tools used for studying the mantle, including radiogenic isotopes, trace elements, melting equations, diffusion coefficients and rheological flow laws, are explored in detail. Pre-requisites: basic geology, petrology and chemistry or consent of the instructor.

GES 281. Principles of $^{40}\text{Ar}/^{39}\text{Ar}$ Thermochronometry. 3-4 Units.

The $^{40}\text{Ar}/^{39}\text{Ar}$ method is based upon the K-Ar decay scheme and allows high precision geochronology and thermochronology to be performed with K-bearing minerals. Provides a detailed exploration of the method including all practical considerations and laboratory procedures for standardization and instrument calibration. A laboratory component allows practical experience in making measurements and interpreting results.

GES 282. Interpretative Methods in Detrital Geochronology. 3 Units.

Over the past decade, the number of studies that make use of isotopic provenance data has sky-rocketed. This type of data is now routinely used throughout the geosciences to solve a broad range of geologic problems. This seminar examines the state-of-the-art of existing interpretative methods for detrital geo/thermochronology data in provenance studies and critically examines their strengths and weaknesses. While this course will touch upon sampling approaches analytical aspects of data collection, focus is primarily upon data interpretation.

GES 283. Thermochronology and Crustal Evolution. 4 Units.

Thermochronology analyzes the competition between radioactive ingrowth and temperature-dependant loss of radiogenic isotopes within radioactive mineral hosts in terms of temperature-time history. Coupled with quantitative understanding of kinetic phenomena and crustal- or landscape-scale interpretational models, thermochronology provides an important source of data for the Earth Sciences, notably tectonics, geomorphology, and petrogenesis. Focus on recent developments in thermochronology, specifically analytical and interpretative innovations developed over the past decade. Integrates the latest thermochronology techniques with field work in a small-scale research project focused upon crustal evolution.

GES 284. Field Seminar on Eastern Sierran Volcanism. 1 Unit.

For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.

GES 285. Igneous Petrogenesis of the Continents. 2-4 Units.

Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; residence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; phase equilibria of partial melting of mantle and crust; geothermometry and geobarometry. Topics emphasize student interest. Prerequisite: 180 or equivalent.

GES 286. Secondary Ionization Mass Spectrometry. 3 Units.

Secondary ionization mass spectrometry (SIMS) is a versatile method capable of performing elemental and isotopic analysis in the solid-state at the nanogram to picogram scale. SIMS offers the most favorable combination of high spatial resolution, sensitivity, and mass resolving power. This course explores the ion optics of the primary and secondary columns of SIMS instruments and explains instrumental mass fractionation and standardization methods for both positive and negative secondary ions. Ion imaging and depth profiling approaches are also covered. Practical experience using Stanford's SHRIMP-RG and NanoSIMS instruments is provided.

GES 287. Fundamentals of Mass Spectrometry. 3 Units.

This course explains ion creation, mass separation, and ion detection in mass spectrometry methods commonly used in the Earth Sciences. Gas source (C-O-H-S stable isotope, $^{40}\text{Ar}/^{39}\text{Ar}$, and (U-Th)-He), secondary ionization (SIMS), laser ablation and solution-based mass inductively coupled (ICP-MS) and thermal ionization (TIMS) mass spectrometry techniques are also explored. Additional topics include ion optics, vacuum generation, and pressure measurement, instrument calibration, data reduction, and error propagation methods.

GES 290. Departmental Seminar in Geological and Environmental Sciences. 1 Unit.

Current research topics. Presentations by guest speakers from Stanford and elsewhere. May be repeated for credit.

GES 291. GES Field Trips. 1 Unit.

Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.

GES 292. Directed Reading with Geological and Environmental Sciences Faculty. 1-10 Unit.

May be repeated for credit.

GES 299. Field Research. 2-4 Units.

Two-three week field research projects. Written report required. May be repeated three times.

GES 310. Climate Change, Climate Variability, and Landscape Development. 1 Unit.

The impact of long-term climate change on erosional processes and the evolution of Cenozoic landscapes. Climate data that highlight recurring climate variability on inter-annual to decadal timescales. The behavior of climate on multi-decadal to tectonic timescales over which significant changes in topography take place. The effects of climate change and variability on landscape development, sedimentary environments, and the deposits of these events. May be repeated for credit.

GES 311. Interpretation of Tectonically Active Landscapes. 3 Units.

Focuses on interpreting various topographic attributes in terms of horizontal and vertical tectonic motions. Topics include identification, mapping, and dating of geomorphic markers, deducing tectonic motions from spatial changes in landscape steepness, understanding processes that give rise to different landscape elements, interrogating the role of climate and lithology in producing these landscape elements, and understanding relationships between tectonic motions, surface topography, and the spatial distribution of erosion. Consists of two one hour lectures per week and one laboratory section that help students gain proficiency in Quaternary mapping and interpretation of topographic metrics.

GES 312. Analysis of Landforms. 3 Units.

Quantitative methods to analyze digital topography and to interpret rates of tectonic and geomorphic processes from topographic metrics. Topics include analysis of digital topography using local and neighborhood-based methods, spectral methods, and wavelet methods. Course consists of two one hour lectures per week and one laboratory section that will help students gain proficiency in calculating topographic metrics using ArcGIS and Matlab.

GES 313. Modeling of Landforms. 3 Units.

Geomorphic-transport-rule-based, as well as mass- and momentum-conservation based models to understand the evolution of Earthquakes; topography. Topics include formulation of land-sculpting processes as geomorphic transport rules, coupling this mass-conservation approach with mechanical models of crustal deformation, and analysis of landscape forms in terms of events for which mass and momentum of fluid and sediment can be conserved. Both analytical, as well as numerical (finite-volume) treatments of particular problems in tectonic geomorphology will be covered. The specific problems addressed as part of the course will be tailored to those currently investigated by class participants.

GES 315. Literature of Structural Geology. 1 Unit.

Classic studies and current journal articles. May be repeated for credit.

GES 325. The Evolution of Body Size. 2 Units.

Preference to graduate students and upper-division undergraduates in GES and Biology. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size?.

Same as: BIO 325

GES 328. Seminar in Paleobiology. 1 Unit.

For graduate students. Current research topics including paleobotany, vertebrate and invertebrate evolution, paleoecology, and major events in the history of life on Earth.

GES 336. Stanford Alpine Project Seminar. 1 Unit.

Seminar on the geology of Italy. Weekly student presentations on continental collision tectonics, sedimentology, petrology, geomorphology, climate, culture, and other topics of interest. Students create a guidebook of geologic stops in advance of field trip. May be repeated for credit.

GES 340. Seminar on the Earth's Interior. 1 Unit.

Seminar to review and discuss current research in mineral physics, seismology, geochemistry and geodynamics on understanding the distribution, form, and role of volatiles in Earth's mantle.

GES 355. Advanced Stratigraphy Seminar and Field Course. 1-3 Unit.

Student-led presentations; poster-sized display on assigned topic; field trip.

GES 373. METAMORPHIC PETROLOGY. 3 Units.

Metamorphic petrology is concerned with the range of solid-state recrystallization and chemical mass transfer processes under physical conditions ranging from those prevalent at the Earth's surface to crustal melting. This course explores the phenomenology of these processes from mineralogic, textural, structural, geochemical, and geodynamic perspectives. The focus is on subduction, arc magmatic, rift magmatic and regional tectonic (collisional and extensional) settings. Important concepts and methods in phase equilibria, thermobarometry, geochronology, and fabric analysis are explored.

GES 373L. Metamorphic Petrology Laboratory. 1 Unit.

Teaches petrographic methods for characterizing recrystallization of common clastic and chemically precipitated sedimentary, mafic and felsic igneous, and ultramafic mantle rocks. Features suites from contact and regional metamorphic settings including arc magmatic, subduction, convergent, and extensional metamorphic settings.

GES 381. Igneous Petrology and Petrogenesis Seminar. 1-2 Unit.

Topics vary by quarter. May be repeated for credit.

GES 384. Volcanology Seminar. 1-2 Unit.

Specialized and advanced topics vary by offering. May be repeated for credit.

GES 385. Practical Experience in the Geosciences. 1 Unit.

On-the-job training in the geosciences. May include summer internship; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training.nn (Staff).

GES 399. Advanced Projects. 1-10 Unit.

Graduate research projects that lead to reports, papers, or other products during the quarter taken. On registration, students designate faculty member and agreed-upon units.

GES 400. Graduate Research. 1-15 Unit.

Faculty supervision. On registration, students designate faculty member and agreed-upon units.

GES 801. TGR Project. 0 Units.

.

GES 802. TGR Dissertation. 0 Units.

.

Geophysics Courses

GEOPHYS 20N. Predicting Volcanic Eruptions. 3 Units.

Preference to sophomores. The physics and chemistry of volcanic processes and modern methods of volcano monitoring. Volcanoes as manifestations of the Earth's internal energy and hazards to society. How earth scientists better forecast eruptive activity by monitoring seismic activity, bulging of the ground surface, and the discharge of volcanic gases, and by studying deposits from past eruptions. Focus is on the interface between scientists and policy makers and the challenges of decision making with incomplete information. Field trip to Mt. St. Helens, site of the 1980 eruption.

GEOPHYS 50N. Planetary Habitability, World View, and Sustainability. 3 Units.

Sustainability lessons from the geological past Life on Earth has partially perished in sudden mass extinctions several time over the Earth's history. Threats include actions of our own volition, including fossil fuel burning as well as natural events, including the impact of large asteroids. The end Permian 250 million years ago and end Paleocene 55 million years ago extinctions involved natural burning of fossil fuels. The 65 million year ago end Cretaceous extinction involved the impact of and asteroid and possibly fossil fuel burning. Related sustainability topics in the popular press will be discussed as they arise. Student pairs lead discussions on topics on how humanity might avert these catastrophes. Offered occasionally.

GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology. 4 Units.

Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. GER:DB-EngrAppSci.

Same as: EE 60N

GEOPHYS 80. The Energy-Water Nexus. 3 Units.

Energy, water, and food are our most vital resources constituting a tightly intertwined network: energy production requires water, transporting and treating water needs energy, producing food requires both energy and water. The course is an introduction to learn specifically about the links between energy and water. Students will look first at the use of water for energy production, then at the role of energy in water projects, and finally at the challenge in figuring out how to keep this relationship as sustainable as possible. Students will explore case examples and are encouraged to contribute examples of concerns for discussion as well as suggest a portfolio of sustainable energy options.

Same as: EARTHYSYS 140

GEOPHYS 90. Earthquakes and Volcanoes. 3 Units.

Is the "Big One" overdue in California? What kind of damage would that cause? What can we do to reduce the impact of such hazards in urban environments? Does "fracking" cause earthquakes and are we at risk? Is the United States vulnerable to a giant tsunami? The geologic record contains evidence of volcanic super eruptions throughout Earth's history. What causes these gigantic explosive eruptions, and can they be predicted in the future? This course will address these and related issues. For non-majors and potential Earth scientists. No prerequisites. More information at https://pangea.stanford.edu/research/CDFM/CourseDescriptions/GP_113_announcement.pdf.
Same as: EARTHYSYS 113

GEOPHYS 100. Directed Reading. 1-2 Unit.
(Staff).**GEOPHYS 104. The Water Course. 3 Units.**

The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues.
Same as: EARTHYSYS 104

GEOPHYS 110. Earth on the Edge: Introduction to Geophysics. 3 Units.

Introduction to the foundations of contemporary geophysics. Topics drawn from four broad themes in: whole Earth geodynamics, geohazards, natural resources, and environment/sustainability. In each case the focus is on how the interpretation of a variety of geophysical measurements (e.g., gravity, seismology, heat flow, magnetism, electromagnetics, and geodesy) can be used to provide fundamental insight into the behavior of the Earth's complex geosystems. Prerequisite: CME 100 or MA TH 51, or co-registration in either.

GEOPHYS 112. Exploring Geosciences with MATLAB. 1-3 Unit.

How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications. Offered every year, autumn quarter.

GEOPHYS 118. Understanding Natural Hazards, Quantifying Risk, Increasing Resilience in Highly Urbanized Regions. 3 Units.

Integrating the science of natural hazards, methods for quantitatively estimating the risks that these hazards pose to populations and property, engineering solutions that might best ameliorate these risks and increase resilience to future events, and policy and economic decision-making studies that may increase long-term resilience to future events. Panel discussions by outside experts exploring the science, engineering, policy, and economics that underly the hazards, risks, and strategies for increasing resilience. Group assignments to evaluate the way in which natural hazards, and human population and developing interact in megacities to produce risk, and what strategies might be adopted in each area to reduce risks posted by the specific hazards faced by these urban areas.

Same as: EESS 118, EESS 218, GEOPHYS 218, GES 118, GES 218

GEOPHYS 120. Ice, Water, Fire. 3-5 Units.

Introductory application of continuum mechanics to ice sheets and glaciers, water waves and tsunamis, and volcanoes. Emphasis on physical processes and mathematical description using balance of mass and momentum, combined with constitutive equations for fluids and solids. Designed for undergraduates with no prior geophysics background; also appropriate for beginning graduate students. Prerequisites: CME 100 or MATH 52 and PHYSICS 41 (or equivalent). Offered every year, winter quarter.
Same as: GEOPHYS 220

GEOPHYS 130. Introductory Seismology. 3 Units.

Introduction to seismology including: elasticity and the wave equation, P, S, and surface waves, dispersion, ray theory, reflection and transmission of seismic waves, seismic imaging, large-scale Earth structure, earthquake location, earthquake statistics and forecasting, magnitude scales, seismic source theory. Offered every year, Autumn quarter. (Beroza, G).

GEOPHYS 141. Remote Sensing of the Oceans. 3-4 Units.

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHYSYS 141, EARTHYSYS 241, EESS 141, EESS 241

GEOPHYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHYSYS 146A, EARTHYSYS 246A, EESS 146A, EESS 246A, GEOPHYS 246A

GEOPHYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHYSYS 146B, EARTHYSYS 246B, EESS 146B, EESS 246B, GEOPHYS 246B

GEOPHYS 150. Geodynamics: Our Dynamic Earth. 3 Units.

In this course we cover the dynamic forces acting upon the Earth. We will investigate how geophysical forces effect the bending of tectonic plates, the flow of heat, sea level topography, the breaking point of rocks, porous flow, and how faults store and release energy. Math 52 or CME 102, GP 107 or permission from instructor. Offered every year, Spring quarter.

GEOPHYS 162. Laboratory Methods in Geophysics. 3-4 Units.

Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research. Prerequisites: Physics 45 (Light and Heat); and CME 100 (Vector Calculus).

Same as: GEOPHYS 259

GEOPHYS 170. Global Tectonics. 3 Units.

The architecture of the Earth's crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies.

GEOPHYS 171. Tectonics Field Trip. 1-3 Unit.

Long weekend field trip to examine large-scale features in the crust. Destinations may include the San Andreas fault, Mendocino Triple Junction, Sierra Nevada, and western Basin and Range province.

GEOPHYS 181. Fluids and Flow in the Earth: Computational Methods. 3 Units.

Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.
Same as: GEOPHYS 200

GEOPHYS 182. Reflection Seismology. 3 Units.

The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration.
Same as: GEOPHYS 222

GEOPHYS 183. Reflection Seismology Interpretation. 1-4 Unit.

The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit.
Prerequisite: 222, or consent of instructor.
Same as: GEOPHYS 223, GES 223

GEOPHYS 184. Journey to the Center of the Earth. 3 Units.

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.
Same as: GEOPHYS 274, GES 107, GES 207

GEOPHYS 185. Rock Physics for Reservoir Characterization. 3 Units.

How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.
Same as: GEOPHYS 260

GEOPHYS 186. Tectonophysics & Global Tectonics. 3 Units.

The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter. This course is offered in 2014-15 instead of Geophys 170/220.
Same as: GEOPHYS 290

GEOPHYS 187. Environmental Soundings Image Estimation. 3 Units.

Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See <http://sep.stanford.edu/sep/prof/>.
Same as: GEOPHYS 211

GEOPHYS 190. Near-Surface Geophysics. 3 Units.

Introduction to the integration of geophysical field measurements and laboratory measurements for imaging and characterizing the top 100 meters of Earth. Examples will focus on applications related to water resource management. The link between the measured geophysical properties of rocks, soils, and sediments, and their material properties. Forward modeling and inversion of geophysical data sets. Each week includes two hours of lectures; plus one two-hour lab that involves acquisition of field or lab data, or computer modeling/analysis of data. Pre-requisite: CME 100 or Math 51, or co-registration in either.

GEOPHYS 196. Undergraduate Research in Geophysics. 1-10 Unit. Field-, lab-, or computer-based. Faculty supervision. Written reports.

GEOPHYS 197. Senior Thesis in Geophysics. 3-5 Units.

For seniors writing a thesis based on Geophysics research in 196 or as a summer research fellow. Seniors defend the results of their research at a public oral presentation.

GEOPHYS 198. Honors Program. 1-3 Unit.

Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval. Seniors defend the results of their research at a public oral presentation.

GEOPHYS 199. Senior Seminar: Issues in Earth Sciences. 3 Units.

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.
Same as: GES 150

GEOPHYS 200. Fluids and Flow in the Earth: Computational Methods. 3 Units.

Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.
Same as: GEOPHYS 181

GEOPHYS 201. Frontiers of Geophysical Research at Stanford: Faculty Lectures. 1 Unit.

Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be. Offered every year, autumn quarter.

GEOPHYS 202. Reservoir Geomechanics. 3 Units.

Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability. Course will have an online component in 2014-2015. Given alternate years.

GEOPHYS 204. Spectral Finite Element Method (SPECFEM) Seismograms. 3 Units.

This is a short course intended for graduate students, but senior level undergraduate students are welcome. The course will cover spectral finite element methods for generating synthetic seismograms. The course will emphasize application over theory, such that students will be able to generate synthetic seismograms by the end of the course. We will employ the SPECFEM code suite on the Center for Computational Earth and Environmental Science (CEES) cluster to generate synthetic seismograms. Bring your laptop to class! Pre-requisite: A working knowledge of differential equations, matrix algebra, unix/linux, and earthquake seismology.

GEOPHYS 205. Effective Scientific Presentation and Public Speaking. 2 Units.

The ability to present your work in a compelling, concise, and engaging manner will enhance your professional career. This course breaks down presentations into their key elements: the opening, body of the talk, closing, slide and poster graphics, Q&A, pacing, pauses, and voice modulation. We use clips from archived talks, slide sets and posters to illustrate the good, the bad, and the ugly. Each participant will use their upcoming conference talk or poster (e.g., AGU, SEG), or upcoming job talk or funding pitch, as their class project. The course will be 40% group meetings and 60% individual coaching. Everyone will come away a more skilled and confident speaker than they were before. Instructor: Ross S. Stein (USGS) The course syllabus is the third publication in <http://profile.usgs.gov/rstein>.

GEOPHYS 206. FLUID DYNAMICS OF THE SOLID EA. 3 Units.

Introduction to fluid dynamical processes in the interior and on the surface of the Earth. The main focus of this course are viscous flow systems with different rheologies. Topics include solid-mantle convection, lava flows, creep in ice sheets, flow instabilities in solid-fluid mixtures and basic principles of fluid percolation through porous media.

GEOPHYS 210. Basic Earth Imaging. 2-3 Units.

Echo seismogram recording geometry, head waves, moveout, velocity estimation, making images of complex shaped reflectors, migration by Fourier and integral methods. Anti-aliasing. Dip moveout. Computer labs. See <http://sep.stanford.edu/sep/prof/>. Offered every year, autumn quarter.

GEOPHYS 211. Environmental Soundings Image Estimation. 3 Units.

Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoint, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See <http://sep.stanford.edu/sep/prof/>. Same as: GEOPHYS 187

GEOPHYS 218. Understanding Natural Hazards, Quantifying Risk, Increasing Resilience in Highly Urbanized Regions. 3 Units.

Integrating the science of natural hazards, methods for quantitatively estimating the risks that these hazards pose to populations and property, engineering solutions that might best ameliorate these risks and increase resilience to future events, and policy and economic decision-making studies that may increase long-term resilience to future events. Panel discussions by outside experts exploring the science, engineering, policy, and economics that underly the hazards, risks, and strategies for increasing resilience. Group assignments to evaluate the way in which natural hazards, and human population and developing interact in megacities to produce risk, and what strategies might be adopted in each area to reduce risks posed by the specific hazards faced by these urban areas. Same as: EESS 118, EESS 218, GEOPHYS 118, GES 118, GES 218

GEOPHYS 220. Ice, Water, Fire. 3-5 Units.

Introductory application of continuum mechanics to ice sheets and glaciers, water waves and tsunamis, and volcanoes. Emphasis on physical processes and mathematical description using balance of mass and momentum, combined with constitutive equations for fluids and solids. Designed for undergraduates with no prior geophysics background; also appropriate for beginning graduate students. Prerequisites: CME 100 or MATH 52 and PHYSICS 41 (or equivalent). Offered every year, winter quarter. Same as: GEOPHYS 120

GEOPHYS 222. Reflection Seismology. 3 Units.

The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration.

Same as: GEOPHYS 182

GEOPHYS 223. Reflection Seismology Interpretation. 1-4 Unit.

The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor.

Same as: GEOPHYS 183, GES 223

GEOPHYS 224. Seismic Reflection Processing. 2-3 Units.

Workshop in computer processing of 2D and 3D seismic reflection data. Students individually process a seismic reflection profile (of their own choice or instructor-provided) from field recordings to migrated sections and subsurface images, using interactive software (OpenCPS from OpenGeophysical.com). Prerequisite: GEOPHYS 222 or consent of instructor.

GEOPHYS 229. Earthquake Rupture Dynamics. 3 Units.

Physics of earthquakes, including nucleation, propagation, and arrest; slip-weakening and rate-and-state friction laws; thermal pressurization and dynamic weakening mechanisms; off-fault plasticity; dynamic fracture mechanics; earthquake energy balance. Problem sets involve numerical simulations on CEES cluster. Prerequisites: GEOPHYS 287. Offered occasionally.

GEOPHYS 235. WAVES AND FIELDS IN GEOPHYSICS. 3 Units.

Basic topics and approaches (theory and numerical simulations) on acoustic, electromagnetic, and elastic waves and fields for geophysical applications: dispersion, phase and group velocities, attenuation, reflection and transmission at planar interfaces, high frequency and low frequency approximations, heterogeneous media. Prerequisites: UG level class on waves or consent of instructor.

GEOPHYS 240. Borehole Seismic Modeling and Imaging. 3 Units.

Borehole seismic imaging for applications to subsurface reservoir characterization and monitoring. Topics include data acquisition, data processing, imaging and inversion. Analysis and processing of synthetic and field datasets. Prerequisites: Waves class equivalent to GP 230, Matlab or other computer programming.

GEOPHYS 241A. Seismic Reservoir Characterization. 3-4 Units.

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112.

Same as: ENERGY 141, ENERGY 241

GEOPHYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A

GEOPHYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B

GEOPHYS 251. Structural Geology and Rock Mechanics. 4 Units.

Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

Same as: CEE 297R, GES 215

GEOPHYS 255. Report on Energy Industry Training. 1-3 Unit.

On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignment, and key results. May be repeated for credit. Prerequisite: written consent of adviser.

GEOPHYS 257. Introduction to Computational Earth Sciences. 2-4 Units.

Techniques for mapping numerically intensive algorithms to modern high performance computers such as the Center for Computational Earth and Environmental Science's (CEES). Topics include computer architecture performance analysis, and parallel programming. Topics covered include pthreads, OpenMP, MPI, Cilk++, and CUDA. Exercises using SMP and cluster computers. May be repeated for credit. Offered every other year, winter quarter.

GEOPHYS 258. Applied Optimization Laboratory (Geophys 258). 3-4 Units.

Application of optimization and estimation methods to the analysis and modeling of large observational data sets. Laboratory exercises using inverse theory and applied linear algebra to solve problems of indirect and noisy measurements. Emphasis on practical solution of scientific and engineering problems, especially those requiring large amounts of data, on digital computers using scientific languages. Also addresses advantages of large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing observational systems such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prerequisites: Programming with high level language. Recommended: EE261, EE263, EE178, ME300 or equivalent.

Same as: EE 257

GEOPHYS 259. Laboratory Methods in Geophysics. 3-4 Units.

Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research. Prerequisites: Physics 45 (Light and Heat); and CME 100 (Vector Calculus).

Same as: GEOPHYS 162

GEOPHYS 260. Rock Physics for Reservoir Characterization. 3 Units.

How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.

Same as: GEOPHYS 185

GEOPHYS 262. Rock Physics. 3 Units.

Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results. Offered every year, autumn quarter.

GEOPHYS 265. Imaging Radar and Applications. 3 Units.

Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278, EE279.

Same as: EE 355

GEOPHYS 270. Electromagnetic Properties of Geological Materials. 2-3 Units.

Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability.

GEOPHYS 274. Journey to the Center of the Earth. 3 Units.

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 184, GES 107, GES 207

GEOPHYS 280. 3-D Seismic Imaging. 2-3 Units.

The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometrics of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units. Offered every year, Spring quarter.

GEOPHYS 281. Geophysical Inverse Problems. 3 Units.

Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 51.

GEOPHYS 284. Hydrogeophysics. 3 Units.

The use of geophysical methods for imaging and characterizing the top 100 meters of Earth for hydrogeologic applications. Includes material properties, forward modeling, data acquisition, inversion, and integration with other forms of measurement. Each week includes three hours of lectures; plus one three-hour lab that involves acquisition of data at campus or nearby sites, or computer modeling of data. Offered occasionally.

GEOPHYS 286. Global Seismology. 3 Units.

This course investigates how waves propagate through the whole Earth. This course examines the questions "How do body waves and surface waves behave within the Earth?" and "What does that tell us about the Earth?" The course delves into both theory and how we apply that theory to understand seismic observations. Requirements: Math 52 or CME 102, GP130 or permission from instructor.

GEOPHYS 287. Earthquake Seismology. 3-5 Units.

Seismic wave propagation (body waves and surface waves, reflection/transmission), Green's functions, seismic moment tensors and equivalent forces, representation theorem, finite-source effects. Prerequisites: GEOPHYS 130 or equivalent. Offered every other year, spring quarter.

GEOPHYS 288A. Crustal Deformation. 3-5 Units.

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including sills, dikes, and magma chambers. Offered every other year, autumn quarter.

GEOPHYS 288B. Crustal Deformation. 3-5 Units.

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries.

GEOPHYS 289. Global Positioning System in Earth Sciences. 3-5 Units.

The basics of GPS, emphasizing monitoring crustal deformation with a precision of millimeters over baselines tens to thousands of kilometers long. Applications: mapping with GIS systems, airborne gravity and magnetic surveys, marine seismic and geophysical studies, mapping atmospheric temperature and water content, measuring contemporary plate motions, and deformation associated with active faulting and volcanism.

GEOPHYS 290. Tectonophysics & Global Tectonics. 3 Units.

The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter. This course is offered in 2014-15 instead of Geophys 170/220. Same as: GEOPHYS 186

GEOPHYS 385A. Reflection Seismology. 1-2 Unit.

Research in reflection seismology and petroleum prospecting. May be repeated for credit.

GEOPHYS 385B. Environmental Geophysics. 1-2 Unit.

Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit.

GEOPHYS 385D. Theoretical Geophysics. 1 Unit.

Research on physics and mechanics of earthquakes, volcanoes, ice sheets, and glaciers. Emphasis is on developing theoretical understanding of processes governing natural phenomena.

GEOPHYS 385E. Tectonics. 1-2 Unit.

Research on the origin, major structures, and tectonic processes of the Earth's crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit.

GEOPHYS 385J. Global Seismic Techniques, Theory, and Application. 1-2 Unit.

Topics chosen from surface wave dispersion measurement, 1D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit.

GEOPHYS 385K. Crustal Mechanics. 1-2 Unit.

Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit.

GEOPHYS 385L. Earthquake Seismology, Deformation, and Stress. 1 Unit.

Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit.

GEOPHYS 385N. Experimental Rock Physics. 1-2 Unit.

Research on the use of laboratory geophysical methods for the characterization of the physical properties of rocks and their response to earth stresses, temperature, and rock-fluid interactions. May be repeated for credit.

GEOPHYS 385S. Wave Physics. 1-2 Unit.

Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit.

GEOPHYS 385V. Poroelasticity. 1-2 Unit.

Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit.

GEOPHYS 385W. GEOPHYSICAL MULTI-PHASE FLOWS. 1-2 Unit.

Research on the dynamics of multi-phase systems that are fundamental to many geophysical problems such as ice sheets and volcanoes.

GEOPHYS 385Z. Radio Remote Sensing. 1-2 Unit.

Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit.

GEOPHYS 400. Research in Geophysics. 1-15 Unit.**GEOPHYS 801. TGR Project. 0 Units.****GEOPHYS 802. TGR Dissertation. 0 Units.**

German General Courses

German Language Courses

GERLANG 1. First-Year German, First Quarter. 5 Units.

Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.

GERLANG 2. First-Year German, Second Quarter. 5 Units.

Continuation of GERLANG 1. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Prerequisite: Placement Test, GERLANG 1.

GERLANG 3. First-Year German, Third Quarter. 5 Units.

Continuation of GERLANG 2. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Fulfills the University language requirement. Prerequisite: Placement Test, GERLANG 2.

GERLANG 5A. Intensive First-Year German, Part A. 5 Units.

Same as GERLANG 1. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C.

GERLANG 5B. Intensive First-Year German, Part B. 5 Units.

Same as GERLANG 2. Continuation of 5A. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

GERLANG 5C. Intensive First-Year German, Part C. 5 Units.

Same as GERLANG 3. Continuation of 5B. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University Foreign Language Requirement.

GERLANG 10. Elementary German for Seniors and Graduate Students. 4 Units.

Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 250 fulfills Ph.D. reading exam.

GERLANG 11P. Individually Programmed Beginning German. 1-5 Unit.

For those who wish to complete fewer than 5 units a quarter, have scheduling conflicts, or prefer to work independently. Self-paced work with text and tapes; instructor available for consultation on a regular basis. 3-unit minimum for beginners. Conversational practice available for additional unit. May be repeated for credit. This course does not fulfill the University language requirement.

GERLANG 20A. Beginning German Conversation. 1 Unit. (AU).**GERLANG 20B. Intermediate German Conversation. 1 Unit. (AU).****GERLANG 20C. Advanced German Conversation. 1 Unit. (AU).****GERLANG 20E. Fun Facts about Europe. 1 Unit. (AU) (Staff).****GERLANG 20J. Central European Brewing. 1 Unit.**

This is a general survey course of the variety of German Beers. The course will have two components: (1) We will meet every other week for a beer tasting session and discussion of the history of German brewing culture. (2) Students will brew their own batch of beer once during the quarter. Beer Tasting will take place alternate Wednesday evenings. Brewing sessions will be hosted on the weekends. All sessions take place at Haus Mitt, 620 Mayfield Ave.

GERLANG 20K. Küche Mitt. 1 Unit. (AU).

Same as: German Cooking Class

GERLANG 20M. Mitt Movie Series. 1 Unit. (AU).**GERLANG 20P. Theme Projects. 1 Unit. (AU).****GERLANG 20R. German Art and Design. 1 Unit.****GERLANG 20T. Teaching German Conversation. 1 Unit. (AU).****GERLANG 21. Intermediate German I. 4 Units.**

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: Placement Test, GERLANG 3 or consent of instructor.

GERLANG 21S. Intermediate German. 4 Units.

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German; or two years high school German or equivalent, or AP German.

GERLANG 21W. Intermediate German I: German for Business and International Relations. 4 Units.

Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 3.

GERLANG 22. Intermediate German II. 4 Units.

Continuation of GERLANG 21, with greater emphasis on reading and writing skills. Literary texts of major 20th-century writers in historical context. Prerequisite: Placement Test, GERLANG 21.

GERLANG 22W. Intermediate German II: German for Business and International Relations. 4-5 Units.

Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 21, 21W.

GERLANG 23. One Hundred German Years. 4 Units.

Hundert deutsche Jahre - Hones German language skills while introducing the history and culture of Germany as experienced by ordinary people over the course of the 20th century. Themes include Germans and money, foreigners, Hitler, the Wall, food, etc. Video series, parallel readings, discussion in German, writing, advanced usage. Prerequisite: Placement Test, GERLANG 22, GERLANG 22W.

GERLANG 23C. Second Year German, Third Quarter. 4-5 Units.

Continuation of GERLANG 22.

GERLANG 99. Language Specials. 1-5 Unit.

Prerequisite: consent of instructor.

GERLANG 105. Advanced Business German. 4 Units.

For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: Placement Test, GERLANG 22.

GERLANG 110. German Newspapers. 3-4 Units.

For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit.

GERLANG 111. Television News from Germany. 3-4 Units.

For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.

GERLANG 199. Individual Reading. 1-5 Unit.

Prerequisite: consent of instructor.

GERLANG 205A. Intensive First-Year German for Stanford Grads. 3-5 Units.

Equivalent to GERLANG 5A. For Stanford graduate students only. Stanford graduate students restricted to 9 units; may take 205A, B and C for a total of 9 units.

GERLANG 205B. Intensive First-Year German for Stanford Grads. 3-5 Units.

Equivalent to GERLANG 5B. For Stanford graduate students only. Continuation of 205A. Stanford graduate students restricted to 9 units; may take 205A, B and C for a total of 9 units.

GERLANG 205C. intensive First-Year German, Part C. 3-5 Units.

Equivalent to GERLANG 5C. For Stanford graduate students only. Continuation of 205B. Stanford graduate students restricted to 9 units may take 205A, B and C for a total of 9 units.

GERLANG 210. Elementary German for Graduate Students. 3-4 Units.

Restricted to Stanford graduate students. Prerequisite: consent of instructor.

GERLANG 250. Reading German. 4 Units.

For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Fulfills University reading requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of German, or 10, or equivalent.

GERLANG 395. Graduate Studies in German. 1-5 Unit.

Prerequisite: consent of instructor.

GERLANG 399. Independent Study. 1-5 Unit.

Prerequisite: consent of instructor.

German Literature Courses

German Literature Courses

GERMAN 41N. Inventing Modern Theatre: Georg Büchner and Frank Wedekind. 3 Units.

The German writers Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). Many of the most important theater and film directors of the last century, including Max Reinhardt, G. W. Pabst, Orson Welles, Robert Wilson, and Werner Herzog, have wrestled with their works, as have composers and writers from Alban Berg and Bertolt Brecht through Christa Wolf and Thalia Field. Rock artists as diverse as Tom Waits, Lou Reed, Duncan Sheik, and Metallica have recently rediscovered their urgency. Reading these works in translation and examining artistic creations they inspired. Classroom discussions and written responses; students also rehearse and present in-class performances of excerpts from the plays. The aim of these performances is not to produce polished stagings but to creatively engage with the texts and their interpretive traditions. No previous theatrical experience required.

Same as: TAPS 41N

GERMAN 80N. Modern Conservatives. 3 Units.

How do conservatives respond to the modern world? How do they find a balance between tradition and freedom, or between stability and change? This seminar will examine selections from some conservative and some classically liberal writers that address these questions. At the center of the course are thinkers who left Germany and Austria before the Second World War: Friedrich Hayek, Leo Strauss and Hannah Arendt. We will also look at earlier European writers, such as Edmund Burke and Friedrich Nietzsche, as well as some recent American thinkers. Taught in English.

GERMAN 88. Germany in 5 Words. 3-5 Units.

This course explores German history, culture and politics by tracing five (largely untranslatable) words and exploring the debates they have engendered in Germany over the past 200 years. This course is intended as preparation for students wishing to spend a quarter at the Bing Overseas Studies campus in Berlin, but is open to everyone. Taught in English.

GERMAN 88Q. Gateways to the World: Germany in 5 Words. 3-5 Units.

This course explores German history, culture and politics by tracing five (largely untranslatable) words and exploring the debates they have engendered in Germany over the past 200 years. This course is intended as preparation for students wishing to spend a quarter at the Bing Overseas Studies campus in Berlin, but is open to everyone. Preference to Sophomores. Taught in English.

GERMAN 104. Resistance Writings in Nazi Germany. 3 Units.

This course focuses on documents generated by nonmilitary resistance groups during the period of National Socialism. Letters, essays, diaries, and statements on ethics from the Bonhoeffer and Scholl families form the core of the readings. The resistance novel, *Every Man Dies Alone*, is also included. Texts will be read as historical documents, reflections of German thought, statements of conscience, attempts to maintain normal relationships with others in the face of great risk, as poetic works, and as guides for the development of an ethical life. Taught in English.

GERMAN 105. Going Medieval: Introduction to Freiburg, Germany, and its Surrounding Region. 1 Unit.

This course offers an introduction to materials that are pertinent to the BOSP summer seminar "Going Medieval" offered in summer 2015. It is a required course for participants of the seminar.

Same as: DLCL 105

GERMAN 116. Writing About Germany: New Topics, New Genres. 3-4 Units.

Writing about various topics in German Studies. Topics based on student interests: current politics, economics, European affairs, start-ups in Germany. Intensive focus on writing. Students may write on their experience at Stanford in Berlin or their internship. Fulfills the WIM requirement for German Studies majors.

GERMAN 118N. From Mozart to Metal, Germany in 99 Songs. 3-5 Units.

This course explores 200 years of German history and culture through popular songs -- the good, the bad and the very, very goofy. From songs composed by classical composers, via folksongs and operettas, all the way to punk, hip-hop, techno and heavy metal, this course explores the evolution of German popular culture and history. Prerequisite: 1 year of German.

GERMAN 120N. The Brothers Grimm and Their Fairy Tales. 4 Units.

Historical, biographical, linguistic, and literary look at the Kinder- and Hausmarchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Four short essays, one or two oral reports. Preference to Freshmen; class then opens to all. Fulfills WIM for German majors (must be taken for letter grade.) In German.

GERMAN 120Q. Contemporary Politics in Germany. 3-4 Units.

This course provides an opportunity to engage with issues and actors, politicians and parties in contemporary Germany, while building German language abilities. We will work with current events texts, news reports, speeches and websites. Course goals include building analytic and interpretive capacities of political topics in today's Europe, including the European Union, foreign policy, and environmentalism. Differences between US and German political culture are a central topic. At least one year German language study required.

GERMAN 123. German Culture and Film. 3-5 Units.

This course has two primary goals. First, it is designed to provide students with a visual and linguistic foundation for discussing and writing about German film from the Weimar period to the present. To that end we will review important genres, directors, and technological developments in the history of German film. Second, using film as a lens, we will examine several key moments in German cultural history from the 1920s to the present. Certain themes will reoccur throughout the course, including gender, the city, technology, violence, and social crisis. All materials and class discussion in German. (Meets Writing-in-the-Major requirement).

GERMAN 124. Introduction to German Poetry. 3-5 Units.

Introduction to lyric poetry in German from the 18th century to the present. Readings include poems by Goethe, Holderlin, Brentano, Eichendorff, Heine, Rilke, Trakl, Celan, Brecht. Ways of thinking about and thinking with poetry. Focus on poetic form, voice, figural language, and the interaction of sensory registers. Taught in German, with attention to discussion and writing skills. Prerequisite: Gerlang 1-3 or equivalent.

GERMAN 126. Old Stories, New Media: Great German Tales and their Adaptations. 3-5 Units.

There are some characters that we see again and again: the love-struck artist, the mad genius, and the valiant hero. Where do these tropes come from? How do they evolve through history? This course will survey German history through the eyes of some of its most well-known stories. We will explore how audience, medium, cultural ideals, and historical changes can transform the meaning of a narrative over time. The central aim of this course is to provide students with an analytical framework with which to approach an unfamiliar work of art or literature. The course also aims to improve students' quest; German language proficiency and give students a broad understanding of German intellectual history. Taught in German.

GERMAN 127. Modernity, Memory, Mourning: 20th Century German Short Fiction. 3-5 Units.

Through a sampling of short stories and novellas from 1918 to 1952, this course will explore major historical and cultural questions related to Germany in the early 20th century. Students will develop an understanding of recent German history and of how German writers have chosen to engage with this history in various ways. Themes will include the impact of modernity on the individual, violence and war, fascism and its effect on personal agency, exile and mourning, memory and trauma, and tradition and its breakdown. Authors include Kafka, Mann, Seghers, and Bouml;l. Readings and discussion in German.

GERMAN 128N. Medicine, Modernism, and Mysticism in Thomas Mann's the Magic Mountain. 3 Units.

Published in 1924, *The Magic Mountain* is a novel of education, tracing the intellectual growth of a budding engineer through a maze of intellectual encounters during a seven-year sojourn in a sanatorium set high in the Swiss Alps. It engages with the key themes of modernism: the relativity of time, the impact of psychoanalysis, the power of myth, and an extended dispute between an optimistic belief in progress and a pessimistic vision of human nature. Through its detailed discussion of disease (tuberculosis), this remarkable text connects the study of medicine to the humanities. There will be an exploration of this rich and profound novel both as a document of early twentieth-century Europe and as a commentary on the possibilities of education that are urgent for liberal arts education today. Taught in English.

GERMAN 130N. Nobel Prize Winners in German Literature. 3 Units.

Readings from some of the best German-language authors, including Thomas Mann, Hermann Hesse, Heinrich Boll and Herta Muller. How imaginative literature engages with history, and how great authors address the major questions in politics and philosophy in modern Germany. Taught in German. German language equivalent to high school AP.

GERMAN 131. What is German Literature?. 3-5 Units.

This course covers material from the fairy tales of German romanticism, expressionist poetry and painting, literary responses to Nazi Germany and reflections on a unified Germany. Exploring the shifting relationships between cultural aesthetics, entertainment, historical context, and "what is German", we will cover roughly 250 years of literary and artistic production, social and political upheavals, as well as the lives of numerous authors, both male and female. Taught in German. Prerequisite: One year of German language at Stanford or equivalent.

GERMAN 132. Dynasties, Dictators and Democrats: History and Politics in Germany. 3-5 Units.

Key moments in German history through documents: personal accounts, political speeches and texts, and literary works. The course begins with the Prussian monarchy and proceeds to the crisis years of the French Revolution. Documents from the 1848 revolution and the age of Bismarck and German unification follow. World War I and its impact on Germany, including the rise of Hitler, as well as the aftermath, divided Germany in the Cold War through the fall of the Berlin Wall. Taught in German. Same as: COMPLIT 132A

GERMAN 133. Marx, Nietzsche, Freud. 3-5 Units.

We read and discuss selections from works by the key master thinkers who have exerted a lasting influence by debunking long-cherished beliefs. Do these authors uphold or repudiate Enlightenment notions of rationality, autonomy and progress? How do they assess the achievements of civilization? How do their works illuminate the workings of power in social and political contexts? Readings and discussion in German.

GERMAN 137. Hysteria and Modern Culture. 3-5 Units.

The term "hysteria" has been used for centuries to categorize the mysterious ailments of others. This course will focus on the history of hysteria's representation and production from the late nineteenth century through WWI. Readings will include medical writings (Charcot, Bernheim, Freud), plays (Ibsen, Strindberg, Toller), and feminist theory (Cixous, Cleacute;ment, Diamond). We will also devote some attention to the ongoing influence of the discourse of hysteria on contemporary medical and popular cultures.

Same as: HUMBIO 162H, TAPS 169

GERMAN 140. German Sports Culture and History. 3-5 Units.

The course highlights specificities of sports in Germany and thus provides a unique point of access for understanding German culture in past and present. Concepts of competition and performance will be examined, as well as the relations between sports and politics in different periods of modern German history. Special attention will be given to soccer, but boxing, cycling, gymnastics (Turnen), and other Olympic sports will be studied as well. Materials will include theoretical and literary texts in English and German, media representations of athletic contests. To improve writing skills students will write a weekly essay on various phenomena. Language: German, requirement: one year of college German or equivalent.

GERMAN 150. Masterpieces: Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. Same as: COMPLIT 114, JEWISHST 145

GERMAN 154. Poetic Thinking Across Media. 4 Units.

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclesiastes, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts--from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 154B, COMPLIT 354B, GERMAN 354, JEWISHST 144B

GERMAN 181. Philosophy and Literature. 5 Units.

(Formerly CLASSGEN 81) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English. Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, ITALIAN 181, PHIL 81, SLAVIC 181

GERMAN 182. War and Warfare in Germany. 3 Units.

Survey of Germany at war through historical, theoretical and literary accounts. War in the international system and the role of technology. Religious wars, rationalization of warfare, violence and politics, terrorism. War films, such as All Quiet on the Western Front. Readings by authors such as Clausewitz, Juuml;nger, Remarque, Schmitt, and Arendt. Taught in English.

GERMAN 184. Technology, Innovation, and the History of the Book. 3-5 Units.

An historical perspective on the intellectual and social impact of developments in information technology will be examined. Focusing on the evolution of media from scrolls to codices to printed books we will look at the social, historical, cultural, and economic sources and ramifications of innovation in media and information technology, and explore why such innovation occurs in certain places and within certain social groups and not others. Examples draw from German cultural history, e.g. Gutenberg and the printing press, but also from the broader European history of the book. Students will have the opportunity to work with historical materials from Special Collections. Taught in English.

GERMAN 190. German Capstone: Reading Franz Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement).

Same as: COMPLIT 111, COMPLIT 311C, GERMAN 390, JEWISHST 147, JEWISHST 349

GERMAN 191. German Capstone Project. 1 Unit.

Each student participates in a capstone interview and discussion with a panel of the German Studies faculty on topics related to German cultural and literary analysis. In preparation for the interview/discussion, students submit written answers to a set of questions based on several authentic cultural texts in German. The written answers, normally in English, should be well-formed and coherent. Within the interview/discussion, students must demonstrate a further understanding of the topic(s) posed, through cogent argument.

GERMAN 199. Individual Work. 1-12 Unit.

Repeatable for Credit. Instructor Consent Required.

GERMAN 200. The Ballad Tradition. 3-5 Units.

This team-taught cross-disciplinary course traces the history and aesthetics of the ballad in German, English, and Scottish literature, from the 18th century to the early 20th century. No knowledge of German is required, but reading knowledge is a plus.

Same as: COMPLIT 227A, ENGLISH 383A

GERMAN 217. The Poetry of Friedrich Holderlin. 3-5 Units.

A working through of the complex prosodic forms, existential and political concerns, and poetological reflections of both the most past-oriented and most pathbreaking German poet of the late eighteenth and early nineteenth century. A comprehensive introduction that will attempt to develop an innovative view in which Holderlin will appear as one of the founding figures of literary Modernity. Knowledge of German desirable but participation through English translations will be possible.

Same as: COMPLIT 217

GERMAN 218. Central European Literature. 4 Units.

Central Europe is not a clearly defined region so much as an idea debated with particular intensity in the successor states of the Austro-Hungarian monarchy. Part reality part fantasy, "Central Europe" refers to a contested space between East and West, between cosmopolitanism and provincial narrowness, a space whose diversity has fostered cultural creativity, political conflict and utopian fantasy. Our survey will focus on fiction, memoirs and essayistic commentary from the successor states of the Austro-Hungarian monarchy. It will comprise the dissolution of the empire, the interwar years, the Cold War decades and the postcommunist era. Attention to the predicament of small nations, "minor" literatures and cultural cross-pollination. Authors include Musil, Kafka, Roth, Kosztoacute;nyi, Maacute;rai, Hasek, Svevo, Kis, Torberg, Hrabal, Kundera, Esterhaacute;zy, Magris. Discussion and readings in English.

GERMAN 220. German Literature 1: How Stories are Told (ca. 1170-1600). 5-8 Units.

This seminar offers a survey of medieval and early modern German literature and culture from ca.1170 to 1600. Genres include heroic epic, romance, lyric poetry, and mysticism as well as the popular literary forms characteristic of Reformation culture. We will pay special attention to the changing strategies of storytelling across time, genre, and medium. Discussion in English. All texts are available in modern German or English translation. Undergraduates enroll in 220 for 5 units, graduate students enroll in 320 for 5 or 8 units.

Same as: GERMAN 320

GERMAN 221. German Literature 2: Selfhood and History. 3-8 Units.

How the literature of the period between 1750 and 1900 gives voice to new conceptions of selfhood and articulates the emergent self understanding of modernity. Responses to unprecedented historical experiences such as the French Revolution and the ensuing wars, changes in the understanding of nature, the crisis of foundations, and the persistence of theological motifs. Lessing, Herder, Goethe, Schiller, Holderlin, Kleist, Heine, Buchner, Keller, and Fontane. Taught in English, readings in German. (Note: Fulfills DLCL 325 for AY 1415 for the PhD Minor in the Humanities). Same as: COMPLIT 321A, GERMAN 321

GERMAN 222. German Literature 3: Myth and Modernity. 5-8 Units.

Masters of German 20th- and 21st-Century literature and philosophy as they present aesthetic innovation and confront the challenges of modern technology, social alienation, manmade catastrophes, and imagine the future. Readings include Nietzsche, Freud, Rilke, Musil, Brecht, Kafka, Doebelin, Benjamin, Juenger, Arendt, Musil, Mann, Adorno, Celan, Grass, Bachmann, Bernhardt, Wolf, and Kluge. Taught in English. Undergraduates enroll in 222 for 5 units, graduate students enroll in 322 for 8 units. Same as: COMPLIT 222A, GERMAN 322

GERMAN 223. GERMANY BETWEEN EAST AND WEST. 3-5 Units.

A consideration of German political culture and its contradictory orientations toward alternative poles: the Russian East and the American West. How historical traditions inform current debates, such as the response to the Ukraine crisis. Conflicts between liberal and populist paradigms, enlightenment and romantic legacies. Germany and its geopolitical imagination. The German image of Russia. Texts such as Th. Mann, *quest*; The German Republic, *quest*; Carl Schmitt, *Land and Sea*, *Wolf*, *Divided Heaven*, and documents of contemporary popular culture.

GERMAN 245. German Idealist and Romantic Aesthetics. 3-5 Units.

Focus on influential theories of aesthetic experience as an autonomous cultural domain that supplements science and morality. How the discovery of beauty and sublimity in nature led to an unprecedented celebration of art as the highest form of human activity. The problem of the relation between aesthetic experience and conceptual understanding. Readings by Kant, Schiller, Friedrich Schlegel, Schelling, Hegel, and more recent responses to their works. Taught in English.

GERMAN 246. Hegel's Phenomenology of Spirit. 3-5 Units.

Hegel's groundbreaking work models the mind's efforts to understand itself and tells a historically rich story of the evolution of social forms of life. The book begins with basic sensory awareness and ends with the recognition that thought is not finite and constrained by an inert reality but absolutely free, the only source of authority for modern subjects. Topics include the question of whether the human standpoint is inherently limited and fixed, the role of history, knowledge and agency, political conflict and power, rationality and religion, the ancient and the modern world.

GERMAN 250. Humanities Education in the Changing University. 3 Units.

Advanced study in the humanities faces changes within fields, the university and the wider culture. Considers the debate over the status of the humanities with regard to historical genealogies and current innovations. Particular attention on changes in doctoral education. Topics include: origins of the research university; disciplines and specialization; liberal education in conflict with professionalization; literature and literacy education; interdisciplinarity as a challenge to departments; education policy; digital humanities; accountability in education, assessment and student-centered pedagogies.

Same as: COMPLIT 275, DLCL 320

GERMAN 258. Song Collections as a Reflection of Social and Political Practices at the Hapsburg Court ca. 1500. 3-5 Units.

Artistic endeavors were of crucial importance for Emperor Maximilian; his self-conception and his notion of an emerging German nation. Up to now it has been investigated particularly by looking at literary and visual artworks commissioned by him. In the seminar musical products of the Imperial court, especially songs will be surveyed as expressions of courtiers, urban patricians and humanists in the German lands. A manuscript collection, which was prepared for the Diet in Augsburg 1518 will be at the core of the course, complemented by an early print from 1512. Besides a panegyric on Maximilian as defender of Christendom against the Turks there are standard lyrics, mostly on the theme of love and some merry topics, punctuated by a considerable amount of politically conceived texts, complaining about grievances and social evils at court. Recent approaches have tried to decipher courtly love poems of pre-conversational times as a method of launching social or political opinions in a disguised way. Thus the anthology can be checked as a vehicle of political communication. Philological aspects of source description, material, layout and handwriting will also be examined. Additionally, excursions to Early Modern High German and to musical procedures will be undertaken.

GERMAN 262. The Total Work of Art. 5 Units.

Frequently associated with the work of Richard Wagner, The Total Work of Art (or Gesamtkunstwerk) is a genre that aims to synthesize a range of artistic forms into an organic unity, a unity that both models and helps to forge an ideal state. This seminar will examine the history of the Gesamtkunstwerk from its roots in German Romanticism to the present day, focusing on the genre's relations with technology and mass culture across a wide range of media. Creations we will consider include Wagner's Festival Theatre at Bayreuth, Walter Gropius' plans for a Totaltheater, Bertolt Brecht and Kurt Weill's radio-oratorio *The Lindbergh Flight*, Leni Riefenstahl's *Triumph of the Will*, Walt Disney's theme parks, Andy Warhol's *Exploding Plastic Inevitable*, and Bill Gates' "home of the future." Taught in English. Same as: TAPS 262S

GERMAN 262A. Explosions of Enlightenment. 3-5 Units.

Eighteenth-century culture seen as permeated by intellectual and artistic practices and plays pushing principles of reason and rationality to an extreme that becomes self-undercutting. Such obsessions and practices are becoming more visible and prominent now, as the traditional concept of "Enlightenment" (synonymous with the 18th century) is undergoing a profound transformation. Among the protagonists of this seminar will be: Diderot as a philosopher and novelist; Lichtenberg as a scientist and writer of everyday notes; Goya, accusing violence and obsessed with nightmarish visions; Mozart as the excessive master of repetition and variation. Same as: COMPLIT 262A

GERMAN 264. Post-Cold War German Foreign Policy. 3-5 Units.

This course is devoted to Germany's role and policy in international relations since 1990. It is based on the premise that Germany's post-Cold War foreign policy was shaped by two potentially conflicting impulses which is historical learning versus the country's economic role and geopolitical position. The course's objective is to make students familiar with the overall conditions of German Foreign Policy in the post-Cold War era and to analyze related tensions and dilemmas. Empirical examples are Germany's role in the Yugoslavian wars in the first half of the 1990s, the transatlantic crisis over the Iraq war of 2003 and Germany's engagement in Afghanistan and German Foreign Policy during the country's tenure as a non-permanent member of the UN Security Council 2011-2012. Discussion in English; German reading knowledge required.

GERMAN 264A. Walter Benjamin. 3-5 Units.

Walter Benjamin's work as cultural historian, critic, literary author and philosopher, seen from the trajectory of a German-Jewish intellectual life in the context of the first half of the 20th century. Providing such a historical perspective will be the condition for an actively critical reading of Benjamin's works; a reading that -- counter to the predominant Benjamin-reception -- will try to distinguish between works of purely biographical and historical interest and those Benjamin texts that prove to be of great and lasting intellectual value. Taught in English.

Same as: COMPLIT 264

GERMAN 271. Futurity: Why the Past Matters. 3-5 Units.

Drawing on literature, the arts, political discourse, museums, and new media, this course asks why and how we take interest in the watershed events of the modern era; how does contemporary culture engage with modern, made-made disasters such as the World Wars or 9/11? Readings and viewings include the literature of G. Grass, W. G. Sebald, Ian McEwan, Toni Morrison and Cormac McCarthy; the cinema of Kathryn Bigelow and Steven Spielberg; speeches by Barak Obama; and the theoretical writing of Walter Benjamin, Hayden White, Fredric Jameson, among others. Taught in English.

Same as: COMPLIT 271A

GERMAN 282. Martin Heidegger. 3-5 Units.

Working through the most systematically important texts by Martin Heidegger and their historical moments and challenges, starting with *Being and Time* (1927), but emphasizing his philosophical production after World War II. The philological and historical understanding of the texts function as a condition for the laying open of their systematic provocations within our own (early 21st-century) situations. Satisfies the capstone seminar requirement for the major tracks in Philosophy and Literature. Taught in English.

Same as: COMPLIT 213A, COMPLIT 313A, GERMAN 382

GERMAN 283. Brecht. 3-5 Units.

Arguably the most influential theatrical artist of the twentieth century, Bertolt Brecht continues to be a lightning rod for debates over art and politics. This course will consider Brecht as playwright, director, and theorist. Alongside reading and discussing texts such as *Threepenny Opera*, *Mother Courage*, and *Galileo*, students will also be expected to participate in occasional in-class performances in order better to grapple with his plays and theories. No previous theatrical experience is necessary.

Same as: TAPS 382

GERMAN 284. The Nervous Age: Neurosis, Neurology, and Nineteenth-century Theatre. 5 Units.

The nineteenth century witnessed profound developments in neurological and psychological sciences, developments that fundamentally altered conceptions of embodiment, agency, and mind. This course will place these scientific shifts in conversation with theatrical transformations of the period. We will read nineteenth-century neuropsychologists such as Charles Bell, Johannes Müller, George Miller Beard, Jean-Martin Charcot, and Hippolyte Bernheim alongside artists such as Percy Shelley, Georg Büchner, Richard Wagner, Émile Zola, and August Strindberg.

Same as: HUMBIO 162, TAPS 354

GERMAN 285. Environmentalism, Literature and Cultural Criticism. 3-5 Units.

Concern for environmental threats increasingly draw on traditions of cultural and civilizational criticism. This course explores literary and cultural dimensions of environmentalist discourse, especially in German-speaking Europe but with opportunities for comparative treatments of ecological tendencies in other countries. Topics include: Environmentalism as progressive or as conservative; ambivalence toward technology; sustainability and the critique of growth; humans and animals. Authors such as F. Jünger, Jahn, Wolf, C. Amery, Dath, with comparisons to Leopold, Atwood, Ghosh, Latouche and others. Reading knowledge of German or permission of instructor.

GERMAN 289. Buechner and Wedekind. 3-5 Units.

Modern theatre owes an incalculable debt to two German playwrights: Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). We will read their still-shocking portraits of sex, madness, and social brutality in plays such as *Woyzeck* and *Spring's Awakening*, and explore the international journeys these works have made from stage to film and from opera to musical theatre.

Same as: TAPS 289

GERMAN 298. Writing Workshop. 1-12 Unit.

Open only to German majors and to students working on special projects, including written reports for internships. Honors students use this number for the honors essay. May be repeated for credit.

GERMAN 300. Concepts of Modernity I: Philosophical Foundations. 5 Units.

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students.

Same as: ENGLISH 334A, MTL 334A

GERMAN 310A. Music and Critical Theory. 3-5 Units.

The seminar provides an opportunity to study some of the seminal texts of Critical Theory dealing with music. Concentrating on Theodor Adorno's writings on music, we will also include key philosophers who informed Adorno's thinking (in particular Kant, Hegel and Nietzsche), influential nineteenth-century aesthetics of music (Hoffmann, Schopenhauer and Hanslick), other contemporaries of Adorno (for example, Ernst Bloch), and some later authors whose work was influenced by the Frankfurt School (such as Carl Dahlhaus). We will also consider the impact of Critical Theory on recent scholarship. Weekly meetings will be organized around various topics, ranging from central concepts such as "Enlightenment" and "musical material" to individual composers. Music by Wagner, Mahler, Schoenberg, Stravinsky and Weill will feature prominently on the syllabus.

Same as: MUSIC 310A

GERMAN 320. German Literature 1: How Stories are Told (ca. 1170-1600). 5-8 Units.

This seminar offers a survey of medieval and early modern German literature and culture from ca. 1170 to 1600. Genres include heroic epic, romance, lyric poetry, and mysticism as well as the popular literary forms characteristic of Reformation culture. We will pay special attention to the changing strategies of storytelling across time, genre, and medium. Discussion in English. All texts are available in modern German or English translation. Undergraduates enroll in 220 for 5 units, graduate students enroll in 320 for 5 or 8 units.

Same as: GERMAN 220

GERMAN 321. German Literature 2: Selfhood and History. 3-8 Units.

How the literature of the period between 1750 and 1900 gives voice to new conceptions of selfhood and articulates the emergent self understanding of modernity. Responses to unprecedented historical experiences such as the French Revolution and the ensuing wars, changes in the understanding of nature, the crisis of foundations, and the persistence of theological motifs. Lessing, Herder, Goethe, Schiller, Holderlin, Kleist, Heine, Buchner, Keller, and Fontane. Taught in English, readings in German. (Note: Fulfills DLCL 325 for AY 1415 for the PhD Minor in the Humanities).

Same as: COMPLIT 321A, GERMAN 221

GERMAN 322. German Literature 3: Myth and Modernity. 5-8 Units. Masters of German 20th- and 21st-Century literature and philosophy as they present aesthetic innovation and confront the challenges of modern technology, social alienation, manmade catastrophes, and imagine the future. Readings include Nietzsche, Freud, Rilke, Musil, Brecht, Kafka, Doebelin, Benjamin, Juenger, Arendt, Musil, Mann, Adorno, Celan, Grass, Bachmann, Bernhardt, Wolf, and Kluge. Taught in English. Undergraduates enroll in 222 for 5 units, graduate students enroll in 322 for 8 units. Same as: COMPLIT 222A, GERMAN 222

GERMAN 354. Poetic Thinking Across Media. 4 Units. Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclestias, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts--from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter. Same as: COMPLIT 154B, COMPLIT 354B, GERMAN 154, JEWISHST 144B

GERMAN 369. Introduction to Graduate Studies: Criticism as Profession. 3 Units. A history of literary theory for entering graduate students in national literature departments and comparative literature. Same as: COMPLIT 369, DLCL 369, FRENCH 369, ITALIAN 369

GERMAN 382. Martin Heidegger. 3-5 Units. Working through the most systematically important texts by Martin Heidegger and their historical moments and challenges, starting with *Being and Time* (1927), but emphasizing his philosophical production after World War II. The philological and historical understanding of the texts function as a condition for the laying open of their systematic provocations within our own (early 21st-century) situations. Satisfies the capstone seminar requirement for the major tracks in Philosophy and Literature. Taught in English. Same as: COMPLIT 213A, COMPLIT 313A, GERMAN 282

GERMAN 390. German Capstone: Reading Franz Kafka. 3-5 Units. This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement). Same as: COMPLIT 111, COMPLIT 311C, GERMAN 190, JEWISHST 147, JEWISHST 349

GERMAN 397. Graduate Studies Colloquium. 1 Unit. Colloquium for graduate students in German Studies. Taught in English.

GERMAN 398. Dissertation Prospectus Colloquium. 1-12 Unit. Repeatable for Credit.

GERMAN 399. Individual Work. 1-12 Unit. Repeatable for Credit. Instructor Consent Required.

GERMAN 802. TGR Dissertation. 0 Units.

Health Research Policy Courses

HRP 28SI. Alternative Spring Break: Prevention, Treatment, and Policy Perspectives on Alzheimer's Disease. 1 Unit.

Examines four aspects of Alzheimer's disease. Goal is to give participants a clearer sense of the struggle that patients actually feel and experience during the progression of the disease. Also explores difficulties and issues that many relatives face in assuming the responsibility of full-time caregiver for an Alzheimer's patient. Addresses ethical considerations on genetic testing, should these advances be embraced or should we be wary of the knowledge they may bring? Finally, explores the notion of service through engaged scholarship by exposing oneself to cutting-edge discoveries as researchers attempt to unravel the puzzle.

HRP 89Q. Introduction to Cross Cultural Issues in Medicine. 3 Units. Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system.

HRP 198. Unite, Empower, Experience: Understanding the Universality of Women's Health. 1 Unit.

Directed reading course reading. Focus is on the impact of the unique challenges women face in the healthcare system on women and their communities. Examines the current state of women's health from global perspective, considering: community health, health policy, and the medical technology sector.

HRP 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

HRP 205. Innovation in a Changing Health Care System. 2 Units.

Brings to light issues faced by many different sectors of the healthcare field in response to both health reform and other marketplace changes, with particular emphasis on ways that innovators in health care organizations and delivery can understand and respond to these issues. Considers ways that various components of the healthcare delivery system are innovating and evolving in response to dramatic changes in U.S. healthcare marketplace. Topics include health insurance, provider systems, pharmaceuticals, medical devices, information technology. Guest speakers from private-sector and public-sector healthcare organizations.

HRP 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics. Same as: MED 206, STATS 211

HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I. 2 Units.

Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.

HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II. 3 Units.

Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.

HRP 209. Health Law: The FDA. 2-3 Units.

(Same as LAW 458) Open to law and medical students; other graduate students by consent of instructor. The FDA's regulatory authority over drugs, biologics, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.

HRP 210. Health Law and Policy. 3 Units.

(Same as Law 313) Open to law, medicine, business, and graduate students. Focus this term is on the physician/patient relationship, medical ethics, and public health law.

HRP 211. Law and the Biosciences: Neuroscience. 3 Units.

(Same as LAW 368) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, and cognitive enhancement.

HRP 212. Cross Cultural Medicine. 3 Units.

Developing interviewing and behavioral skills needed to facilitate culturally relevant health care across all population groups. Discussions focus on explicit and implicit cultural influences operating in formal and informal medical contexts.

HRP 213. Writing in the Sciences. 2-3 Units.

Primarily for medical students in the Clinical Research Scholarly concentration; open to graduate students except Epidemiology graduate students. Development of research questions and plans for statistical analysis. Study design, sample size and power calculations, and statistical analysis of study data. Analytic methods to carry out statistical power and sample size calculations. Prerequisites: 225, and 258 or 259, or consent of instructor.

HRP 214. Scientific Writing. 2-3 Units.

Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly. Preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course.

HRP 215. Scientific Writing for Basic and Translational Scientists. 2-3 Units.

Teaches students in the basic sciences how to write clearly, concisely, and effectively. Focuses on the process of writing and publishing a scientific manuscript. 3 unit option requires work on a manuscript. Not intended for epidemiology graduate students.

HRP 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research. 2-3 Units.

Topics include: advanced aspects of study design and data analyses; development of health measurement instruments; methods of summarizing literature and quantifying effect sizes; and multivariable nature of health events in human populations. 3 units requires a term paper. Prerequisites: 225, and 258 or 261, or consent of instructor.

HRP 220. BIOTECHNOLOGY LAW AND POLICY. 3 Units.

(Same as LAW 440) Open to all law or medical students; other graduate students by consent of the instructor. Focuses on the biotechnology industry, with some discussion of the "med tech" or medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. In addition to a final exam, students are required to participate in a group project during the term, making law and business recommendations about a biotech firm.

HRP 221. Law and the Biosciences: Genetics. 3 Units.

(Same as LAW 480) Open to all law or medical students; other graduate students by consent of the instructor. Focus is on ethical, legal, and social issues arising from advances in our knowledge of human genetics. Includes forensic uses of genetics, genetic testing, widespread whole genome sequencing, the consequences of genetics for human reproduction, and the ethics of genomic biobanks for research. Research paper required.

HRP 222A. Advising Congress on Health Policy. 1 Unit.

(Same as LAW 413L) Focus on conducting research on national health policy problems for the Medicare Payment Advisory Commission, or MedPAC. Students work in teams with lawyers and PhD economists from MedPAC, resident and fellow physicians from Stanford Hospital, and other students from throughout the University on expanding the healthcare workforce through reform of states' scope of practice regulation or designing antitrust policy to achieve the benefits of coordination and avoid the costs of consolidation. Application required.

HRP 222B. Advising Congress on Health Policy. 2 Units.

(Same as LAW 413L) Focus on conducting research on national health policy problems for the Medicare Payment Advisory Commission, or MedPAC. Students work in teams with lawyers and PhD economists from MedPAC, resident and fellow physicians from Stanford Hospital, and other students from throughout the University on expanding the healthcare workforce through reform of states' scope of practice regulation or designing antitrust policy to achieve the benefits of coordination and avoid the costs of consolidation. Application required.

HRP 223. Introduction to Data Management and Analysis in SAS. 2 Units.

Provides hands-on introduction to basic data management and analysis techniques using SAS. Data management topics include: Introduction to SAS and SAS syntax, importing data, creating and reading SAS datasets, data cleaning and validation, creating new variables, and combining data sets. Analysis techniques include: basic descriptive statistics (e.g., means, frequency) and bivariate procedures for continuous and categorical variables (e.g., t-tests, chi-squares).

HRP 225. Design and Conduct of Clinical and Epidemiologic Studies. 3-4 Units.

Intermediate-level. The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, estimating sample size, questionnaire design, and the effects of measurement error. Prerequisite: A basic/introductory course in statistics or consent of instructor.

HRP 226. Advanced Epidemiologic and Clinical Research Methods. 3-4 Units.

The principles of measurement, measures of effect, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Students enrolled for 4 units complete an additional assignment or paper. Prerequisite: 225 or consent of instructor.

HRP 228. Genetic Epidemiology. 2 Units.

Provides framework for physicians, epidemiologists, and other scientists to interpret the literature and incorporate genetic information into human disease research. Topics include: common genetic measures, approaches to finding disease genes, study design and analysis issues, genome-wide association studies, meta-analysis of genetic studies, genetic risk prediction, and applications of new genomic technologies. Includes reading seminal papers in genetic epidemiology.

HRP 230. Cancer Epidemiology. 2-3 Units.

Descriptive epidemiology and sources of incidence/mortality data; the biological basis of carcinogenesis and its implications for epidemiologic research; methodological issues relevant to cancer research; causal inference; major environmental risk factors; genetic susceptibility; cancer control; examples of current research; and critique of the literature. 3 units requires paper or project. Prerequisite: 225, or consent of instructor.

HRP 231. Epidemiology of Infectious Diseases. 3 Units.

Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance.

HRP 236. Epidemiology Research Seminar. 1 Unit.

Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit.

HRP 237. Practical Approaches to Global Health Research. 3 Units.

Enrollment limited to graduate students; undergraduates in their junior or senior year may enroll with consent of instructor only. Introduces research methods for conducting studies involving health in low-income context. Focuses on developing a concept note to support a funding proposal. addressing research question of student's interest. Skills developed include developing a compelling research question; synthesizing a focused literature review; selecting and adapting appropriate study design, target population, sampling methods, data collection and analysis; addressing human subject issues; developing productive cross-collaboration. Same as: IPS 290, MED 226

HRP 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health. 2-3 Units.

The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor. Same as: HUMBIO 159

HRP 239. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.

Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See <http://web.stanford.edu/~rag/stat209/>. Prerequisite: intermediate-level statistical methods. Same as: EDUC 260X, STATS 209

HRP 241. Measuring Global Health. 4 Units.

Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? Workshops build familiarity with relevant data and their analysis. Prerequisite: coursework in statistics, biostatistics, quantitative epidemiology, econometrics, or equivalent. Same as: HUMBIO 129M, MED 231

HRP 251. Design and Conduct of Clinical Trials. 3 Units.

The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.

HRP 252. Outcomes Analysis. 4 Units.

Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics. Same as: BIOMEDIN 251, MED 252

HRP 255. Observational Studies. 2-3 Units.

This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include the potential outcomes framework for causal inference; randomized experiments; methods for controlling for observed confounders in observational studies; sensitivity analysis for hidden bias; instrumental variables; tests of hidden bias; coherence; and design of observational studies. Same as: STATS 355

HRP 256. Economics of Health and Medical Care. 5 Units.

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51. Same as: BIOMEDIN 156, BIOMEDIN 256, ECON 126

HRP 258. Introduction to Probability and Statistics for Clinical Research. 3 Units.

Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.

HRP 259. Introduction to Probability and Statistics for Epidemiology. 3-4 Units.

Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications. Differential between 3 and 4 units is the amount of out-of-class work required.

HRP 260A. Workshop in Biostatistics. 1-2 Unit.

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.
Same as: STATS 260A

HRP 260B. Workshop in Biostatistics. 1-2 Unit.

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.
Same as: STATS 260B

HRP 260C. Workshop in Biostatistics. 1-2 Unit.

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.
Same as: STATS 260C

HRP 261. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.

Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.
Same as: BIOMEDIN 233, STATS 261

HRP 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis. 3 Units.

Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.
Same as: STATS 262

HRP 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.

Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.
Same as: MED 263

HRP 268. Genetics and Reproductive Technologies. 2 Units.

(Same as LAW 568) Examines the complex interrelationship among legal, political, ethical, and social issues shaping the intersection of genetics, reproductive technologies and reproductive rights. Issues discussed may include, but are not limited to: the commercialization and sale of reproductive materials like sperm, ovum, and surrogacy services; genetic technologies, prenatal genetic screening, and diagnostic testing of offspring; criminalization of reproductive decision-making such as sex-selection and genetic enhancement; stem cells, cloning, and abortion; DNA databanks and collection of genetic information; in vitro fertilization and other emerging reproductive technologies.

HRP 274. Design for Service Innovation. 4 Units.

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011.
Same as: BIOE 372, MED 274

HRP 280. Spanish for Medical Students. 3 Units.

First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students).
Same as: SPANLANG 121M

HRP 281. Spanish for Medical Students. 2 Units.

Second quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students).
Same as: SPANLANG 122M

HRP 282. Spanish for Medical Students. 2-3 Units.

Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students).
Same as: SPANLANG 123M

HRP 283. Health Services Research Core Seminar. 1 Unit.

Presentation of research in progress and tutorials in the field of health services research.

HRP 290. Advanced Medical Spanish Oral Communication. 2 Units.

Enrollment limited to medical students. Designed to further develop linguistic skills, covering all medical specialties according to student needs. Sessions also include topics on patient education and diseases, such as diabetes, asthma, TB, and CVDs.

HRP 295. Advanced Topics in Epidemiologic and Clinical Research. 2 Units.

Topics include alternative study designs, causal inference methods, instrumental variables, time-varying confounding, registry-based research, missing data, and repeated events. Weekly readings and discussions will consider how these methods apply to numerous substantive areas including pharmacoepidemiology, reproductive and perinatal epidemiology, and many areas of chronic disease epidemiology. Prerequisite: HRP 225 and HRP 226 or permission of instructor.

HRP 296. Current Topics in Bioethics. 3 Units.

(Same as LAW 596) Explores the ethical, legal, and public policy issues arising from recent advances in biomedicine and the biosciences. Approaches to bioethical reasoning including casuistry, social justice, resource allocation, and individual rights in areas such as refusal of treatment conception. Topics include: the use of forensic genetics in criminal law, neuroscience and national security, race and ethnicity in genetic research, experimentation on human subjects and prisoners, privacy of medical and genetic information in the information age, synthetic biology, and do-it-yourself medical and genetic testing. No prior knowledge in science, medicine, philosophy or related disciplines is required.

HRP 299. Directed Reading in Health Research and Policy. 1-18 Unit.

Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.

HRP 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

HRP 391. Health Law: Finance and Insurance. 3 Units.

(SAME AS LAW 348, MGTECON 331) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

Same as: PUBLPOL 231

HRP 392. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.

(Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.

Same as: BIOMEDIN 432

HRP 399. Graduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

HRP 801. TGR Project. 0 Units.

.

HRP 802. TGR Dissertation. 0 Units.

.

History Courses

HISTORY 1A. Global History: The Ancient World. 3-5 Units.

This course examines the emergence of "world empires"-- the first way of constituting a world-- in four regions of the eastern hemisphere from the first millennium BCE to the year 900 CE. It will study the pivotal role of cities, the importance of rulers, the incorporation of diverse peoples, and how the states that followed their collapse constituted new world orders through combining imitation of the vanished empire with the elaboration of the new "world religions."

Same as: CLASSICS 76

HISTORY 1B. Global History: The Early Modern World, 1300 to 1800. 3-5 Units.

Topics include early globalization and cross-cultural exchanges; varying and diverse cultural formations in different parts of the world; the growth and interaction of empires and states; the rise of capitalism and the economic divergence of "the west"; changes in the nature of technology, including military and information technologies; migration of ideas and people (including the slave-trade); disease, climate, and environmental change over time. Designed to accommodate beginning students, non-majors, and more advanced history students.

HISTORY 3. The Historical and Geographical Background of Current Global Events. 1 Unit.

This one-unit lecture course aims to provide the historical and geographical context necessary for understanding the most important global issues of the day. Weekly lectures will explore two or more major issues in some detail, illustrating them with maps, timelines, photographs, and other images.

Topics are not planned in advance, but will instead reflect stories currently in the news.

HISTORY 4N. A World History of Genocide. 3-5 Units.

Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide.

Same as: JEWISHST 4N

HISTORY 5C. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.

(Same as History 105C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: FEMGEN 5C, HUMBIO 178T, SOMGEN 205

HISTORY 5W. Human Trafficking Service Learning. 2 Units.

Continuation of service learning for students who completed History 105C.

HISTORY 6W. Service-Learning Workshop on Human Trafficking Part I. 3-4 Units.

Two-quarter service-learning workshop to accompany course, "Human Trafficking: Historical, Legal, and Medical Perspectives." Considers purpose and practice of service learning. Provides training for students' work in community. Examines current scope of human trafficking in Bay Area, pressing concerns, capacity and obstacles to effectively address them. Students work with community partners dedicated to confronting human trafficking and problems it entails on a daily basis. Must currently be enrolled in or have previously taken History 5C/105C (FEMGEN 5C/105C, HUMBIO 178T, SOMGEN 205, INTNLREL 105C).

Same as: FEMGEN 6W

HISTORY 7E. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography. Same as: ANTHRO 13A, ARCHLGY 13, HISTORY 107E

HISTORY 7W. Service-Learning Workshop on Human Trafficking Part II. 3 Units.

Prerequisite: History 6W. Two-quarter service-learning workshop to accompany course, "Human Trafficking: Historical, Legal, and Medical Perspectives." Considers purpose and practice of service learning. Provides training for students' work in community. Examines current scope of human trafficking in Bay Area, pressing concerns, capacity and obstacles to effectively address them. Students work with community partners dedicated to confronting human trafficking and problems it entails on a daily basis. Must currently be enrolled in or have previously taken History 5C/105C ((FEMGEN 5C/105C, HUMBIO 178T, SOMGEN 205, INTNLREL 105C). Same as: FEMGEN 7W

HISTORY 10B. Survey of Early Modern Europe. 3 Units.

(Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) From 1350 to 1789, Europe went from being a provincial backwater to a new global center of power. This course surveys the profound changes of the period that shape our world today: the spread of humanism and science, religious reformation, new styles of warfare, the rise of capitalism and a new global economy, the emergence of the state, and revolution which sought to overthrow established governments.

HISTORY 10C. Introduction to Modern Europe. 3 Units.

(SAME as HISTORY 110C. History majors and others taking 5 units, register for 110C.) From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today.

HISTORY 10SC. Biography in History, Fiction, and Elsewhere. 2 Units.

How biographers, novelists, critics and others have written about the rhythms of life the lives of the famous as well as the obscure - will be explored in this course. Biographical writing can be frivolous, but at its best it has the capacity to undercover so much of life's richness, complexity, and confusions. We'll study biography with the use of some of the most resonant, compelling examples of the genre. Together we'll read books about poets Sylvia Plath and Ted Hughes, Henry James Aspern Papers, the brilliant novel on biographical writing, A. S. Byatt's *Possession*, and Norman Mailer on Marilyn Monroe. How one chooses one topic over another; the differences and similarities between the representation of lives in fiction and biography; the benefits and pitfalls of an intense identification with one's own subjects these and other matters will be examined. We'll meet in San Francisco with local writers wrestling with issues of this sort, and students will be encouraged to try their hands at writing about lives based on research, personal observation, or both.

HISTORY 11N. The Roman Empire: Its Grandeur and Fall. 4 Units.

(Formerly CLASSHIS 24N.) Preference to freshmen. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?. Same as: CLASSICS 26N

HISTORY 11SC. How Is a Buddhist. 2 Units.

Buddhism as a system of thought, a culture, a way of life, a definition of reality, a method for investigating it, and a mental, physical, and social practice. Buddhism as a total phenomenon. Readings, films, music, and art. How Buddhist practices constitute the world of the Buddhist.

HISTORY 11W. Service-Learning Workshop on Issues of Education Equity. 1 Unit.

Introduces students to a variety of issues at stake in the public education of at-risk high school youth in California. Participants will hear from some of the leading faculty in the School of Education as well as the Departments of Psychology, Sociology, and others, who will share perspectives on the problems and challenges of educating a diverse student body in the state's public school system. The service-learning component of the workshop is a mentoring project (Stanford Students for Educational Equity) with junior class history students from East Palo Alto Academy High School, a Stanford charter school. Same as: CSRE 11W

HISTORY 12. Medicine and Disease in the Ancient World. 3 Units.

(Same as HISTORY 112. History majors and others taking 5 units, register for 112.) This course explores medicine and disease through case studies from civilizations of the ancient world such as Egypt, Greece, and Peru. We will discuss how these cultures conceptualized disease, and in turn, how they contended with illnesses. Lectures will address different forms of illness through medical texts, art, and human remains. Weekly discussion will incorporate evidence from these sources to explore both their potential and their limitations.

HISTORY 12N. The Early Roman Emperors: History, Biography, and Fiction. 3 Units.

Preference to freshmen. The politics, drama, and characters of the period after the fall of the Roman Republic in 49 B.C.E. Issues of liberty and autocracy explored by Roman writers through history and biography. The nature of history writing, how expectations about literary genres shape the materials, the line between biography and fiction, and senatorial ideology of liberty. Readings include: Tacitus' *Annals*, Suetonius' *Lives of the Caesars*, and Robert Graves' *I Claudius* and episodes from the BBC series of the same title.

HISTORY 13. The Historical and Geographical Background of Current Global Events. 3 Units.

This three-unit course is designed to complement History 3, which aims to provide the historical and geographical context necessary for understanding important global issues of the day. Students taking the three-unit course will, in addition to attending the weekly lectures, participate in a weekly seminar in which the same topics addressed in lecture will be examined in greater depth. Students will also be required to write a research paper on a generally neglected news topic of their own choosing.

HISTORY 15D. The Civilization and Culture of the Middle Ages. 3-5 Units.

This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we will concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it.

Same as: HISTORY 115D

HISTORY 15N. Inequality: the Last 100,000 Years. 3 Units.

(Formerly CLASSHIS 13N.) This seminar traces the evolution of resource inequality from the Stone Age to the present. Only this long-term perspective reveals the forces that drive inequality and allows us to address two key questions: what causes inequality, and what factors have been capable of reducing it, at least for a while? We are going to confront challenging arguments: that inequality has been closely tied up with overall economic and human development, and that over the long course of history, war, revolution and pestilence were the most effective equalizers of income and wealth. This class will help you appreciate contexts and complexities that are usually obscured by partisan polemics and short-term thinking. Seminar participants will be directly involved in the instructor's current research project on the history of inequality.

Same as: CLASSICS 28N

HISTORY 20A. The Russian Empire, 1450-1800. 3 Units.

(Same as HISTORY 120A. History majors and others taking 5 units, register for 120A.) Explores rise of Russian state and expanse of empire; patterns of governance of a Eurasian empire; strategies and institutions of governance; survey of various ethnic and religious groups in empire and their varied cultures and political economies; gender and family; serfdom; Russian Orthodox religion and culture; reforms and Europeanization of 18th century.

HISTORY 20N. Russia in the Early Modern European Imagination. 4 Units.

Preference to freshmen. The contrast between the early modern image of Europe as free, civilized, democratic, rational, and clean against the notion of New World Indians, Turks, and Chinese as savage. The more difficult, contemporary problem regarding E. Europe and Russia which seemed both European and exotic. Readings concerning E. Europe and Russia from the Renaissance to the Enlightenment; how they construct a positive image of Europe and conversely a negative stereotype of E. Europe. Prerequisite: PWR 1.

HISTORY 24SC. Martin Luther King, Jr., and the African American Freedom Struggle. 2 Units.

Many of us understand Martin Luther King, Jr. through the lens of his most civil rights activities and his "I Have a Dream" oration at the 1963 March in Washington for Jobs and Freedom. But who was King really? What can we learn about his inner life? To what extent did he actually lead a movement that was beyond the control of any single leader? How did thousands of grassroots activists become a movement that changed the course of history? This course will examine these questions and more by utilizing the vast number of primary source materials of the King Institute. Students will have the opportunity to conduct research and carry out their own individual research projects, which can be traditional papers, multi-media presentations, or even educational websites. Guest speakers may include various experts, such as King Institute scholar-in-residence Clarence Jones, who served as King's attorney, adviser, and occasional speechwriter. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

HISTORY 25. St. Petersburg: A Cultural Biography. 1 Unit.

This course explores the rich cultural heritage of St. Petersburg: art, architecture, urban planning, literature, dance, music, theater. Lectures will be extensively slide-illustrated, particularly on architecture and art. The course will meet Thursday evenings 7:00-9:00 pm as part of the Continuing Studies Program (CSP) for adult students; undergraduate students are welcome to participate by enrolling in this 1-unit History course. Readings will be posted in Coursework for CSP participants and will be available but optional for undergraduate students. Satisfactory credit for undergraduates will be earned by attending 80% of the lectures and by submitting a 5-page paper on a topic of the student's choice utilizing the CSP assigned readings and sources suggested by the instructor.

HISTORY 29S. The Animal Other: Humans and Animals in Western History. 5 Units.

Enter a world in which war was waged not by tanks but on horseback and oceans brimmed with fantastic monsters. This class explores the animal-human divide in Western cultural history through topics including: the rise of natural history; the centralized state and its relationship to nature; monstrosity and witchcraft; the ethics of metaphor; scapegoating, sexism, racism; history of animal-rights. Students will have the opportunity to help curate a Green Library exhibition on this subject. The course fulfills the departmental Sources and Methods requirement.

Same as: FEMGEN 29S

HISTORY 30C. Culture and Society in Reformation England. 3 Units.

(Same as History 130C. History majors and others taking 5 units, register for 130C.) Focuses on the appeal of both Reformed and Catholic ideas in the political and cultural contexts of early modern Europe. Topics include: the Lutheran revolt; the spread of Protestant ideas; Calvin's Geneva; the English Reformation; Tridentine reform and the Jesuits; toleration and the underground churches; wars and religious violence; and the making of European confessional identities. Sources include sermons, religious polemic, autobiographies, graphic prints, poetry, and music.

HISTORY 30N. Eighteen-Year-Olds Go to War: Global Experiences of World War I. 4 Units.

Exactly one hundred years ago, eighteen-year-olds like you went to war, imagining a romantic, life-changing experience. They found instead an apocalyptic nightmare, senseless mass death, unending stalemate, mud, rats, and endless trauma. In this course we will revisit the journeys of young men and women who lived through the First World War in Europe, India, the Middle East, and Africa. We will explore the causes, unfolding, legacy, and memory of the war, using diaries, letters, memoirs, novels, poetry, films, and works of historical analysis. Witness the birth of the modern world.

HISTORY 31. Leonardo's World: Science, Technology, and Art in the Renaissance. 3-5 Units.

(Same as HISTORY 31. History majors and others taking 5 units, register for 131.) What did Leonardo actually know? How did he acquire that knowledge? Explores Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. Considers the relationship between the society of fifteenth century Italy and the work of the man from Vinci: why did this world produce a Leonardo? How might we use him to understand creativity, innovation, and invention in the Renaissance and beyond? What was his legacy and how did he become a myth? Designed both for students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy.

Same as: HISTORY 131

HISTORY 36N. Gay Autobiography. 4 Units.

Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences?.

Same as: FEMGEN 36N

HISTORY 38A. Germany and the World Wars. 3 Units.

(Same as HISTORY 138A. Majors and others taking 5 units, enroll in 138A.) Germany's tumultuous history from the Second Empire through the end of the Cold War. International conflict, social upheaval, and state transformation during Bismarck's wars of unification, World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.

Same as: JEWISHST 38A

HISTORY 39. Modern Britain and the British Empire. 3 Units.

(Same as HISTORY 139. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain.

HISTORY 39S. Brave New World: Berlin in the Twenties. 5 Units.

From Expressionism to Nazism, the bloodstream of Germany's Weimar Republic (1918-33) coursed with bold and terrifying ideas about how to be modern. Using classic films and architecture, cabaret songs and novels, propaganda posters and newspapers, we will explore Berlin's Roaring Twenties. Yet we will also see that profound and frightening questions accompanied the glamour and sex appeal: about technology and the city, gender and modernity, political violence and the fragility of democracy, the place of emotions in public life. The course fulfills the departmental Sources and Methods requirement.

HISTORY 40. World History of Science. 3 Units.

(Same as HISTORY 140. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions.

HISTORY 40S. Magic and Occult Science in Early Modern Europe. 5 Units.

The history of magic and occult philosophy in Europe during the Renaissance, the Scientific Revolution, and the Enlightenment. How did magical and occult ways of approaching the world figure in the development of science, technology, and culture, and how do they relate to our views today? We will read primary texts on astrology and alchemy, esoteric cosmology, mathematical mysticism, magic and technology, exploration and discovery, and the Chinese occult tradition, as well as consider their expression in art and music. The course fulfills the departmental Sources and Methods requirement.

HISTORY 41Q. Mad Women: Women and Mental Illness in U.S. History. 3 Units.

Explores how gender and historical context have shaped the experience and treatment of mental illness in U.S. history. Why have women been the witches and hysterics of the past, and why have there historically been more women than men among the mentally ill? Topics include the relationship between historical ideas of femininity and insanity, the ways that notions of gender influence the definition and treatment of mental disorder, and the understanding of the historically embedded nature of medical ideas, diagnoses, and treatments.

HISTORY 42S. The Circle of Life: Visions of Nature in Modern Science, Religion, Politics and Culture. 5 Units.

A new understanding of nature emerged in the 1700s that fundamentally altered our perception of the living world and humanity's relationship with it. By tracing the evolution of this understanding forward, we gain insight into the interactions among science, religion, politics and culture. Topics include: nature in Romantic science, poetry and art; Darwin's theory of evolution and its afterlife in science, literature and popular culture; the science and politics of the 20th-century environmental movement; and the philosophical presuppositions underlying modern debates about biodiversity. In addition to close readings of canonical texts and contemporary commentaries, students will be introduced to digital history methods. Students will design their own final projects in consultation with the instructor.

HISTORY 44. History of Women and Gender in Science, Medicine and Engineering. 3 Units.

(Same as HISTORY 144. Majors and others taking 5 units, enroll in HISTORY 144.) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What efforts are underway globally to transform research institutions so that both men's and women's careers can flourish? How have science and medicine studied and defined males and females? How can we harness the creative power of gender analysis to enhance knowledge and spark innovation?.

HISTORY 45B. Africa in the Twentieth Century. 3 Units.

(Same as HISTORY 145B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans.

HISTORY 46N. Science and Magic in History. 4-5 Units.

Preference to freshmen. This course explores the intertwined histories of science and magic. We will begin with the emergence of experimental modern science from natural magic during the Renaissance and will look closely at the apparatus of the natural magician -- magic lanterns and other optical devices, magnets, siphons and other tricky gadgets -- which supplied the first experimental philosophers with their instruments. We will follow the development of scientific performances through the electrical and pneumatic amusements of the 18th century and the founding of "modern magic" in the 19th. Finally, we will look at the legacy of this joint history for both magic and science today. You may think magic and science sound like opposites, but by the light of history -- presto! -- you will see them merge in surprising ways.

HISTORY 47. History of South Africa. 3 Units.

(Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: AFRICAAM 47

HISTORY 47N. Global History of Death and Dying. 4 Units.

Does death have a history? Explores the changing realities of, attitudes towards and ways of coping with death. The role of death in shaping the modern world via the global slave trades, imperial conquests, pandemics, wars and genocides. Ways people have made sense of death in extraordinary circumstances and during calmer times. Continuities and transformations in death rituals, intellectual and philosophical debates about the personal and social meanings of death, and the consequences of ways and patterns of dying.

HISTORY 48Q. South Africa: Contested Transitions. 3 Units.

Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. Same as: AFRICAAM 48Q

HISTORY 49C. THE SLAVE TRADE. 3 Units.

(Same as HISTORY 149C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slaving and the European conquest of Africa.

HISTORY 50A. Colonial and Revolutionary America. 3 Units.

(Same as HISTORY 150A. History majors and others taking 5 units, register for 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.

HISTORY 50B. 19th Century America. 3 Units.

(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. Same as: AFRICAAM 50B

HISTORY 50C. The United States in the Twentieth Century. 3 Units.

(Same as HISTORY 150C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War.

HISTORY 50K. John F. Kennedy: Fifty Years Later. 1 Unit.

November 22, 2013 marks the 50th anniversary of President John F. Kennedy's assassination. Half a century on, our visually saturated culture remains besotted with images of the youthful president and his strikingly photogenic family. But the passage of time has also yielded new perspectives on Kennedy's presidency and on his era. November 22, 1963 may well come to be remembered not only as the day when the life of a promising young leader was violently cut short, but also as the pivot between two distinct eras in American history. Ironically, though Kennedy was the first World War II veteran to reach the White House, his death heralded the end of the long postwar season of national pride, optimism, confidence, and widely shared prosperity; and may have opened the road to the great catastrophe that was the Vietnam War. His passing also helped to pry open the portals to historic changes in the lives of millions of African Americans, as witnessed by Lyndon Johnson's artful invocation of the fallen president to bring about passage of the epic civil rights legislation of the late 1960s. This course will examine the postwar domestic and international settings in which Kennedy rose to and exercised power. It will probe our continuing fascination with his character and with his family; his role as a Cold Warrior, especially in the tense confrontation known as the Cuban Missile Crisis; and his relation to the African American struggle to bury Jim Crow. We will conclude with an assessment of the longer-term historical consequence of his brief moment in the arenas of celebrity and power. Guest speakers will include noted Kennedy biographer Robert Dallek; Johnson biographer Bruce Schulman; Taylor Branch, acclaimed biographer of Martin Luther King, Jr.; and Stanford's own Jennifer Burns, historian of modern America.

HISTORY 50N. Who Killed Jane Stanford?. 4 Units.

In 1905 Jane Stanford died of strychnine poisoning. Who may have killed her remains unknown. You will, in effect, be a grand jury. Like most of your real life intellectual work, the class will be collaborative. Together you will identify suspects and examine the often odd actions of central figures in the case: her personal secretary, physicians, and David Starr Jordan, the president of Stanford.

HISTORY 54. American Intellectual and Cultural History to the Civil War. 3 Units.

(Same as HISTORY 154. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images.

HISTORY 54N. African American Women's Lives. 3-4 Units.

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, AMSTUD 54N, CSRE 54N, FEMGEN 54N

HISTORY 55Q. The Origins of the Modern American City, 1865-1920. 3 Units.

Are we living in a new Gilded Age? To answer this question, we go back to the original Gilded Age, as well as its successor, the Progressive Era. How did urban Americans around the turn of the twentieth century deal with stark inequalities of class, race, ethnicity, gender, and sexuality? And what can we learn from their struggles for our own time? Students use primary and secondary sources in digital and print formats. Possible field trip to San Francisco.

Same as: AMSTUD 25Q, URBANST 25Q

HISTORY 57E. State of the Union 2014. 1 Unit.

This course will examine major themes that contribute to the health, or disease, of the US body politic. Challenges and opportunities abound: we live in an age of rising inequality, dazzling technological innovation, economic volatility, geopolitical uncertainty, and the accumulating impact of climate change. These conditions confront our political leaders and us as citizens of a democracy plagued by dysfunction. What are the implications for the body politic? Led by Rob Reich (Political Science, Stanford), David Kennedy (History, Stanford), and James Steyer (CEO, Common Sense Media), the course will bring together distinguished analysts of American politics. Together, we will examine the following topics: inequality; energy and the environment; media and technology; the economy; and the 2014 midterm elections. The course is designed for the entire Stanford community: jointly offered for undergraduate and graduate students at Stanford (through listings in Political Science and History) and for community members through the Continuing Studies Program. For students, the course is available for 1 credit. This course may not be taken for a Letter Grade.

Same as: POLISCI 57E

HISTORY 60N. Revolutionaries and Founders. 3 Units.

Americans remain fascinated by the revolutionary generation which secured independence and established a national constitutional republic. Books about the founders come steadily from the presses, some describing the lives of individual revolutionaries, others trying to analyze and explain what made these events possible. This seminar will approach the Revolution through both a biographical and analytical framework, relying both on scholarly writings and the massive array of primary sources that are readily available through letterpress editions and on-line. The course will rely on the instructor's own recent book, *Revolutionaries: A New History of the Invention of America*, which carries the story from the crisis around the Boston Tea Party of 1773 through the end of President Washington's first administration. The course will be divided evenly between modern scholarship and the careful reading of original materials, and students will write short essays that will involve the analysis of explanatory problems, the close interpretation of documents, and the crafting of historical narratives. Topics to be discussed will include the outbreak of the revolution, constitution-making at both the state and national levels of government, the conduct of the war, and the legacies that Americans particularly associate with Thomas Jefferson, James Madison, and Alexander Hamilton.

HISTORY 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: AMSTUD 63N, CSRE 63N, FEMGEN 63N

HISTORY 64. Racial and Ethnic Diversity in Modern America. 4-5 Units.

How ethnicity influenced the American experience and how prevailing attitudes about racial and ethnic groups over time have affected the historical and contemporary reality of the nation's major minority populations. Focus is on the past two centuries.

Same as: CSRE 64

HISTORY 64S. Debtor Nation: 20th Century American Capitalism. 5 Units.

This course explores the history of 20th century American capitalism through the workings of credit and debt. What is debt? Who has access to credit and how is creditworthiness determined? Using a range of sources, from crop-lien contracts, to installment plans, to advertisements for municipal bonds, students will examine the ways in which capitalism shapes and is shaped by the allocation of credit along race, class, and gendered lines. The course fulfills the departmental Sources and Methods requirement.

HISTORY 65D. The Pacific World. 3 Units.

(Same as HISTORY 165D. Majors and others taking 5 units, enroll in 165D.) Taking the Pacific and the regions of the world that touch the ocean as the unit of analysis, we will explore geographic, social, cultural, and political interactions that created what we now call the Pacific World. Ranging over four hundred years of history, we will examine human migrations, explorations, interactions and conflicts, and human ecology. The course is not nation-focused but is transnational and international in approach.

HISTORY 65S. Intimate Frontiers: Race, Gender, and Colonialism in the American West. 5 Units.

Historians have increasingly recognized the American West as a place of empire and settler colonialism. This course will explore the colonial dimensions of the 19th century American West through a variety of sources produced in the most "intimate" spaces on North America's multicultural frontier: in homes, missions, boardinghouses, schools, mining camps, courtrooms, and more. By examining how the intimate shaped everyday lives, we will pay special attention to how ambiguous concepts like race, gender, class, sexuality, and national identity coalesced. The course fulfills the departmental Sources and Methods requirement.

Same as: CSRE 65M, FEMGEN 65S

HISTORY 66S. The Americans are Coming!: The Cold War at Home and Abroad. 5 Units.

This course explores the relationship between U.S. foreign and domestic policy from 1945 to 1975. How did fighting the "Communist menace" shape notions of race, gender, and national identity within the United States? In what ways did nation-building abroad trigger clashes over the meaning of democracy at home? Using textual sources, photographs, films, and cartoons, students will examine notions of what it meant to be "American," both inside and outside the nation's borders, in a Cold War climate. The course fulfills the departmental Sources and Methods requirement.

Same as: CSRE 66S

HISTORY 70. Culture, Politics, and Society in Latin America. 3 Units.

(Same as HISTORY 170B. History majors and others taking 5 units, enroll in HISTORY 170B.) The course of Latin American history from the colonial era to the present day. Key issues such as colonialism, nationalism, democracy, and revolution will be examined critically in light of broad comparative themes in Latin American and world history. Sources include writings in the social sciences as well as primary documents, fiction, and film.

HISTORY 71S. American Political Thought from the Civil War to the Cold War. 5 Units.

This course explores America's most important political tradition: liberalism. What does liberalism mean? Does it mean something different today than it did in the past? Using multiple textual and visual sources, students will grapple with how Americans remade liberalism in the 19th and 20th centuries and how political thinkers have understood its meaning over time. We will see how American liberalism was shaped by factors of race, gender, and class and by competing ideologies like conservatism and socialism.

HISTORY 72S. Family and Law in American History. 5 Units.

This course explores connections between family and law in American history, from the colonial period through the early twentieth century. We will examine the roles, status, and agency of husbands, wives, mothers, fathers, and children, within the family, the law, and broader society. Using a variety of primary sources, we will consider topics including property rights, marriage, divorce, illegitimacy, child labor, slave families and family relationships among freedpeople, child custody, adoption, polygamy, immigration and citizenship, and child welfare. The course fulfills the departmental Sources and Methods requirement.

HISTORY 74. Mexico Since 1876: History of a "Failed State"?. 3 Units.

This course is an introduction to the history and diverse peoples of modern Mexico from 1876 to the present. Through lectures, discussions, primary and secondary readings, short documentaries, and written assignments, students will critically explore and analyze the multiplicity of historical processes, events and trends that shaped and were shaped by Mexicans over the course of a century. The course will cover some of the social and political dimensions of rural social change, urbanization and industrialization, technological innovation and misuse, environmental degradation and conservation, education, ideology, culture and media, migration, and the drug trade.

HISTORY 74S. Sounds of the Century: Popular Music and the United States in the 20th Century. 5 Units.

What can popular music teach us about the past? What can we learn about music if we study it historically? This course grapples with these two questions by examining various examples of American music in the 20th century, as well as more conventional historical sources, scholarly books, and essays. Will pay special attention to how issues of race, gender, sexuality, class, and nation were reflected in and produced by people's interactions with music, inside and outside American borders.

HISTORY 78N. Film and History of Latin American Revolutions. 3 Units.

In this course we will watch and critique films made about Latin America's 20th century revolutions focusing on the Mexican, Cuban, Chilean and Nicaraguan revolutions. We will analyze the films as both social and political commentaries and as aesthetic and cultural works, alongside archivally-based histories of these revolutions.

HISTORY 82C. Making of the Islamic World, 600-1500. 3 Units.

(Same as HISTORY 182C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1500. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols.

HISTORY 84. Zionism. 3 Units.

(Same as HISTORY 184. History majors and others taking 5 units, register for 184.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond. Same as: CSRE 84, JEWISHST 84, REES 84

HISTORY 84N. The American Empire in the Middle East. 4-5 Units.

What have been the traditional objectives of U.S. policy in the Middle East since the end of World War II? What forces shape U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq and Israel/Palestine.

HISTORY 87. The Islamic Republics: Politics and Society in Iran, Afghanistan and Pakistan. 3 Units.

(Same as HISTORY 187. History majors and other taking 5 units, register for 187.) Explores the contested politics of these societies in modern times. Topics include controversies surrounding the meaning of revolution, state building, war, geopolitics, Islamic law, clerical authority, gender, an Islamic economy, culture, and ethnic, national and religious identities from the 1940s to the present. Assignments will focus on primary sources (especially legal documents, poetry, novels, and memoirs) and films.

HISTORY 90. EARLY CHINESE THOUGHT. 3-5 Units.

This course will examine the basic themes that emerged among the philosophical texts of early China; including writings attributed to Confucius and his followers, those of the early Daoists, and those focused on the authoritarian state; and analyze their relation to the changes in the state and social order in that period. Themes to be discussed will include the nature of human networks, the state, the family, the body, personality or temperaments, stratagems, language, and the structure of the cosmos. Same as: HISTORY 190

HISTORY 91D. China: The Northern and Southern Dynasties. 3 Units.

(Same as HISTORY 191D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization.

HISTORY 92A. The Historical Roots of Modern East Asia. 4-5 Units.

Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire.

Same as: HISTORY 392E

HISTORY 93. Late Imperial China. 3 Units.

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINLIT 93, FEMGEN 93

HISTORY 93S. Bandits, Merchants, and Saints: The Sino-Tibetan Frontier, 1700-2000. 5 Units.

Beginning in the eighteenth century, this course traces the complex transition from empire to nation-state along the Sino-Tibetan frontier, touching upon a number of important issues such as imperial policies of incorporation, resistance, and the rise of modernity. We will explore varied methodological approaches to a wide range of primary sources; Tibetan histories, Sufi hagiographies, legal cases, short stories; and investigate how the frontier; merchants, herders, and farmers experienced the enormous social and political changes of the last three centuries. The course fulfills the departmental Sources and Methods requirement.

HISTORY 94B. Japan in the Age of the Samurai. 3 Units.

(Same as HISTORY 194B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community.

HISTORY 94S. Muscle Men and Iron Girls: Sex and Masculinity in Chinese and American History. 5 Units.

How is masculinity represented and experienced in different cultural contexts? How do gender, sexuality, race, and class inform the construction of American and Chinese masculinities? How do historians use primary sources to make arguments? Examines visual and textual sources including magazines, photographs, propaganda posters, legal cases and film. Analyzes transnational history of masculinity in China and the United States from the late 1800s to the present. Topics include bodybuilding, martial arts, female masculinity, homosexuality, Cold War, and 1960s social movements. The course fulfills the departmental Sources and Methods requirement. Same as: FEMGEN 94S

HISTORY 95. Modern Korean History. 3 Units.

(Same as HISTORY 195. History majors and others taking 5 units, register for 195.) This lecture course provides a general introduction to the history of modern Korea. Themes include the characteristics of the Chosocirc;n dynasty, reforms and rebellions in the nineteenth century, Korean nationalism; Japan's colonial rule and Korean identities; decolonization and the Korean War; and the different state-building processes in North and South, South Korea's democratization in 1980s, and the current North Korean crisis.

HISTORY 95C. Modern Japanese History: From Samurai to Pokemon. 3 Units.

(Same as History 195C. History majors and others taking 5 units, register for 195C.) Japan's modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions.

HISTORY 95N. Mapping the World: Cartography and the Modern Imagination. 4-5 Units.

Preference to freshmen. Focus is on cutting-edge research. Topics: the challenge of grasping the globe as a whole; geography's roots in empire; maps as propaganda and as commodities; the cultural production of scale; and the cartography of imaginary worlds. Sources include resources in the Green Library Special Collections and in the Stanford Spatial History Lab.

HISTORY 96. Worlds of Gandhi. 3 Units.

Place the paradox of Gandhi in context of global convulsions of 20th century. Gandhi lived across continents; maturing in South Africa, struggling in India, attaining celebrity in Europe. As leader of masses, his method of Satyagraha was distinctively at odds with his times. Yet, he also privileged sacrifice, dying, even euthanasia. In a world beset by fear and war, Gandhi's complex theory of nonviolence is compelling. What kind of nonviolent politics did Gandhi envision after Fascism, Auschwitz, Hiroshima, and Pakistan?

HISTORY 98. The History of Modern China. 3 Units.

(Same as HISTORY 198. History majors and others taking 5 units, register for 198.) This course charts major historical transformations in modern China, and will be of interest to those concerned with Chinese politics, culture, society, ethnicity, economy, gender, international relations, and the future of the world.

HISTORY 98N. Beijing, Shanghai, and the Structure of Modern China. 3 Units.

This course examines the transformation of China from the late empire to the present by studying the nature of its two greatest cities. Topics examined will include the evolving physical structure of the cities, their changing relations to the Chinese state and the outside world, shifting understandings of the urban population/crowd, the changing nature of time, new modes of self-definition through patterns of consumption, the cities as topics of literature and movies, and the nature of urban modernity.

HISTORY 99S. Christianity in East Asia. 5 Units.

How did Christianity spread in East Asia? Was it simply a by-product of Western imperialism? How should we evaluate the social transformations that accompanied Christianity? How have historians addressed the related issues such as cultural encounter, nationalism, imperialism, gender, and secularism? Through a wide range of primary and secondary sources, this course examines the history of Christianity in East Asia from its origins in the 16th century to the present. The course fulfills the departmental Sources and Methods requirement.

HISTORY 101. The Greeks. 4-5 Units.

(Formerly CLASSHIS 101.) 250 years ago, for almost the first time in history, a few societies rejected kings who claimed to know what the gods wanted and began moving toward democracy. Only once before had this happened--in ancient Greece. This course asks how the Greeks did this, and what they can teach us today. It uses texts and archaeology to trace the material and military sides of the story as well as cultural developments, and looks at Greek slavery and misogyny as well as their achievements. Weekly participation in a discussion section is required. Same as: CLASSICS 83

HISTORY 102. History of the International System. 5 Units.

After defining the characteristics of the international system at the beginning of the twentieth century, this course reviews the primary developments in its functioning in the century that followed. Topics include the major wars and peace settlements; the emergence of Nazism and Communism; the development of the Cold War and nuclear weapons; the rise of China, India, and the EU; and the impact of Islamic terrorism. The role of international institutions and international society will also be a focus as will the challenge of environment, health, poverty, and climate issues to the functioning of the system. Same as: INTNLREL 102

HISTORY 102A. The Romans. 3-5 Units.

(Formerly CLASSHIS 60.) How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. Weekly participation in a discussion section is required; enroll in sections on Coursework. Same as: CLASSICS 84

HISTORY 103D. Human Society and Environmental Change. 4 Units.

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1. Same as: EARTHSYS 112, EESS 112

HISTORY 103E. The International History of Nuclear Weapons. 5 Units.

The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far and whether it can be avoided in the future. Same as: POLISCI 116

HISTORY 103F. Introduction to Military History. 5 Units.

Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present day so-called new wars, we will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war.

HISTORY 104D. International Security in a Changing World. 5 Units.

This class surveys the most pressing international security issues facing the world today and includes an award-winning two-day international crisis simulation led by Stanford faculty and former policymakers. Guest lecturers have included former Secretary of Defense William Perry, former U.S. Ambassador to Afghanistan Gen. Karl Eikenberry, and former Secretary of State Condoleezza Rice. Major topics covered: cyber security, nuclear proliferation, insurgency and intervention, terrorism, the Arab Spring, and the future of U.S. leadership in the world. No prior background in international relations is necessary.

Same as: IPS 241, POLISCI 114S

HISTORY 105C. Human Trafficking: Historical, Legal, and Medical Perspectives. 5 Units.

(Same as HISTORY 5C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: FEMGEN 105C, INTNLREL 105C

HISTORY 106A. Global Human Geography: Asia and Africa. 5 Units.

Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes.

HISTORY 106B. Global Human Geography: Europe and Americas. 5 Units.

Patterns of demography, economic and social development, geopolitics, and cultural differentiation. Use of maps to depict geographical patterns and processes.

HISTORY 107E. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography.

Same as: ANTHRO 13A, ARCHLGY 13, HISTORY 7E

HISTORY 109E. Global Women Leaders: Past, Present, and Future. 3-4 Units.

What conditions prompted the emergence of women political leaders around the world and what difference has their leadership made? This course introduces students to global women's history and focuses on a series of individual women leaders in the 20th century. We look at movements for women's self-determination in the 19th and 20th centuries that set the stage for women's emergence as national political leaders and activists in the 20th century. We then focus on a series of global women leaders including Eleanor Roosevelt, Golda Meir, Margaret Thatcher, Benazir Bhutto, Michelle Bachelet and Aung San Suu Kyi. By studying their biographies and historical contributions, we will explore the ways women leaders make distinctive contributions as heads of state and political activists.

HISTORY 110B. Survey of Early Modern Europe. 5 Units.

(Same as HISTORY 10B. History majors and others taking 5 units, register for 110B.) From 1350 to 1789, Europe went from being a provincial backwater to a new global center of power. This course surveys the profound changes of the period that shape our world today: the spread of humanism and science, religious reformation, new styles of warfare, the rise of capitalism and a new global economy, the emergence of the state, and revolution which sought to overthrow established governments.

HISTORY 112. Medicine and Disease in the Ancient World. 5 Units.

(Same as HISTORY 12. History majors and others taking 5 units, register for HISTORY 112.) This course explores medicine and disease through case studies from civilizations of the ancient world such as Egypt, Greece, and Peru. We will discuss how these cultures conceptualized disease, and in turn, how they contended with illnesses. Lectures will address different forms of illness through medical texts, art, and human remains. Weekly discussion will incorporate evidence from these sources to explore both their potential and their limitations.

HISTORY 113. Before Globalization: Understanding Premodern World History. 3-5 Units.

(Formerly CLASSHIS 147.) This course covers the history of the world from 60,000 years ago until 1500 by asking big questions: Why did civilizations develop the way they did? What factors were responsible for similarities and differences between different parts of the world? What does this mean for our newly globalized world?

HISTORY 114. Origins of History in Greece and Rome. 4-5 Units.

(Formerly CLASSHIS 117.) The beginnings and development of historical writing in the ancient world. Emphasis on major classical historians and various models of history they invented, from local to imperial, military, cultural, biographical, world history and church history. Focus on themes of power, war, loss, growth and decline, as put by the ancients into historical narrative forms and probed by way of historical questioning and explanation. Attention to how these models resonate still today. Readings in translation: Herodotus, Thucydides, Tacitus, Livy and others. Participation in a weekly discussion section is required.

Same as: CLASSICS 88

HISTORY 115D. The Civilization and Culture of the Middle Ages. 3-5 Units.

This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we will concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it.

Same as: HISTORY 15D

HISTORY 116N. Howard Zinn and the Quest for Historical Truth. 3 Units.

With more than two million copies in print, Howard Zinn's *A People's History* is a cultural icon. We will use Zinn's book to probe how we determine what was true in the past. *A People's History* will be our point of departure, but our journey will visit a variety of historical trouble spots: debates about whether the US was founded as a Christian nation, Holocaust denial, and the "Birther" controversy of President Obama.

Same as: EDUC 116N

HISTORY 117. Ancient Empires: Near East. 4-5 Units.

Why do imperialists conquer people? Why do some people resist while others collaborate? This course tries to answer these questions by looking at some of the world's earliest empires. The main focus is on the expansion of the Assyrian and Persian Empires between 900 and 300 BC and the consequences for the ancient Jews, Egyptians, and Greeks. The main readings come from the Bible, Herodotus, and Assyrian and Persian royal inscriptions, and the course combines historical and archaeological data with social scientific approaches. Weekly participation in a discussion section is required.

Same as: CLASSICS 81

HISTORY 120A. The Russian Empire, 1450-1800. 5 Units.

(Same as HISTORY 20A. History majors and others taking 5 units, register for 120A.) Explores rise of Russian state and expanse of empire; patterns of governance of a Eurasian empire; strategies and institutions of governance; survey of various ethnic and religious groups in empire and their varied cultures and political economies; gender and family; serfdom; Russian Orthodox religion and culture; reforms and Europeanization of 18th century.

HISTORY 120B. The Russian Empire. 5 Units.

From Peter the Great to the Bolsheviks. Russia as an empire; its varied regions, including the Caucasus, Central Asia, Ukraine, Poland, and the Baltics. Focus is on the politics and cultures of empire. Sources include novels, political tracts, paintings, music, and other primary sources.

HISTORY 120C. 20th-Century Russian and Soviet History. 5 Units.

The Soviet polity from the 1917 Revolution to its collapse in 1991. Essentials of Marxist ideology; the Russian Empire in 1917. Causation in history; interpretations of the Revolution; state building in a socialist polity; social engineering through collectivization of agriculture, force-paced industrialization, and cultural revolution; terror as concept and practice; nationality policies in a multiethnic socialist empire; the routinization, decline, and collapse of the revolutionary ethos; and the legacy of the Soviet experiment in the new Russia.

HISTORY 126B. Protestant Reformation. 4 Units.

The emergence of Protestant Christianity in 16th-century Europe. Analysis of writings by evangelical reformers (Luther, Calvin, Zwingli, Sattler, Hubmeier, Muuml;ntzer) and study of reform movements (Lutheran, Reformed, Anabaptist, Spiritualist) in their medieval context and as expressions of new and influential visions of Christian belief, life, social order.

Same as: RELIGST 126

HISTORY 130A. In Sickness and In Health: Medicine and Society in the United States: 1800-Present. 5 Units.

Explores the history of medical institutions, ideas and practices in the United States from the early nineteenth century to the present. How are ideas of illness and health historically rooted and socially constructed? How did scientific and medical discoveries lead to the risk of scientific medicine, and how were these innovations adopted within the American cultural landscape? Topics include the transformation of therapeutics and technologies, medicine and the scientific ideal in the U.S., gender and race and medicine, the history of public health, and the professionalization and specialization of American medical practice.

HISTORY 131. Leonardo's World: Science, Technology, and Art in the Renaissance. 3-5 Units.

(Same as HISTORY 31. History majors and others taking 5 units, register for 131.) What did Leonardo actually know? How did he acquire that knowledge? Explores Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. Considers the relationship between the society of fifteenth century Italy and the work of the man from Vinci: why did this world produce a Leonardo? How might we use him to understand creativity, innovation, and invention in the Renaissance and beyond? What was his legacy and how did he become a myth? Designed both for students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy.

Same as: HISTORY 31

HISTORY 132. Ordinary Lives: A Social History of the Everyday in Early Modern Europe. 5 Units.

What war meant for foot soldiers and the peasants across whose fields they marched. Ordinary people's lives in the eras of Machiavelli, Shakespeare, the Reformation, and the scientific revolution. Topics include: birth, marriage, and death; city life and peasant culture; lay encounters with religious and intellectual ideas; war and crime; and gender and sexuality.

HISTORY 137. The Holocaust. 4 Units.

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 337, JEWISHST 183, JEWISHST 383

HISTORY 137A. Europe, 1945-2002. 5 Units.

Europe's transformation from the end of WW II to an expanded EU. Political, cultural, economic, and social history. Topics: postwar reconstruction, Cold War, consumer versus socialist culture, collapse of Communism, postcommunist integration.

HISTORY 138A. Germany and the World Wars. 5 Units.

(Same as HISTORY 38A. Majors and others taking 5 units, enroll in 138A.) Germany's tumultuous history from the Second Empire through the end of the Cold War. International conflict, social upheaval, and state transformation during Bismarck's wars of unification, World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.

Same as: JEWISHST 138A

HISTORY 139. Modern Britain and the British Empire. 5 Units.

(Same as HISTORY 39. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain.

HISTORY 140. World History of Science. 5 Units.

(Same as HISTORY 40. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions.

HISTORY 144. History of Women and Gender in Science, Medicine and Engineering. 5 Units.

(Same as HISTORY 44. Majors and others taking 5 units, enroll in HISTORY 144.) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What efforts are underway globally to transform research institutions so that both men's and women's careers can flourish? How have science and medicine studied and defined males and females? How can we harness the creative power of gender analysis to enhance knowledge and spark innovation?. Same as: FEMGEN 144

HISTORY 145A. Africa Until European Conquest. 5 Units.

Episodes in African history from the earliest records up until European partition of the continent, focusing on how knowledge about the natural, social, and spiritual worlds was linked to the exercise of power. The effects of technological innovations on states and other forms of social complexity; use of religious beliefs and practices to legitimate or critique authority. The effects of slave trades and imperial conquest on these forms of authority.

HISTORY 145B. Africa in the 20th Century. 5 Units.

(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans.

Same as: AFRICAAM 145B

HISTORY 146. History of Humanitarian Aid in sub-Saharan Africa. 4-5 Units.

Explores humanitarian endeavors through the era of the slave trade, colonialism, the Cold War and the present. Our focus is both local and global examining international humanitarian policy and the effects and perceptions of humanitarian aid within different African localities. Assignments use primary and secondary sources including organizational reports, ethnographies, memoirs and film. Topics: anti-slave trade and abolition movements, 'civilizing' quest; missions, development, refugees, peacekeeping, famine and women's rights.

HISTORY 147. History of South Africa. 5 Units.

(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: AFRICAAM 147

HISTORY 149C. The Slave Trade. 5 Units.

(Same as HISTORY 49C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slaving and the European conquest of Africa.

HISTORY 150A. Colonial and Revolutionary America. 5 Units.

(Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.

Same as: AMSTUD 150A

HISTORY 150B. 19th-Century America. 5 Units.

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AFRICAAM 150B, AMSTUD 150B

HISTORY 150C. The United States in the Twentieth Century. 5 Units.

(Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War.

Same as: AMSTUD 150C

HISTORY 151. The American West. 5 Units.

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, ENGLISH 124, POLISCI 124A

HISTORY 152. History of American Law. 5 Units.

(Same as LAW 318.) Modern history of American law, legal thought, legal institutions and the legal profession. Topics include law and regulation of corporate organizations and labor relations in the age of enterprise, law of race relations in the South and North, development of classical legalism, critiques of classical legalism, modern administrative state, organized legal profession, New Deal legal thought and legislation, legal order of the 50s, expansion of enterprise liability, civil rights movements from 1940, rights revolution of the Warren Court and Great Society.

Same as: HISTORY 352B

HISTORY 152E. From Gold Rush to Google Bus: History of San Francisco. 5 Units.

This class will examine the history of San Francisco from Native American and colonial settlement through the present. Focus is on social, environmental, and political history, with the theme of power in the city. Topics include Indians and Spanish settlers, the Gold Rush, immigration and nativism, earthquake and fire, progressive reform and unionism, gender, race and civil rights, sexuality and politics, redevelopment and gentrification.

Same as: AMSTUD 150X, URBANST 150

HISTORY 153. CREATION OF THE CONSTITUTION. 5 Units.

(Same as LAW 230.) The course begins with readings setting forth the intellectual and experiential background of the framing, including common law and natural rights theory, republicanism, economic & political scientific ideas, and colonial and post-Independence experience. We then study large parts of the debates at the Constitutional Convention, primarily using Madison's Notes. Next come the ratification debates, including readings from antifederalist writers, about half of *The Federalist*, and overviews of the Virginia and New York ratification conventions. We conclude with the addition of the Bill of Rights. Classes consist of a combination of lecture and extensive participation by students. Elements used in grading: Exam.

HISTORY 154. American Intellectual and Cultural History to the Civil War. 5 Units.

(Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images.

Same as: AMSTUD 154

HISTORY 154D. Religion and War in America. 4 Units.

Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.

Same as: RELIGST 105

HISTORY 155. American Constitutional History from the Civil War to the War on Poverty. 5 Units.

(Same as LAW 738.) American Constitutional History from the Civil War to the Cold War. This course will address U.S. constitutional history from the post-Civil War Reconstruction period through the mid-20th century. Because of the breadth of the subject matter, the view will necessarily be partial. In particular we will take as our focus the way the Constitution has provided a point of political mobilization for social movements challenging economic and social inequality. Topics covered include: Civil War Reconstruction and restoration; the rise of corporate capitalism and efforts to constrain it; Progressive Era regulation; the New Deal challenge to federalism and the anti-New Deal backlash; government spending; the World Wars and emergency powers; Civil Liberties including speech and privacy; and the beginning of the Civil Rights Era. Readings will include both legal and historical materials with a focus on the relationship between law and society. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Paper extensions will be granted with instructor permission. No automatic grading penalty for late papers.

HISTORY 156. American Economic History. 5 Units.

The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; emergence of American technology and business organization; economics of the Great Depression and the New Deal; post-World War II economic performance and social change; globalization, information technology, and inequality. Prerequisite: 1 or 1A or 1V.

Same as: AMSTUD 116, ECON 116

HISTORY 156G. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing.

Same as: AMSTUD 156H, FEMGEN 156H

HISTORY 157. The Constitution: A Brief History. 5 Units.

A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime.

Same as: AMSTUD 157, POLISCI 128S

HISTORY 158. The United States Since 1945. 4-5 Units.

Focus is on foreign policy and politics with less attention to social and intellectual history. Topics include nuclear weapons in WW II, the Cold War, the Korean and Vietnam wars, Eisenhower revisionism, the Bay of Pigs and Cuban missile crisis, civil rights and the black freedom struggle, the women's movement, the Great Society and backlash, welfare policy, conservatism and liberalism, the 60s anti-war movement, Watergate and the growth of executive power, Iran-Contra and Reagan revisionism, Silicon Valley, the Gulf War, the Clinton impeachment controversy, 2004 election, and 9/11 and Iraq war.

HISTORY 158B. History of Education in the United States. 3-5 Units.

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: AMSTUD 201, EDUC 201

HISTORY 158C. History of Higher Education in the U.S. 3-5 Units.

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 165, EDUC 265

HISTORY 161. Women in Modern America. 4-5 Units.

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: AMSTUD 161, CSRE 162, FEMGEN 161

HISTORY 163. A History of North American Wests. 5 Units.

The history, peoples, and natural systems of a region that has never been contained within a single empire or nation state, but has been united by the movement of peoples, species, and things. Topics include smallpox, horses, gold, salmon, rivers, coal, and oil.

HISTORY 164C. From Freedom to Freedom Now: African American History, 1865-1965. 5 Units.

(Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music.

Same as: AMSTUD 164C

HISTORY 165. Mexican American History through Film. 4-5 Units.

Focus is on the 20th century. Themes such as immigration, urbanization, ethnic identity, the role of women, and the struggle for civil rights.

HISTORY 165D. The Pacific World. 5 Units.

(Same as HISTORY 65D. History majors and others taking 5 units, register for 165D.) Taking the Pacific and the regions of the world that touch the ocean as the unit of analysis, we will explore geographic, social, cultural, and political interactions that created what we now call the Pacific World. Ranging over four hundred years of history, we will examine human migrations, explorations, interactions and conflicts, and human ecology. The course is not nation-focused but is transnational and international in approach.

HISTORY 166. Introduction to African American History - the Modern Freedom Struggle. 3-5 Units.

(AFRICAAM-166/ AMSTUD-166/ HISTORY-166) This course focuses on African-American political movements of the period after 1930, with special emphasis on the contributions of grassroots activists and visionary leaders such as W. E. B. Du Bois, Martin Luther King, Jr., and Malcolm X. The lectures will utilize audio-visual materials extensively, and the exams will cover these materials as well as the content of traditional lectures. Students are encouraged to undertake research projects utilizing the unique resources of the King Research and Education Institute. Same as: AFRICAAM 166, AMSTUD 166

HISTORY 166B. Immigration Debates in America, Past and Present. 3-5 Units.

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions. Same as: CSRE 166B, HISTORY 366B

HISTORY 167A. Martin Luther King, Jr. and the Global Freedom Struggle. 3-5 Units.

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will be taught by Professor Carson and his colleagues at the Institute. It will provide a general introduction to the life and legacy of Martin Luther King, Jr., as well as devote attention to the movements he inspired. In addition to lectures, the course will include presentations of documentaries such as *Eyes on the Prize*. Students will be expected to read the required texts, participate in class discussions, and take a final exam or submit a research paper (or an audio-visual project developed in consultation with the professor).

HISTORY 168. American History in Film Since World War II. 3-4 Units.

U.S. society, culture, and politics since WW II through feature films. Topics include: McCarthyism and the Cold War; ethnicity and racial identity; changing sex and gender relationships; the civil rights and anti-war movements; and mass media. Films include *The Best Years of Our Lives*, *Salt of the Earth*, *On the Waterfront*, *Raisin in the Sun*, *Kramer v Kramer*, *Falling Down*, and *Never Forever*, among others.

HISTORY 170B. Culture, Society and Politics in Latin America. 5 Units.

(Same as HISTORY 70. History majors and others taking 5 units, enroll in HISTORY 170B.) The course of Latin American history from the colonial era to the present day. Key issues such as colonialism, nationalism, democracy, and revolution will be examined critically in light of broad comparative themes in Latin American and world history. Sources include writings in the social sciences as well as primary documents, fiction, and film.

HISTORY 172A. Mexico: From Colony to Nation, or the History of an impossible Republic?. 5 Units.

Was a republican form of government even possible in 19th-century Mexico after 300 years of colonial rule under the Spanish monarchy? Was the Spanish colonial heritage a positive or a negative legacy according to 19th-century Mexican politicians? How were they to forge a new national identity with so many ethnically and culturally diverse peoples throughout the territory? Just how iquest;traditionaliquest; was, in fact, the colonial period? These are some of the questions we will explore in this course. Journeying from the late colonial period (c.1700) to the 35-year dictatorship known as El Porfiriato (1876-1911) we will examine how Mexicoiquest;s diverse indigenous peoples adapted to both colonial and postcolonial rule, how they actively participated in politics and political discourse to preserve their cultures, customs and colonial privileges, and how after independence in 1821, a new republican political culture was forged. Mexico was not an impossible republic, but rather another kind of republic.

HISTORY 174. Mexico Since 1876: Hlstory of a "Failed State"?. 5 Units.

(Same as History 374.) This course is an introduction to the history and diverse peoples of modern Mexico from 1876 to the present. Through lectures, discussions, primary and secondary readings, short documentaries, and written assignments, students will critically explore and analyze the multiplicity of historical processes, events and trends that shaped and were shaped by Mexicans over the course of a century. The course will cover some of the social and political dimensions of rural social change, urbanization and industrialization, technological innovation and misuse, environmental degradation and conservation, education, ideology, culture and media, migration, and the drug trade.

HISTORY 177D. U.S. Intervention and Regime Change in 20th Century Latin America. 5 Units.

Policy discussions of regime change by US politicians, journalists and pundits usually focus on Iraq, Iran, Syria and North Korea, often with little or no historical context or perspective. This course does the opposite and takes seriously the proverbial saying "if history is any guide..." by examining U.S. interventions in Latin America, a region where so-called preventive regime change (covert as well as overt) has been operative policy for well over a century. Investigates the rationales, motivations and strategies behind U.S.-backed or engineered regime changes in Mexico in the 1910s, Guatemala in the 1950s, Chile in the 1970s, and Nicaragua in the 1980s.

HISTORY 182C. Making of the Islamic World, 600-1500. 5 Units.

(Same as HISTORY 82C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1500. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols.

HISTORY 184. Zionism. 5 Units.

(Same as History 84.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: CSRE 184C, JEWISHST 184, REES 184

HISTORY 187. The Islamic Republics: Politics and Society in Iran, Afghanistan and Pakistan. 5 Units.

(Same as HISTORY 87. History majors and others taking 5 units, register for 187.) Explores the contested politics of these societies in modern times. Topics include controversies surrounding the meaning of revolution, state building, war, geopolitics, Islamic law, clerical authority, gender, an Islamic economy, culture and ethnic, national and religious identities from the 1940s to the present. Assignments will focus on primary sources (especially legal documents, poetry, novels, and memoirs) and films.

HISTORY 187D. Zionism and Its Critics. 4-5 Units.

Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

HISTORY 190. EARLY CHINESE THOUGHT. 3-5 Units.

This course will examine the basic themes that emerged among the philosophical texts of early China, including writings attributed to Confucius and his followers, those of the early Daoists, and those focused on the authoritarian state, and analyze their relation to the changes in the state and social order in that period. Themes to be discussed will include the nature of human networks, the state, the family, the body, personality or temperaments, stratagems, language, and the structure of the cosmos. Same as: HISTORY 90

HISTORY 191D. China: The Northern and Southern Dynasties. 5 Units.

(Same as HISTORY 91D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization.

HISTORY 193. Late Imperial China. 5 Units.

(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: FEMGEN 193

HISTORY 194B. Japan in the Age of the Samurai. 5 Units.

(Same as HISTORY 94B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community.

HISTORY 195. Modern Korean History. 5 Units.

(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) This lecture course provides a general introduction to the history of modern Korea. Themes include the characteristics of the Chosŏn dynasty, reforms and rebellions in the nineteenth century, Korean nationalism; Japanese colonial rule and Korean identities; decolonization and the Korean War; and the different state-building processes in North and South, South Korean democratization in 1980s, and the current North Korean crisis.

Same as: HISTORY 395

HISTORY 195C. Modern Japanese History: From Samurai to Pokemon. 5 Units.

(Same as HISTORY 95C. History majors and others taking 5 units, register for 195C.) Japan's modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions.

HISTORY 195X. Islam in India: Conflict and Accommodation. 4 Units.

This course will investigate the history of Islam in South Asia, particularly interactions between Muslims and Hindus, through the lenses of conflict and accommodation. This topic has become increasingly important in modern times as India and neighboring nations experience sectarian violence and simultaneously strive to engender the peaceful coexistence of multiple religious communities. In many ways the debate over South Asia's present and future is being played out in regards to interpretations of its past. In this course, students will gain a solid overview of the chronological development of Islam in India and its negotiations with other religious traditions on the subcontinent. We will think critically about the relevance of South Asia's past to its present and the crucial role of forms of Indian Islam in the broader context of Islamic cultures across the globe.

Same as: RELIGST 111

HISTORY 196. Worlds of Gandhi. 5 Units.

(Same as HISTORY 96. History majors and others taking 5 units, register for 196.) Place the paradox of Gandhi in context of global convulsions of 20th century. Gandhi lived across continents; maturing in South Africa, struggling in India, attaining celebrity in Europe. As leader of masses, his method of Satyagraha was distinctively at odds with his times. Yet, he also privileged sacrifice, dying, even euthanasia. In a world beset by fear and war, Gandhi's complex theory of nonviolence is compelling. What kind of nonviolent politics did Gandhi envision after Fascism, Auschwitz, Hiroshima, and Pakistan?

HISTORY 197. Southeast Asia: From Antiquity to the Modern Era. 5 Units.

The history of S.E. Asia, comprising Indonesia, the Philippines, Malaysia, Singapore, Thailand, Vietnam, Burma, Cambodia, and Laos, from antiquity to the present. The spread of Indian cultural influences, the rise of indigenous states, and the emergence of globally linked trade networks. European colonization, economic transformation, the rise of nationalism, the development of the modern state, and the impact of globalization.

HISTORY 198. History of Modern China. 5 Units.

(Same as HISTORY 98. History majors and others taking 5 units, register for 198.) This course charts major historical transformations in modern China, and will be of interest to those concerned with Chinese politics, culture, society, ethnicity, economy, gender, international relations, and the future of the world.

HISTORY 198G. Beijing, Shanghai, and the Structure of China. 3-5 Units.

China's modern history through the rivalry of its two most important cities. The course begins in the nineteenth century, contrasting Beijing, the classic imperial capital and a foreign foundation paradoxically celebrated as the embodiment of "traditional" China, with Shanghai, a treaty port and demographic/economic center of China, but identified as a "foreign" city. After following the cities' history through the warlord period, the "Shanghai decade" of Nationalist rule, and the Japanese occupation, the course examines the two cities' developments under Mao and Deng. The course concludes with a look at their current relations and roles, and the transformed nature of China's cities.

HISTORY 201. Introduction to Public History and Public Service. 4-5 Units.

Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

Same as: AFRICAAM 102, CSRE 201, HISTORY 301

HISTORY 201A. The Global Drug Wars. 4-5 Units.

Explores the global story of the struggle over drugs from the nineteenth century to the present. Topics include the history of the opium wars in China, controversies over wine and tobacco in Iran, narco-trafficking and civil war in Lebanon, the Afghan 'narco-state,' Andean cocaine as a global commodity, the politics of U.S.- Mexico drug trafficking, incarceration, drugs, and race in the U.S., and the globalization of the American 'war on drugs.'

Same as: HISTORY 301A

HISTORY 201C. The U.S., U.N. Peacekeeping, and Humanitarian War. 5 Units.

The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter's provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan.

Same as: INTNLREL 140C

HISTORY 202. International History and International Relations Theory. 5 Units.

The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.

Same as: HISTORY 306E, POLISCI 216E, POLISCI 316

HISTORY 202G. Peoples, Armies and Governments of the Second World War. 4-5 Units.

Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history.

Same as: HISTORY 302G

HISTORY 203. Premodern Economic Cultures. 5 Units.

A comparative survey of premodern economies and the value systems that supported them. Students will read and discuss theories of economic culture as well as historical monographs about specific regions. Discussions will focus on the comparison and conceptualization of premodern economic cultures. Students will be required to research the literature on a particular premodern society of their choosing, compile an annotated bibliography of that literature, and compose an essay analyzing the problems and possibilities presented therein.

Same as: HISTORY 303

HISTORY 203C. History of Ignorance. 5 Units.

Scholars pay a lot of attention to knowledge--how it arises and impacts society--but much less attention has been given to ignorance, even though its impacts are equally profound. Here we explore the political history of ignorance, through case studies including: corporate denials of harms from particular products (tobacco, asbestos), climate change denialism, and creationist rejections of Darwinian evolution. Students will be expected to produce a research paper tracing the origins and impact of a particular form of ignorance.

HISTORY 203D. The Holocaust in Recent Memory: Conflicts - Commemorations - Challenges. 5 Units.

This course offers an in-depth approach to the study of the Holocaust as a historical point of reference for European memory, or for the memory cultures of European nations, where the international context in particular the USA and Israel will also be taken into consideration. The starting point is the transformations in Holocaust memory: after 1945, in the era of European postwar myths, the Holocaust was on the periphery of historical thinking, of scholarly and public interest. Today the Holocaust is acknowledged as a 'break in civilization', a watershed event in human history. This approach has only evolved since the 1980s.

Same as: HISTORY 303D, JEWISHST 283D, JEWISHST 383D

HISTORY 203E. Global Catholicism. 5 Units.

The rise of Catholicism as a global phenomenon, and its multiple transformations as it spread to the Americas, Asia, and Africa. Topics include the Reformation, Tridentine reform and the Jesuits, the underground churches in England and the Dutch Republic, the missions to Asia, the Spanish conquest of Latin America, conversion and indigenous religions, missionary imperialism and new religious movements in the non-European world.

Same as: INTNLREL 103E

HISTORY 203K. Trauma and History: Intergenerational suffering and collective healing. 1 Unit.

This course will examine trauma as a historical process, following the intergenerational impacts of history's darker dramas, analyzing collective strategies for coping and healing after trauma, and asking whether we can speak of "traumatized societies." Readings for graduate students will include Ben Shephard's *A War of Nerves*, Didier Fassin and Richard Rechtman's *The Empire of Trauma*, and selections from Yael Danieli, ed., *Intergenerational Handbook of Multigenerational Legacies of Trauma*. Colloquium will be discussion-oriented, but will also include guest discussants from around the world. The course will culminate in a conference to be held at Stanford, June 4-6: "Soul Wounds: Trauma and Healing Across Generations." Undergraduate requirements for 1 credit: Attend weekly "Mind, Body, and Culture" workshop and first hour of Wednesday morning discussion, attend some part of conference on June 4-6. Graduate requirements for 4-5 credits: Attend workshop, read weekly, discussion on Wednesday mornings, write a paper and if desired present at conference.

HISTORY 204. What is History?. 5 Units.

An introduction to the discipline of history, designed for current or prospective History majors. Focusing on methods and theories of historical inquiry, students will learn how historians frame problems, collect and analyze evidence, and contribute to on-going debates. Through a series of case studies or exemplary works of historical study, the course will also explore different genres of historical writing (such as narrative, biography, social history) and different methodological approaches to history (such as Annales school, microhistory, and cultural history).

HISTORY 204E. Totalitarianism. 4-5 Units.

Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities.

Same as: HISTORY 307E

HISTORY 204G. War and Society. 5 Units.

How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.
Same as: HISTORY 304G

HISTORY 205F. Digital History: Concepts, Methods, Problems. 5 Units.

Students will study the development of the relationship between the discipline of history and computing tools through a combination of theoretical and hands-on activities, and readings. Students will read leading critical works, examine seminal digital projects, and examine the works of leading digital humanities scholars. The course will introduce students to concepts and methods within digital history, including text analysis, spatial history, data visualization, and digital scholarship. The end product of the course will be a born-digital scholarly product.

HISTORY 205G. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources.
Same as: HISTORY 305G, POLISCI 235J, POLISCI 335J

HISTORY 206A. City, Society, Literature- 19th Century Histories. 4 Units.

This course examines the rise of modern cities through an analysis of urban society and the imaginative literature of the 1800s.
Same as: HISTORY 306A, URBANST 106

HISTORY 207. Biography and History. 4-5 Units.

The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's *Possession*, Bernard Malamud's *Dubin's Lives*) that illuminate the intellectual underpinnings of biographical labor.
Same as: HISTORY 308

HISTORY 207B. Environment, Technology and Revolution in World History. 4-5 Units.

Exploration of historiographical and interdisciplinary methodologies and approaches to intersections among environmental, technological, and revolutionary social change in diverse geographical and temporal contexts. Readings include broad theoretical and synthetic works as well as case studies of American, French, Mexican, Russian, Chinese, and Hungarian revolutions.

HISTORY 207C. The Global Early Modern. 4-5 Units.

In what sense can we speak of "globalization" before modernity? What are the characteristics and origins of the economic system we know as "capitalism"? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.
Same as: HISTORY 307C

HISTORY 208. Private Lives, Public Stories: Autobiography in Women's History. 5 Units.

Changing contexts of women's lives and how women's actions have shaped and responded to those contexts.

HISTORY 208B. Women Activists' Response to War. 4-5 Units.

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.
Same as: FEMGEN 208B, HISTORY 308B

HISTORY 208S. Facing the Past: The Politics of Retrospective Justice. 5 Units.

Forms of injustice in history including slavery, genocide, ethnic cleansing, mass rape, forced religious conversion, and torture of prisoners. Mechanisms developed over the last century to define, deter, and alleviate the effects of such offenses, including war crimes tribunals, truth commissions, national apologies, and monetary reparations. Case studies chart the international field of retrospective justice, exploring the legal, political, and moral implications of confronting traumatic pasts.

HISTORY 209B. The Idea of Politics. 4-5 Units.

Can we live without politics? Is politics indispensable for humanity and vice-versa? The idea of politics is that it must transform, through human action, conditions of collective life. But the 20th century produced colliding beliefs about what that life might be and what the human being itself might look like. Explore whether, after the century, we might still think of politics as an ethical idea and the "human" as foundational political category. Keywords: Civility, Cruelty, Friendship, Empire, Democracy, Humanism, Animals.
Same as: HISTORY 309B

HISTORY 209C. Liberalism and Violence. 5 Units.

Does Liberalism have a theory of violence? What does modern political thought, in privileging humanity and rights, share with "terrorists" and "rogue states"? How is liberalism transformed by the use of religion and death for political ends? We read key thinkers of modern life- Adorno, Arendt, Agamben, Benjamin, Derrida, Fanon, Foucault, Gandhi, Heidegger, and Schmitt- to interrogate the relationship between religion, sacrifice, and democracy. At the center are connections between war and modern life, and between violence and non-violence.
Same as: HISTORY 309C

HISTORY 209D. Postcolonialism and Universalism. 4-5 Units.

Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.
Same as: HISTORY 309A

HISTORY 209S. Research Seminar for Majors. 5 Units.

Required of History majors. How to conduct original, historical research and analysis, including methods such as using the libraries and archives at Stanford and elsewhere, and working collaboratively to frame topics, identify sources, and develop analyses. Autumn quarter focuses on European Lit and Arts; winter quarter on U.S. History and Colonialism; spring quarter on modern Europe, ancient China and early modern Europe.

HISTORY 212. Knights, Monks, and Nobles: Masculinity in the Middle Ages. 4-5 Units.

This course considers masculinity as historically and culturally contingent, focusing on the experiences and representations of medieval men as heroes, eunuchs, fathers, priests, husbands, boys, and fighting men. Recognizing that the lives of men, like those of women, were governed by gendered rules and expectations, we will explore a wide range of medieval masculinities, paying close attention to the processes by which manhood could be achieved (e.g. martial, spiritual, sexual), and to competing versions of manliness, from the warrior hero of the early middle ages to the suffering Christ of late medieval religion.
Same as: HISTORY 312

HISTORY 214D. Mediterranean Crossroads: Power, Culture, and Religion in Medieval Sicily. 5 Units.

Sicily in the Middle Ages was a Mediterranean crossroads, a dynamic and diverse kingdom in which Muslim and Christian, Viking and African, European and Eastern Cultures all came together. Explores the life and times of Frederick II (1194-1250). He claimed universal authority as a Christian emperor, yet ruled multireligious Sicily as king. He promoted crusading, yet was accused of being a heretic and a crypto Muslim. He spoke six languages and actively patronized the arts and sciences. Topics include: structures and influences that made such a figure possible; how he managed the tensions of governing a diverse and disparate empire; how religion and cultural production created and maintained his authority; how contemporaries and later generations reacted to this enigmatic emperor; why has he continued to generate such polarizing reactions; and how did Frederick become a figure revered by Nazis and multiculturalists alike. Same as: HISTORY 314D

HISTORY 216. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's quest for book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's quest for authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, FEMGEN 216, HISTORY 316

HISTORY 217S. Minorities In Medieval Europe. 5 Units.

This course examines attitudes towards outsider groups within medieval society and the treatment of these groups by medieval Christians. Heretics, Jews, Muslims, homosexuals, prostitutes and usurers occupied ambivalent and at times dangerous positions within a society that increasingly defined itself as Christian. Differences in the treatment of these various 'outcast' groups, their depiction in art, their legal segregation, and their presumed association with demonic activity are addressed through discussion, and readings from primary and secondary source material.

Same as: RELIGST 217X

HISTORY 219C. Science, Technology, and Modernity in the Soviet Union. 5 Units.

Science and technology were integral to the Soviet claim to offer a vision of modernity superior to that of Western capitalism. Science and technology would flourish; society would develop on a scientific basis. The results were more complex than the vision. Topics to be covered: science and Marxism-Leninism; the Lysenko affair; the R&D system; the role of the secret police; the atomic project; the space race; missile development; Andrei Sakharov; technology and innovation.

Same as: HISTORY 319C

HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800. 5 Units.

Social values, gender relations, and social change in an era of rapid change; challenges to established norms by new constructions of deviance (witchcraft, religious reform, and revolt) and new standards of civility; encounters with non-Russians and the construction of national consciousness. Social values as political ethos: patrimonial autocracy and the reality of female rule in the late 17th and 18th century.

HISTORY 221B. The 'Woman Question' in Modern Russia. 5 Units.

Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia.

Same as: FEMGEN 221B

HISTORY 222. Crime and Punishment in Early Modern Europe and Russia. 5 Units.

Explores criminal law in early modern Europe and Russia, ca 1500-1800, in law and in practice. Engages debates about use of exemplary public executions as tactic of governance, and about gradual decline in "violence" in Europe over this time. Explores practice of accusatory and inquisitory judicial procedures, judicial torture, forms of punishment, concepts of justice.

HISTORY 223. Art and Ideas in Imperial Russia. 4-5 Units.

Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.

Same as: HISTORY 323

HISTORY 224A. The Soviet Civilization. 4-5 Units.

Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

Same as: HISTORY 424A, REES 224A

HISTORY 224C. Genocide and Humanitarian Intervention. 3 Units.

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 324C, JEWISHST 284C, JEWISHST 384C, PEDS 224

HISTORY 224D. The Soviet Civilization, Part 2. 4-5 Units.

Prerequisite: HISTORY 224A/424A.

Same as: HISTORY 424B

HISTORY 226E. Famine in the Modern World. 3 Units.

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011.

Same as: HISTORY 326E, PEDS 226

HISTORY 227D. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.
Same as: HISTORY 327D, REES 227, REES 327

HISTORY 228. Circles of Hell: Poland in World War II. 5 Units.

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.
Same as: HISTORY 328, JEWISHST 282, JEWISHST 382

HISTORY 230A. The Witness in Modern History: Memoir, Reportage, Image. 5 Units.

The rise of the witness as icon and debates about its reliability as a historical source. The power of eyewitness accounts to convict accused criminals, inspire indignation about war and genocide, and attract attention to humanitarian crises. Their notorious unreliability due to exaggeration and misapprehension. Sources include reportage, photography, and documentary film. Case studies include criminal cases, war, poverty, and natural disasters.

HISTORY 230D. Europe in the World, 1789-Present. 4-5 Units.

The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more "globalized" society we live in today.
Same as: HISTORY 330D

HISTORY 230F. Surveillance in Modern Europe. 4-5 Units.

We will investigate the role of surveillance in modern societies -- the motives, pressures, and consequences of informal and formal systems of control from the French Revolution to the present day. Students will encounter a variety of sources and situations, analyzing the tensions between social stability and individual pursuits, and the circumstances under which these tensions can lead to state repression and violence.
Same as: HISTORY 330F

HISTORY 231C. The Great War: WWI in Literature, Film, Art, and Memory. 3-5 Units.

This course concerns how writers, artists, and other cultural producers understood and represented the traumas of the First World War and its aftermath. Rather than tracing a political or military history of the conflict, we'll focus on how the horrors of War (both in the trenches and on the home front) fostered broader social and cultural shifts, as people questioned the very foundations of European civilization. Most specifically, we'll explore the connections between the War and the emergence of post-War modernist movements, as writers and artists created new works to help them make sense of the catastrophe and the new world it wrought. Though France provides our starting point, we'll also travel beyond the Hexagon to incorporate other views and major works. Course readings will be in English, though students may elect to read works in French if they wish.
Same as: FRENCH 258, FRENCH 358, HISTORY 332C

HISTORY 231E. Paper, Printing, and Digital Revolutions: Transformations of the Book. 4-5 Units.

What is a book? This seminar explores the conceptual implications of approximately two millennia of transformations in the physical and material properties of books. How have the meaning and authority we assign the written word changed as technologies of book production and dissemination have evolved, and how have they remained continuous? Topics covered include the rise of the medieval manuscript codex, the emergence of print culture in early modern Europe, and current debates over the nature of text in the digital age.
Same as: HISTORY 331E

HISTORY 232B. Heretics, Prostitutes and Merchants: The Venetian Empire. 5 Units.

Between 1200-1600, Venice created a powerful empire at the boundary between East and West that controlled much of the Mediterranean, with a merchant society that allowed social groups, religions, and ethnicities to coexist. Topics include the features of Venetian society, the relationship between center and periphery, order and disorder, orthodoxy and heresy, the role of politics, art, and culture in the Venetian Renaissance, and the empire's decline as a political power and reinvention as a tourist site and living museum.
Same as: ITALIAN 232B

HISTORY 232D. Rome: The City and the World, 1350-1750. 4-5 Units.

What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.
Same as: HISTORY 332D

HISTORY 232F. The Scientific Revolution. 5 Units.

Was there a scientific revolution in the sixteenth and seventeenth centuries? How did modern science emerge as a distinctive kind of knowledge and practices? Explores changing ideas of nature and knowledge during the age of Copernicus, Galileo, Descartes, Bacon, and Newton. Examines the contexts in which western science emerged, issues of scientific methodology (e.g. induction, deduction, probability, and the rise of experimentation), the development of scientific institutions, and the emergence of the scientist as a historical figure.

HISTORY 233C. Two British Revolutions. 4-5 Units.

Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.
Same as: HISTORY 333C

HISTORY 233F. Political Thought in Early Modern Britain. 5 Units. 1500 to 1700. Theorists include Hobbes, Locke, Harrington, the Levellers, and lesser known writers and schools. Foundational ideas and problems underlying modern British and American political thought and life.

HISTORY 233G. Catholic Politics in Europe, 1789-1992. 5 Units. What led to the creation of a specifically Catholic mass politics? How did these parties and movements interact with the Vatican and the wider Church? What accounts for political Catholicism's involvement in clerical-fascist states and its important role in shaping the EU? Sources focus on monographs. Research paper using primary sources.

HISTORY 233K. The Invention of the Modern Republic. 4-5 Units. Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution. Same as: HISTORY 333K

HISTORY 234. The Enlightenment. 3-5 Units. The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet. Same as: DLCL 324, HISTORY 334, HISTORY 432A, HUMNTIES 324

HISTORY 234G. Narrating the British Empire. 4-5 Units. This course will explore the historical and cultural reality of the British Empire in a global and comparative context, through works of fiction and non-fiction, history, memoir and a range of cultural chronicles. What relationship did British colonialism have with modernity and the European Enlightenment, and with neoliberalism and globalization that followed decolonization? Texts: CLR James's *Beyond a Boundary*, Jamaica Kincaid's *A Small Place*, Nirad Chaudhuri's *The Autobiography of an Unknown Indian*, Alan Paton's *Cry, The Beloved Country*, Witi Ihimaera's *Dear Miss Mansfield*. Same as: ENGLISH 234G, HISTORY 334G

HISTORY 235. The Renaissance of War: Politics, Technology, and War in Late Medieval and Renaissance Italy. 5 Units. The dynamic societies of the Italian Peninsula of the 14th to 16th centuries "prosperous, astonishingly creative, politically fractious, and endemically violent" produced sweeping, deeply consequential changes. Among these were new developments in the theory and practice of war, politics, and diplomacy that laid the foundations for the modern state system and European military power. The class covers: new diplomatic practice; the Military Revolution; state-building; war finance; court culture; and the intersection of these with the shimmering brilliance of Renaissance culture.

HISTORY 235C. Readings in the Supernatural. 4-5 Units. Class will read and discuss a selection of monographs, scholarly essays, and primary sources on the rich supernatural world of early modern Europe. We will discuss how fairies, werewolves, nightmares, and trolls all became witches, how the binary of angels and demons figured in European thought, and how the marginalized imaginary was reconstituted in theatre and fiction. Same as: HISTORY 335C

HISTORY 236. The Ethics of Imperialism. 5 Units. Can a commitment to liberty, progress, and universal rights be reconciled with imperialism? The ethical underpinnings of empire; how modern Europeans provided ethical and political justifications for colonial expansion. How European ideals were used to defend and justify inequality, violence, and genocide. The ethics of American-driven globalization and humanitarianism. Texts include primary sources, philosophical treatises, and historical studies.

HISTORY 236B. Hobbes to Habermas: The Idea of Society in Modern Thought. 4-5 Units. Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber. Same as: HISTORY 336B

HISTORY 236F. The End of the World As They Knew It: Culture, Cafés, and Crisis in Europe, 1880-1918. 4-5 Units. The years stretching from roughly 1880 to end of the First World War were marked by profound social upheaval and an intense burst of creativity. This seminar will focus on the major cultural movements and big ideas of the period. Topics covered include the rise of mass culture and cinema, the origins of psychoanalysis, anti-Semitism and Zionism, new anxieties about sexuality and the iquest;New Woman,iquest; anarchism, decadence, degeneration, and Dada iquest; with cameos from Bernhardt, Freud, Klimt, Nietzsche, Toulouse-Lautrec, Wilde, Zola, and other luminaries of the age. Same as: HISTORY 336F

HISTORY 237K. Speed and Power in Twentieth-Century Europe. 4-5 Units. Europeans living in the 20th century witnessed an unprecedented (and, to many observers, frightening) acceleration in the pace of everyday life, wrought by the introduction of a host of new travel technologies. Focusing on the metropolises of Europe, this seminar will explore the various ways that trains, planes, and automobiles have shaped modern urban life. We'll also look at how 20th-century artists and writers have treated the interrelated themes of speed and power in their work. Same as: HISTORY 337K

HISTORY 238E. European Legal History. 5 Units. (Same as LAW 441.) This seminar will explore major topics in European legal history from ancient Rome through the present: Roman law, canon law, feudalism, sixteenth- and seventeenth-century constitutionalism, modern natural law, the age of absolutism and the rise of the centralized, administrative state, the structure of Old Regime law and society and the radical changes brought about by revolution, the German historical school of jurisprudence, and the rise of the European Union and a new culture of international human rights. In exploring these topics, we will focus on certain core, recurring themes that continue profoundly to shape the world in which we live. These include the sources and nature of law (positive law vs. custom), the relationship between law and society, and the relationship between law and history. Classroom discussion will focus on selected primary- and secondary-source texts that we will read as a group. This course is cross-listed with LAW441. The course will be limited to 12 SLS students with 10 additional slots held for students enrolling in HISTORY338E. Same as: HISTORY 338E

HISTORY 238G. Ethnography of the Late Middle Ages: Social history and popular culture in the age of the plague. 4-5 Units. During the late Middle Ages, as Europe was recovering from the devastation of the Black Death, political reorganization contributed to a burst of archival documentation that allows historians richly detailed glimpses of societies in transition. We will be reading selected scholarly articles and monographs covering such topics as persecution, prechristian cultural remnants, folk theologies, festival cultures, peasant revolts, heresy, and the advent of the diabolic witch. Same as: HISTORY 338G

HISTORY 239E. Paris: The Making of a Modern Icon. 3-5 Units. Few places have been as heavily romanticized and mythologized as Paris. To many observers, Paris and its attractions serve as icons of modernity itself. By engaging with fiction, film, journalism, painting, photography, poetry, song, and other media, we will trace how different people at different times have used Paris as both backdrop and main protagonist, and we'll consider how the city itself has incorporated and rebelled against such representations. The scope of our inquiry will stretch from the late 18th century to the present, covering a host of topics, figures, and sites: from the French Revolution to the protests of May '68, from Baudelaire to Hemingway, from the Impressionists to the Situationists. Taught in English. Same as: FRENCH 227, URBANST 142

HISTORY 239F. Empire and Information. 4-5 Units.

How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.

Same as: HISTORY 339F

HISTORY 239H. Colonialism and Empire in Modern Europe. 5 Units.

To better understand the history of modern Europe within a global context, explores the following questions: What impact did more than a century of colonialism have on the social lives, cultural attitudes, political loyalties, and intellectual world views of European women and men during the nineteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism?.

HISTORY 239K. Revolutionary Moments in French Thought. 3-5 Units.

French intellectual and political culture has often been associated with revolutionary attempts to break free from the hold of tradition. Indeed, the concept of "revolution" has itself become a French tradition of sorts. Over the last 500 years, these revolutions have taken place in a number of arenas. In philosophy, Reneacute; Descartes challenged all traditional learning and defined new principles that were central to the so-called iquest;Revolution of the Mind.iquest; In religion, Enlightenment thinkers not only advocated the toleration of different faiths but also questioned the veracity of Christianity and of all theistic worldviews. In politics, the French Revolution redefined the very concept of a political revolution and set the stage for modern conceptions of sovereignty. French socialist thinkers of the 19th century, in turn, reshaped the ways their contemporaries thought about socio-economic arrangements. Finally, 20th-century existentialists have attempted to rethink the very purpose of human existence. In this course, we will explore these and other seminal revolutionary moments that not only transformed French society, but that also had implications for European and, indeed, global culture. Taught in English, readings in English.

Same as: FRENCH 128

HISTORY 240. The History of Evolution. 4-5 Units.

This course examines the history of evolutionary biology from its emergence around the middle of the eighteenth century. We will consider the continual engagement of evolutionary theories of life with a larger, transforming context: philosophical, political, social, economic, institutional, aesthetic, artistic, literary. Our goal will be to achieve a historical rich and nuanced understanding of how evolutionary thinking about life has developed to its current form.

Same as: HISTORY 340

HISTORY 241E. Hearing and Seeing in the Long Nineteenth Century. 3-4 Units.

Ideas about vision and hearing in science and culture from 1790 through 1910. The development of sensory physiology in the wake of Kant's *Critique of Pure Reason*, including Maine de Biran, Goethe, Helmholtz. Treatments of the senses in different spheres of culture and the arts: Baudelaire's *flacirc;neur*, Impressionist painting, sound-reproduction technologies, the musical avant-garde, early cinema. Case studies include Ceacute;zanne, Debussy, and Russolo. Focus is on the complex relationships between science and culture and the role of the senses in the formation of the 'modern' subject. HISTORY241E/341E must be taken for 4 units.

Same as: HISTORY 341E, MUSIC 186D, MUSIC 286D

HISTORY 243G. Tobacco and Health in World History. 4-5 Units.

Cigarettes are the world's leading cause of death--but how did we come into this world, where 6 trillion cigarettes are smoked every year? Here we explore the political, cultural, and technological origins of the cigarette and cigarette epidemic, using the tobacco industry's 80 million pages of secret documents. Topics include the history of cigarette advertising and cigarette design, the role of the tobacco industry in fomenting climate change denial, and questions raised by the testimony of experts in court.

Same as: HISTORY 343G

HISTORY 243S. Human Origins: History, Evidence, and Controversy. 4-5 Units.

Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and clichacute; in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required.

Same as: HISTORY 443A

HISTORY 244. Egyptomania! The Allure of Ancient Egypt Over the Past 3,500 Years. 5 Units.

Why does Egypt fascinate us? From Napoleoniquest;s invasion to Katy Perryiquest;s latest music video, we have interpreted ancient Egyptian history and mythology for centuries; in fact, this obsession dates back to the Egyptians themselves. This seminar explores Egyptomania from the Pharaonic period to the 20th century. Topics include: ancient Egypt, Greek historians, medieval Arabic scholars, hieroglyphic decipherment, 19th century travel, 20th century pop culture, and how historians have interpreted this past over the centuries.

Same as: CLASSICS 87

HISTORY 244C. The History of the Body in Science, Medicine, and Culture. 4-5 Units.

The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.

Same as: HISTORY 444C

HISTORY 245. Violence and Identity in the African Great Lakes Region. 5 Units.

Untangles current crises through exploring debates on migration, autochthony, ethnicity and nationalism from the pre-colonial era to the present. While the majority of the course focuses on the region's `center' (Rwanda, Burundi and the Democratic Republic of the Congo), we will also examine continuities and differences within the larger geographic region. Topics include the historical roots and perspectives that inform genocide, gender based violence, mineral exploitation, reconciliation, development and controversies around homosexuality in Uganda and the wider region.

HISTORY 246E. Refugees and the Making of the Modern World: 1945-Present. 4-5 Units.

Following the mass popular displacements of WWII, a group of diplomats came together to create the United Nations High Commissioner for Refugees (UNHCR) and the 1951 Convention Relating to the Status of Refugees-- the bases of the international refugee regime that has endured to the present. We will explore the processes that led to the creation of the modern international refugee regime, and how international refugee law has evolved in response to conflicts and emergencies "on the ground." Throughout, we will question the category of the "refugee," and interrogate the methods by which refugees, as individuals and as groups, have sought to control and alter their positions under national and international authorities. Topics will include notions of migration and asylum, the creation and evolution of international refugee law, refugees, stateless people, economic migrants, and decolonization. We will have case studies of post-WWII European, Palestinian, Thai, Ethiopian, Haitian, and Cuban "refugees," among others.

Same as: HISTORY 346E

HISTORY 247. Violence in African History: Conflict and Healing in sub-Saharan Africa. 4-5 Units.

This course questions what constitutes "violence" in African history, and why it occurred when it did. We will examine the subtleties of "violence" in African history, which have sometimes led to conflicts, and sometimes to rich strategies of healing and improvisation. These include ecological crises, domestic violence, corruption, economic exploitation, and demographic crises (including urbanization and diseases such as HIV-AIDS). While we begin by examining ideas about conflict in pre-colonial Africa, the course focuses on the colonial and post-colonial eras in African history.

Same as: HISTORY 347

HISTORY 248S. Colonial States and African Societies, Part I. 4-5 Units.

Colonialism set in motion profound transformations of African societies. These transformations did not occur immediately following military conquest, nor did they occur uniformly throughout the continent. This research seminar will focus directly on the encounter between the colonial state and African societies. The seminar will examine problems of social transformation, the role of the colonial state, and the actions of Africans. Following four weeks of colloquium style discussion, students then embark on independent research on the encounter between one colonial state and its constituent African societies.

Same as: HISTORY 448A

HISTORY 249S. Colonial States and African Societies, Part II. 4-5 Units.

Second part of the research seminar offered in the Winter. Students continue their research and present their penultimate drafts in week 8.

Same as: HISTORY 448B

HISTORY 250A. History of California Indians. 5 Units.

Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system.

Same as: CSRE 117S

HISTORY 250E. Taxing America: From the Puritans to Prop. 13. 5 Units.

Taxes have shaped American society and politics since before the Revolution. And they've been extremely controversial just as long. In this course we'll try to understand American society and government by looking at the politics of taxation from the colonial period to the twentieth century. Topics include the legitimacy of taxation, the constitution, economic development, inequality, gender, and race.

HISTORY 252B. Diplomacy on the Ground: Case Studies in the Challenges of Representing Your Country. 5 Units.

The tragic death of Ambassador Chris Stevens has recently highlighted the dangers of diplomacy in the modern era. This class will look at how Americans in embassies have historically confronted questions such as authoritarian rule, human rights abuses, violent changes of government, and covert action. Case studies will include the Berlin embassy in the 1930s, Tehran in 1979, and George Kennan's experiences in Moscow, among others. Recommended for students contemplating careers in diplomatic service.

Same as: INTNLREL 174

HISTORY 252K. America as a World Power: U.S. Foreign Relations, 1914 to Present. 5 Units.

This course will examine the modern history of American foreign relations, from 1914 to the present. Beginning with the fateful decision to intervene in the First World War, it will examine the major crises and choices that have defined the American Century. Our study of U.S. foreign relations will consider such key factors as geopolitics, domestic politics, bureaucracy, psychology, race, and culture. Students will be expected to undertake their own substantial examination of a critical episode in the era studied.

Same as: INTNLREL 168

HISTORY 254. Popular Culture and American Nature. 5 Units.

Despite John Muir, Aldo Leopold, and Rachel Carson, it is arguable that the Disney studios have more to do with molding popular attitudes toward the natural world than politicians, ecologists, and activists. Disney as the central figure in the 20th-century American creation of nature. How Disney, the products of his studio, and other primary and secondary texts see environmentalism, science, popular culture, and their interrelationships.

HISTORY 254D. Law, Slavery, and Race. 5 Units.

(Same as LAW 747.) This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/does law work "on the ground" to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day.

Same as: AFRICAAM 254D, CSRE 154D, HISTORY 354

HISTORY 254G. The Causes and Consequences of the American Revolution. 5 Units.

Why did Britain's North American colonies declare independence from an empire they had long revered? What did the American Revolution mean for the people who experienced it? In this course we will explore the explosive origins of the American republic. Topics: revolutionary ideology, empire, the federal constitution, slavery, social conflict, and the international consequences of the American Revolution.

HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice. 5 Units.

The religious and political thought of Martin Luther King, Jr., using the documentary resources of the King Institute at Stanford. His social gospel Christianity and prophetic message of radical social transformation. Readings include the forthcoming *The Papers of Martin Luther King, Jr., Volume VI: Advocate of the Social Gospel*.

HISTORY 255E. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, CSRE 216X, EDUC 216

HISTORY 256. America- China Relations. 4-5 Units.

The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

Same as: AMSTUD 256, HISTORY 356

HISTORY 256G. Constructing Race and Religion in America. 4-5 Units.

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: CSRE 246, HISTORY 356G, RELIGST 246, RELIGST 346

HISTORY 257C. LGBT/Queer Life in the United States. 4-5 Units.

An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

Same as: FEMGEN 140D, FEMGEN 240D

HISTORY 258. Topics in the History of Sexuality: Sexual Violence in America. 4-5 Units.

This undergraduate/graduate colloquium explores recent historical interpretations of the history of sexuality, with a focus on sexual violence. The readings cover changing definitions and laws, cultural representations, and the role of gender, race, and age in the construction of rape and other forms of sexual violence. Topics include slavery; incest, seduction, and statutory rape reform; the racialization of rape and the anti-lynching movement; street harassment; men and boys as victims; war and conquest; and feminist responses to rape.

Same as: AMSTUD 258, CSRE 192E, FEMGEN 258, FEMGEN 358, HISTORY 358

HISTORY 258E. History of School Reform: Origins, Policies, Outcomes, and Explanations. 3-5 Units.

Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. This course is required for POLS students pursuing the PreK-12 concentration.

Same as: EDUC 220D

HISTORY 259A. Poverty and Homelessness in America. 4-5 Units.

Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. Service Learning Course (certified by Haas Center).

HISTORY 260. California's Minority-Majority Cities. 4-5 Units.

Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

Same as: CSRE 260

HISTORY 261. Race, Gender, and Class in Jim Crow America. 5 Units.

How African American life and labor were redefined from 1890-1954. Topics include family life, work, leisure patterns, transnational relations, cultural expressions emphasizing literature and music, resistance and social activism. Primary sources including visual materials, literature, and film; historical interpretations of the period.

HISTORY 261G. Presidents and Foreign Policy in Modern History. 5 Units.

Nothing better illustrates the evolution of the modern presidency than the arena of foreign policy. This class will examine the changing role and choices of successive presidential administrations over the past century, examining such factors as geopolitics, domestic politics, the bureaucracy, ideology, psychology, and culture. Students will be encouraged to think historically about the institution of the presidency, while examining specific case studies, from the First World War to the conflicts of the 21st century.

Same as: INTNLREL 173

HISTORY 264G. Madness in American Society: The Social History of Mental Illness in the United States. 5 Units.

(Formerly HPS 158.) Explores the variety of meanings of mental illness in the past, and the diagnostic, therapeutic, cultural and policy challenges historically posed by mental illness. Focus is on the U.S. but is not limited to it. How has mental illness been defined in history? How has the mind been medicalized and managed? Topics include the rise of institutions for the mentally ill, the growth of the psychiatric profession and the relationship between psychiatry, deviance and anti-psychiatry, and gender and psychiatric norms.

HISTORY 265. Writing Asian American History. 5 Units.

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: AMSTUD 265, ASNAMST 265, HISTORY 365

HISTORY 266C. The Cold War: An International History. 5 Units.

Though it ended twenty years ago, we still live in a world shaped by the Cold War. Beginning with its origins in the mid-1940s, this course will trace the evolution of the global struggle, until its culmination at the end of the 1980s. Students will be asked to ponder the fundamental nature of the Cold War, what kept it alive for nearly fifty years, how it ended, and its long term legacy for the world.

Same as: INTNLREL 154

HISTORY 267E. Martin Luther King, Jr. - His Life, Ideas, and Legacy. 4-5 Units.

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will provide a general introduction to King's life, visionary ideas, and historical significance. In addition to lectures and discussions, the course will include presentations of documentaries such as *Eyes on the Prize*. Students will be expected to read the required texts, participate in class discussions, and submit a research paper or an audio-visual project developed in consultation with the professor.

Same as: AFRICAAM 267E, AMSTUD 267E

HISTORY 271. Mexicans in the United States. 5 Units.

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: AMSTUD 271, CHILATST 171, CSRE 171H

HISTORY 272E. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration. Same as: AMSTUD 272E, CHILATST 172, CSRE 172H, FEMGEN 272E, HISTORY 372E

HISTORY 273. The European Expansion. 4-5 Units.

The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.

Same as: HISTORY 373A

HISTORY 274. Mexico Since 1876: History of a "Failed State"?. 5 Units.

This course is an introduction to the history and diverse peoples of modern Mexico from 1876 to the present. Through discussions, primary and secondary readings, short documentaries, and written assignments, students will critically explore and analyze the multiplicity of historical processes, events and trends that shaped and were shaped by Mexicans over the course of a century. The course will cover some of the social and political dimensions of rural social change, urbanization and industrialization, technological innovation and misuse, environmental degradation and conservation, education, ideology, culture and media, migration, and the drug trade.

HISTORY 274E. Urban Poverty and Inequality in Latin America. 5 Units.

We examine historical issues of social inequality, poverty, crime, industrialization, globalization, and environment in major Latin American cities.

HISTORY 278S. The Ethical Challenges of Climate Change. 4-5 Units.

This course explores the ethical challenges of climate change from historical, social, economic, political, cultural and scientific perspectives. These include the discovery of global warming over two centuries, the rise of secular and religious denialism and skepticism toward the scientific consensus on it, the dispute between developed and developing countries over how to forge a binding global agreement to mitigate it, and the "role morality" of various actors (scientists, politicians, fossil fuel companies, the media and ordinary individuals) in the US in assessing ethical responsibility for the problem and its solutions.

Same as: HISTORY 478

HISTORY 279. Latin American Development: Economy and Society, 1800-2014. 4-5 Units.

The newly independent nations of Latin America began the 19th century with economies roughly equal to the U.S. and Canada. What explains the economic gap that developed since 1800? Why are some Latin American nations rich and others poor and how have societies changed over time? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks are explored. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice are examined and debated.

Same as: HISTORY 379

HISTORY 279D. Modern Brazil: Economy, Society & Culture. 4-5 Units.

This course addresses the history of modern Brazil from independence in 1822 to the present day. The class focuses on theories of economic development, social structure and change, and cultural life in Brazil's diverse regions.

Same as: HISTORY 379D

HISTORY 281A. Twentieth-Century Iraq: A Political and Social History. 5 Units.

The colonial experience, creation of the modern Iraqi state, and transition to military dictatorship. Political movements, religious and tribal elements, and their relation to the state. Geopolitical context.

HISTORY 282. The United States and the Middle East since 1945. 4-5 Units.

Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?.

Same as: HISTORY 382

HISTORY 282F. History of Modern Turkey. 5 Units.

Social, political and cultural history of Modern Turkey from the last decades of the Ottoman Empire in the late 19th century until Today. Themes include transformation from a multi-national empire to a national republic; Islam, secularism and radical modernism; military, bureaucracy and democratic experience; economic development, underdevelopment and class; Istanbul, Ankara and provincial Turkey; socialism, conservatism(s), and Kurdish challenge; Turkey in Europe, the Middle East and Central Asia; gender, sexuality and family; recent political crises.

HISTORY 283. The New Global Economy, Oil and Origins of the Arab Spring. 4-5 Units.

This class uses the methods of political economy to study the trajectory of global capitalism from the end of World War II to the current phase of neoliberal globalization. The argument is that the role of oil, and its primary repository " the Middle East " has been central in the global capitalist order and that neoliberalism and the oil economy are closely linked to the eruption of the Arab uprisings of 2011.

Same as: HISTORY 383

HISTORY 284F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800. 4-5 Units.

Focuses on political regimes, economic interactions and sociocultural formations in the early modern Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sufis. Same as: HISTORY 384F

HISTORY 286. Jews Among Muslims in Modern Times. 4-5 Units.

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 386, JEWISHST 286, JEWISHST 386

HISTORY 287C. Zionism and its Critics. 4-5 Units.

Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

HISTORY 288. Palestine and the Arab-Israeli Conflict. 4-5 Units.

This course examines some salient issues of the Israeli-Palestinian conflict from the late 19th century to the present. At the end of the course you should be able to articulate the positions of the major parties to the conflict, with the understanding that there is no single, unified Zionist (or Jewish) or Palestinian (or Arab) position. One quarter does not allow sufficient time to cover even all of the important topics comprehensively (for example, the role of the Arab states, the USA and the USSR, and the internal history of Israel receive less attention than is desirable). Some prior knowledge of Middle East history is desirable, but not required. Vigorous debate and criticism are strongly encouraged. Criticism and response expressed in a civil tone is an important way to get a fuller and more truthful picture of something. This is not only a fundamental democratic right and a basic citizenship skill, but it is essential to interpreting information and making good policy. Rights not used are easily lost.

Same as: JEWISHST 288, JEWISHST 388

HISTORY 288D. American Jewish History: Learning to be Jewish in America. 2-4 Units.

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience.

History students must take course for at least 3 units.

Same as: AMSTUD 279X, EDUC 279X, JEWISHST 297X, RELIGST 279X

HISTORY 291A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times. 4-5 Units.

The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts.

Same as: HISTORY 391A

HISTORY 292D. Japan in Asia, Asia in Japan. 4-5 Units.

How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.

Same as: HISTORY 392D

HISTORY 292F. Culture and Religions in Korean History. 4-5 Units.

This colloquium explores the major themes of Korean history before 1800 and the role of culture and religions in shaping the everyday life of Chosŏn-dynasty Koreans. Themes include the aristocracy and military in the Koryŏ-dynasty, Buddhism and Confucianism in the making of Chosŏn-dynasty Korea, kingship and court culture, slavery and women, family and rituals, death and punishment, and the Korean alphabet (Hangul) and print culture.

Same as: HISTORY 392F

HISTORY 293B. Queer History in Comparative Perspective. 4-5 Units.

Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

Same as: FEMGEN 293B, FEMGEN 393B, HISTORY 393B

HISTORY 293D. Global Intellectual History. 4-5 Units.

Ideas have circulated globally for millennia but relatively recently have thinkers begun to conceptualize the global. Like "humanity" and "universalism," or what Marx called "international," the "global" too has complex genealogies. It is associated, often simultaneously, with empire and freedom, war and equality, commitment and treason, piracy and justice, homelessness and cosmopolitanism. Working with key 20th century texts from Italy, Britain, India, Israel, Palestine, Germany, France, and Algeria, course explores how thinking "globally" impacts the very foundations of modern political thought.

Same as: HISTORY 393D

HISTORY 293E. Female Divinities in China. 4-5 Units.

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: HISTORY 393E, RELIGST 257X, RELIGST 357X

HISTORY 294D. Manchuria: Cradle of Conflict, Cockpit of Asia. 4-5 Units.

How did Manchuria become Chinese? This course utilizes the dual waves of early twentieth-century writings and a wide array of recent scholarship dealing with Manchuria to explore the formation of nation-states out of the Qing and Japanese empires in Northeast Asia through the lenses of opium, migration, cities, warlords, and memoir. This course will be of interest to students concerned with developing transcultural understandings of Northeast Asian history.

Same as: HISTORY 394D

HISTORY 295F. Race and Ethnicity in East Asia. 4-5 Units.

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day.

Same as: ASNAMST 295F, HISTORY 395F

HISTORY 296. Communism and Revolution in China. 5 Units.

From the formation of the Chinese Communist Party (CCP) in 1921 through the 1949 founding of the People's Republic of China (PRC). Topics include: early theories of socialism in China; the relationship between Chinese communism and the Communist International and Soviet Union; agrarian reformulation of communism by Mao; the communist-nationalist civil war; the Communist Revolution of 1949; and the consolidation of communist power in the PRC.

HISTORY 296F. Short Stories from India and Pakistan. 3-5 Units.

The course introduces the main periods and trends of 20th- and 21st-century Urdu short story: Progressive Writers' Movement, Partition literature, Modernism, contemporary fiction. Classes include close reading and discussion of selected short stories, with special focus on prominent themes such as social problems; personal loss, exile, displacement, alienation, and questions of identity; gender and sexuality; history, memory, and nostalgia; myth and imagination. Readings include: Premchand, Manto, Ismat Chughtai, Qurratulain Hyder, Intizar Husain, Naiyer Masud. All readings are in English.

Same as: ICA 296F

HISTORY 297. The Cold War and East Asia. 5 Units.

Explores how East Asia negotiated superpower rivalry and global ideological competition during the Cold War. Considers the ways in which China, Japan, and Korea were more than battlegrounds for US-Soviet contestation and played active roles in defining the nature and dynamics of the conflict. Re-examines conventional narratives and periodizations against alternative conceptual models and interpretive frameworks highlighting the constructed nature of the struggle as well as the role of historical and cultural factors in shaping the East Asian experience.

Same as: HISTORY 397

HISTORY 297F. Religion and Power in the Making of Modern South Asia. 3-5 Units.

This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. HISTORY297F must be taken for 4-5 units.

Same as: RELIGST 255, RELIGST 355

HISTORY 299A. Senior Research I. 1-5 Unit.

.

HISTORY 299B. Senior Research II. 1-5 Unit.

.

HISTORY 299C. Senior Research III. 1-5 Unit.

.

HISTORY 299D. Tooling Up for Digital Humanities. 1 Unit.

What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

HISTORY 299H. Junior Honors Colloquium. 1 Unit.

Required of junior History majors planning to write a History honors thesis during senior year. Meets four times during the quarter.

HISTORY 299M. Undergraduate Directed Research: Martin Luther King, Jr., Research and Education Institute. 1-4 Unit.

May be repeated for credit.

HISTORY 299P. Undergraduate Directed Research: Pioneering Women. 1 Unit.

May be repeated for credit.

HISTORY 299S. Undergraduate Directed Research and Writing. 1-5 Unit.

May be repeated for credit.

HISTORY 299X. Preparing for International Field Work: Public Service or Research. 1 Unit.

Open to students in all classes, those planning internships abroad and those planning research, from juniors with honors theses and sophomores with Chappell Lougee grants to freshmen thinking ahead. Introduces resources on campus for planning international research and service. Raises issues that need to be considered in advance of going abroad: ethical concerns, Human Subjects Protocol, networking, personal safety and gender issues, confronting cultural differences. Exposes students to research methods: case studies, interviewing, working in foreign libraries and archives.

Same as: HISTORY 399A

HISTORY 301. Introduction to Public History and Public Service. 4-5 Units.

Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

Same as: AFRICAAM 102, CSRE 201, HISTORY 201

HISTORY 301A. The Global Drug Wars. 4-5 Units.

Explores the global story of the struggle over drugs from the nineteenth century to the present. Topics include the history of the opium wars in China, controversies over wine and tobacco in Iran, narco-trafficking and civil war in Lebanon, the Afghan 'narco-state,' Andean cocaine as a global commodity, the politics of U.S.- Mexico drug trafficking, incarceration, drugs, and race in the U.S., and the globalization of the American 'war on drugs.'

Same as: HISTORY 201A

HISTORY 302G. Peoples, Armies and Governments of the Second World War. 4-5 Units.

Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history.

Same as: HISTORY 202G

HISTORY 303. Premodern Economic Cultures. 5 Units.

A comparative survey of premodern economies and the value systems that supported them. Students will read and discuss theories of economic culture as well as historical monographs about specific regions. Discussions will focus on the comparison and conceptualization of premodern economic cultures. Students will be required to research the literature on a particular premodern society of their choosing, compile an annotated bibliography of that literature, and compose an essay analyzing the problems and possibilities presented therein.

Same as: HISTORY 203

HISTORY 303C. History of Ignorance. 4-5 Units.

Scholars pay a lot of attention to knowledge--how it arises and impacts society--but much less attention has been given to ignorance, even though its impacts are equally profound. Here we explore the political history of ignorance, through case studies including: corporate denials of harms from particular products (tobacco, asbestos), climate change denialism, and creationist rejections of Darwinian evolution. Students will be expected to produce a research paper tracing the origins and impact of a particular form of ignorance.

HISTORY 303D. The Holocaust in Recent Memory: Conflicts - Commemorations - Challenges. 5 Units.

This course offers an in-depth approach to the study of the Holocaust as a historical point of reference for European memory, or for the memory cultures of European nations, where the international context in particular the USA and Israel will also be taken into consideration. The starting point is the transformations in Holocaust memory: after 1945, in the era of European postwar myths, the Holocaust was on the periphery of historical thinking, of scholarly and public interest. Today the Holocaust is acknowledged as a 'break in civilization', a watershed event in human history. This approach has only evolved since the 1980s.

Same as: HISTORY 203D, JEWISHST 283D, JEWISHST 383D

HISTORY 303F. Words and Things in the History of Classical Scholarship. 4-5 Units.

How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.

Same as: CLASSICS 331

HISTORY 303K. Trauma and History: Intergenerational suffering and collective healing. 4-5 Units.

This course will examine trauma as a historical process, following the intergenerational impacts of history's darker dramas, analyzing collective strategies for coping and healing after trauma, and asking whether we can speak of "traumatized societies." Readings for graduate students will include Ben Shephard's *A War of Nerves*, Didier Fassin and Richard Rechtman's *The Empire of Trauma*, and selections from Yael Danieli, ed., *Intergenerational Handbook of Multigenerational Legacies of Trauma*. Colloquium will be discussion-oriented, but will also include guest discussants from around the world. The course will culminate in a conference to be held at Stanford, June 4-6: "Soul Wounds: Trauma and Healing Across Generations." Undergraduate requirements for 1 credit: Attend weekly "Mind, Body, and Culture" workshop and first hour of Wednesday morning discussion, attend some part of conference on June 4-6. Graduate requirements for 4-5 credits: Attend workshop, read weekly, discussion on Wednesday mornings, write a paper and if desired present at conference.

HISTORY 304. Approaches to History. 5 Units.

Required of first-year History Ph.D. students. This course explores ideas and debates that have animated historical discourse and shaped historiographical practice over the past half-century or so. The works we will be discussing raise fundamental questions about how historians imagine the past as they try to write about it, how they constitute it as a domain of study, how they can claim to know it, and how (and why) they argue about it.

HISTORY 304G. War and Society. 5 Units.

How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.

Same as: HISTORY 204G

HISTORY 305. Graduate Pedagogy Workshop. 1 Unit.

Required of first-year History Ph.D. students. Perspectives on pedagogy for historians: course design, lecturing, leading discussion, evaluation of student learning, use of technology in teaching lectures and seminars. Addressing today's classroom: sexual harassment issues, integrating diversity, designing syllabi to include students with disabilities.

HISTORY 305C. Graduate Workshop Series. 1 Unit.

This is a 1-credit course for which only regular attendance is required, and graduate students may audit any or all of the sessions as they find useful. The majority of the course addresses questions of research, grant writing, and professionalization, while the last few sessions offer general guidance on preparing for the job market.

HISTORY 305G. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources.

Same as: HISTORY 205G, POLISCI 235J, POLISCI 335J

HISTORY 306A. City, Society, Literature- 19th Century Histories. 4 Units.

This course examines the rise of modern cities through an analysis of urban society and the imaginative literature of the 1800s.

Same as: HISTORY 206A, URBANST 106

HISTORY 306D. World History: Graduate Colloquium. 4 Units.

How do historians engage the global scale in the classroom as well as in research? The world history canon including Toynbee, McNeill, Braudel, Wolf, and Wallerstein; contrasting approaches, recent research, and resources for teaching. Recommended: concurrent enrollment in HISTORY 306K.

HISTORY 306E. International History and International Relations Theory. 5 Units.

The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.

Same as: HISTORY 202, POLISCI 216E, POLISCI 316

HISTORY 306F. Identities and Identification in the Atlantic World. 4-5 Units.

How identities and processes of identification changed in Europe, Africa, and the Americas during the early modern period and as a result of the engagement of the inhabitants of these three continents in the Atlantic world.

HISTORY 306G. Colonial Law. 4-5 Units.

Examines the relationship between law and colonialism in Latin America, Africa and Asia during both the early modern and the modern period. By reading some of the seminal works that have been published on this issue, we will seek to understand how law both facilitated and limited colonialism and how colonialism, in turn, had modified the legal systems that had existed previously. Attention will also be given to law as an acculturating agent and to the legal arena as a sphere for conflict resolution, negotiation, and identity formation.

HISTORY 306K. World History Pedagogy Workshop. 1 Unit.

Students draft a syllabus and create a curriculum module for use in a world history lecture course. Corequisite: HISTORY 306D, recommended.

HISTORY 307A. Legal History Workshop. 4-5 Units.

(Same as LAW 372.) The Legal History Workshop is designed as a forum in which faculty and students from both the Law School and the History Department can discuss some of the best work now being done in the field of legal history. Every other week, an invited speaker will present his or her current research for discussion. This year the theme of the Workshop will be Conservative Legal Movements from 1950 to the Present. Speakers will include Reva Siegel, the Nicholas deB. Katzenbach Professor of Law at Yale Law School, and Thomas Sgrue, the David Boies Professor of History and Sociology at the University of Pennsylvania, as well several other scholars of law, the social sciences and humanities writing about this topic. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Special Instructions: Students are required to write a brief response to each speaker's paper. There will be a total of four speakers, and thus four papers. Guidance will be provided concerning how to frame these response papers, which will be due every two weeks - i.e., on the day before speaker presents and students will receive "W" writing credit. Students taking the course to receive "R" research credit are required to write a research paper on a legal history topic that they choose (in consultation with the professor). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation, attendance, assignments and final paper. This course is open to first-year Law School students. Writing (W) credit is for students entering prior to Autumn 2012.

HISTORY 307C. The Global Early Modern. 4-5 Units.

In what sense can we speak of "globalization" before modernity? What are the characteristics and origins of the economic system we know as "capitalism"? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.

Same as: HISTORY 207C

HISTORY 307E. Totalitarianism. 4-5 Units.

Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities.

Same as: HISTORY 204E

HISTORY 308. Biography and History. 4-5 Units.

The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's *Possession*, Bernard Malamud's *Dubin's Lives*) that illuminate the intellectual underpinnings of biographical labor.

Same as: HISTORY 207

HISTORY 308B. Women Activists' Response to War. 4-5 Units.

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.

Same as: FEMGEN 208B, HISTORY 208B

HISTORY 309A. Postcolonialism and Universalism. 4-5 Units.

Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.

Same as: HISTORY 209D

HISTORY 309B. The Idea of Politics. 4-5 Units.

Can we live without politics? Is politics indispensable for humanity and vice-versa? The idea of politics is that it must transform, through human action, conditions of collective life. But the 20th century produced colliding beliefs about what that life might be and what the human being itself might look like. Explore whether, after the century, we might still think of politics as an ethical idea and the "human" as foundational political category.

Keywords: Civility, Cruelty, Friendship, Empire, Democracy, Humanism, Animals.

Same as: HISTORY 209B

HISTORY 309C. Liberalism and Violence. 5 Units.

Does Liberalism have a theory of violence? What does modern political thought, in privileging humanity and rights, share with "terrorists" and "rogue states?" How is liberalism transformed by the use of religion and death for political ends? We read key thinkers of modern life- Adorno, Arendt, Agamben, Benjamin, Derrida, Fanon, Foucault, Gandhi, Heidegger, and Schmitt- to interrogate the relationship between religion, sacrifice, and democracy. At the center are connections between war and modern life, and between violence and non-violence.

Same as: HISTORY 209C

HISTORY 309E. History Meets Geography. 4-5 Units.

Focus is on developing competence in GIS computer applications and applying it to historical problems. Previous experience with GIS not required. Recommended: complete the GIS tutorial in Branner Library before the course starts.

HISTORY 309F. Historical Geography Colloquium: Maps in the Early Modern World. 4-5 Units.

The significance of cartographic enterprise across the early modern world. Political, economic, and epistemological imperatives that drove the proliferation of nautical charts, domain surveys, city plans, atlases, and globes; the types of work such artifacts performed for their patrons, viewers, and subjects. Contributions of indigenous knowledge to imperial maps; the career of the map in commerce, surveillance, diplomacy, conquest, and indoctrination. Sources include recent research from Asia, Europe, and the Americas.

HISTORY 309G. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: CLASSICS 215, DLCL 209, RELIGST 204

HISTORY 311A. Family, Gender, and Production in Ancient Rome. 4-5 Units.

Seminar. The household as the basic unit of production in Rome in the context of family relations and ideologies of gender. Methodological challenges of doing social and economic history from literary, epigraphic, and literary texts. Demography of family and kinship in ancient Rome. Ideologies of gender and family roles and their influence on economic production. Economic theories of the family and human capital.

HISTORY 311G. Big Ancient History. 4-5 Units.

How the shift away from thinking about European history in terms of a western civilization model toward embedding it in stories of how global history affects research and teaching on ancient Greece and Rome. Conventional, evolutionary, and global history narratives of the past 5,000 to 15,000 years and some new ideas about how Greco-Roman history might fit into different storylines.

HISTORY 312. Knights, Monks, and Nobles: Masculinity in the Middle Ages. 4-5 Units.

This course considers masculinity as historically and culturally contingent, focusing on the experiences and representations of medieval men as heroes, eunuchs, fathers, priests, husbands, boys, and fighting men. Recognizing that the lives of men, like those of women, were governed by gendered rules and expectations, we will explore a wide range of medieval masculinities, paying close attention to the processes by which manhood could be achieved (e.g. martial, spiritual, sexual), and to competing versions of manliness, from the warrior hero of the early middle ages to the suffering Christ of late medieval religion.

Same as: HISTORY 212

HISTORY 314D. Mediterranean Crossroads: Power, Culture, and Religion in Medieval Sicily. 5 Units.

Sicily in the Middle Ages was a Mediterranean crossroads, a dynamic and diverse kingdom in which Muslim and Christian, Viking and African, European and Eastern Cultures all came together. Explores the life and times of Frederick II (1194-1250). He claimed universal authority as a Christian emperor, yet ruled multireligious Sicily as king. He promoted crusading, yet was accused of being a heretic and a crypto Muslim. He spoke six languages and actively patronized the arts and sciences. Topics include: structures and influences that made such a figure possible; how he managed the tensions of governing a diverse and disparate empire; how religion and cultural production created and maintained his authority; how contemporaries and later generations reacted to this enigmatic emperor; why has he continued to generate such polarizing reactions; and how did Frederick become a figure revered by Nazis and multiculturalists alike.

Same as: HISTORY 214D

HISTORY 315. Advanced Paleography. 5 Units.

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: CLASSICS 216, ENGLISH 300A, RELIGST 329X

HISTORY 316. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, FEMGEN 216, HISTORY 216

HISTORY 319B. Secularity. 4-5 Units.

Classic theories of secularity. Is a secular world possible? How does, historically seen, the notion of the secular emerge, impose itself, and get challenged? Readings include Max Weber, E. Durkheim, R.A. Markus, Carl Schmitt, and Hans Blumenberg, and studies bearing on the Middle Ages, English monastic secularization, the French Revolution, and 20th-century political religions.

HISTORY 319C. Science, Technology, and Modernity in the Soviet Union. 5 Units.

Science and technology were integral to the Soviet claim to offer a vision of modernity superior to that of Western capitalism. Science and technology would flourish; society would develop on a scientific basis. The results were more complex than the vision. Topics to be covered: science and Marxism-Leninism; the Lysenko affair; the R&D system; the role of the secret police; the atomic project; the space race; missile development; Andrei Sakharov; technology and innovation.

Same as: HISTORY 219C

HISTORY 321A. State, Society and Nation in Modern Russian Historiography. 4-5 Units.

Main trends of Russian intellectual history as seen through major historians' treatment of Muscovy: Romanticism, Slavophilism, Hegelianism, Populism, Social Democracy, New Idealism, and Marxism-Leninism.

HISTORY 321B. Imperial Russian Historiography. 4-5 Units.

.

HISTORY 323. Art and Ideas in Imperial Russia. 4-5 Units.

Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.

Same as: HISTORY 223

HISTORY 323B. Research Methodologies in Early Modern Russian History. 4-5 Units.

.

HISTORY 324C. Genocide and Humanitarian Intervention. 3 Units.

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 224C, JEWISHST 284C, JEWISHST 384C, PEDS 224

HISTORY 324F. The Caucasus and the Muslim World. 4-5 Units.

The linkages connecting the societies of the Caucasus to Muslim communities in Iran, Russia, the Ottoman Empire and Turkey, S. Asia, and the Middle East.

HISTORY 326A. Modern Europe: Society and Politics. 5 Units.

The goal of this course is to introduce graduate students to major works of history and literature in the field of nineteenth and early-twentieth century history. A colloquia will be given in tandem with a research seminar.

HISTORY 326C. Graduate Colloquium on Balkan History. 4-5 Units.

Designed for History Ph.D. students to develop competence in the history and historiography of the modern Balkans, from the French Revolution to the present. Areas of study include the influence of empires on the region, the rise of nationalism and nation states, the dilemmas of independence, the emergence and decline of communism in the region, and the recurrence of war and ethnic conflict.

HISTORY 326E. Famine in the Modern World. 3 Units.

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011.

Same as: HISTORY 226E, PEDS 226

HISTORY 327D. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.

Same as: HISTORY 227D, REES 227, REES 327

HISTORY 328. Circles of Hell: Poland in World War II. 5 Units.

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.

Same as: HISTORY 228, JEWISHST 282, JEWISHST 382

HISTORY 330. Core Colloquium on Early Modern Europe: Ancien Regime. 4-5 Units.

Topics in the social, political, and religious history of Western Europe, 1550-1789, with an emphasis on France. May be repeated for credit.

HISTORY 330A. Early Modern Colloquium. 4-5 Units.

Historiographical survey from the Renaissance to the Enlightenment. Topics include Renaissance, Reformation, European expansion, state and nation building, printing, military, and scientific revolutions, origins of Enlightenment. Designed to prepare students doing either a primary or secondary graduate field in early modern European history.

HISTORY 330D. Europe in the World, 1789-Present. 4-5 Units.

The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more "globalized" society we live in today.

Same as: HISTORY 230D

HISTORY 330F. Surveillance in Modern Europe. 4-5 Units.

We will investigate the role of surveillance in modern societies -- the motives, pressures, and consequences of informal and formal systems of control from the French Revolution to the present day. Students will encounter a variety of sources and situations, analyzing the tensions between social stability and individual pursuits, and the circumstances under which these tensions can lead to state repression and violence.

Same as: HISTORY 230F

HISTORY 331D. Core Colloquium on Modern Europe: Intellectual History. 4-5 Units.**HISTORY 331E. Paper, Printing, and Digital Revolutions: Transformations of the Book. 4-5 Units.**

What is a book? This seminar explores the conceptual implications of approximately two millennia of transformations in the physical and material properties of books. How have the meaning and authority we assign the written word changed as technologies of book production and dissemination have evolved, and how have they remained continuous? Topics covered include the rise of the medieval manuscript codex, the emergence of print culture in early modern Europe, and current debates over the nature of text in the digital age.

Same as: HISTORY 231E

HISTORY 332B. Heretics, Prostitutes and Merchants: The Venetian Empire. 4-5 Units.

Between 1200-1600, Venice created a powerful empire at the boundary between East and West that controlled much of the Mediterranean, with a merchant society that allowed social groups, religions, and ethnicities to coexist. Topics include the features of Venetian society, the relationship between center and periphery, order and disorder, orthodoxy and heresy, the role of politics, art, and culture in the Venetian Renaissance, and the empire's decline as a political power and reinvention as a tourist site and living museum.

Same as: ITALIAN 332B

HISTORY 332C. The Great War: WWI in Literature, Film, Art, and Memory. 3-5 Units.

This course concerns how writers, artists, and other cultural producers understood and represented the traumas of the First World War and its aftermath. Rather than tracing a political or military history of the conflict, we will focus on how the horrors of War (both in the trenches and on the home front) fostered broader social and cultural shifts, as people questioned the very foundations of European civilization. Most specifically, we'll explore the connections between the War and the emergence of post-War modernist movements, as writers and artists created new works to help them make sense of the catastrophe and the new world it wrought. Though France provides our starting point, we'll also travel beyond the Hexagon to incorporate other views and major works. Course readings will be in English, though students may elect to read works in French if they wish.

Same as: FRENCH 258, FRENCH 358, HISTORY 231C

HISTORY 332D. Rome: The City and the World, 1350-1750. 4-5 Units.

What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.

Same as: HISTORY 232D

HISTORY 332F. The Scientific Revolution. 5 Units.

What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.

HISTORY 332G. When Worlds Collide: The Trial of Galileo. 4-5 Units.

In 1633, the Italian mathematician Galileo was tried and condemned for advocating that the sun, not the earth, was the center of the cosmos. The Catholic Church did not formally admit that Galileo was right until 1992. Examines the many factors that led to the trial of Galileo and looks at multiple perspectives on this signal event in the history of science and religion. Considers the nature and definition of intellectual heresy in the sixteenth and early seventeenth centuries, and examines the writings of Galileo's infamous predecessor Giordano Bruno (burned at the stake in 1600). Looks closely at documents surrounding the trial and related literature on Renaissance and Reformation Italy in order to understand the perspectives of various participants in this famous event. Focal point of seminar involves the examination of the many different histories that can be produced from Galileo's trial. What, in the end, were the crimes of Galileo?.

HISTORY 333C. Two British Revolutions. 4-5 Units.

Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.

Same as: HISTORY 233C

HISTORY 333K. The Invention of the Modern Republic. 4-5 Units.

Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

Same as: HISTORY 233K

HISTORY 334. The Enlightenment. 3-5 Units.

The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

Same as: DLCL 324, HISTORY 234, HISTORY 432A, HUMNTIES 324

HISTORY 334F. Science, Technology, and Empire. 4-5 Units.

How modern Europe came to be connected to the wider world through repeated cycles of expansion, circulation, and exchange from the nineteenth century to the present. Using weekly themes and in-depth discussions of watershed moments, the roles played by colonialism, migration, commerce, warfare, telecommunications, and popular culture in redefining the place of Europe in a changing global landscape will be explored.

HISTORY 334G. Narrating the British Empire. 4-5 Units.

This course will explore the historical and cultural reality of the British Empire in a global and comparative context, through works of fiction and non-fiction, history, memoir and a range of cultural chronicles. What relationship did British colonialism have with modernity and the European Enlightenment, and with neoliberalism and globalization that followed decolonization? Texts: CLR James's *Beyond a Boundary*, Jamaica Kincaid's *A Small Place*, Nirad Chaudhuri's *The Autobiography of an Unknown Indian*, Alan Paton's *Cry, The Beloved Country*, Witi Ihimaera's *Dear Miss Mansfield*.

Same as: ENGLISH 234G, HISTORY 234G

HISTORY 335. The Renaissance of War: Politics, Technology, and War in Late Medieval and Renaissance Italy. 4-5 Units.

The dynamic societies of the Italian Peninsula of the 14th to 16th centuries "prosperous, astonishingly creative, politically fractious, and endemically violent" produced sweeping, deeply consequential changes. Among these were new developments in the theory and practice of war, politics, and diplomacy that laid the foundations for the modern state system and European military power. The class covers: new diplomatic practice; the Military Revolution; state-building; war finance; court culture; and the intersection of these with the shimmering brilliance of Renaissance culture.

HISTORY 335C. Readings in the Supernatural. 4-5 Units.

Class will read and discuss a selection of monographs, scholarly essays, and primary sources on the rich supernatural world of early modern Europe. We will discuss how fairies, werewolves, nightmares, and trolls all became witches, how the binary of angels and demons figured in European thought, and how the marginalized imaginary was reconstituted in theatre and fiction.

Same as: HISTORY 235C

HISTORY 336. Modern France. 4-5 Units.

(Daughton).

HISTORY 336B. Hobbes to Habermas: The Idea of Society in Modern Thought. 4-5 Units.

Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber.

Same as: HISTORY 236B

HISTORY 336E. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.

Same as: CLASSICS 396, DLCL 396

HISTORY 336F. The End of the World As They Knew It: Culture, Cafés, and Crisis in Europe, 1880-1918. 4-5 Units.

The years stretching from roughly 1880 to end of the First World War were marked by profound social upheaval and an intense burst of creativity. This seminar will focus on the major cultural movements and big ideas of the period. Topics covered include the rise of mass culture and cinema, the origins of psychoanalysis, anti-Semitism and Zionism, new anxieties about sexuality and the New Woman, anarchism, decadence, degeneration, and Dada; with cameos from Bernhardt, Freud, Klimt, Nietzsche, Toulouse-Lautrec, Wilde, Zola, and other luminaries of the age.

Same as: HISTORY 236F

HISTORY 337. The Holocaust. 4 Units.

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 137, JEWISHST 183, JEWISHST 383

HISTORY 337C. Street History: Learning the Past in School and Out. 3-5 Units.

Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?.

Same as: EDUC 356

HISTORY 337K. Speed and Power in Twentieth-Century Europe. 4-5 Units.

Europeans living in the 20th century witnessed an unprecedented (and, to many observers, frightening) acceleration in the pace of everyday life, wrought by the introduction of a host of new travel technologies. Focusing on the metropolises of Europe, this seminar will explore the various ways that trains, planes, and automobiles have shaped modern urban life. We'll also look at how 20th-century artists and writers have treated the interrelated themes of speed and power in their work.

Same as: HISTORY 237K

HISTORY 338A. Graduate Colloquium in Modern British History, Part I. 4-5 Units.

Influential approaches to problems in British, European, and imperial history. The 19th-century British experience and its relationship to Europe and empire. National identity, the industrial revolution, class formation, gender, liberalism, and state building. Goal is to prepare specialists and non-specialists for oral exams.

HISTORY 338E. European Legal History. 5 Units.

(Same as LAW 441.) This seminar will explore major topics in European legal history from ancient Rome through the present: Roman law, canon law, feudalism, sixteenth- and seventeenth-century constitutionalism, modern natural law, the age of absolutism and the rise of the centralized, administrative state, the structure of Old Regime law and society and the radical changes brought about by revolution, the German historical school of jurisprudence, and the rise of the European Union and a new culture of international human rights. In exploring these topics, we will focus on certain core, recurring themes that continue profoundly to shape the world in which we live. These include the sources and nature of law (positive law vs. custom), the relationship between law and society, and the relationship between law and history. Classroom discussion will focus on selected primary- and secondary-source texts that we will read as a group. This course is cross-listed with LAW441. The course will be limited to 12 SLS students with 10 additional slots held for students enrolling in HISTORY338E.

Same as: HISTORY 238E

HISTORY 338G. Ethnography of the Late Middle Ages: Social history and popular culture in the age of the plague. 4-5 Units.

During the late Middle Ages, as Europe was recovering from the devastation of the Black Death, political reorganization contributed to a burst of archival documentation that allows historians richly detailed glimpses of societies in transition. We will be reading selected scholarly articles and monographs covering such topics as persecution, prechristian cultural remnants, folk theologies, festival cultures, peasant revolts, heresy, and the advent of the diabolic witch.

Same as: HISTORY 238G

HISTORY 339F. Empire and Information. 4-5 Units.

How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.

Same as: HISTORY 239F

HISTORY 339H. Modern European History in a Global Age. 4-5 Units.

How scholars can write the history of modern Europe in a way that integrates global and transnational perspectives. Discussed the methodological challenges and merits of various approaches and reviews relevant theoretical and interdisciplinary models for how this can best be done. Topics include globalization, migration, internationalism, colonialism, post-colonialism, modern warfare, and the media.

HISTORY 340. The History of Evolution. 4-5 Units.

This course examines the history of evolutionary biology from its emergence around the middle of the eighteenth century. We will consider the continual engagement of evolutionary theories of life with a larger, transforming context: philosophical, political, social, economic, institutional, aesthetic, artistic, literary. Our goal will be to achieve a historical rich and nuanced understanding of how evolutionary thinking about life has developed to its current form.

Same as: HISTORY 240

HISTORY 341E. Hearing and Seeing in the Long Nineteenth Century. 3-4 Units.

Ideas about vision and hearing in science and culture from 1790 through 1910. The development of sensory physiology in the wake of Kant's *Critique of Pure Reason*, including Maine de Biran, Goethe, Helmholtz. Treatments of the senses in different spheres of culture and the arts: Baudelaire's *flacirc;neur*, Impressionist painting, sound-reproduction technologies, the musical avant-garde, early cinema. Case studies include Ceacute;zanne, Debussy, and Russolo. Focus is on the complex relationships between science and culture and the role of the senses in the formation of the 'modern' subject. HISTORY241E/341E must be taken for 4 units.

Same as: HISTORY 241E, MUSIC 186D, MUSIC 286D

HISTORY 342. Darwin in the History of Life. 4-5 Units.

Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. Attendance at the lectures of HISTORY 142 is required.

HISTORY 343G. Tobacco and Health in World History. 4-5 Units.

Cigarettes are the world's leading cause of death--but how did we come into this world, where 6 trillion cigarettes are smoked every year? Here we explore the political, cultural, and technological origins of the cigarette and cigarette epidemic, using the tobacco industry's 80 million pages of secret documents. Topics include the history of cigarette advertising and cigarette design, the role of the tobacco industry in fomenting climate change denial, and questions raised by the testimony of experts in court.

Same as: HISTORY 243G

HISTORY 344. Narrative Knowing. 1-2 Unit.

Philosophers and historians have been debating the status of narrative explanation for well over 50 years. Until quite recently, a supposed dichotomy between natural science and history has shaped the discussion. Beginning from the origins, history, and limitations of the dichotomy, this seminar will explore how claims for narrative understanding and explanation have come to occupy an increasingly important role in the natural sciences as well as the social sciences. Some classic contributors are Hempel, Danto, Mink, Kuhn, White, Ricouer, Geertz, and Ginzburg. Current authors include Roth, Rheinberger, Kitcher, Beatty, Morgan, and (yes) Wise.

Same as: PHIL 344

HISTORY 345A. Africa in the Era of the Slave Trade. 4-5 Units.

The slave trade, including the trans-Saharan, Indian Ocean, and trans-Atlantic trades, constituted nearly a millennium of interaction with the wider world and set in motion transformations in African societies, polities, and cultures. Topics include the debates about slavery in Africa, the impact of the slave trade on African societies, state formation, economic change, religious change, and household change in the period before the scramble for Africa in the late 19th century.

HISTORY 345B. African Encounters with Colonialism. 4-5 Units.

This colloquium is a broad sweep of some of the main themes in the history of the colonial period for Africa. A course of this nature can not help but be a selective sample of the field. For example, topics on the end of slavery in Africa, on the social history of law in colonial Africa, Islam and religious conversion, nationalism and decolonization are not included here because they are covered by more specialized courses. This course is designed to let students sample different approaches to the history of the colonial period.

HISTORY 346. The Dynamics of Change in Africa. 4-5 Units.

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, POLISCI 246P, POLISCI 346P

HISTORY 346E. Refugees and the Making of the Modern World: 1945-Present. 4-5 Units.

Following the mass popular displacements of WWII, a group of diplomats came together to create the United Nations High Commissioner for Refugees (UNHCR) and the 1951 Convention Relating to the Status of Refugees-- the bases of the international refugee regime that has endured to the present. We will explore the processes that led to the creation of the modern international refugee regime, and how international refugee law has evolved in response to conflicts and emergencies "on the ground." Throughout, we will question the category of the "refugee," and interrogate the methods by which refugees, as individuals and as groups, have sought to control and alter their positions under national and international authorities. Topics will include notions of migration and asylum, the creation and evolution of international refugee law, refugees, stateless people, economic migrants, and decolonization. We will have case studies of post-WWII European, Palestinian, Thai, Ethiopian, Haitian, and Cuban "refugees," among others.

Same as: HISTORY 246E

HISTORY 347. Violence in African History: Conflict and Healing in sub-Saharan Africa. 4-5 Units.

This course questions what constitutes "violence" in African history, and why it occurred when it did. We will examine the subtleties of "violence" in African history, which have sometimes led to conflicts, and sometimes to rich strategies of healing and improvisation. These include ecological crises, domestic violence, corruption, economic exploitation, and demographic crises (including urbanization and diseases such as HIV-AIDS). While we begin by examining ideas about conflict in pre-colonial Africa, the course focuses on the colonial and post-colonial eras in African history.

Same as: HISTORY 247

HISTORY 351B. Core in American History, Part II. 4-5 Units.

.

HISTORY 351C. Core in American History, Part III. 4-5 Units.

.

HISTORY 351D. Core in American History, Part IV. 4-5 Units.

.

HISTORY 351E. Core in American History, Part V. 4-5 Units.

Required of all first-year United States History Ph.D. students. Topics in Twentieth Century United States History.

HISTORY 351F. Core in American History, Part VI. 4-5 Units.

Required of all first-year Ph.D. students in U.S. History.

HISTORY 352B. History of American Law. 5 Units.

(Same as LAW 318.) Modern history of American law, legal thought, legal institutions and the legal profession. Topics include law and regulation of corporate organizations and labor relations in the age of enterprise, law of race relations in the South and North, development of classical legalism, critiques of classical legalism, modern administrative state, organized legal profession, New Deal legal thought and legislation, legal order of the 50s, expansion of enterprise liability, civil rights movements from 1940, rights revolution of the Warren Court and Great Society.

Same as: HISTORY 152

HISTORY 353D. Approaches to American Legal History. 4-5 Units.

(Same as LAW 651.) Legal history may once have been primarily devoted to exploring legal doctrines and key judicial opinions, and thus to be of interest mainly to legal scholars and lawyers. Now, the best writing in legal history resembles historical writing more generally, and the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Examines recent writings in American legal history, ranging broadly across time and space to ask how the field reflects developments in historical writing more generally, and how the use of legal materials affects our understanding of major aspects of American history.

HISTORY 354. Law, Slavery, and Race. 5 Units.

(Same as LAW 747.) This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/does law work "on the ground" to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day.

Same as: AFRICAAM 254D, CSRE 154D, HISTORY 254D

HISTORY 355. Decision Making in International Crises: The A-Bomb, the Korean War, and the Cuban Missile Crisis. 4-5 Units.

For advanced undergraduates and graduate students. Primary documents and secondary literature. Topics include: the decision to use the atomic bomb on Japan, the Korean War, and the Cuban missile crisis.

HISTORY 356. America- China Relations. 4-5 Units.

The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

Same as: AMSTUD 256, HISTORY 256

HISTORY 356G. Constructing Race and Religion in America. 4-5 Units.

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: CSRE 246, HISTORY 256G, RELIGST 246, RELIGST 346

HISTORY 358. Topics in the History of Sexuality: Sexual Violence in America. 4-5 Units.

This undergraduate/graduate colloquium explores recent historical interpretations of the history of sexuality, with a focus on sexual violence. The readings cover changing definitions and laws, cultural representations, and the role of gender, race, and age in the construction of rape and other forms of sexual violence. Topics include slavery; incest, seduction, and statutory rape reform; the racialization of rape and the anti-lynching movement; street harassment; men and boys as victims; war and conquest; and feminist responses to rape.

Same as: AMSTUD 258, CSRE 192E, FEMGEN 258, FEMGEN 358, HISTORY 258

HISTORY 362G. The Pivotal Decade in U.S. History: 1960's or 1970's?. 4-5 Units.

Which had more lasting impact, the civil war of the 1960s or the conservative revolt of the 1970s? Should the 1970s supersede the 1960s as a pivotal moment when something happened of considerable importance to historians? Considers this debate of the decades comparatively and thematically, addressing topics including civil rights, foreign policy, electoral politics, popular culture, law, economics, labor, and social movement organizing.

HISTORY 365. Writing Asian American History. 5 Units.

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: AMSTUD 265, ASNAMST 265, HISTORY 265

HISTORY 366B. Immigration Debates in America, Past and Present. 3-5 Units.

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions.

Same as: CSRE 166B, HISTORY 166B

HISTORY 370. Graduate Colloquium on Colonial Latin American History. 4-5 Units.

Sixteenth to nineteenth centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations.

HISTORY 372A. Mexico: From Colony to Nation or the History of an Impossible Republic?. 5 Units.

Was a republican form of government even possible in 19th-century Mexico after 300 years of colonial rule under the Spanish monarchy? Was the Spanish colonial heritage a positive or a negative legacy according to 19th-century Mexican politicians? How were they to forge a new national identity with so many ethnically and culturally diverse peoples throughout the territory? Just how iquest;traditionaliquest; was, in fact, the colonial period? These are some of the questions we will explore in this course. Journeying from the late colonial period (c.1700) to the 35-year dictatorship known as El Porfiriato (1876-1911) we will examine how Mexicoiquest;s diverse indigenous peoples adapted to both colonial and postcolonial rule, how they actively participated in politics and political discourse to preserve their cultures, customs and colonial privileges, and how after independence in 1821, a new republican political culture was forged. Mexico was not an impossible republic, but rather another kind of republic.

HISTORY 372E. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration. Same as: AMSTUD 272E, CHILATST 172, CSRE 172H, FEMGEN 272E, HISTORY 272E

HISTORY 373A. The European Expansion. 4-5 Units.

The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.

Same as: HISTORY 273

HISTORY 374. Mexico Since 1876: History of a "Failed State"?. 5 Units.

(Same as History 174.) This course is an introduction to the history and diverse peoples of modern Mexico from 1876 to the present. Through lectures, discussions, primary and secondary readings, short documentaries, and written assignments, students will critically explore and analyze the multiplicity of historical processes, events and trends that shaped and were shaped by Mexicans over the course of a century. The course will cover some of the social and political dimensions of rural social change, urbanization and industrialization, technological innovation and misuse, environmental degradation and conservation, education, ideology, culture and media, migration, and the drug trade.

HISTORY 375B. Borders and Borderlands in Modern Mexico. 4-5 Units.

Surveys the history of Mexico's borders and borderlands from the nineteenth century to the present. Examines theoretical conceptualizations of the borderlands as well as the historical development of identities and geographic borders within and around Mexico. Topics include the legacies of war, map making, the construction of lo Mexicano, the politics of culture, and migrations to, from, and through Mexico. Analyzes the prevailing trends in Mexicanist historiography.

HISTORY 376. Modern Brazil. 4-5 Units.

From independence in 1822 to the present. Social and cultural history. Literary and historical sources.

HISTORY 378A. The Logic of Authoritarian Government, Ancient and Modern. 5 Units.

If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.

HISTORY 379. Latin American Development: Economy and Society, 1800-2014. 4-5 Units.

The newly independent nations of Latin America began the 19th century with economies roughly equal to the U.S. and Canada. What explains the economic gap that developed since 1800? Why are some Latin American nations rich and others poor and how have societies changed over time? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks are explored. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice are examined and debated.

Same as: HISTORY 279

HISTORY 379D. Modern Brazil: Economy, Society & Culture. 4-5 Units.

This course addresses the history of modern Brazil from independence in 1822 to the present day. The class focuses on theories of economic development, social structure and change, and cultural life in Brazil's diverse regions.

Same as: HISTORY 279D

HISTORY 381. Economic and Social History of the Modern Middle East. 4-5 Units.

The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine.

HISTORY 382. The United States and the Middle East since 1945. 4-5 Units.

Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?.

Same as: HISTORY 282

HISTORY 382F. History of Modern Turkey. 4-5 Units.

Social, political and cultural history of Modern Turkey from the last decades of the Ottoman Empire in the late 19th century until Today. Themes include transformation from a multi-national empire to a national republic; Islam, secularism and radical modernism; military, bureaucracy and democratic experience; economic development, underdevelopment and class; Istanbul, Ankara and provincial Turkey; socialism, conservatism(s), and Kurdish challenge; Turkey in Europe, the Middle East and Central Asia; gender, sexuality and family; popular culture, soccer, and film industry; Post-Modernism, Neo-Ottomanism, and the New-Turkey; The class also include reading works of Turkish literature and watching movies by Turkish directors.

HISTORY 382G. Israel from the Margins. 4-5 Units.

Although secular, European Jews form a minority of the population of the State of Israel, and its history is typically narrated and interpreted from that perspective. Israel looks like a rather different place if it is seen and understood from the point of view of Middle Eastern and North African Jews, including those indigenous to the country before the advent of the modern Zionist movement, orthodox and ultra-orthodox Jews, Palestinian Arabs (nearly twenty percent of Israel's population today), migrant workers (about 200,000), and women. This course does not suggest that their perspectives are necessarily more real or true, only that an understanding of Israel that does not adequately consider them is necessarily false.

HISTORY 383. The New Global Economy, Oil and Origins of the Arab Spring. 4-5 Units.

This class uses the methods of political economy to study the trajectory of global capitalism from the end of World War II to the current phase of neoliberal globalization. The argument is that the role of oil, and its primary repository " the Middle East " has been central in the global capitalist order and that neoliberalism and the oil economy are closely linked to the eruption of the Arab uprisings of 2011.

Same as: HISTORY 283

HISTORY 384F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800. 4-5 Units.

Focuses on political regimes, economic interactions and sociocultural formations in the early modern Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sufis.

Same as: HISTORY 284F

HISTORY 385A. Core Colloquium in Jewish History, 17th-19th Centuries. 4-5 Units.

Same as: JEWISHST 385A

HISTORY 385B. Core in Jewish History, 20th Century. 4-5 Units.

Instructor consent required.

Same as: JEWISHST 385B

HISTORY 385K. History of Modern Antisemitism: Nineteenth and Twentieth Centuries. 4-5 Units.

The articulations of anti-Jewish hatred from the advent of Jewish emancipation in Europe. The legacy of premodern Christian demonization and its modern protean transformations as they penetrated and annexed new currents of ideology, notions of identity (social, national, racial), taste, and aesthetics. A history of ideas, representations, and stereotypes, and their relation to historical experience, action, and mobilization. Europe is the focus; case studies also include the Middle East and elsewhere.

HISTORY 386. Jews Among Muslims in Modern Times. 4-5 Units.

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 286, JEWISHST 286, JEWISHST 386

HISTORY 386B. The Ottoman Empire in the Age of Revolutions, 1750-1850. 4-5 Units.

Investigates the Ottoman World (the Balkans and the Middle East under the Ottoman Empire) in the Age of Revolutions in the global context. While the Ottoman World is the primary interest, developments in Europe, India and China are also discussed in a comparative perspective. Topics include military and fiscal transformation; regionalism; urban life and formations of public spheres; political crisis, social disturbances and political violence; transformation in the ethnoreligious structures, gender relations and family life; protonationalism in the Balkans and Egypt.

HISTORY 387C. Zionism and Its Critics. 4-5 Units.

Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

HISTORY 387K. Gentlemen and Jews: History of the Jews of England. 4-5 Units.

Focuses on key chapters in the cultural and political histories of Britain and its Jews, between 1650 and 1950 and examines the advantages, as well as possible difficulties, that emerge when connecting Anglo-Jewish history to mainstream British history. What is unique about Jewish emancipation in England, and what are its connections to the formation of British national identity? Is there unique path in which Jewish Enlightenment developed in England? What was the contribution of Jews to British Imperialism? Is there a cultural affinity between English philosemitism and liberalism?.

HISTORY 390. Han Chinese and the Global White: The Production of Ethnoracial Majorities, East and West. 4-5 Units.**HISTORY 390A. Major Topics in Modern Chinese History: Qing/Republican Transition. 4-5 Units.**

Continuities and discontinuities in society, economy, politics, culture, and thought during the transition from the Qing dynasty to the republic. May be repeated for credit.

HISTORY 391. East Asia in the Early Buddhist Age. 4-5 Units.

Evolution of cities in imperial China through early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative examination of cases from European history.

HISTORY 391A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times. 4-5 Units.

The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts.

Same as: HISTORY 291A

HISTORY 391B. The City in Imperial China. 5 Units.

The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.

HISTORY 391C. Early Imperial China. 4-5 Units.

The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form.

HISTORY 392B. Law and Society in Late Imperial China. 4-5 Units.

(Same as LAW 773.) Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history.

Same as: CHINLIT 392B

HISTORY 392D. Japan in Asia, Asia in Japan. 4-5 Units.

How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.

Same as: HISTORY 292D

HISTORY 392E. The Historical Roots of Modern East Asia. 4-5 Units.

Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire.

Same as: HISTORY 92A

HISTORY 392F. Culture and Religions in Korean History. 4-5 Units.

This colloquium explores the major themes of Korean history before 1800 and the role of culture and religions in shaping the everyday life of Chosŏn-dynasty Koreans. Themes include the aristocracy and military in the Koryŏ; dynasty, Buddhism and Confucianism in the making of Chosŏn Korea, kingship and court culture, slavery and women, family and rituals, death and punishment, and the Korean alphabet (Hangul) and print culture.

Same as: HISTORY 292F

HISTORY 392G. Modern Korea. 4-5 Units.

Examines seminal works and major historical debates in the study of modern Korea. Topics include the state and society in the Chosŏn dynasty, reform and rebellion in the nineteenth century, colonization, gender and colonial modernity, national identity and assimilation, wartime colonial Korea, decolonization and the North Korean revolution, the Korean War and its aftermath, the Pak Chung Hee regime and labor relations, and democratization.

HISTORY 393B. Queer History in Comparative Perspective. 4-5 Units.

Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

Same as: FEMGEN 293B, FEMGEN 393B, HISTORY 293B

HISTORY 393C. Late Imperial China. 4-5 Units.

A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

HISTORY 393D. Global Intellectual History. 4-5 Units.

Ideas have circulated globally for millennia but relatively recently have thinkers begun to conceptualize the global. Like "humanity" and "universalism," or what Marx called "international," the "global" too has complex genealogies. It is associated, often simultaneously, with empire and freedom, war and equality, commitment and treason, piracy and justice, homelessness and cosmopolitanism. Working with key 20th century texts from Italy, Britain, India, Israel, Palestine, Germany, France, and Algeria, course explores how thinking "globally" impacts the very foundations of modern political thought.

Same as: HISTORY 293D

HISTORY 393E. Female Divinities in China. 4-5 Units.

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: HISTORY 293E, RELIGST 257X, RELIGST 357X

HISTORY 394D. Manchuria: Cradle of Conflict, Cockpit of Asia. 4-5 Units.

How did Manchuria become Chinese? This course utilizes the dual waves of early twentieth-century writings and a wide array of recent scholarship dealing with Manchuria to explore the formation of nation-states out of the Qing and Japanese empires in Northeast Asia through the lenses of opium, migration, cities, warlords, and memoir. This course will be of interest to students concerned with developing transcultural understandings of Northeast Asian history.

Same as: HISTORY 294D

HISTORY 395. Modern Korean History. 5 Units.

(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) This lecture course provides a general introduction to the history of modern Korea. Themes include the characteristics of the Chosŏn dynasty, reforms and rebellions in the nineteenth century, Korean nationalism; Japanese colonial rule and Korean identities; decolonization and the Korean War; and the different state-building processes in North and South, South Korean democratization in 1980s, and the current North Korean crisis.

Same as: HISTORY 195

HISTORY 395F. Race and Ethnicity in East Asia. 4-5 Units.

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day. Same as: ASNAMST 295F, HISTORY 295F

HISTORY 395J. Gender and Sexuality in Chinese History. 4-5 Units.**HISTORY 396D. Modern Japan. 4-5 Units.**

Introduces students to the major historical problems and historiographic trends in the study of modern Japan from the Meiji period to the present. Themes include approaches to late Meiji culture and politics, the formation of imperial subjects and citizens, agrarian society and politics, gender in modern Japan, empire and modernity, total war and transwar state and society, U.S. occupation, and postwar Japan.

HISTORY 397. The Cold War and East Asia. 5 Units.

Explores how East Asia negotiated superpower rivalry and global ideological competition during the Cold War. Considers the ways in which China, Japan, and Korea were more than battlegrounds for US-Soviet contestation and played active roles in defining the nature and dynamics of the conflict. Re-examines conventional narratives and periodizations against alternative conceptual models and interpretive frameworks highlighting the constructed nature of the struggle as well as the role of historical and cultural factors in shaping the East Asian experience. Same as: HISTORY 297

HISTORY 398. Major Topics in Modern Chinese History. 4-5 Units.

Advanced graduate colloquium in modern Chinese history.

HISTORY 399A. Preparing for International Field Work: Public Service or Research. 1 Unit.

Open to students in all classes, those planning internships abroad and those planning research, from juniors with honors theses and sophomores with Chappell Lougee grants to freshmen thinking ahead. Introduces resources on campus for planning international research and service. Raises issues that need to be considered in advance of going abroad: ethical concerns, Human Subjects Protocol, networking, personal safety and gender issues, confronting cultural differences. Exposes students to research methods: case studies, interviewing, working in foreign libraries and archives. Same as: HISTORY 299X

HISTORY 399E. Preparing for International Field Research: Public Svc or Research, Electronic Version. 1 Unit.

Restricted to students studying at a Stanford Overseas Studies campus; same course content as HISTORY 299X. Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys. Prerequisite: consent of instructor.

HISTORY 399W. Graduate Directed Reading. 1-10 Unit.**HISTORY 401A. Spatial History: Concepts, Methods, Problems. 4-5 Units.**

Technical training in GIS, with modules taught by Stanford Spatial History Lab staff; conceptual work in the use of these techniques in spatial historical analysis. Students develop their own spatial history projects and produce beta versions of dynamic visualizations.

HISTORY 401B. Spatial History, Part II. 4-5 Units.

Prerequisite: 401A.

HISTORY 406. Graduate Research Seminar on Colonial Law. 4-5 Units.

Prerequisite: HISTORY 306G.

HISTORY 414A. Medieval History. 4-5 Units.**HISTORY 414B. Medieval History. 4-5 Units.****HISTORY 421A. Early Modern Russia. 4-5 Units.****HISTORY 422A. Research Seminar on the History of the Russian Empire. 4-5 Units.****HISTORY 422B. Research Seminar in Imperial Russia. 4-5 Units.****HISTORY 424A. The Soviet Civilization. 4-5 Units.**

Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

Same as: HISTORY 224A, REES 224A

HISTORY 424B. The Soviet Civilization, Part 2. 4-5 Units.

Prerequisite: HISTORY 224A/424A.

Same as: HISTORY 224D

HISTORY 424C. The End of Communism in Europe. 4-5 Units.

Causes, course, and consequences.

HISTORY 430. Graduate Research Seminar: Early Modern Europe. 4-5 Units.

Prerequisite: Students wishing to take this seminar must enroll in HISTORY 332B in Winter 2015. Students may research any aspect of late medieval, Renaissance, and early modern history, 1300-1800.

HISTORY 430A. Graduate Research Seminar: Early Modern Europe. 3-5 Units.

Students will begin a research project on any aspect of early modern European history, 1400-1800, by taking HISTORY 430A in winter quarter as the first quarter of this two-quarter sequence. Enrollment by permission of instructor.

HISTORY 431. Early Modern Things. 4-5 Units.

How do objects reveal their histories? What can be learned about the past by studying things? The material culture of early modern Europe, ca 1450-1750. Recent work on the circulation, use, and consumption of things, starting with the Columbian exchange which expanded the material horizons of the early modern world in the late 15th century, exploring challenges to the meaning of things in the age of the Reformation and Scientific Revolution, and ending with the birth of consumer society in the 18th century. How did the meaning of things and people's relationships to them change over these centuries? What objects, ordinary and extraordinary, secular and sacred, natural and man-made, came to define the emerging features of the early modern world?

HISTORY 432A. The Enlightenment. 3-5 Units.

The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

Same as: DLCL 324, HISTORY 234, HISTORY 334, HUMNTIES 324

HISTORY 432B. Grad Research Seminar: The Enlightenment, Pt. II. 4-5 Units.

Prerequisite: Completion of HISTORY 234, 334 or 432A.

HISTORY 433A. Modern Europe: Society and Politics. 5 Units.

The goal of this course is to introduce graduate students to major works of history and literature in the field of nineteenth and early-twentieth century history. A colloquia will be given in tandem with a research seminar. nMay be repeated for credit.

HISTORY 433B. European History. 4-5 Units.

Prerequisite: HISTORY 433A.

HISTORY 438. European History Workshop. 1 Unit.

All European history graduate students in residence register for this weekly workshop, at which dissertation chapters and prospectuses, papers, and grant proposals by students and faculty are read and discussed.

HISTORY 439A. Graduate Research Seminar: Modern Britain and the British Empire. 4-5 Units.**HISTORY 439B. Graduate Research Seminar: Modern Britain and the British Empire II. 4-5 Units.****HISTORY 443A. Human Origins: History, Evidence, and Controversy. 4-5 Units.**

Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché; in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required.

Same as: HISTORY 243S

HISTORY 444. Graduate Research Seminar: Gender in Science, Medicine, and Engineering. 5 Units.

Theory and practice of gender in STEM. 1. "Fix the Numbers of Women" focuses on increasing women's participation; 2. "Fix the Institutions" promotes gender equality in careers through structural change in research organizations; 3. "Fix the Knowledge" or "gendered innovations" stimulates excellence in science and technology by integrating gender analysis into research. Seminar explores harnessing the creative power of gender analysis to enhance knowledge and spark innovation.

Same as: FEMGEN 444

HISTORY 444C. The History of the Body in Science, Medicine, and Culture. 4-5 Units.

The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.

Same as: HISTORY 244C

HISTORY 445A. Research Seminar in African History. 4-5 Units.

Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.

HISTORY 445B. Research Seminar in African History. 4-5 Units.

Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.

HISTORY 448A. Colonial States and African Societies, Part I. 4-5 Units.

Colonialism set in motion profound transformations of African societies. These transformations did not occur immediately following military conquest, nor did they occur uniformly throughout the continent. This research seminar will focus directly on the encounter between the colonial state and African societies. The seminar will examine problems of social transformation, the role of the colonial state, and the actions of Africans. Following four weeks of colloquium style discussion, students then embark on independent research on the encounter between one colonial state and its constituent African societies.

Same as: HISTORY 248S

HISTORY 448B. Colonial States and African Societies, Part II. 4-5 Units.

Second part of the research seminar offered in the Winter. Students continue their research and present their penultimate drafts in week 8.

Same as: HISTORY 249S

HISTORY 459A. Grad Research Seminar in U.S. History. 4-5 Units.**HISTORY 461A. Research Seminar on the Histories of Women, the Family, and Sexuality. 4-5 Units.**

Research design, research methods, and historical writing on topics in the histories of women, the family, or sexuality in the U.S. Prepares graduate students for dissertation work. Workshop model involves exchanging preliminary prospectus, outline, writing sample, and draft for peer responses. Article-length original paper based on primary sources, to be completed by the end of Spring Quarter.

HISTORY 461B. Research Seminar on the Histories of Women, the Family, and Sexuality, Part II. 4-5 Units.

Prerequisite: 461A.

HISTORY 464E. Research in History and Social Science Education. 3-5 Units.

For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.

Same as: EDUC 496

HISTORY 470. Graduate Colloquium: Explorations in Latin American Social History. 4-5 Units.

How to use primary sources such as government records, estate inventories, and parish records for social history.

HISTORY 471A. Environmental History of Latin America. 5 Units.

What role did the natural environment play in the emergence of Latin America as a distinct geographical and socio-cultural world region? How do we analyze the historical relationship between the region's rich and seemingly abundant natural resources and its status as underdeveloped? What historical consequences did this relationship have and what alternative, more sustainable developmental paths can we envision for the future in light of the past that we will study? In this course, students will become familiar with the historiography on Brazil, Mexico, Peru, Cuba and Honduras that has explored these questions through a variety of approaches, methodologies and points of view.

HISTORY 471B. Environmental History of Latin America. 5 Units.

What role did the natural environment play in the emergence of Latin America as a distinct geographical and socio-cultural world region? How do we analyze the historical relationship between the region's rich and seemingly abundant natural resources and its status as 'underdeveloped'? What historical consequences did this relationship have and what alternative, more sustainable developmental paths can we envision for the future in light of the past that we will study? In this course, students will become familiar with the historiography on Brazil, Mexico, Peru, Cuba and Honduras that has explored these questions through a variety of approaches, methodologies and points of view.

HISTORY 477. Transnational Latina/o History. 4-5 Units.

The course explores the major trends in Latin American migration to the United States. We examine the impact of transnational migration on identity formation, economic relations, and policy debates in Latin America and the United States. Topics include citizenship debates, struggles over immigration reform, transnational identity formation, refugee migration and Cold War politics, Latino alliances in the United States, and the effects of gender and sexuality on Latina/o communities.

HISTORY 477B. Transnational Latina/o History, Part 2. 4-5 Units.

The course explores the major trends in Latin American migration to the United States. We examine the impact of transnational migration on identity formation, economic relations, and policy debates in Latin America and the United States. Topics include citizenship debates, struggles over immigration reform, transnational identity formation, refugee migration and Cold War politics, Latino alliances in the United States, and the effects of gender and sexuality on Latina/o communities. Prerequisite: History 477.

HISTORY 478. The Ethical Challenges of Climate Change. 4-5 Units.

This course explores the ethical challenges of climate change from historical, social, economic, political, cultural and scientific perspectives. These include the discovery of global warming over two centuries, the rise of secular and religious denialism and skepticism toward the scientific consensus on it, the dispute between developed and developing countries over how to forge a binding global agreement to mitigate it, and the "role morality" of various actors (scientists, politicians, fossil fuel companies, the media and ordinary individuals) in the US in assessing ethical responsibility for the problem and its solutions.

Same as: HISTORY 278S

HISTORY 481. Research Seminar in Middle East History. 4-5 Units.

Student-selected research topics.

Same as: JEWISHST 287S, JEWISHST 481

HISTORY 481A. Research Seminar in Middle East History. 4-5 Units.**HISTORY 486A. Graduate Research Seminar in Jewish History. 4-5 Units.**

Same as: JEWISHST 486A

HISTORY 486B. Graduate Research Seminar in Jewish History. 4-5 Units.

Prerequisite: HISTORY 486A.

Same as: JEWISHST 486B

HISTORY 491A. Modern Korea Research Seminar. 4-5 Units.

This graduate seminar prepares students to undertake research using Korean-language sources on a variety of themes in modern Korea. Students will identify characteristics of major online and offline archives in Korean studies, learn essential skills in investigating primary sources, and analyze selected sample documents in class.

HISTORY 491B. Modern Korea Research Seminar. 4-5 Units.

This graduate seminar prepares students to undertake research using Korean-language sources on a variety of themes in modern Korea. Students will identify characteristics of major online and offline archives in Korean studies, learn essential skills in investigating primary sources, and analyze selected sample documents in class.

HISTORY 492B. Origins of Technical Medicine in the Han Dynasty. 4-5 Units.

How medicine as a technical, text-based art monopolized by specialists was established under the Han Dynasty in competition with practices aimed at nourishing life and securing longevity.

HISTORY 493. Graduate Seminar on South Asia. 4-5 Units.

A series of texts and documents that form the heart of what Marx and Engels called "the colonial question". Discussions center on specific themes relating to each student's research topic and/or interests. The seminar will be organized around a set of core common readings and weekly discussions, supplemented by a designed list of secondary texts and primary materials. Themes include: secularism, religion, state, capital, empire, anticolonialism, gender, democracy, textual and print cultures, cinema, political and legal theory, and history of economic thought. 400-level options allows students to do a two-quarter sequence, with the Summer devoted to writing up the research paper.

HISTORY 495A. Qing Legal Documents. 4-5 Units.

How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese.

HISTORY 495B. Qing Legal Documents. 4-5 Units.

How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese.

HISTORY 497A. Maps and Gazetteers as Sources for East Asian History. 4-5 Units.

For graduate students of early modern or modern East Asia. Includes weekend workshop on Chinese historical GIS with Harvard's Peter Bol. Students work with the Stanford Spatial History Lab to develop analytical techniques. Prerequisite: background in GIS.

HISTORY 497B. Maps and Gazetteers as Sources for East Asian History, Part 2. 4-5 Units.

Prerequisite: HISTORY 497A.

HISTORY 498C. Japanese Imperial Archives, Part 1. 4-5 Units.

First part of a two-quarter research graduate seminar on Japanese imperialism in Asia. Students explore different types of archives, from national and research libraries to online databases; learn various methods of research including oral history; and translate and analyze sample documents including government publications, company histories, police records, and media sources. Prerequisite: advanced reading ability in Japanese.

HISTORY 498D. Japanese Imperial Archives, Part 2. 4-5 Units.

Second part of a two-quarter research graduate seminar on Japanese imperialism in Asia. Students complete research papers based on research conducted for History 498C; the class meets occasionally to report on progress and discuss working drafts. Prerequisite: History 498C.

HISTORY 499X. Graduate Research. 1-10 Unit.

Units by arrangement. May be repeated for credit.

HISTORY 802. TGR Dissertation. 0 Units.

Units by arrangement.

History Philosophy of Science Courses

HPS 60. Introduction to Philosophy of Science. 5 Units.

The nature of scientific knowledge: evidence and confirmation; scientific explanation; models and theories; objectivity; science, society, and values. Same as: PHIL 60

HPS 61. Science, Religion, and the Birth of Modern Philosophy. 5 Units.

Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes.

Same as: PHIL 61

HPS 199. Directed Reading. 1-15 Unit.

May be repeated for credit.

HPS 299. Graduate Individual Work. 1-15 Unit.

May be repeated for credit.

Human Biology Courses

HUMBIO 2A. Genetics, Evolution, and Ecology. 5 Units.

Introduction to the principles of classical and modern genetics, evolutionary theory, and population biology. Topics: micro- and macro-evolution, population and molecular genetics, biodiversity, and ecology, emphasizing the genetics and ecology of the evolutionary process and applications to human populations. HUMBIO 2A and 2B must be taken concurrently.

HUMBIO 2B. Culture, Evolution, and Society. 5 Units.

Introduction to the evolutionary study of human diversity. Hominid evolution, the origins of social complexity, social theory, and the emergence of the modern world system, emphasizing the concept of culture and its influence on human differences. HUMBIO 2A and 2B must be taken concurrently.

HUMBIO 3A. Cell and Developmental Biology. 5 Units.

The principles of the biology of cells: principles of human developmental biology, biochemistry of energetics and metabolism, the nature of membranes and organelles, hormone action and signal transduction in normal and diseased states (diabetes, cancer, autoimmune diseases), drug discovery, immunology, and drug addiction. HUMBIO 3A and 3B must be taken concurrently. Prerequisite: college chemistry or completion of the HumBio chemistry lecture series during the fall quarter.

HUMBIO 3B. Behavior, Health, and Development. 5 Units.

Research and theory on human behavior, health, and life span development. How biological factors and cultural practices influence cognition, emotion, motivation, personality, and health in childhood, adolescence, and adulthood. HUMBIO 3A and 3B must be taken concurrently.

HUMBIO 3Y. Practicum in Child Development. 1 Unit.

Practicum experience at Bing Nursery School for 1 1/4 hours of observation per week, class meeting every other week for 1 hour. Pre- or corequisite: 3B.

HUMBIO 4A. The Human Organism. 5 Units.

Organ system physiology: the principles of neurobiology and endocrinology, and the functions of body organs. The mechanisms of control, regulation, and integration of organ systems function. HUMBIO 4A and 4B must be taken concurrently.

HUMBIO 4B. Environmental and Health Policy Analysis. 5 Units.

Connections among the life sciences, social sciences, public health, and public policy. The economic, social, and institutional factors that underlie environmental degradation, the incidence of disease, and inequalities in health status and access to health care. Public policies to address these problems. Topics include pollution regulation, climate change policy, biodiversity protection, health care reform, health disparities, and women's health policy. HUMBIO 4A and 4B must be taken concurrently.

HUMBIO 5E. Science Education in Human Biology. 1 Unit.

In this seminar, students will become familiar with current research on science education. They will use this knowledge to create and analyze teaching material such as section plans, exams, and problem sets. Material produced in this course will be related to the topics covered in the core course of the Program in Human Biology. Students will experience and practice various teaching styles. Prerequisite: HumBio Core or equivalent.

HUMBIO 6. Human Origins. 5 Units.

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 6, ANTHRO 206

HUMBIO 11SI. Health and Wellness for Generation Y: A post-college Survival. 1 Unit.

After living in the Stanford Bubble for 4 years, the thought of the rest of our lives can be a bit daunting. This 10-week seminar will cover key topics for a successful transition into the "real world" such as personal finance, health and nutrition, relationships, careers, and mindfulness, all through the interdisciplinary lens of Human Biology.

HUMBIO 12SI. The Right to Health: Frameworks for Advocacy and Action. 1 Unit.

Interactive dialogue on the right to health, beginning with general frameworks on human rights instruments and then applying them to case studies of global health disparities. Features weekly guest lectures by experts in global health, health policy, and human rights. Topics include: global health governance, maternal and child health, and global mental health. Students will use lectures and dialogues as frameworks for their own advocacy projects. Classes will be held in the Arrillaga Study Room.

HUMBIO 16SC. The Stanford Safari: Field Observations in Our Own Backyard. 2 Units.

Although Stanford is renowned as a place of learning and research, the goal of this class is to approach Stanford University as a subject worthy of study in and of itself. Students will study Stanford in terms of the built environment (e.g. architecture; how buildings and styles interact; how the landscape shapes the flow of people, plants, and animals), the human interactions (e.g. sociology of tourism, the politics of land use), and the ecology (flora, fauna, geology, climatology, and pest control) of campus. The students in this course will defamiliarize themselves with their campus environment and approach Stanford with new eyes—the eyes of the anthropologist, the photographer, the historian, the artist, and the tourist. We will explore its edifices, gardens, sculptures, open spaces, and commercial areas. Moreover, we will use Stanford as a lens to discuss a variety of disciplines: architecture, educational theory, California history, climatology, and natural history. But more than anything, we will focus on the human component, including the vision, drive, and serendipity that shaped the University. In taking the course students will hone their skills in field observation that will carry over to future field work in more distant locales, develop an interdisciplinary approach to analyzing complex institutions, and gain a deeper appreciation for the complexity and richness of Stanford that will enhance all aspects of their remaining time as undergraduates. On a daily basis, the class will consist of three components: class presentations and discussions, formal and informal talks by many of the local experts at Stanford, and topical field trips. Students will select a theme that is of personal interest and develop field observation techniques useful for their particular topics. Course assignments will be to give two presentations on specific aspects of Stanford. In addition, each student will keep a field note-book with daily observations and field notes, post a collection of photographic observations, and complete pertinent readings. Plan to work intensely and have a great time in the process.

HUMBIO 17SC. Darwin, Evolution, and Galapagos. 2 Units.

The tiny remote islands of Galapagos have played a large and central role in the study of evolution. Not surprisingly, they have also been central to the study of conservation. The fascinating adaptations of organisms to the unique ecosystems of the archipelago have left them particularly vulnerable to outside introductions. This seminar explores evolution, conservation, and their connection in the Galapagos. Using case-study material on finches, iguanas, tortoises, cacti, Scalesia plants, and more, we will explore current theory and debate about adaptation, sexual selection, speciation, adaptive radiation, and other topics in evolution. Similarly, we will explore the special challenges Galapagos poses today for conservation, owing to both its unusual biota and the increasing human impact on the archipelago. The first week is held on-campus, followed by an intensive eleven-day expedition to Galapagos to observe firsthand evolutionary phenomena and conservation issues. A chartered ship will serve as our floating classroom, dormitory, and dining hall as we work our way around the archipelago to visit as many as ten islands. For this portion of the class, undergraduates will be joined by a group of Stanford alumni and friends in a format called a Stanford "Field Seminar." Students are required to complete all course readings over the summer. Students will be asked to lead discussions and carry out literature research on the evolutionary and conservation biology of particular Galapagos species. The final assignment is a seven- to ten-page paper and class presentation as we travel in Galapagos. Travel to Galapagos will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Stanford Alumni Association Travel/Study Program and generous donors. Students will return to campus late afternoon Sunday, September 20.

Same as: ANTHRO 10SC

HUMBIO 18SC. Conservation and Development Dilemmas in the Amazon. 2 Units.

This course explores the human dimensions of conservation efforts under way in the Amazon Basin of South America. It has two specific goals: (1) to introduce the human ecology of Amazonia; and (2) to assess the prospects for joint efforts at biodiversity conservation and community development. We will draw on case studies to investigate such topics as the causes and consequences of deforestation, the social impact of parks and protected areas, and the potential for "Integrated Conservation and Development Projects" (ICDPs) such as extractive reserves, natural forest management, biodiversity prospecting, and community-based ecotourism. The course views Amazonia as a microcosm of the challenges facing conservation and development efforts today in the Third World. Part of the course is an intensive 11-day expedition to the Peruvian Amazon, at no extra cost, to observe firsthand the conservation and development dilemmas discussed in class. We will visit ecologies in the rainforest, walking miles of trails to learn about local flora, fauna, and conservation efforts. We will also visit Machu Picchu in the upper reaches of the rainforest. For the travel portion of the class, undergraduates will be joined by a group of Stanford alumni and friends. Student contributions and presentations are emphasized throughout the course. Students are expected to come well-prepared to each session, to lead discussions, and to carry out literature research. The final assignment is a 6 to 8 page paper on a case study of your own choosing; or an equivalent piece of a longer collaborative paper that offers a critical assessment of one particular conservation and/or development project in or near the region we will visit. Students will present the main findings of their papers in a joint seminar of undergraduates and alumni as we travel in the Peruvian Amazon. Note: Students will arrive on campus and will be housed at Stanford until we leave for the Amazon. Travel to and from Peru is organized by the Travel/Study Program of the Stanford Alumni Association; is included; costs are defrayed by the Stanford Field Seminar Fund and generous donors.

Same as: ANTHRO 11SC

HUMBIO 19SC. Parks and Peoples: Dilemmas of Protected Area Conservation in East Africa. 2 Units.

The world-famous landscapes of East Africa, including Serengeti National Park, Ngorongoro Conservation Area, and the Rift Valley lakes of Tanzania, form the backdrop for this special course on protected area conservation. The course is designed to explore the pros and cons of parks and protected areas as they impact flora, fauna, and human inhabitants, and to address the dilemma of how to achieve conservation in a manner that creates local community benefits and is socially just. We will use a case study approach to ask: (1) What approach to protected area (PA) conservation has been taken in each case? Who are the key proponents and what are their main objectives? (2) How successful has the protected area been at achieving its conservation goals? (3) What are the benefits of the PA to people and who receives them? (4) What are the costs of the PA to people and who pays them? (5) Where benefits are not commensurate to costs, what, if anything, is being done to address the imbalance? How well is it working? (6) Are there alternatives or variations on the theme of protected area conservation that would be more realistic and beneficial? How could the interests of parks and people be made more compatible in each case? Is there any chance for an "integrated conservation-development project" (ICDP), or is that just "wishful thinking," as some critics insist? This course includes an intensive 12-day expedition to Tanzania to observe firsthand the dilemmas of parks and peoples we have discussed in class. We are scheduled to visit Tarangire, Lake Manyara, Mt. Meru, and Serengeti National Parks, as well as the Ngorongoro Conservation Area. Both on campus and in Tanzania, the course emphasizes student contributions and presentations. Students are expected to come well-prepared to each and every session, and will be asked to lead discussions plus carry out literature research on particular protected areas or conservation issues of interest to them, or on alternative conservation strategies. The final assignment for the seminar is to complete a 5- to 7-page paper on some aspect of conservation dilemmas in East Africa, preferably Tanzania, and to present the main findings of that paper in a joint seminar of undergrads and alumni as we travel in East Africa. Note: Students will arrive on campus and will be housed at Stanford until we leave for the travel portion. Travel to Tanzania will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Stanford Alumni Association Travel/Study Program and generous Stanford donors.

HUMBIO 21. Introduction to Brain and Behavior. 3 Units.

Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities.

Same as: BIO 20

HUMBIO 25SI. Diverse Perspectives on Disabilities. 1-2 Unit.

This class investigates definitions and the complexities of life with a disability through discussion and panel based learning. Through student and parent panels, speakers, professors, and professionals in the field of disability, this class looks at the different perspectives and ways that disability interacts with the world. In addition to learning about the scientific, social and legal backgrounds students can also participate in a community volunteering project for an additional unit through Kids with Dreams or another community or student organization.

HUMBIO 26. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 135X, EDUC 335X, MED 235

HUMBIO 27. Traditional Chinese Medicine. 1 Unit.

The philosophy and history behind traditional Chinese medicine. Concepts such as Qi, Yin/Yang, meridians, Chinese organs, and the 5 elements. How these concepts are applied through techniques such as acupuncture, herbal medicine, Qi gong, and massage. How traditional Chinese medicine is understood from a scientific standpoint. Political and socioeconomic implications. Observation of an acupuncturist. Readings on the integration of Eastern and Western medicine and on traditional Chinese medicine.

HUMBIO 29A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, CSRE 177E, EDUC 177A

HUMBIO 74. Ethics in a Human Life. 4 Units.

Ethical questions pervade a human life from before a person is conceived until after she dies, and at every point in between. This course raises a series of ethical questions, following along the path of a person's life; questions that arise before, during, and after she lives it. We will explore distinctive questions that a life presents at each of several familiar stages: prior to birth, childhood, adulthood, death, and even beyond. We will consider how some philosophers have tried to answer these questions, and we will think about how answering them might help us form a better understanding of the ethical shape of a human life as a whole. Seminar for Juniors and Seniors in Philosophy or Humbio - others by permission.

Same as: PHIL 74A

HUMBIO 79Q. Sexuality and Society. 3 Units.

This course will explore how sexual identity, attitudes, and behaviors are shaped by the messages sent by the various agents of society such as schools, family, peers, media, and religious, medical, and political institutions. The interaction of biology, psychology, and socio-cultural factors, such as gender roles and sexual/relationship scripts will be discussed, as will the intersection of sexuality and notions of love, romance, and commitment. Critical developmental periods, such as adolescence and emerging adulthood will be examined in depth. Students will explore their own values and feelings about sexuality and come to an understanding of how their beliefs were formed. We will discuss how information about sexuality is disseminated in our society and what we can do to help ensure that such information is used in a way that promotes healthy self-conceptions, behavior, and relationships.

HUMBIO 81Q. Introduction to Child Nutrition. 3 Units.

This course examines contemporary child nutrition in America, from the level of the intestinal villus to the food marketing directed at children, as well as the diseases associated with inappropriate nutrition. Students will obtain an understanding of what constitutes a healthy diet for growth and how dietary needs change throughout childhood and adolescence. We will review existing community and school-based nutrition interventions as well as pertinent literature on child nutrition. Students will also gain practical experience in healthy food preparation, emphasizing a seed-to-table approach.

HUMBIO 82A. Qualitative Research Methodology. 3 Units.

Goal is to develop knowledge and skills for designing and conducting qualitative research studies including purposes, conceptual contexts, research questions, methods, validity issues, and interactions among these facets. Each student designs a qualitative research study.

HUMBIO 82B. Advanced Data Analysis in Qualitative Research. 3 Units.

For students writing up their own qualitative research. Students prepare a complete draft presenting their own qualitative research study including results, with reports drafted section by section, week by week. Class provides feedback, guidance, support.

HUMBIO 84. Practical Analysis of Epidemiologic and Biological Data. 3 Units.

This course will teach students how to think about and analyze quantitative data. Students will learn to apply univariate and multivariable methods (using Stata software) to either their own data or data from publicly available sources. A central part of the course will consist of the joint planning and execution of an epidemiologic analysis of real-world data and the production of a manuscript for submission to a scientific journal. This course focuses on health-related data, although these methods can be applied much more broadly.

HUMBIO 85A. Essential Statistics for Human Biology. 4 Units.

Introduction to statistical concepts and methods that are essential to the study of questions in biology, environment, health, epidemiology and related areas. The course will teach and use the computer language R. Topics include distributions, probabilities, likelihood, linear models; illustrations will be based on recent research.

Same as: BIO 108

HUMBIO 86Q. Love as a Force for Social Justice. 3 Units.

Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of agape love. How love is conceptualized across cultures; agape love as the basis of many religions; different kinds of love; the biology of love; love in action for social justice; the languages of love, including art, literature, music, and poetry. Emphasis is on blog writing, participation, and oral presentation.

Same as: FEMGEN 86Q

HUMBIO 87Q. Women and Aging. 5 Units.

Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center).

Same as: MED 87Q

HUMBIO 88. Introduction to Statistics for the Health Sciences. 3 Units.

Students will learn the statistical tools used to describe and analyze data in the fields of medicine and epidemiology. This very applied course will rely on current research questions and publicly available data. Students will gain proficiency with Stata to do basic analyses of health-related data, including linear and logistic regression, and will become sophisticated consumers of health-related statistical results.

HUMBIO 89. Statistics in the Health Sciences. 3 Units.

This course aims to provide a firm grounding in the foundations of probability and statistics, with a focus on analyzing data from the health sciences. Students will learn how to read, interpret, and critically evaluate the statistics in medical and biological studies. The course also prepares students to be able to analyze their own data, guiding them on how to choose the correct statistical test, avoid common statistical pitfalls, and perform basic functions in R deducer.

HUMBIO 91Q. Neuroethology: The Neural Control of Behavior. 3 Units.

Preference to sophomores. Animal behavior offers insights about evolutionary adaptations and this seminar will discuss the origins of the study of animal behavior and its development to the present. How does the nervous system control behavior and how is it changed by behavior? We will analyze and discuss original research papers about the neural basis of behavior. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat.

HUMBIO 92Q. Health and Security. 3 Units.

In this course, we explore the interconnections between health and three types of security: human, national, and international. Health is obviously a component of human security, but is it also a concern of national security or international security? Should it be? What are the potential benefits, costs, and risks of treating health as a national or international security issue? The course will provide a broad overview of key policy issues concerning global health, and will assess how global governance is addressing these issues.

HUMBIO 94Q. Law, Lawyers and Justice in Cinema. 4 Units.

Examination of how the law, justice and lawyers are depicted in film, how real the depictions are, and the social issues that are the subjects of the film and the effect of film on change, attitudes and policy.

HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes. 3 Units.

This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their beliefs.

HUMBIO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine. 3 Units.

Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

Same as: ORTHO 97Q

HUMBIO 99Q. Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice. 3 Units.

Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery using stories to illustrate the topics: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; financial considerations; and the importance of empathy.

HUMBIO 111. Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice. 3 Units.

The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nation-states most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.

Same as: ANTHRO 173

HUMBIO 111M. Marine Resource Economics and Conservation. 5 Units.

Economic and ecological frameworks to understand the causes of and potential solutions to marine resource degradation. Focus on conservation of marine biodiversity and ecosystem-based management. Applications include: commercial and recreational fisheries, marine reserves, and offshore energy production.

Same as: EARTHYSYS 156M, ECON 156

HUMBIO 112. Conservation Biology: A Latin American Perspective. 3 Units.

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class.

Same as: BIO 144, BIO 234

HUMBIO 113. The Human-Plant Connection. 3 Units.

The intertwined biologies of humans and plants, particularly the ways in which people and plants have imposed selection pressures and ecological change on one another. Topics include evolution and basic plant structure; plant domestication; effects of agriculture on human health and physiology; plants in traditional and contemporary diets; and human influences on plant biology through genetic manipulation and environmental change. Class meetings center on journal articles. Final project includes written and multimedia presentations.

HUMBIO 113S. Healthy/Sustainable Food Systems: Maximum Sustainability across Health, Economics, and Environment. 4 Units.

Discussion-based seminar. Focus on problems with and systems-based solutions to food system issues. Four particular settings are addressed: University, worksite, hospital, and school food. Traditional vs. disruptive food system models compared and contrasted. The goal is to determine how best to maximize sustainability across several dimensions, including health, economics, and the environment. Underlying class themes include social justice and the potential for changing social norms around food production and consumption.

HUMBIO 114. Environmental Change and Emerging Infectious Diseases. 3-5 Units.

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, ANTHRO 277

HUMBIO 115. Human Health and Global Environmental Change. 3 Units.

Climate change, biodiversity loss, and other forms of global environmental change matter profoundly to human health. This class will bridge the fundamental science that informs our understanding of global environmental changes to health outcomes and challenge students to rigorously assess proposed remedies to the causes and consequences of global environmental changes.

HUMBIO 117H. Human Behavioral Ecology. 3-5 Units.

Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting. Same as: ANTHRO 161, ANTHRO 261

HUMBIO 118. Theory of Ecological and Environmental Anthropology. 5 Units.

Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America.

Same as: ANTHRO 90C

HUMBIO 119. Demography: Health, Development, Environment. 3 Units.

Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor.

Same as: BIO 102

HUMBIO 120. Health Care in America: An Introduction to U.S. Health Policy. 4 Units.

Health policy and health care delivery from a historical and a current policy perspective. Introduces cost, quality, and access as measures of health system performance. Considers institutional aspects of health care reform.

HUMBIO 120A. American Health Policy. 3 Units.

Issues in health care reform and the policy making process, the evolution of current systems, and theories underlying efforts for change. The national search for solutions to the problems of the uninsured, and the feasibility, options, and ramifications of alternative proposals for health care reform. Student presentations. Prerequisite: Human Biology core or equivalent, Human Biology 120, or consent of instructor.

HUMBIO 121. Critical Issues in Child Health. 4 Units.

Integrated picture of the physical and psychosocial health factors that result in a healthy child building on principles taught in the Human Biology core. Students apply basic human physiology to the physiology of the child to develop perspective on global pediatric health challenges and how the cultural context influences and defines the child living within it.

HUMBIO 121E. Ethnicity and Medicine. 1-3 Unit.

Weekly lecture series. Examines the linguistic, social class, and cultural factors that impact patient care. Presentations promote culturally sensitive health care services and review contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. 1 unit requires weekly lecture attendance, completion of required readings, completion of response questions; 2 units requires weekly lecture attendance and discussion session, completion of required readings and weekly response questions; additional requirement for 3 units (HUMBIO only) is completion of a significant term paper Only students taking the course for 3 units may request a letter grade.

Same as: FAMMED 244

HUMBIO 122. Beyond Health Care: Seeking Health in Society. 3 Units.

Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HUMBIO 4B or equivalent, and background in research methods and statistics.

Same as: PEDS 222

HUMBIO 122M. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations. 3 Units.

An emerging area of inquiry. Topics include: global migration trends, health Issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students.

Same as: PEDS 212

HUMBIO 122S. Social Class, Race, Ethnicity, and Health. 4 Units.

Examines health disparities in the U.S., looking at the patterns of those disparities and their root causes. Explores the intersection of lower social class and ethnic minority status in affecting health status and access to health care. Compares social and biological conceptualizations of race and ethnicity.

HUMBIO 123. Obesity in America: Clinical and Public Health Implications. 3-4 Units.

Interdisciplinary clinical, research, and policy approaches. The prevalence, predictors, and consequences of obesity and diabetes; biological and physiological mechanisms; clinical treatments including medications and surgery; and the relevance of behavioral, environmental, economic, and policy approaches to obesity prevention and control. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 124C. Global Child Health. 4 Units.

This course will introduce key challenges to the health and wellbeing of children worldwide, with a particular focus on children in low- and middle-income countries. It will review the leading causes of morbidity and mortality, identify interventions to address some of the biggest child health problems, and provide an overview of the roles of culture, gender, and civil society on child health and health policy.

HUMBIO 124E. Economics of Infectious Disease and Global Health. 3 Units.

Introduction to global health topics such as childhood health, hygiene, drug resistance, and pharmaceutical industries from an economic development perspective. Introduces economic concepts including decision-making over time, externalities, and incentives as they relate to health.

Same as: MED 236

HUMBIO 125. Current Controversies in Women's Health. 2-3 Units. Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. Undergraduates must enroll in HumBio 125 for 3 units. PhD minor in FGSS, enroll in FEMGEN 256 for 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units. Spring.
Same as: FEMGEN 256, OBGYN 256

HUMBIO 126. Promoting Health Over the Life Course: Multidisciplinary Perspectives. 3 Units. Disease prevention and health promotion topics pertinent to different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on scientific investigation, the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; obesity, nutrition, and stress; children, young adult, mid-life and aging health issues; health care delivery and public health system; workplace wellness programs; and other additional issues. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 127A. Community Health: Assessment and Planning I. 4 Units. Major determinants of health in a community. Working with community partners to identify health issues and plan programs and policies to prevent disease and promote health. Service learning component involving students in community health assessment techniques. Final grade given upon completion of HUMBIO 127B. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, or consent of instructor.

HUMBIO 127B. Community Health: Assessment and Planning II. 4 Units. Continuation of 127A. Service learning course with emphasis on conducting community health assessment and planning projects in collaboration with community-based organizations. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, 127A, or consent of instructor.

HUMBIO 128. Community Health Psychology. 4 Units. Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent. Same as: PSYCH 101

HUMBIO 129. Critical Issues in International Women's Health. 4 Units. Women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on women's capacity to exercise their human rights including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor. Same as: FEMGEN 129

HUMBIO 129M. Measuring Global Health. 4 Units. Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? Workshops build familiarity with relevant data and their analysis. Prerequisite: coursework in statistics, biostatistics, quantitative epidemiology, econometrics, or equivalent. Same as: HRP 241, MED 231

HUMBIO 129S. Global Public Health. 4 Units. The class is an introduction to the fields of international public health and global medicine. It focuses on resource poor areas of the world and explores major global health problems and their relation to policy, economic development and human rights. The course is intended for students interested in global health, development studies, or international relations, and provides opportunities for in-depth discussion and interaction with experts in the field. .

HUMBIO 129W. Health Care Systems Around the World. 4 Units. This course will explore the role of health care systems in societies around the world, identifying the common challenges facing health care systems and how different institutional structures in different countries perform in response to these challenges. We will structure the course around general conceptual frameworks related to key health system institutions (including financing, insurance, provider payment, patient cost-sharing, and the regulation of medical technology). From this foundation, we will draw on the experience of individual countries (high and low income, with heavy chronic disease and infectious disease burdens) to illustrate the function of these institutions under real-world circumstances observed around the globe.

HUMBIO 130. Human Nutrition. 4 Units. The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to population and cultural, race, ethnic, religious, and social economic diversity. The relationships between nutrition and disease; ethnic diets; vegetarianism; nutritional deficiencies; nutritional supplementation; phytochemicals.

HUMBIO 133. Human Physiology. 4 Units. Human physiology will be examined by organ systems: respiratory, cardiovascular, renal, and gastrointestinal. Concepts of cell and molecular biology that underlie organ development, pathophysiology and opportunities for regenerative medicine will be introduced. Signaling and integrative control by the endocrine, autonomic and central nervous systems will be introduced. Prerequisite: Biology or Human Biology core. Same as: BIO 112

HUMBIO 135. Exercise Physiology. 4 Units. How body systems respond to the stress of acute exercise and adapt to chronic exercise training. How the cardiovascular system adapts to optimize oxygen delivery and utilization, how muscles generate force and hypertrophy in response to training, how metabolic/biochemical pathways are regulated to support the increased energy demand of exercise. Theories on the causes of fatigue and muscle soreness, and on what limits human performance. Applied topics such as the effects of aging, gender, and environmental conditions (high altitude, heat, cold, microgravity) on exercise capacity will also be discussed. Portions of the class will be flipped with some lectures online and others in class. Heavy emphasis on practical physiology in the second half of the course. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.

HUMBIO 135S. Applied Topics in Exercise Physiology and Metabolism. 3 Units.

Discussions of controversial topics related to exercise physiology, sports performance, impacts of aging and environmental physiology. Special focus on how to get science out of the lab via novel training programs, medical device development, and science communication. Students will learn the fundamentals of science storytelling and mixed media presentation of ideas. A requirement of this class is participation in blogs, participation in discussions and evaluations of physiology research, and creation of a science-based story to share with the class. If class is full, contact instructor for an application. Enrollment limited to 10. Prerequisites: B+ or higher in HB135 and/or consent of instructor.

HUMBIO 136. Human Physiology Laboratory. 4 Units.

This laboratory course is inquiry based, so the subject matter of the course will change in successive years. In 2015, the two questions to be researched concurrently in Spring will be (1) Can heat-related performance decrements incurred by individuals clad in impermeable attire (e.g., biohazard personal protective suits) be mitigated?; and (2) Can the sensation of thermal comfort be affected by regional skin temperature manipulations? Students will participate both as experimenters and as subjects. The laboratory work will focus on exercise and temperature. Thus, participants must be in good physical condition and be willing to participate in strenuous exercise routines under adverse environmental conditions. Varsity athletes currently participating in a spring sport should first talk with Prof. Heller before applying. Combined Lab/Discussion sessions will be Tue and Thurs 1:15 - 5:05. You must attend both days each week, with no conflicts with other courses. Prerequisite is Bio 42 or HumBio 4A. Satisfies WIM for majors in biology. Enrollment for Spring 2015 course is limited to 16 students by permission. See: sites.stanford.edu/bio107 for the link to online application form.

Same as: BIO 107

HUMBIO 139E. Sport and Exercise Medicine. 3 Units.

This is an upper division lecture course taught by the course directors and guest lecturers (experts from the field of sports and exercise medicine) who will cover a range of topics within sports medicine; ethical issues in return-to-play decisions, the balance point between health and harm in sport, the role of sports medicine in the prevention of chronic disease through exercise, common sports injuries, exercise physiology, and diseases common to athletes. Students will develop critical reading, thinking and writing skills as well as oral presentation skills and the confidence to engage in verbal exchange.

HUMBIO 140. Sex and Gender in Human Physiology and Disease. 2-3 Units.

Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. Undergraduate students must enroll for 3 units.

Same as: FEMGEN 241, MED 240

HUMBIO 141. Disability, Gender, & Identity. 5 Units.

Course explores visible and invisible disabilities, focusing on issues of gender and identity. The course emphasizes psychological as well as physical health, cross-cultural variables, diversity of disability experiences, legal and political aspects, work and home accommodations, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance.

Same as: AMSTUD 260, FEMGEN 260, FEMGEN 360

HUMBIO 142. Adolescent Development. 4 Units.

Underlying changes and their consequences in everyday functioning. Physical, cognitive, social, and sexual development; how these changes influence the emerging sense of identity, autonomy, and intimacy. Contexts in which adolescents move such as family, friends and peers, school, and workplace. Focus is on normal development of boys and girls; attention to problem outcomes including eating disorders, depression, and teen pregnancy. Prerequisite: 3B or PSYCH 1, or consent of instructor.

HUMBIO 142M. Special Topics in Adolescent Mental Health. 4 Units.

Includes the study of aspects of common disorders seen in adolescent populations, such as prevalence, developmental course, gender differences, theoretical explanations, and therapeutic interventions. Topics will include mood/anxiety disorders, eating disorders, learning disabilities and ADHD, sexual risk behaviors, developmental disorders, substance abuse, and self-harm. Goals of this course include getting students to think critically about the unique mental health needs of adolescents, collaborating on devising ways to improve the way our society meets those needs, and strengthening writing and communication skills applicable to this area of inquiry.

HUMBIO 143. Adolescent Sexuality. 4 Units.

Developmental perspective. Issues related to scientific, historical, and cultural perceptions; social influences on sexual development; sexual risk; and the limitations and future directions of research. Sexual identity and behavior, sexually transmitted diseases including HIV, pregnancy, abortion, gay and lesbian youth, sex education and condom availability in schools, mass media, exploitative sexual activity, and difficulties and limitations in studying adolescent sexuality. Legal and policy issues, gender differences, and international and historical trends. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 144. Boys' Psychosocial Development. 3 Units.

From early childhood through adolescence. Emphasis is on how boys' lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, and education. Prerequisite: Human Biology core, or Developmental Psychology, or consent of instructor.

HUMBIO 145L. The Biology and Evolution of Language. 4-5 Units.

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 171, ANTHRO 271

HUMBIO 146D. Developmental Disabilities: From Biology to Policy. 3 Units.

Fifteen percent of US children have disabilities. While advances in medicine and technology have increased life expectancy for these children, health care delivery, education, and public attitudes have not kept pace. Students in this course will learn the possibilities and limitations of new biomedical treatments of Down syndrome, cerebral palsy, and autism. Students will also evaluate the impact of public policy initiatives, such as the Individuals with Disabilities Education Act and Americans with Disabilities Act on inclusion and participation in society.

Same as: PEDS 246

HUMBIO 148W. Women, Fertility, and Work. 5 Units.

How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places.

Same as: ANTHRO 151, ANTHRO 251

HUMBIO 149. Psychological and Educational Resilience Among Children and Youth. 4 Units.

Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.
Same as: EDUC 256

HUMBIO 149L. Longevity. 4 Units.

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.
Same as: NENS 202, PSYCH 102

HUMBIO 150A. Assisted Reproductive Technologies. 1-3 Unit.

Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.
Same as: OBGYN 202

HUMBIO 151R. Biology, Health and Big Data. 3 Units.

We are living in the midst of a revolution in the accessibility and availability of biological and medical data. How can all this data be used to improve human health? In this course, students will look at case studies from diabetes and cancer research to learn how to access publicly available data ranging from gene or protein level datasets to information about clinical trials. Students will apply what they learn from the case studies to develop a research proposal and presentation on a biology-related topic of their choice. The class will have a small group workshop-type format. Students will gain skills in research methods including accessing, analyzing and presenting data. There will be exercises using the statistical package R. Prior programming experience is not required. Prerequisites: HumBio 2A, 3A or equivalent.

HUMBIO 152. Viral Lifestyles. 3 Units.

Viral lifestyle is a seminar devoted to exploring contemporary topics in microbiology with a focus on the global microbiome. The course includes lectures and will provide an opportunity for students to interact with each other, the instructor and guest lecturers to explore novel research areas in microbiology that are still being formed. The course will begin with lectures on topics such as cross-species transmission of microbes and human microbiome and will transition to presentation and discussion led by student groups. A significant percentage of class will be devoted to presentation and discussion focused on group projects.

HUMBIO 153. Parasites and Pestilence: Infectious Public Health Challenges. 4 Units.

Parasitic and other pestilence of public health importance. Pathogenesis, clinical syndromes, complex life cycles, and the interplay among environment, vectors, hosts, and reservoirs in historical context. Public health policy initiatives aimed at halting disease transmission. World Health Organization tropical disease targets including river blindness, sleeping sickness, leishmaniasis, schistosomiasis, mycobacterial disease (tuberculosis and leprosy), malaria, toxoplasmosis, dracunculiasis, and intestinal helminthes. Guest lecturers with expertise in disease control. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 154A. Outbreaks, Epidemics, & Disease Control Systems. 4 Units.

This course teaches skills in disease control epidemiology. Students will engage in in-depth interdisciplinary study of disease detection and control strategies from a "systems science" perspective, which addresses classical public health dilemmas, such as how to allocate limited resources, investigate disease outbreaks, and analyze common problems at the intersection of social policy and public health. Lectures and problem sets will focus on developing quantitative skills essential to public health practice, emphasizing the use of common mathematical techniques for disease control. Readings will complement the lectures and problem sets by offering critical perspectives from the sociology of public health. In-depth case studies from non-governmental organizations, departments of public health, and international agencies will drive the course. Human Biology 154 courses can be taken separately or as a series.
Same as: SOMGEN 254

HUMBIO 154B. Principles of Epidemiology. 3 Units.

Epidemiology is the study of the distribution and determinants of health and disease in human populations. This course introduces students to observational epidemiology through major study designs along with measures of association and their computation. The course also covers how error, bias, and confounding can affect analytic findings, and how to detect and interpret interaction effects. Students will learn through lectures, problem sets, and critical appraisal of both classic and contemporary research articles. Human Biology 154 courses can be taken separately or as a series.

HUMBIO 154C. Cancer Epidemiology. 4 Units.

Clinical epidemiological methods relevant to human research in cancer will be the focus. The concepts of risk; case control, cohort, and cross-sectional studies; clinical trials; bias; confounding; interaction; screening; and causal inference will be introduced and applied. Social, political, economic, and ethical controversies surrounding cancer screening, prevention, and research will be considered. Human Biology 154 courses can be taken separately or as a series.

HUMBIO 155B. The Vaccine Revolution. 6 Units.

Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 8. Prerequisite: prior enrollment in HumBio 155H Humans and Viruses or MI 116, The Human Virosphere.
Same as: MI 115B

HUMBIO 155H. Humans and Viruses I. 6 Units.

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.
Same as: MI 155H

HUMBIO 157. The Biology of Stem Cells. 3 Units.

The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: HumBio 2A and 3A, or the equivalent in the BioCore in Biological Sciences.
Same as: DBIO 257

HUMBIO 158. The Human Genome and Disease. 3 Units.

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIO 109A, BIOC 109A, BIOC 209A

HUMBIO 158G. Genomics, Bioinformatics and Medicine. 3 Units.

Molecular basis of inherited human disease. Diagnostics approaches: simple Mendelian diseases and complex, multifactorial diseases.

Genomics: functional genomics, epigenetics, gene expression, SNPs, copy number and other structural genomic variations involved in disease. Novel therapeutic methods: stem cell therapy, gene therapy and drug developments that depend on the knowledge of genomics. Personal genomics, pharmacogenomics, clinical genomics and their role in the future of preventive medicine. Prerequisites: BIO 41 or HUMBIO 2A or consent of instructor. Those with credit in BIOC 118 not eligible to enroll. Course webpage: <http://biochem158.stanford.edu/>.

Same as: BIOC 158, BIOC 258, BIOMEDIN 258

HUMBIO 159. Genes and Environment in Disease Causation: Implications for Medicine and Public Health. 2-3 Units.

The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.

Same as: HRP 238

HUMBIO 160. Human Behavioral Biology. 5 Units.

Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

Same as: BIO 150, BIO 250

HUMBIO 161. The Neurobiology of Sleep. 4 Units.

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

Same as: BIO 149, BIO 249

HUMBIO 162. The Nervous Age: Neurosis, Neurology, and Nineteenth-century Theatre. 5 Units.

The nineteenth century witnessed profound developments in neurological and psychological sciences, developments that fundamentally altered conceptions of embodiment, agency, and mind. This course will place these scientific shifts in conversation with theatrical transformations of the period. We will read nineteenth-century neuropsychologists such as Charles Bell, Johannes Muuml;ller, George Miller Beard, Jean-Martin Charcot, and Hippolyte Bernheim alongside artists such as Percy Shelley, Georg Buuml;chner, Richard Wagner, Eacute;mile Zola, and August Strindberg.

Same as: GERMAN 284, TAPS 354

HUMBIO 162H. Hysteria and Modern Culture. 3-5 Units.

The term "hysteria" has been used for centuries to categorize the mysterious ailments of others. This course will focus on the history of hysteria's representation and production from the late nineteenth century through WWI. Readings will include medical writings (Charcot, Bernheim, Freud), plays (Ibsen, Strindberg, Toller), and feminist theory (Cixous, Cleacute;ment, Diamond). We will also devote some attention to the ongoing influence of the discourse of hysteria on contemporary medical and popular cultures.

Same as: GERMAN 137, TAPS 169

HUMBIO 163. Neural Systems and Behavior. 4 Units.

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A.

Same as: BIO 163, BIO 263

HUMBIO 164. Autism Spectrum Disorders. 3 Units.

Abnormal social deficits, language development and repetitive behaviors, are the core symptoms of Autism Spectrum Disorders (ASD), a group of neurodevelopmental disorders that affect about 1% of all children and costs society an estimated \$35B annually. This interactive new seminar will provide an overview of our understanding of ASD, from genetics through epidemiology, biology and treatment, and the many implications for society, including the principles and problems of diagnosis, its impact upon family and lifespan, and controversies regarding its etiology, perception and care.

HUMBIO 165. Early Roots of Human Behavior. 3 Units.

A growing body of evidence suggests that the roots of human behavior are to be found in early childhood. These early behaviors have a direct effect on the quality of a child's educational experience. The educational experience, in turn, is a principal determinant of many adult outcomes that affect well-being. This course will explore how early social forces, psychological influences, and biological systems combine to affect human behavior in early childhood, in the educational experience, and throughout the life course.

HUMBIO 166. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context. 4 Units.

The class examines the array of forces that affect the foods human beings eat, and when, where, and how we eat them, including human labor, agriculture, environmental sustainability, politics, animal rights/welfare, ethics, policy, culture, economics, business, law, trade, and ideology, and psychology. The class addresses the impact of current policies and actions that might be taken to improve human nutrition and health; macro-scale influences on food, nutrition, and eating behavior.

HUMBIO 167. The Art of Vision. 3 Units.

This course concerns eyes and art. It asks how eyes are built, how they process visual information, and how they are affected by diseases that are major problems in our society. These topics are illustrated through fine art and famous artists, and we explore the implications of both normal and abnormal vision for art. There are short diversions into animal eyes and the role of vision in music, literature, and sports.

HUMBIO 168. Multidisciplinary Perspectives on Guilt. 3 Units.

The seminar encompasses the personal and cultural components of guilt. It explores the behaviors that induce guilt; its relational aspects; genesis in evolutionary and developmental terms; and its normal and pathological manifestations. The cultural section includes crosscultural perspectives on guilt and its conceptions in Christianity, Judaism, Islam, Hinduism, Buddhism, and Confucianism; as well as in the philosophy of Aristotle, Kant, J. S Mill and Nietzsche, and culpability and the law. The course consists of lectures, and discussion in class and sections.

HUMBIO 170. Justice, Policy, and Science. 5 Units.

The role of science in civil rights, justice, policy, criminal justice, evidence, education, and disabled rights.

HUMBIO 170A. Sex and the Law. 4 Units.

This course uses an interdisciplinary approach to examine the laws and regulation of sex in the United States by considering the legal, policy, social, political and scientific bases (or lack thereof) of such laws, the context and objectives of sex regulation, and the political dynamics of contemporary and controversial issues presented by this subject. Some laws reflect policies to protect persons from harm related to sexual conduct, such as rape, assault and pedophilia. Other laws impose notions of morality, such as sodomy, incest or polygamy, or homosexuality, or reflect policy or social judgments regarding abortion, contraceptives, and sexual activity of minors. Regulation often concern consensual conduct. This course will consider these topics from varying perspectives and policy objectives, and in the context of Constitutional and other liberty interests.

HUMBIO 172B. Children, Youth, and the Law. 5 Units.

How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; informed consent; health care; protection from harm and child welfare; due process; and privacy and freedom of expression. Interactive, using hypotheticals for discussion and analysis. A and B alternate annually; students may take one or both. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 173. Science, Innovation and the Law. 3 Units.

The interaction of science, business and law: how scientific ideas are protected by law; the rights of those who invent, develop, and finance scientific discovery; and how ideas are commercialized and brought to market. What kinds of research, discovery, and innovation are protected; who has rights that can be protected; what kinds of rights can be protected, and the kinds of protections that apply; how inventions are commercialized; and the success and failure of businesses based on scientific discovery. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 174. Foundations of Bioethics. 3 Units.

Classic articles, legal cases, and foundational concepts. Theoretical approaches derived from philosophy. The ethics of medicine and research on human subjects, assisted reproductive technologies, genetics, cloning, and stem cell research. Ethical issues at the end of life. Prerequisite: Human Biology core or equivalent, or consent of instructor.

HUMBIO 175. Health Care as Seen Through Medical History, Literature, and the Arts. 3 Units.

The differences between disease as pathology and as the patient's experience. Topics include: patient-doctor relationships; medical technology; the changing focus on illness; gender issues; love, sex, and illness; mental illness; sick children; and death and dying. Limited enrollment.

HUMBIO 175H. Literature and Human Experimentation. 3-5 Units.

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, COMPLIT 223, CSRE 123B, MED 220

HUMBIO 175L. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, FRENCH 229, MED 234

HUMBIO 175S. Novels and Theater of Illness. 3 Units.

Illness and disease through novels and plays by authors including Shakespeare, Miller, Sophocles, Hemingway, and Camus. How sickness involves the patient, family, community, and state. Limited enrollment.

HUMBIO 176. Impact of Infectious Diseases on Human History. 3 Units.

Impact of infectious diseases on human society. Some topics include: Plague of Justinian and 14th century; impact on exploration, trade and conquest; how slavery, malaria and yellow fever conspired to alter the New World; Microbes and war; diseases of poverty, tuberculosis and others; Cholera and public health; pandemic influenza; diseases of human progress. Students give a 30 minute presentation on a topic of their choosing that exemplifies an aspect of the impact of politics, societal influences, religion or other forces on infectious diseases.

Same as: MED 176

HUMBIO 176A. Medical Anthropology. 4 Units.

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 82, ANTHRO 282

HUMBIO 177C. Culture, Narrative, and Medicine. 5 Units.

This course examines the ways in which medicine is practiced in diverse cultural contexts with narrative skills of recognizing, interpreting and being moved by the stories of illness. It is an examination of the human experience of illness and healing through narratives as presented in literature, film, and storytelling. We explore how cultural resources enable and empower healing and how narrative medicine can guide the practice of culturally competent medical care.

Same as: ANTHRO 178A

HUMBIO 178. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]

Same as: CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

HUMBIO 178T. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.

(Same as History 105C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: FEMGEN 5C, HISTORY 5C, SOMGEN 205

HUMBIO 179S. Spirituality and Healing. 3-5 Units.

The puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have common features around the world? Shamanism, spirit possession, prayer, and the role of placebos in modern biomedicine. Students do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.

Same as: ANTHRO 184

HUMBIO 180. Human Skeletal Anatomy. 5 Units.

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, ANTHRO 275, BIO 174, BIO 274

HUMBIO 186. Biological Clocks. 3 Units.

The biological basis for endogenous timekeeping in organisms from flies to human beings. How biological clocks are constructed at the molecular, tissue, and behavioral levels; how these clocks interact with other physiological systems and allow animals to anticipate changes in their environment. Applications of circadian rhythm principles to treating human disorders and diseases such as cancer. Prerequisite: Biology or Human Biology core, or consent of instructor.

HUMBIO 192. Capstone. 1-5 Unit.

Completion of the capstone project, normally taken in the student's final quarter. A senior year capstone experience is a mentored project that builds upon or extends work or a theme already established in the Area of Concentration (AC). Requirements include participation in the capstone symposium, which would involve a presentation followed by a brief question and answer session. Enrollment strictly by permission of instructor. May be taken for a maximum 3 quarters of credit. Total of units not to exceed 9.

HUMBIO 193. Research in Human Biology. 1-5 Unit.

Independent research conducted under faculty supervision, in junior or senior year, normally but not necessarily in pursuit of an honors project. May be taken for a maximum 3 quarters of credit. Prerequisite: Faculty approval; application available in student services office.

HUMBIO 194. Honors. 1-10 Unit.

Completion of the honors project, normally taken in the student's final quarter. First component: the honors thesis, a final paper providing evidence of rigorous research, fully referenced, and written in an accepted scientific style. Second component: participation in the honors symposium, including a 10-minute oral presentation followed by a brief question and answer session. Prerequisites: 193 or 199, and acceptance into the honors program.

HUMBIO 197. Human Biology Internship. 1-4 Unit.

Limited to and required of Human Biology majors. A supervised field, community, or lab experience of student's choosing, pre-approved by Human Biology faculty and student advisers, and initiated at least three quarters prior to graduation. Participation in a poster session on the internship experience is required during the first quarter that the student is in residence at Stanford after completion of the internship. May be repeated for credit and a total of 4 units accumulatively. Prerequisite: Human Biology core.

HUMBIO 198. Senior Tutorial in Human Biology. 1-5 Unit.

Reading for Human Biology majors in exceptional circumstances and under sponsorship of Human Biology associated faculty. Students must apply through Human Biology student services before registering. Reading list, paper, and evaluation required. May be repeated for credit.

HUMBIO 199. Directed Reading/Special Projects. 1-4 Unit.

Human Biology majors must obtain a sponsor from the Human Biology associated faculty or the Academic Council. Non-majors and students who have not declared must obtain a sponsor only from the Human Biology associated faculty. Students must complete application in student services office.

HUMBIO 200. Teaching of Human Biology. 1-5 Unit.

For upper division undergraduates and graduate students. Practical experience in teaching Human Biology or serving as an assistant in a lecture course. May be repeated for credit.

Human Resource Management Courses

HRMGT 280. Human Resource Management. 2 Units.

An organization's human resources are very often a key, even the key, to the organization's success. Human resource management (HRM) is therefore of strategic importance. We begin by surveying the fundamentals of human resource management from the perspective of the organization's overall strategy, relying on concepts and theories from your previous economics and organizational behavior courses. Then we focus on the question of motivation and, in particular, how organizations can successfully motivate their employees to provide "efforts" that go above and beyond the nominal specs of the particular job.

HRMGT 282. HR for Startups. 2 Units.

This course focuses attention on human resource strategies for startups. It discusses recruitment, incentives, design of jobs, development of talent, leadership and empowerment challenges in startups. We will deal with questions ranging from equity splits to founding team dynamics, hiring talent to the sequencing of hires. We will use a mix of "live cases" from the field, and lectures.

HRMGT 284. Organizational Strategy. 2 Units.

HRMGT 284 will focus on the organization strategy of the firm. The success of a firm depends not just on a well-designed product market strategy, but on how well that strategy is executed to align the goals of the employees with those of the firm. Topics covered include meeting strategic objectives, hiring, pay, training, teamwork, promotions, performance evaluation, pay for top executives, management practices in startups, and organizational transformation. While the general theme is the management of the firm, the topics also lend themselves to developing perspectives on how you manage your personal career.

HRMGT 289. Sloan: Talent Management Strategy. 4 Units.

Everyone manages people; how can it be done better? How can it be done to facilitate your overall strategy, for your company and your career? This class covers the standard topics of people management: recruitment and selection; performance evaluation; incentives and compensation; promotions; job design; training; teamwork; and layoffs and retention. Each topic is covered through case studies and then analytical models for choosing and using best practices. The class content is aimed at managers who recognize that people management is important, but who typically want to spend less time managing people and more time doing what they really enjoy.

HRMGT 302. Incentives and Productivity. 4 Units.

This course is designed to teach the student how to use economics to solve practical personnel problems that affect worker productivity. Topics include: selecting the best workers to hire, training workers, turnover, setting compensation strategically, structuring salespersons' commissions, downsizing, using promotions as an incentive mechanism, and other topics. Examples and cases will be presented to demonstrate the importance of using economic techniques to structure human resources programs. The course will appeal most to the student who expects to be a general manager or who hopes to run his or her own business. Although the human resources specialist may benefit from this course, the emphasis will be on decisions that affect personnel, but are made primarily by general managers. The class format is somewhat unusual. Most classes consist of lecture with questions, but two are class workshops. The lecture will present a theoretical development of a topic. The questions discussed during the last part of the lecture period will involve practical business application of the theory presented in lecture. This course is more technical than other human resources courses, but should be accessible to anyone who has successfully completed the economics and statistics courses in the MBA core. Every student is expected to know calculus and basic probability and statistics. Although I will not emphasize the technical aspects on the final exam, the problem sets will require some knowledge of mathematics. To ease your fears, many "poets" have taken variants of this course in the past and have done well. There will be graded team problem sets and a final exam.

HRMGT 512. Changing How We Manage People. 1 Unit.

This course is designed for individuals interested in changing how people are managed-to dispel flawed assumptions about human resource strategies and develop new techniques. In the past, human resource practices rarely served as a source of innovation in organizations. Rather, when establishing guidelines, policies, and rules, most companies chose to follow the norm, which often was unsatisfying and frustrating for their employees. These same firms chose not to focus on their human resource practices as a source of competitive advantage that could be used to hire the best talent, perform at the highest level, and weather the most difficult times. More recently, new ideas about the optimal approach to managing the firm's most important asset-its human capital-have flourished. As a result, a debate has surfaced in the corporate world about the best ways to get work done-from the allocation of job tasks to the structure of financial incentives. We tackle many of these fundamental questions in this course-what is the best way to hire people, to give performance feedback, to foster collaboration-but we look at these problems through a new lens, one informed more by evidence and analysis than by tradition and intuition. This class is an exercise in collaboration: a joint effort by a practitioner and an academic who are both hopelessly optimistic about how the management of human resources can be improved. In each session, we will tackle a novel and important topic (e.g., engagement surveys?) from three distinct points of view, first describing what is currently done, then identifying alternative approaches in other firms, and finally considering what a bold and creative approach might look like. After taking this course, you will be better able to: (1) identify misconceptions that undermine the effectiveness of human resource strategies; (2) learn new insights about human motivation in the workplace and (3) design new tools that can improve the working lives of your employees. We believe this perspective will be invaluable to you throughout your career.

HRMGT 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

HRMGT 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

HRMGT 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

Humanities Sciences Courses

HUMSCI 201. Graduate Environment of Support. 1 Unit.

Psychosocial, financial, and career issues in adapting graduate students to Stanford; how these issues relate to diversity, resources, policies, and procedures. Discussions among faculty, advanced graduate students, campus resource people, and the dean's office. (Thomas).

Iberian Latin American Cultures Courses

ILAC 10SC. Spanish Immersion. 2 Units.

Wouldn't it be great if you could quickly increase your Spanish proficiency through an intensive immersion experience right here at Stanford? Wouldn't you love to gain the cultural and historical knowledge necessary to begin taking film, literature, and culture courses generally reserved for advanced students? This intensive Spanish immersion course is designed to help students who have completed a year of Spanish to move forward quickly toward greater linguistic and cultural competence. After a year of Spanish, students tend to be able to handle straightforward interactions related to basic needs and personal information, but they generally lack the ability to handle more abstract discussions or to combine short utterances into longer presentations of their ideas. Most students likewise have little knowledge of the rich and complex history that surrounds the Spanish language or the central role that Spanish has played in the cultural, artistic, and political life of California. In this course, a team of experienced instructors will help students improve their Spanish through intensive lessons that incorporate film, literature, and social issues. Through a focused discussion of the themes of immigration and democracy in Latin America, Spain, and the United States, as well as excursions and guest lectures by Stanford faculty and community leaders, this course will immerse students in Spanish and help them to gain advanced proficiency much more quickly. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

ILAC 103N. The Millennium Novel in Latin America. 3 Units.

Between 2000 and 2012, a young Spanish American novel emerges, taking at times a minimalist point of view to narrate individual stories with a subjective tone, or continuing a tradition of the historical panorama to present national tragedies that occurred in the last two or three decades. Focus is on this new type of novel from different countries, with such titles as "El cuerpo en que nací" by Guadalupe Entel; "Las teorías" by Pola Oloixarac; "El ruido de las cosas al caer" by Juan Gabriel Vazquez; and "Bonsai" by Alejandro Zambra, among others. Taught in Spanish.

ILAC 107N. 3D Modeling, Virtual Media, and the Poetics of the Self: The Art and Lives of Fernando Pessoa. 3-5 Units.

Preference to freshmen. The poetry and prose of Fernando Pessoa, Portugal's greatest modern poet. As famous for his written work (in Portuguese and English) as for his complex understanding of selfhood (he would divide his own subjectivity into 106 different, autonomous selves), Pessoa remains a towering and largely perplexing figure even today. Class discussions will focus on close readings of Pessoa's work along with the implications of his theory of subjectivity for our understanding of modernity, art, and the self. Class field trip to San Francisco. Written assignments include a journal, blog posts, and a final paper written as someone else. Taught in English.

ILAC 108N. Masterpieces: García Márquez. 3-5 Units.

Extensive and detailed reading of the major works and a selection of the most significant critical texts about the author. Secondary readings by Vargas Llosa, Ludmer, Moretti, and Bloom. Topics include: *macondismo*, magical realism, canonicity, representations of violence, and autobiography.

ILAC 110. Spanish Society in the 21st Century Through Film. 3-5 Units.

Open to undergraduates with an interest in 21st Century Film and the social reality of Spain nowadays. Explores how Spain has evolved from being one of the most undeveloped European countries to become a first mover in social issues such as gay marriage or women's public role. Topics include racism, migration, the reconstruction of the past and the vision of the other. Themes are analyzed through movies directed by Spanish and American filmmakers such as: Cesc Gay, Bollaín, Bigas-Luna, Gonzálezález-Intillde;ritu and Woody Allen. Class taught in Spanish, readings both in Spanish and English.

ILAC 111Q. Spanish-English Literary Translation Workshop. 3 Units.

This course introduces students to the theoretical knowledge and practical skills necessary to translate literary texts from Spanish to English and English to Spanish. Topics may include comparative syntaxes, morphologies, and semantic systems; register and tone; audience; the role of translation in the development of languages and cultures; and the ideological and socio-cultural forces that shape translations. Students will workshop and revise an original translation project throughout the quarter. Same as: DLCL 111Q

ILAC 114N. Introduction to Lyric Poetry. 3-5 Units.

A basic introduction to the elements of lyric poetry--image, metaphor, symbol, connotation, denotation, irony, rhyme and meter - drawing upon a selection of poems from major poets of the Hispanic World, including, G. A. Beacutecquer, Rosalíacutede Castro, Rubenacutecutenez, Miguel de Unamuno, Antonio Machado, Juan Ramoacutenez, García Lorca, Pablo Neruda, and Gabriela Mistral. This is a bilingual course, taught both in English, and Spanish, with an emphasis on Spanish.

ILAC 116. Approaches to Spanish and Spanish American Literature. 3-5 Units.

Short stories, poetry, and theater. What analytical tools do the "grammars" of different genres call for? What contact zones exist between these genres? How have ideologies, the power of patronage, and shifting poetics shaped their production over time? Authors may include Arrabal, Borges, Cortaacutezar, Cernuda, Garcíaacutea Maacutequez, Lorca, Neruda, Rivas. Taught in Spanish. Prerequisite: SpanLang 13C.

ILAC 120. Advanced Critical Reading in Spanish. 3-5 Units.

Research and writing in the humanities; focus is on culture, literature, and society of the Spanish-speaking world. Students will learn how to conduct research online and in the library while developing archive skills. Emphasis is on skill-building while exploring topics of interest to each student from various historical periods and global locations. Taught in Spanish. Prerequisite: SPANLANG 13 or equivalent. Meets Writing-in-the-Major requirement.

ILAC 122. Literature and Politics - Two Mediterranean Cases: Catalonia and Italy. 3-5 Units.

A comparison between the different roles played by writers as members of the intellectual establishment in Catalonia, Spain and Italy. Focus on the relation between intellectuals and politics in shaping national identity. We will give especially consideration to the role played by intellectuals during the Fascist and Francoist dictatorships and during Spain's transition to democracy. Taught in English. Same as: ITALIAN 136

ILAC 130. Introduction to Iberia: Cultural Perspectives. 3-5 Units.

The purpose of this course is to study major figures and historical trends in modern Iberia against the background of the linguistic plurality and social and cultural complexity of the Iberian world. We will study the fundamental issues of empire, the Napoleonic occupation of Spain, Latin American independence, recurring civil wars, federal republicanism, and the historic nationalisms (Galician, Basque, and Catalan), all leading up to the Spanish Civil War (1936-1939), which is a defining moment in modern Spanish and European history, with ongoing consequences still felt and debated painfully today in contemporary Spain. This course is designed to help prepare students for their participation in the Stanford overseas study programs in Barcelona and Madrid. Taught in Spanish.

ILAC 131. Introduction to Latin America: Cultural Perspectives. 3-5 Units.

Part of the Gateways to the World program, this is an introductory course for all things Latin American: culture, history, literature, and current events. By combining lecture and seminar formats, the class prepares you for all subsequent research on, and learning about, the region. Comparative discussion of independence movements in Mexico, Central America, the Caribbean, the Andean Region, Brazil, and the Southern Cone. Other topics vary yearly, including: representations of ethnicity and class, the Cold War, popular culture, as well as major thinkers and writers. Open to all. Recommended for students who want to study abroad in Santiago, Chile. Required for majors in Spanish or Iberian and Latin American Cultures (ILAC). In Spanish.

ILAC 133N. The Animal Within: Animal Presence in Latin American Narrative. 3 Units.

How does the criterion for the division between the human and the animal take part on contemporary Latin American narrative? To what extent is this divide challenged or contested? The course combines a discussion of the literary works of authors like Jorge Luis Borges, Horacio Quiroga, Julio Cortázar, Mario Bellatin, Clarice Lispector, and Joseacut; Mariacut;a Arguedas with a reflection on the animal and animality in the writings of Bataille, Derrida and Deleuze. Taught in English.

ILAC 134. In the First Person: Representation of the Self in Modern Latin America. 3-5 Units.

This course examines different expressions of self-portrayal in Latin America from 1920s to the present. The course explores different models of self-shaping and forms of expression that draw contours on self and identity in Latin America. After a brief consideration of the Inca Garcilaso, Sor Juana, J.F. Sarmiento, we examine the works of Joseacut; Vasconcelos, Norah Lange, Victoria Ocampo, Frida Kahlo, Joseacut; Mariacut;a Arguedas, Rosario Castellanos, Mario Bellatin, Tununa Mercado, Marcela Trujillo, Fernando Vallejo, among others. Taught in Spanish; Spanish proficiency required.

ILAC 135. From Book to Screen: Brazilian Novels and Their Film Adaptations. 3-5 Units.

Can the study of cinematographic adaptation of novels help us understand better the specific nature of literature and that of film? Addressing this central question, the course combines an introduction to Brazilian narrative (Euclides Da Cunha, Maacut;rio De Andrade, Joatilde;o Guimaraes Rosa, Graciliano Ramos, Rubem Fonseca, Clarice Lispector) and a panorama of Brazilian cinematography (from Cinema Novo to contemporary productions). The course offers a space for reflection on the multifaceted relationship between the literary and the cinematographic. Taught in English.

ILAC 136. Modern Iberian Literatures. 3-5 Units.

1800 to the mid 20th century. Topics include: romanticism; realism and its variants; the turn of the century; modernism and the avant garde; the Civil War; and the first half of the 20th century. Authors may include Mariano Jose de Larra, Gustavo Adolfo Becquer, Rosalia de Castro, Benito Perez Galdos, Jacint Verdaguer, Eca de Queiros, Miguel de Unamuno, Ramon de Valle-Inclan, Antonio Machado, and Federico Garciacut;a Lorca. Taught in Spanish. Prerequisites: SPANLANG 13 or equivalent.

ILAC 137. Latin American Heroes and Heroines. 3-5 Units.

This course will focus on artists, writers, and political leaders in Latin America whose work would change Latin American history. The historical significance of some of these individuals is polemical, but their influence in Latin American culture is nevertheless of great importance. The iquest;heroes and heroinesquest; to be studied include: Eva Peron, Frida Kahlo, Ernesto Guevara, Anthony Quinn, Evo Morales, Michelle Bachelet, Fidel Castro, Jose Mujica, Carlos Fuentes, German Valdes Tin Tan, Mario Moreno Cantinflas, Gabriel Garciacut;a Maacut;riquez, Niniacut; Marshall."

ILAC 138. From National Angst to Incipient Modernity: Spanish Literature After Empire. 3-5 Units.

This course focuses on the most predominant and influential Spanish writers from 1836 to 1936, exploring the emergence of a new political and social conscience in Spain and its transition from global empire to a nation that questions the ideas behind its world decline and eventual Civil War. The writers chosen portray a nation trying to find a new political order after the failure of various forms of government. Readings include the nonfiction and narrative of Larra, Espronceda, Galdacut;e;s, and subsequently analyzing the innovative thinking and actions of Generation of 1898 philosopher Unamuno and the poets Machado and Garciacut;a Lorca. Taught in Spanish.

ILAC 140. Migration in 21st Century Latin American Film. 3-5 Units.

Focus on how images and narratives of migration are depicted in recent Latin American film. It compares migration as it takes place within Latin America to migration from Latin America to Europe and to the U.S. We will analyze these films, and their making, in the global context of an evergrowing tension between "inside" and "outside"; we consider how these films represent or explore precariousness and exclusion; visibility and invisibility; racial and gender dynamics; national and social boundaries; new subjectivities and cultural practices. Films include: El nintilde;o pez, Bolivia, Ulises, Faustino Mayta visita a su prima, Copacabana, Chico y Rita, Sin nombre, Los que se quedan, Amador, and En la puta calle. Films in Spanish, with English subtitles. Discussions and assignments in Spanish. Same as: CHILATST 140

ILAC 145. Poets, Journalists and Collectors: Latin American Modernismo. 3-5 Units.

Discusses the different artistic avatars exercised by Latin American modernistas at the turn of the 19th Century in the context of growing capitalism, technological innovation and social transformation. We focus on how modernistas as poets, journalists and collectors explored and transgressed the limits of the individual and his/her situation. We consider topics like cosmopolitanism, dandysm, autonomy of art, and the aesthetic cultivation of the self. Authors include: Delmira Agustini, Rubeacut;n Dariacut;o, Juliaacut;n del Casal, Leopoldo Lugones, Joseacut; Martiacut;e;, Manuel Gutierrez Naacut;jera, Joseacut; Enrique Rodoacut;e;, Joseacut; Asuncioacut;n Silva, and Abraham Valdelomar. Spanish proficiency required.

ILAC 157. Medieval and Early Modern Iberian Literatures. 3-5 Units.

Survey of Iberian literature from the medieval and early modern periods. When covering texts in languages other than Spanish, translations into English or Spanish will be made available. Taught in Spanish; prerequisite: SPANLANG 13 or equivalent.

ILAC 161. Modern Latin American Literature. 3-5 Units.

From independence to the present. Topics include romantic allegories of thenation; modernism and postmodernism; avant-garde poetry; regionalism versus cosmopolitanism; indigenous and indigenist literature; magical realism and the literature of the boom; Afro-Hispanic literature; and testimonial narrative. Authors may include: Boliacut;var, Bello, Goacut;mez de Avellaneda, Isaacs, Sarmiento, Machado de Assis, Dariacut;o, Martiacut;shy;, Agustini, Vallejo, Huidobro, Borges, Cortaacut;zar, Neruda, Guillon, Rulfo, Ramos, Garciacut;shy;a Marquez, Lispector, and Bolantilde;o. Taught in Spanish.

ILAC 175. Daydreaming in Portugal and Brazil. 3-5 Units.

This course explores the role of the imagination in 19th and 20th century Portuguese and Brazilian literature. We will read 4-5 novels, short stories and articles analyzing how and why authors recreate imaginary processes in their characters, and what these processes reveal about the socio-cultural contexts of their period. Authors include Rauacut;l Brandatilde;o, Machado de Assis, Antonio Lobo Antunes, Raduan Nassar, and Aacut;lvoro Cardoso Gomes, with complementary short pieces by Fernando Pessoa, Joseacut; Saramago, Mario de Andrade, Guimaratilde;es Rosa, and Clarice Lispector. Readings available in English and Portuguese. In English.

ILAC 193. The Cinema of Pedro Almodovar. 3-5 Units.

Pedro Almodovar is one of the most recognizable auteur directors in the world today. His films express a hybrid and eclectic visual style and the blurring of frontiers between mass and high culture. Special attention is paid to questions of sexuality and the centering of usually marginalized characters. This course studies Pedro Almodovar's development from his directorial debut to the present, from the "shocking" value of the early films to the award-winning mastery of the later ones. Prerequisite: ability to understand spoken Spanish. Readings in English. Midterm and final paper can be in English. Majors should write in Spanish.

Same as: ILAC 393

ILAC 193Q. Spaces and Voices of Brazil through Film. 3-4 Units.

The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, *Banana is my Business*, *Black Orpheus*, *Olga*, *They Don't Use Black-Tie*, *City of God*, *Central Station*, *Gaijin*, and *Four Days in September*—among others. In English.

Same as: PORTLANG 193Q

ILAC 199. Individual Work. 1-12 Unit.

Open only to students in the department, or by consent of instructor.

ILAC 207E. RENAISSANCE PASTORALISMS. 3-5 Units.

Major works of Iberian pastoral lyric poetry and narrative fiction. What made this classical mode so popular during the Renaissance and beyond? What are its essential characteristics? What does it tell us about early modern theories of humanity's relation to nature? Was it merely a form of erotic escapism or is something darker and more troubling lurking between its lines? What can it teach us today about nature, eros, ethics, death, and love? Authors include: Theocritus; Virgil; Sannazaro; Garcilaso de la Vega; Montemayor; Ribeiro; Camotilde; Cervantes. Readings in English, Portuguese, and Spanish. Discussion in English.

ILAC 210. Queer Almodovar. 3-5 Units.

Focus on the representation of non-normative sexualities and genders in films by Pedro Almodovar, one of the most recognizable auteur directors in Europe today. Analysis of his hybrid and eclectic visual style complemented by critical and theoretical readings in queer studies. Taught in English.

Same as: FEMST 210

ILAC 216. Comparative Cities: Travel Literature as Urban Experience in Catalan Culture. 3-5 Units.

Comparative reflection on travel literature, focused on some major Western cities, taking as a starting point the reflections on travel by some of the most prominent Catalan writers in the 20th century. Catalan travel literature, whether autobiographical or in essay form, is often related to literary journalism and exile. The foremost Catalan authors take notice of cities like Paris, Berlin, Madrid, Venice, Buenos Aires and New York, at historically decisive times: the two World Wars, the rise of fascism in Italy, Spain and Germany, the Cold War, the emergence of the United States as a world power. In this sense, travel writers offer a double comparative vantage point: on the one hand, between their own literature and that of other European travel writers; on the other hand, between Barcelona and some of the greatest cities in the world. These contrasts, perceived through the literary lens, help us understand the cosmopolitanism and modernity of Catalan culture. Taught in Spanish; all readings available both in Catalan and Spanish, some readings also available in English.

ILAC 218. Anticlericalism in the Iberian Novel of the 19th Century. 3-5 Units.

The rapid social and cultural changes in which 19th-century novelists wrote; the anti-clerical stance as marker of society's attempts to modernize. Why were monks and priests reviled by many Spanish novelists? How and why did they re-write Spanish history around these figures? What was the role of the church and religious men in modern society? Questions of individualism, property, and labor in novels by major Iberian prose realists. In Spanish.

ILAC 223. The Generation of 1898 and Beyond. 3-5 Units.

Preference for graduate students, majors are welcome. Course will focus on six major authors (Unamuno, Baroja, A. Machado, J. R. Jimenez, Valle-Inclan, Garcia Lorca) and representative works, written between 1898 and 1930, dealing with an historical period of crisis and transition, and displaying major aesthetic innovations in both poetry and theater. Fundamental themes include the decline of feudal Galicia, the Spanish-American War of 1898, the emergence and social activism of new social forces, and the struggle for and betrayal of democracy, expressed through the various genres of the novel, poetry, and theater. Major works of Antonio Machado, Juan Ramo Jimenez, and Federico Garcia Lorca will be examined, with special emphasis on the historical context of the first three decades of the 20th century and their contributions to the development of 20th century Spanish lyric poetry. Taught in either English or Spanish, depending on course enrollment.

ILAC 224. Literature Inspired by the Spanish Republic and the Spanish Civil War. 3-5 Units.

This course will deal with the significance of the Spanish Civil War in Iberian, European, and world history, through the literary works (poetry, theater, and novel) of major Spanish and Latin American writers. The war is anticipated in the poetry of Antonio Machado and in the theater of Garcia Lorca, dealt with directly in the poetry of Alberti and Hernandez, of Neruda (Chile), Vallejo (Peru), and N. Guillen (Cuba), and treated in the aftermath during the Franco dictatorship in the novels of Cela and Sender. Taught in English.

ILAC 235. Critique of Technology. 3-5 Units.

Informed citizens living in today's world, and especially in Silicon Valley, should be able to formulate their own, articulate positions about the role of technology in culture. The course gives students the tools to do so. Against the trend towards the thoughtless celebration of all things technological, we will engage in critique in the two senses of the term: as careful study of the cultural implications of technology and as balanced, argumentative criticism. Can technology make life more meaningful, society more fair, people smarter, and the world smaller? Selections by fiction writers, philosophers and thinkers (such as Heidegger and Beller), as well as recent popular works of social commentary, such as *You are not a Gadget*, *The Shallows*, *24/7*, and *Present Shock*.

ILAC 239. Borges and Translation. 3-5 Units.

Borges's creative process and practice as seen through the lens of translation. How do Borges's texts articulate the relationships between reading, writing, and translation? Topics include authorship, fidelity, irreverence, and innovation. Readings will draw on Borges's short stories, translations, and essays. Taught in Spanish. Prerequisite: 100-level course in Spanish or permission of instructor.

ILAC 240E. Borges and Philosophy. 3-5 Units.

Analysis of the Argentine author's literary renditions of philosophical ideas. Topics may include: time, free will, infinitude, authorship and self, nominalism vs. realism, empiricism vs. idealism, skepticism, peripheral modernities, postmodernism, and Eastern thought. Close reading of short stories, poems, and essays from *Labyrinths* paired with selections by authors such as Augustine, Berkeley, James, and Lao Tzu. The course will be conducted in English; Spanish originals will be available. Satisfies the capstone seminar requirement for the major in Philosophy and Literature.

ILAC 241. Fiction Workshop in Spanish. 3-5 Units.

Spanish and Spanish American short stories approached through narrative theory and craft. Assignments are creative in nature and focus on the formal elements of fiction (e.g. character and plot development, point of view, creating a scene, etc.). Students will write, workshop, and revise an original short story throughout the term. No previous experience with creative writing is required. Readings may include works by Ayala, Bolantilde;o, Borges, Clariacute;n, Cortaacute;zar, Garciacute;a Maacute;rquez, Piglia, Rodoreda, and others. Enrollment limited.

ILAC 242. Poetry Workshop in Spanish. 3-5 Units.

Latin American and Spanish poetry approached through elements of craft. Assignments are creative in nature and focus on lyric subgenres (e.g. ode, elegy, prose poetry) and formal elements of poetry (e.g. meter, rhythm, rhetorical figures, and tropes). Students write original poems over the course of the quarter. No previous experience with creative writing is required. Authors include Darishy;o, Machado, Jimenez, Vallejo, Huidobro, Salinas, Pales Matos, Lorca, Aleixandre, Cernuda, Neruda, Girondo. Course is offered every other year. Taught in Spanish. Prerequisite: 100-level course taught in Spanish, or equivalent. Enrollment limited to 10 students.

ILAC 243. The Millenium Novel in Latin America. 3-5 Units.

Between 2000 and 2012, a young Spanish American novel emerges, taking at times a minimalist point of view to narrate individual stories with a subjective tone, or continuing a tradition of the historical panorama to present national tragedies that occurred in the last two or three decades. Focus is on this new type of novel from different countries, with such titles as "El cuerpo en que naciacute;" by Guadalupe Entel; "Las teoriacute;as salvajes" by Pola Oloixarac; "El ruido de las cosas al caer" by Juan Gabriel Vazquez; and "Bonsai" by Alejandro Zambra, among others.

ILAC 245. Brazil's Rhythm and Songs. 3-5 Units.

Audiovisual introduction to Brazilian popular music. Chorinho, Samba, Frevo, Forro, Bossa Nova, Tropicalia, Pagode, Repente, Hip-Hop, Axe. Candomble and Capoeira rhythms. Amerindian Songs. Dances and Rituals: Bumba meu Boi, Congada, Caterete, Carnaval. Drama Performances and Musical Films. Final visual-sonorous exhibition created by students. In English. Special sections for Portuguese learners.

ILAC 248. Distant Borders: Hispanic Migrations. 3-5 Units.

During the last half a century, different people from Africa, Eastern Europe, have been moving from one area to another, looking for a better habitat. This has been a world wide phenomenon that has changed hundreds of thousands of lives, producing imperfect utopias. This course will focus on the assimilation of families and individuals to different cultures, as well as how the new country deals with this, many time rejecting the "other". Cinema and literature have been a great source to understand the drama of migration, and the course will use extensively these forms of artistic representation. Authors include Aacute;ngel Vaacute;quez, Jorge Sempruacute;n, Mahi Binebine, Ariel Dorfman, Alberto Fuguet, Zoeacute; Valdeacute;s, and Julia Aacute;lvarez.

ILAC 251. Latin American Literary Theory. 3-5 Units.

Latin American literary theory through the works of Joseacute; Carlos Mariaacute;tegui, Joseacute; Enrique Rodoacute;, Alfonso Reyes, Antonio Candido, Roberto Schwartz, Angel Rama, Roberto Fernaacute;ndez Retamar, Antonio Cornejo Polar, Josefina Ludmer, Flora Sussekind. This course will focus on the concepts of "the lettered city", "hybridization", "psychoanalysis", "marxist theory", "class struggle", "literary politics", "latinamericanism". In sum: Literary theory from the inside of Latin American culture, considering also its Western influences. Taught in Spanish.

ILAC 252. Guerillas. 3-5 Units.

The modern strategic response to state dictatorships in Latin America has its origins in Ernesto Che Guevara's "Guerra de guerrillas". This course will focus on how those irregular military groups were formed in Chile, Mexico, Argentina, and Uruguay during the 20th Century. We will give particular attention to the "invisible" guerrillas" (the women) in revolutionary moments. That view will be enhanced by films and literature on this subject. Authors include Palau, Ignacio Taibo II, Tort, Gibler, Guevara, Gilio, Caula, and Cavallo.

ILAC 253. Poverty, Redemption and Writing: Franciscanism in Latin America. 3-5 Units.

How are theories of poverty reflected in literary writing? What is the relationship between writing and redemption? Addressing these central questions, the course examines the heritage of Catholic thought and aesthetics in prominent colonial and post-colonial Latin America through the figure of Francis of Assisi. Franciscan writing allows us to explore the notions of subjectivity, solidarity, exception, animality, and capital. In Spanish.

ILAC 254. Surrealism in Latin America and Spain. 3-5 Units.

This course focuses on the legacy of Surrealism in the Hispanic transatlantic traditions, both in literature and the visual arts (film and paintings). We will study and analyze two aesthetic paths: on one hand, the embracing of Surrealism to enrich one's own poetics; on the other, that of other groups and authors' orthodox approach to the principles established by Andreacute; Breton and his cohort in the aesthetic adventure. The course will study and assess Surrealism's lasting echoes in recent literary manifestations (among them Roberto Bolantilde;o's works). Taught in Spanish.

Same as: Poetry and Fiction

ILAC 257. Dictatorships in Latin America through testimonies and film. 3-5 Units.

Focus on Pinochet coup, the Falkland Islands, the prison Libertad in Uruguay, the "Plan Condor." How literature, journalism and cinema denounced and revisited the worst political times in Latin America. Taught in Spanish.

Same as: Argentina, Chile, Uruguay in the 70s

ILAC 261. Voices in Brazilian Fiction. 3-5 Units.

Brazilian Literary canon. Novels and short stories from independence to the present. Topics include romanticism and realism; regionalism; modernism and postmodernism. Authors may include: Joseacute; de Alencar, Machado de Assis, Oswald de Andrade, Graciliano Ramos, Guimaratilde;es Rosa, Lispector, Hilda Hilst, Silviano Santiago. Readings in Portuguese; Class discussions in English; Assignments in Portuguese or in English.

ILAC 263. Visions of the Andes. 3-5 Units.

What visions of the Andes circulate in Latin American literature, photography and painting? How are they constructed? How is their value accrued? The course focuses on visual and written images of Andean landscapes. Beginning with 19th century technical photography, the course explores the visual economy of the Andes in representative texts and images from Peru, Bolivia and Chile, vis-a-vis critical discourses about Andean culture. In Spanish.

Same as: ILAC 363

ILAC 276. Aesthetics, Revolutionaries and Terrorists. 3-5 Units.

Who is a terrorist and who is a revolutionary? With surge of Anarchism in the XXth Century, the "culture of fear" has been one of the axes of political activism. This course will explore the difference between the desire to correct injustice in society (Revolution) and the desire to destroy society (Terrorism) using literary texts and films. Readings will include novels and testimonies of the protagonists in various social struggles, as well as journalistic and academic papers about these social movements.

Same as: ILAC 376

ILAC 277. Spanish and Society: Rock en Español. 3-5 Units.

Can music be a medium to study how a society communicates? This course wants to answer this question by paying attention to how has Spanish changed and adapted in recent history. Taking rock and pop as a global musical phenomenon, the focus of the course will be the most prominent bands and songs in Spanish language. Emphasis is on the analysis of the use of Spanish in real-world contexts. In Spanish.

ILAC 278. Senior Seminar: Monsters of Modern Spanish Empire. 3-5 Units.

Focus is on debates over the morality of empire and slavery in literary works from modern Spain and Cuba. Taught in Spanish.

ILAC 278A. Senior Seminar: Pau-Brazil from Modernism to Concretism. 3-5 Units.

From the historical Linguas people in Colonial Portuguese America to the Modern Galactic vision of Haroldo de Campos and his theory of translation as transcreation. A Cultural and Literary immersion in Brazilian history, in Luso-Afro-European-Amerindian plurilingualism and ethnic diversity. Authors include Pero Vaz de Caminha, Jean de Lery, Antonio Vieira, Oswald de Andrade, Mario de Andrade, Tarsila do Amaral, Augusto de Campos, Haroldo de Campos, Decio Pignatari, Helio Oiticica, Eduardo Viveiros de Castro, Andre Vallias, and Josely Vianna Baptista. Taught in Spanish.

ILAC 280. Latin@ Literature. 3-5 Units.

Examines a diverse set of narratives by U.S. Latin@s of Mexican, Puerto Rican, Cuban, Guatemalan, and Dominican heritage through the lens of latinidad. All share the historical experience of Spanish colonization and U.S. imperialism, yet their immigration patterns differ, affecting social, cultural, and political trajectories in the US and relationships to "home" and "homeland," nation, diaspora, history, and memory. Explores how racialization informs genders as well as sexualities. Emphasis on textual analysis. Taught in English.

Same as: CHILATST 200, CSRE 200, ILAC 382

ILAC 281. Fernando Pessoa's Five forms of Anxiety. 3-5 Units.

Ethics, politics, and philosophy in the poetry of Fernando Pessoa. A close analysis of five forms of anxiety that pervade Pessoa's poetry: 1) that you are a person; 2) that you are one person; 3) that you are yourself; 4) that your life can be wasted; and 5) that others may fail to understand you. How do these forms of anxiety shape Pessoa's style(s), his system of heteronyms, his interest in certain literary forms (such as esoteric and prophetic literature), and his perception of the Portuguese cultural and geohistorical context? Readings available in English and Portuguese. Taught in English.

ILAC 287. Queer Raza. 3-5 Units.

Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and other structures of power? How do these texts reinforce or contest stereotypes and the "ideal" bodies of national identity? How do these texts produce queerness as a web of social relations?.

Same as: CHILATST 120, FEMGEN 120

ILAC 299. Individual Work. 1-12 Unit.

Open to department advanced undergraduates or graduate students by consent of professor. May be repeated for credit.

ILAC 305. Rhythm: Ethics and Poetics of the Premodern. 3-5 Units.

Focus is on the notion of rhythm as a theoretical frame for the analysis of medieval and early modern Iberian poetry. Topics include Ancient Greek and modern conceptions of rhythm and the links between poetics and ethics in the medieval period and beyond. Authors include: Aeschylus, Plato, Aristoxenus, Maurice Blanchot, Paul Celan, Emmanuel Levinas, Arcipreste de Hita, Ausiarius March, Garcilaso de la Vega, and Lucretius. Taught in English.

ILAC 309. First Year Writing Workshop. 1 Unit.

This course enables students to develop the writing skills necessary in their academic careers. Course topics include writing in the discipline, critiques, and literature reviews.

ILAC 316. Realism and Surrealism in the Cinema of Luis Bunuel. 3-5 Units.

Surrealism, realism, dark comedy, film genres transformed by Spanish director, Luis Bunuel in Spain, France and Mexico during the second half of the XX century. An examination of Bunuel's work from his Surrealist beginnings (*Age of Or*, *Un Chien Andalou*), subsequent realistic films in Mexico (*Los Olvidados*, *Nazarin*), and a mixture of Surrealism and Realism (*Viridiana*, *Exterminating Angel*, *Simon del Desierto*), as well his work with dark comedy (*Archibaldo de la Cruz*, *Belle de Jour*, *Le charme discret de la bourgeoisie*). In Spanish.

ILAC 329. Luis de Camoes - Epic. 3-5 Units.

Focus is on Camoes's epic masterpiece, *Os Lusíadas*. Topics include empire, intertextuality, Indian Ocean Studies, history, prophecy, and poetics. Readings in English and Portuguese.

ILAC 332. Race and Slavery in Nineteenth Century Spain. 3-5 Units.

An analysis of the literature written in Spain during the nineteenth and twentieth centuries dealing with the empire post 1808. Authors discussed include Blanco White, Baroja, Avellaneda, and Rusintilde, among others.

ILAC 333. Spain and the Transatlantic. 3-5 Units.

Course will address a variety of literary works from the 19th century to today, current debates on transatlantic studies, review of recent scholarship, and history. Taught in Spanish.

ILAC 335. Materialism and Literature. 3-5 Units.

Exploration of vibrant materialism (Bennet, Latour) and historical materialism (critical theory) as a basis to approach Latin American commodity novels, i.e., those that revolve around bananas, coffee, etc. Literary works by J.E. Rivera, Garcia Maureque, Asturias, Neruda, Magnus, and others. Taught in Spanish.

Same as: COMPLIT 335A

ILAC 336. Early 20th Century Iberian Poetry. 3-5 Units.

This course will study the development of the dominant trends of early Iberian 20th-century lyric poetry, against the background of Restoration Spain (1875-1930), and the forces of resistance and opposition to its oligarchical and archaic social and political structure. We will concentrate on the major works of the three most important poets: Antonio Machado, Juan Ramoacutenez, and Federico Garciaacutela Lorca. Symbolist-modernist poetry, the creation of symbolic systems, and the brief appearance of surrealism all define key aspects of this avant-garde during the first three decades. Special attention will be given to close stylistic analysis and to the historical and social conditions out of which arose the progressive intellectual and educational movement that gave rise to this renaissance of brilliant lyric poetry. Taught in either English or Spanish depending on class enrollment.

ILAC 341. Roberto Bolaño. 3-5 Units.

The most universally acclaimed Latin American writer since the Boom, Roberto Bolaño has recently joined transnational literary canons. But what does that tell us about the phenomenon of World Literature itself? The class will provide an overview of Bolaño's vast oeuvre by considering nouvelles, selected short stories, and sections of the long novels *The Savage Detectives* and *2666*. The focus will be on exploring the multifarious relationship of Bolaño and the world. Up-to-date critical bibliography includes readings by Sarah Pollack, Gareth Williams, Sergio Villalobos, and others. Taught in Spanish.

ILAC 345. Biopolitics and Sovereignty in Andean Culture, 1920-1940. 3-5 Units.

What is productive life? How is life aesthetically and politically valued? This course explores the inscription of life in changing political and aesthetic regimes of the Andean South in the turbulent decades of the 1920s-1940s. Based on theories of biopower and sovereignty, we explore topics such as domination, domestication, appropriation, exclusion, facism, solidarity, tellurism, race, mestizaje, and human/nature relations. We will consider poetry, narrative, journals, and the visual arts. Authors include: Gabriela Mistral, Pablo Neruda, Pablo de Rokha, Alcides Arguedas, Augusto Ceacutepedes, Franz Tamayo, Leopoldo Marechal, Roberto Arlt, Jorge Luis Borges, Ceacutesar Vallejo, Joseacutecarlos Mariaacutetegui, Ciro Alegriacutear, and Joseacutemariacutear Arguedas. Spanish proficiency required.

ILAC 363. Visions of the Andes. 3-5 Units.

What visions of the Andes circulate in Latin American literature, photography and painting? How are they constructed? How is their value accrued? The course focuses on visual and written images of Andean landscapes. Beginning with 19th century technical photography, the course explores the visual economy of the Andes in representative texts and images from Peru, Bolivia and Chile, vis-a-vis critical discourses about Andean culture. In Spanish.
Same as: ILAC 263

ILAC 367. João/Joyce: Guimarães Rosa and the World Novel. 3-5 Units.

A comparative analysis of Joatildeo Guimaratildees Rosa's (1908-1967) work, with special attention to the novel Grande Sertao-Veredas, translated by a Stanford professor, launched by A. Knopf in 1963. Rosa's fiction disturbs gender, racial, and literary divisions by the creation of a Babelic Brazilian Portuguese language from the sertao. Students increase their literary vocabulary with new terms, nonada and conconversa, and a gallery of Indigenous, Afro-Americans, mestizos, and foreigners' characters. Discussions in English; readings in Portuguese and Spanish.
Same as: COMPLIT 317

ILAC 376. Aesthetics, Revolutionaries and Terrorists. 3-5 Units.

Who is a terrorist and who is a revolutionary? With surge of Anarchism in the XXth Century, the "culture of fear" has been one of the axes of political activism. This course will explore the difference between the desire to correct injustice in society (Revolution) and the desire to destroy society (Terrorism) using literary texts and films. Readings will include novels and testimonies of the protagonists in various social struggles, as well as journalistic and academic papers about these social movements.
Same as: ILAC 276

ILAC 380E. Critical Concepts in Chican@ Literature. 3-5 Units.

Combines primary texts of Chican@ literature with a metacritical interrogation of key concepts informing Chican@ literary criticism, the construction of Chican@ literary history, and a Chican@ literary canon. Interrogates the resistance paradigm and the "proper" subject of this literature, and critiques established genealogies and foundational authors and texts, as well as issues of periodization, including the notion of "emergence" (e.g. of feminist voices or dissident sexualities). Considers texts, authors and subjects that present alternatives to the resistance paradigm.
Same as: CHILATST 201C, CSRE 201C

ILAC 382. Latin@ Literature. 3-5 Units.

Examines a diverse set of narratives by U.S. Latin@s of Mexican, Puerto Rican, Cuban, Guatemalan, and Dominican heritage through the lens of latinidad. All share the historical experience of Spanish colonization and U.S. imperialism, yet their im/migration patterns differ, affecting social, cultural, and political trajectories in the US and relationships to "home" and "homeland," nation, diaspora, history, and memory. Explores how racialization informs genders as well as sexualities. Emphasis on textual analysis. Taught in English.
Same as: CHILATST 200, CSRE 200, ILAC 280

ILAC 389E. Queer of Color Critique: Race, Sex, Gender in Cultural Representations. 3-5 Units.

Examines major questions and issues that arise in considering race, sex, and gender together. Focus on critical and theoretical texts queering ethnic and diaspora studies and bringing race and ethnicity into queer studies. Close reading of texts in a variety of media negotiating racialized sexualities and sexualized identities. How is desire racialized? How is racial difference produced through sex acts? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and structures of power? Same as: CSRE 289E, FEMGEN 389E

ILAC 393. The Cinema of Pedro Almodovar. 3-5 Units.

Pedro Almodovar is one of the most recognizable auteur directors in the world today. His films express a hybrid and eclectic visual style and the blurring of frontiers between mass and high culture. Special attention is paid to questions of sexuality and the centering of usually marginalized characters. This course studies Pedro Almodovar's development from his directorial debut to the present, from the "shocking" value of the early films to the award-winning mastery of the later ones. Prerequisite: ability to understand spoken Spanish. Readings in English. Midterm and final paper can be in English. Majors should write in Spanish.
Same as: ILAC 193

ILAC 399. Individual Work. 1-12 Unit.

For Spanish and Portuguese department graduate students only. Prerequisite: consent of instructor.

ILAC 801. TGR Project. 0 Units.

.

ILAC 802. TGR Dissertation. 0 Units.

.

Iberian Languages Courses

Immersion in the Arts Courses

ITALIC 91. Immersion in the Arts: Living in Culture. 4 Units.

ITALIC is a new residence-based program built around a series of big questions about the historical, critical and practical purposes of art and its unique capacities for intellectual creativity, communication, and expression. This year-long program fosters close exchanges among faculty, students and guest artists and scholars in class, over meals and during excursions to arts events. We trace the challenges that works of art have presented to categories of knowledge (quest; history, politics, culture, science, medicine, law (quest; by turning reality upside-down or inside-out, or just by altering one's perspective on the world. The arts become a model for engaging with problem-solving: uncertainty and ambiguity confront art makers and viewers all the time; artworks are experiments that work by different sets of rules. Students will begin to understand and use the arts to create new frameworks for exploring our (and others' quest;) experience.

ITALIC 92. Immersion in the Arts: Living in Culture. 4 Units.

ITALIC is a new residence-based program built around a series of big questions about the historical, critical and practical purposes of art and its unique capacities for intellectual creativity, communication, and expression. This year-long program fosters close exchanges among faculty, students and guest artists and scholars in class, over meals and during excursions to arts events. We trace the challenges that works of art have presented to categories of knowledge -- history, politics, culture, science, medicine, law -- by turning reality upside-down or inside-out, or just by altering one's perspective on the world. The arts become a model for engaging with problem-solving: uncertainty and ambiguity confront art makers and viewers all the time; artworks are experiments that work by different sets of rules. Students will begin to understand and use the arts to create new frameworks for exploring our (and others') experience.

ITALIC 93. Immersion in the Arts: Living in Culture. 4 Units.

ITALIC is a new residence-based program built around a series of big questions about the historical, critical and practical purposes of art and its unique capacities for intellectual creativity, communication, and expression. This year-long program fosters close exchanges among faculty, students and guest artists and scholars in class, over meals and during excursions to arts events. We trace the challenges that works of art have presented to categories of knowledge -- history, politics, culture, science, medicine, law -- by turning reality upside-down or inside-out, or just by altering one's perspective on the world. The arts become a model for engaging with problem-solving; uncertainty and ambiguity confront art makers and viewers all the time; artworks are experiments that work by different sets of rules. Students will begin to understand and use the arts to create new frameworks for exploring our (and others') experience.

ITALIC 95W. Immersion in the Arts: Living in Culture, Writing Section. 4 Units.

ITALIC is a new residence-based program built around a series of big questions about the historical, critical and practical purposes of art and its unique capacities for intellectual creativity, communication, and expression. This year-long program fosters close exchanges among faculty, students and guest artists and scholars in class, over meals and during excursions to arts events. We trace the challenges that works of art have presented to categories of knowledge; history, politics, culture, science, medicine, law; by turning reality upside-down or inside-out, or just by altering one's perspective on the world. The arts become a model for engaging with problem-solving; uncertainty and ambiguity confront art makers and viewers all the time; artworks are experiments that work by different sets of rules. Students will begin to understand and use the arts to create new frameworks for exploring our (and others') experience.

Immunology Courses

IMMUNOL 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

IMMUNOL 201. Advanced Immunology I. 3 Units.

For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.

Same as: MI 211

IMMUNOL 202. Advanced Immunology II. 3 Units.

Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.

Same as: MCP 202

IMMUNOL 203. Advanced Immunology III. 2 Units.

Key experiments and papers in immunology. Course focuses on the history of Immunology and how current research fits into the historical context. Students work on developing effective presentation skills.

IMMUNOL 204. Innate Immunology. 3 Units.

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

Same as: MI 104, MI 204

IMMUNOL 205. Immunology in Health and Disease. 4 Units.

Concepts and application of adaptive and innate immunology and the role of the immune system in human diseases. Case presentations of diseases including autoimmune diseases, infectious disease and vaccination, hematopoietic and solid organ transplantation, genetic and acquired immunodeficiencies, hypersensitivity reactions, and allergic diseases. Problem sets based on lectures and current clinical literature. Laboratory in acute and chronic inflammation.

IMMUNOL 206. Introduction to Applied Computational Tools in Immunology. 1-2 Unit.

Introduction to the major underpinnings of systems immunology: first principles of development of computational approaches to immunological questions and research; aspects of study design and analysis of data sets; literature and quantifying effects sizes as applied to clinical trial design. Final projects: individual and team reviewed grant proposals (1 unit); individual or team development of grant proposals into projects and journal articles (2 units).

IMMUNOL 206B. Directed Projects in Systems and Computational Immunology. 3-10 Units.

Independent and team grant proposals, developed in Immunol 206A, will continue on as projects and contribute to ongoing research. Number of units assigned dependent upon the difficulty of and time spent on the project. May be repeated for credit.

IMMUNOL 207. Essential Methods in Computational and Systems Immunology. 3 Units.

Introduction to the major underpinnings of systems immunology: first principles of development of computational approaches to immunological questions and research; details of the algorithms and statistical principles underlying commonly used tools; aspects of study design and analysis of data sets. Prerequisites: CS106a and CS161 strongly recommended.

IMMUNOL 209. Translational Immunology. 1 Unit.

(Open to medical students in the Immunology concentration, graduate students, undergraduates by consent of instructor) Journal style format focusing on current basic immunology research and how it is translated into immunotherapies and clinical trials. Topics include hematopoiesis, transplantation, tolerance, immune monitoring, vaccination, autoimmunity and antibodies, rheumatoid arthritis, chronic pulmonary disease, and asthma. May be repeated for credit.

IMMUNOL 210. Immunology Research Seminars for Medical Students. 2 Units.

Required for medical students selecting the Immunology Concentration. Attendance at a minimum of ten seminars related to immunology outside of required medical school classes. A one-page essay on each seminar, what was presented and how it relates to a clinical immunologic problem, is required.

IMMUNOL 215. Principles of Biological Technologies. 3 Units.

The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as fluorescence microscopy, including applications such as FRET and single-cell analysis; human and murine genetic analysis; FACS; proteomics and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program. Same as: MI 215

IMMUNOL 231. Medicine for Innovators and Entrepreneurs. 3-4 Units.

Interdisciplinary, project-based course in which bioscience, bioinformatics, biodesign, bioengineering students learn concepts and principles to understand human disease and work together to propose solutions to medical problems. Diabetes mellitus is used as a paradigm for understanding human disease. Guest medical school and outside faculty. Field trips to Stanford clinics and biotechnology companies. Prerequisite: college level biology.

Same as: PEDS 231

IMMUNOL 260. HIV: The Virus, the Disease, the Research. 3-4 Units.

Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune deficits, opportunistic infections including TB, and malignancies; genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2 to primates, dated the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, pivotal clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest. Same as: MED 260

IMMUNOL 275. Tumor Immunology. 3 Units.

Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoeediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core. Same as: CBIO 275

IMMUNOL 280. Early Clinical Experience in Immunology. 1-3 Unit.

Clinical observation experience for medical students in the Immunology Scholarly Concentration. At the end of the observation period, which may span over one to two quarters, the student submits a case observation paper to his/her faculty sponsor. Prerequisite: IMMUNOL 205.

IMMUNOL 290. Teaching in Immunology. 1-15 Unit.

Practical experience in teaching by serving as a teaching assistant in an immunology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student. May be repeated for credit.

IMMUNOL 299. Directed Reading in Immunology. 1-18 Unit.

Prerequisite: consent of instructor.

IMMUNOL 305. Immunology Journal Club. 1 Unit.

Required of first- to fourth-year graduate students. Graduate students present and discuss recent papers in the literature. May be repeated for credit.

IMMUNOL 310. Seminars in Computational and Systems Immunology. 1 Unit.

Presentation of CSI technologies from recent literature. Discussion of emerging application areas and limitations. Dissemination of computational resources.

IMMUNOL 311. Seminar in Immunology. 1 Unit.

Enrollment limited to Ph.D., M.D./Ph.D., and medical students whose scholarly concentrations are in Immunology. Current research topics.

IMMUNOL 311A. Discussions in Immunology. 1 Unit.

Students discuss papers of speakers in 311, and meet with the speakers. Corequisite: 311.

IMMUNOL 315. Special Topics in Immunology. 1 Unit.

Format for 2014-15 is a year long (three quarter) lecture series comprising directed readings and survey study of these topics in human and mouse immunology: cells of the immune system; innate and adaptive immunity; antibodies and antigens; histocompatibility complex; lymphocyte development and the rearrangement and expression of antigen receptor genes; T-cell and B-cell signaling and activation; immunological tolerance; transplantation; diseases caused by immune responses; allergy; congenital and acquired immunodeficiencies. Graduate students outside immunology and Postdoctoral fellows and clinical fellows are welcome.

IMMUNOL 399. Graduate Research. 1-15 Unit.

For Ph.D., M.D./Ph.D. students, and medical students whose scholarly concentrations are in Immunology.

IMMUNOL 801. TGR Project. 0 Units.

.

IMMUNOL 802. TGR Dissertation. 0 Units.

.

Institute for International Studies Courses

IIS 199. Interschool Honors Program in International Security Studies. 1-5 Unit.

Students from different schools meet in a year-long seminar to discuss, analyze, and conduct research on international security. Combines research methods, policy evaluation, oral presentation, and preparation of an honors thesis by each student. May be repeated for credit.

Interdisciplinary Studies in the Humanities Courses

HUMNTIES 175. BELIEF-UNBEL. 0-60 Units.

.

HUMNTIES 324. The Enlightenment. 3-5 Units.

The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet. Same as: DLCL 324, HISTORY 234, HISTORY 334, HISTORY 432A

International Policy Studies Courses

IPS 201. Managing Global Complexity. 3 Units.

Is international relations theory valuable for policy makers? The first half of the course will provide students with a foundation in theory by introducing the dominant theoretical traditions and insights in international relations. The second half of the course focuses on several complex global problems that cut across policy specializations and impact multiple policy dimensions. Students will assess the value of major theories and concepts in international relations for analyzing and addressing such complex global policy issues.

IPS 202. Topics in International Macroeconomics. 5 Units.

Topics: standard theories of open economy macroeconomics, exchange rate regimes, causes and consequences of current account imbalances, the economics of monetary unification and the European Monetary Union, recent financial and currency crises, the International Monetary Fund and the reform of the international financial architecture. Prerequisites: Econ 52 and Econ 165.

IPS 203. Issues in International Economics. 5 Units.

Topics in international trade and international trade policy: trade, growth and poverty, the World Trade Organization (WTO), regionalism versus multilateralism, the political economy of trade policy, trade and labor, trade and the environment, and trade policies for developing economies. Prerequisite: ECON 51, ECON 166.

IPS 204A. Microeconomics. 4 Units.

Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

Same as: PUBLPOL 301A

IPS 204B. Cost-Benefit Analysis and Evaluation. 4-5 Units.

This class provides the economic and institutional background necessary to use "cost-benefit analysis" or CBA to evaluate public policy. We will examine the economic justification for government intervention and apply these concepts in different policy contexts. We will also examine the theoretical foundations and the practical challenges of implementing CBA. The goal of the course is to provide you with the conceptual foundations and practical skills you will need to be thoughtful consumers or producers of CBA. Prerequisites: ECON 102B or PUBLPOL 303D.

Same as: PUBLPOL 301B

IPS 205. Introductory Statistics for Policy. 5 Units.

Introduction to key elements of probability statistical analysis focusing on international and public policy relevant applications. Topics will include the algebra of events and probability, discrete and continuous random variables, exploratory data analysis and elements of mathematical statistics. The two lectures per week will be structured such that they will involve both theoretical and practical components. Students will be introduced to R statistical programming and LaTeX.

IPS 206. Applied Statistics for Policy. 5 Units.

Introduction to the use of statistical models, as relevant for decision making and data interpretation in policy contexts. Emphasis on regression analysis, as the most frequently used tool in quantitative policy analysis. The purpose of the course is to enable students to become intelligent consumers of regression analysis. Applied experience in both consuming and producing regression analyses, as well as knowledge of the underlying statistical theory.

IPS 207. Governance, Corruption, and Development. 3-5 Units.

The role of governance in the growth and development experience of countries with a focus on the economics of corruption. Topics covered: the concept and measurement of governance; theory and evidence on the impact of corruption on growth and development outcomes, including investment, financial flows, human capital accumulation, poverty and income inequality; the link between governance and financial crises with a focus on the recent global crisis; the cultural, economic, and political determinants of corruption; and policy implications for improving governance. Prerequisite: ECON 50.

IPS 207A. Problem Solving and Decision Making for Public Policy and Social Change. 4-5 Units.

This course introduces skills and bodies of knowledge useful for careers in law, public policy, and achieving social change at scale. These include framing problems; designing, implementing and evaluating strategies; systems design; cost-benefit analysis; decision making under uncertainty; heuristics and biases that affect empirical judgments and decision making; methods for influencing people's behavior ranging from incentives and penalties to "nudges"; and human-centered design. The course will be taught through problems, cases, and a field project to solve real-world problems on or near the Stanford campus, with the goal of integrating strategic thinking and behavioral insights with human-centered design and systems design. Enrollment: Limited to 30 students, with priority given to students in the Law School, the MPP program, and the IPS program, in that order. This course is cross-listed with the Law School (LAW 333) and International Policy Studies (IPS 207A).

Same as: PUBLPOL 305A

IPS 207B. Public Policy and Social Psychology: Implications and Applications. 4 Units.

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, and climate change. Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.

Same as: PSYCH 216, PUBLPOL 305B

IPS 208. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

IPS 208A. International Justice. 4-5 Units.

This course will examine the arc of an atrocity. It begins with an introduction to the interdisciplinary scholarship on the causes and enablers of mass violence; genocide, war crimes, terrorism, and state repression. It then considers political and legal responses ranging from humanitarian intervention (within and without the Responsibility to Protect framework), sanctions, commissions of inquiry, and accountability mechanisms, including criminal trials before international and domestic tribunals. The course will also explore the range of transitional justice mechanisms available to policymakers as societies emerge from periods of violence and repression, including truth commissions, lustrations, and amnesties. Coming full circle, the course will evaluate current efforts aimed at atrocity prevention, rather than response, including President Obama's atrocities prevention initiative. Readings address the philosophical underpinnings of justice, questions of institutional design, and the way in which different societies have balanced competing policy imperatives.

IPS 209. Practicum. 1-8 Unit.

Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major international policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis. May be repeated for credit for a total of 10 units.

IPS 209A. IPS Master's Thesis. 1-10 Unit.

For IPS M.A. students only (by petition). Regular meetings with thesis advisers required.

IPS 210. The Politics of International Humanitarian Action. 3-5 Units.

The relationship between humanitarianism and politics in international responses to civil conflicts and forced displacement. Focus is on policy dilemmas and choices, and the consequences of action or inaction. Case studies include northern Iraq (Kurdistan), Bosnia, Rwanda, Kosovo, and Darfur.

IPS 211. The Transition from War to Peace: Peacebuilding Strategies. 3-5 Units.

How to find sustainable solutions to intractable internal conflicts that lead to peace settlements. How institutions such as the UN, regional organizations, and international financial agencies attempt to support a peace process. Case studies include Bosnia, East Timor, Kosovo, Burundi, Liberia, and Afghanistan.

IPS 213. International Mediation and Civil Wars. 3-5 Units.

This graduate seminar will examine international mediation efforts to achieve negotiated settlements for civil wars over the last two decades. Contending approaches to explain the success or failure of international mediation efforts will be examined in a number of cases from Africa (Sudan, Sierra Leone, Burundi), the Balkans (Bosnia, Macedonia), and Asia (Cambodia, Indonesia/Aceh).

IPS 219. Intelligence and National Security. 3-4 Units.

How intelligence supports U.S. national security and foreign policies. How it has been used by U.S. presidents to become what it is today; organizational strengths and weaknesses; how it is monitored and held accountable to the goals of a democratic society; and successes and failures. Current intelligence analyses and national intelligence estimates are produced in support of simulated policy deliberations.

IPS 224. Economic Growth, Development, and Challenges of East Asia. 3-5 Units.

This course explores economic growth and development in East Asia and the region's current economic policy issues. For the purpose of this course, we will largely focus on China, Japan, and Korea. However, we will incorporate Southeast Asia when relevant. The first part of the course examines economic growth in East Asia and the development strategies pursued. Cross country comparisons will help draw similarities but also differences in the development processes. We will also discuss the validity of an East Asian model for economic growth. The second part of the course focuses on the specific factors relating to economic development, e.g., human capital, firms, infrastructure, institutions, democracy, political leaders, etc. We will also discuss the current challenges and policy issues. Readings will come from books, journal articles, reports, news articles, and case studies. Many of the readings will have an empirical component and students will be able to develop their understanding of how empirical evidence is presented in articles.

IPS 225. Innovation-Based Economic Growth: Silicon Valley and Japan. 4 Units.

Innovation is essential for the growth of a matured economy. An important reason for Japan's economic stagnation over the past two decades was its failure to transform its economic system from one suited for catch-up growth to one that supports innovation-based economic growth. This course examines the institutional factors that support innovation-based economic growth and explores policies that may encourage innovation-based growth in Japan. The course is a part of a bigger policy implementation project that aims to examine the institutional foundations of innovation-based economic growth, to suggest government policies that encourage innovation-based growth in Japan, and to help implement such policies. The central part of the course will be several group research projects conducted by the students. Each student research project evaluates a concrete innovation policy idea. Each student research group is to report the findings to the class and prepare the final paper.

Same as: EASTASN 151, EASTASN 251

IPS 230. Democracy, Development, and the Rule of Law. 5 Units.

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. Same as: INTNLREL 114D, POLISCI 114D, POLISCI 314D

IPS 231. Russia, the West and the Rest. 4 Units.

Focus on understanding the diversity of political, social, and economic outcomes in Russia since the collapse of the Soviet Union. Exploration of questions, including: Is Russia still a global power? Where does it have influence internationally, how much, and why? Developmentally, what is the relevant comparison set of countries? Is Russia's economic growth over the last decade truly similar to Brazil, China, and India or is it more comparable to Kazakhstan, Nigeria, and Kenya? How has Russia's domestic political trajectory from liberalizing country to increasingly autocratic affected its foreign policy toward Ukraine, Georgia, and other formerly Soviet states? Finally, is Russia's reemergence as an important global actor more apparent than real?.

Same as: REES 231

IPS 233. Civil Society, Protest, and Revolution. 3-5 Units.

Study of the role of civil society in protest movements and revolutions which result in either regime change or regime continuity. The course will examine why some protest movements result in change while others do not, and what happens after the protests die out. The course will examine three periods of revolutionary movements in very recent history: Eastern/Central Europe around 1989, some former Soviet Republics in the early 2000s, as well as the Arab Spring countries. We will also compare and contrast these episodes in terms of the actors, environments and ultimate results.

IPS 236. The Politics of Private Sector Development. 3-5 Units.

This is a case-based course on how to achieve public policy reform with the aim of promoting private sector development in developing countries. It will deal with issues like privatization, reducing informality, infrastructure development, trade promotion, and combatting corruption.

IPS 237. Religion and Politics in Comparative Perspective. 4-5 Units.

Israeli democracy lost the historical moment for the establishment of a constitution. A prominent factor affecting the vulnerability of this democracy has been the unbearable tension between State and Religion. Can religion co-exist with politics in a democracy? The research seminar endeavors to establish the comparative dimension for exploring this fundamental issue, particularly in Israeli democracy. Course will include opportunities for applied, team-based research.

IPS 238. Overcoming Practical Obstacles to Policy Implementation. 3-5 Units.

Many of the obstacles to effective governance lie less in the proper formulation of public policies than in their implementation. Modern government is complex, multilayered, and often highly politicized. This course will focus on problems of implementation based on the practical experiences of policy practitioners. This will be a team-taught course utilizing faculty from across the Freeman Spogli Institute for International Studies (FSI), and will encompass diverse policy areas including national security, foreign policy, crime, health, food safety, and environment.

IPS 241. International Security in a Changing World. 5 Units.

This class surveys the most pressing international security issues facing the world today and includes an award-winning two-day international crisis simulation led by Stanford faculty and former policymakers. Guest lecturers have included former Secretary of Defense William Perry, former U.S. Ambassador to Afghanistan Gen. Karl Eikenberry, and former Secretary of State Condoleezza Rice. Major topics covered: cyber security, nuclear proliferation, insurgency and intervention, terrorism, the Arab Spring, and the future of U.S. leadership in the world. No prior background in international relations is necessary.

Same as: HISTORY 104D, POLISCI 114S

IPS 242. American Foreign Policy: Interests, Values, and Process. 5 Units.

This seminar will examine the tension in American foreign policy between pursuing U.S. security and economic interests and promoting American values abroad. The course will retrace the theoretical and ideological debates about values versus interests, with a particular focus on realism versus liberalism. The course will examine the evolution of these debates over time, starting with the French revolution, but with special attention given to the Cold War, American foreign policy after September 11th, and the Obama administration. The course also will examine how these contending theories and ideologies are mediated through the U.S. bureaucracy that shapes the making of foreign policy. ** NOTE: Initial registration for this course does not guarantee enrollment. All interested students should attend the first class. Final enrollment criteria will be detailed on the first day of class. There will be 10 seats for graduate students and 10 seats for undergraduate students.

Same as: GLOBAL 220, POLISCI 217A

IPS 244. U.S. Policy toward Northeast Asia. 5 Units.

Case study approach to the study of contemporary U.S. policy towards Japan, Korea, and China. Historical evolution of U.S. foreign policy and the impact of issues such as democratization, human rights, trade, security relations, military modernization, and rising nationalism on U.S. policy. Case studies include U.S.-Japan trade tensions, anti-Americanism in Korea, and cross-straits relations between China and Taiwan.

IPS 246. China on the World Stage. 3-5 Units.

China's reemergence as a global player is transforming both China and the international system. Other nations view China's rise with a mixture of admiration, anxiety, and opportunism. Some welcome China's rise as a potential counterweight to US preeminence; others fear the potential consequences of Sino-American rivalry and erosion of the US-led international system that has fostered unprecedented peace and prosperity. This course provides an overview of China's engagement with countries in all regions and on a wide range of issues since it launched the policy of opening and reform in 1978. The goal is to provide a broad overview and systematic comparisons across regions and issues, and to examine how China's global engagement has changed over time.

IPS 247. Organized Crime and Democracy in Latin America. 5 Units.

Scholars and policy analysts have long emphasized the strength of the rule of law as a key determinant of economic development and social opportunity. They also agree that the rule of law requires an effective and accountable legal system. The growth of transnational organized crime is a major impediment, however, to the creation of effective and accountable legal systems. This seminar examines how and why transnational criminal organizations have developed in Latin America, explores why they constitute a major challenge to the consolidation of democratic societies, economic development and individual rights. It also examines the efforts of governments to combat them, with a focus on the experiences of Mexico, Colombia, and Brazil. The course examines these cases in order to draw lessons; by pointing to both successes and failures; of use to policy analysts, legal scholars, and practitioners.

Same as: INTNLREL 152, POLISCI 244T

IPS 248. America's War in Afghanistan: Multiple Actors and Divergent Strategies. 4 Units.

Establishing clear and consistent political-military objectives when waging limited wars is an essential but difficult task. Efforts to develop coherent campaign strategies are complicated by competing interests among US government actors (diplomatic, development, military and intelligence), members of the coalition intervention force, and relevant international organizations. This course will examine post-9/11 efforts to defeat Al Qaeda and stabilize Afghanistan from the perspectives of key US, international, and Afghan actors including the White House, State Department, Defense Department, Central Intelligence Agency, United Nations, NATO, Pakistan, and Afghan political elite and civil society. Classes will include presentations by individuals with firsthand diplomatic and military experience in Afghanistan and Pakistan.

IPS 249. Living at the Nuclear Brink: Yesterday and Today. 3 Units.

The development, testing, and proliferation of nuclear weapons will be covered, from World War II through the Cold War to the present. Emphasis will be placed on understanding the evolving role of these weapons, both militarily and politically. It will also examine controversies and opposition movements to nuclear weapons and their use. The course will feature numerous guest speakers from Stanford and beyond. Students will be required to write in-depth analyses of specific nuclear weapons policy questions. Following this course, students are expected to have a deeper understanding of the profound dangers these weapons continue to present to the world today.

Same as: POLISCI 115, POLISCI 315

IPS 250. International Conflict Resolution. 3 Units.

(Same as LAW 656) This seminar examines the challenges of managing and resolving violent inter-group and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach focuses on the following questions: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? Among the conceptual issues we will examine include the problem of spoilers who seek to sabotage agreements, the role of mediators, the role international legal rules can play in facilitating or impeding conflict resolution, and the advantages and disadvantages of unilateral versus reciprocal measures in advancing conflict resolution efforts. Particular conflicts we will explore include the Northern Ireland conflict, the Israeli-Palestinian conflict, and the U.S.-Soviet Cold War rivalry. Prerequisite for undergraduates: consent of instructor.

Same as: PSYCH 383

IPS 250A. International Conflict Resolution Colloquium. 1 Unit.

(Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology.

Same as: PSYCH 283

IPS 252. Implications of Post-1994 Conflicts in Great Lakes Region of Africa: an American Perspective. 3 Units.

Seminar will explore the post-1994 conflicts in the Great Lakes Region from the perspective of the former US Special Envoy to the region. Particular emphasis will be placed on the intensified regional and international efforts to resolve these conflicts since the M23 rebellion of 2012. It will consider the implications these activities have for the region, legal accountability, international peacekeeping and the conduct of American foreign policy. The seminar will include the following segments: 1) the origins and nature of the post-1994 conflicts and recent efforts to resolve them with particular attention to the relationship between modern Congolese history and the Rwandan genocide and the peace-making efforts initiated by the Peace, Security and Cooperation Framework agreement of February 2013; 2) accountability for conflict-related crimes committed in the region including sex and gender-based crimes and the legal and other regimes established to address conflict minerals; and 3) the broader implications of the conflict for American foreign policy in Africa (in particular and in general, and lessons learned about the way in which such policy is formulated) as well as the implications of this conflict for international peace-making and peace-keeping efforts. The course is cross-listed for IPS and law school students.

IPS 264. Behind the Headlines: An Introduction to US Foreign Policy in South and East Asia. 3-5 Units.

Introduction to India, Af-Pak and China. Analyzes historical forces that shaped the region, recent history and current state of key countries: the economic and political rise of India and China; rise of the Taliban and Al Qaeda in Afghanistan; Pakistan's government, military, and mullahs; and China's impact on the region. Explores U.S. policy in depth: U.S. intervention in- and upcoming withdrawal from Afghanistan, U.S. relations with Pakistan and India, the "pivot to Asia" and its implications for US-China relations and the strategic balance in Asia. Satisfies the IPS policy writing requirement.

IPS 266. Managing Nuclear Waste: Technical, Political and Organizational Challenges. 3 Units.

The essential technical and scientific elements of the nuclear fuel cycle, focusing on the sources, types, and characteristics of the nuclear waste generated, as well as various strategies for the disposition of spent nuclear fuel - including reprocessing, transmutation, and direct geologic disposal. Policy and organizational issues, such as: options for the characteristics and structure of a new federal nuclear waste management organization, options for a consent-based process for locating nuclear facilities, and the regulatory framework for a geologic repository. A technical background in the nuclear fuel cycle, while desirable, is not required.

Same as: GES 266

IPS 270. The Geopolitics of Energy. 3-5 Units.

The global energy landscape is undergoing seismic shifts with game-changing economic, political and environmental ramifications. Technological breakthroughs are expanding the realms of production, reshuffling the competition among different sources of energy and altering the relative balance of power between energy exporters and importers. The US shale oil and gas bonanza is replacing worries about foreign oil dependence with an exuberance about the domestic resurgence of energy-intensive sectors. China's roaring appetite for energy imports propels its national oil companies to global prominence. Middle Eastern nations that used to reap power from oil wealth are bracing for a struggle for political relevance. Many African energy exporters are adopting promising strategies to break with a history dominated by the resource curse. This course provides students with the knowledge, skill set and professional network to analyze how the present and past upheavals in oil and gas markets affect energy exporters and importers, their policymaking, and their relative power. Students will gain a truly global perspective thanks to a series of exciting international guest speakers and the opportunity to have an impact by working on a burning issue for a real world client.

IPS 271A. U.S. Human Rights NGOs and International Human Rights. 1 Unit.

(Same as LAW 782) Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario. Same as: ETHICSOC 15R, MED 225, POLISCI 203

IPS 274. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see internationalurbanization.org for details. Prerequisites: consent of the instructor(s).

Same as: EARTHSYS 138, URBANST 145

IPS 280. Transitional Justice, Human Rights, and International Criminal Tribunals. 3-5 Units.

Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

Same as: ETHICSOC 280, INTNLREL 180A

IPS 290. Practical Approaches to Global Health Research. 3 Units.

Enrollment limited to graduate students; undergraduates in their junior or senior year may enroll with consent of instructor only. Introduces research methods for conducting studies involving health in low-income context. Focuses on developing a concept note to support a funding proposal. Addressing research question of student's interest. Skills developed include developing a compelling research question; synthesizing a focused literature review; selecting and adapting appropriate study design, target population, sampling methods, data collection and analysis; addressing human subject issues; developing productive cross-collaboration.

Same as: HRP 237, MED 226

IPS 298. Practical Training. 1-3 Unit.

Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by associate director. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to International Policy Studies students only. May be repeated for credit.

IPS 299. Directed Reading. 1-5 Unit.

IPS students only. May be repeated for credit.

IPS 300. Issues in International Policy Studies. 1 Unit.

Presentations of techniques and applications of international policy analysis by students, faculty, and guests, including policy analysis practitioners.

IPS 316S. Decision Making in U.S. Foreign Policy. 5 Units.

Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies. Interested students should attend the first day of class. Admission will be by permission of the instructor. Priority to IPS students.
Same as: POLISCI 316S

IPS 802. TGR Dissertation. 0 Units.

International Relations Courses

INTNLREL 1. Introduction to International Relations. 5 Units.

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

Same as: POLISCI 1

INTNLREL 12. The Human Rights Fad? International Human Rights Advocacy and the Ethics of Humanitarianism. 1 Unit.

This 1-unit Alternative Spring Break course and trip will explore the world of international human rights advocacy, and the ethics of humanitarianism in the 21st Century. The course will examine the history of human rights and the international system that has been created to promote them. By looking at case studies of historical and current human rights violations, specifically those associated with mass atrocities, we hope to develop our understanding of the term human rights and how it is applied in our world today. We will critically analyze the strategies employed by governments and NGOs to address these crimes committed against humanity.

INTNLREL 13. Not For Sale: Human Trafficking in the Bay Area. 1 Unit.

When we hear the phrase, "human trafficking", we usually envision brothels in India or red light districts in Nepal. Yet, trafficking is a worldwide phenomenon that is occurring right in our backyard, from the massage parlors of San Francisco to the small night clubs of Gilroy. Throughout our course and trip, we will shed light on the impact of trafficking in our daily lives, and why this billion dollar industry is occurring right here in the Bay Area. We will examine trafficking as an intersection of issues, and how topics such as gender, politics, immigration, and, even, economics fuel this dangerous industry. Through arming ourselves with awareness, we, as students, can equip ourselves with knowledge to identify and fight trafficking in our own community.

INTNLREL 40N. World War 1: Ongoing and New Controversies. 3 Units.

This seminar will examine controversies surrounding World War 1. Was Britain's decision to enter the war, the biggest error in modern history? Was Germany responsible for the war? Did the German army commit mass atrocities as was alleged by British propaganda? By studying the arguments and evidence that undergird the controversies, we hope to understand why many older controversies have defied resolution, how new evidence and interpretations may shed light on them, and why new controversies continue to arise.

INTNLREL 60Q. United Nations Peacekeeping. 3 Units.

Focus is on an examination of United Nations peacekeeping, from its inception in 1956 in the wake of the Suez Crisis, to its increasingly important role as an enforcer of political stability in sub-Saharan Africa. Examines the practice of "classic" peacekeeping as it developed during the Cold War, the rise and fall of "second-generation" peacekeeping, and the reemergence of a muscular form of peacekeeping in sub-Saharan Africa more recently. Topics include the basic history of the United Nations since 1945, the fundamentals of the United Nations Charter, and the historical trajectory of U.N. peacekeeping and the evolving arguments of its proponents and critics over the years.

INTNLREL 61Q. Food and security. 3 Units.

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

Same as: EARTHYSYS 61Q, EESS 61Q

INTNLREL 71Q. Aesthetics of Dissent: the Case of Islamic Iran. 2 Units.

Censorship, Borges tells us, is the mother of metaphors. The Islamic regime in Iran censors all aesthetic production in the country. But Iranian dissident artists, from film-makers and fiction writers to composers in a thriving under-ground musical scene, have cleverly found ways to fight these draconian measures. They have developed an impressive body of work that is as sophisticated in style as it is rich in its discourse of democracy and dissent. The purpose of the seminar is to understand the aesthetic tropes of dissent in Iran, and the social and theological roots of rules of censorship. Masterpieces of post-revolutionary film, fiction, and music will be discussed in the context of tumultuous history of dissent in Islamic Iran.
Same as: COMPLIT 40Q

INTNLREL 102. History of the International System. 5 Units.

After defining the characteristics of the international system at the beginning of the twentieth century, this course reviews the primary developments in its functioning in the century that followed. Topics include the major wars and peace settlements; the emergence of Nazism and Communism; the development of the Cold War and nuclear weapons; the rise of China, India, and the EU; and the impact of Islamic terrorism. The role of international institutions and international society will also be a focus as will the challenge of environment, health, poverty, and climate issues to the functioning of the system.

Same as: HISTORY 102

INTNLREL 103E. Global Catholicism. 5 Units.

The rise of Catholicism as a global phenomenon, and its multiple transformations as it spread to the Americas, Asia, and Africa. Topics include the Reformation, Tridentine reform and the Jesuits, the underground churches in England and the Dutch Republic, the missions to Asia, the Spanish conquest of Latin America, conversion and indigenous religions, missionary imperialism and new religious movements in the non-European world.

Same as: HISTORY 203E

INTNLREL 105C. Human Trafficking: Historical, Legal, and Medical Perspectives. 5 Units.

(Same as HISTORY 5C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: FEMGEN 105C, HISTORY 105C

INTNLREL 110C. America and the World Economy. 5 Units.

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit.

Same as: POLISCI 110C, POLISCI 110X

INTNLREL 110D. War and Peace in American Foreign Policy. 5 Units.

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period.

Same as: POLISCI 110D, POLISCI 110Y

INTNLREL 112. Micro Finance, Impact Investment and Gender. 1-2 Unit.

Introduction to microfinance and impact investment as important development efforts in the war against poverty. Why and how microfinance operations have grown to provide financial services to poor and low-income people on a sustainable basis. Advice and best practices from successful practitioners and institutions around the world as well as new technology startups targeting industry. Faculty and student led discussions concerning assigned articles and readings.

INTNLREL 114D. Democracy, Development, and the Rule of Law. 5 Units.

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.

Same as: IPS 230, POLISCI 114D, POLISCI 314D

INTNLREL 118S. Political Economy of International Trade and Investment. 5 Units.

How domestic and international politics influence the economic relations between countries. Why do governments promote or oppose globalization? Why do countries cooperate economically in some situations but not others? Why do countries adopt bad economic policies? Focus on the politics of international trade and investment. Course approaches each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence from many geographical regions around the world. Prerequisites: ECON 1A, ECON 1B, and a statistics course.

Same as: POLISCI 218S

INTNLREL 119. The International Human Rights Movement; Assessing its History, Work and Current Challenges. 4 Units.

This course critically examines the origins of the human rights movement, its present and its future. We will address the limits, challenges and principal dilemmas facing human rights advocates as well as their role in other global agendas such as economic development, humanitarian law and peace-building. In what circumstances is human rights advocacy most and least effective? Can advocacy be counterproductive? The course will examine these questions through critical readings, class discussion and consideration of case studies of rights advocacy.

INTNLREL 122. Introduction to European Studies. 5 Units.

This course offers an introduction to major topics in the study of historical and contemporary Europe. We focus on European politics, economics and culture. First, we study what makes Europe special, and how its distinct identity has been influenced by its history. Next, we analyze Europe's politics. We study parliamentary government and proportional representation electoral systems, and how they affect policy. Subsequently, we examine the challenges the European economy faces. We further study the European Union and transatlantic relations.

Same as: POLISCI 213E

INTNLREL 122A. The Political Economy of the European Union. 5 Units.

EU institutions, the legislative process, policies, relations with the U.S., and enlargement and the future of the EU. History and theories of EU integration. Democratic accountability of the institutions, and the emerging party system. Principal policies in agriculture, regional development, the internal market, single currency, and competition. Emphasis is on policies that affect the relations with the U.S. including trade and security. Results of the EU's constitutional convention.

INTNLREL 123. The Future of the European Union: Challenges and Opportunities. 5 Units.

First, this course analyzes the EU's greatest challenge, preserving the monetary union, and discusses the political and economic reforms needed to achieve that goal. In this context the course also studies the fiscal and budgetary policies of the EU. Second, the course discusses the EU's role in global politics, its desire to play a more prominent role, and the ways to reach that objective. Third, the course analyzes the EU's institutional challenges in its efforts to enhance its democratic character.

INTNLREL 128B. International Problem-Solving Through NGOs: Policy, Players, Strategies, and Ethics. 2 Units.

This course will focus on advanced international problem-solving through the lens of international NGOs, while integrating other relevant players that address global issues within a lens of ethics and accountability. Particular aspects of NGOs that will be assessed are: policy, business, strategy, and engagement with other players. Students will consider the major issues that international NGOs face in their effort to effect positive change in an increasingly complex global environment. The course draws heavily on a series of sophisticated case studies involving a variety of NGOs, areas of specialization, and geographic regions. Topics may include: poverty and famine; the natural resources curse; terrorism; HIV/Aids and other epidemics and neglected diseases; natural disasters and emergencies; climate change; and contagion of unethical behavior. A final project tailored to each student's interest will be in lieu of a final exam. Students will have the opportunity to work with several internationally prominent guests.

Same as: PUBLPOL 128, PUBLPOL 228

INTNLREL 135A. International Environmental Law and Policy. 5 Units.

This course addresses the nature, content, and structure of international environmental law. We will discuss its sources (formal and informal) and general principles, along with the emerging principles (sustainable development, precautionary principle, etc.) We will evaluate the role of international and non-governmental organizations, as well as examine the negotiation, conclusion, and implementation of international environmental agreements. Problem areas to be examined include global warming, stratospheric ozone depletion, exports of hazardous substances, transboundary pollution, trade and environment, and development and environment. RECOMMENDED PREREQ: students have completed INTNLREL 1 and/or INTNLREL 140A.

INTNLREL 136. History of International Relations Thought. 5 Units.

In this course, we will examine the intellectual origins of contemporary theories and approaches to international politics. In particular, we will trace the classical and early modern roots of contemporary realism, idealism, and cosmopolitanism. We will also address some of the enduring normative and empirical questions about international politics: (1) What is the basis of political power and authority? (2) What rights and obligations do individuals have? (3) What rights and obligations do states have? (4) What are the causes of conflict? (5) What are the prospects for enduring peace? Thinkers covered may include: Thucydides, Cicero, Augustine, Aquinas, Grotius, Hobbes, Kant, Morgenthau, and Waltz.

Same as: POLISCI 238T

INTNLREL 136R. Introduction to Global Justice. 4 Units.

Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

Same as: ETHICSOC 136R, PHIL 76, POLISCI 136R, POLISCI 336

INTNLREL 140A. International Law and International Relations. 5 Units.

What is the character of international legal rules? Do they matter in international politics, and if so, to what degree? How effective can they really be? What should we expect from international law in shaping international relations? This seminar will provide introductory knowledge of the foundational principles and sources of public international law and a brief review of the most prominent IR-theories. Besides exploring how these theories address the role of IL in international politics, we will also consider a set of practical problems, where IL and IR intersect most dramatically, such as intervention by force, human rights, and enforcement of criminal law. * Notice to students- registration for this course is not finalized until confirmed by the instructor during the first week of class. All interested students (registered or not) must attend the first class meeting for an in-depth discussion of the syllabus and other course policies. At that (mandatory) meeting a selection process will be conducted to determine final course enrollment.

INTNLREL 140C. The U.S., U.N. Peacekeeping, and Humanitarian War. 5 Units.

The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter's provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan.

Same as: HISTORY 201C

INTNLREL 141A. Camera as Witness: International Human Rights Documentaries. 5 Units.

Rarely screened documentary films, focusing on global problems, human rights issues, and aesthetic challenges in making documentaries on international topics. Meetings with filmmakers.

INTNLREL 142. Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice. 3-5 Units.

This seminar is part of a broader program on Social Entrepreneurship at CDDRL in partnership with the Haas Center for Public Service. It will use practice to better inform theory. Working with three visiting social entrepreneurs from developing and developed country contexts students will use case studies of successful and failed social change strategies to explore relationships between social entrepreneurship, gender, democracy, development and justice. It interrogates current definitions of democracy and development and explores how they can become more inclusive of marginalized populations. This is a service learning class in which students will learn by working on projects that support the social entrepreneurs' efforts to promote social change. Students should register for either 3 OR 5 units only. Students enrolled in the full 5 units will have a service-learning component along with the course. Students enrolled for 3 units will not complete the service-learning component. Limited enrollment. Attendance at the first class is mandatory in order to participate in service learning. Same as: AFRICAST 142

INTNLREL 143. State and Society in Korea. 4 Units.

20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience. Same as: SOC 111, SOC 211

INTNLREL 144. New Global Human Rights. 3 Units.

Examination of emerging trends in international human rights with an analysis of new categories of human rights victims, human rights actors, and human rights technologies.

INTNLREL 145. Genocide and Humanitarian Intervention. 5 Units.

The course, a colloquium, traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo, and Sudan. The final session of the course will be devoted to a discussion of the International Criminal Court and the separate criminal tribunals that have been tasked with investigating and punishing the perpetrators of genocide.

INTNLREL 149. The Economics and Political Economy of the Multilateral Trade System. 5 Units.

The historical development of the multilateral trade system, the current agenda of the World Trade Organization, and prospects for trade liberalization. Emphasis is on the economic rationale for multilateral trade rules, the political problems facing countries in supporting further liberalization, and the challenges to the legitimacy of WTO procedures and practices. Issues include the greater participation of developing countries, the impact of new members, and the relationship between the WTO and other multilateral bodies. Guest speakers; student research paper presentations.

INTNLREL 151. Decoding the Arab Spring and the Future of the Middle East. 5 Units.

The seminar will focus on events of the Arab Spring and the future of the Middle East under new political players. The course will explore themes such as: the issues that forged the identity of the Arab Spring; common features among the Arab Spring countries; mechanisms of street protests against police states, history and current relationship between the military and new political powers; differences and similarities between secularists and Islamists towards public policy; why the Islamists are winning in public polls; scenarios for the region and some countries under new constitutions and parties.

INTNLREL 152. Organized Crime and Democracy in Latin America. 5 Units.

Scholars and policy analysts have long emphasized the strength of the rule of law as a key determinant of economic development and social opportunity. They also agree that the rule of law requires an effective and accountable legal system. The growth of transnational organized crime is a major impediment, however, to the creation of effective and accountable legal systems. This seminar examines how and why transnational criminal organizations have developed in Latin America, explores why they constitute a major challenge to the consolidation of democratic societies, economic development and individual rights. It also examines the efforts of governments to combat them, with a focus on the experiences of Mexico, Colombia, and Brazil. The course examines these cases in order to draw lessons; by pointing to both successes and failures; of use to policy analysts, legal scholars, and practitioners.

Same as: IPS 247, POLISCI 244T

INTNLREL 154. The Cold War: An International History. 5 Units.

Though it ended twenty years ago, we still live in a world shaped by the Cold War. Beginning with its origins in the mid-1940s, this course will trace the evolution of the global struggle, until its culmination at the end of the 1980s. Students will be asked to ponder the fundamental nature of the Cold War, what kept it alive for nearly fifty years, how it ended, and its long term legacy for the world.

Same as: HISTORY 266C

INTNLREL 157. The Political Economy of the Arab Revolutions. 5 Units.

Many observers prefer to interpret the popular uprisings that swept through the Middle East in 2011 as a mere reaction to decades of authoritarian rule and human rights abuses. Conversely, others have underlined the deeper and more structural socio-economic drivers of revolt. This course aims at providing an in-depth analysis of Arab revolutions by employing the tools of political economy and departing from the conviction that revolts are the culmination of lengthy and complex processes rather than just occasional breakdown of authoritarian regimes.

INTNLREL 159. Political Economy of East Asia. 3-5 Units.

(Formerly 117.) Comparative and international political economy of E. and S.E. Asia. Industrial development and the Asian miracle, economic integration, regional cooperation, the Asian financial crisis, and contemporary challenges.

Same as: POLISCI 211

INTNLREL 163. Introduction to Israeli Politics. 5 Units.

This course aims to introduce students to Israel's political system and its major actors. We will survey Israel's political landscape, both chronologically and thematically, covering the major issues and conflicts which have dominated Israeli politics since its inception.

Same as: JEWISHST 279P, POLISCI 249P

INTNLREL 168. America as a World Power: U.S. Foreign Relations, 1914 to Present. 5 Units.

This course will examine the modern history of American foreign relations, from 1914 to the present. Beginning with the fateful decision to intervene in the First World War, it will examine the major crises and choices that have defined the American Century. Our study of U.S. foreign relations will consider such key factors as geopolitics, domestic politics, bureaucracy, psychology, race, and culture. Students will be expected to undertake their own substantial examination of a critical episode in the era studied.

Same as: HISTORY 252K

INTNLREL 173. Presidents and Foreign Policy in Modern History. 5 Units.

Nothing better illustrates the evolution of the modern presidency than the arena of foreign policy. This class will examine the changing role and choices of successive presidential administrations over the past century, examining such factors as geopolitics, domestic politics, the bureaucracy, ideology, psychology, and culture. Students will be encouraged to think historically about the institution of the presidency, while examining specific case studies, from the First World War to the conflicts of the 21st century.

Same as: HISTORY 261G

INTNLREL 174. Diplomacy on the Ground: Case Studies in the Challenges of Representing Your Country. 5 Units.

The tragic death of Ambassador Chris Stevens has recently highlighted the dangers of diplomacy in the modern era. This class will look at how Americans in embassies have historically confronted questions such as authoritarian rule, human rights abuses, violent changes of government, and covert action. Case studies will include the Berlin embassy in the 1930s, Tehran in 1979, and George Kennan's experiences in Moscow, among others. Recommended for students contemplating careers in diplomatic service.

Same as: HISTORY 252B

INTNLREL 177. Bridging the Divide: Civil-Military Relations and Military Service as Public Service. 1 Unit.

How does society conceive of a soldier, a sailor, an airman, a marine? Today fewer than 0.5 percent of Americans serve in the military, as compared to roughly 12 percent during the second World War. This has led to a widening gap in knowledge about the military and its members. This course is intended to introduce students to the notion of military service as public service and explore how misperceptions on both sides affect the civil-military divide.

INTNLREL 180A. Transitional Justice, Human Rights, and International Criminal Tribunals. 3-5 Units.

Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

Same as: ETHICSOC 280, IPS 280

INTNLREL 182. World War I: Three Perspectives. 2 Units.

Required for students participating in the BOSP Overseas Seminar, "Europe 1914 and the Origins of World War I." This course provides historical background on World War I and the events and processes leading up to the war. Taught in three-week segments from the perspectives of military history, political science, and literature, the course aims to help students formulate possible research topics for the Overseas Seminar. Prerequisite application and acceptance/waitlisted statuses into Europe 1914 and the Origins of World War I.

INTNLREL 189. PRACTICAL TRAINING. 1-3 Unit.

Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by the director. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to International Relations students only. May be repeated for credit.

INTNLREL 191. IR Journal. 1 Unit.
(Staff).**INTNLREL 197. Directed Reading in International Relations. 1-5 Unit.**
Open only to declared International Relations majors.n (Staff).**INTNLREL 198. Senior Thesis. 2-10 Units.**

Open only to declared International Relations majors with approved senior thesis proposals.

INTNLREL 200A. International Relations Honors Field Research. 3 Units.

For juniors planning to write an honors thesis during senior year. Initial steps to prepare for independent research. Professional tools for conceptualizing a research agenda and developing a research strategy. Preparation for field research through skills such as data management and statistics, references and library searches, and fellowship and grant writing. Creating a work schedule for the summer break and first steps in writing. Prerequisite: acceptance to IR honors program.

INTNLREL 200B. International Relations Honors Seminar. 3 Units.

Second of two-part sequence. For seniors working on their honors theses. Professional tools, analysis of research findings, and initial steps in writing of thesis. How to write a literature review, formulate a chapter structure, and set a timeline and work schedule for the senior year. Skills such as data analysis and presentation, and writing strategies. Prerequisites: acceptance to IR honors program, and 199 or 200A.

INTNLREL 200C. IR Honors Thesis Writing. 1 Unit.

Mandatory seminar for International Relations Honors Students who are writing their Honors Thesis. INTNLREL 200A and 200B are prerequisites.

INTNLREL 206. Palestinian Nationalism, Past and Present. 5 Units.

The Palestinian national movement and its role in the Arab-Israeli conflict. The roots of the movement in the Ottoman Empire, its growth through the British Mandate, the 1948 and 1967 wars, the Intifada, and the Israeli-Palestinian peace process. Emphasis is on components which contributed to or delayed the growth of a distinct Palestinian identity, including Zionism.

INTNLREL 207. Tribe, State, and Society in the Modern Middle East. 5 Units.

The staying power of tribal identities and values in the Middle East. Examples include the Iraqi Sunni tribal insurgency against the U.S. The role of tribes in the formation of Middle Eastern states and how tribal values continue to impact social, political, and economic issues today.

Introduction to the Humanities Courses

Italian General Courses

Italian Language Courses

ITALLANG 1. First-Year Italian, First Quarter. 5 Units.

All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities.

ITALLANG 1A. Accelerated First-Year Italian, Part 1. 5 Units.

Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: advanced-level proficiency in another Romance language or placement test.

ITALLANG 2. First-Year Italian, Second Quarter. 5 Units.

Continuation of ITALLANG 1. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Itallang 1 or placement test.

ITALLANG 2A. Accelerated First-Year Italian, Part 2. 5 Units.

Continuation of ITALLANG 1A. Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: Placement Test or ITALLANG 1A. Fulfills the University language requirement.

ITALLANG 3. First-Year Italian, Third Quarter. 5 Units.

Continuation of ITALLANG 2. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Itallang 2 or placement test. Fulfills the University language requirement.

ITALLANG 5A. Intensive First-Year Italian, Part A. 5 Units.

Same as ITALLANG 1. Accelerated. Covers 1 quarter of Italian. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

ITALLANG 5B. Intensive First-Year Italian, Part B. 5 Units.

Same as ITALLANG 2. Continuation of 5A. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

ITALLANG 5C. Intensive First-Year Italian, Part C. 5 Units.

Same as ITALLANG 3. Continuation of 5B. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University language requirement.

ITALLANG 15S. Intermediate Italian Oral Conversation. 3 Units.
May be repeated once for credit.**ITALLANG 20. Intermediate Oral Communication: Italy Today. 3 Units.**

Second-year conversational and presentational skills developed through exposure to based on movie clips, slide shows, and other authentic multimedia materials. Guest lectures on Italian culture including opera, pop music, wine, and food culture. Preview of the Florentine experience with Florence returnees sharing their experiences in Italy. Prerequisite: ITALLANG 2A, ITALLANG 3. Repeatable for credit twice.

ITALLANG 21. Second Year Italian, First Quarter. 3-4 Units.

Continuation of 3. Second-Year Italian, First Quarter - Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross cultural understanding. Prerequisite: Placement Test, ITALLANG 3.

ITALLANG 21A. Accelerated Second-Year Italian, Part 1. 4-5 Units.
Continuation of ITALLANG 2A. For students going to Florence. Completes second-year sequence in two rather than three quarters. Prerequisite: placement test, ITALLANG 2A, ITALLANG 3.

ITALLANG 22. Second-Year Italian, Second Quarter. 3-4 Units.
Continuation of ITALLANG 21. Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and excerpts from short stories. Reading, writing, listening, and speaking competence based on cross-cultural understanding. Prerequisite: Placement Test, ITALLANG 21 or equivalent.

ITALLANG 22A. Accelerated Second-Year Italian, Part 2. 4-5 Units.
Continuation of ITALLANG 21A or OSPFLOR 21F (for Florence returnees). Part A of a second-year sequence in two rather than three quarters. Satisfies the foreign language requirement for International Relations majors. Prerequisite: Placement Test, ITALLANG 21A or OSPFLOR 21F.

ITALLANG 23. Second-Year Italian, Third Quarter. 3-4 Units.
Continuation of ITALLANG 22. Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross cultural understanding. Prerequisite: Placement Test, ITALLANG 22 or equivalent. Satisfies the foreign language requirement for International Relations majors.

ITALLANG 99. Language Specials. 1-5 Unit.
Prerequisite: consent of instructor.

ITALLANG 101. Advanced Oral Communication: Italian Opera. 3 Units.
For Florence returnees or those who have completed second-year Italian. Use of opera excerpts by Leoncavallo, Puccini, Rossini, and Verdi to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: Placement Test, second-year Italian or equivalent.

ITALLANG 102. Advanced Oral Communication: Modern Cinema. 3 Units.
For Florence returnees or those who have completed second-year Italian. Use of movie sequences by Italian film directors such as Benigni, Moretti, Salvatores, Soldini, and Tornatore to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisite: placement test, 101.

ITALLANG 103. Advanced Oral Communication: Italian Classic Cinema. 3 Units.
For Florence returnees or those who have completed second-year Italian. Use of classical movie sequences by Italian film directors such as Antonioni, De Sica, Fellini, Rossellini, and Visconti to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisite: second-year Italian.

ITALLANG 113. Italian Cultural Studies. 3 Units.
Literary texts, news reports, comic books, film reviews, music lyrics, and sociological surveys used to examine Italy's language, culture, and society today. Advanced grammatical analysis and reading comprehension. Prerequisite: second-year Italian or equivalent.

ITALLANG 114. Advanced Stylistics and Composition. 3-4 Units.
Goal is advanced proficiency in written Italian. Textual and grammatical analysis of literary and non-literary texts, oral reports, translations, and writing assignments. Prerequisite: Placement Test, second-year Italian or equivalent.

ITALLANG 115. Academic and Creative Writing. 3-4 Units.
Continuation of 114. Academic prose: formal structures and academic terminology. Creative prose: short stories, expressive language, and when and how to break the rules for effect. Prerequisite: second-year Italian or equivalent.

ITALLANG 126. Italy and Italians Today. 2 Units.
May be repeated for credit.

ITALLANG 205A. Intensive First-Year Italian for Stanford Grads, Part A. 3-5 Units.
Equivalent to ITALLANG 5A. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units.

ITALLANG 205B. Intensive First-Year Italian for Stanford Grads, Part B. 3-5 Units.
Equivalent to ITALLANG 5B. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units Prerequisite 205A or equivalent.

ITALLANG 205C. Intensive First-Year Italian for Stanford Grads, Part C. 3-5 Units.
Equivalent to ITALLANG 5C. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units Prerequisite 205B or equivalent.

ITALLANG 250. Reading Italian. 4 Units.
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of Italian or reading proficiency in another Romance language.

ITALLANG 394. Graduate Studies in Italian Conversation. 1-3 Unit.
Prerequisite: consent of instructor.nn (Staff).

ITALLANG 395. Graduate Studies in Italian. 2-5 Units.
Prerequisite: consent of instructor.nn (Staff).

Italian Literature Courses

Italian Literature Courses

ITALIAN 41N. Imagining Italy. 3 Units.
Preference to freshmen. To the English and American literary imagination, Italy has long been a source of fascination. During the past hundred years, writers from Nathaniel Hawthorne to Frances Mayes have explored the broad range of contradictory resonances of the Italian setting, in fiction, travel essays, and memoirs. While some writers have celebrated the sensuality of Italian culture and landscape, others have imagined Italy as a more dangerous place -- as dangerous as the erotic love with which it is often identified. The range of literary responses to Italy by writers in English during the past hundred years will be examined, and the ways in which our culture has continued to construct myths of Italy will be explored. We will also see how these myths have been transformed into commodities in today's consumer culture, making "Italy" one of the most profitable fictions in the marketplace. Taught in English.

ITALIAN 52N. Life is a Play: Identity, Persona, and Improvisation in Luigi Pirandello. 3 Units.

Stanford Introductory Seminar. Preference to freshmen. For Pirandello (1867-1936; Nobel Prize, 1934), to suddenly realize your entire life has been a performance is a moment of utmost horror, comedy, and opportunity for self-awareness. In a quintessentially modern fashion, he claims that the performance cannot be stopped, that authenticity is a mirage, and that learning to laugh at oneself is the only liberation. Materials include Pirandello's existential "theater within the theater," his novels, and their film adaptations, which we will study in their cultural context.

ITALIAN 75N. Narrative Medicine and Near-Death Experiences. 3 Units.

Even if many of us don't fully believe in an afterlife, we remain fascinated by visions of it. This course focuses on Near-Death Experiences and the stories around them, investigating them from the many perspectives pertinent to the growing field of narrative medicine: medical, neurological, cognitive, psychological, sociological, literary, and filmic. The goal is not to understand whether the stories are veridical but what they do for us, as individuals, and as a culture, and in particular how they seek to reshape the patient-doctor relationship. Materials will span the 20th century and come into the present. Taught in English.

Same as: FRENCH 75N

ITALIAN 100. Masterpieces: Dante. 3-5 Units.

An exploration of Dante's "Inferno" (the first of the three canticles of The Divine Comedy). The aim is to learn how to read the poem in detail and in depth, through both slow reading and ongoing reconstruction of Dante's world. We will also ask to what extent Dante's civic identity as a Florentine, especially his exile from Florence, gave momentum to his literary career and helped him become the author of one of the masterpieces of Western literature. Special emphasis is placed on Dante's ethical world view and his representation of character. Taught in English.

ITALIAN 101. Italy: The Good, the Bad and the Ugly. 3-5 Units.

Renowned for its rich cultural tradition, Italy is also one of the most problematic nations in Europe. This course explores the contradictions at the heart of Italy, focusing key phenomena, such as art, corruption, migration, and crises of all kinds. Through the study of historical and literary texts, films, and news media, the course seeks to examine Italy's present and future trajectory by looking to its past as a point of comparison. Taught in English.

ITALIAN 104. La dolce vita: Italian Stereotypes in Film. 3-5 Units.

Passion, nostalgia, mafia, women. What has it meant to be Italian in the past hundred years? How are these stereotypes invented, portrayed and dismantled by filmmakers such as Fellini, Scola, Giordana, Benigni and Torre? This course will address the problem of Italianity; its anomalies and contradictions, and look at how Italians have imagined themselves on the big screen, from the figure of the hopeless romantic to the mafioso. Films will be in Italian with English subtitles. Taught in Italian.

ITALIAN 120. Love Italian Style. 4 Units.

Gateway course for Italian studies. An examination of representations of love and sexuality in Italian literature, art, film, and popular culture from the Italian Renaissance to the current period. Beginning with the figure of Silvio Berlusconi and ending with Dante's love for Beatrice, the course considers differences in social practices and mores over time, the role of literary and artistic representations in establishing cultural expectations about love, the question of gender roles and identity in Italian society, as well as contemporary stereotypes about love in Italy and Italians in love. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent.

ITALIAN 127. Inventing Italian Literature. 4 Units.

An introduction to the study of literature in Italian, especially short prose fiction and poetry. Attention will be given to building a vocabulary and critical tool-set for the interpretation of literary texts from the Middle Ages to the contemporary period. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent (2 years of Italian).

ITALIAN 128. The Italian Renaissance: Power and Perspective. 4 Units.

The literature, art, and history of the Renaissance in Italy. Topics vary year to year. In 2015, the course will address the question of perspective in art, history, politics, literature, and philosophy, with a focus on the Florentine Renaissance. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent (2 years of Italian).

ITALIAN 129. Modern Italian Culture: Literary Landscapes. 4 Units.

Italian national and cultural identity in the 19th and 20th centuries. Topics vary from year to year. In 2015, the course will address the importance of landscape, geography, and regional traditions and languages in modern Italian history and literature. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent (2 years of Italian).

ITALIAN 136. Literature and Politics - Two Mediterranean Cases: Catalonia and Italy. 3-5 Units.

A comparison between the different roles played by writers as members of the intellectual establishment in Catalonia, Spain and Italy. Focus on the relation between intellectuals and politics in shaping national identity. We will give especially consideration to the role played by intellectuals during the Fascist and Francoist dictatorships and during Spain's transition to democracy. Taught in English.

Same as: ILAC 122

ITALIAN 152. Boccaccio's Decameron: The Ethics of Storytelling. 3-5 Units.

This course involves an in-depth study of Boccaccio's Decameron in the context of medieval theories of poetry and interpretation. The goal is to understand more fully the relationship between literature and lived experience implied by Boccaccio's fictions. We will address key critical issues and theoretical approaches related to the text. Taught in English translation, there will be an optional supplementary Italian discussion section during weeks 2-9.

Same as: ITALIAN 352

ITALIAN 154. Film & Philosophy. 4 Units.

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Twelve Monkeys (Gilliam), Ordet (Dreyer), The Dark Knight (Nolan), Vicky Cristina Barcelona (Allen), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English.

Same as: COMPLIT 154A, FRENCH 154, PHIL 193C, PHIL 293C

ITALIAN 155. The Mafia in Society, Film, and Fiction. 4 Units.

The mafia has become a global problem through its infiltration of international business, and its model of organized crime has spread all over the world from its origins in Sicily. At the same time, film and fiction remain fascinated by a romantic, heroic vision of the mafia. Compares both Italian and American fantasies of the Mafia to its history and impact on Italian and global culture. Taught in English.

ITALIAN 181. Philosophy and Literature. 5 Units.

(Formerly CLASSGEN 81) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, PHIL 81, SLAVIC 181

ITALIAN 199. Individual Work. 1-12 Unit.

ITALIAN 214. Pirandello, Sartre, and Beckett. 3-5 Units.

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 281E, COMPLIT 381E, FRENCH 214, FRENCH 314, ITALIAN 314

ITALIAN 215. Italian Film, Fashion, and Design, 1950-1968. 3-5 Units.

In a close analysis of films by Fellini, Antonioni, Rossellini, Pasolini, and Bertolucci, we will explore the various contradictions that fueled the Italian cultural imagination in the 50s and 60s: minimalism and multiplicity, male and female, industrial and archaic, comic and tragic, wealth and poverty. Special emphasis placed on fashion, design, and modernist art. Taught in English, with the option of an additional discussion section in Italian. Occasional screenings Monday evenings at 7pm.

Same as: ITALIAN 315

ITALIAN 220. Early Modern Seminar. 3-5 Units.

Explores some of the key texts of European early modernity and the critical paradigms according to which the idea of the "Renaissance" has been formed, analyzed, and questioned since the 19th century. Will aim to provide a broad introduction to Early Modern studies from the point of view of the Italian Renaissance and its reception in different European contexts. Taught in English.

Same as: DLCL 323

ITALIAN 221. Italo Calvino: Literature, Science, Philosophy. 3-5 Units.

The course will follow the development of Italo Calvino's literary career, with a particular focus on his interest in fantastical and meta-fictional forms of narrative. Readings of Calvino's literary works, such as *Cosmicomics*, *Invisible Cities*, and *Mr. Palomar*, will be supplemented by readings from his critical prose, collected in the volumes *The Uses of Literature* and *Six Memos for the Next Millennium*. Taught in English.

ITALIAN 224. Leopardi, Baudelaire, and Modernity. 3-5 Units.

A close reading of Giacomo Leopardi's *Canti* and Charles Baudelaire's *Flowers of Evil* and *Paris Spleen* in the context of 19th-century Europe. Discussion of the poetry will be enriched by selections from their essays on literature and art and by notes from the *Zibaldone* and *Mon coeur mis a nu*. Key themes and concepts include language, imagination, "noia," "spleen," and the oppositions between nature and civilization, modernity and antiquity. Taught in English.

Same as: FRENCH 224, FRENCH 324, ITALIAN 324

ITALIAN 225. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

Same as: COMPLIT 225E, COMPLIT 325E, ITALIAN 325

ITALIAN 226. Modern Italian Poetry and Ultimate Questions. 3-5 Units.
