(Formerly Law 670) This course explores the law of economic and political crimes associated with the rubric "white collar crime." The class is divided thematically between mens rea issues and substantive issues. Among the substantive areas which are covered are: obstruction of justice, perjury, bribery and gratuities, mail and wire fraud, securities fraud, and money laundering. We will study specific federal statutes in considerable detail, while also speculating about the jurisprudence underlying these crimes, and related issues of prosecutorial discretion and attorney ethics. Special instructions: Students may write a paper in lieu of the final exam for Research credit. Also, classroom participation may be taken into account to some very small degree. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation and final exam or paper.

**LAW 201. Civil Procedure I. 4 Units.**

This course is part of the required first-year JD curriculum. This course is a study of the process of civil litigation from the commencement of a lawsuit through final judgment under modern statutes and rules of court, with emphasis on the federal rules of civil procedure. May include class participation, written assignments, or other elements. Your instructor will advise you of the basis for grading.

**LAW 2010. Sentencing, Corrections, and Criminal Justice Policy. 3 Units.**

(Formerly Law 621) This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system for adult offenders. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore: (1) sentencing theories and their application; (2) the nature, scope and function of jails, prisons, probation and parole; (3) the impact of incarceration on crime, communities, and racial justice; (4) the effectiveness of rehabilitation programs; (5) the collateral consequences of a criminal conviction; (6) special prison populations (e.g., mentally ill) and policies (e.g., solitary confinement); (7) prison litigation and conditions of confinement; and (8) parole, risk prediction, and prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation, and either: (1) three reflection papers of 5 to 7 pages each, or (2) a longer research paper. Due dates will be listed in the class syllabus. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the research (R) requirement, with consent of the instructor. Elements used in grading: Final grades will be based on either the three reflection papers (25% each) or the research paper (75%), and class participation (25%).

**LAW 2015. Advanced Criminal Law. 3 Units.**

The intensity of the current debates over criminal law and criminal justice policy is at an unusually high level, with strong and conflicting positions being staked out in the areas of race and crime, policing, incarceration and sentencing, drug policy, and guns. We will be discussing these topics with a mixture of doctrinal analysis of key issues, review of secondary commentaries on key aspects of criminal justice policy, and analysis of a few empirical papers that illuminate important elements relevant to these legal and policy debates. Elements used in grading: Grading will be based on attendance, class participation, one-to-two-page response papers to readings, and three six-page papers on topics distilled from each of the three three-week blocks in the course.

**LAW 2016. Violence and the Law. 2-3 Units.**

This seminar will explore how the law thinks about violence. Across various legal domains—e.g., criminal law, criminal procedure, juvenile justice, immigration, domestic violence, family law, civil rights, free speech, firearms regulation—we will study when and to what extent the law marks off violence as a category of distinct concern, how violence is defined, and what ideas the law reflects about how violence operates. Students may elect to write a substantial research paper or a series of short response papers. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Response Papers or Final Paper.

**LAW 2018. Wrongful Convictions: Causes, Preventions and Remedies. 3 Units.**

(Formerly Law 381) Over the course of the past two decades there has been increasing recognition that, despite its commitment to the concept of proof beyond a reasonable doubt, our criminal justice system yields a steady stream of wrongful convictions. This Seminar will focus on some causes, preventions and potential remedies for this phenomenon. Subjects to be addressed include eyewitness identification, interrogations and confessions, jailhouse informant testimony, forensic evidence, the psychology of tunnel vision and confirmation bias, the role of appellate review and habeas corpus, the role of clemency, the impact of the problem on the death penalty, and issues around compensation of those who have been wrongly convicted. As we study these subjects, we will also reflect on whether taking some reforms too far will impair on the efficacy of legitimate law enforcement. The class will meet for two hours each week. In addition, there will be three additional evening or weekend sessions (to be scheduled at the convenience of the participants). During each of these additional sessions, students will watch a film involving a wrongful conviction and will engage in conversation about the particular case involved. Each student will be responsible for preparing a paper on an appropriate topic to be chosen in consultation with the instructor. Consent Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation; Paper.

**LAW 2019. Criminal Procedure: Theoretical Foundations. 2-3 Units.**

This course examines the theoretical foundations of criminal procedure—political, historical, and, above all, philosophical. What are the ideas at work in the American system of criminal procedure? How, historically, did the system develop, and why does it presently function as it does? Is the system broken and, if so, what principles should orient us in fixing it? This theoretical inquiry has a practical point. Procedure plays a major role in the present crisis of American criminal justice. By examining criminal procedure's theoretical foundations, this course aims to develop competing "big picture," synthetic perspectives on the criminal justice crisis as a whole. Thus, for students interested in criminal justice reform, this course will equip you to take a philosophically richer view of the underlying policy issues. For students thinking about a career in criminal law, this course will equip you to engage in large-scale thinking about how criminal procedure should change, rather than just working within the doctrinal and institutional structures that exist at present. For students interested in legal academia, this course will develop your ability to read sophisticated theoretical material, to write in the same vein, and to relate theoretical ideas to policy prescriptions. Elements used in grading: Class participation and, based on individual student preference, either a final reflection paper or a final research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Cross-listed with Philosophy (PHIL 375K).

**LAW 2023. Law, Order & Algorithms. 3 Units.**

Data and algorithms are transforming law enforcement and criminal justice, a shift that is ripe for rigorous empirical and narrative exploration. This class is centered around several data-driven projects in criminal justice, with the goal of fostering greater understanding, transparency, and public accountability. Students work in interdisciplinary teams, using a combination of statistical and journalistic methods. Some of the work may be published by news organizations or may be used to advance data journalism investigations. Students with a background in statistics, computer science, law, public policy or journalism are encouraged to participate. Enrollment is limited, and project teams will be selected during the first week of class. Elements used in grading: Class Participation, Written Assignments, Final Paper. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 230), Management Science & Engineering (MS&E 330), Sociology (SOC 279).

**LAW 203. Constitutional Law. 3 Units.**

This course is part of the required first-year JD curriculum. This course offers an introduction to American constitutional law. In addition to examining questions of interpretive method, the course focuses on the powers of the federal government and the allocation of decision making authority among government institutions, including both federalism and separation of powers. Class participation, attendance, written assignments, and final exam. This course is open to first-year Law School students only.

**LAW 205. Contracts. 4 Units.**

This course is part of the required first-year JD curriculum. It provides exposure to basic contract law. The course will identify the scope and purpose of the legal protection accorded to interests predicated on contract and will focus on problems of contract formation, interpretation, performance, and remedies for breach.

**LAW 207. Criminal Law. 4 Units.**

This course is part of the required first-year JD curriculum. It examines the traditional general issues in the substantive criminal law, including the purposes of punishment and the appropriate limits on the use of the criminal sanction. It focuses predominantly on how criminal statutes are organized around objective offense elements (conduct, causation, and attendant circumstances) and mental states, and to a lesser degree on inchoate crimes, complicity, justification and excuse.

**LAW 217. Property. 4 Units.**

This course is part of the required first-year JD curriculum. It deals with possession and ownership of land and with the incidents thereof, including private and public restrictions on its use and development, nuisance, trespass, concurrent interests, landlord and tenant, and eminent domain. Attendance and final exam. Your instructor will advise you of other basis of grading. This course is open to first-year Law School students only.

**LAW 219. Legal Research and Writing. 2 Units.**

Legal Research and Writing is a two-unit course taught as a simulation. Students work on a legal problem starting with an initial interview, and they conduct fact investigation and legal research related to that problem. Students receive rigorous training in reading and analyzing legal authority, and in using persuasive strategies—legal analysis, narrative, rhetoric, legal theory, and public policy—to frame and develop legal arguments. Students write predictive memos and persuasive briefs, and are introduced to the professional norms of ethics, timeliness, and courtesy. This course is part of the required first-year JD curriculum.

**LAW 223. Torts. 4 Units.**

This course is part of the required first-year JD curriculum. It considers issues involved in determining whether the law should require a person to compensate for harm intentionally or unintentionally caused. These problems arise in situations as diverse as automobile collisions, operations of nuclear facilities, and consumption of defective food products. Among other considerations, the course explores various resolutions in terms of their social, economic, and political implications.

**LAW 224A. Federal Litigation in a Global Context: Coursework. 2 Units.**

This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated global torts case set in a federal district court that raises complex issues of federal civil procedure. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and transnational lawyering. Elements used in grading: attendance, class participation, oral argument, assignments in preparation for written briefs (outlines, drafts, research and citation assignments), written briefs, and professionalism. This course is open to first-year Law School students only.

**LAW 224B. Federal Litigation in a Global Context: Methods and Practice. 2 Units.**

This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated global torts case set in a federal district court that raises complex issues of federal civil procedure. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and transnational lawyering. Elements used in grading: attendance, class participation, oral argument, assignments in preparation for written briefs (outlines, drafts, research and citation assignments), written briefs, and professionalism. This course is open to first-year Law School students only.

**LAW 2401. Advanced Civil Procedure: Multiparty Litigation. 3 Units.**

(Formerly Law 253) This introduction to aggregative litigation will cover joinder of claims and parties, class actions, and multidistrict litigation, as well as related topics such as preclusion and brief coverage of remedies and choice of law. The focus will be both doctrinal and practice-oriented, and we will also consider broader questions of how the civil justice system should respond to mass harms as well as proposals for reform. This course is strongly recommended for students planning a practice in private or public civil litigation, managing or supervising litigation, or a judicial clerkship. It provides a basis for advanced courses such as complex litigation. Elements used in grading: Class participation, assignments and in-class Final (modified closed book). This course is open to first-year Law School students.

**LAW 2402. Evidence. 5 Units.**

(Formerly Law 290) Evidence rules constrain proof at criminal and civil trials. We will study the Federal Rules of Evidence, related case law, and those constitutional concepts that limit proof at criminal trials. Topics include relevance, unfair prejudice, character evidence, impeachment, the rape shield law, hearsay, the Confrontation and Compulsory Process Clauses, and expert testimony. Please note that the California Bar Examiners have posted this announcement: "Applicants should be prepared to answer questions that have issues concerning the Federal Rules of Evidence and the California Evidence Code. Applicants should be prepared to compare and contrast the differences between the Federal Rules and the California Evidence Code, especially where the California rules of evidence have no specific counterparts in the Federal Rules." This evidence course covers only the Federal Rules of Evidence and does not address the California Evidence Code. Though similar principles of law govern the Federal Rules and California Code, the two sets of rules are not identical. Students preparing for the California Bar Exam will have to learn some new material. Elements used in grading: Final exam (one-half essay and one-half multiple choice).

**LAW 2403. Federal Courts. 4 Units.**

(Formerly Law 283) This course considers the role of the federal courts in the federal system. It is both an advanced course in constitutional law and a course on the institutional design of the federal courts. On the first, we consider two great themes: the allocation of power between the states and the federal government – federalism – and the relationship between the federal courts and the political branches of the national government – separation of powers. On the second, we focus on the structure of the judicial system, the scope and limits of federal judicial power, essential aspects of federal court procedure, and the evolving structural response of the federal courts to changes in technology, commerce, government, and a multitude of factors that affect the business of the federal courts and the role of federal judges. Topics may include the original and appellate jurisdiction of the federal courts, Supreme Court review of state court judgments, federal common law including implied rights of action, Congressional power to limit the jurisdiction of the federal courts and to create adjudicative bodies within the federal government but outside the requirements of Article III, state sovereign immunity, justiciability, abstention and other doctrines of restraint, and the role of the federal courts in the war on terrorism. This course is highly recommended for students planning to practice in the federal courts, and many judges consider it essential preparation for a judicial clerkship. This course complements Constitutional Litigation (Law 641/Law 7011), and students, especially those who plan to clerk, will benefit from taking both courses. Elements used in grading: Class Participation, Exam.

**LAW 2404. Global Litigation. 4 Units.**

(Formerly Law 749) German owned VW admits that it included a "defeat device" in the software for its diesel cars so they could fraudulently pass US environmental tests, and is sued by thousands of US consumers in state and federal courts in the US. Very quickly, the cases are consolidated here in the federal court in Northern California. Meanwhile, special purpose foundations are established in the Netherlands to seek a settlement with VW on behalf of European consumers under the Dutch collective settlement act, and a securities lawsuit on behalf of investors whose share values have dropped dramatically is filed in Germany, using that country's special group litigation procedure. The Dutch foundations may be coordinating their actions with US lawyers, the shareholders in Germany are represented by the local partners of a leading US-based litigation boutique, and the shareholder suit is funded by a UK-based international litigation financing firm. In 2011, US-based Apple sues Korea-based Samsung for patent infringement in N.D. CA and Samsung counter-sues in Korea, Japan and Germany. A year later more than 50 lawsuits are ongoing in more than 10 countries. Two years later the companies agree to drop their litigation outside the US and focus their resources on their US litigation battle. Apple wins a big judgment in the federal court in San Jose but in the past several years its award has been whittled down and now it is headed for the U.S. Supreme Court for reconsideration. Samsung's counsel of record is Kathleen Sullivan, former dean of Stanford Law School. Philip Morris' Hong Kong subsidiary files a claim in an international arbitration tribunal charging that Australia's public health protection statute regarding tobacco marketing violates Australia's bi-lateral investment treaty with Hong Kong. The arbitration claim is filed after the parent company unsuccessfully challenged Australia's statute before the High Court. In December 2015 the arbitration tribunal rules that it does not have jurisdiction over Philip Morris' claim effectively dismissing it. But controversy over Philip Morris' attempt to use investment arbitration to challenge a health regulation derails international trade negotiations between the US and the EU. These high profile cases illustrate an important aspect of complex litigation: across many different substantive domains, in court and ADR proceedings, disputes that used to be contained within national borders are now trans-national. The seminar will consider the doctrinal, procedural and practical challenges that arise when litigation goes global. We will consider the high profile cases in which these issues have played out in recent years and meet some of the lawyers who are creating a new virtual international court system for the resolution of global disputes. The goal of the seminar is to develop an understanding of how the global dimension of high-stakes complex disputes shapes parties' and lawyers' strategies and judges' decisions. The seminar will meet 3 times a week. A small number of seminar sessions will be conducted in collaboration with law faculty and students in Canada, the Netherlands and Germany, three countries that have adopted procedures for dealing with large-scale civil litigation in distinctive fashion. Special Instructions: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and degree program. Elements used in grading: Class participation and course paper.

**LAW 2406. Conflict of Laws. 3 Units.**

(Formerly Law 251) Instances are common in law where more than one legal authority potentially governs a particular event, occurrence or transaction. When the outcome required by these authorities differs, which law governs? Beginning with the classic problem of choosing an applicable law in cases with facts touching more than one jurisdiction, this course is designed broadly to explore the variety of theories and systems used to resolve this question. The course thus uses state/state conflicts to develop a set of approaches and then extends these to such other problems as adjudicatory jurisdiction, judgments, federal subject-matter jurisdiction, and public and private international law. Elements used in grading: Attendance, preparation, participation and final examination.

**LAW 2502. Climate Change Policy: Economic, Legal, and Political Analysis. 4 Units.**

(Formerly Law 746) This course will advance students' understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Beyond focusing on economic issues and legal constraints, it will address the political economy of various emissions-reduction strategies. The course will consider policy efforts at the local, national, and international levels. Theoretical contributions as well as empirical analyses will be considered. Specific topics include: interactions among overlapping climate policies and between new policies and pre-existing legal or regulatory frameworks; the role that jurisdictional or geographic scale can play in influencing the performance of climate policy approaches; and numerical modeling and statistical analyses of climate change policies. Elements used in grading: Class Participation, Written Assignments, Final Exam. Cross-listed with Economics (ECON 159).

**LAW 2503. Energy Law. 3 Units.**

(Formerly Law 455) The supply of a reliable, low-cost and clean energy supply for the United States is a key determinant of current and future prosperity. Perhaps as a result, electric utilities are among the most heavily regulated of large firms. This statutory and regulatory framework is composed of a complex patchwork of overlapping state and federal rules that is constantly evolving to meet emerging challenges to the energy system. In this course, students will acquire a basic understanding of the law of rate-based regulation of utilities. We will then examine the history of natural gas pipeline regulation in the United States, concluding with the introduction of market competition into US natural gas markets and the advent of shale gas. Next, we will cover the basics of the electricity system, including consumer demand, grid operations, and power plant technologies and economics. We will then revisit cost of service rate regulation as it has been applied in the electricity context. Next we will examine reform of both rate-regulated and wholesale market-based structures, focusing on various attempts to introduce market competition into aspects of the industry and to strengthen incentives for utility investment in energy efficiency. Finally, students will examine various approaches to subsidization of utility scale renewable energy and the growth of distributed energy. Throughout, the course will focus on the sometimes cooperative, sometimes competing, but ever evolving federal and state roles in regulating the supply of electric power. Students will write two 1000 word response papers to questions related to readings and outside speakers in addition to taking a final exam. Elements used in grading: Class participation (20%), written assignments (40%), and final exam (40%).

**LAW 2504. Environmental Law and Policy. 3 Units.**

(Formerly Law 603) Environmental law is critically important and endlessly fascinating. In this course, we will look at the major statutes and policies used, at both the federal and state levels, to protect humans and the environment against exposure to harmful substances, including the Clean Air Act, Clean Water Act, Superfund, the Resource Conservation & Recovery Act, and laws designed to regulate toxic substances. This class will also examine the challenges of global air pollution, including climate change and ozone depletion. The class will look not only at the substance of these laws and policies, but also at enforcement challenges, alternative legal mechanisms for advancing environmental policies (such as voter initiatives and common-law actions), the role of market mechanisms in addressing environmental problems, and constitutional restrictions on environmental regulation. As part of the class, students will engage in a series of situational case studies designed to provide a better sense of the real-world issues faced by environmental lawyers and to teach students the skills and tactics needed to solve those issues. Elements used in grading: Attendance, Class Participation, Exam.

**LAW 2505. Land Use Law. 3 Units.**

(Formerly Law 338) This course focuses on the pragmatic (more than theoretical) aspects of contemporary land use law and policy, including: the tools and legal foundation of modern land use law; the process of land development; vested property rights, development agreements, and takings; growth control, sprawl, and housing density; and direct democracy over land use. We explore how land use decisions affect environmental quality and how land use decision-making addresses environmental impacts. Special Instructions: All graduate students from other departments are encouraged to enroll, and no pre-requisites apply. Student participation is essential. Roughly two-thirds of the class time will involve a combination of lecture and classroom discussion. The remaining time will engage students in case studies based on actual land use issues and disputes. This class is limited to 40 students, with an effort made to have students from SLS (30 students will be selected by lottery) and students from Earth Systems (10 students). Elements used in grading: Attendance, class participation, writing assignments, and final exam. Elements used in grading: Attendance, Class Participation, Final Exam. This course is cross-listed with Earth Systems (EARTHYSYS 238).

**LAW 2506. Natural Resources Law and Policy. 3 Units.**

(Formerly Law 281) Governance of natural resources presents difficult and contentious issues of law and public policy. Debate rages over issues such as proposals to reform the Endangered Species Act, how to manage public lands and whether to privatize them, whether the President can unilaterally revoke the protected status of national monuments, and how to prevent disastrous overfishing of the world's oceans. This course will present a survey of major areas of natural resources law, with particular attention to public-lands law (the law of national parks, forests, wilderness areas, etc.), biodiversity, and agriculture. Additional topics will include environmental justice and the constitutional dimensions of ecological challenges. Throughout the course, we will consider the historical and political context of natural resources law, examining how new ideas and social movements in the past helped to shape current laws, and asking how today's ferment might foreshadow future lawmaking. We will not treat either water law or energy law in depth. Elements used in grading: Class Participation, Final Exam.

**LAW 2508. The Business of Water. 2 Units.**

One of the fastest growing economic sectors is the water field, and private water companies are playing an increasingly important role around the world in water management. In many cases, private companies have made important contributions to meeting water needs (e.g., in the development of new technologies and expanding water supplies). In other cases, however, the involvement of private companies has proven controversial (e.g., when private companies have taken over public water supply systems in developing countries such as Bolivia). This course will look at established or emerging businesses in the water sector and the legal, economic, and social issues that they generate. These businesses include investor-owned water utilities, water technology companies (e.g., companies investing in new desalination or water recycling technologies), water-right funds (who directly buy and sell water rights), social impact funds, innovative agricultural operations, water concessionaires, and infrastructure construction companies and investors. Each week will focus on a different business and company. Company executives will attend the class session and discuss their business with the class. In most classes, we will examine (1) the viability and efficacy of the company's business plan, (2) the legal and/or social issues arising from the business' work, and (3) how the business might contribute to improved water management and policy. Each student will be expected to write (1) two short reflection papers during the course of the quarter on businesses that present to the class, and (2) a 10- to 15-page paper at the conclusion on the class on either a water company of the student's choice or a policy initiative that can improve the role that business plays in improving water management (either in a particular sector or more generally). Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 2509. Clean Energy Project Development and Finance. 3 Units.**

(Formerly Law 774) This case study-oriented course will focus on the critical skills needed to evaluate, develop, finance (on a non-recourse basis), and complete standalone energy and infrastructure projects. The primary course materials will be documents from several representative projects – e.g., solar, wind, storage, carbon capture, transmission, combined heat & power – covering key areas including market and feasibility studies, environmental permitting and regulatory decisions, financial disclosure from bank and bond transactions, and construction, input, and offtake contracts. For virtually every clean energy project, legal documents and financial/business models tend to highly customized. By examining actual projects and transactions we can learn how developers, financiers, and lawyers work to get deals over the finish line—deals that meet the demands of the market, the requirements of the law, and (sometimes) broader societal goals, in particular climate change, economic competitiveness, and energy security. Elements used in grading: Class Participation (35 %), Lecture-based Assignment (15 %), Group Project (50 %). Absences affect grade. Also open to engineering graduate students. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with Graduate School of Business (GSBGEN 335).

**LAW 2510. California Coast: Science, Policy and Law. 4 Units.**

(Formerly Law 514) This interdisciplinary course integrates the legal, scientific, and policy dimensions of how we characterize and manage resource use and allocation along the California coast. We will use this geographic setting as the vehicle for exploring more generally how agencies, legislatures, and courts resolve resource-use conflicts and the role that scientific information and uncertainty play in the process. Our focus will be on the land-sea interface as we explore contemporary coastal land-use and marine resource decision-making, including coastal pollution, public health, ecosystem management; public access; private development; local community and state infrastructure; natural systems and significant threats; resource extraction; and conservation, mitigation and restoration. Students will learn the fundamental physics, chemistry, and biology of the coastal zone, tools for exploring data collected in the coastal ocean, and the institutional framework that shapes public and private decisions affecting coastal resources. There will be 3 to 4 written assignments addressing policy and science issues during the quarter, as well as a take-home final assignment. Special Instructions: In-class work and discussion is often done in interdisciplinary teams of students from the School of Law, the School of Engineering, the School of Humanities and Sciences, and the School of Earth, Energy, and Environmental Sciences. Students are expected to participate in class discussion and field trips. In place of weekly class meetings on Friday mornings, we will have 2-3 Saturday field trips throughout the quarter. Elements used in grading: Participation, including class session and field trip attendance, writing and quantitative assignments. Cross-listed with Civil & Environmental Engineering (CEE 175A/275A).

**LAW 2512. Cities and Sustainability: Current Issues, Policy, and Law. 2 Units.**

Cities are on the front lines of solving many of society's sustainability problems, from advancing green buildings and clean energy, to preparing for the effects of climate change. With a diminishing role of the federal government on environmental policy and regulation, it is up to sub-nationals like states and cities to lead innovation and deployment of clean energy, resilience strategies, water management, and more. This class will explore the evolving role of cities in advancing sustainability from the lens of law, policy, planning, and governance. Some of the topics we will discuss in-depth include climate mitigation, clean energy, green buildings, climate adaptation and resilience, water supply and reuse, land use and transportation, and more. Case studies will focus on U.S. cities with some emphasis on California. Overarching themes across all content areas include legal constraints of city authority, governance, socioeconomic tradeoffs, and the roles of various types of institutions in developing, advancing, and advocating for local policy change. Elements used in grading: Attendance, Class Participation, Written Assignments, Exam.

**LAW 2513. Climate: Politics, Finance and Infrastructure. 2-3 Units.**

While climate change is often considered an 'environmental problem', the risks and opportunities embedded in a changing climate go well beyond the frame of the natural environment. This course will reframe climate as a macroeconomic challenge, one in which multilateral politics, global investment and physical and institutional infrastructure must be understood and reconsidered. Based on scholarly analysis and guest speakers, this interdisciplinary course will cover the past, present and future pillars of climate politics and finance. Starting with the policy framework established by past global climate negotiations, the bulk of the course will investigate current innovations at the intersection of finance and policy, including risk management and disclosure, blended finance, distributed solutions, and resilience measures. The final sessions will consider the future, taking a look at how future leaders might solve the greatest challenge of our time. Elements used in grading: Students may take the course for 2 units (section 1) or 3 units (section 2). Section 1 and 2 students will both receive grades for attendance, in class participation and guest-speaker questions. Section 1 students will also complete a group presentation on the design of a financial, legal or policy intervention with the potential to reduce emissions on a large scale. Section 2 students will be required to write a research paper meeting the Law School's R paper requirements. This class is limited to 25 students, with an effort made to have students from SLS (15 students will be selected by lottery) and 10 non-law students by consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

**LAW 2515. Environmental Justice. 3 Units.**

(Formerly 768) This course will introduce environmental justice as a social movement, including its central substantive concerns (the needs of humans in the built environment rather than the need to protect the environment from humans) and its methods (community-based political organizing rather than professionalized judicial or legislative action). The bulk of the course will then pursue a broader conception of environmental justice today by using social science research, theory, and case studies to investigate the civil rights and poverty aspects of environmental safety and natural resources. The course will include units on: (1) toxic exposure and public health disparities stemming from the disproportionate siting of locally-unwanted land uses in poor neighborhoods of color; (2) access to natural resources and basic public services, including clean water, wastewater disposal, and open space; (3) tools in environmental justice advocacy (including community-based lawyering, Title VI of the Civil Rights Act of 1964, the Fair Housing Act, common law nuisance actions, and transactional lawyering); (4) environmental justice issues in Indian Country, and (5) environmental justice issues in climate change policy. Much of the course material, including student presentations, will be grounded in the experiences and advocacy histories of specific communities, both urban and rural, across the country. Elements used in grading: Class participation, in-class presentation, final paper.

**LAW 2517. Modern Crosscurrents in Energy and Environmental Law. 3 Units.**

This course explores the close relationship between energy and environmental law. We will work through the major energy sectors and, for each, discuss key environmental law and policy issues that are influencing energy production and use. Our focus will be on current issues. We'll explore environmental issues that are traditionally associated with the energy sector, including air emissions, waste disposal and cleanup, and oil spills, while also covering new environmental issues emerging from the energy sector including climate change-related regulatory and business risk issues, energy infrastructure permitting issues, and environmental pressure points on the utility industry and on renewable energy and conventional energy projects, more generally. Elements used in grading: Exam; one written assignment; class participation.

**LAW 2518. U.S. Environmental Law in Transition. 1 Unit.**

This course offers an accessible survey of timely topics in environmental law and policy as the United States transitions presidential administrations. Taught by two practicing lawyers, the class introduces students from any background to the interactions between local, state, and federal environmental law as they apply to critical policy issues. We will analyze major changes in federal policy, providing historical context for the transformations now underway in the laws and institutions that shape environmental outcomes in the United States. Elements used in grading: Attendance, Class Participation, Final Paper. Cross-listed with Earth Systems (EARTHSYS 108 & 208).

**LAW 2519. Water Law. 3 Units.**

(Formerly Law 437) This course will study how society allocates and protects its most crucial natural resource – water. The emphasis will be on current legal and policy debates, although we will also examine the history of water development and politics. Although the course will focus on United States law and policy, insights from the course are applicable to water regimes throughout the world, and we will occasionally look at law and policy elsewhere in the world for comparison. Among the many issues that we will consider are: how to allocate water during periods of scarcity (particularly as climate change leads to more extremes); alternative means of responding to the world's growing demands for water (including active conservation); the appropriate role for the market and private companies in meeting society's water needs; protection of threatened groundwater resources; environmental limits on water development (including the U.S. Endangered Species Act and the "public trust" doctrine); constitutional issues in water governance; Indian water rights; protection of water quality; challenges to substantively reforming existing water law; and interstate and international disputes over water. Students will be expected to participate actively in classroom discussions. Elements Used in Grading: Class participation, attendance and final exam.

**LAW 2520. Climate Law and Policy. 3 Units.**

This course offers an interdisciplinary, graduate-level survey of current and historical efforts to regulate emissions of greenhouse gases in the United States and around the world. Students will read primary legal documents—including statutes, regulations, and court cases—in order to evaluate the forces and institutions shaping American climate policy. Additional perspectives from climate science, economics, and political science will provide context as students analyze the evolution of climate law and policy regimes. Elements used in grading: Grades will be based on class attendance, class participation, and either written assignments and an exam (section 01) or a final paper (section 02). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Cross-listed with Environment and Resources (ENVRES 222).

**LAW 3001. Health Law: Finance and Insurance. 3 Units.**

(Formerly Law 348) This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at <https://syllabus.stanford.edu>. Elements used in grading: Participation, attendance, and final exam. Cross-listed with Graduate School of Business (MGTECON 331), Health Research & Policy (HRP 391) & Public Policy (PUBLPOL 231).

**LAW 3002. Health Law: Quality and Safety of Care. 3 Units.**

(Formerly Law 727) Concerns about the quality of health care, along with concerns about its cost and accessibility, are the focal points of American health policy. This course will consider how legislators, courts, and professional groups attempt to safeguard the quality and safety of the health care patients receive. The course approaches "regulation" in a broad sense. We will cover regimes for determining who may deliver health care services (e.g. licensing and accreditation agencies), legal and ethical obligations providers owe to patients (e.g. confidentiality, informed consent), individual and institutional liability for substandard care, and various proposals for reforming the medical malpractice system. We will also discuss the Patient Protection and Affordable Care Act (aka, "Obamacare"), which is launching many new initiatives aimed at assuring or improving health care quality. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Exam or Final Paper. Cross-listed with School of Medicine (MED 209).

**LAW 3003. Health Law: The FDA. 3 Units.**

(Formerly Law 458) This course will examine the Food and Drug Administration. It will focus largely on the FDA's regulation of drugs and biologics, but will also cover its regulation of medical devices, nutritional supplements, and its jurisdiction over special legal, social, and ethical issues arising from advances in the biosciences. Special Instructions: The class is open to all law students and graduate or professional students from other parts of the University. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Elements used in grading: Attendance, class participation, and final exam (In-school, open book). Cross listed with Health Research and Policy (HRP 209).

**LAW 3004. Law and Biosciences: Genetics. 2 Units.**

(Formerly Law 480) This seminar will focus on ethical, legal, and social issues arising from advances in our knowledge of human genetics. These will drawn from topics such as forensic uses of genetics, genetic testing, widespread whole genome sequencing, genome editing, genome synthesis, the consequences of genetics for human reproduction, and the ethics of genomic biobanks for research, among other things. Students are required to write a research paper for this course. Special Instructions: The class is open to all law students and graduate or professional students from other parts of the University. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Students will be required to submit an independent research paper. Elements used in grading: Class participation, attendance and final paper. Cross-listed with Health Research & Policy (HRP 221).

**LAW 3005. Law and Biosciences Workshop. 1-2 Unit.**

(Formerly Law 654) This workshop seminar will provide students with the opportunity to examine and critique cutting-edge research and work in the field of law and the biosciences presented by different speakers from Stanford and elsewhere. Although it is open to all students, the seminar is designed especially for those with an interest in the field who wish to stay abreast of current issues, work, and ideas. In each class, an academic expert, policy maker, or practitioner will present his or her current research or work and engage in a robust discussion. Students may take this class for one or two units. It will meet eight times for 2 hours, 15 minutes per session; students will need to attend at least six of the eight sessions and, for each session attended, write a reflection piece of roughly three double-spaced pages, due just before the speaker's presentation. The class is open to first-year Law School students. Elements used in grading: Class participation, attendance, and written assignments.

**LAW 3006. Law and Biosciences: Neuroscience. 2 Units.**

(Formerly Law 368) This seminar examines legal, social, and ethical issues arising from advances in the biosciences. This year it will focus on neuroscience. It will examine how neuroscience will affect the law, and society, through improvements in predicting illnesses and behaviors, in "reading minds" through neuroimaging, in understanding responsibility and consciousness, in "treating" criminal behavior, and in cognitive enhancement. Students who have taken the Law and the Biosciences (Genetics) seminar in past years may receive additional credit for taking this year's class. The class is open to 1Ls. Elements used in grading: Class participation, attendance and final research paper. Cross-listed with Health Research & Policy (HRP 211).

**LAW 3009. Health Law: Improving Public Health. 3 Units.**

(Formerly Law 762) This course examines how the law can be used to improve the public's health. The major questions explored are, what authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the benefits and pitfalls of using laws and litigation to achieve public health goals? The course investigates these issues as they operate in a range of specific contexts in public health, including the control and prevention of infectious disease; preventing obesity; reducing tobacco use; ensuring access to medical care; reducing firearm injuries; and responding to public health emergencies. In these contexts, we will ask and answer questions such as, what do the Constitution and key statutes permit? What makes a good public health law? Where do we see success stories—and failures—in public health law? What ethical and economic arguments justify government intervention to shape individuals' and companies' health-related behaviors? Instruction is through interactive lectures with a significant amount of class discussion and some group exercises. Class Participation, Written Assignments, Final Exam. Cross-listed with Medicine (MED 237).

**LAW 3010. Mental Health Law. 2 Units.**

This class will review basic issues surrounding mental health law. Units will include a) Mental health in the criminal justice system; b) forced treatment and hospitalization; c) qualification for government benefits; d) discrimination under ADA; e) incapacity and other issues in the civil law context. Elements used in grading: Class Participation, Written Assignments, Final Paper.

**LAW 3254. How to Ask a Question. 2 Units.**

(Formerly Law 715A) Asking questions is at the core of the role of an attorney. Whether it is interviewing a potential new client, interrogating a witness in a deposition, or conducting a direct or cross examination at trial, knowing how to ask a question is an essential lawyering skill. We'll explore textual materials and real life case examples in transcripts, videotape, and cinema to determine the principals and best practices for questioning. We'll learn how to prepare for questioning, how to focus, narrow, and broaden an examination, how to obtain key admissions, how to deal with a difficult opponent, when to stop asking, and how to use what's been obtained in court or otherwise to win for your clients. This course will give you the skills and tools needed for the critical roles of understanding your clients and your cases and successfully representing their causes. Class attendance is required. Shanin Specter is a founding partner of Kline & Specter, P.C., in Philadelphia, concentrating in catastrophic injury litigation. He has obtained more than 200 settlements or verdicts in excess of \$1 million and is a member of the Inner Circle of Advocates, whose membership is limited to the top 100 plaintiffs' attorneys in the United States. Elements used in grading: assessment of two brief and one longer reaction papers, as well as classwork.

**LAW 3258. Responsibility for Risk: Perspectives on Liability Insurance. 2-3 Units.**

This seminar will explore the intellectual foundations of the institution of insurance, including the following key questions: How is insurance to be conceived: from a contract perspective? a tort perspective? a private governmental perspective? Correlatively, what are the economic and ethical dimensions of risk classifications and management? How serious are the concerns about moral hazard and adverse selection—core concepts of insurance law? What standards should be used to resolve insurance bad faith claims? And, when a party is sued and the liability insurer controls the party's defense, how should the defense lawyer hired by the insurer navigate—and conceive of—this triangular relationship? The pervasive role of insurance in addressing societal concerns about accidental harm is vitally important but has been remarkably under-examined in the traditional law school curriculum. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, reflection papers or research paper. Early drop deadline.

**LAW 3502. Art and the Law. 2 Units.**

(Formerly Law 236) This course covers the legal, public policy, and ethical issues that concern artists, art dealers, auction houses, museums, collectors, and others who comprise the world of visual art. Our focus will be on artists' rights (including copyright, resale royalties, moral rights, and freedom of expression issues), how the market in art functions (such as the artist-dealer relationship, auction rules, and issues faced by collectors), and the legal and ethical rules governing the collection, donation, and display of visual art, particularly for museums and their donors. The course focuses on certain recurrent themes: How do statutes and courts define (or attempt to define) art—and how is art defined differently for different legal purposes? How does the special character of art justify or require different treatment under the law from that accorded other tangible personal property, and how does (and should) the expressive nature of art affect the way it is owned, protected, regulated, or funded? We anticipate having two or three visitors to the class during the quarter, such as a gallery owner, auctioneer, and museum director. In addition, we will also have the students participate in at least one or two interactive negotiation simulation exercises inspired by real situations and controversies in the art world. Graduate students from other departments are welcome to take this course with the permission of the instructor. This class is limited to 30 students, with an effort made to have students from SLS (25 students will be selected by lottery) and 5 non-law students by consent of instructor. Elements used in grading: Class participation, attendance, final exam.

**LAW 3504. History of American Law. 3 Units.**

(Formerly Law 318) This course examines the growth and development of American legal institutions with particular attention to crime and punishment, slavery and race relations, the role of law in developing the economy, and the place of lawyers in American society, from colonial times to the present. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final exam or paper. Automatic grading penalty waived for writers. Cross-listed with History (HISTORY 152 - Consent of instructor required) & (HISTORY 352B).

**LAW 3505. Law and Culture in American Fiction. 3 Units.**

(Formerly Law 345) This seminar examines the way literary texts register changes in property law, the law of contracts, intellectual property and legal constructions of race, gender, and privacy, especially as they relate to the maintenance of personal identity, community stability, and linguistic meaning. The terms and stakes of these relationships will inform our readings of the texts themselves, as well as our understanding of their representations of law. The writers whose work we will consider include James Fenimore Cooper, Herman Melville, Henry James, Nella Larsen, Willa Cather, William Faulkner, and Sherman Alexie. Each week, a novel or story will be paired with relevant legal and historical readings. We will also consider the points of contact between literary narrative and narrative in law. English Department cognate course. Special instructions: Course requirements include class attendance and participation, three short response papers, and two longer papers. For Research "R" credit, students may petition to complete one long paper based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, written assignments and final paper. Automatic grading penalty waived for writers.

**LAW 3506. Law and Empire in U.S. History. 2-3 Units.**

This course will examine the interrelationship between legal norms and empire in the history of the United States. Topics in this part will include the Constitution as an imperial document; law and the expansion of the United States in western North America, Puerto Rico, and Hawaii; the Insular Cases; and current debates over extraterritoriality and the War on Terror. Substantial readings will consist of scholarly articles, historical cases, and primary sources, and will be provided online. Requirements for the course include regular class participation and, at the students' election, either response papers or a historiographical essay. Students may also elect to complete a research paper, in which case they will receive 3 units and "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Cross-listed with History (HISTORY 354F).

**LAW 3507. Law and the Rhetorical Tradition. 3 Units.**

(Formerly Law 304) In this interdisciplinary seminar we will explore the rhetorical underpinnings of legal argument. In the first half of the course, we will acquaint ourselves with relevant elements of the rhetorical tradition. In the second half, we will analyze a variety of legal texts (both written and oral) with an eye to the use and function of rhetorical principles, as well as the ways form and content are mutually constitutive. This course aims both to increase students' understanding of rhetoric as readers and interpreters of legal texts and to develop students' skills as writers and speakers. Students will be expected to participate in class discussion in addition to completing a series of writing assignments including the rhetorical analysis of legal and non-legal texts and the revision of students' legal writing. Special Instructions: This course can satisfy the Research "R" requirement. The instructor and the student must agree whether the student will receive "R" credit. For "R" credit, the paper is substantial and is based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, assignments, final paper. Automatic grading penalty waived for writers.

**LAW 3508. Law and Visual Culture. 3 Units.**

(Formerly Law 760) We know it when we see it. But what kind of knowledge does a smartphone or dashboard camera video offer? We tend to treat certain kinds of video as unmediated representations of reality, even though as sophisticated consumers of media we should know better. Neuroscience, empirical research, and cultural theory all refute this so-called reality effect. But the desire that drives it—the desire for definitive proof of what did or did not happen—arises from very real experience, and is inextricably connected to the legal process. This seminar tracks the legal reception of modern visual representation from the confusion about the admissibility of photographs in the late 19th century (is it like a drawing? is it like eyewitness testimony?) to the debate about cameras in the courtroom in the late 20th century (do judges and jurors decide differently when the proceedings are subject to public scrutiny?) to the frequent and strategic deployment of visual media in pretrial and litigation practice today. We will also explore the prominent role of video in today's conversation about policing and race. Course materials range from film theory to social psychology to presentations by practicing attorneys. Special Instructions: This course can satisfy the Research "R" requirement. The instructor and the student must agree whether the student will receive "R" credit. For "R" credit, the paper is substantial and is based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements Used in Grading: Class Participation. Attendance, Written Assignments, Final Paper. Automatic grading penalty waived for writers.

**LAW 3510. Psychological Development: Myth, Law, and Practice. 2 Units.**

(Formerly Law 491) Collective myths from a variety of traditions and cultures capture enduring psychological truths about human choices and the human condition. Lawyers at various stages in their careers have their own personal myths, sometimes conscious and sometimes not. These personal myths embody key tendencies that determine or heavily influence each lawyer's personal and professional path. This course uses some salient collective myths as well as modern psychological material to create a powerful backdrop for self-examination and self-development. It offers a space and time for each student to consider his or her own personal and professional direction through the course materials, class interactions, and a series of reflection papers. The course benefits from the collaboration of Ron Tyler, Director of the Criminal Defense Clinic, who will conduct a session focusing on mindfulness practices. Elements used in grading: A series of reflection papers totaling at least 18-pages.

**LAW 3511. Writing Workshop: Law and Creativity. 3 Units.**

(Formerly Law 239) Practicing law is very much a creative enterprise. Effective advocates and counselors provide innovative and thoughtful solutions to complex problems. But there often isn't enough attention devoted in law school either to thinking creatively or to reflecting in a creative way on the issues students confront inside and outside the classroom. This course will respond to this gap by building a bridge between law and the arts, with the goal of helping students hone their ability to think creatively and use disciplined imagination. Law & Creativity will meet twice a week and have dual components designed to inform one another. The first session will be structured as a seminar in which students gather to examine and discuss creative treatments of legal and professional issues in a variety of media (including film, fiction, and nonfiction). The second session will follow the creative-writing workshop model in which students submit their own fiction and creative nonfiction pieces for group discussion. Through the workshop process, students will develop the skills necessary to constructively critique and workshop one another's work, and learn a variety of techniques for improving their own creative writing. Elements used in grading: Class attendance, participation and final paper.

**LAW 3512. Markets, Morals and the Law. 2 Units.**

What things should or should not be for sale - and why? This course will consider several examples of "blocked exchanges" or "contested commodities," including the trade in reproductive services, body parts, environmental resources, political rights and obligations, and the varieties of human labor. With readings drawn from law, philosophy, and moral and political economy, the purpose of the course will be to examine a range of contemporary controversies over commodification and to consider arguments about the appropriate scope and limits of market activity. The assigned reading will be substantial, varied, and demanding. Elements used in grading: Attendance, Class Participation, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 3514. Law and Inequality. 1 Unit.**

This reading group will focus on the challenges presented to law by the long-term growth of economic inequality. In addition to exploring evidence of rising inequality (including the work of Thomas Piketty and others), we will examine legal and other scholarship that seeks to understand law's contribution to inequality and legal responses that might reduce inequality or ameliorate its effects. Meeting Time: TBD with instructor. Elements used in grading: Attendance, Class Participation. Same as: Reading Group

**LAW 3515. Law and Humanities Workshop: History, Literature, and Philosophy. 2-3 Units.**

(Formerly Law 516) The Law and Humanities Workshop: History, Literature, and Philosophy is designed as a forum in which faculty and students from the Law School and from various humanities departments can discuss some of the best work now being done in law and humanities. Every other week, an invited speaker will present his or her current research for discussion. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Students have two options. Those taking the course for 2 units are required to write a brief response to each speaker's paper. There will be a total of four speakers, and thus four papers. Guidance will be provided concerning how to frame these response papers, which will be due every two weeks - i.e., on the day before the speaker presents. Students taking the course for 3 units are required to write a research paper on a law and humanities topic that they choose (in consultation with the professors). Law students who complete this 3-unit track will receive an "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Enrollment will be limited to 30 students - 20 from SLS who will be selected by lottery and 10 from H&S. Elements used in grading: Class participation, attendance, and writing assignments. Cross-listed with the Department of History (HIST 308F).

**LAW 3517. Law and Literature. 3-4 Units.**

After its heyday in the 1970s and 1980s, many wondered whether the law and literature movement would retain vitality. Within the last decade there has, however, been an explosion of energy in the field, which has expanded beyond the boundaries of the literary text narrowly conceived and incorporated a range of other genres and humanistic approaches. Several recent or forthcoming books survey the range of emerging scholarship and the potential for new directions within the field. Using one of these—*New Directions in Law and Literature* (Oxford, 2017)—as a guide, this course will delve into a variety of topics that law and literature approaches can illuminate. These include, among others, conceptions of sovereignty and non-sovereign collectivities, the construction of the citizen and refugee, competing visions of marriage and its alternatives, law and the rhetorical tradition, and theoretical perspectives on intellectual property. Nearly every session will pair recent scholarship in the field with a literary or artistic work, ranging from Claudia Rankine's *Citizen* to Shakespeare's *Merchant of Venice*. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 3 or 4 units, depending on the paper length. This class is limited to 22 students, with an effort made to have students from SLS (16 students will be selected by lottery) and six non-law students by consent of instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Cross-listed with English (ENGLISH 350).

**LAW 3518. Law and Psychology. 3 Units.**

This course will examine the implications of psychological theory and research for normative legal theory and for contemporary legal policies, procedures, and practices. The course will draw on contemporary cognitive, social, and clinical psychology to address the concepts of intent, responsibility, deterrence, retribution, morality, and procedural and distributive justice. We will examine evidence law (e.g. eyewitness testimony, polygraphy, expert testimony, psychiatric diagnosis and prediction), procedure (e.g., trial conduct, jury selection, settlement negotiations, alternative dispute resolution), and various topics in criminal law, torts, contracts, property, discrimination, family law, and other areas. We will compare "rational actor" and psychological perspectives on decision making by juries, judges, attorneys, and litigants. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Series of shorter papers or final independent research paper totaling 28 pages.

**LAW 3519. Law and the Greek Classics. 1 Unit.**

This one credit course, based on materials taught at the Aspen Institute, will read and discuss selected classical Greek documents (in translation, of course) of particular relevance to the contemporary practice of law. We will begin with a reading of two Platonic dialogues – *Crito* and the *Apologia* – to frame the question of whether Socrates should have resisted the lawful, but unjust, verdict condemning him to death. We'll focus of the tension between law and justice, perhaps peeking forward to Melville's *Billy Budd*, and MLK Jr.'s *Letter from the Birmingham Jail*. We will continue with the third play in Aeschylus' *Oresteia*, focusing on the decision to remit Orestes to the judgment of the people of Athens, rather than to the Furies, in connection with the murder of Clytemnestra. We'll focus on the decision to vest secular authorities with the definition of justice. We'll close with a reading of *Antigone*, focusing on the relationship between the individual and the state, and the gendered nature of justice. I often end the seminar with an informal public reading of the *Antigone*. I play Creon, maybe this year in a Trump mask. I anticipate four to five meetings, usually over dinner in one of the seminar rooms. Meeting Time: TBD with instructor. Discussion will be informal, and non-hierarchical. Elements used in grading: Attendance, Class Participation.  
Same as: Reading Group

**LAW 400. Directed Research. 1-4 Unit.**

Directed Research is an extraordinary opportunity for students beyond the first-year to research problems in any field of law. The final product must be embodied in a paper or other form of written work involving a substantial independent effort on the part of the student. A student must submit a detailed petition of at least 250 words, approved by the sponsoring faculty member, outlining his or her proposed project and demonstrating that the research is likely to result in a significant scholarly contribution. A petition will not be approved for work assigned or performed in a course, clinic, or externship for which the student has or will receive credit. A petition must indicate whether the product is intended for publication in a law review or elsewhere. A student may petition for "Directed Research: Curricular Development" when the work involves assisting a Law School faculty member in developing concepts or materials for new and innovative law school courses. Both the supervising faculty member and the Associate Dean for Curriculum must approve petition for "Directed Research: Curricular Development." Students must meet with the instructor frequently for the purposes of report and guidance. Unit credit is by arrangement. Students whose projects warrant more than four units should consider a Senior Thesis or the Research Track. See SLS Student Handbook for requirements and limitations. With the approval of the instructor, a directed research project of two-units or more may satisfy one research writing course (R course). Elements used in grading: As agreed to by instructor. Directed Research petitions are available on the Law School Registrar's Office website (see Forms and Petitions).

**LAW 4001. Communications Law: Broadcast and Cable Television. 3 Units.**

(Formerly Law 447) Most people watch television on a regular basis (although not necessarily on TV). Television entertains, delivers the news, and provides an important forum for debating political issues. Focusing on communications law and first amendment law, the course will discuss how and why regulation shapes what we see on TV, and how it attempts to ensure that television can fulfill its functions for society. For example, why is cable television so expensive? Why can comedians swear on cable TV, but not on broadcast TV? Should regulators care as much about violence as they do about indecency? Can we trust the market to give the audience what it wants? Will the market provide content that is in the public interest, such as local news or educational programming, or do regulators need to intervene? Should we care if media outlets are increasingly owned by a few small conglomerates? And how does the Internet affect the need for ownership regulation? The course mostly focuses on the U.S., but highlights developments elsewhere where appropriate. Special instructions: Students may take Communications Law: Internet and Telephony and Communications Law: Broadcast and Cable Television in any order (neither is a prerequisite for the other). There are no prerequisites for this course. No technical background is required. Elements used in grading: Class participation, attendance, final exam.

**LAW 4003. Current Issues in Network Neutrality. 2 Units.**

(Formerly Law 731) Due to the change in administration, the future of net neutrality in the US is in question again. Network neutrality rules are based on a simple principle: Internet service providers like Verizon or Comcast that connect us to the Internet should not control what happens on the Internet. Net neutrality rules prohibit ISPs from blocking or slowing down websites, making some sites more attractive than others, or charging sites fees to reach people faster. After a long, public fight that mobilized more than 4 million people across the political spectrum, the Federal Communications Commission (FCC) adopted strong net neutrality rules in February 2015. Now these rules might be on the chopping block. FCC Chairman Pai, who opposed the rules when they were adopted, has declared his intention to roll back the rules, while expressing some support for "net neutrality principles." At the same time, Republicans in Congress have indicated they might consider a legislative solution. Through lectures, class discussions, and guest speakers, the seminar will introduce students to the key questions underlying the net neutrality debate so that they can become informed participants in this debate. Do we need net neutrality rules, and, if yes, what should they be? What are the options for addressing net neutrality at the FCC and in Congress? How do past court decisions constrain the FCC's options for adopting net neutrality rules? While the class focuses on the net neutrality debate in the U.S., the underlying policy questions are general and directly applicable to ongoing net neutrality debates around the world. The class is open to law students and students from other parts of the university. Students do not need to have any technical background to participate in the class; any necessary background will be taught in class. Elements used in grading: Short written assignments, class participation, attendance. Students are expected to attend all sessions of the class and participate in the class discussion. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 4004. Cybersecurity: A Legal and Technical Perspective. 2 Units.**

This class will use the case method to teach basic computer, network, and information security from technology, law, policy, and business perspectives. Using real world topics, we will study the technical, legal, policy, and business aspects of an incident or issue and its potential solutions. The case studies will be organized around the following topics: vulnerability disclosure, state sponsored sabotage, corporate and government espionage, credit card theft, theft of embarrassing personal data, phishing and social engineering attacks, denial of service attacks, attacks on weak session management and URLs, security risks and benefits of cloud data storage, wiretapping on the Internet, and digital forensics. Students taking the class will learn about the techniques attackers use, applicable legal prohibitions, rights, and remedies, the policy context, and strategies in law, policy and business for managing risk. Grades will be based on class participation, two reflection papers, and a final exam. Special Instructions: This class is limited to 65 students, with an effort made to have students from SLS (30 students will be selected by lottery) and students from Computer Science (30 students) and International Policy Studies (5 students). Elements used in grading: Class Participation (20%), Written Assignments (40%), Final Exam (40%). Cross-listed with Computer Science (CS 203) and International Policy Studies (IPS 251).

**LAW 4005. Introduction to Intellectual Property. 4 Units.**

(Formerly Law 409) This is an overview course covering the basics of intellectual property law – trade secrets, patents, copyrights, and trademarks, as well as selected other state intellectual property rights. This course is designed both for those who are interested in pursuing IP as a career, and those who are looking only for a basic knowledge of the subject. There are no prerequisites, and a scientific background is not required. Elements used in grading: Class participation and final exam (4-hour, open-book, in-class final).

**LAW 4006. Intellectual Property and Antitrust Law. 3 Units.**

(Formerly Law 459) This is an advanced seminar focusing on antitrust law as it applies to the creation, licensing, and exercise of intellectual property rights. At least one IP or antitrust class is a prerequisite, and ideally both. Papers will be due before the Law School deadline. Draft papers will be due in time for student presentations. Elements used in grading: Class participation and final paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 4007. Intellectual Property: Copyright. 3 Units.**

(Formerly Law 324) This course provides an introduction to copyright law and policy. Students will learn the fundamental substantive and procedural features of copyright law, including subject matter requirements and limitations on protection with respect to validity, infringement, and defenses, as well as the boundaries between federal copyright law and other IP regimes. It will explore the source and nature of copyright protection, as well as the various justifications offered for such protection. In addition to familiarity with the Copyright Act and extensive case law, students will gain an understanding of copyright policy. Whose work should be protected, to what extent, and under what circumstances? Which unauthorized uses should count as infringing, and why? Special emphasis will be placed on the evolution of copyright in the digital era, since copyright law has evolved nearly constantly, in connection with new technologies, creative practices, and business models, as well as legislative and political shifts. There is no prerequisite for this course. Elements used in grading: Attendance, Class Participation, Exam.

**LAW 4008. Intellectual Property: Copyright Licensing, Principles, Law and Practice. 2 Units.**

(Formerly Law 625) This course will combine in-depth study, through reading assignments and lectures, of US law governing copyright transactions (contract formalities and construction; recordation and title practice; termination of transfers) and copyright contract drafting and negotiation exercises (book publishing agreement; videogame production and distribution agreement). Elements used in grading: Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 4009. Intellectual Property: International and Comparative Patent Law. 2 Units.**

(Formerly Law 796) Patentable goods and services are increasingly important in today's global information economy, and they frequently cross national borders, physically or electronically. This course will include a comparative examination of the major national patent systems, a survey of the principal international patent treaties, and discussions of related transnational patent issues. We will examine these topics both from the perspective of global patent practitioners – who face challenges such as securing large international patent portfolios and strategizing multinational patent litigation – and from the perspective of the academics and policymakers who are engaged in ongoing patent harmonization debates. Prerequisites: Introduction to Intellectual Property or consent of instructor. Law students enrolled in this class will have the option of participating in a one-week extension of the course (Law 4030) in Tokyo, Japan during spring break for an additional credit. Students may enroll for this course alone or for both this course and Law 4030. The overseas option is limited to 12 students. (See Law 4030 for application instructions and deadline). Elements used in grading: class participation, attendance, and short writing assignments.

**LAW 4010. Intellectual Property: Patents. 3 Units.**

(Formerly Law 326) In this course we cover the major aspects of patent law, primarily as applied in the United States: patentability (including patentable subject matter, novelty, nonobviousness, enablement, and definiteness); infringement; and remedies. The emphasis is on essential legal principles and a policy analysis of the patent system. The course is designed to be useful both as solid background for non-patent-specialists and for those planning a career in the field. Introduction to Intellectual Property or consent of the instructor is a prerequisite for this course. No technical background is required. Law students enrolled in this class will have the option of participating in a one-week extension of the course (Law 4030) in Tokyo, Japan during spring break for an additional credit. Students may enroll for this course alone or for both this course and Law 4030. The overseas option is limited to 12 students. (See Law 4030 for application instructions and deadline). Elements used in grading: Class participation, attendance, and final exam.

**LAW 4011. Intellectual Property: The Business & Law of Technology & Patent Licensing. 3 Units.**

(Formerly Law 753) If you practice in any technology-related area (whether transactions, corporate, or litigation), you will encounter licensing, as it is the principal means by which technology and patent rights are disseminated, exploited and commercialized. It is fundamental to Silicon Valley and beyond, including in software, mobile, consumer devices, autonomous cars, semiconductors and pharmaceuticals. This is a practice-oriented course covering the fundamentals of licensing technology and patents, including business considerations, drafting, negotiations and strategic considerations. We will also consider the role of licensing in mergers and acquisitions, litigation and antitrust contexts. The course is structured based on a real-world hypothetical involving entrepreneurs who spin out university-developed inventions into startup companies and then seek to commercialize the technology and patents to leading companies in a specified technology industry (such as smartphones, autonomous cars, "internet of things" or the like). We will also have a guest lecturer from a major technology company with significant licensing dimensions (which in the past have included Google, Waymo, and Qualcomm). Elements used in grading: Class Participation, Final Exam.

**LAW 4012. Intellectual Property: Trademark and Unfair Competition Law. 3 Units.**

(Formerly 337) Brands today constitute one of the main sources of business value, often outstripping the value of physical assets and, indeed, of a company's other intellectual property. This course will focus on the exploitation of merchandising values (such as brand names and logos), celebrity values (such as product endorsements) and competitive advantage (such as technical know-how) under federal and state trademark, unfair competition, right of publicity and trade secret laws. Elements used in grading: Final Exam.

**LAW 4013. Information Privacy Law. 2 Units.**

(Formerly Law 775) This course will explore the roots of privacy law, its evolution in the 20th century in the face of ever changing technology, and the challenges of individual control over or government regulation of information in the modern era where institutions and individuals need and reveal information constantly, but also seek basic dignity and safety from harm. Privacy law is comprised of torts, contracts, constitutional law, statutory law, international law, soft law norms, and affected by emerging technologies. We will discuss all of these things, as well as incorporate developments in the news, from the perspective of the various privacy stakeholders—consumers, regulators and business. Elements used in grading: Final Exam.

**LAW 4014. Law, Technology, and Liberty. 2 Units.**

New technologies from gene editing to networked computing have already transformed our economic and social structures and are increasingly changing what it means to be human. What role has law played in regulating and shaping these technologies? And what role can and should it play in the future? This seminar will consider these and related questions, focusing on new forms of networked production, the new landscape of security and scarcity, and the meaning of human nature and ecology in an era of rapid technological change. Readings will be drawn from a range of disciplines, including science and engineering, political economy, and law. The course will feature several guest speakers. There are no formal prerequisites in either engineering or law, but students should be committed to pursuing novel questions in an interdisciplinary context. The enrollment goal is to balance the class composition between law and non-law students. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course is cross-listed with Bioengineering (BIOE 242) and Engineering (ENGR 243).

**LAW 4015. Modern Surveillance Law. 2 Units.**

(Formerly Law 692) This seminar provides an in depth look at modern government surveillance law, policies and practices. It is taught by Richard Salgado, director of law enforcement and information security at Google and a former prosecutor at the U.S. Department of Justice's Computer Crime and Intellectual Property Section, and Todd Hinnen, a partner at Perkins Coie and a former head of U.S. Department of Justice's National Security Division. The course will cover the technology, law and policy of government surveillance of the Internet and other communications technologies. We will focus on U.S. government surveillance for national security, criminal law enforcement and public safety purposes, but also address the relationship with other jurisdictions. Technologies and practices covered will include wiretapping, stored data collection and mining, location tracking and developing eavesdropping techniques. Legal regimes will include the Fourth Amendment, the Foreign Intelligence Surveillance Act, the USA Freedom Act, USA Patriot Act, the Electronic Communications Privacy Act, and CALEA among others. Elements used in grading: Two papers, timely submission of topics and outlines, and class participation.

**LAW 4016. Patent Litigation Workshop. 3 Units.**

(Formerly Law 322) This course simulates the strategy and pretrial preparation of a patent lawsuit. The course materials include information typical to a patent lawsuit: a patent, file history, prior art, and information regarding the accused product. Students will represent either the patentee or the accused infringer. Students will draft claim construction charts, infringement charts, take and defend depositions, and brief and argue claim construction and motions for summary judgment of infringement and invalidity. Some knowledge of patent law is presumed. Special Instructions: IP: Patents (Law 326) is a prerequisite for this course, but can be taken coterminously. Students must attend the first class session (or contact the instructor) or they will be dropped from the class or waitlist. Elements used in grading: Attendance, participation, writing assignments, exercises and oral arguments.

**LAW 4017. Advanced Torts: Defamation, Privacy, and Emotional Distress. 3 Units.**

(Formerly Law 373) This course will examine the theoretical foundations and common law development of the range of tort remedies designed to afford protection to the interests in personality. Defamation, the right of privacy, and claims of emotional distress and harassment will receive particular attention, along with the constitutional defenses to these claims, based on the First Amendment, and recent issues novel to the Internet era. Elements used in grading: Final Exam.

**LAW 4018. Intellectual Property: International and Comparative Copyright. 2 Units.**

(Formerly Law 745) Few copyright licenses today fail to reach across national borders, and copyright litigation increasingly calls for a general understanding of foreign copyright law. This course will focus on the counselling considerations that surround the exploitation of music, film, literature and other copyrighted works in foreign markets through licensing, litigation, or both. The course will survey the principal legal systems and international treaty arrangements for the protection of copyrighted works as well as the procedural questions that lie at the threshold of protection. Elements used in grading: class participation; two reflection papers.

**LAW 4019. Legal Informatics. 2-3 Units.**

(Formerly Law 729) The management of information is crucial to the proper functioning of any legal system. A good legal system relies on information about the world itself (such as evidence of who did what and when) as well as more purely legal information (such as court rulings, statutes, contracts, and so forth). Legal Informatics is the theory and practice of managing such information. It covers both legal theory and information theory. It also covers elements of general information processing technology as well as applications of that technology in the administration of law. While the concept of Legal Informatics is not new, its importance is greater than ever due to recent technological advances - including progress on mechanized legal information processing, the growth of the Internet, and the proliferation of autonomous systems (such as self-driving cars and robots), as well as globalization of the legal industry. The upshot of these advances is the emergence of practical legal technology that is qualitatively superior to what has gone before. This technology is capable of dramatically changing the legal profession, improving the quality and efficiency of legal services and disrupting the way law firms do business. The technology is also capable of popularizing the law - bringing legal understanding and legal tools to everyone in society, not just legal professionals. Through this class students gain an understanding of the unique challenges and opportunities the legal system and the legal industry are facing in light of this tech-driven transformation of our legal system, and learn about innovative new approaches seeking to address them. Particular attention will be given to Computational Law, the branch of Legal Informatics concerned with the mechanization of legal analysis. Expert guest-speakers from academia and industry will provide for a diverse and interdisciplinary experience. Successful legal technology entrepreneurs and thought leaders in the legal technology space will provide a practical angle to the discussion. Class sessions include: Legal Document Search and Legal Document Analysis, Consumer Law, Computational Law and Logical Worksheets, Dialog Systems / Expert Systems, Predictive Analytics, Legal Ethics and the Unauthorized Practice of Law. Grades will be based on class participation (25% of grade) and one of the following two options: Option 1 (section 01): Legal Technology Project (individual or group; 75% of grade). Students can identify a legal information problem and develop a legal tech project, individually or as part of a team, to address the problem by preparing a technical demonstration project/prototype and in form of a written report about the project. Students will be asked to build their own system using Neota Logic, <https://www.neotalogic.com/>, or Stanford's Worksheets system, <http://worksheets.stanford.edu>. Option 2 (section 02): Independent Research Paper (individual; 75% of grade). Students shall write an independent research paper on a legal informatics topic. You are invited to propose a topic and a working title and to discuss your topic ideas with us. The topic and the working title of the research paper must be approved by the instructors, before you start your detailed research. Independent research papers require by definition that students include other research materials besides the readings for class. Students electing option 2 will receive Research (R) credit. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the length of the research paper. If you wish to earn 2 units, the research paper shall be at least 18 pages in length (double-spaced, 12-point font size, 1-inch margins). If you wish to earn 3 units, the research paper shall be at least 26 pages in length (double-spaced, 12-point font size, 1-inch margins). You can find examples of papers written by last year's students on the CodeX website at <https://law.stanford.edu/codex-the-stanford-center-for-legal-informatics/codex-publications/#slnav-semantic-papers>. Each student can choose one of the above two options, whichever he/she prefers. After the term begins, students electing option 2 can transfer from section (01) into section (02), with consent of the instructor. During the course, students will be asked to provide a brief description of their project. There are no prerequisites for this class. Elements used in grading: Class Participation, Attendance, Legal Technology Project, Research Paper. Cross-listed with Computer Science (CS 204).

**LAW 4020. Lawyering for Innovation: A Case Study. 3 Units.**

(Formerly Law 769) Strategic lawyering in the 21st century requires a combination of critical skillsets, including facility with technology, product design, partnerships, dispute resolution, and policy. No issue in the digital age has demonstrated this better than the history of and litigation surrounding Google Books. For over a decade, from the inception of the product to the resolution of its legal issues, lawyers were integrally involved with engineers and the business every step of the way. They helped design its features, defend it from lawsuits, craft a settlement, and advocate complementary policy positions. On a broader level, the history of ebooks is a microcosm of the opportunities and challenges of the digital age: new technologies to reproduce and distribute works, changing consumer norms, massive disruptions to economic interests, evolving concepts of fair use, increased access to information, fears about piracy, and threats to competition. Every one of these issues requires skilled lawyering in close partnership with business leadership. This seminar will focus on strategic lawyering at the cutting edge of innovation by closely studying, among other things, the history of Google Books and the evolution of copyright in the digital age. We will look at how leading businesses, including Google, Apple, Amazon and Microsoft, have each used law, litigation, and policy as tools to advance their business interests. We will focus on developments related to ebooks, and also study analogous issues involving the music, movie, and newspaper industries. The seminar will include guest speakers who have led legal strategies to further innovation. Some copyright experience is helpful but not essential. The course is open to graduate students throughout the university, especially the Graduate School of Business, the Department of Communication, and the Journalism Program. Special Instructions: Students on the waitlist for the course will be admitted if spots are available on the basis of their position on the waitlist and degree of study. Elements used in grading: Grading will be based upon weekly reflections, class participation, and a short final paper (or, for those opting for Research credit, a longer paper based on independent research). A version of this course was taught at Stanford Law School in 2015 and Harvard Law School in 2016. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

**LAW 4021. Free Speech in the Age of the Internet. 2 Units.**

Taught by top policy leaders from Google/YouTube, Facebook and Twitter, this course will explore the way free speech norms have evolved in the age of the Internet and the pivotal role online platforms play in the information available worldwide. From the content policy issues that evolved in the face of violent geopolitical disputes (from the Arab Spring to the Ukraine), to the Right to be Forgotten in Europe, the challenges posed by terrorist propaganda online, and the role platforms play in social movements like #blacklivesmatter, this course will allow students to critically engage the balance between freedom of information and other important social values, such as privacy and security. After the term begins, students accepted into the course can transfer from section (01) into section (02), with consent of the instructor. Elements used in grading: Attendance, Class Participation, Written Assignments; Exam or Final Paper.

**LAW 4022. Communications Law: Internet and Telephony. 3 Units.**

(Formerly Law 481) The internet has enabled new forms of innovation, content production and political participation that are transforming our economy, society and democratic system. Technical, legal and economic choices will affect whether the Internet can realize its potential or not. Communications law - the law that governs both the physical infrastructures for communications services such as cable and telephone networks as well as the communication services which are provided over these infrastructures - has become one of the most important arenas in which choices affecting the future of the information society are made. The debates over network neutrality or the right ways to foster broadband deployment are examples of this trend. At the same time, the Internet's ability to support a variety of different communications services such as telephony, information services or video over the same physical network infrastructure challenges the existing communications law, which is based on the assumption that different physical infrastructures offer different communications services. What can regulators and legislators do to allow the Internet to realize its economic, social, cultural, and political potential? How can we foster the deployment of more broadband networks? And how can policymakers allow applications like Internet telephony and traditional telephony to coexist without giving one an unfair advantage over the other? The course will address how current law deals with these questions, but also explore what regulators and legislators may do to better deal with the challenges posed by the Internet. The course is mostly focused on the US, but highlights developments elsewhere where appropriate. Special Instructions: Students may take Communications Law: Internet and Telephony and Communications Law: Broadcast and Cable Television in any order (neither is a prerequisite for the other). There are no prerequisites for this course. No technical background is required. Elements used in grading: Class participation, attendance, final exam.

**LAW 4024. Patent Prosecution. 2 Units.**

(Formerly 321) This skill-based course examines the core requirements and strategies for drafting and prosecuting a patent application before the U.S. Patent & Trademark Office (US PTO). The class brings in real inventors and US PTO patent examiners to give students a real-world experience of developing a patent, understanding patentability and building patent portfolios, and getting a patent application prosecuted through the patent office. Students will interact with the inventors and examiners to gain the experience of getting a patent issued – through interactions with an inventor to develop an idea and draft a patent application, responding to rejections and office actions from the US PTO after filing the patent application, through interactions with examiners to interview the office action and getting the application issued. This course is open to people with technical or non-technical backgrounds – all you require is an interest in patent law. A solid understanding of patent claims and internal mechanics (which this class focuses on) will be helpful experience and background for students interested in pursuing any patent litigation or transactional practice. Students are evaluated on participation, in-class and take-home exercises, and projects relating to the drafting and prosecution of a patent application.

**LAW 4025. Intellectual Property: Trade Secrets. 3 Units.**

(Formerly Law 499) With the increasing importance of technology to industry and the ease with which information can now be downloaded and shared, trade secret protection has become one of the most important issues in intellectual property today. The law has to strike a balance between encouraging and protecting commercial investment in research, and preserving an individual's right to change employment or to compete directly against a former employer. In addition to examining the law and the theory behind it, we will emphasize the practical aspects of protecting information as a trade secret. We will discuss the challenges and issues involved in litigating trade secret cases, creating corporate programs to protect trade secrets, and drafting agreements. We will feature several guest speakers and will highlight topics of current interest, such as "inevitable disclosure," non-competition agreements, trade secrets and the Internet, and cybercrime. The class should be of interest to students who expect to practice intellectual property law as well as to students who expect to be involved in corporate transactions and labor law. Elements used in grading: Class participation and final exam.

**LAW 4026. Free Expression in a Networked World. 2-3 Units.**

This seminar explores cutting-edge questions at the intersection of the First Amendment, the internet, and new technologies. The internet and digital media technologies have opened up new spaces for expression – spaces that are designed and controlled by a handful of private companies. For example, Facebook, Twitter, and Google's algorithms determine what content is presented to us; software designed by Facebook and Twitter identifies and filters content like fake news; and new kinds of "speakers" like bots tweet and share information. The engineering and design choices underlying these technologies have significant implications for our ability to express ourselves and for democracy. But our expressive rights are increasingly in tension with platform companies' statutory immunities, like CDA 230, and, potentially, their constitutional claims to speech and press rights. Lawyers operating in this space – whether from the perspective of technology companies, policymakers, regulators, or academia – need to understand not only traditional First Amendment doctrine, but also the statutes and technologies that shape the behavior of private actors and the spaces in which expression occurs. They need to grapple with questions of responsibility and accountability, and with the proper balance between private and public control. This course prepares students to deal with the complex dynamics underlying these issues. Every other week, a scholar or practitioner at the cutting edge of these topics will present their research or discuss their professional experiences. Students will read any materials provided in advance, and the class will engage in a discussion with the guest. In the week before the speaker's presentation, we will meet as a group to discuss key literature informing the scholar's work or the practitioner's experiences. Special Instructions: Enrollment will be limited to 15 students from both SLS and H&S. Experience with First Amendment doctrine is helpful, but not required. Grades will be based on class attendance, class participation, and either five reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, reflection papers or research paper. CONSENT APPLICATION: To apply for this course, students must complete and submit the Consent Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).

**LAW 4028. Intellectual Property: Advanced Copyright. 2 Units.**

Copyright law is the primary legal regime governing human creativity, and it plays some role in nearly all creative industries today. Consequently, copyright law has far-reaching economic and cultural implications. In this seminar, we will consider the interests of some of the different groups affected by the copyright regime, including creators, technologists, audiences, institutions, and heirs. Course readings will cover copyright case law and scholarship; research on creative practices and relevant business models; the role of copyright law in innovation policy; and legal versus extralegal modes of protecting the fruits of creative labor. Throughout, we will assess the fairness, efficacy, and alignment of copyright protection and remedies available, to whom, when, and for what reasons. The course aims to deepen students' knowledge of copyright law and scholarship; to equip students to develop principled policy arguments about the scope of copyright protection; and to enable students to evaluate reforms and alternatives to copyright in light of how these might serve different entities in the copyright ecosystem. Elements used in grading: Attendance, Class Participation, Written Assignments.

**LAW 4029. Video Game Law. 3 Units.**

This seminar discusses a variety of legal issues raised by video games and game platforms. We will devote substantial attention to intellectual property matters, but will also include business and licensing issues, tort law, the First Amendment, and legal issues presented by virtual reality. Students will write and present an original research paper on a topic related to the class. This is a 3-unit seminar that satisfies the R requirement. Introduction to Intellectual Property or equivalent is a prerequisite. Enrollment is limited to 12 students, and will be by consent of the instructors. Interested students should submit a paragraph explaining their background and interest in the course. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 403. Senior Thesis. 5-8 Units.**

An opportunity for third-year students to engage in original research and to prepare a substantial written-work product on the scale of a law review article. The thesis topic should be chosen no later than two weeks after the beginning of the seventh term of law study and may be chosen during the sixth term. The topic is subject to the approval of the thesis supervisor, who may be any member of the Law School faculty under whose direction the student wishes to write the thesis and who is willing to assume the responsibility therefor. An oral defense of the thesis before members of the faculty, including the thesis supervisor, will be conducted late in the student's ninth academic term. Acceptance of the thesis for credit requires the approval of the thesis supervisor and one or more other members of the faculty who will be selected by the supervisor. Satisfactory completion of the senior thesis will satisfy graduation requirements to the extent of (a) 5 - 8 units of credit and (b) two research courses. The exact requirements for a senior thesis are in the discretion of the supervising faculty member. Special Instructions: Two Research credits are possible. Elements Used in Grading: Paper.

**LAW 4030. Intellectual Property: Patents - Japan Field Study. 1 Unit.**

This is the Tokyo, Japan component of Intellectual Property: International and Comparative Patent Law (Law 4009) and Intellectual Property: Patents (Law 4010). Students enrolled in either Law 4009 or Law 4010 may apply for this optional field study component, for which students will travel to Tokyo for one week during spring break 2018. Class sessions will take place primarily at Waseda Law School. Students will also meet with local lawyers, clients, and government officials, including at the Japanese Patent Office, the Intellectual Property High Court, and the Ministry of Economy, Trade and Industry. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and visa to travel to Japan. Elements used in grading: class participation and short writing assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website. See Consent Application Form for instructions and submission deadline.

**LAW 4031. Disruptive Technologies: Their Impact on Our Laws, and the Laws' Impact on the Technology. 2 Units.**

The advent of a highly disruptive technology necessarily butts up against existing laws, regulations and policies designed for the status quo as well as established businesses. This course takes the examples of driverless cars and artificial intelligence and examines the new and challenging legal questions and opportunities presented by these technologies. We will also discuss how business leaders, lawyers and technologists in these areas can navigate and create legal, regulatory and policy environments designed to help their businesses not only survive but thrive. Through a combination of readings, classroom discussions, expert guest speakers from the relevant technology and policy fields and student presentations, this course explores the promise of these technologies, the legal and regulatory challenges presented and the levers in-house counsel and business leaders in these fields can invoke to better navigate the inevitable obstacles facing these highly disruptive technologies. There are no formal prerequisites in engineering or law required, but students should be committed to pursuing novel questions in an interdisciplinary context. Elements used in grading: class preparation and short reflection papers. This course is open to School of Engineering and graduate students with consent of the instructor.

**LAW 4032. Advanced Negotiation of Patent Reform Policies. 2 Units.**

Patent reform has been a hotly debated topic in recent years in the intellectual property field. Different industries and players have differing and often competing views of our patent system—how effective it is in promoting innovation and what, if any, reform is needed. Students will play the role of counsel on one or more teams representing the interests of particular stakeholder groups. The teams will engage in a series of mock negotiations on actual legislative or administrative patent reform proposals with other teams, as well as mock legislative or administrative engagements before Congress or the United States Patent and Trademark Office respectively. The goal is to achieve consensus on patent reforms that best serve the stakeholders' individual and collective interests, all in an environment of competing interests. Through experience-based learning and simulations, students will gain an understanding of some of the most current patent policy issues being debated in Congress and before the United States Patent and Trademark Office. This seminar will also teach students how to: (1) evaluate from their client's perspective complex, legislative and administrative, patent policy proposals; and (2) strategize, prepare for, participate in, negotiate and advocate for beneficial reforms. Prerequisites: Introduction to Intellectual Property. Grading Criteria: The seminar requires that students to do the required reading, actively participate in class and the mock negotiations and legislative or administrative engagements, and write a series of at least three short assignments.

**LAW 4035. Cyber Law: International and Domestic Legal Frameworks for Cyber Policy. 3 Units.**

Was Russia's interference in the 2016 U.S. elections an act of war? When do cyber attacks constitute a use of force? Is sovereignty in cyberspace different than in other domains, and can states meaningfully defend their sovereignty in cyberspace? Is "hacking back" against cyber thieves the legal equivalent of defending one's own property? This course explores the domestic and international law of cyberspace and its application to significant practical challenges. It also addresses broader legal policy questions, including the extent to which law acts as a constraint on state and non-state actors in cyberspace, whether the application of existing law to cyber activities is sufficient or new laws and norms are needed, and how they could be developed. Policy and law students are welcome; no previous legal knowledge is required. Elements used in grading: Attendance, class participation, writing assignments, and a final exam. Cross-listed with International Policy Studies (IPS 269).

**LAW 4038. Does Google Need a Foreign Policy? Private Corporations & International Security in the Digital Age. 3 Units.**

Facebook has more users than any nation has citizens. Apple CEO Tim Cook speaks more often with Chinese President Xi Jinping than President Trump does. Google's revenues exceed the GDPs of more than half the world's countries. Cybersecurity companies produce weapons that once only foreign governments wielded. These and other technology companies are increasingly caught in the maw of global politics whether it's entering challenging new foreign markets, developing platforms that enable millions of people around the world to organize for both noble and nefarious aims, or developing products that can become tools of intelligence agencies worldwide for surveillance, counterintelligence, and information warfare. In several respects, tech companies wield more power than governments. We examine the changing role of corporations in international politics, the role of the state, and critical challenges that large technology companies face today in particular. We discuss contending perspectives about key issues with guest lectures by industry and US government leaders as well as simulations of foreign policy crises from the board room to the White House Situation Room. No background in political science or computer science is required. Admission based on application. Elements used in grading: Class participation, midterm policy memo, final policy memo, participate in final course simulation tech company summit. CONSENT APPLICATION: Admission based on application. Instructor consent required. Please send an application email to the teaching assistant, Taylor McLamb, at twj@stanford.edu, that includes: your major, an explanation why you want to take the course, and how your background fits with the subject matter (not to exceed three paragraphs). The application deadline is Friday, November 17 and notification of course acceptance will be sent on Thursday, November 30. International Policy Studies (IPS 245) and Public Policy (PUBLPOL 245).

**LAW 406. Research Track. 9-12 Units.**

The Research Track is for students who wish to carry out a research project of a scope larger than that contemplated for a Senior Thesis. Research Track projects are to be supervised by two or more professors, at least one of whom must be a member of the Law School faculty. At least one faculty member in addition to the supervisors must read the written product of the research, and the student must defend the written work orally before the readers. Students will be admitted to Research Track only if they have a demonstrated capability for substantial independent research, and propose a significant and well-formulated project at the time of application. Special Instructions: Two Research credits are possible. Elements Used in Grading: Paper.

**LAW 411. Directed Writing. 1-4 Unit.**

Teams of students may earn "Directed Writing" credit for collaborative problems involving professional writing, such as briefs, proposed legislation or other legal writing. Only projects supervised by a member of the faculty (tenured, tenure-track, senior lecturer, or professor from practice) may qualify for Directed Writing credit. It will not necessarily be appropriate to require each member of the team to write the number of pages that would be required for an individual directed research project earning the number of units that each team member will earn for the team project. The page length guidelines applicable to individual papers may be considered in determining the appropriate page length, but the faculty supervisor has discretion to make the final page-length determination. Students must meet with the instructor frequently for the purposes of report and guidance. Unit credit is by arrangement. A petition will not be approved for work assigned or performed in a course, clinic, or externship for which the student has or will receive credit.

**LAW 5001. China Law and Business. 3 Units.**

(Formerly Law 245) This introductory course provides an overview of the Chinese legal system and business environment and examines Chinese legal rules and principles in select business-related areas. These areas include intellectual property, dispute resolution, foreign investment vehicles, mergers and acquisitions, antimonopoly law, and environment. Through active class participation and analysis of legal and business cases, students will learn both the law in the books and the law in action, as well as strategies that businesses could use to overcome limitations in the Chinese legal system. Leaders from the law and business community will be invited to share their experiences and insights. This course is particularly suitable for law students and students enrolled in the MBA program and/or the East Asian Studies Program. Undergraduates who have permission from the instructor may also take this course. A Stanford Non-Law Student Course Registration Form is available on the SLS Registrar's Office website. Elements used in grading: Class participation (30%) and extended take-home exam (70%).

**LAW 5002. Comparative Law. 3 Units.**

(Formerly Law 311) The big question in comparative law today - and one that is of key importance to anyone interested in international law - is whether we are currently witnessing a convergence of national legal systems. This course examines this question, as well as the related problem of American exceptionalism, by exploring key aspects of contemporary Western European legal systems. We will study a range of legal institutions and practices, including such topics as legal education, the role of judges and judging, constitutional courts and judicial review, criminal procedure and punishment, and the rise and regulation of consumer culture. In contrast to the traditional comparative law course, we will also devote substantial time to such pressing public-law questions as racial equality and affirmative action, gender equality and sexual harassment, and church-state relations. In lieu of the final exam, students may opt to write four response papers to the assigned readings (each 5 to 7 double-spaced pages long). After the term begins, students accepted into the course can transfer from section (01) into section (02), with consent of the instructor. Elements used in grading: Class participation; and exam or response papers.

**LAW 5005. European Union Law. 2-3 Units.**

(Formerly Law 451) The U.S. and the European Union (which comprises 28 European states and 500 million people) have the largest bilateral trade relationship in the world. Over 50% of the world's GDP is generated on the Transatlantic Marketplace. U.S. companies rely on the EU market for more than half of their global foreign profits, and U.S. investment in the EU is currently three times greater than U.S. investment in the whole of Asia. In recent years, this has tremendously heightened the need for a sound understanding of the legal system of the EU, especially for business and technology lawyers. Responding to this need, this course will, first, examine the internationally unique legal system of the EU as such, as it is applicable to any field of substantive and procedural EU law. Thus, we will look at the legal nature and the different sources of EU law and its relationship with the national law of the EU Member States, including European human rights and fundamental rights protection standards. We will cover the relevant EU law enforcement actions including state liability issues for breach of EU law as well as the jurisdiction of both European Courts and relevant remedies in national courts. Secondly, we will explore the legal framework governing business activities in the EU, from the perspective of a business entity as an internationally operating actor in a European business environment. In this context, we will focus on the most essential fields of EU business law, i.e. (a) the four fundamental economic freedoms of the European Internal Market for goods, services, capital, and persons (enterprises, workforce, immigration), including the legal and economic implications of Brexit, (b) EU competition (antitrust) law, and (c) the new digital European Internal Market and EU data protection and privacy laws. Special attention will be given to the question how companies established outside the EU can efficiently use EU business law to pursue their interests in the EU. Additional study and research opportunities for students in EU law, building on this course, can be found on the SLS EU Law Initiatives website ([www.law.stanford.edu/eulaw](http://www.law.stanford.edu/eulaw)). Special Instructions: After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Students in section (1) will complete the course with a one-day take-home exam. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation, one-day take-home exam or research paper.

**LAW 5006. International Business Transactions and Litigation. 3 Units.**

(Formerly Law 766) Lawyers are increasingly asked to advise clients with global operations: Twitter reacts to free speech limitations in Turkey, governments around the world regulate Facebook's user data, Nike weighs the legal risk from factory fires in Bangladesh, investors consider spending billions in China without legal protections common elsewhere, companies worry about the consequences of being complicit in human rights violations, governments threaten to expropriate intellectual and real property, and US litigators face court rulings abroad that may conflict with the orders of US courts. What legal problems arise when firms go global? Through a series of case studies, we put you in the driver's seat and ask you to consider the challenges of doing business around the world, subject to multiple and sometimes inconsistent national laws. We will examine how treaties, international agreements, and informal norms can constrain or supplement national laws and review the risks of doing business in nations whose laws are ineffective or unreliable. We also consider some of the costs of globalization. We'll hear from current or former general counsel from global firms such as Intel and G.E. Elements used in grading: a short paper, class participation, and written assignments.

**LAW 5007. International Business Negotiation. 3 Units.**

(Formerly Law 504) This course is structured around a quarter-long, simulated negotiation exercise which provides an in-depth study of the structuring and negotiating of an international business transaction. This class will be taught in counterpart with a class at Berkeley Law School. Students in this class will represent a U.S. pharmaceutical company, and the students in the class at Berkeley will represent an African agricultural production company. The two companies are interested in working together to exploit a new technology developed by the pharmaceutical company that uses the cassava produced by the African agricultural production company. The form of their collaboration could be a joint venture, a licensing agreement or a long term supply contract. The negotiations between the two classes will take place through written exchanges and through real-time negotiation which will be conducted both in-person and via videoconferences. The purpose of the course is to provide students with an opportunity (i) to experience the sequential development of a business transaction over an extended negotiation, (ii) to study the business and legal issues and strategies that impact the negotiation, (iii) to gain insight into the dynamics of negotiating and structuring international business transactions, (iv) to learn about the role that lawyers and law play in these negotiations, (v) to give students experience in drafting communications, and (vi) to provide negotiating experience in a context that replicates actual legal practice with an unfamiliar opposing party (here, the students at Berkeley). Students will also learn about the legal and business issues that may arise in joint ventures, supply agreements and licensing agreements. The thrust of this course is class participation and active involvement in the negotiations process. Students are expected to spend time outside of class, working in teams, to prepare for class discussions involving the written exchanges, as well as preparing for the live negotiations. Class discussions will focus on the strategy for, and progress of, the negotiations, as well as the substantive legal, business and policy matters that impact on the negotiations. In addition to the regular Monday class, classes will meet for the live negotiations on two Thursday evenings on-campus at 7:00 PM (10/19 and 10/26) and three Saturday mornings at 10:30 AM (10/7, 10/14 and 11/11) in the San Francisco office of DLA Piper (555 Mission Street; close to Montgomery St. BART station). Due to the Thursday and Saturday classes, this class will conclude on November 13. The course will be limited by lottery to twelve (12) law students (additional students from business or engineering may also participate). Attention Waitlist Students: Students on the waitlist for the course will be admitted if spots are available on the basis of their position on the waitlist and degree of study; all waitlist students are encouraged to attend the first class and will be notified as spaces become available. Attention Non-Law Students: You must complete and submit a Non-Law Student Course Add Request Form to the Law School Registrar's Office (Room 100). See Stanford Non-Law Student Course Registration on the SLS Registrar's Office website. Prerequisites: A course in basic negotiations (e.g., Law 7821) or comparable prior experience is recommended. A primer on basic negotiations skills will be offered at a time TBD as an alternative for students who have not had a prior negotiations class or experience. Elements used in grading: Class participation, written assignments and final paper.

**LAW 5008. International Commercial Arbitration. 3 Units.**

(Formerly Law 575) This course provides a rigorous introduction to the law, theory and practice of international commercial arbitration. International commercial arbitration which has become the default means of settling international disputes and with clients increasingly involved in international business transactions and cross-border activity, is a rapidly growing practice area in law firms of every size. The practice is peripatetic, with many international arbitration lawyers basing themselves in law firms in New York, Washington D.C., Paris, Hong Kong, Singapore, and other major world commercial centers. The course will deal with the internationalist elements of the subject matter, but also examine international commercial arbitration from an American perspective. Students can expect to review both foreign and US commentaries, statutes and case law. The course will comprise of five main topics: (1) an introduction to the field of international commercial arbitration; (2) the agreement to arbitrate; (3) the arbitrators; (4) the arbitration process; and (5) the arbitral award. The intent is to provide a strong academic understanding of the various theories and principles, but with a strong practical bent. Elements used in grading: Attendance, Class Participation, Final Exam.

**LAW 5009. International Conflict Resolution. 2 Units.**

(Formerly Law 656) This seminar examines the challenges of managing and resolving intractable political and violent intergroup and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach examines the need for the parties to conflicts to address the following questions in order to have prospects of creating peaceful relationships: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? We will consider both particular conflicts, such as the Israeli-Palestinian conflict and the South African transition to majority rule, as well as cross-cutting issues, such as the role international legal rules play in facilitating or impeding conflict resolution, the intragroup dynamics that affect intergroup conflict resolution efforts, and the role of criminal accountability for atrocities following civil wars. Special Instructions: Section 01: Grades will be based on class participation, written assignments, and a final exam. Section 02: Up to five students, with consent of the instructor, will have the option to write an independent research paper for Research (R) credit in lieu of the written assignments and final exam for Section 01. After the term begins, students (max 5) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. This class is cross-listed with International Policy Studies (IPS 250) and Psychology (PSYCH 383).

**LAW 5010. International Human Rights. 3 Units.**

(Formerly Law 330) This course examines the law of international human rights, analyzing various categories of rights, from civil and political human rights, to social and economic human rights, to group and collective rights. It studies the structure and processes of international and regional courts that adjudicate human rights claims and international treaty bodies that report on State human rights action. It explores debates about the normative justifications for human rights, and whether and how these debates impact upon the application and enforcement of human rights. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation; exam or final long research paper.

**LAW 5011. International Investment Law. 3 Units.**

(Formerly Law 583) The past few decades have seen a dramatic increase in the number of bilateral investment treaties and other agreements with investment-related provisions (such as NAFTA), followed by a sharp rise in the number of disputes between private investors and sovereign states pursuant to investor-state dispute settlement (ISDS) provisions. The rise of international investment arbitration has generated a new and exciting practice area in global law firms. This course will cover four broad areas: (I) the historical and policy origins of international investment law; (II) the substantive obligations and standards governing the investor-state relationship; (III) the investor-state arbitration process; and (IV) current controversies over the legitimacy and desirability of ISDS. The course uses materials from international investment treaty texts, case law, and commentaries to enable students to evaluate and apply legal doctrine to future situations. Students may choose between a series of weekly response papers or a larger research paper, and will serve as discussion facilitators along with the instructors. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructors. Elements used in grading: Class participation, attendance and paper(s).

**LAW 5012. International Criminal Justice. 3 Units.**

(Formerly Law 752) The establishment of a global system of international justice reveals that the promises made during the Nuremberg era are not mere history. Over the past decade, the international community has undertaken a considerable investment in enforcing international criminal law in conflict and post-conflict situations with the establishment of the international criminal tribunals for the former Yugoslavia, Rwanda, Sierra Leone, East Timor, Cambodia, and Lebanon. As these ad hoc institutions wind down, the International Criminal Court (ICC) has become fully functional, although it is plagued by challenges to its legitimacy, erratic state cooperation, and persistent perceptions of inefficacy and inefficiency. Moreover, the global commitment to international justice remains inconsistent as calls for criminal accountability for the situations in Sri Lanka, South Sudan, and Syria-among others-go unanswered. This intensive mini-course in the new September Term will introduce students to the law, institutions, and actors that constitute the system of international criminal justice and to the political environment in which it operates. The classroom component (offered at Stanford during the first week of the course) will offer an elemental analysis of international crimes as they have evolved in international law and focus on the challenges of interpreting these norms in a criminal prosecution. Jurisprudence from the various international tribunals will be scrutinized with an emphasis on understanding the prosecution's burden, available defenses, and sources of proof. The course will culminate in a visit to The Hague in the second week of the course, during which time students will meet with principals from the tribunals, including prosecutors, judges, administrators, and members of the defense bar. In addition to the substance of international criminal law, this course will also serve as an introduction to international legal reasoning, law-making, and institutional design. It will complement existing courses at the Law School covering comparative law, international organizations, international human rights, and public international law. Elements used in grading: The course grade will be based on a series of short papers and active in-class engagement with the assigned materials. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 5013. International Law. 4 Units.**

(Formerly Law 479) This course provides a general introduction to international law and its role in today's complex and interdependent world. We will begin by considering fundamental questions about the nature of international law, such as: the sources of international law (including treaties and customary international law); the subjects of international law; the origins of international law in the sovereign equality of states; principles of state responsibility; the bases upon which states may exercise jurisdiction; and the global governance challenges arising from the absence of assured mechanisms for the interpretation or enforcement of international law. We will then examine the operation of international law in the U.S. legal system. In the second half of the course, we will look at a series of contemporary international law topics and issues, including international human rights law, the law governing coercion and the use of armed force, the law of armed conflict, international environmental law, and international criminal law. Throughout, we will consider current issues and problems arising in the international arena and the extent to which international law actually affects the behavior of states. This course provides a general grounding in public international law and a foundation for more advanced or specialized international law courses. Elements used in grading: Class participation, optional paper, and final exam.

**LAW 5014. International Trade Law. 3 Units.**

(Formerly Law 285) This course will survey the law and policy of the World Trade Organization and related legal arrangements such as NAFTA, as well as national laws regarding "unfair" international trade practices. Topics will include the political economy of the treaty framework, the relationship between international and domestic law, bilateralism versus multilateralism, the WTO dispute resolution system, nondiscrimination obligations in international trade, regional trade agreements, the relation between WTO obligations and domestic environmental/health/safety regulations and controversies relating to these issues, subsidies in international trade, antidumping law, trade in services, and currency manipulation. Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance and final exam or research paper.

**LAW 5015. International Dealmaking: Vienna Field Negotiation. 2 Units.**

This course is structured around a week-long, simulated negotiation exercise which provides an in-depth study of the structuring and negotiating of an international business transaction. This class will be taught in counterpart with a class at University of Vienna Law School. Students in this class will represent a U.S. pharmaceutical company, and the students in the class at Vienna will represent an African agricultural production company. The two companies are interested in working together to exploit a new technology developed by the pharmaceutical company that uses the cassava produced by the African agricultural production company. The form of their collaboration could be a joint venture, a licensing agreement or a long-term supply contract, or some combination. The negotiations between the two classes will take place through written exchanges and through real-time negotiation which will be conducted in-person. The purpose of the course is to provide students with an opportunity (i) to experience the sequential development of a business transaction over an extended negotiation, (ii) to study the business and legal issues and strategies that impact the negotiation, (iii) to gain insight into the professional and cultural dynamics of negotiating and structuring international business transactions, (iv) to learn about the role that lawyers and law play in these negotiations, (v) to give students experience in drafting communications, and (vi) to provide negotiating experience in a context that replicates actual legal practice with an unfamiliar opposing party. Students will also learn about the legal and business issues that may arise in joint ventures, supply agreements and licensing agreements. The thrust of this course is class participation and active involvement in the negotiations process. Students are expected to spend time outside of class, working in teams, to prepare for class discussions involving the written exchanges, as well as preparing for the live negotiations. Class discussions will focus on the strategy for, and progress of, the negotiations, as well as the substantive legal, business and policy matters that impact on the negotiations. The course will be limited by consent to eight (8) students. Prerequisites: A course in basic negotiations (e.g., Law 7821) or comparable prior experience is recommended. Elements used in grading: Class participation, written assignments and final paper. There will be two preparatory sessions at Stanford during February and March 2018. Students in the class will travel to Vienna on or before Saturday, March 24th. Class sessions will begin on Sunday afternoon, March 25, and continue all day Monday, March 26 through Wednesday, March 28th. [Cultural tour and closing dinner on Thursday, March 29th, and depart for USA on Friday, March 30th].

**LAW 5016. Japanese Law, Society and Economy. 3 Units.**

This course provides a critical introduction to the institutions and actors that comprise the Japanese legal system. Throughout the course, law is examined within the broader context of Japanese social, political, and economic institutions. Topics covered include the legal profession, constitutional law, dispute resolution, family law, employment law, contracts, and corporate law. Thematically, the course offers an extended exploration of the "transplantation" of foreign law and the role of law in Japan's social structure and economic development. All readings and instruction are in English. Japanese language ability and knowledge of Japan are not required. Elements used in grading: Attendance, Class Participation, Written Assignments and Final Exam.

**LAW 5017. Law in Latin America. 2 Units.**

(Formerly Law 582) The course has two main goals: to introduce students to the civil law tradition and to gain an understanding of the ways in which the law is practiced and lived in Latin American and Spain. Special attention is given to law firms, courts and legal education. The course will be especially useful for those expecting to have contact with Latin American countries or Spain in their practice of law and for those interested in comparative law or Latin American studies. All required readings are in English. In addition, students may review and present elective readings in Spanish and Portuguese. The ability to read in these languages is appreciated but not required. Elements used in grading: Class Participation, Written Assignments, Final Paper.

**LAW 5018. Legal Institutions and Global Economic Development. 3 Units.**

This course will cover readings on the relationship between legal institutions and economic development across different countries. Some topics are set by the instructor, while others arise depending on the interests of students as they develop their paper topics. Topics in the past have included the role of legal and colonial origins, rights in property and contract, natural resources, political stability, governance/corruption, and social and economic rights. Readings will emphasize both broad themes and policy in these areas, with a special emphasis on considering varieties of evidence, including case studies, comparative history, statistical studies with observational data, and field experiments. No prior background in empirical methods is necessary or required. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation; Written Assignments or Final Research Paper.

**LAW 5021. Current Topics in International Economic Law. 2 Units.**

This seminar will explore select topics in international economic law, including but not limited to: the formation of new free trade agreements (in particular the proposed Pacific and Atlantic partnerships); the inclusion of "next generation" issues into trade agreements; the expanding use of investment arbitration; the architecture of the Eurozone in relation to recent European Union jurisprudence and policy; and the global regulation of cross-border financial flows. An introductory course in international trade law (or equivalent preparation) is prerequisite. In addition to a final paper, students will be expected to produce weekly reading responses. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 5023. The Rule of Law - The Foundation of Functional Communities. 2 Units.**

(Formerly Law 679) We will seek to determine a useful meaning of the notion of the rule of law to identify some measurement of adherence and to explore the importance of the rule of law in terms of economic, socio-political and human development. We will focus on accountable government; just laws; open processes for the enactment, administration and enforcement of laws and effective dispute resolution. Readings and discussion will include the works of ancient philosophers, political theorists and jurists from the 17th to the 20th century, modern political economists and contemporary scholars. This seminar will feature several experts in the field as guest lectures and requires three reaction papers from all participants. Elements Used in Grading: Class participation, written assignments and series of short reaction papers.

**LAW 5025. Global Poverty and the Law. 3 Units.**

With more than a billion people living on less than \$2 a day, global poverty is one of the biggest challenges currently facing humanity. Even though those who suffer the most are located in the developing world, many of the policies, economic opportunities, and legal actions that offer the biggest potential for global poverty alleviation are made in the United States. This course will provide an introduction to the study of global poverty. What causes poverty? Why have some parts of the developing world done better at alleviating poverty than other parts? Can the world ever be free of poverty, as the World Bank's official motto suggests? And most importantly, what can aspiring lawyers do to improve the condition of the world's impoverished? These are some of the questions this course is designed to address. This course is designed especially for future lawyers and policymakers who seek a deeper understanding of the developing world. After a brief overview that will familiarize students with the major concepts and empirical debates in poverty and development studies, we will examine a variety of 'causes' of poverty, from poor governance to lack of economic opportunity to the role of society. Since this course is just as much about what can be done, we shall also consider applied approaches to poverty alleviation. These types of interventions include political/legal reforms such as anti-corruption initiatives, 'rule of law' interventions, right to information programs, privatization, and community-driven development models; economic solutions such as cash transfers and microfinance; and technological approaches such as new methods for measuring policy impact and the application of new technologies for state identification and distribution programs. In addition to more typical scholarly readings, students will review poverty alleviation policy proposals and contracts made by various stakeholders (academics, NGOs, states, international bodies, etc.). Grading is based on participation, a presentation of research or a proposal, and, in consultation with the professor, a research paper. The research paper may be a group project (Section 01) graded MP/R/F or an individual in-depth research proposal either of which could be the basis for future field research (Section 02) graded H/P/R/F. Students approved for Section 01 or Section 02 may receive R credit. After the term begins, students accepted into the course can transfer from Section 01 into Section 02 with consent of the instructor. Automatic grading penalty waived for research paper. This course is taught in conjunction with the India Field Study component (Law 5026). Students may enroll for this course alone or for both this course and Law 5026 with consent of the instructor (12 students will come to India). See Law 5026 for application instructions. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with International Policy Studies (IPS 281).

**LAW 5026. Global Poverty, Corruption, and the Law: India Field Study. 1 Unit.**

This is the India Field Study component of Global Poverty and the Law (Law 5025). For details, see course description for Law 5025. Corruption is one of the most difficult challenges facing societies across the developing world. Why is corruption so pervasive and what can be done to address it? During spring break 2018, this course will be held in Delhi, India and will consist of conversations with lawyers, politicians, scholars, leaders in civil society, and senior bureaucrats who are active in anti-corruption efforts. Students will also meet frontline bureaucrats (i.e., cops and government teachers) who will share their own perspectives about the problem. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and a visa to travel to India. Students will be required to attend two dinner meetings during the Winter Quarter in preparation for the trip. Elements used in grading: class participation and short writing assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website. See Consent Application Form for instructions and submission deadline.

**LAW 5027. Social Conflict, Social Justice, and Human Rights in 21st Century Latin America. 2 Units.**

This course will consider significant sources of social conflict, efforts to achieve social justice and the relevance and impact of human rights norms and oversight mechanisms in Latin America in the 21st Century. Led by Prof. James Cavallaro, the course will involve weekly sessions, each focusing on a particular topic. Readings will provide the basis for short student reflection papers to be prepared in advance of each session. The class will generally involve an initial presentation, followed by seminar-style discussion. Topics will include the human rights crisis facing Mexico, in particular, forced disappearances, summary executions and torture. We will consider, for example, the forced disappearance of 43 students in September 2014 (Ayotzinapa) in at least one session. The current political and human rights crisis facing Venezuela will be considered, likely by an expert guest speaker. So too will the peace process in Colombia and the Special Jurisdiction for Peace. Other sessions will consider social conflict and justice issues across the region. These issues will include the resurgence of populism in the United States and Latin America and its effects on social justice and human rights, the continued relevance of the Organization of American States and its human rights bodies, migration and human rights, the rights of indigenous and traditional peoples and models of development, among others. Elements used in grading: Grades will be based on class participation, and either several short reflection papers (section 01) or a final paper (section 02). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 5028. Regional Human Rights Protections: The Inter-American System. 3 Units.**

This course provides an in-depth introduction to the doctrine, practice and critiques of the Inter-American Human Rights System ("IASHR"). Students will examine the major instruments for human rights protections in the IASHR, the Inter-American Court and Commission's procedure and jurisprudence, as well as the obstacles and opportunities that civil society, victims, and advocates encounter when engaging the inter-American system. The Course will consider issues of implementation, and the types of measures and forms of relief that can be sought from the Court and the Commission. The inter-American system has played a crucial role in opening spaces for debate on human rights protections in Latin America and the Caribbean, increasing protections at the domestic level, and supporting civil society in its quest for accountability for massive human rights violations. The system has also played a role in civil society efforts to bring the human rights debate home, including in the United States. Students will have an opportunity to cast a comparative look at the inter-American and the European Human Rights systems and to consider the comparative advantages, disadvantages and complementary potential of regional human rights systems and universal international human rights and criminal justice bodies. Cross Registration: This Course is open to graduate students across the university, with permission of the instructor. Preference for cross-registration by non-Law School students will be given to students enrolled in the Master of Arts program in Latin American Studies. Elements used in grading: Class Participation, Attendance, Short Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 5029. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.**

(Formerly Law 675) This course offers an interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, including trafficking for forced prostitution, labor exploitation, and organ harvesting. In each of these areas, we will focus on human rights violations and remedies. The course aims to:

1. Provide the historical context for the development and spread of human trafficking.
2. Analyze current international and domestic legal and policy frameworks to combat trafficking and evaluate their practical implementation.
3. Examine the medical, psychological, and public health issues involved.
4. Stimulate ideas for new interventions.

Instruction will combine lectures and small group discussion, and uses problem-based learning. Students interested in service learning should also enroll in History 6W/7W (FemGen 6W/7W), a two-quarter service learning workshop. Elements used in grading: Attendance; participation; written assignments; and final exam. This class is cross-listed with Feminist, Gender and Sexuality Studies (FEMGEN 5C, FEMGEN 105C), History (HISTORY 5C, 105C), Human Biology (HUMBIO 178T), International Relations (INTNLREL 105C) & School of Medicine General (SOMGEN 205).

**LAW 5031. Law and Society in Late Imperial China. 3 Units.**

(Formerly Law 773) Our purpose in this colloquium is to understand how law in the Qing dynasty (1644-1912) functioned as an instrument of autocratic power, a field of interaction between state and society, and a vital feature of social life. To this end, we shall survey Qing law "from the top down" (the perspective of the imperial center, its ideology, and its political imperatives), but also "from the bottom up" (the perspective of quotidian practice at the local level). We shall explore the friction between ideology and practice within the dynasty's formal legal system, but also the field of customary practice that flourished outside the formal system, sometimes in conflict with it. Readings have been selected to introduce the work of major historians (in English) and to cover a range of basic concepts and problems in this field. One important theme is how scholarly interpretation and debate have changed over time, especially as a result of the opening of Qing legal archives for research. Another theme is the question of what concepts and vocabulary are most appropriate for this field of study. What are the advantages and disadvantages of analyzing the Chinese legal tradition in comparison to the West? Is it possible to understand it "on its own terms"? Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Cross-listed with Chinese (CHINA 392B) and History (HISTORY 392B).

**LAW 5033. International Justice. 2-3 Units.**

(Formerly Law 786) Mass atrocities—including genocide, war crimes, and crimes against humanity—continue to rage around the world, from Syria and South Sudan to Iraq and Myanmar. This course examines origins, operations, and outcomes of historical and contemporary international justice measures to address such heinous crimes. We will consider the full range of judicial, legislative, and executive "transitional justice" mechanisms available to policymakers as societies emerge from periods of violence and repression. These mechanisms include war crimes tribunals (such as the International Criminal Court), truth commissions, amnesties, lustration, exile, indefinite detention, lethal force, and inaction. The course draws on various case studies, including present-day Syria and Iraq, Rwanda and the Balkans in the 1990s, and World War II. Readings address the legal, political, and philosophical underpinnings of justice; questions of institutional design; and how different societies have balanced competing policy imperatives. Students may take the course for two or three units depending on the length of the paper. Students will receive Research credit for the seminar. This class is limited to 20 students, with an effort made to have students from SLS (15 students will be selected by lottery) and five non-law students by consent of instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 5037. Qing Legal Documents. 3 Units.**

How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Prerequisite: advanced reading ability in Chinese. Elements used in grading: Students complete research papers. This course is cross-listed with History (HISTORY 495A) and Chinese (CHINA 495A).

**LAW 5101. Afghanistan Legal Education Project (ALEP) Seminar. 3 Units.**

(Formerly 259A) The Afghanistan Legal Education Project (ALEP) Seminar is only open to student preselected in spring 2017. The ALEP Seminar will begin with an intensive bootcamp taught by ALEP leadership and members of the law faculty at American University of Afghanistan (AUAF). We will explore the Afghan sociopolitical and legal context, rule of law efforts and challenges in Afghanistan, and the role of legal education in legal development. Participants will learn from Afghan law professors about Shari'a law, customary law, Afghan civil law, and the challenges presented by Afghanistan's pluralistic legal system in preparation to work on legal curriculum to be taught at AUAF. The bootcamp will be highly participatory and requires full attendance. During the remainder of the quarter, participants will receive training in curriculum creation and organizational development in preparation for authoring an Afghan legal textbook and assuming ALEP programmatic responsibilities. Elements used in grading: Grading is based on mandatory attendance of the boot camp, participation, assignments, and authoring a new chapter and/or revision of an existing textbook chapter. Consent Process: Only students selected in spring 2017 have consent to take the ALEP Seminar. Their names will be given to the Registrar, who will automatically enroll them in the course in fall 2017.

**LAW 5102. Advanced Afghanistan Legal Education Seminar. 3 Units.**

(Formerly Law 453A) Students who participate in the Afghanistan Legal Education Seminar in the fall quarter will continue their work in the Advanced Seminar in the winter or spring quarter. Only students selected for the Afghanistan Legal Education Project (ALEP) in spring 2017 may participate. Students will author textbook chapters, assume programmatic responsibilities, and meet regularly as a team and individually with the ALEP faculty. Elements used in grading: Attendance, Written Assignments, Final Paper.

**LAW 5103. State-Building and the Rule of Law Seminar. 3 Units.**

(Formerly Law 259) The State-Building and Rule of Law Seminar is centrally concerned with bridging theory and practice. The seminar introduces the key theories relevant to state-building generally and strengthening the rule of law in particular. This course explores the multidisciplinary nature of development – through readings, lectures, guest lectures, and seminar discussions – and asks how lawyers fit in and contribute to the process. Essentially, in a given context, what is the relationship of law to political, social, and economic change? This course will employ case studies as a way to analyze rule-of-law practice within development theory. The set of developing countries considered within the scope of this workshop is broad. It includes, among others, states engaged in post-conflict reconstruction, e.g., Cambodia, Timor Leste, Rwanda, Iraq, Sierra Leone; states still in conflict, e.g., Afghanistan, Somalia; the poorest states of the world that may not fall neatly into the categories of conflict or post-conflict, e.g., Nepal, Haiti; least developed states that are not marked by high levels of violent conflict at all, e.g., Bhutan; and more developed states at critical stages of transition, e.g., Tunisia, Georgia, Hungary. Grading is based on participation, a presentation of research or a proposal, and, in consultation with the professor, a research paper. The research paper may be a group project (Section 01) graded MP/R/F or an individual in-depth research proposal either of which could be the basis for future field research (Section 02) graded H/P/R/F. Students approved for Section 01 or Section 02 may receive EL credit or R credit. Automatic grading penalty waived for submission of the final work products. CONSENT APPLICATION: The seminar is open by consent to up to sixteen (16) JD, SPILS, and LLM students, and graduate students from other departments within Stanford University. To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 5104. Advanced State-Building and Rule of Law Seminar. 3 Units.**

(Formerly Law 453) Students who participate in the State-Building and Rule of Law Seminar in the fall quarter may seek consent to continue their work in the Advanced Seminar in winter or spring quarter. Six students per quarter will be allowed to participate. Students will work on individual applied or scholarly research projects developed in collaboration with the professor, and meet regularly as a group to discuss shared research challenges and issues. There may be funds available for fieldwork necessary to complete applied research projects. Determinations will be made by the professor and Rule of Law Program. Students may write a paper for Research credit with instructor consent. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Written Assignments, Final Paper.

**LAW 5201. Foreign Legal Study: Bucerius Law School. 9-14 Units.**

(Formerly Law 404B) This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See Foreign Legal Study Program at <https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

**LAW 5204. Foreign Legal Study: Hebrew University of Jerusalem. 9-14 Units.**

(Formerly Law 404H) This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See Foreign Legal Study Program at <https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

**LAW 5207. Foreign Legal Study: Institut d'Etudes Politiques de Paris. 9-14 Units.**

(Formerly Law 404I) This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See Foreign Legal Study Program at <https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

**LAW 5210. Foreign Legal Study: National University of Singapore. 9-14 Units.**

(Formerly Law 404S) This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See Foreign Legal Study Program at <https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

**LAW 5213. Foreign Legal Study: Peking University Law School. 9-14 Units.**

(Formerly Law 404P) This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See Foreign Legal Study Program at <https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

**LAW 5216. Foreign Legal Study: Waseda University. 9-14 Units.**

(Formerly 404W) This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See Foreign Legal Study Program at <https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

**LAW 5801. Legal Studies Workshop. 1 Unit.**

(Formerly Law 496) The Legal Studies Workshop is designed to support students working on a piece of legal scholarship with an eye to publication. The workshop will meet every other week in the winter and spring quarters, and (we expect) most quarters over the next two years. Students may sign up for as many quarters they wish, and will receive one credit for each quarter they are enrolled. Each session will be devoted to presentations of one or two student works-in-progress. Every student is expected to present his or her own work at least once over the quarters she or he is enrolled in the Workshop, and to provide constructive oral feedback on others' work. We welcome students who are just starting to explore their interest in an academic career; if you have any questions about whether the course is suitable for you, please contact Prof. Barbara Fried (bfried@stanford.edu) or Prof. Bernadette Meyler (bmeyler@law.stanford.edu). Attendance is mandatory (except of course for extenuating circumstances). There are no written requirements for the course, and no requirement that the work presented be original to the Workshop. Students may wish to use the Workshop as an opportunity to expand on seminar papers or pursue independent research projects for which they are getting separate credit through one of the research tracks (e.g., directed research, dissertation). Whether students are working on a new project or revising an old, the expectation is that students will develop their topics independently of the course. Students who would like to participate in the Workshop but feel they need help in developing a workable research topic should consult faculty members ahead of time. Elements used in grading: Class participation and attendance. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 5802. Modern American Legal Thought. 3 Units.**

(Formerly Law 500) The course is a survey of the theories of law and adjudication that have been most important in this country since the Civil War, concluding with an introduction to significant contemporary schools of legal thought. We will consider Formalist (Langdellian) Legal Science, Sociological Jurisprudence, American Legal Realism, the Legal Process School, Law and Moral Philosophy, Public Choice Theory, Law and Economics, Feminist Jurisprudence, Critical Race Theory, the Law and Society movement, and Empirical Legal Studies. The readings are drawn principally from primary materials – the important contemporary manifestos and critiques of the schools of thought studied, along with writings that involve their application to concrete legal problems or reveal their influence on others. Enrollment allowing, students may be asked to help co-teach some of the sessions. Contact Prof. Fried (bfried@stanford.edu) if you would like to look at a syllabus from prior years before deciding whether to enroll. Special Instructions: If any student would like to write a research paper in lieu of the final exam, he or she should consult the instructor before the start of the course. After the term begins, students accepted into the course can transfer from section (01) (Final exam option) into section (02) (Final paper option) with consent of the instructor. Section (02) meets the R requirement. Elements used in grading: Class Participation plus Final Exam or Final Paper.

**LAW 5805. Animal Law. 1 Unit.**

(Formerly Law 652) All nonhuman animals have been legal things that lack the capacity for legal rights for centuries. The struggle to extend legal personhood, which is the capacity to possess legal rights, to at least some nonhuman animals has turned to the courts. Lawsuits alleging that a captive nonhuman animal is a legal person entitled to her bodily liberty pursuant to common law or civil law habeas corpus have been litigated, and continue to be litigated, in the United States, Argentina, Brazil, and Costa Rica. We will study what legal rights are, where they come from, and why humans have sometimes lacked them, as well as some of those lawsuits, the grounds they allege and the arguments they make, and arguments made against them by their critics. This class will meet on Thursday the first three weeks of Spring Quarter (April 6, April 13, and April 20). Elements used in grading: Attendance, Class Participation, Final Paper.

**LAW 5806. Jurisprudence. 3 Units.**

This course examines the diverse ways in which the philosophy of law bears on the practice of law. Our subject is thus a set of philosophical concepts, particularly legal positivism and natural law, but the approach is not purely conceptual. Rather, we will examine both the philosophical concepts in the abstract and how those philosophical concepts are reflected or actualized in the craft of legal argumentation, in the intellectual history of law, and in contemporary questions of politics and government. Above all, we will ask which conception of law best contributes to legal justice. The course consists in three units. Unit I is about theories of the nature of law, focusing on legal positivism and natural law. Unit II is about theories of particular departments of law, focusing on tort law and criminal law. Unit III takes a philosophical perspective on being a lawyer, focusing on questions of what principles define lawyers' role in society and what ideals give the life of a lawyer meaning. Grading is based on class participation, two in-class moot court presentations, and, based on individual student preference, either a final exam (a one-day take-home essay with a word limit) or a final research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Cross-listed with Philosophy (PHIL 375J).

**LAW 6001. Legal Ethics. 3 Units.**

(Formerly Law 335) A survey of the major legal and ethical issues presented in the practice of law. We will examine the concept of the lawyer endorsed by the rules of professional responsibility, the principal-agent relationship, and common law doctrines governing law practice in both civil and criminal settings. We will also assess the tensions between this concept of the lawyer and the personal, political, and economic constraints of law practice. To this end, emphasis will be given not only to the law of lawyering but to the history and sociology of the American legal profession, theories of role morality and professional identity, the sources of cognitive bias that affect perception and judgment, and techniques for navigating ethical dilemmas. Elements used in grading: Attendance, class participation, in-class exercises, short papers and final exam.

**LAW 6003. The American Legal Profession. 3 Units.**

(Formerly Law 685) This course will deal with selected aspects of the history, organization, economics, ethics, and possible futures of the legal profession in the United States. Likely topics will include, in addition to the ABA's Model Rules of Professional Conduct: demographic changes in the profession, the evolution of law firms, bar associations, and law schools from the early twentieth century to the present; the development of corporate law, personal injury, mass torts, prosecutorial and criminal defense practices, and the "public-interest" bar; the dominant professional ethic of adversary-advocacy, and its critics; the regulation of lawyers; the economics of the market for legal services; the organization and culture of law firm practice; the role of the lawyer as counselor; and the export of American lawyering models abroad. 8-hour self-scheduled take-home examination, with option of writing a research paper. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, final paper or final exam.

**LAW 6004. Legal Ethics: The Plaintiffs' Lawyer. 3 Units.**

(Formerly Law 555) This course uses a study of plaintiffs' lawyers as a vehicle to explore many of the most controversial and important issues at the intersection of tort law, civil procedure, and legal ethics. Specifically, in this course, we will study who personal injury lawyers are, how they find clients, how they fund litigation, and how they usher complex cases to conclusion. In so doing, we will address: the role and regulation of lawyers, the use and abuse of the contingency fee, the legality and normative consequences of solicitation and attorney advertising, the propriety of secret settlements and expansive protective orders, the rise and impact of "alternative litigation finance," and the vexing issues posed by class actions, aggregate actions, consolidated actions, and multidistrict litigations (MDLs). The final segment of the course will involve a series of case studies, where students will test their knowledge of the Model Rules of Professional Conduct and have the opportunity to see the course's themes echoed and expressed in recent real-world controversies. Importantly, though the course is nominally focused on "the plaintiffs' lawyer," it does not just equip students to practice on one side of the "v." Rather, through our grounded study of legal ethics, advanced civil procedure, and contemporary legal practice, students will acquire tools that will be helpful across all kinds of civil litigation. The final paper will be due shortly after the course's conclusion. Elements used in grading: Class participation, reflection papers, final paper, and group presentation.

**LAW 6005. Technological, Economic and Business Forces Transforming the Private Practice of Law. 2 Units.**

(Formerly Law 388) The private commercial practice of law is undergoing fundamental change. Modern technological, economic and business forces are placing extreme pressure on the traditional private attorney law firm model. These forces will transform, eliminate or replace virtually every aspect of legal services provided by attorneys. Traditional foundations of the large law firm model such as "billable" hours, summer associate programs, large staffs (e.g., paralegals and secretaries) and high associate-to-partner ratios are becoming (or have already become) relics of a bygone era. Today, the business need for clients to select a one-stop, full-service law firm for their important legal work has, in a variety of circumstances, disappeared. Sophisticated clients are utilizing a wide range of legal services firms and companies for their legal work. As a result, the diversity of legal business models and manner of providing legal services has greatly expanded. Often individual lawyers (or very small firms) can provide high-level legal services by assembling "virtual" teams in which each team member handles a different constituent part of the representation. "In-sourcing," "out-sourcing" and the transferring of large portions of work to non-lawyer legal support vendors are all becoming fixtures of the legal economy. This rapid increase in diversity on both the supply and demand side of the legal economy will greatly alter the skills and prerequisites required for the successful private practice of law. The course is composed of two parts. In part one, the technological, economic and business practices transforming the legal profession are identified and their impact on the traditional approaches to private practice law firms will be examined. In part two, the course focuses on how individual lawyers can adapt to or embrace the forces transforming law to improve their practice and succeed in the new environment. Part two of the course will additionally focus on how specific skills such as project management, social networking and information management will be crucial to a successful legal career. Part two of the course will also discuss how the changing legal environment creates new ethical and professional challenges for attorneys. Elements used in grading: Attendance, class participation and written assignments.

**LAW 6006. Introduction to Legal Design. 3 Units.**

(Formerly Law 761) Intro to Legal Design is a 9-week course for law students & other graduate students to reimagine how legal services are delivered, & to learn how to use human-centered design methods to create breakthrough solutions to complex problems. The students will work with project partners - including legal aid groups, courts, and private law firms -- on legal service challenges to help the partners solve real problems they & their users face. For each challenge, students will work on interdisciplinary teams, with close coaching from designers, engineers & lawyers. Students will learn design methods to create new innovations that make legal services more accessible & engaging. Elements used in grading: Class Participation, Attendance, Written Assignments.

**LAW 6015. Innovations in the Delivery of Legal Services. 2 Units.**

This is an era of groundbreaking change in the legal profession. Twenty years ago, email was unheard of at most law firms. Today, artificial intelligence, machine learning, and online services are creating a fundamental shift in how law is practiced. Beyond technology, massive challenges to the code of professional responsibility, from multi-disciplinary practices to law firms filing for IPOs, are reshaping the legal landscape. This course focuses on the opportunities and challenges these disruptions create for the new lawyer. Students will gain hands-on experience with some of the most innovative organizations in the legal community. Significant time will also be spent analyzing changes anticipated to impact the legal industry in the next decade. Elements used in grading: Attendance, Class Participation, Final Paper.

**LAW 681C. Discussion: Group Behavior. 1 Unit.**

This discussion group will look at how ethical choices are shaped by organizational and group cultures. We'll read about some famous psychological experiments such as the Milgram and Zimbardo experiments; and some studies of decisions made in corporate organizations, government bureaucracies, and a battalion of ordinary middle-class Germans tasked with hunting down Jews; and talk about what insights from this work may be relevant to lawyers' ethics and working lives. Begin in Winter Quarter and run through Spring Quarter. Meeting Time: Wednesdays, 7:30 to 9:30 p.m. Meeting Dates: TBD. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

**LAW 681J. Discussion: When Bad Things are Done by Good People. 1 Unit.**

Some people live their lives in a manner that would lead few to declare them good people. From Tony Soprano to Saddam Hussein to Bernie Madoff, we are all familiar with individuals who have made crime and violence a constant in their lives. There are far more people, though, who try generally to live good lives, but find themselves having acted or having failed to act in ways that are widely condemned as evil. In the first four of our five meetings, we will be looking (through some books, reports and films) at case studies of such circumstances, including (a) those in authority who have covered up evidence of sexual abuse; (b) prosecutors who have ignored evidence of a defendant's innocence, (c) lawyers who have turned blind eyes to client misconduct, and (d) soldiers who have committed acts they would have once found unimaginable. In our fifth session we will consider contrasting case studies of individuals who resisted great pressure and kept their moral compasses well-calibrated. Throughout our inquiry, we will reflect in particular on the power of institutions and authority in affecting ethical mores. Winter Quarter. Class meeting dates: Five Wednesday Evenings from 7:00 to 9:00 p.m. (precise dates TBD). DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

**LAW 681U. Discussion: Injuries. 1 Unit.**

Very generally speaking, we try, as individuals, to avoid injuring people and, collectively, to adopt policies that minimize injury, in the sense that we don't want to make people worse off, in some hedonic sense, or deprive them of options or capacities that we think they ought to have. Moreover, our legal system frequently compensates people who are injured (and therefore must ascertain if, and how badly, they are injured.) What we get the chance to investigate and discuss in this discussion group is what we mean when we say that people are injured by some particular practices or outcomes that might seem, without much reflection, to be obviously injurious. More particularly, we will discuss five issues: (1) In our first session, we will work out the implications of an academic literature that seems to explore what I see to be one of the finest of one-line jokes ("Nothing matters, and what if it did?"). The literature on hedonic adaptation might seem to suggest that we can neither injure others nor improve their lots: very quickly, people return to a (generally mildly positive) fixed equilibrium state even when seemingly very good or very bad things happen to them. We will explore the literature and its limits. (2) In the final four sessions, we will explore four conditions or practices that seem intuitively injurious and problematic and try to figure out more precisely what might be bad about them, or whether they are actually injurious in the ways that we might at first think: we will explore what is injurious about poverty, discrimination, sexual harassment, and even the big one, death. Begin in Winter Quarter and run through Spring Quarter. Class times will be determined: 3 in winter and 2 in spring, on an evening that works for all those enrolled. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 682A. Discussion: Authoritarianisms. 1 Unit.**

What is authoritarianism? What is the authoritarian personality? In what social, psychological, economic, and political climates does authoritarianism take root and become an object of desire? In what ways does the rule of law bend to and even reflect authoritarian impulses? Although it is common to think of constitutionalism as anti-authoritarian, and of authoritarianism as anathema to constitutionalism (after all, what do formal legal "constraints" on state power inscribed in fundamental law mean in an authoritarian state – a state free to act as it wishes?), in what ways and to what ends have authoritarian and quasi-authoritarian regimes relied on constitutional law and in what ways do authoritarian impulses manifest in supposedly liberal democratic regimes? Finally, and crucially for our purposes, what roles have lawyers played in erecting and resisting authoritarianism? In this reading group we will address these questions through a wide range of source material in law, history, cognitive psychology, political theory, and fiction. Begin in Winter Quarter and run through Spring Quarter. Meeting Time: Tuesdays, 5:30 to 7:30 p.m. Meeting Dates: TBD. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Attendance and active participation are requirements of the seminar.

**LAW 682B. Discussion: Beyond Neoliberalism. 1 Unit.**

Scholars' and policy makers' thinking about political economy evolves as one understanding of the role of government ceases to reflect people's aspirations and views of social reality and is superseded by another. The laissez faire thinking of the 19th century was replaced by Keynesian management in response to the Great Depression. After WWII, Keynesian thinking was challenged, by 'neoliberalism'—a challenge that began to achieve success in the 1970s in response to perceived failures of government, high inflation, and other economic and social woes. By the mid-1980s, neoliberalism had become the new conventional wisdom, and liberals as well as conservatives accepted its core premises: that society consists of atomized individuals competing rationally to advance their own interests; that this behavior, in aggregate, produces good social outcomes and economic growth; that free markets are therefore the best way to allocate societal resources and government should intervene only to remedy market failures. Disagreements about what constitutes such failures and about corrective interventions persisted, but the general premises were widely embraced by policymakers and politicians—the so-called Washington Consensus. Today, that consensus is breaking down. Neoliberal policies have generated profound wealth inequality and have little to offer to address the perceived threats of globalization and emerging technologies like artificial intelligence and robotics. But what should come next? Our readings in the course will explore a variety of themes related to these debates. How did neoliberalism come to dominate political discourse? What are its core tenets? What kinds of challenges are being presented to them, and what might an alternative approach to political economy for the 21st century look like? Winter Quarter. Five Monday Evenings from 6:30 - 8:30 (precise dates TBD). DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

**LAW 682C. Discussion: Law and Development: Poverty, Institutions, and Geopolitics. 1 Unit.**

From economic grievances fueling conflict over territory to refugee emergencies to famine and health inequalities, problems of regional and global development often implicate law in its various forms. In this discussion seminar, we explore some key ideas and examples that illuminate law's role in shaping development. Among other topics, we will examine the role of institutions in perpetuating or breaking the cycle of poverty; how geopolitical pressures affect domestic political and economic conditions; the relationship of health and wealth to well-being; the role of lawyers; and ethical questions bearing on law's role in development. Readings will include selections from academic and policy-oriented books and articles, as well as fiction and documentary films. Begin in Autumn Quarter and run through Winter Quarter. Class will meet Tuesdays and Wednesdays from 6:30 - 8:30 p.m. (precise dates TBD). DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Attendance and participation.

**LAW 682D. Discussion: Science and the Law. 1 Unit.**

In an attempt to reach "correct," justified outcomes, areas of the law ranging from criminal justice to toxic torts look to science as a source of disinterested, objective fact. But while science is indeed at its heart a search for objective truths about the world, the incorporation of scientific results into legal institutions is often both fraught and unsatisfying. Problems may arise due to a misunderstanding of the underlying science by lawyers and judges, different norms in the legal and scientific worlds, or even for the simple reason that scientific results are not immutable but rather are often subject to reinterpretation and refinement. In this discussion group, we will explore a range of questions at the intersection of science and law. We will discuss how scientists reach consensus on the interpretation of research results, including the role of peer review and whether science is beset by a "replication crisis." We will compare how different legal processes incorporate scientific findings, ranging from active solicitation of expert input to independent research by legal decisionmakers. And, most importantly, we will discuss where and how these processes go wrong, and how communication from scientists to lawyers and policymakers might be improved. Spring Quarter. Class meeting dates: Five Mondays from 7:30 to 9:30 p.m. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Attendance at all sessions and participation.

**LAW 682E. Discussion: Tocqueville's Democracy in America. 1 Unit.**

The young Frenchman Alexis de Tocqueville traveled extensively in the Jacksonian America of the 1830s, and wrote a two-volume book based on his observations. Widely regarded as the most perceptive commentary ever written on the character of the American republic, it deals with the social preconditions for democracy, issues of religion, race, and gender, the conflict between freedom and equality, and the potential danger of soft despotism. The assigned readings will be excerpts from the book. We will meet five Tuesday evenings during winter and spring quarters, from 6:30 to 9:00, at my home. Precise dates will be determined in consultation with the class. We will begin each session with an informal dinner at 6:30, leaving about two hours for discussion. I will ask two students to lead the discussion each session. Enrollment will be limited to eight students. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

**LAW 682F. Discussion: Understanding America. 1 Unit.**

As the election of 2016 underscored, we in the United States live in a polarized and fractured society, where there is, increasingly, a lack of interaction, dialog, and understanding between groups. In this discussion seminar, we will try to escape our particular niches and enclaves to seek the perspectives of those who occupy different segments of contemporary American society. In so doing, we will engage fundamental questions about identity, difference, and how best to build a new pluralism. We will work with students to compile our final reading list, though the list will include some of the following: Ta-Nehisi Coates, *Between the World and Me*; J.D. Vance, *Hillbilly Elegy: A Memoir of a Family and Culture in Crisis*; George Packer, *The Unwinding: An Inner History of the New America*; Jessica Valenti, *Sex Object*; Arlie Hochschild, *Strangers in Their Own Land*; Katherine J. Cramer, *The Politics of Resentment: Rural Consciousness in Wisconsin and the Rise of Scott Walker*; Domingo Martinez, *The Boy Kings of Texas*; and T.M. Luhrmann, *When God Talks Back: Understanding the American Evangelical Relationship with God*. Begin in Autumn Quarter and run through Winter Quarter. Class meeting dates: Five Tuesday Evenings from 7:00 – 9:00 (precise dates TBD). DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

**LAW 7001. Administrative Law. 4 Units.**

(Formerly Law 238) Federal, state and local administrative agencies affect vast areas of life and law practice. Their domain includes regulation of the environment, immigration, professional licensing, and many other areas of the economy as well as the provision of government benefits. It's fair to say that today we live in an administrative state – which some would like to deconstruct. Administrative law is about the procedures (mostly prescribed by the federal and state Administrative Procedure Acts as well as constitutional due process) that agencies must follow when they adopt regulations or adjudicate disputes. It's also about the legislative, executive, and judicial checks and balances that control the agencies. In particular, the course explores the nature and scope of judicial review of agency action. Elements used in grading: Final Exam (essay, three hours, open book).

**LAW 7002. Beyond the Common Law: Tort Reform and Tort Alternatives. 2-3 Units.**

(Formerly Law 563) Over the past century, tort law has been under sustained attack. Using a broad mix of case law, case studies, and scholarly analysis, this seminar will interrogate those attacks—including their historical roots, their theoretical justifications, and their practical effects. We will first study "replacement reforms"—attempts to jettison the common law in favor of alternative compensation mechanisms, including workers' compensation, auto no-fault, the September 11th Victim Compensation Fund, and the Vaccine Injury Compensation Program, housed within the U.S. Court of Claims. Second, we will study modern tort reform initiatives, often dubbed "discouragement reforms," which have chiseled away at damages and chilled personal injury victims' incentives and capacity to seek relief. Finally, we will study the United States Supreme Court's own tort reform activity, including recent jurisprudence limiting punitive damages, preferencing arbitration, and granting broad preemptive effect to agency actions. Through this analysis, students will develop a deeper and richer understanding of the tort system, its contemporary operation and excesses, and the uneasy but undeniably important place tort law—and civil litigation more generally—occupies in contemporary American society. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, reflection papers or research paper. Early drop deadline.

**LAW 7003. Cities in Distress. 2-3 Units.**

(Formerly Law 735) In 2013, the City Detroit became the 28th city to declare municipal bankruptcy or to enter a receivership for fiscal crisis since late 2008, marking a window of time that saw five of the six largest municipal bankruptcies in American history. Despite the end of the Great Recession, serious fiscal challenges remain for many urban and rural local governments. This course will focus on these places and what they need from state and local government. Rather than a survey of municipal bankruptcy or restructuring law, the course will function as a seminar on state and local governance in the face of decline and poverty, especially due to the loss and automation of industrial employment. Subjects will include: (1) the basics of local finance; (2) an introduction to the primary causes of local fiscal distress; (3) tools for state and federal governance of city finances and financial distress (including municipal bankruptcy and state receiverships); and (4) the local public sector's role in anti-poverty work. The course will feature readings focused on places (both urban and rural) across the country, including in California, Oregon, the Northeast, the Great Lakes/Rust Belt region, and the Appalachian region. Students will have two options for this course. In Section 1, students will enroll for 2 units of course credit. Section 1 grades will be based on class participation and weekly reflection papers of 3-5 pages each week for most of our topics. In Section 2, a smaller number of students will enroll for 3 units of course credit. Section 2 grades will be based on an original research paper for R-Research Paper credit. Completion or co-enrollment with Local Government or Land Use Law is advisable but not required. Elements Used in Grading: Class Participation, Attendance, Written Assignments. CONSENT APPLICATION: To apply for either section of this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7005. Constitutional Politics. 2-3 Units.**

This seminar will explore various ways in which constitutional law interacts with the political process. Topics covered will include the appointment and confirmation process for federal judges, judicial campaigns and elections in the states, various approaches to "popular constitutionalism," ratification of constitutional amendments, judicial activism as a political issue, public opinion and the Supreme Court, court-curbing legislation, and the role of interest groups in constitutional litigation. Readings will include cases, as well as perspectives from legal scholars, political scientists and historians. Students will be assigned to prepare and circulate discussion questions for one week of the class. Students can choose to write a final R paper or take an exam. Students writing the paper may take the class for 2 credits or write a longer paper for 3 credits. The paper will be due at the law school's paper deadline for fall quarter classes. Students taking the exam will be asked to answer one or more essay questions about the major issues covered in the class. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: The grade will be based on the paper or exam, along with class participation.

**LAW 7006. Civil Liberties and the Response to Terrorism. 3 Units.**

This seminar will address a series of interrelated issues that have arisen from America's response to 9/11, including: torture, detention, surveillance, profiling, and dissent. Each of these issues raises a discrete set of legal and policy questions. However, each also offers the chance to explore how the system of checks and balances can and should work during periods of national crisis, the relevance of traditional constitutional constraints on executive power in a national security context, and the enforceability of international legal norms in domestic courts. Elements used in grading: Attendance, Class Participation, Final Paper.

**LAW 7007. Constitutional Law: Religion and the First Amendment. 4 Units.**

(Formerly Law 602) This course covers the major doctrines and decisions interpreting the provisions of the First Amendment affecting religion, especially the free exercise and establishment clauses. The principal focus is on modern Supreme Court cases and doctrine, but the course also emphasized the historical, philosophical, and theological roots of first amendment principles. Elements used in grading: Final Exam (take-home).

**LAW 7008. American Constitutional History from the Civil War to the War on Poverty. 3 Units.**

(Formerly Law 738) This course addresses U.S. constitutional history from the post-Civil War Reconstruction period through the mid-20th century. Because of the breadth of the subject matter, the view will necessarily be partial. In particular we will take as our focus the way the Constitution has provided a point of political mobilization for social movements challenging economic and social inequality. Topics covered include: Civil War Reconstruction and restoration; the rise of corporate capitalism and efforts to constrain it; Progressive Era regulation; the New Deal challenge to federalism and the anti-New Deal backlash; government spending; WWII and the Japanese Internment; the Civil Rights Era, and the War on Poverty. Readings will include both legal and historical materials with a focus on the relationship between law and society. Readings will include both legal and historical materials with a focus on the relationship between law and society. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Paper extensions will be granted with instructor permission. No automatic grading penalty for late papers. Cross-listed with American Studies (AMSTUD 155) and History (HISTORY 155).

**LAW 7010. Constitutional Law: The Fourteenth Amendment. 3 Units.**

(Formerly Law 255) This course examines various aspects of the Fourteenth Amendment, with special attention to equal protection and substantive due process. Topics addressed will include equal protection in relation to race, gender, and sexual orientation, and substantive due process in relation to privacy, sexuality, and reproductive justice. Elements used in grading: Class attendance and participation and exam.

**LAW 7011. Constitutional Litigation. 4 Units.**

(Formerly Law 641) This is a course in advanced and applied constitutional law. It focuses on one of the central ways in which constitutional claims are actually litigated: in lawsuits against public officials and local governments. The bulk of the course looks at litigation under 42 U.S.C. § 1983. We will consider topics such as what it means to act "under color of state law;" absolute and qualified immunities; government liability for the acts of individual officials; remedies for constitutional violations, including monetary and injunctive relief; structural reform litigation; and the remedial issue nearest and dearest to many lawyers' hearts: attorney's fees awards. This course is particularly useful for students who plan to clerk in Federal courts, as much of their dockets involves §1983 litigation. This course complements Federal Courts (Law 283) and students who plan to clerk will benefit from taking both courses. Elements used in grading: Participation, Attendance, Exam.

**LAW 7012. Constitutional Law: Speech and Religion. 4 Units.**

(Formerly Law 612) This is a course about the freedoms of speech, press, religion, association, and assembly under the First Amendment. Two-thirds of the course will be about freedoms of speech, press, and assembly. We will examine historical context, doctrinal development, and current caselaw. We will ask why government regulates speech (to prevent harms? to protect sensibilities? to redistribute power? to advance the interests and ideas of the politically powerful?), how government regulates speech (by aiming at messages? by aiming at markets? by aiming at when and where speech takes place? by conditioning subsidies?), and what justifications are ever sufficient for limiting speech. We will include consideration of the institutional press and new technologies including the Internet, as well as the rights of private organizations to determine their membership and organization. About a third of the course will be about religion. We will ask how the twin constraints of the Free Exercise and Establishment Clauses relate, looking especially at notions of neutrality, voluntarism, separation, and accommodation. Elements used in grading: Exam.

**LAW 7014. Constitutional Theory. 3 Units.**

The guiding question of this course will be how we should think about the role of the U.S. Constitution in American law and American life. In considering this issue, we will address debates about constitutional interpretation (including both originalism and living constitutionalism), the nature and features of constitutional change within the American context, the role of federalism and the separation of powers in the constitutional scheme, and the nature of American constitutionalism as opposed to English and continental European models. We will tackle these debates in the context of some specific contemporary controversies about the Constitution, including: How do the civil rights movement and other social movements impact our understanding of the Constitution? Does the Constitution reject a European-style inquisitorial process in favor of an Anglo-American vision of due process?; How important is consensus within the Supreme Court to establishing the legitimacy of constitutional meanings?; and; What is the Constitution, and how much does it include outside of the written document? Throughout we will be contemplating the extent to which our interpretation of the constitution depends on our vision of American democracy and the good society. Requirements for the course include regular class participation and either four response papers or a substantial research paper; students who take the research paper option will receive four units and "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation; Response Papers or Final Paper.

**LAW 7015. Contemporary Issues in Constitutional Law. 3 Units.**

(Formerly 448) This is an advanced constitutional law seminar for students who have already taken the introductory Constitutional Law course. The seminar will provide an opportunity for in-depth discussion of competing theories of constitutional interpretation, the role of the Supreme Court in our political system, and analysis of judicial behavior. Each week, these themes will be examined through the lens of a current "hot topic" in constitutional law - for example, affirmative action, same-sex marriage, religious liberty, the death penalty, executive power, campaign finance, immigration, abortion, and other topics. This is not a "spectator" class; all students will be expected to participate actively in class discussion each week. This is a good seminar for students interested in clerking or pursuing academia. Prerequisite: Constitutional Law. Elements used in grading: Attendance, Participation, Written Assignments.

**LAW 7016. Critical Race Theory. 3 Units.**

(Formerly Law 671) This course will cover the most important writing in critical race theory as it relates to law and jurisprudence. We will review the relationship between skeptical jurisprudence as developed in legal realism and Critical Legal Studies to the struggle for racial justice and the ambivalent relationship of civil rights lawyers to mainstream legal strategies for social change. We will review the critique of rights, the use of narrative in legal scholarship and the emergence of the critique of "intersectionality" as a challenge to conventional racial politics. Special Instructions: Students have the option to write an independent research paper for Research credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation and final paper.

**LAW 7017. Creation of the Constitution. 4 Units.**

(Formerly Law 230) The course begins with readings setting forth the intellectual and experiential background of the framing, including common law and natural rights theory, republicanism, economic & political scientific ideas, and colonial and post-Independence experience. We then study large parts of the debates at the Constitutional Convention, primarily using Madison's Notes. Major topics are the principle of representation, the extent and enumeration of national powers, the construction of the executive and judicial branches, and slavery. Next come the ratification debates, including readings from antifederalist writers, *The Federalist*, and speeches in ratification conventions. We conclude with the addition of the Bill of Rights. Classes consist of a combination of lecture and extensive participation by students. Elements used in grading: Class participation, In-class exam, supplemented by short take-home essay. Cross-listed with History (HISTORY 153).

**LAW 7018. Disability Law. 3 Units.**

(Formerly Law 644) This is a survey course of disability rights law, with an emphasis on federal and state statutes and case law. Areas of concentration include employment, government services, public accommodations, education, housing, mental health treatment and involuntary commitment, and personal autonomy. We will review such statutes as the Americans with Disabilities Act (ADA), Rehabilitation Act (Sec. 504), Individuals with Disabilities Education Act (IDEA), and the Fair Housing Act Amendments. The course examines disability from a civil and human rights perspective. Elements used in grading: Grades will be based on class participation (50%), and either several short reflection papers (50%) - Section 01 or a long independent research paper (50%) - Section 02. The student must consult with the instructor on the paper's topic, scope and format. After the term begins, students accepted into the course can transfer from Section 01 into Section 02, which meets the R requirement, with consent of the instructor. Non-law students may enroll with instructor consent. This class is limited to 45 students, with an effort made to have students from SLS (35 students will be selected by lottery) and 10 non-law students by consent of instructor.

**LAW 7019. Employment Discrimination. 3 Units.**

(Formerly Law 349) This course will examine legal responses to the barriers to workplace equality that are faced by minority groups. The course will survey the relevant doctrine, focusing primarily on federal employment discrimination statutes, but also addressing more expansive antidiscrimination protections under some state statutes, and local ordinances. Covered topics include sexual and racial harassment, sexual orientation discrimination, and affirmative interventions aimed at increasing the minority group and/or female representation in certain job categories or segments of the labor market. In addition to surveying the doctrine as it stands and as it has developed over time, we will also explore the doctrinal and conceptual difficulties inherent in identifying invidious discrimination and in devising appropriate remedies. Elements used in grading: Class participation and exam.

**LAW 7020. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 2 Units.**

(Formerly Law 724) The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: the Rohingya crisis in Myanmar; civilian space travel (Elon Musk's Mars plans); designer genetics; social media ethics (e.g. Facebook and Russia and on-line sex trafficking); free speech on University campuses (and Gawker type cases); artificial intelligence; Brexit; corporate and financial sector scandals (Epi pen pricing, hedge funds, Wells Fargo, Volkswagen emissions testing manipulation); and non-profit sector ethics challenges (e.g. should NGOs engage with ISIS). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Brenna Boerman at [brennab@stanford.edu](mailto:brennab@stanford.edu). The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). NOTE: This course does not meet the SLS Ethics requirement. Elements used in grading: Class Participation, Attendance, Written Assignments, and Final Paper. Cross-listed with Ethics in Society (ETHICSOC 234R), Public Policy (PUBLPOL 134, PUBLPOL 234).

**LAW 7021. Family Law. 3 Units.**

(Formerly Law 293) If there were no legal institution called marriage, would we want to create one? In the context of people's intimate relationships, when and how does the law facilitate and reinforce people's preferences/choices, and when does and should it restrict them? What are (and should be) the sources of legally enforceable obligations between intimates or family members? How does and should the law take account of children, who cannot fend for themselves? This course will consider these questions and more. Elements used in grading: Exam, with minor adjustments for class participation.

**LAW 7022. Federal Habeas Corpus. 2 Units.**

This course covers the history of the Great Writ and the evolution of the scope of federal habeas corpus review and relief; the Suspension Clause; habeas review in capital cases including stays of execution; alternatives to habeas review; state post-conviction proceedings; the Antiterrorism and Effective Death Penalty Act (AEDPA); and jurisdictional issues in both the trial and appellate courts. The course will be valuable to students seeking federal judicial clerkships as well as those interested in prosecutorial work or post-conviction representation. Elements used in grading: Exam.

**LAW 7023. Federalism. 3 Units.**

(Formerly Law 742) This course is an overview of legal and policy issues connected to federalism. We will examine a set of core theoretical questions - the values federalism serves; the relationship of federalism and individual and minority rights; and the role of judges in enforcing federalism through judicial review - across a wide range of contemporary legal debates (e.g., same-sex marriage, health care, immigration, voting rights). While much of the seminar will focus on the United States, we will also consider federalism in comparative context by examining the constitutions and legal doctrines of other regimes. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Written Assignments or Research Paper.

**LAW 7024. Food Law and Policy. 2-3 Units.**

This seminar explores legal and policy issues related to our food system, including the regulation of food supply, food safety, nutrition / obesity, marketing / labeling, security, and animal treatment. We will examine how laws and regulations affect the production, distribution, sale, and consumption of food and whether particular regulatory approaches (e.g., product bans, product standards, government subsidies, taxes, information disclosure, or labeling) are more effective in achieving public goals. Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7025. Employment Law. 3 Units.**

(Formerly Law 339) Workplace issues have become one of the fastest-growing areas of state and federal law. Employment-related lawsuits filed in federal court have tripled in volume in the past decade, and now account for a tenth of all civil cases. Many state courts have experienced a similar burgeoning of their employment law caseloads. This course examines this diverse, rewarding, and rapidly evolving area of legal practice by considering the diverse array of laws and institutions that regulate the employment relationship. The focus of the course is on laws that affect employees in non-unionized settings, such as protections against dismissal without cause, wage and hour restrictions, workplace privacy, covenants not to compete, the Family and Medical Leave Act, and mandatory arbitration of employment disputes. The course does not cover either Employment Discrimination or Labor Law, both of which are offered as separate courses. Special Instructions: Regular, punctual attendance is required. If you expect (or are unexpectedly forced) to miss more than two classes, please consult with the instructor as soon as possible, as exceptions will be considered on a case-by-case basis. Early Add/Drop Deadline: Add/Drop decisions must be made the first week of class. Exceptions are at the instructor's discretion and will be considered on a case-by-case basis. Elements used in grading: Final Exam.

**LAW 7026. Immigration Law, Policy and Constitutional Rights. 3 Units.**

(Formerly Law 565) This survey course will provide a foundation in immigration law, the system of admission and removal, and the constitutional principles governing the regulation and rights of noncitizens. The course will also explore selected contemporary topics concerning immigrants' rights and immigration reform drawing on the instructor's extensive litigation to advance the constitutional and civil rights of noncitizens and service as a senior immigration advisor in the Obama administration. We will examine some current issues such as immigration detention; Trump executive orders; federal enforcement authority; state and local regulation of immigrants; constitutional prohibitions on 'alienage' discrimination; habeas corpus and Article III judicial review of removal orders; and the intersection of criminal and immigration law. Guest speakers may be invited for some topics. No prior course or background in immigration law is expected. Elements used in grading: Class participation and attendance (10%), final exam (90%).

**LAW 7027. Critical Race Theory. 1 Unit.**

This reading group will investigate unresolved issues in Critical Race Theory. Questions explored will include: What exactly are advocates for racial justice fighting for? That is, what does racial justice look like? What is the place of "culture" in our racial present and in a racial utopia? What are the roles of agency and structure -- individuals and institutions -- in perpetuating, and remedying, racial inequality? What is the role of law in undermining and/or entrenching racial stratification? Readings will be highly varied, coming from the fields of law, psychology, sociology, and anthropology, among others. Meeting Dates: This class will meet 4:15PM - 7:15PM on Thursday, September 29, October 27 and November 17. Elements used in grading: Grading will be based on participation, short reaction/response papers, and a final paper. Same as: Reading Group

**LAW 7028. Lawyers and Leadership. 3 Units.**

(Formerly Law 759) This course will examine the responsibilities and challenges for those who occupy leadership roles, with particular emphasis on those seeking to use law as a vehicle for social and organizational change. Topics will include characteristics and styles of leadership, organizational dynamics, forms of influence, decision making, conflict management, innovation, diversity, ethical responsibilities, scandal, civil and human rights, and public interest law. Materials will include cutting-edge research, case histories, problems, exercises, and media clips. Class sessions will include visitors who have occupied leadership roles. Requirements will include class participation, and either short written weekly reflection papers (2 to 3 pages and a short research paper (about 3-5 pages) or (2) a long paper (approximately 26-30 pages). After the term begins, students can transfer from section (01) into section (02), which meets the R requirement. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper.

**LAW 7029. Legislation and Administration. 3 Units.**

(Formerly Law 394) This course explores the world of legislation and administration that defines much of our modern legal order. By analyzing agencies, statutes, and legislative procedures, the course prepares students to think about the structures and processes of government, and how they influence legal outcomes that would otherwise be defined largely by social norms and common law adjudication. Drawing on examples from a variety of substantive areas, the course covers the legislative process, approaches to statutory interpretation, the role of agencies and the legislature in a system of separated powers, delegation to agencies, the interaction of common law doctrines and agency practices, and techniques of agency regulation and adjudication. First-year students are welcome. Special Instructions: Students who receive credit for Legislation (Law 319) and/or Statutory Interpretation (Law 425) may not receive credit for Legislation and Administration (Law 7029) and vice versa. Elements used in grading: Attendance, participation in in-class discussion and simulation and occasional short assignments, being on "panel" for selected classes, and a self-scheduled open-book exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a simple Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7030. Federal Indian Law. 3 Units.**

(Formerly Law 600) This course will provide an overview of the field of federal Indian law. It will consider the origins and scope of tribal sovereignty as recognized under federal law, as well as current federal law on tribal criminal and civil jurisdiction. It will also explore the division of authority between tribal, federal, and state governments; federal statutory schemes governing Natives and Native nations; and constitutional issues affecting Natives. Additional current legal issues which may be covered based on class selection include Native land claims, gaming, family law, religious and cultural rights, and natural resources. The course includes an optional supplementary trip to the Yurok Reservation in northern California in early May. Elements used in grading: Class Participation, Final Exam.

**LAW 7031. Political Campaigning in the Internet Age. 2 Units.**

This course will acquaint students with the changing environment for campaigns posed by the rise of the Internet. So much of the traditional way analysts have understood campaigns has revolved around television as the primary mode of campaign communication. The rise of the Internet, nonlinear television programming, and mobile communication enables new forms of campaigning. With particular focus on the 2016 campaign, this course will examine the relevant social science on these topics, while at the same time bringing in guest lecturers from industry, campaigns, and media. Requirements: Students will be required to complete a 25 page research paper on a topic relevant to the course. Law students enrolled in this class will have the option of participating in a one-week extension of the course (Law 7056) in Delhi, India during spring break for an additional credit. Students may enroll for this course alone or for both this course and Law 7056. The overseas option is limited to 12 students. (See Law 7056 for application instructions and deadline). Elements used in grading: Attendance, Final Paper. This course is cross-listed with Communication (COMM 153 & 253).

**LAW 7032. Public Interest Law and Practice. 2 Units.**

(Formerly Law 617) This course will examine the history, theoretical frameworks, strategies used by, and political position of public interest law practice and attorneys in the United States. We will consider the role of lawyers and the legal system in advancing social change; different career paths of public interest lawyers; ethical issues related to working as a public interest lawyer; the personal impacts of this type of career choice; and tactics deployed by lawyers in differing settings, from issue-based non-profits to government agencies, and private public interest law firms or legal services groups. Readings will include law review articles, legal pleadings and case studies that allow analysis and exploration of the tensions and challenges that exist within the legal system for public interest practitioners. Guest speakers will include leaders from the field. Students will also be exposed to practical skills outside of litigation that social change lawyers should understand. Students will be asked to produce several short papers throughout the quarter. Elements used in grading: Attendance, class participation, written assignments.

**LAW 7033. Race, Identity, and National Security. 2 Units.**

This course explores theoretical, historical, and legal policy questions at the intersection of race, group identity, and national security. Recent political events have thrust the relationship between race, religion, nationality, immigration status, and national security into the limelight, although the questions themselves are not new. How do national security threats affect the formation of racial identity within the United States, and how does race affect our understanding of national security? How should we conceptualize exclusion or discrimination based on nationality, religion, or ideology, as compared to race per se? What is the proper role of courts in addressing challenges to national security policy affecting minority communities? This seminar aspires to understand contemporary policy questions in light of a broader theoretical, historical, and legal context. Class attendance and robust participation in discussion is required. There are two options for assignments in this course. You can either write 5 response papers throughout the course, or a single 18-20 page research paper related broadly to the themes of the course (for R credit). Those who choose the research paper option will be expected to discuss and submit an outline of their research paper while the course is in session and to submit the final paper in accordance with standard law school requirements. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Response Papers or Research Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7034. Race and Public Education. 3 Units.**

From at least *Brown v. Board of Education*, and many would say before that, education has been central to racial justice movements in America. More than fifty years after *Brown*, most American schools remain segregated by race and class, and many advocates still argue that the struggle for quality education is the key civil rights issue of our time. This course will examine a host of education-related legal and policy issues that intersect with questions of race and class. Topics will include: desegregation and re-segregation, tracking, charter schools, school vouchers, high-stakes testing, the Common Core, school discipline, the "school to prison pipeline," and education in alternative schools, juvenile facilities, and adult prisons. This will be a discussion-oriented course that will operate more like a seminar than a lecture. This class is limited to 30 students, with an effort made to have students from SLS (20 students will be selected by lottery) and students from the School of Education (10 students). Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 7036. Law of Democracy. 3 Units.**

(Formerly Law 577) This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Law students enrolled in this class will have the option of participating in a one-week extension of the course (Law 7056) in Delhi, India during spring break for an additional credit. Students may enroll for this course alone or for both this course and Law 7056. The overseas option is limited to 12 students. (See Law 7056 for application instructions and deadline). Elements used in grading: Class participation and exam. Cross-listed with Communication (COMM 361) and Political Science (POLISCI 327C).

**LAW 7037. Poverty Law: Policy and Practice. 3 Units.**

(Formerly Law 614) This survey course will cover historical and contemporary policy debates about poverty in the U.S. Topics will include the constitutional treatment of poverty, as well as the legal and policy treatment of questions of access to specific social goods, such as housing, health care, education, and legal services. We will also discuss "hot topics" in the field, such as criminalization of poverty, international perspectives on poverty, wage theft, and recent policy analyses at the 20th anniversary of welfare reform. Materials will include practice-derived materials as well as scholarly treatment of the issues. Students with a range of backgrounds and perspectives on the issues are encouraged to enroll. While a survey class, lecturing will be minimal, with student leadership of and participation in discussion will be principal methodology. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Exam.

**LAW 7038. Remedies. 3 Units.**

(Formerly Law 393) The remedy is arguably the most important part of any lawsuit, and often the most neglected. This course considers the question of what plaintiffs are entitled to when they win a case and why. It will cover damages, punitive damages, restitution, unjust enrichment, and injunctive relief. While we will consider public remedies in constitutional cases, the majority of the course will focus on remedies in private law civil actions. Elements used in grading: Class participation and final exam.

**LAW 7039. Reproductive Justice. 1 Unit.**

(Formerly Law 490) This seminar explores Reproductive Justice ("RJ") as a paradigm for understanding reproductive oppression – that is, the subordination of individuals through their bodies, sexualities, and abilities to reproduce. The RJ paradigm picks up where a reproductive rights framework ends. It contends that the fight for equality and dignity in matters relating to reproduction continues beyond a successful argument that the Constitution ought to protect a "right" to privacy, "right" to access contraception, or "right" to an abortion. An RJ framework observes that "rights" are given meaning – and lose meaning – according to the race, class, age, sexual orientation, gender identity, immigration status, and physical and mental ability (among other attributes) of the rights bearer. As such, RJ analyzes reproductive experiences within a complex context and with respect to the multiple statuses of the persons involved. This seminar will explore RJ as it speaks to assisted reproductive technologies, health care policy, immigration, incarceration, environmental justice, and economic inequality, among other topics. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. This class meets during the first two weeks of Winter Quarter.

**LAW 7040. Social Justice Impact Litigation: Issues and Strategies. 2 Units.**

(Formerly Law 572) This seminar explores strategic, legal, and ethical issues related to using law reform and social justice litigation to advance the constitutional and civil rights of vulnerable communities. The seminar is designed to allow students to understand and grapple with some of the doctrinal and strategic issues faced by social justice litigators. The course will be informed by the instructor's thirty years of litigating cases, including in the Supreme Court, to advance immigrants' rights as the founder and former national director of the ACLU Immigrants' Rights Project. Among the topics that may be included are selecting and using test cases; identifying plaintiffs; coalition litigation; strategic pleading; class action problems; the role of amicus briefs; suits for damages versus injunctive relief; standing and mootness; ethical problems; settlement strategies; use of public advocacy and media; the effect of lawsuits on policymakers and public officials; the role of government and agency lawyers; and litigation to achieve legislative change. Guest speakers will be invited. Enrollment is limited and the seminar is not open to 1L students. Students are expected to submit a series of reflections (totaling 18 pages) in response to seminar issues and guest speakers. In unusual cases, a student may be approved for Research (R) credit to write a substantial research paper on an approved topic of current significance. R credit is available only with the instructor's prior consent early in the quarter. Students approved for R credit will transfer from section (01) into section (02) after the term begins. Elements used in grading: Class participation (50%) and written submissions (50%). CONSENT APPLICATION: To apply for this course, students are asked to complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7041. Statutory Interpretation. 3 Units.**

(Formerly Law 425) Statutory law is the dominant source of contemporary law, and it is the form of law that lawyers are likely to confront most often in almost any area of practice. It is also an area of vibrant intellectual debate, as scholars, Supreme Court justices, and others debate the methods and aims of statutory interpretation. This course will stress both the practical and theoretical dimensions of interpretation. Students will learn and apply the methods of statutory interpretation. We will also spend considerable time on contemporary controversies, such as debates about textualist, purposive and dynamic interpretation; about the use of legislative history and canons of construction; about the special interpretive problems that arise in the context of direct democracy; and about the democratic and constitutional foundations of statutory interpretation itself. Readings will draw from political science as well as law. Elements used in grading: Class participation and final exam.

**LAW 7042. Law and Sexuality. 2-3 Units.**

(Formerly Law 576) This seminar will focus on how the law regulates sexuality. We will approach the material as an exercise in advanced constitutional law, exploring how courts have used—or might use—federal or state constitutional provisions to address issues regarding a wide array of issues involving sexuality. The core of the class will relate to contemporary controversies concerning sexual orientation and gender identity (including, for example, how sexual orientation and gender identity are defined, regulation of sexual conduct, marriage and parenting rights of same-sex couples, and religious liberty debates, among others). But we will also discuss other issues, including polygamy/polyamory and asexuality. We will maintain an interdisciplinary focus throughout as we consider how social, cultural, and political forces shape, and are shaped by, legal doctrine. All students taking the seminar for 2 units will either write a final research paper of approximately 18 pages (for R credit) or a take a final exam. Students who wish to write a longer R paper (approx. 26 pages) may enroll in the seminar for 3 units. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation; and paper or exam.

**LAW 7043. Strategic Litigation for Racial Justice. 1 Unit.**

(Formerly Law 715B) Recent events in our country have dramatically highlighted the fact that we are not a post-racial society, and that structural racism and implicit bias are as harmful to people and institutions as intentional discrimination. Currently, plaintiffs can only show a violation of the Equal Protection Clause of the 14th Amendment - and several other antidiscrimination laws - by proving intentional discrimination. This seminar will examine this "intent standard" and its significant barriers to racial justice litigation. The course will review social science research, including studies on implicit bias, racial anxiety, stereotyping, and other concepts, to explore how contemporary discrimination manifests. We will address how legal advocates and the law can utilize such research to challenge and remedy discrimination through strategic litigation. We will examine real-world examples of this, including in the context of school discipline and the school-to-prison pipeline. Meeting dates: This class will meet on three Fridays, October 21, October 28 and November 4. Students must attend all three classes. Early drop deadline: Students may not drop this course after the first class. Elements used in grading: Written assignments (reflection papers) and class participation.

**LAW 7044. Supreme Court Simulation Seminar. 3 Units.**

(Formerly Law 606) This seminar provides students with the opportunity to analyze, argue, hear oral arguments and draft opinions in cases that are currently pending before the Supreme Court of the United States. Professor Lawrence Marshall will serve as the instructor in the seminar, and several of the Law School's esteemed group of Supreme Court litigators are expected to participate in one or more of the sessions. The 18 students in the seminar will be divided into two courts. During each sitting, one of the courts will hear arguments in a case currently pending before the Supreme Court, while two of the students from the court not sitting that week will present oral arguments. The cases chosen will provide a mix of constitutional and statutory issues, as well as a mix between criminal and civil cases. Each student will be assigned the role of a particular Justice for the entire quarter. Each student's task while sitting on cases is to do his or her best to understand that particular justice, based on that justice's prior opinions and judicial philosophy. In this sense, the seminar is also intended to help promote insight into the role of judicial personality and philosophy within the decisional process. The weekly seminars will proceed as follows: In preparation for each week's session, all students (whether they are the two students arguing that week, the nine students judging that week, or the seven students observing that week) will read the lower courts' decisions, the briefs (the party briefs and selected amicus briefs) and the major precedents implicated. During the first portion of each week's session (approximately one hour), two of the students (who are members of the Court that is not sitting that week) will present oral arguments to the nine "justices" sitting that week. The arguments will be based on the briefs that were actually filed in the case. During the second segment of each week's session (approximately 45 minutes), the "justices" who are sitting that week will "conference" the case while the other non-sitting students, students who argued, instructors and guests will observe. Again, each student will be in the role of a particular justice. At the end of the "conference," the opinion-writing will be assigned to one "justice" in the majority and one "justice" in the dissent. During the final portion of each session (approximately one hour), the instructors, guests and students will engage in a broad discussion of what they just observed. This may include analysis of the briefing, discussion about the oral argument, reflections on the "conference," and, more generally, a discussion about the case and its significance. After each class, the student assigned to draft the majority opinion will have two weeks to circulate a draft to the "Court." The student writing the dissent will then have two weeks to circulate his or her opinion. The other sitting "justices" can join one of these opinions, request some changes as a condition of joining, or decide to write separately. Over the course of the Quarter, then, each student will argue one case, sit on four or five cases, and draft at least one opinion. Special instructions: 1. Because this is a simulation with assigned roles, students who are accepted into the seminar may not drop without permission of the instructor. 2. Because of the nature of the writing projects (with extensive interaction with other students), the normal deadline for Winter Quarter papers is waived and final papers must be submitted by the Spring Quarter deadline. Elements used in grading: Students will be graded based on the quality of their participation as justices, their oral argument, and their written opinions.

**LAW 7045. The Article III Judge. 2 Units.**

(Formerly Law 278) The contemporary debate over the proper role of a federal judge under the Constitution turns, in large measure, on what it is we think an Article III judge is doing when she is called upon to resolve a "case or controversy." Is she looking for the fair result? If so, by whose lights? Is she a political actor, or is she instead looking for a rule of decision that has been previously established by law (a "mere translator" of the law, in Justice Frankfurter's words). If so, by natural law or positive law? These are some of the questions we will consider in discussing what role a federal judge plays when she exercises "the judicial Power of the United States" conferred by Article III of the Constitution. Readings will include books and articles by some of the leading legal thinkers in the nation's history. Special Instructions: This class will meet the first three weeks of the quarter only. Elements used in grading: Class attendance and participation, reading the assigned material, and a 10-15 page paper that uses the readings to analyze a significant judicial opinion. Special Instructions: This class will meet the first three weeks of the quarter only.

**LAW 7046. The Welfare State. 3-5 Units.**

(Formerly Law 765) Much has been written in recent years about the decline of the welfare state. Numerous adjectives have been applied to describe a trend toward austerity -- death, demise, withering, reversal. One writer suggested that the welfare state had not died, it had merely "moved to Asia" along with industrialization. This seminar introduces students to the key literature, questions, and debates about the modern welfare state. We will consider the emergence, growth, and current status of the welfare state, primarily in Western Europe and North America. The course will examine classical theories about markets and the emergence of social provision. We will also consider the leading theoretical and empirical research addressing the emergence of the welfare state, looking at the American case in comparative perspective. Attention will be paid to social and political factors on state development including political parties, labor markets, gender, demographic change, and immigration. We will then turn to the trend toward austerity and retrenchment, and the effect of globalization for the future of the welfare state. Course Requirements. Participation/Discussion (25%). Students are responsible to complete all readings and to come to class prepared to actively participate in discussion. Each student is responsible to lead a portion of the discussion twice per quarter. Short Reaction Papers (25%). All students must complete 5 reaction papers related to the weekly readings of 2 to 3 pages in length. Reaction papers will include a list of questions to be addressed in that week's discussion. All reaction papers must be posted to coursework in advance of class so that the student(s) leading that week's discussion can incorporate the questions into that week's discussion. Final Options (50%). Students have the option of completing one final paper of 20 pages in length OR 4 essays of 5-6 pages each addressing the readings in weeks that the student did NOT complete reaction papers. Topics for 20 page papers must be approved by me in advance, and may be related to a student's dissertation or master's research or may be a stand-alone topic. Papers may take the form of a research proposal and need not contain original empirical research. Shorter papers should engage thoroughly with the literature on the selected topic, and should bring additional sources other than those read for class to bear on the topic of choice. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with Sociology (SOC 254 & SOC 354).

**LAW 7047. Rethinking Campus and School Title IX Policies and Procedures. 2-3 Units.**

I apologize in advance for the fact that there are no paragraph breaks in this description. It is not my fault. Please contact me directly if you have questions about the class and I will email you a more readable description. Thanks, MLD. Seminar with Concurrent Policy Lab: Rethinking Campus and School Title IX Policies and Procedures. Policy Lab Client: National Women's Law Center: Over the past six years, the issue of campus sexual assault has exploded into the public discourse. While definitive figures are difficult to obtain due to the necessarily private nature of these events, several recent studies estimate that between 20-25% of college women (and a similar proportion of students identifying as transgender and gender-nonconforming, as well as around 5-10% of male students) experience sexual assault. Survivors have come forward across the country with harrowing stories of assault followed by an insensitive or indifferent response from college administrators, launching one of the most successful, and surprising, social movements in recent memory. Statistics are equally disturbing in the middle and high school context. As a result, the federal government under President Obama stepped up its civil rights enforcement in this area, with over 250 colleges and universities currently under investigation for allegedly mishandling student sexual assault complaints. At the same time, students accused of sexual assault have complained of botched processes driven by a "campus rape over-correction" that denied them a fair disciplinary hearing. It is clear that schools are struggling to develop and implement policies and procedures that satisfy their legal obligations in this area. While the future of federal enforcement under the Trump Administration is uncertain, schools are still subject to federal and state law that require them to have policies and procedures to address sexual harassment and violence. This course focuses on the legal and policy issues surrounding the highly challenging area of investigation and adjudication of sexual assault and other gender-motivated violence on college campuses and in K12 schools. It will cover the federal and state legal frameworks governing these procedures including Title IX, the Violence Against Women Act, and the Clery Act, and examine current cases as well as the rapidly-evolving legal, federal regulatory, and political environment surrounding this issue. Guest speakers working in the area will help to broaden the class's understanding of the subject matter. Students in this seminar will have the opportunity to participate in the invitation-only national conference entitled The Way Forward: Title IX Advocacy in the Trump Era, which will be held May 1-2 at Stanford Law School and is organized in conjunction with the National Women's Law Center. See [<http://conferences.law.stanford.edu/thewayforward-title9/>] for more information on the conference. Concurrent Seminar and Policy Lab: The seminar is taught concurrently with the Policy Lab (also entitled "Rethinking Campus and School Title IX Policies and Procedures"). All students registered for the seminar participate in the Policy Lab, which works with the National Women's Law Center toward the development of a set of evidence-based and legally compliant model policies and procedures. Given all the controversy, surprisingly little is actually known about the policies and processes that are currently in use, nor is there any way of easily ascertaining what the majority of an institution's "peer schools" are doing with respect to solving a challenge or addressing an issue. There is no set of "best practices" to which school administrators can easily turn. Students will analyze cutting-edge issues related to school-based gender-motivated violence and work on a white paper for the NWLC that includes both legal and empirical research into the policies and procedures currently in use around the country. Throughout the class, students will have the opportunity to reflect on what they are learning and how it applies in a professional context. The eventual goal of this Policy Lab is the development in conjunction with NWLC of a free, web-based, open-source set of adaptable model policies and procedures that are targeted for different market segments (i.e., large private, large public, small private, HBCU, community colleges, and K12). Course Schedule and Optional Travel: The first three weeks of the class there will be two meetings per week, on Tuesday and Thursday from 4:15 to 6:15. Students will meet with Fatima Goss Graves, Senior Vice President for Program at the NWLC during week 2 to hear her expectations regarding the project and ask questions. During weeks 4-6 the class will meet once per week, on Thursday from 4:15-7:15 and small groups will work on their assigned sections of the project. On Thursday, May 4 (week 5), the class will meet with special guest Catherine Lhamon,

**LAW 7048. Legislation. 3 Units.**

(Formerly Law 319) Lawyers work in a legal system largely defined by statutes, and constantly shaped by the application of legislative power. This course is about statutes and the legislative institutions that create them. It discusses some of the key laws governing access to legislative power and the procedures that culminate in the production of statutes in the legislature. The course is divided into two parts. The first part will focus on the acquisition of legislative power. Key topics include bribery laws, lobbying and indirect influence on legislative activity, and campaign finance regulations. The second part will focus on the exercise of legislative power. Through a number of public policy case studies, students will better understand the organization of the U.S. Congress, the ways in which power is exercised in that institution, and the intersection between politics, the law, and policymaking. Elements used in grading: Class participation, final memo, and in-class presentation. (Cross-listed with PUBLPOL 319).

**LAW 7049. Advanced Torts: Law and Practice. 3 Units.**

Most of civil litigation is in tort. As society changes, this dynamism is reflected in the progression and regression of tort law. Taught by an experienced practitioner, this course will explore contemporary developments in the law of medical malpractice, product liability, mass torts, harms to reputation and dignity and other civil wrongs. We will consider a range of remedies including compensatory and punitive damages as well as their constriction through tort limitations. Knowledge of these substantive rights and remedies has greatest value if the arc and texture of suit is understood. So we'll also learn about insurance, negotiation, settlement and alternatives to trial. And we'll set all this in the broader context of how an attorney can guide a plaintiff or defendant to an appropriate economic and/or noneconomic remedy. Elements used in grading: Class attendance is mandatory and class participation is encouraged and valued. There will be a final exam.

**LAW 7050. Toxic Harms. 2 Units.**

(Formerly Law 280) This seminar will examine the concerns arising from exposure to toxic substances from a variety of perspectives. A principal focus will be tort liability, and a central theme in the course will be whether tort law is an effective method of compensating victims of toxic exposure and controlling the distribution and/or emission of toxic substances. In order to assess the efficacy of tort, it is essential to compare the liability system with alternatives such as restructured "public law" litigation, administrative compensation schemes, and regulatory control strategies. Moreover, it seems equally important that these options be grounded in a concrete understanding of the major current problem areas. To accomplish these aims, the course will focus on a number of specific present concerns, including tobacco, asbestos, anti-inflammatory drugs, and workplace emissions exposures. In each instance, we will look at the nature of the public health problem as well as ensuing tort litigation and regulatory activity. In addition to examining these distinctive problem areas, we will look at broader, cross-cutting institutional reform proposals that have received recent attention. Students in Section (01) will write three ten-page writing exercises on topics discussed in class. After the term begins, students accepted into the course can transfer from section (01) into section (02), and have the option to write a final independent research paper for Research credit, with instructor consent. Elements used in grading: Three ten-page writing exercises or final independent research paper. Early drop deadline.

**LAW 7051. Local Government Law. 3 Units.**

(Formerly Law 427) Local governments exert tremendous influence over socioeconomics, race relations, environmental health, political power, and housing and real estate. This public law course will investigate the law of these governments (including cities, counties, and special districts) from four vantage points: (1) local governments within the federalist system, including the balance of power between local, state, and federal governments; (2) horizontal questions of power, including hierarchy and specialization among local governments; interlocal cooperation and competition; and the creation, expansion, and dissolution of local entities; (3) innovative uses and delegations of local authority to achieve state or local public policy goals; and (4) the nature of local democracy and local finance, including citizen influence of local lawmaking through initiatives and referenda, alternative voting schemes, and responses to fiscal distress. Discussions and in-class projects in the course will be situated in locations ranging from rural towns to major metropolises across the country. This class is limited to 30 students, with an effort made to have students from SLS (25 students will be selected by lottery) and up to five non-law students by consent of instructor. Elements used in grading: Class participation; in-class presentation, and one-day take home exam.

**LAW 7054. The 45th President and the Constitution. 2-3 Units.**

We will survey a number structural constitutional issues raised during the Trump Presidency, including the role of the judiciary; the scope and limits of unilateral Presidential power; the relationship between state and federal governments; Congressional power to investigate; and the role of the Special Counsel. Among the substantive areas of coverage will be protection of voting rights; partisan gerrymandering; free speech; and religious freedom. Among the specific settings we will consider are the President's first and second immigration orders; the Global Gag Rule; the effort to de-fund Planned Parenthood; the President's acrimonious relationship with the press; conflict of interest issues, including the Emoluments Clauses; the legal status of the Affordable Care Act's mandatory coverage of contraception, including religious objections; the status of gay marriage, including religious exceptions; and the regulation of the mass media and the Internet. Participants in the seminar should have completed (or be enrolled in) the basic Constitutional Law course. After the term begins, a maximum of 20 students accepted into the course can transfer from Section 01 into Section 02 (long research paper option), which meets the R requirement, with consent of the instructor. Elements used in grading: Final paper.

**LAW 7055. American Legal History, 1930 - 2000: The New Deal, The Rights Revolution and Conservative Reaction. 2 Units.**

This course examines major transformations in American law brought about by the momentous social and political movements of the mid- to late 20th Century. Part I deals with the response of Franklin D. Roosevelt's New Deal to the economic catastrophe of the Great Depression. The New Deal resulted in a major expansion – against the resistance of conservative courts – in the size and responsibilities of the Federal government to regulate the economy and secure citizens against risks of unemployment, sickness and old age. Part II covers the expansion of the New Deal after World War II to new forms of welfare and regulation (such as Medicare and environmental law) and what we now call the Rights Revolution – movements of subordinated or marginalized groups to claim equal rights (African-Americans, women, the disabled, gays and lesbians) or fair treatment by government (criminal suspects, welfare recipients, mental patients, prisoners). Part III: Both the New Deal and the Rights Revolution provoked fierce political reactions in which the modern conservative movements arose and came to power. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Attendance; Exam or Final Research Paper. Cross-listed with History (HISTORY 51G & 151G).

**LAW 7056. Law of Democracy - India: Field Study. 1 Unit.**

This is the Delhi, India component of Political Campaigning in the Internet Age (Law 7031) and Law of Democracy (Law7036). For details, see course description for Law 7031 and Law 7036. Students in this optional field study component will travel to Delhi, India for one week during spring break 2017. It accompanies courses in Law of Democracy and Political Campaigning in the Internet Age. Class sessions will take place primarily at the O.P. Jindal Global University, but will include visits to the Indian Parliament, Supreme Court, and National Electoral Commission. The Course will examine topics in regulation of democracy in a comparative perspective. Those topics include voting rights, campaign finance, regulation of political parties, and election administration. On the last day of the course, students will also have the option of participating in an international conference on comparative democracy to be held at O.P Jindal Law School. The course grade will be based on student essays examining a topic of the law of democracy in comparative perspective. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7057. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

The 2016 presidential campaign will go down in history as a unique blend of personality and politics. But what actually happened behind-the-scenes remains a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, campaign finance laws and regulations, communications, grassroots strategy, and digital outreach – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will related to the 2016 presidential contest, and how they might apply to future presidential campaigns. Elements used in grading: Attendance, Final Paper. Cross-listed with Public Policy (PUBLPOL 146, PUBLPOL 246) and Political Science (POLISCI 72).

**LAW 7058. Introduction to Antidiscrimination Law. 3 Units.**

(Formerly Law 734) This course will focus on the statutory legal rules (primarily federal) governing discrimination on the basis of race, national origin, sex, disability, and other protected classifications. With a rotation of instructors including and beyond Ford and Anderson, the course will include modules regarding: employment discrimination (including sexual harassment), fair housing law, voting rights, and disability law. Note: The course will be designed to minimize overlap with Ford's Employment Discrimination course, and thus students are welcome to take both. Elements used in grading: Class Participation, Attendance, Final Exam.

**LAW 7059. Labor Law. 2 Units.**

(Formerly Law 301) This course will cover the basic substantive and procedural aspects of the enforcement of the National Labor Relations Act (NLRA) in the U.S. economy today. After a brief introduction to the origin and history of collective bargaining laws, the course will examine how the protections and obligations of the NLRA actually operate in the modern workplace. Coverage will include legal issues in union organizing, union recognition, collective bargaining and workplace governance in a union context. The course will also emphasize the role of the NLRA in the non-union workplace, addressing such issues as the right to speak out at work (and limits thereon), and the rights of employees to engage in other concerted activity to advance their interests. Finally, the course will address the issue of arbitration of employment disputes in both the union and non-union workplace. Elements used in grading: Class Participation, Written Assignments.

**LAW 7060. Law and Continental Thought: Resistance. 2 Units.**

Dominant trends in continental thought will be studied with an emphasis on the complex evolution of the relationship between theories of the rule of law and the definition and assertion of liberal democratic rights, on the one hand, and the sources of systematic legal failure and justifications of resistance to law, on the other. The roots, development, and pathologies of post-structural theory will be a central preoccupation of the course, as will the tensions between post-structuralism and the premises of liberal democratic thought. Major works by a range of theorists (such as Marx, Freud, Nietzsche, Benjamin, Fanon, Lacan, Foucault, Bhabha, Butler, Said, Chakrabarty, Haraway, Crenshaw, Ranciere, and Agamben) will be situated in relation to historical and theoretical interpretations of discrete 19th and 20th century resistance movements. No prior work in philosophy or critical theory is required to enroll in the seminar. Students may elect to write an 'R' credit paper or complete a 10-12 page essay. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Grading Elements: attendance, active class participation and written assignments (essay or research paper).

**LAW 7061. Children Sexuality and the Law. 2-3 Units.**

This seminar focuses on federal and state law designed to protect children from sexual exploitation, as well as federal constitutional law regulating young adults' expressive rights with regard to gender and sexual identity. The seminar provides a general introduction to some of the laws governing children's sexual autonomy as well as necessary protections from sexual abuse; however, the seminar's primary purpose is to teach students about how the law discursively constructs children as it attempts to protect them. Specifically, students will explore how laws designed to protect children from sexual exploitation also naturalize certain assumptions about children's perceptions, cognitive capacities, interests and vulnerabilities. Our discussions will explore how the law, while attempting to catalogue and regulate the potential threats children face, also instantiates certain ideas about children's potential sex-related injuries and how these injures can affect them over time. Finally, seminar discussions will explore whether there are any inconsistencies between the understanding of childhood, sexual injury, capacity, and autonomy in various areas of state child protection laws, federal constitutional law, and relevant federal statutes. In addition to considering how laws regulating children's sexuality affect children, the seminar will also examine how the same laws effectively constrain adults' behavior, as well as shape our understanding of the role of certain social institutions. Laws intended to more generally protect children from sexual exploitation also regulate children's relationships to their parents, affect our understanding of the role of schools, and even our understanding of the role libraries and the internet play in educating citizens. Seminar discussions will focus on how discursive constructs and social understandings about children contained in law both constrain and enable us in discussions of child sexuality. We will also consider how these constructs and understandings empower certain institutions by legitimating certain kinds of intervention. Students can choose to write three short response papers for two units or a final research paper for three units. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the Research (R) requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation; Written Assignments or a Final Research Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7062. Originalism. 2 Units.**

This two-credit seminar will explore the theory and practice of "originalism" – the idea that the Constitution should be interpreted in light of the meaning of its text to those who had authority to enact it. This is a controversial approach (as are the others) and we will read and consider critics as well as proponents, so that students can make up their own minds. The first part of the seminar will be devoted to the theory: how it works, what are its justifications, what are its flaws, the various versions. The remainder will be devoted to specific applications. Because there are far more topics than we have time to cover, students will vote on the first day for which topics we will take up. Among the choices are: executive power, speech and press, liberty under the Fourteenth Amendment, equality under the Fourteenth Amendment, gun rights, searches and seizures, and freedom of religion. Two students will assist in leading class discussions. Elements used in grading: Grades will be based 20% on participation and 80% on papers. Students will have the choice of one longer research paper or three shorter reflection papers. After the term begins, students accepted into the course can transfer from Section 01 into Section 02 (long research paper), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7063. Youth Law and Policy. 2 Units.**

(Formerly Law 795) This course examines current issues in youth law and policy with a focus on the potential and collateral effects of law on certain subpopulations of vulnerable youth. Substantively, the course focuses on case law and statutes in delinquency, dependency, education, public benefits, and health access with an attention to cross-section themes of poverty, economic justice, race, and youth voice. By the end of the course, students will have developed a better understanding of how litigation, legislation, and policy in youth law come about through examining recent developments in the field and the tools advocates have used to enact change. Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from the exam section (01) into paper section (02), with consent of the instructor. Elements used in grading: Class Participation, Attendance, Written Assignments; Exam or Final Paper.

**LAW 7065. One in Five: The Law, Politics, and Policy of Campus Sexual Assault. 3-4 Units.**

TRIGGER WARNING: Over the past three years, the issue of campus sexual assault has exploded into the public discourse. While definitive figures are difficult to obtain due to the necessarily private nature of these events, several recent studies estimate that between 20-25% of college women (and a potentially higher proportion of students identifying as transgender and gender-nonconforming, as well as around 5-10% of male students) experience sexual assault. People of color, LGBT students, disabled individuals and other vulnerable groups are at increased risk. This is also a significant problem in K12 education. Survivors have come forward across the country with harrowing stories of assault followed by what they describe as an insensitive or indifferent response from college administrators. These survivors have launched one of the most successful, and surprising, social movements in recent memory. As a result, the federal government under President Obama stepped up its civil rights enforcement in this area, with over 300 colleges and universities under investigation for allegedly mishandling student sexual assault complaints as of July 2017. At the same time, this heightened response has led to a series of high-profile lawsuits by accused students who assert that they were falsely accused or subjected to mishandled investigations that lacked sufficient due process protections. The one thing that survivors and accused students appear to agree on is that colleges are not handling these matters appropriately. Colleges have meanwhile complained of being whipsawed between survivors, accused students, interest groups, and enforcement authorities. The election of President Trump has now created significant uncertainty about how this issue will be handled by the Department of Education going forward. The Trump Administration took the extraordinary step this September of rolling back all of the Obama Administration guidance on this subject. Meanwhile Congress has been unable to pass legislation addressing the issue, though there are several bipartisan bills under consideration. This course focuses on the legal, policy, and political issues surrounding sexual assault on college campuses. We will learn background about sexual violence and the efforts to implement legal protections for survivors in the educational context. We will also study the basic legal frameworks governing campus assault, focusing on the relevant federal laws such as Title IX and the Clery Act. We will hear from guest speakers who are actively involved in shaping policy and advocating in this area, including lawyers, lobbyists, filmmakers, journalists, and policymakers. The subject matter of this course is sensitive and students are expected to treat the material with sensitivity. Much of the reading and subject matter may be upsetting and/or triggering for students who identify as survivors. There is no therapeutic component for this course, although supportive campus resources and Title IX staff are available for those who need them. This course was previously a Sophomore College Class that is now being offered as a regular quarter-length course. Enrollment is by INSTRUCTOR PERMISSION. Access the consent form here [feminist.stanford.edu/academics/undergraduate-program/forms](http://feminist.stanford.edu/academics/undergraduate-program/forms) or email [rmeisels@stanford.edu](mailto:rmeisels@stanford.edu) to request a form via email. Cross-listed with Feminist, Gender and Sexuality Studies (FEMGEN 143) and Sociology (SOC 188). Elements used in grading: Attendance, Class Participation, Written Assignment, Final Paper or Project.

**LAW 7067. Law and Policy in the Post-Obama Era. 1 Unit.**

This course will consider a number of current issues of law and policy that achieved prominence during the Presidency of Barack Obama and remain unresolved. These issues include: 1) immigration law reform and DACA, 2) the role of the Department of Justice in reforming local and federal criminal law enforcement, 3) the role of government policy in regulating the economy and financial system, in facilitating health insurance, and in remedying economic inequality, 4) the proper balance between national security and civil liberties/human rights, as exemplified by the debates over the status of the Guantanamo Bay detention facility and drone warfare. In each of these areas, and others, debates about law and policy had reached a seeming, or potential, consensus in early 2009, but that consensus quickly fell apart. In each area, the gap between differing formulations of law and policy that had existed until recently has widened. Keeping in mind the time limitations of this course, we will briefly examine most of these law and policy – the governing legal doctrines and policies, their evolution since 2009, and their present and future prospects. The course will ask: What accounts for these differing visions of law and policy? What accounts for the inability of the political and legal system to resolve them? What are the possible ways forward? Class format will consist mainly of readings and class discussion, and students are encouraged to bring their own perspectives to bear on these difficult and timely issues. Class will meet Monday-Thursday, January 8-11, 7:15 PM to 9:15 PM and Tuesday of the following week, January 16, 6:20 PM to 7:20 PM. Elements used in grading: Class Participation.

**LAW 7071. Philanthropy and Civil Society. 1 Unit.**

(Formerly Law 781) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 3 units. Cross-listed with Education (EDUC 374), Political Science (POLISCI 334) and Sociology (SOC 374).

**LAW 7075. Family Law I: Regulating Marriage and other Intimate Relationships. 3 Units.**

Intimate sexual relationships are central to most people's lives. Marriage has long been the primary locus of such relationships, the foundation of family life. In recent decades, though, marriage has undergone unprecedented changes. Sustained political advocacy and judicial decisions have opened marriage to same sex couples. Yet marriage equality has triumphed at a time when marriage is less universal and less robust as a social institution than ever. More American adults than ever are unmarried; more than a third of those who do marry will divorce. Unprecedented numbers of children are now born to unmarried parents. And marriage rates and stability have diverged across racial and socioeconomic groups as never before. What is one to make of these changes? And how should law and policy respond? The course will examine the constitutional and statutory doctrine governing marriage and other intimate relationships. Throughout, we will consider the cultural and social understandings that undergird our past and current approaches to regulating intimate relationships. Elements used in grading: Attendance, Class Participation and Exam.

**LAW 7076. Race, Disadvantage, and Elite Education: the Allocation of Opportunity. 2 Units.**

In recent years, selective universities have become more academically selective than ever. During the past half century their applicant pools have grown considerably—now including women, minorities, immigrants, and international students—while the sizes of their student bodies remain virtually unchanged. The broader social and economic context has shifted as well. With globalization, the advance of technology and the resulting labor market shifts, advanced education is seen as more important than ever to getting ahead. Yet, even as elite universities seem central to Americans' hopes and dream, they have also come under attack, viewed as disconnected from, and alien to, "regular Americans." This course will engage these developments through considering a pivotal question: How do and should elite educational institutions choose among the many applicants vying for admission? Two principles loom large in the ethos of selective college admissions: diversity and merit. Throughout the course, we will take a critical stance toward these claims. For example, how much does and should merit shape admissions decisions? What are the rationales for using prior grades and test scores to assess applicants? Similarly, what are the costs and benefit of the diversity rationale? Should schools take account of race, socioeconomic class, or neither? Course readings will include judicial opinions and legal commentary, social science evidence and cultural criticism. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 7077. Native Peoples and the Law. 1 Unit.**

This reading group of five evening meetings over the quarter will explore Native peoples' encounters with U.S. law as recounted in novels, documentaries, essays, and other material, emphasizing indigenous perspectives and voices. The class is intended as a complement to LAW7030: Federal Indian Law; students enrolled in that course will receive priority in admission, but all students are welcome, space permitting. Elements used in grading: Attendance, Class Participation. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Same as: Reading Group

**LAW 7501. Carrots, Sticks, Norms, and Nudges: Changing Minds and Behaviors. 3 Units.**

In this class, we will survey the current state of the science of behavior change. By the 1990s, social scientists had already built a massive literature on this topic, and an integrative consensus theoretical framework began to emerge. But in the past decade, this literature has been revitalized by dramatic new ideas and technologies, as well as significant improvements in evaluation methodology. We will focus on four types of strategies that apply equally to influence efforts by individuals, communities, non-profits, for-profits, and government: (1) Carrots: Positive incentives (rewards, awards, praise, recognition, discounts, rebates, property rights, etc.); (2) Sticks: Negative incentives (punishments, fines, shaming, guilt or liability verdicts, costs, etc.); (3) Norms: What other people believe I should do, and what I see others actually do (tipping points, bandwagons, cascades, herding, etc.); and (4) Nudges: Traditional methods of persuasion; use of defaults to encourage certain behaviors; engineering the environment; harm reduction for risky behaviors. We will examine the "how" and "why" and "when" of these approaches, but also their normative implications for ethics, justice, and public welfare. Course requirements include class attendance and participation, and five short written assignments. For Research "R" credit, students may petition to complete one long paper based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, written assignments and/or final paper.

**LAW 7502. Economic Analysis of Law. 3 Units.**

(Formerly Law 528) This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differ from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. There is no formal economics prerequisite to take this course, though some prior training in economics will be helpful. Elements used in grading: Final exam (open-book) plus four short take-home problems during the quarter. Cross-listed with Public Policy (PUBLPOL 302B). (For students interested in a shorter introduction to economic analysis of law, see Law 7503, "Introduction to Law and Economics," which is a one-unit course also offered during the winter quarter that is graded on a mandatory pass-fail basis.)

**LAW 7503. Introduction to Law and Economics. 1 Unit.**

(Formerly Law 741) This course will introduce students to the "law and economics" way of thinking about the legal system. It is designed primarily for students who have little or no prior training in economics and who are unlikely to take more advanced courses in the field (such as the 3 unit Law 7502, "Economic Analysis of Law"). This class will meet for six 1.5 hour sessions during the first part of the quarter. We will focus on the core bodies of law taught to first-year law students: tort law, contract law, property law, criminal law, and civil procedure. For each of these bodies of law, the economic approach will be described in non-technical terms and then this approach will be used to examine a key case or key issue within that body of law. First-year law students are especially welcome in this course. There are no prerequisites to take this course. Elements used in grading: Two short take-home exercises (graded on a mandatory pass-fail basis).

**LAW 7504. Introduction to Organizational Behavior. 3 Units.**

(Formerly Law 327) Why do firms exist? Is their sustained success in markets possible? How do leaders choose and execute on a strategy? What should the role of firms be in society? This course will meet once a week to discuss these questions and others about business enterprise. Each week we will focus on interesting and engaging case studies that illustrate key components of strategic management in firms in the U.S. and abroad. The course is designed to be highly interactive, and the principles taught during this course can help students prepare for careers in which they will need to employ strategic thinking. Due to the interactive nature of the course, attendance and in-class participation are graded components. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 7505. Law and Economics of the Death Penalty Seminar. 2-3 Units.**

(Formerly Law 397) This seminar will examine the legal and policy aspects of a capital punishment regime, with a focus on three primary issues: 1) the Supreme Court's forty-year effort to define what cases can permissibly receive the death penalty and the procedures under which it must be imposed; 2) the arguments for and against the death penalty, with a major focus on whether the death penalty deters, is administered in a racially biased way, or is otherwise implemented in an arbitrary and capricious manner; and 3) what the U.S. and international status of the death penalty is today and what the prospects are for the future in the wake of Justice Breyer's invitation in June 2015 to the Court to rule on the constitutionality of capital punishment in light of the existing empirical evidence. The principle text in the class will be Steiker and Steiker, *Courting Death: The Supreme Court and Capital Punishment*. Although the readings on deterrence and racial discrimination will entail some substantial statistical analysis, a background in statistics, though helpful, will not be required. Special Instructions: After the term begins, students can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading seminar: attendance, class participation, short response papers, and final paper or approved research with the professor.

**LAW 7506. Law and Economics Seminar I. 2-3 Units.**

(Formerly Law 344) This seminar will examine current research by lawyers and economists on a variety of topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Special Instructions: You may write a series of short commentaries on the guest speakers' papers, of which there will be four. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single research paper on a law and economics topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. (You may write a single longer paper for two quarters if you enroll in the Seminar in the Winter as well.) Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit, depending on the paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. There is no formal economics prerequisite to take this seminar, though students doing the longer research papers typically have some prior training in economics. Students may take both Law and Economics Seminar I and Law and Economics Seminar II in either order (neither is a prerequisite for the other). This seminar is cross-listed with the Economics Department (same as Econ 354). Elements used in grading: Four commentaries or one research paper. Special note: Professor Polinsky will be the principal instructor, with Professor Donohue participating mainly when there are guest speakers. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7507. Law and Economics Seminar II. 2-3 Units.**

(Formerly Law 344) This seminar will examine current research by lawyers and economists on a variety of topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Special Instructions: You may write a series of short commentaries on the guest speakers' papers, of which there will be four. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single research paper on a law and economics topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. (You may write a single longer paper for two quarters if you enroll in the Seminar in the Autumn as well.) Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit, depending on the paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. There is no formal economics prerequisite to take this seminar, though students doing the longer research papers typically have some prior training in economics. Students may take both Law and Economics Seminar I and Law and Economics Seminar II in either order (neither is a prerequisite for the other). Elements used in grading: Four commentaries or one research paper. Cross-listed with Economics (ECON 354). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7508. Problem Solving and Decision Making for Public Policy and Social Change. 4 Units.**

(Formerly Law 333) Stanford graduates will play important roles in solving many of today's and tomorrow's major societal problems -- such as improving educational and health outcomes, conserving energy, and reducing global poverty -- which call for actions by nonprofit, business, and hybrid organizations as well as governments. This course teaches skills and bodies of knowledge relevant to these roles through problems and case studies drawn from nonprofit organizations, for-profit social enterprises, and governments. Topics include designing, implementing, scaling, and evaluating social strategies; systems thinking; decision making under risk; psychological biases that adversely affect people's decisions; methods for influencing individuals' and organizations' behavior, ranging from incentives and penalties to "nudges;" human-centered design; and pay-for-success programs. The concepts and tools taught in the classroom will be applied in a field project that addresses an actual policy problem facing the University. The course may be of interest to students in Law and Policy Lab practicums who wish to broaden their policy analysis skills. Elements Used in Grading: Class participation 30% (coming to class having done the readings, timely submission of questionnaires and problems, participating actively in class discussions, being a responsible member of your team for the team project, and not using laptops or mobile devices in class). Individual paper 30% and Team project 40%. Enrollment: Limited to 32 students, with priority given to students who register on or before the last day of the autumn quarter in the following order: Law School, MPP program, Sustainability Science and Practice Program, IPS program. After that date, any remaining places will be filled on a first-come, first-served basis. Students other than law students must seek the consent of the instructor. .

**LAW 7510. Research Design for Empirical Legal Studies. 3-4 Units.**

(Formerly Law 712) Empirical legal studies have become popular in the U.S. and are now spreading to non-U.S. law faculties as well. Usually the term applies to analyses of quantitative data and the researcher relies on data collected by others. But the term "empirical" properly encompasses both qualitative and quantitative data, including interviews, legal documents, survey research and experimental results. Analysts interested in using such data need to understand how they were collected, in order to decide what data can appropriately be used to answer different kinds of questions. Often to answer the questions of interest, a researcher needs to collect new data, which poses challenging questions about how to design an empirical research study. Answering these questions appropriately is important to ensure publication in a peer-reviewed journal, which is becoming increasingly important to legal academia. This seminar will introduce students to the wide range of research methods that can be used to answer empirical questions, provide a framework for choosing among methods, and explain how to use the methods. The project for the quarter is to design an empirical research study on a topic of your choice. Special Instructions: JD students can take the class for 3-4 units. SPILS students must take this class for 4 units. Students taking the course for 4 units must attend the additional session on Thursday, which is optional for others. After the term begins, JD students accepted into the course can transfer from section (01) into section (02), which can potentially satisfy the R requirement, with consent of the instructor. Consent Application for JD students: To apply for this course, JD students must e-mail Robert MacCoun at [maccoun@law.stanford.edu](mailto:maccoun@law.stanford.edu) and Diego Gil McCawley at [dgil@stanford.edu](mailto:dgil@stanford.edu). This course is REQUIRED for all SPILS fellows and BY CONSENT for all other students. Elements used in grading: Class participation, attendance, written assignments and final paper.

**LAW 7511. Sociology of Law. 3-4 Units.**

(Formerly Law 538) This course explores major issues and debates in the sociology of law. Topics include historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance, with particular attention to the problem of mass incarceration; the "law in action" versus the "law on the books;" organizational responses to law, particularly in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change with particular emphasis on the American civil rights movement. Special Instructions: Students are expected to attend a weekly TA-led discussion section in addition to lecture. Sections will be scheduled after the start of term at times when all students can attend. Paper requirements are flexible. Cross listed with the Sociology Department (Soc 136/236). See "Special Instructions" in course description above. Elements Used in Grading: Class participation, paper proposal, three short papers and a final paper (see syllabus for details).

**LAW 7512. Statistical Inference in Law. 3 Units.**

(Formerly Law 468) Drawing inferences from quantitative data lies at the heart of many legal and policy decisions. This course provides the tools, concepts, and framework for lawyers to become sophisticated consumers of quantitative evidence and social science. The course will focus on a number of empirical debates -- for example, does the death penalty deter murder, do concealed handgun laws influence crime -- as a springboard to teach the logic and terminology of statistical/econometric evaluation of law and policy (regression, statistical significance, identification). No background, beyond high school algebra, is assumed. Anyone who 1) will work in litigation (whether corporate, securities, antitrust, employment discrimination, environmental law) or in public policy, 2) wants to be a better citizen or 3) wants to understand the challenges of establishing causal relationships, and who doesn't already have a strong understanding of statistics will find this course useful. Elements Used in Grading: Attendance, written assignments, response papers, and a final project. To avoid math phobias and fears about ringers from the econ or stats departments, the course is graded as a mandatory pass-fail course.

**LAW 7514. Behavioral Law and Economics. 2-3 Units.**

The field of "law and economics" provides important lessons for how legal institutions should be designed, but many of those lessons rely on the assumption that individuals behave in the way that maximizes their self-interest. Research from the fields of psychology and behavioral economics casts doubt on this assumption in numerous legal contexts. This seminar will explore a range of topics about human decision-making, focusing on how research in this area should inform the design of policy. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: class participation, class attendance, reflection papers or research paper. Early drop deadline.

**LAW 7801. Professional Development & Management Skills for Lawyers. 2 Units.**

(Formerly Law 519) This course will help students to develop the professional management skills that are essential for a successful legal career. The course will focus on team dynamics and leadership; influence and managing up; effectively communicating with clients, colleagues, other parties and tribunals; and managing expectations and unexpected adversity. For the final paper, students will have the option to write a reflection paper on one of the topics covered in class, or create a personal plan outlining the substantive knowledge, professional skills, and business focus the student needs to build a fulfilling law practice. Assignments and simulations will demonstrate and model various skills and instructors will provide real-time feedback to students on class exercises. The course is not limited to any particular type of practice (size or substantive area). Elements used in grading: Class participation and attendance, course exercises and written assignments.

**LAW 7802. Accounting. 3 Units.**

(Formerly Law 226) The objective of financial accounting is to measure economic activity for decision-making. Financial statements are a key product of this measurement process and an important component of firms' financial reporting activities. This course is aimed at developing students' ability to read, understand, and use corporate financial statements. The primary focus is on understanding the mapping between underlying economic events and financial reporting, and how this mapping can affect inferences about future firm profitability. To this end, the course will provide an introduction to: (1) Accrual accounting concepts, principles and conventions; (2) The process of preparing and presenting the primary financial statements (income statement, balance sheet, and statement of cash flows); (3) The judgment involved and discretion allowed in making accounting choices; (4) The effects of accounting discretion on the quality of the (reported) financial information; (5) The fundamentals of financial statement analysis. Class time will be allocated to a combination of short lectures and discussions of the assigned cases. The assigned cases are based on actual corporate financial statements and/or "real life" financial situations. Grading will be based on: class participation, attendance and written assignments. Early add/drop deadline.

**LAW 7803. Alternative Dispute Resolution: Law, Practice, and Policy. 3 Units.**

(Formerly Law 545) Clients in disputes increasingly call for lawyers with skill within a broad range of alternative dispute resolution processes. In this course, you will learn about the variety of dispute resolution procedures that operate under the ADR umbrella, within and outside of the court system (including mediation and arbitration). The goal is for students to understand the law and policy behind these alternatives relative to court adjudication, to be able to select the appropriate process for a client, and to effectively represent that client in the selected process. The teaching team includes third party neutrals and advocates from a range of contexts, including federal court, private mediation, private and public arbitration, and corporate legal counsel. Special class on Saturday, Feb. 24, 9a-3p. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, discussion; three written assignments, final paper.

**LAW 7804. Alternative Dispute Resolution: Practicum. 2 Units.**

(Formerly Law 546) Effective client representation increasingly calls for lawyers with skill within a broad range of alternative dispute resolution processes. In this course, you will have the opportunity to observe 2-3 ADR processes being handled by Bay Area third-party neutral practitioners. Students in the class will meet periodically to review relevant law and policy, and to discuss observed cases. Grades will be based on seminar participation and 3 short papers. Co- or Prerequisites: Mediation or ADR. Elements used in grading: Class participation, attendance and written assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7805. Career Development: Alchemy, Law, and Practice. 2 Units.**

(Formerly Law 772) Career development is embedded in life development. This course offers a space and time for each student to consider both through course materials, class interactions, and a series of reflection papers. The course includes one class facilitated in collaboration with the Office of Career Services focusing on a formal assessment via one or more psychological tests offered to each student. The materials for other class meetings are thought provoking works that have proven to be salient for considering career and life direction. Images and material from alchemy that embody what many consider to be a primary set of symbols for personal transformation provide a backdrop for the course. The course benefits from the collaboration of Michael Guasperini, a mythologist and lawyer whose primary vocation is working intimately with lawyers and firms during periods of personal and institutional transition. Mr. Guasperini has deep experience with the personal lives of hundreds of lawyers at various ages and levels of professional development, providing a valuable and practical perspective for self-reflection. Elements used in grading: Written Assignments (reflection papers).

**LAW 7806. Dispute System Design. 3 Units.**

(Formerly Law 613) Lawyers are often called upon to help design systems for managing and resolving conflicts that support or supplant existing legal structures. The crisis of September 11 led Congress to pass a law creating the September 11 Fund; a California Supreme Court challenge to its method of resolving health care disputes led Kaiser Permanente to reform its arbitration system; years of atrocities committed against the people of South Africa, Guatemala and many other countries led to the formation of truth commissions. Lawyers helped to structure these and many other conflict resolution systems. We'll use a case study model to survey different kinds of conflict prevention, management and resolution systems, and examine different factors in their design. Special Instructions: Grades will be based on class participation and Option 1 (section 01) a series of weekly short written assignments plus a 10-page case study; or Option 2 (section 02) weekly short written assignments plus a 26-page research paper involving independent research. Students electing option 2 (section 02) will be graded on the H/P/R/F system and will receive Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Negotiation Seminar (LAW 615) is preferred but not required. Elements used in grading: Class participation, attendance, written assignments and final paper. Attendance at the first class is mandatory.

**LAW 7807. Facilitation for Attorneys. 2 Units.**

(Formerly Law 509) Most lawyers and other professionals spend a significant amount of time in meetings and working in teams or groups for a variety of purposes, and many report that this can be a frustrating experience. As the practice of law becomes more complex, it includes more and more situations where groups of people need to work together planning complex legal strategies, developing firm policies, working with corporations or other multi-person clients, or participating in shareholder meetings, public commissions and councils, corporate and non-profit Board of Directors meetings. Group functionality and outcomes can be significantly improved by any group members who has the awareness and skills of a facilitator, whether or not that person is formally designated as the facilitator. The interactive class methodology will combine discussion with many exercises and roleplays, putting facilitation tools into practice every step of the way. We will examine group dynamics and learn skills used by professional facilitators to prevent common problems and elicit the best work of a group. We will explore how to prepare effectively with clear goals, collaborative problem definition, inclusive process design and a well structured agenda. We will also discuss and practice core meeting management skills such as how to balance voice and participation, build consensus, inspire creativity and promote principled evaluation and decision-making. Finally, we will identify and apply communication skills that keep group sessions productive and tools to manage difficult moments and problem behaviors. Class Schedule dates: Oct. 13th. (4:30 – 9p.m.), Oct 14th. (9 – 5:15) and Oct. 21st. (9 – 5:15). Elements used in grading: Class attendance, participation and final paper.

**LAW 7808. Foreign and International Legal Research. 2 Units.**

(Formerly Law 461) This course will introduce students to concepts and skills used in international and foreign law research. Students will learn to construct successful research strategies for questions of foreign law, public international law, and private international law. Both primary and secondary authority will be covered in various formats. Students will understand how different legal systems and cultures influence the use and assessment of legal resources. The course will also equip students to critically evaluate current and future research tools. No pre-requisites or foreign language ability required. Advanced degree and non-law students are welcome to enroll in the course. Learning Outcomes – \*Identify primary and secondary sources of materials on international law and foreign legal systems. \*Develop effective research strategies using online and print resources. \*Critically evaluate research tools for international and foreign legal research. \*Appreciate cultural and historical influences on the development of legal systems and their relevance to legal research. \*Understand the role of language and translation tools in researching foreign and international law. Elements used in grading: Weekly assignments.

**LAW 7809. Advanced Legal Research. 3 Units.**

(Formerly Law 222) The course is designed to prepare law students for research in practice and clerkships. The course will review sources of legal authority and how this material is used, organized, published, indexed, and kept current. Objectives for the course are: 1) to show students how to find and evaluate legal research sources and use them effectively, with particular emphasis on cost-effective research; 2) to expand research skills in primary and secondary U.S. legal sources; and 3) to introduce students to the array of non-legal information resources useful to legal practice. Learning legal research requires a hands-on approach, so students will complete in-class exercises and homework assignments – all of which contribute to grading. There will not be a final exam. This course is open to Stanford graduate students with permission from the instructor.

**LAW 7815. Advanced Legal Writing: Business Transactions. 3 Units.**

(Formerly Law 664) This course offers comprehensive preparation for practice of the transactional lawyer. Students will learn the foundational tools necessary to write clear, effective, plain language business contracts and analyze other transactional writings used to manage and document complex business transactions. The course provides interactive lectures and a wide range of realistic drafting and research exercises, completed both inside and outside of class, both individually and collaboratively. These exercises help students improve their research, analysis, drafting, and editing skills and develop sensitivity to the expectations of attorneys and clients with whom they will be working. Students will learn the research and analytical tools necessary to interpret provisions in a variety of business agreements. Issues related to ethics in a transactional practice will also be addressed. The course should appeal especially to students interested in working for a law firm and practicing transactional law (be it corporate, venture, debt, intellectual property, mergers and acquisitions, entertainment, real estate, etc.). It will also appeal to those interested in business litigation, or those curious about the work of transactional lawyers. SPECIAL INSTRUCTIONS: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and Degree of Study. Early drop deadline: Students may not drop this course after first week of class. Corporations (Law 242) is a prerequisite for all but LLM (CGP) students. Due to an overlap in content, students may not take both Advanced Legal Writing: The Art of the Deal and Advanced Legal Writing: Business Transactions. Elements used in grading: Class participation, attendance, written assignments, and final paper. Please consult the syllabus for paper and assignment deadlines.

**LAW 7816. Advanced Legal Writing: Litigation. 3 Units.**

(Formerly Law 674) Building on the skills developed in Federal Litigation, this course will give students additional practice with legal analysis, argument structure, and writing in either the pre-trial or appellate litigation context. Students will draft an office memo and a brief. Students also will complete short writing exercises in class to practice skills such as omitting surplus words, preferring active voice, using concrete words, punctuating carefully, etc. The goals of this class are to help students organize facts and principles in a succinct and logical way, to deepen their understanding of legal reasoning and writing, and to hone their advocacy skills. The course should appeal to students interested in litigation practice and those wishing to strengthen their writing. Special Instructions: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and Degree of Study. Elements used in grading: Written work, class participation, and attendance.

**LAW 7817. Advanced Legal Writing: Global Litigation. 3 Units.**

This course offers an introduction to the practical, procedural and analytical aspects of private transnational litigation in the U.S. and Europe. Through a case simulation students will examine differences in legal systems and how to effectively navigate the challenges and opportunities presented when litigation goes global. With three instructors and limited student enrollment, the class provides an excellent opportunity for students to develop the research, writing and oral advocacy skills necessary for a successful transnational litigation practice. Elements used in grading: class participation, attendance, assignments.

**LAW 7818. Advanced Legal Writing: Technology Transactions. 3 Units.**

(Formerly Law 730) This course covers the foundations of drafting contracts in a modern commercial setting, primarily through weekly hands-on writing exercises that illustrate business problems commonly found in today's technology transactions law practice. Topics to be addressed will include basic contract anatomy, common clause ambiguities, structuring for readable "flow", and drafting-for-negotiation techniques. Final examination will involve crafting a full-length technology license agreement from a rough term sheet that appears to have been pecked out on some sort of mobile device. No prior business law coursework, intellectual property background, or martial arts proficiency required. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

**LAW 7819. Mediation. 3 Units.**

(Formerly Law 638) As law is practiced today, attorneys are far more likely to participate in multiple mediations than trial. Mediation has become the preferred approach to conflict resolution in most states and many parts of the world. With the assistance of a mediator, parties can reach agreements at any stage in a dispute, in some cases avoiding litigation altogether, in other cases agreeing just before trial or when the case is on appeal. The course goals are to understand the nature of conflict and principles of conflict management, to develop the communication skills essential to effective mediation, to evaluate various mediation models and mediator styles, to practice all of the phases of a mediation and appropriate use of caucus, to consider the policy and ethical implications of the expanding use of mediation, and to develop the skills necessary to represent clients in mediation. The class methodology is highly experiential, with more than 1/3 consisting of practice from the perspective of client, advocate and mediator. The course also includes readings and discussions, brief interactive lectures, demonstrations and videotaped sessions. Each student receives individual feedback from an experienced Bay Area mediator and develops skills that will be useful in client development, negotiation and a variety of contexts beyond mediation. You are encouraged to apply if you have taken (or are concurrently taking) the basic negotiation class or its equivalent in studies or experience. Elements used in grading: Class participation, attendance, assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7820. Moot Court. 2 Units.**

(Formerly Law 402) The major moot court activity at Stanford Law School is the Marion Rice Kirkwood Memorial Competition, which takes place each year during Autumn and Winter terms. Autumn term will be dedicated to brief writing and completion of the written portion of the Competition; the oral argument portion of the Competition will be conducted during the first four to five weeks of Winter term. Students on externship and in clinics may enroll if permitted by their respective programs. In Autumn term there are only a few class meetings, including a guest lecture on ethics, which can be recorded. In addition, there are individually scheduled conferences and practice arguments. In Winter term, students must participate in scheduled oral arguments. The preliminary rounds are in the evening; the semifinal and final rounds are in the late afternoon. Prior to the Competition itself, materials and lectures are provided on research, brief writing, and oral advocacy techniques. Registration for the Kirkwood Competition is by team. Each team is required to submit an appellate brief of substantial length and quality and to complete at least two oral arguments, one on each side of an actual case. The first draft of the brief is reviewed and critiqued by the course instructors. The course instructors and the Moot Court Board Presidents score the final draft of the brief. The course also offers digital recording and critiques of practice oral arguments. Panels of judges and local attorneys serve as judges who score the oral argument portion of the Competition. Teams are selected for the quarterfinal, semifinal, and final round of the Competition based on their brief and oral advocacy scores. The final round of the Competition is held before a panel of distinguished judges and the entire Law School community is invited to attend. Special Instructions: In order to maintain academic standards, enrollment in the Kirkwood Competition is limited to 20 two-person teams. This limit will be strictly enforced. Registration forms will be distributed Spring term. If the program is oversubscribed, a lottery will be held to determine participating teams and to establish a waiting list. The final drop deadline for the course will be the Friday of the first week of classes. Enrollment in both Autumn (2 units) and Winter (1 unit) terms is required. The final grade for both Autumn and Winter terms and the Professional Skills credit will be awarded upon the completion of the course requirements. Registration and Consent Instructions: Instructions on how to register for the Moot Court competition are sent out to students each year in Spring term for the coming academic year. The registration process is separate from the regular class registration process. Elements used in grading: Satisfactory completion of appellate brief and oral arguments. Early application and drop deadlines.

**LAW 7821. Negotiation. 3 Units.**

(Formerly Law 615) As a lawyer, you will probably negotiate more than you do anything else. You will negotiate not just over cases, but any time that you need something that you cannot get alone. You will negotiate with your boss, your clients, your paralegal, and all of their counterparts (plus the lawyers) on the other side. You will negotiate with "the system" whether it is the court, the government, the structure of society, or the law. You will also continue to negotiate with your family, your friends, and yourself. This course is designed to: (1) develop your understanding of negotiation, and your awareness of yourself as a negotiator; (2) give you some tools and concepts for analyzing and preparing for negotiations; (3) enhance your negotiating skills through frequent role plays, reflection, and feedback; and (4) teach you how to keep learning from your own negotiation experience. In addition to negotiation skills and theory, you will be introduced to issues of representation, ethics, and the place of negotiation in our legal system. The Negotiation Seminar is an intense, interactive course. We will require weekly preparation of readings, simulations, and written assignments. Basically, you will learn by reading about specific research and doing simulated negotiations – figuring out with the rest of the class what works and what does not, writing about what you're learning, and trying again. Because participation in the simulations is central to the course, attendance at all classes is required. Since we will begin our simulation exercises on the first day of class, all students who are interested in taking the course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the instructor.) Add-drop decisions need to be resolved at the first class; no drops will be permitted thereafter. Once you commit to the class, you must complete it or receive a failing grade. Exceptions to this rule will be made by petition only. Elements used in grading: Class participation, attendance and written assignments.

**LAW 7822. Negotiation on the Ground: Discussions at the Intersection of Theory and Practice. 1 Unit.**

(Formerly Law 726) We can read any number of books about negotiation, but how do the concepts and principles play out in the real world? This dinner colloquium will meet with distinguished negotiators working in a variety of fields to reflect on and draw lessons from their deep and diverse experience. Guests for this term will speak on: studio and talent perspectives in entertainment negotiations; insights into negotiating strategy for impact litigation (same sex marriage and the "bathroom" laws); working relationship between inside and outside transactional counsel in M&A; and prosecution and defense perspectives on negotiating in the criminal justice system. Pre-Requisite: Negotiation Seminar or substantial equivalent. Schedule: Wednesday, 5:30-8:00pm. There will be four presentation/dinner discussion sessions during the Spring Quarter on April 4, April 25, May 9, and May 23. Elements used in grading: Class Participation and Attendance.

**LAW 7823. Advanced Negotiation: International. 3 Units.**

(Formerly Law 661) Understanding the fundamentals of negotiation and conflict resolution in the international domain is now more critical than ever. This hands-on, advanced seminar is designed to teach students how to prepare for, participate in, and critically evaluate complex multiparty negotiations in the public international field. Through experience-based learning and simulations, the course will expose students to various types of international conflict resolution processes. These processes include second track negotiation and dialogue, natural resource management and extractive industries, and peace agreements. Special attention will be paid to the role of mediators and facilitators in such processes, as well as lawyers and legal advocates. Prerequisites: Negotiation Seminar, its substantial academic equivalent, or substantial experience in the field. SPILS students are especially encouraged to enroll. This course is also open to cross-registration by graduate students in a variety of departments and programs including International Policy Studies. Please describe prior negotiations coursework and experience on your Consent Form. Any student deemed to be lacking the required foundational knowledge may still be admitted to the course, but required to attend an intensive bootcamp in basic negotiation theory and methods on Saturday, April 7th. Grading Criteria: The seminar requires that students do the assigned reading, prepare for and actively participate in class and simulations, and write a series of short assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit the Consent Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).

**LAW 7824. Advanced Negotiation: Public Policy. 3 Units.**

(Formerly Law 650) Advanced Negotiation courses are designed to take students beyond the two-party, lawyer-client negotiations that were the focus of the Negotiation Seminar, to examine many facets of negotiation complexity, both in terms of the participants and topics. This section of Advanced Negotiation will focus on multi-party negotiations, working in teams, group decision-making, and negotiating on behalf of organizations to solve complex problems in the economic development, environmental, and health policy sectors. The goals of the class are twofold, for students (1) to acquire an added theoretical base beyond what was covered in the Negotiation Seminar through which to analyze, prepare for, participate in and facilitate more complex, multiparty negotiations, and (2) to expand skills through deeper examination of various actual negotiation cases and complex simulations. Special Instructions: Attendance at and participation in the simulations is required. Passing is dependent upon active participation, submission of several assigned short reflection papers, and completion of a selected case analysis (a completed or ongoing multi-party public policy dialogue). Prerequisite: Negotiation Seminar (Law 7821) or its substantial equivalent. Advanced degree students (and graduate students in other departments and programs) are encouraged to enroll provided that they have previous negotiation training or equivalent practice experience. Elements used in grading: Class participation and engagement, including simulations; attendance; preparation for and contributions to discussion; and short written assignments.

**LAW 7825. Advanced Negotiation: Transactions. 3 Units.**

(Formerly Law 659) Advanced Negotiation takes students beyond the two-party, lawyer-client negotiations that were the focus of the Negotiation Seminar. Advanced Negotiation: Transactions places the student in more difficult and more nuanced simulations, working as individuals, pairs, and teams to negotiate on behalf of governments, unions and NGOs, as well as business entities. Simulations include critical-path supply agreements, vendor/collaborator contracts, cross-cultural joint ventures, airline reorganizations, big pharma arbitration resolution and multi-party private sector/government negotiations. The goals of the class include acquiring a designer's mindset for strategic preparation and tactical adjustment to changing scenarios; deeper analysis of the argumentative and persuasive elements of any negotiation; coalition formation and management, and improved tactical skills such as reading non-verbal cues, methods of questioning, response control, situational agility and, ultimately, improved confidence and competence. Special Instructions: Attendance at and participation in all simulations and debriefing sessions is required. Passing is dependent upon this active participation, a series of short papers and in-class presentation. Prerequisite: Negotiation Seminar (Law 615) or its substantial equivalent, as assessed by the instructor. This class is limited to 20 students, with an effort made to have students from SLS (16 students will be selected by lottery) and 4 non-law students by consent of instructor. Elements used in grading: Participation in negotiation and debriefs, thorough out-of-class preparation, and short papers.

**LAW 7826. Oral Argument Workshop. 2 Units.**

(Formerly Law 628A) Building on the skills developed in Federal Litigation, this simulation course will give students the unique opportunity to argue and judge pretrial motions from actual federal court cases. The instructor will provide the written briefs, and each week half the class will argue and half the class will judge a motion. Preparation will require reading the cases cited in the briefs and coming to class ready either to present an argument (attorneys) or interrogate counsel (judges). Students will critique each other both orally and in writing, and the instructor will provide oral critiques of all arguments. The goals of this class are: to train students to argue in court; to provide them with a chance to polish their public speaking skills and practice thinking on their feet; to prepare students to engage in challenging dialogue with both colleagues and future clients; and to improve self-confidence. Thus, while the context of the course is litigation, the objectives are much broader than the mastery of litigation technique. This course is not open to first year Law School students. Priority will be given to those students who commit to taking the class if given consent to enroll. Please indicate your commitment on the consent form. Elements used in grading: Class attendance, participation, and preparation. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7827. Advanced Legal Writing for American Practice. 3 Units.**

(Formerly Law 708) This course orients advanced degree students and upper class JD students to a range of legal writing genres used by lawyers in practice in American law offices and before American courts. At the core of these genres are the techniques of legal research, objective and persuasive legal writing, and related legal analysis. The course presents students with realistic legal writing scenarios that they address in and out of class. Students perform legal research and analysis as they complete assignments designed to incorporate methods that American lawyers use to analyze typical legal problems while advocating on behalf of a hypothetical client in a litigation matter. Class Participation, Attendance, Written Assignments.

**LAW 7828. Trial Advocacy Workshop. 5 Units.**

(Formerly Law 610) This lawyering skills course gives students an orientation to and constant practice in most basic pretrial and trial advocacy skills areas. Topics include: taking and defending depositions, trial evidence, including admission of trial exhibits in evidence and use of prior witness statements to refresh and impeach a witness, jury selection and voir dire, opening statements, direct and cross-examination of witnesses, expert witnesses, and closing arguments. Students will try a full jury case through to verdict with use of jurors and usually before a real judge in the courthouse in Palo Alto at the end of the course. Students will also have a chance to watch the jurors deliberate and talk with them after their verdict. The course takes place during seven weeks of the Autumn Quarter with two classes (one lecture and one workshop) per week on most weeks from 4:15-9:00 (these usually occur on M, W, or Th), plus one Saturday workshop and the final weekend of jury trials, Saturday and Sunday November 11 and 12. Each day's ending time will vary; most sessions will end before 9:00. For a detailed schedule, contact Stephanie Basso at sbasso@law.stanford.edu. The format for each topic begins with a lecture/discussion featuring video vignettes of various techniques and a live demonstration by an expert trial lawyer. Following the discussion portion of each topic are small group sessions during which each student practices the skills involved. Constructive feedback is given after each exercise by two of our faculty of very experienced Bay Area litigators and judges. Most exercises are also videoed for further one-on-one critique by another faculty member. The central philosophy of the workshop is that skills are best acquired in an experiential manner by seeing and doing. Frequent short, well-defined exercises followed by immediate constructive feedback in a non-competitive, non-threatening atmosphere provide the core of the program. The workshop directors are Tim Hallahan, Judge Sallie Kim and Sara Peters. Tim has taught similar programs at Harvard Law School, the University of San Francisco School of Law, Boalt Hall, the California Continuing Education of the Bar, and in private and public interest law firms around the country. Sallie is a United States Magistrate Judge in San Francisco and was a partner in a civil litigation firm and also previously taught a class at SLS and served as Associate Dean for Student Affairs. Sara is a trial attorney for a personal injury law firm in San Francisco. She graduated from Stanford Law School in 2008 and coaches the Stanford Law School mock trial team. Special Instructions: If you haven't taken Evidence you must contact Tim Hallahan before the course begins for some brief pre-course reading assignments. There are no papers or tests, but attendance at every session is required. Since we will begin our trial advocacy exercises on the first day of class, all students who are interested in taking the course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the professor.) Add-drop decisions need to be resolved at the first class; no drops will be permitted thereafter. Exceptions to this rule will be made by petition only. Mandatory attendance. Elements used in grading: Attendance and in-class assignments. In addition, the Trial Advocacy Workshop is approved to offer Experiential Learning (EL) Credit. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 7830. Topics in American Legal Practice. 1 Unit.**

(Formerly Law 733) This course is designed to introduce international students to American legal practice. To do this, the course begins in the spring quarter by working with students to look ahead to their summer experience and begin to identify ways in which the culture or norms of the practice setting might be distinctive, or otherwise differ from the legal, political, or workplace culture of their home country. Then in the fall quarter, students are asked to write a 10-page paper, situated in the relevant literature(s), that uses the summer experience to examine one such set of issues. Elements used in grading: Final Paper.

**LAW 7831. Transition to Practice: Selected Topics. 1 Unit.**

This course is designed to explore issues of professional identity for students transitioning into the legal profession. It will begin in the spring quarter and continue into the fall quarter, and will require the writing of a paper. Elements used in grading: Final Paper.

**LAW 7833. Spanish for Lawyers. 2 Units.**

(Formerly Law 629) The Spanish for Lawyers course offers students the opportunity to enhance existing Spanish communication skills in legal practice. The course will emphasize speaking and listening comprehension through in-class presentations and dialogue. Students will also be given assignments to be completed outside of class. The course will introduce Spanish legal terminology in areas such as immigration, consumer protection, criminal, employment, housing and family law. Students will learn how to apply these language skills as future legal practitioners interacting with clients who possess limited English proficiency. Native or fluent guest participants will expose students to legal terminology, concepts and dialects from various Spanish-speaking countries. The goal of the class is to enable students to, at a minimum, conduct intake interviews with a Spanish-speaking client without the assistance of an interpreter in a culturally competent fashion. Elements used in grading: Attendance, Class Participation, Written Assignments.

**LAW 7836. Advanced Legal Writing: Appellate Litigation. 3 Units.**

(Formerly Law 718) This course will explore the art and science of appellate writing. We'll look at real-world examples of appellate briefs, learning from the brilliant briefs and discussing ways to fix the lousy ones. We'll also study the nuts and bolts of effective appellate writing, including advanced grammar and usage, organization, typography, methods for drafting and editing, and when to break the rules. This class should be useful to students planning appellate-court clerkships or those just looking to hone their legal writing skills. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 7837. Advanced Legal Writing: Public Interest Litigation. 3 Units.**

(Formerly Law 792) Public-interest litigation is often an uphill battle. Civil rights plaintiffs have difficulty prevailing even when their fact-patterns are sympathetic, as can be seen in contexts from sexual harassment lawsuits to wage to hour claims and from police brutality and prison conditions cases to transnational human rights complaints. Yet when public interest impact litigation does succeed it can enable or even galvanize social movements-both domestic and international-and meaningfully change the legal landscape. This class will focus on the skills necessary to litigate public interest lawsuits, and, in particular, public interest impact litigation. We will focus on marrying research and analysis of statutory text and case law and harnessing the creativity necessary to win such lawsuits by using those research and analytical results to write two briefs from the perspective of public interest or pro-bono advocates. Along the way, we will examine some of the most important briefs of the twentieth and twenty-first centuries in various public interest contexts to unpack the rhetorical and analytical skills needed to persuade judges across the ideological spectrum. Grading will be based on a Mandatory P/R/F system, taking into account research and writing as well as class participation. SPECIAL INSTRUCTIONS: Students on the waitlist for the course will be admitted if spots are available on the basis of priority. Early drop deadline: Students may not drop this course after first week of class. Elements used in grading: Attendance, Class Participation, Written Assignments.

**LAW 7841. Teaching and Learning in Higher Education. 3 Units.**

(Formerly Law 303) This course is co-taught by Thomas Ehrlich, former dean of the Law School and now Consulting Professor at the Graduate School of Education and Mariatte Denman, Director of Educational Programs at the Office of the Vice Provost for Teaching and Learning (VPTL). It provides students from many disciplines throughout the university opportunities to gain the knowledge and skills needed to be effective teachers. Students watch and interview master teachers at Stanford, learn a range of effective pedagogical methods, and prepare a syllabus module for a workshop or class they might teach. They have an opportunity to practice teach in a supportive environment and gain feedback on their teaching. Elements used in grading: Class Participation, Written Assignments, Final Course or Workshop Syllabus Module. CONSENT APPLICATION: To apply for this course, SLS students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with The Vice Provost for Teaching and Learning (VPTL 297) and Education (EDUC 297).

**LAW 7843. Community-Led System Design. 2 Units.**

This class engages students in participatory/collaborative approaches to redesign complex systems. They will answer the question: how do we make our social legal systems better for people -- and how do we put people at the center of this redesign? The seminar has two parallel components: (1) Learn from a series of experts who have been taking a community-led approach to remaking a legal system (or analogous ones). Guest experts will present their current case studies to illustrate strategy and process design. (2) Select one of two system redesign challenges (see below) and develop their own prototype launching workshop. [For those students interested in continuing with the project, there will be a companion policy lab in the Spring Quarter 2018. This seminar is a prerequisite for the policy lab.] The two prospective system-leader partners are on the verge of major new overhauls of their current systems: (a) California Self-Help Services' guardianship/kid's custody redesign, with Bonnie Hough and the California Judicial Council as a partner, as they try to figure out how to remake the legal system for parents and family members (without lawyers) trying to get custody worked out for kids. (b) New York Chief Justice Task Force housing court/eviction redesign, with the Chief Judge Janet DiFiore's task force as the partner, as they try to figure out how to make the eviction system work better for users. Students will develop their own preliminary plan and prototype for a user-centered process for their partner. Students will learn about new approaches to policy-change, as well as the fundamentals of participatory design and community lawyering. They will operationalize these different approaches, to make them relevant and actionable in an actual legal system. They must synthesize a recommendation to their partner-leader about how they might create a better process to redesign a given court process/system. And they must create a prototype of a launching workshop, that can demonstrate how a wider process would work, while also testing their plan. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 8001. Corporate Governance and Practice Seminar. 2 Units.**

(Formerly Law 703) The seminar on corporate governance meets in the Autumn and Winter quarters and forms the core of the LL.M. Program in Corporate Governance & Practice. The course, designed to be taken in conjunction with Corporations in the fall, takes an economic approach to the analysis of corporate law. In particular, we ask why American corporation law has its particular structure. We will seek to understand how the separation of ownership and control produces agency costs, and the ways in which corporate law seeks to remedy these through techniques like disclosure, fiduciary duties and shareholder litigation, voting, and hostile takeovers. We will read and discuss ongoing debates among scholars and practitioners about the agency cost framework, the merits and limits of current legal policies, and the role of institutional arrangements like activist shareholders. We will also consider the relevance of these disputes, and the effectiveness of corporate law and governance more generally, in the context of a variety of real-life incidents. No knowledge of economics is presupposed, so the course will also introduce basic economics and finance concepts necessary to understand these concepts. Some course sessions, largely in the Winter, will feature outside speakers who will complement the discussions with real-world examples drawn from practice. Attendance and active participation are important to the success of the seminar and an important factor in the overall grade. Students are expected to have carefully read and reviewed assigned materials in advance of each session. Students may be also asked to prepare brief presentations to help guide discussions. Students will be required to submit short reflection papers that evaluate, critique, and discuss some or all of the key topics reviewed in the previous week's session. The class will be graded H/P/R/F in Autumn Quarter and MP/R/F in Winter Quarter. Elements used in grading: Class participation, attendance and assignments. This course is required for and limited to students in the Corporate Governance and Practice LL.M. Program.

**LAW 8002. Environmental Law and Policy Colloquium. 2 Units.**

(Formerly Law 706) The Environmental Law & Policy Colloquium offers students the opportunity to learn about cutting-edge legal topics related to environmental law, broadly defined to include, among other areas, pollution control, natural resources management, and energy development. The colloquium meets in two quarters. During the autumn quarter, students will learn about core concepts that underlie the administration of environmental law, exploring ideas from economics, philosophy, natural science, and law. In the autumn quarter, students will begin to develop a capstone research paper on a contemporary environmental law issue. During the spring quarter, the students will write and present their research papers. Elements used in grading include attendance and participation, problem sets, small writing assignments, and a final paper. This course is required for students in the Environmental Law & Policy LL.M. Program. All other students need instructor permission to enroll.

**LAW 8003. International Economic Law, Business & Policy (IELBP) Colloquium. 2 Units.**

(Formerly Law 711) This course enables IELBP advanced degree students to explore selected issues, case studies and policy debates in international economic law and business, global political economy, and transnational dispute resolution in a highly interactive seminar. The colloquium provides opportunities for students to engage in dialogue with experts in the field (including Stanford Law faculty and interdisciplinary scholars from other schools, departments or programs at Stanford University), to participate in cross-border negotiation simulations, and to discuss legal processes and strategic challenges with experienced international law practitioners. Students are expected to have carefully read assigned materials in advance of each session and to be well prepared to discuss the materials with the instructor and guest speakers. The course extends over two quarters (autumn and spring), and students are required to complete both quarters in order to satisfy the program requirement. The fall quarter colloquium will analyze issues and trends in international economic law, business and policy in the context of globalization and regionalism; students will engage in a policy analysis and advocacy project in small regional groups. The spring colloquium will focus on international economic law, business and policy issues faced by transnational legal practitioners. In each term, written requirements include several short reflection papers and a longer essay for potential publication in the IELBP LLM blog. Elements used in grading: Attendance, active participation and critical thinking are essential to the success of the seminar and are important factors in the grade in addition to written work.

**LAW 8004. Law, Science, and Technology Colloquium. 2 Units.**

(Formerly Law 704) The Law, Science & Technology Colloquium offers students in the Law, Science & Technology LLM Program the opportunity to discuss cutting-edge legal issues at the intersection of law and technology with leading experts in the field, including Stanford faculty, visiting scholars, technology and IP lawyers, entrepreneurs, and executives from Silicon Valley technology companies. During some class meetings, an invited guest lecturer will present research, a paper, or their experiences on a specific topic related to law, science, and technology. Following these presentations, students will participate with the lecturer in a discussion based on assigned readings, the presentation, and students' experience in the area. Attendance and preparation are vital to the success of the Colloquium and, accordingly, will constitute an important factor in the overall grade. Each student will also write papers that evaluate, critique, and discuss issues in the field. Students' grades are based on their papers and classroom performance (e.g., participation, attendance, etc.). This course is restricted to students in the Law, Science, and Technology LLM program, and satisfies their Colloquium requirement for the spring quarter.

**LAW 801. TGR: Project. 0 Units.****LAW 8011. SPILS Law and Society Seminar. 3 Units.**

(Formerly Law 701) This seminar is restricted to students who are in the SPILS program. The seminar deals with the relationship between legal systems and the societies in which they are embedded. The materials are drawn from studies of many different societies. Among the issues dealt with are: What influence does culture have on the operation of legal systems? What are the social forces which produce particular forms of law? What impact do legal interventions have on society and on human behavior? Elements used in grading: Exam.

**LAW 8012. SPILS Masters Thesis. 4 Units.**

(Formerly Law 705) The writing of a work of original scholarship in the area of research that each student chooses is necessary requirement of the JSM degree. During the winter quarter students are expected to submit two draft chapters: 1) any chapter of the fellow's choice in early February; and 2) a draft of the empirical research result's chapter in early March. During the spring quarter students are expected to finalize their research project, and write and submit their final thesis. Towards that end, students must complete and submit a draft of the whole thesis in early April. The final version, revised in response to the adviser's comments, must be submitted by the end of the quarter. The exact dates will be informed in advance by the teaching fellow. Elements used in grading: Thesis. This course is exclusive to SPILS students. The thesis is required for JSM graduation.

**LAW 8013. SPILS Research Methods Workshop. 2 Units.**

(Formerly Law 707) This is a mandatory course for SPILS Fellows as part of the program's core curriculum. Its main goal is to offer students an interdisciplinary perspective about socio-legal research, and research tools for implementing their individual research projects. This Winter term workshop will complement the Research Design for Empirical Legal Studies Seminar taken in the Autumn by 1) expanding and elaborating on some of the methods analyzed during the seminar; and 2) assisting students in using such methods towards their individual research project. The workshop will consist of specialized sessions, most of them tailored towards the work of empirical research that occurs after the data collection phase. During the quarter the fellows are expected to submit drafts of different chapters of their thesis. If appropriate, the workshop may also include group and/or individual sessions designed to address the very specific needs of the research undertaken by the SPILS Fellows. Elements used in grading: Class participation, attendance and written assignments. Enrollment is restricted to SPILS fellows. The seminar is required for JSM graduation.

**LAW 802. TGR: Dissertation. 0 Units.****LAW 8021. Introduction to American Law. 3 Units.**

(Formerly Law 709) This course is designed to introduce international students in the Exchange and Advanced Degree Programs (LL.M. and SPILS) to the key principles of American law. The course provides an overview of distinctive features of the U.S. legal system, including its history and institutions. Topics include: the role of precedent in the Common Law; distinctive elements of Civil Procedure and legal actions; the Branches of the U.S. Government and the Separation of Powers; Federalism; Due Process; Equal Protection. The course is offered before the start of the regular Law School quarter. Special Instructions: Required for LL.M. but optional for the SPILS and Exchange Program students. Open to LL.M., SPILS and SLS Exchange Program students only. The class starts on September 5 and runs through September 21. Final exam will be scheduled on Friday, September 22. Elements used in grading: Class attendance, participation, short written assignment and final exam.

**LAW 8022. Professional Responsibility. 3 Units.**

(Formerly Law 677) This course introduces students to the goals, rules and responsibilities of the American legal profession and its members. The course is designed around the premise that the subject of professional responsibility is the single most relevant to students' future careers as members of the bar. These issues come up on a constant basis and it is critical that lawyers be alert to spotting them when they arise and be educated in the methods of resolving them. As such, the course will address many of the most commonly recurring issues that arise, such as confidentiality, conflicts of interest, candor to the courts and others, the role of the attorney as counselor, the structure of the attorney-client relationship, issues around billing, the tension between "cause lawyering" and individual representation, and lawyers' duty to serve the underrepresented. In addition, we will delve into some more personal ethical issues that reflect on why students have chosen law as a profession and how lawyers compose careers that promote or frustrate those goals. At the start of each session (starting with the second session) there will be a brief quiz on the material that was covered in the readings and discussion of the prior session. During the period of the course, students will also be responsible for submitting one reflection paper (three-to-five pages) based on a prompt that will be circulated after each of the first six sessions (one paper for the entire course). These papers will be due by 11:59 on the last day the class meets. Grades will be based on the quizzes and the paper submitted, with the instructor retaining the right to take class participation into account. Attendance is mandatory and students must seek instructor approval for any absences not due to illness. This course is offered to foreign graduate students only. It is taught on an accelerated basis over the course of three weeks between orientation and the beginning of the Fall Quarter classes. Thus, the course meets on average nine hours per week. The exact meeting times will be set once the graduate students' schedules are set. Elements used in grading: Attendance, class participation, quizzes and written memo. Limited to LL.Ms, J.S.Ms and exchange students. Required for LL.Ms.

**LAW 8031. JSD Research Colloquium. 0 Units.**

(Formerly Law 218) Required for and limited to JSD candidates. The objective of the colloquium is to assist students in designing, conducting, analyzing and reporting their doctoral dissertation research. Weekly colloquium sessions are devoted to work in progress presentations by JSD candidates, supplemented by occasional guest lectures and discussions of cross-cutting issues of interest to doctoral students.

**LAW 805F. Policy Practicum: Endstage Decisions. 1-3 Unit.**

(Formerly Law 413Z) Medical decisions toward the end of life can be crucial and difficult for patients, doctors, and families. Law and medicine have been struggling to find ways to strike a balance between what the patients might want (or say they want), and what makes medical, economic, and ethical sense. One standard is the "Advanced Health Care Directive" (Directive), which guides doctors and surrogates (usually a family member) on what to do when faced with end-of-life dilemmas. Another form, adopted in just over half the states (including California) is the POLST (Physician Orders for Life-Sustaining Treatment). The two types are supposed to complement each other, but they are different in important ways. The Advanced Health Care Directive expresses what a person wants and/or appoints a surrogate in case the patient is unable to express her wishes. Anybody can fill out a Directive, at any time of life. Ideally, a copy goes to the surrogate, if one is appointed, and another to the primary care physician. The POLST form is meant for people who are seriously ill. The Directive (for example "no artificial nutrition by tube") is supposed to be controlling; the patient, of course, can change her mind; but there is no surrogate. It is an agreement between the patient and the doctor. Who uses these different forms? How effective are they? To what extent and in what situations are they useful? Working closely with Stanford Hospital as the client, students will not only look at current literature on the topic and build on past practicum research, but also conduct interviews with doctors, nurses, and other health care specialists with the goal of finding out what local hospitals and nursing homes are doing. The aim is to get a more realistic picture of the what one might call the living law of the Directive and the POLST. The ultimate goal is policy recommendations to improve the forms and associated laws and to examine alternative approaches. Elements used in grading: Class Participation, Final Paper. – NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 805R. Policy Practicum: Rethinking Campus and School Title IX Policies and Procedures. 1-3 Unit.**

Client: National Women's Law Center. This practicum continues policy research and advocacy undertaken in Spring 2017 (see description below). Day/Time: TBD scheduled in accordance with registered student availability. Students will refine and finalize policy and procedures, including suggestions from clients and stakeholders, and the priorities that emerged from "The Way Forward" Title IX Conference in Spring 2017 at Stanford Law School. We will seek further feedback from legal, survivor, and other stakeholder groups, and work in conjunction with the National Women's Law Center (NWLC) to disseminate the findings and recommendations to the target end-user groups. This Practicum builds on the skills of thinking about law in an integrated way and situating policy in a direct social context where it can be more readily applied. The project provides students with first-hand experience in gaining a broad and nuanced understanding of emerging social, legal, and policy dilemmas. Given all the controversy surrounding sexual assault on college campuses, surprisingly little is actually known about the policies and processes that are currently in use, nor any way of easily ascertaining what the majority of an institution's "peer schools" are doing with respect to solving a challenge or addressing an issue. There is no set of "best practices" to which school administrators can easily turn. The goal of the practicum is to produce a free, web-based, open-source set of adaptable model policies and procedures that are targeted to different market segments and stakeholders (i.e., large private, large public, small private, HBCU, community colleges, and K12). Enrollment is limited and preference will be given to students enrolled in the Spring 2017 Seminar/Policy Lab Practicum. Students from CS or EE or who have coding and have an interest in the design and building of the online platform would be welcome to join the Policy Lab as well. Over the past four years, the issue of campus sexual assault has exploded into the public discourse. While definitive figures are difficult to obtain due to the necessarily private nature of these events, several recent studies estimate that between 20-25% of college women (and a similar proportion of students identifying as transgender and gender-nonconforming, as well as around 5-10% of male students) experience sexual assault. Survivors have come forward across the country with harrowing stories of assault followed by an insensitive or indifferent response from college administrators, launching one of the most successful, and surprising, social movements in recent memory. Statistics are equally disturbing in the middle and high school context. As a result, the federal government has stepped up its civil rights enforcement in this area, with over 250 colleges and universities currently under investigation for allegedly mishandling student sexual assault complaints. At the same time, students accused of sexual assault have complained of botched processes driven by a "campus rape over-correction" that denied them a fair disciplinary hearing. It is clear that schools are struggling to develop and implement policies and procedures that satisfy their legal obligations in this area. This course focuses on the legal and policy issues surrounding the highly challenging area of investigation and adjudication of sexual assault and other gender-motivated violence on college campuses and in K12 schools. It covers the federal and state legal frameworks governing these procedures including Title IX, the Violence Against Women Act, and the Clery Act, and examines current cases as well as the rapidly evolving legal, federal regulatory, and political environment surrounding this issue. Guest speakers working in the area will help to broaden students' understanding of the subject matter. NOTES: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. Elements used in grading: Class Participation, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 805Y. Policy Practicum: Managing Gentrification. 2-3 Units.**

Gentrification is a concern for policy makers in successful and diverse cities. Gentrification can improve neighborhoods that suffer from underinvestment, but it can also cause the displacement of long-term residents, cherished landmarks and long-standing businesses and it can make neighborhoods homogenous, sterile and less able to meet the day-to-day needs of their residents. A gentrifying city can be a city in the process of losing the variety and dynamism that made it attractive to investors and successful people in the first place. And of course, gentrifying cities are unaffordable to low-income residents. Because of rising rents, many neighborhoods in San Francisco are already unable to sustain such businesses as dry cleaners, laundry services, drug stores and affordable restaurants. A neighborhood with nothing but fancy wine bars, chic clothing shops, gourmet restaurants and trendy coffee houses selling \$5 drip coffee is not in crisis, but a city with only such neighborhoods arguably is. This practicum builds on previous Policy Lab research, working closely with the San Francisco Mayor's Office of Housing and Community Development, to examine the challenges of gentrification in San Francisco. Issues include researching policy responses to the displacement of legacy businesses and non-profit enterprises and analyzing the effects of rising property values and rents on the diversity of businesses in San Francisco neighborhoods. Students interested in this policy lab should submit a consent form with a C/V and statement of interest to be reviewed by Professor Ford and San Francisco city officials. Students wishing to undertake R credit will perform additional research for a white paper analyzing the issues and results of the collective research. R credit is possible only by consent of the instructor. After the term begins, and with the consent of the instructor, students accepted into the course may transfer from section (01) into section (02), which meets the R requirement. Elements used in grading: Class Participation, Written Assignments, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 805Z. Policy Practicum: Rethinking INTERPOL's Governance Model. 2-3 Units.**

Today, the international community faces increasingly complex security challenges arising from transnational criminal activities. Effective international cooperation among national and local police agencies is critical in supporting efforts to combat cross-boundary criminal threats like terrorism, human and drug trafficking, and cybercrime. INTERPOL—the world's largest international police organization—is constantly innovating to respond effectively to the world's evolving threat landscape. As a leader in global policing efforts, INTERPOL launched the INTERPOL 2020 Initiative to review the Organization's strategy and develop a roadmap for strengthening its policing capabilities. INTERPOL 2020 will provide the strategic framework to ensure the Organization remains a leader and respected voice in global security matters. This practicum will allow students to assist INTERPOL in modernizing its organizational structure to better fight cyber-crime and terrorism. Students in this practicum will contribute to the Strategic Framework 2017-2020, focusing on comparative governance practices for international organizations. The practicum will analyze decision-making processes within the organization and across other similar organizations (acknowledging their respective mandates) with respect to specific issues identified by INTERPOL. The work product developed during the course of this practicum will serve as part of a framework for INTERPOL to guide and support the development of its governance model. Students in practicum will work directly with INTERPOL clients (via Video-conferencing and email) and may have opportunities to travel to INTERPOL headquarters in Lyon for meetings with clients to develop our policy guidance and provide policy briefings. In addition, selected students in the practicum may have the opportunity to pursue internships and/or externships at the Office of Legal Affairs, INTERPOL General Secretariat in Lyon, France and/or at INTERPOL Global Complex for Innovation in Singapore. Open to graduate students from outside the Law School and, in exceptional cases, to advanced undergraduate students, the practicum seeks those who demonstrate strong interest and background in global security and international law, organizational behavior, and strategic management. This practicum takes place for two quarters (Fall and Winter). Although students may enroll for either one or both quarters, we will give preference to students who agree to enroll for both quarters. Autumn Quarter is offered for 2 or 3 units. Winter Quarter is offered for 2 units. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class participation, Written Assignments, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with International Policy Studies (IPS 255).

**LAW 806A. Policy Practicum: Voting Technology. 2-3 Units.**

CLIENT: Committee on the Future of Voting of the National Academies of Sciences. The Committee on the Future of Voting is seeking Practicum research support for an exhaustive study of technology, standards, and resources for voting technologies, including challenges related to the 2016 election. As described on the website for National Academies of Science, Engineering, & Medicine, this "ad hoc committee, under the auspices of the Committee on Science, Technology and Law and the Computer Science and Telecommunications Board, will conduct a study that will: (1) document the current state of play in terms of technology, standards, and resources for voting technologies; (2) examine challenges arising out of the 2016 federal election; (3) evaluate advances in technology currently (and soon to be) available that may improve voting; and (4) offer recommendations that provide a vision of voting that is easier, accessible, reliable, and verifiable. The committee will issue a report at the conclusion of the study." Students in this Practicum will summarize the available literature and government reports on the state of voting technology and develop a bibliography to aid the Committee. The Practicum seeks to build a graduate team of students from law, computer science, and political science to examine issues specific to their academic areas. Students will meet regularly with Professor Persily one on one or in small teams, depending on the project. Additional information on the Committee can be found at the following link: <http://sites.nationalacademies.org/PGA/stl/voting/index.htm>. Students may enroll in any quarter and those seeking R credit may, with consent of the instructor, move from Section 1 (2 credits) to Section 2 (3 credits for R work), during the first week of the term. Elements used in grading: Class Participation, Final Paper.

**LAW 806B. Policy Practicum: Developmental Disabilities: Rights and Funding Challenges. 3 Units.**

In 1977, California became the first state in the US to grant individuals with developmental disabilities (DD) the right to the services and supports they need to live more independent and normal lives. The Lanterman Act, now codified in the California Welfare and Institutions Code, declared that "[a]n array of services and supports should be established which is sufficiently complete to meet the needs and choices of each person with developmental disabilities, regardless of age or degree of disability, and at each stage of life, and to support their integration into the mainstream life of the community." To this day, California is the only state in which the right of individuals with DD to be supported in the least restrictive environment is construed as a civil right and an individual entitlement, not merely a right to "take a number and wait in line" until sufficient state resources become available to meet their service and support needs. To effectuate the goals of the Lanterman Act, California divides responsibility between the Department of Developmental Services (DDS), a state agency, and a network of twenty-one private, nonprofit corporations called "regional centers" that are funded by DDS. Each regional center serves a different area of the state, providing services and supports to individuals with developmental disabilities in the local community. DDS is responsible for monitoring the regional centers and ensuring that they implement the Lanterman Act. In the early years after the Act's passage, DDS (and in turn, the regional centers) were largely funded through the state's general fund. Since the mid-1980s, however, a sizable portion of funding has been provided by the federal government. Through a special waiver program under Medicaid, individuals with DD who would otherwise be forced to reside in institutions can receive the services and supports they need to live in the community. The federal spending cuts contemplated by the Trump Administration, however, could pose an existential threat to the viability of this system. If the funds available to California through the Medicaid waiver program are significantly curtailed, it will be far more difficult for the state to support the integration of individuals with DD into the community. This policy lab will explore whether – and if so, how – the civil rights and individual entitlement embodied in the Lanterman Act can be preserved in a reduced funding environment. Students will investigate the nature and scope of the rights provided under the Act; the corresponding obligations under the Act of the legislature, DDS, and regional centers; and the tools that different branches of state government might bring to bear to effectuate the goals of the Act if the funding available through Medicaid is significantly reduced. Our co-clients are Disability Rights California, a nonprofit founded in 1978 whose mission is to "educate, investigate, and litigate to advance and protect the rights of Californians with disabilities" (see <http://www.disabilityrightsca.org/>), and the California State Council on Developmental Disabilities, "established by state and federal law as an independent state agency to ensure that people with developmental disabilities and their families receive the services and supports they need . . . to live independently and to actively participate in their communities" (see <https://scdd.ca.gov/>). Students may elect to take the course for either three units of research (R) credit or three units of experiential learning (EL) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, Written Assignments, Final Paper. -- NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 806C. Policy Practicum: Fake News and Misinformation. 2-3 Units.**

CLIENT: Hewlett Foundation Madison Initiative. This Practicum works closely with the Hewlett Foundation Madison Initiative on an exhaustive study of fake news, misinformation, disinformation and propaganda and their implications for democracy in America and around the world. The client, the Hewlett Foundation Madison Initiative, is developing a grant-making program for interventions in the spread of fake news and misinformation which also promote accurate information for a healthy, deliberative democracy. The Practicum builds on the work of a Spring 2017 Practicum, led by Senator Russ Feingold, which analyzed the roles of major online platforms – Google, Facebook, Reddit, and Twitter – in proliferating fake news and misinformation in the 2016 election. Students will contribute to that study with their own independent research focusing on such issues as self-regulation by the platforms, legal and regulatory frameworks, analysis of algorithms and user data, and other issues that arise with current events or through ongoing research findings. Students will undertake literature reviews, legal case analysis, investigations of business practices and algorithms associated with the relevant platforms, surveys of the roles of foreign governments, and analysis of policy proposals to combat fake news, misinformation, disinformation, and propaganda. In addition to law, students in the fields of communications, computer science, journalism, political science, and public policy are especially welcome to join the research team. Students will meet one on one with Professor Persily to frame their research and discuss their findings. Students may enroll in any quarter. Those law students seeking R credit may, with consent of the instructor, move from section 1 to section 2. Section 1 is open enrollment for any law or graduate student. Undergraduates may, in exceptional cases, be admitted to the Practicum with consent of the instructor. Elements used in grading: Class participation, Final Paper. NOTES: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook.

**LAW 806D. Policy Practicum: Expanding Access to the Legal Bar for the Formerly Incarcerated. 3 Units.**

The Stanford Criminal Justice Center is undertaking a project to increase the participation of formerly incarcerated people in the legal profession who have an interest in pursuing legal careers but who face challenges in overcoming the moral character requirement to bar admission. The project includes surveying best practices, advocacy with the State Bar and could eventually lead to supporting California Bar applicants in moral character hearing determinations. This two-quarter lab will also host a national roundtable that brings together scholars, advocates, and Bar representatives to develop best practices, reported in a final white paper, on law school admission and Bar consideration of applicants with criminal records. We are seeking four to six law students to participate. Students may enroll in both quarters. Elements used in grading: Performance, Class participation, Written Assignments, Final Paper. NOTES: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 806E. Policy Practicum: Federal Indian Law: Tribal Code Development Assistance Project. 2-3 Units.**

The Yurok Tribe is the largest federally recognized Native nation in California. Students will assist the client, the Yurok Tribal Attorney's Office, by conducting research related to drafting tribal taxation code. The exact scope and nature of the research will be determined in consultation with the client. Students will produce policy research memos to share internally with the client. Because of the topic's complexity, coursework or background in federal Indian law or taxation is preferred but not required. Elements used in grading: Class Participation, Final Paper. NOTES: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 806F. Policy Practicum: Accountability for the Unintended Consequences of Impact Investing. 2-3 Units.**

As the impact investing industry grows exponentially into trillions of dollars, investors, scholars, and industry leaders are increasingly focused on improving metrics and standards. They recognize the need to define impact, critically evaluate philanthropic trade-offs, and apply due diligence standards to evaluate social and environmental risk. Despite this trend, however, no accountability framework exists to manage the potential for harm to people and the environment from impact investing. To ensure that impact investing lives up to its name, a system is needed that holds investors accountable for harm to local communities and their environments. Other traditional development finance institutions – such as OPIC or the World Bank's IFC – have been routinely applying policy and accountability frameworks for decades to manage their social and environmental risks and to remedy harm. When these institutions invest in a project, they bring environmental and human rights standards and citizen-driven complaint systems that local communities can use to address a grievance. If an impact investor (e.g. a private foundation, individual investor, or private bank's impact fund) is funding that same project without traditional development institutions involved, chances are there is no way that communities can have their voices heard or receive remedy for harm. Yet the failure to take seriously the risks of social and environmental harm can lead to catastrophic financial, human, and environmental outcomes. In "Accountability: The Golden Opportunity in Impact Investing" [https://ssir.org/articles/entry/accountability\\_the\\_golden\\_opportunity\\_in\\_impact\\_investing](https://ssir.org/articles/entry/accountability_the_golden_opportunity_in_impact_investing), Natalie Bridgeman Fields describes Accountability Counsel cases in Liberia and Mexico that demonstrate not only the importance of community-driven accountability but also concrete examples of an accountability framework. This project develops a system that enables impact project asset owners access to information about their asset's compliance, evaluation tools, and grievance systems. The practicum team will work closely with Accountability Counsel staff to develop an accountability and learning system for impact investment that guarantees that assets: (1) comply with policies to protect people and the environment, (2) have evaluation tools that assess their impact, and (3) offer grievance methods to address social or environmental harms associated when they do occur. The potential positive impact for impact investing grounded in an accountability framework is staggering. According to a recent report from Morgan Stanley, sustainable investment has grown more than 33 percent over the last two years to \$9 trillion, and will only continue to grow as impact investing becomes more accessible. If impact investing scales further without governance and accountability structures in place to prevent abuse and address harm, the consequences to local communities are dire. They will be certain to include the land grabs, contamination of water, labor rights abuses, and displacement of indigenous people that are typical of investments where there is weak rule of law and use of land and labor. Benefits of creating a robust accountability framework, if achieved, could spread beyond impact investing and could extend across global finance, including development finance, where existing frameworks could be improved based on leadership from the impact investing community. The practicum seeks interdisciplinary graduate students from law, international development, economics, project finance, impact investing, international human rights law, policy advocacy, business, and/or philanthropy. The research team will collaboratively produce a report for a sustained advocacy campaign with lessons and practices for accountability within impact investing. Elements used in grading: Attendance, Class Participation, Final Paper. NOTES: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Directed Writing, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for

**LAW 806G. Policy Practicum: UNCITRAL Transparency Registry. 2 Units.**

As the core legal body of the United Nations system in the field of international trade law, the United Nations Commission on International Trade Law (UNCITRAL) has developed procedural rules to promote transparency and public accessibility to treaty-based investor-state arbitration. In contrast to traditional closed proceedings, the new Rules on Transparency take into account both the public interest and the interest of the parties to resolve arbitration disputes in a fair and efficient manner. Focusing on the 2014 UN Convention on Transparency in Treaty-based Investor-State Arbitration, students will review UNCITRAL Working Group III documents to identify issues of concern and benefit for individual countries considering whether to sign and ratify the Convention. The research team will prepare a strategy working paper for the UNCITRAL secretariat, based on research and interviews conducted in the winter and spring quarters. The Project welcomes Law and IPS graduate students interested in international investor-state arbitration, but winter 2018 enrollment in this policy lab is a prerequisite for enrollment in spring 2018 quarter. Elements used in grading: Class Participation, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 806H. Policy Practicum: Community-Led System Design Practice. 2 Units.**

How do we re-make court processes and technology, so that they better support people trying to use the legal system? In this class, we work with the California Judicial Council and local state courts and self-help centers, to help them consult with court-users, test new technology and processes, and collaboratively design a better civil justice system. In particular, our class will focus on the Guardianship System, in which people, most often without lawyers, are trying to get custody of children whose parents are not able to care for them. Building off our Winter Quarter class, in which teams of students proposed various user testing and multi-stakeholder design workshops, our Policy Lab team will carry out these testing sessions and workshops. We will gather community input into how the Guardianship System can be made more engaging, navigable, and useful to litigants. Much of the work will be done on-site at local courts and self-help centers. Students will be training in user testing and design workshop facilitation. Their work will be presented to our partners, to guide their innovation agenda and future technology purchases. We encourage students who are interested in public service, design and technology, and community lawyering to join. Pre-requisites: We strongly encourage applicants to have taken the Winter Quarter class "Community Led System Design", but it is not required. All students in the class will have to take and pass the research ethics (CITI) online training, <https://humansubjects.stanford.edu/new/resources/training/citi.html> by end of Week 1. Elements used in grading: Class Participation, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 881. Externship Companion Seminar. 2 Units.**

(Formerly Law 472) The practice of public interest law – whether in the criminal or civil context, or a government or non-profit setting – requires an attorney to consider a host of issues distinct from one in private practice. How should decisions be made about priorities with limited resources? Where an organization has a broad social justice mission, where does litigation on behalf of individual clients or a group of clients fit in? Prior to initiating litigation or advancing a defense, what quantum of evidence should an attorney require? What role, if any, should an attorney's personal beliefs play in a course of representation? Through directed supervision of their externships, as well as participation in weekly seminars, students will evaluate such questions in the context of their practical experience. Students are required to write weekly reflection papers of 2 to 3 pages. Elements used in grading: Attendance, class participation, weekly reflection papers and final reflection paper.

**LAW 882. Externship, Civil Law. 5-12 Units.**

(Formerly Law 474) Following approval of a student's application, the Civil Standard Externship Program (SEP) allows second and third year students to obtain academic credit for externing with select non-profit public interest, public policy, and government agencies in the Bay Area for one quarter. The Civil SEP allows students to (a) gain experience in a field where a clinical course is not offered, or (b) pursue advanced work in an area of prior clinical practice. Students may extern for 20, 24, 30, or 34 hours per week. For a complete description of the Civil SEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: <http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0>. Students wishing to enroll in an externship must meet various requirements that are set out in the Handbook. Students participating in the Civil SEP must also concurrently enroll in the Externship Companion Seminar (Law 881). An externship that otherwise meets the criteria for obtaining EL credit will be approved for EL credit when the field placement provides specialized experience complementary to a student's intended career path and comparable benefits cannot be obtained through other EL coursework at Stanford. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of two to three pages.

**LAW 883. Externship, Criminal Law. 5-12 Units.**

(Formerly Law 475) Following approval of a student's application, the Criminal Standard Externship Program (SEP) allows second and third year students to work for credit in criminal prosecutors' and defenders' offices in the Bay Area for one quarter. Students may extern for 20, 24, 30, or 34 hours per week. For a complete description of the Criminal SEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: <http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0>. Students wishing to enroll in an externship must meet various requirements that are set out in the Handbook. Students participating in the Criminal SEP must also concurrently enroll in the Externship Companion Seminar. An externship that otherwise meets the criteria for obtaining EL credit will be approved for EL credit when the field placement provides specialized experience complementary to a student's intended career path and comparable benefits cannot be obtained through other EL coursework at Stanford. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of two to three pages.

**LAW 884. Externship, Special Circumstances. 12 Units.**

(Formerly Law 473) Following approval of a student's application, the Special Circumstances Externship Program (SCEP) allows second and third year students to work for credit for one quarter in non-profit public interest, public policy, and government agencies outside of the Bay Area. Standards for approval of a SCEP placement are similar to those for Directed Research proposals, although they are higher. Because there is a preference for local civil and criminal SEP placements (see Law 882 and Law 883), your SCEP proposal must explain (a) how it meets the goals of the externship program; and (b) why a similar project cannot be accomplished in one of the placements offered in the Bay Area. SCEP placements outside the Bay Area must be full-time. Students wishing to undertake a SCEP placement obtain the supervision of a faculty member who will oversee their externship and an accompanying tutorial. For a full description of the SCEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: <http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0>. Students wishing to enroll in an externship must meet the various requirements that are set out in the Handbook. An externship that otherwise meets the criteria for obtaining EL credit will be approved for EL credit when the field placement provides specialized experience complementary to a student's intended career path and comparable benefits cannot be obtained through other EL coursework at Stanford. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of three to five pages, and a final reflection paper of a length to be determined by your faculty supervisor.

**LAW 902. Advanced Community Law Clinic. 2-7 Units.**

(Formerly Law 642) The Advanced Community Law Clinic offers law students who already have some significant civil clinical experience the opportunity to work under supervision on more advanced projects and cases being handled by the Stanford Community Law Clinic, including litigation and other matters. Advanced Clinic students will also work with Clinical Supervising Attorneys to provide direction and guidance to those enrolled in the Community Law Clinic for the first time, in areas in which Advanced Clinic students have already acquired some expertise. In addition, Advanced Clinic students may function as team leaders on larger projects in which the Clinic is engaged. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Special Instructions: Completion of the Community Law Clinic (Law 902A,B,C) or its equivalent is a prerequisite for the advanced clinic. Elements used in grading: Participation, reflective paper and project.

**LAW 902A. Community Law Clinic: Clinical Practice. 4 Units.**

(Formerly Law 640A) The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. Each student handles his or her own caseload, which is comprised of cases matters in all of the practice areas. The practice areas are selected and designed to lie at the intersection where the community's unmet legal needs and students' learning needs correspond. The clinic's docket is fundamentally a trial docket. Students have first-chair responsibility for their cases, and perform all of the lawyering tasks necessary to advance their clients' interests, including interviewing, counseling, negotiation, fact investigation, legal research, and representation in the court and agency settings that hear the clients' cases. Skills emphasized include those trial lawyering skills, as well as time management and developing client-centered lawyering practices. Students may also have the chance to participate in outreach or policy-level projects, such as representing the clinic on a state or regional committee on a substantive issue, doing community education workshops at sites around the Peninsula, and/or legislative research and advocacy. In the clinic seminar and in regular supervision, students are encouraged to interrogate the effectiveness of the legal system at delivering "justice" for their clients and to explore creative ways that legal knowledge can be deployed to attack the social problems attendant to low wages, substandard and unstable housing, and other features of low-income life in Silicon Valley. Special Instructions: General Structure of Clinical Courses – The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend four or five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school

**LAW 902B. Community Law Clinic: Clinical Methods. 4 Units.**

(Formerly Law 640B) The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. Each student handles his or her own caseload, which is comprised of cases matters in all of the practice areas. The practice areas are selected and designed to lie at the intersection where the community's unmet legal needs and students' learning needs correspond. The clinic's docket is fundamentally a trial docket. Students have first-chair responsibility for their cases, and perform all of the lawyering tasks necessary to advance their clients' interests, including interviewing, counseling, negotiation, fact investigation, legal research, and representation in the court and agency settings that hear the clients' cases. Skills emphasized include those trial lawyering skills, as well as time management and developing client-centered lawyering practices. Students may also have the chance to participate in outreach or policy-level projects, such as representing the clinic on a state or regional committee on a substantive issue, doing community education workshops at sites around the Peninsula, and/or legislative research and advocacy. In the clinic seminar and in regular supervision, students are encouraged to interrogate the effectiveness of the legal system at delivering "justice" for their clients and to explore creative ways that legal knowledge can be deployed to attack the social problems attendant to low wages, substandard and unstable housing, and other features of low-income life in Silicon Valley. Special Instructions: General Structure of Clinical Courses – The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend four or five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school

**LAW 902C. Community Law Clinic: Clinical Coursework. 4 Units.**

(Formerly Law 640C) The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. Each student handles his or her own caseload, which is comprised of cases matters in all of the practice areas. The practice areas are selected and designed to lie at the intersection where the community's unmet legal needs and students' learning needs correspond. The clinic's docket is fundamentally a trial docket. Students have first-chair responsibility for their cases, and perform all of the lawyering tasks necessary to advance their clients' interests, including interviewing, counseling, negotiation, fact investigation, legal research, and representation in the court and agency settings that hear the clients' cases. Skills emphasized include those trial lawyering skills, as well as time management and developing client-centered lawyering practices. Students may also have the chance to participate in outreach or policy-level projects, such as representing the clinic on a state or regional committee on a substantive issue, doing community education workshops at sites around the Peninsula, and/or legislative research and advocacy. In the clinic seminar and in regular supervision, students are encouraged to interrogate the effectiveness of the legal system at delivering "justice" for their clients and to explore creative ways that legal knowledge can be deployed to attack the social problems attendant to low wages, substandard and unstable housing, and other features of low-income life in Silicon Valley. Special Instructions: General Structure of Clinical Courses – The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend four or five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school

**LAW 904. Advanced Criminal Defense Clinic. 2-7 Units.**

(Formerly Law 418) Advanced clinic allows students who have taken the Criminal Defense Clinic to continue working on cases. Participation in case rounds is required. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical units during their law school career. Students must have taken Criminal Defense Clinic (Law 904A,B,C). Elements used in grading: Class participation, attendance, written assignments and case work.

**LAW 904A. Criminal Defense Clinic: Clinical Practice. 4 Units.**

(Formerly Law 408A) Students in the Criminal Defense Clinic represent local residents in a wide range of misdemeanor cases in Santa Clara and San Mateo counties. Students are California Bar Certified and thus appear in court and argue cases with faculty standing by. Students take the lead role in all aspects of case development, including interviewing clients and witnesses, investigating facts, developing case strategy, negotiating with prosecutors, drafting and arguing motions, and occasionally trying cases before judges and juries. Common charges include drug use and possession, assault, theft, and vandalism. While students have primary responsibility for all aspects of their cases, all work is closely supervised. The Criminal Defense Clinic is an intensive, fast-paced, and demanding program of education and practical skills, taught through introductory training and ongoing workshops and skills practicums. The Clinic also addresses broader systemic issues such as implicit bias in the legal system, immigration consequences, economic disparities, and addiction. The goal of the Clinic is to train students how to conduct a criminal case while engaging in thoughtful reflection and providing holistic representation. The Clinic's broader goal is to provide lawyering skills and habits of mind transferrable to any student's chosen field of practice. While the work is often challenging and sometimes heartbreaking, it offers students a unique opportunity to put their skills, intellect, and compassion to use by serving people in a moment of great need. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Class participation, attendance, written assignments and case work and

**LAW 904B. Criminal Defense Clinic: Clinical Methods. 4 Units.**

(Formerly Law 408B) Students in the Criminal Defense Clinic represent local residents in a wide range of misdemeanor cases in Santa Clara and San Mateo counties. Students are California Bar Certified and thus appear in court and argue cases with faculty standing by. Students take the lead role in all aspects of case development, including interviewing clients and witnesses, investigating facts, developing case strategy, negotiating with prosecutors, drafting and arguing motions, and occasionally trying cases before judges and juries. Common charges include drug use and possession, assault, theft, and vandalism. While students have primary responsibility for all aspects of their cases, all work is closely supervised. **LAW 906A. Criminal Prosecution Clinic: Clinical Practice. 4 Units.**

(Formerly Law 620A) The six students enrolled in the Criminal Prosecution Clinic advocate before the San Jose Superior Court under the guidance of Santa Clara County prosecutors. Students formulate case strategy, identify and interview witnesses, and conduct evidentiary motions, preliminary hearings, and occasional nonjury trials. The cases concern thefts, burglaries, assaults, weapons possession, drunk driving, drug offenses, and a range of less common crimes. Students offer testimony by police officers, crime victims, and other witnesses and cross-examine defense witnesses, including those defendants who take the stand. Clinic students spend at least four full days a week -- Mondays, Tuesdays, Thursdays, and Fridays -- at the D.A.'s office or in court. There generally will be two class sessions each week: a three-hour on-campus class on Wednesday mornings and a Tuesday lunch seminar at the D.A.'s office. Toward the beginning of our term, classes focus on skills training, including direct and cross-examination, admission of physical evidence, making and answering objections, and argument. Toward the end of the term our focus shifts to an examination and critique of the local mechanisms of criminal justice. Topics include the impact of race, gender, and class on the quality of justice; the institutional strengths and weaknesses of the actors in the system; prison conditions and prison reform; and the ethical issues that confront prosecutors and defense lawyers. Students typically tour the Santa Clara County crime lab, San Quentin Prison, and the Chaderjian Youth Correctional Facility in Stockton and have the option to spend an evening on a police ride-along. Students must submit regular written reflections on their experiences in and observations of the local justice system. Their assigned cases often will demand written court filings. During most weeks students will meet one-on-one with the faculty supervisor. Evidence is a prerequisite. Courses in criminal procedure (investigation) and trial advocacy are strongly encouraged. Students will be awarded three separate grades, each reflecting four units, for clinical practice, clinical methods, and clinical coursework. Elements used in grading include class attendance and participation, writing assignments, case preparation, and courtroom presentations and advocacy. Class attendance is mandatory. Grading is on the H/P system. Special Instructions: General Structure of Clinical Courses: All of the Law School's clinical courses, other than advanced clinics, are offered fulltime for twelve units. This format allows students to immerse themselves in the professional experience without having to balance clinical projects with other classes, exams, and papers. Students enrolled in a clinic may not enroll in any other class, seminar, directed research, or other credit-yielding activity within the Law School or University during their clinical quarter. Nor are they allowed to serve as teaching assistants expected to attend a class regularly. **LAW 908. Advanced Environmental Law Clinic. 2-7 Units.**

(Formerly Law 623) The Advanced Environmental Law Clinic provides students who have already taken the Environmental Law Clinic the opportunity to continue intense individual project work. Advanced students often work on matters they worked on as full-time students, but they also have the chance to work on new matters and develop new skills. Advanced students work closely with supervising faculty on their designated projects and are expected to take increasing responsibility for managing their work and representing clients. In addition, advanced students often serve as mentors to less experienced full-time students and thereby receive training in basic team building and supervision. Advanced students may arrange to receive between two and seven units. No student may receive more than 27 total clinical units during the course of the student's law school career. Elements used in grading: TBA.

**LAW 908A. Environmental Law Clinic: Clinical Practice. 4 Units.**

(Formerly Law 622A) Students enrolled in the Clinic provide legal assistance to national, regional and grassroots non-profit organizations on a variety of environmental issues, with a focus on complex natural resource conservation and biodiversity matters at the interface of law, science and policy. Working under the direct supervision of practicing environmental attorneys, Clinic students help screen new matters and potential clients; formulate strategies; research and develop factual and legal issues; and prosecute administrative and litigation proceedings. During the term, students may meet with clients, opposing counsel or agency decision-makers; review and prepare administrative records; develop expert testimony; draft comment letters, petitions, pleading or briefs; and/or attend and present arguments in administrative and court hearings. In regular one-on-one meetings with supervising faculty, there is a heavy emphasis on learning how to write persuasively and present oral arguments. Indeed, in any given quarter, our students typically prepare a mix of state and federal, and trial and appellate, court pleadings, and because all of our hearings during the academic year are conducted by students, many students also have the opportunity to present oral argument in front of one or more judges. In addition, students participate in a regular seminar where we examine strategic, ethical and substantive issues arising out of the Clinic's work. The Clinic is a particularly good place to learn how to conduct effective legal research, marshal facts in support of legal arguments, and, above all, write well. We practice at all levels of state and federal court and before many local, state and federal administrative agencies. Our work involves extensive motions practice and brief writing, and often involves administrative petitions and policy papers. Our work is inherently cross-disciplinary. No prior environmental experience or background is necessary, but an interest in learning about environmental and natural resources law is important. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their

**LAW 910. Advanced Immigrants' Rights Clinic. 2-7 Units.**

(Formerly Law 274) The Immigrants' Rights Advanced Clinic offers the opportunity for students who have already successfully completed the Immigrants' Rights Clinic to pursue: a specific immigrants' rights advocacy project; advanced individual client representation; and/or working with the clinic director to provide direction/guidance to those enrolled in the Clinic for the first time. All advanced Clinic projects will be jointly designed by the director and the advanced student. Advanced students providing guidance/direction to first-time students will receive additional training on providing supervision. Special instructions: Advanced students are expected to attend the case-rounds portion of the weekly seminar, and to participate as needed in the lecture/discussion portion of the seminar. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Elements used in grading: Attendance and participation in class, project work, writing assignments, and case preparation.

**LAW 910A. Immigrants' Rights Clinic: Clinical Practice. 4 Units.**

(Formerly Law 225A) The Immigrants' Rights Clinic offers students the opportunity to represent immigrants before the San Francisco Immigration Court, the Board of Immigration Appeals, and the Ninth Circuit Court of Appeals. Students in the clinic conduct mini-trials in immigration court, write motions and appellate briefs, interview clients and witnesses, investigate facts, develop case strategy, and argue cases. The Clinic represents immigrants with past criminal convictions, asylum seekers, and survivors of domestic violence. All clinic students also work on a variety of impact litigation and advocacy projects to address federal government immigration enforcement practices at the national and local levels, including impact litigation to challenge prolonged immigration detention, local and state advocacy to limit enforcement activity by police, the creation of model pleadings and know your rights materials for immigrant detainees, and advocacy with the federal agencies that regulate immigration. No prior substantive experience or background in immigration or immigrants' rights work is necessary. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. **LAW 912. Advanced International Human Rights and Conflict Resolution Clinic. 2-7 Units.**

(Formerly Law 663) The International Human Rights and Conflict Resolution Advanced Clinic offers the opportunity for students who have already successfully completed an International Human Rights Clinic to pursue one or more specific projects in conjunction with the Clinic, either independently or in collaboration with colleague(s) enrolled in the regular clinic. Any travel will be strictly contingent on the Advanced Clinical student's availability and the needs of the project. Advanced Clinical students are expected to participate in as much of the regular clinical seminar and seminar simulations as possible given pre-existing scheduling constraints. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Elements used in grading: Project work, writing assignments, case preparation, attendance and class participation.

**LAW 912A. International Human Rights and Conflict Resolution Clinic: Clinical Practice. 4 Units.**

(Formerly Law 658A) In the past half-century, human rights advocates have transformed a marginal utopian ideal into a central element of global discourse, if not practice. This course examines the actors and organizations behind this remarkable development, as well as the vast challenges faced by advocates in the recent past and today. Increasingly, human rights as a framework has become essential to a broad range of situations of tension and conflict. This course interrogates the nature of engagement by human rights practitioners, as well as approaches adopted by those focused on the management of violent conflict. What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in rights promotion and defense? How is conflict resolution consistent with human rights advocacy? When and where are these approaches in tension? The course also develops advocacy skills through in-class sessions, role play exercises and engagement in, and critical assessment of clinical projects in human rights. Class sessions introduce students to human rights advocacy and conflict management techniques through discussion of the readings and related issues, as well as through student presentations critiquing their participation in supervised clinical projects. The readings and seminar sessions expose students to some of the practical manifestations of the main debates and dilemmas within the human rights and conflict resolution movement(s). These include several of the ethical and strategic issues that arise in the course of doing fact-finding and advocacy and balancing the often differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the (frequently non-western) developing world. The readings also consider tensions within the field of conflict resolution, as well as between conflict resolution and human rights. Several class sessions will focus on fact-finding and advocacy skills. One or more of these sessions will be full-day, role play exercises. In these full-day sessions, students will engage in human rights research, documentation, negotiation and dispute management exercises, and advocacy role-playing. In some sessions, part of the class will be devoted to presentations by students and clinical 'rounds'. These presentations will consider one or more issues that arise in the course of students' own engagement in advocacy projects through the International Human Rights and Conflict Resolution Clinic. During the course of the quarter, students will also be required to draft several brief fact-finding/advocacy pieces (these will be explained in class), and write short, critical reflection papers (2-4 pages, double-spaced, or 500-1,000 words, thought pieces) on the readings. Special Instructions: - - General Structure of Clinical Courses. The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. **LAW 914. Advanced Juelsgaard Intellectual Property and Innovation Clinic. 2-7 Units.**

(Formerly Law 287) Advanced clinic allows students who have taken the Advanced Juelsgaard Intellectual Property and Innovation Clinic to continue working on cases. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical units during their law school career. Elements used in grading: TBA.

**LAW 914A. Juelsgaard Intellectual Property and Innovation Clinic: Clinical Practice. 4 Units.**

(Formerly Law 266A) The Juelsgaard Intellectual Property and Innovation Clinic provides students the opportunity to understand and advocate for sound innovation policies. Students in the clinic will help shape the course and outcome of significant legal and policy debates before courts, legislators, regulatory bodies, and other policy makers. Our work focuses on the relationship between law, regulation and innovation in areas ranging from biotechnology to information technology, pharmaceuticals, clean technology, and the creation and distribution of information. Students will represent a variety of NGOs and non-profit entities and, in certain cases, groups or associations of innovators, entrepreneurs, technology users or consumers, economists, technologists, legal academics, and the like, and occasionally individual inventors, start-ups, journalists, or researchers. Students will address their client's complex issues through tools that may include amicus briefs; comments or testimony in rulemaking and regulatory proceedings (i.e., DMCA exemption requests, comments to OSTP on issues such as open access, privacy or open data, comments to the FTC as part of IP and innovation hearings and reports, comments to the PTO or FDA, etc.); comments or testimony on proposed legislation; and whitepapers or other "best practices" documents to encourage sensible and balanced legal approaches to innovation and creativity. Our policy advocacy will often involve intertwined factual, technological, business, economic, political and public relations considerations along with the substantive legal issues. Students in the clinic may be called upon to collaborate with technologists, researchers, doctors, economists, social scientists, industry experts, and others to develop and articulate the appropriate policy advocacy for their clients. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will critically examine the role of lawyers advocating for the public interest and for sound and sensible innovation policy outcomes and bring those lessons to bear on their own clinic work. A background in technology may be useful in some cases but is not necessary to a successful experience in the clinic. -- Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will critically examine the role of lawyers advocating for the public interest and for sound and sensible innovation policy outcomes and bring those lessons to bear on their own clinic work. A background in technology may be useful in some cases but is not necessary to a successful experience in the clinic. -- Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and

**LAW 914C. Juelsgaard Intellectual Property and Innovation Clinic: Clinical Coursework. 4 Units.**

(Formerly Law 266C) The Juelsgaard Intellectual Property and Innovation Clinic provides students the opportunity to understand and advocate for sound innovation policies. Students in the clinic will help shape the course and outcome of significant legal and policy debates before courts, legislators, regulatory bodies, and other policy makers. Our work focuses on the relationship between law, regulation and innovation in areas ranging from biotechnology to information technology, pharmaceuticals, clean technology, and the creation and distribution of information. Students will represent a variety of NGOs and non-profit entities and, in certain cases, groups or associations of innovators, entrepreneurs, technology users or consumers, economists, technologists, legal academics, and the like, and occasionally individual inventors, start-ups, journalists, or researchers. Students will address their client's complex issues through tools that may include amicus briefs; comments or testimony in rulemaking and regulatory proceedings (i.e., DMCA exemption requests, comments to OSTP on issues such as open access, privacy or open data, comments to the FTC as part of IP and innovation hearings and reports, comments to the PTO or FDA, etc.); comments or testimony on proposed legislation; and whitepapers or other "best practices" documents to encourage sensible and balanced legal approaches to innovation and creativity. Our policy advocacy will often involve intertwined factual, technological, business, economic, political and public relations considerations along with the substantive legal issues. Students in the clinic may be called upon to collaborate with technologists, researchers, doctors, economists, social scientists, industry experts, and others to develop and articulate the appropriate policy advocacy for their clients. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will critically examine the role of lawyers advocating for the public interest and for sound and sensible innovation policy outcomes and bring those lessons to bear on their own clinic work. **LAW 916. Advanced Organizations and Transactions Clinic. 2-7 Units.** (Formerly Law 279) Advanced clinic allows students who have taken the Organizations & Transactions Clinic to work on ongoing projects. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Students must have taken Organizations & Transactions Clinic (Law 272). Elements used in grading: Written assignments and client interactions.

**LAW 916A. Organizations and Transactions Clinic: Clinical Practice. 4 Units.**

(Formerly Law 272A) The O&T Clinic is targeted at both students planning to do M&A, finance, securities, IP licensing or other corporate or transactional work at major firms and those seeking to explore a non-litigation, advisory-oriented practice. In the clinic, students develop legal advice, learn to review and write contracts and governance materials, meet with client executives, examine commercial relationships, and receive extensive feedback about their work. No prior experience in business, finance, or corporate law is necessary. Students work on structural, programmatic, contractual, affiliation, and governance matters for corporate entities. Students typically represent multiple clients during the term, interact with client CEOs, CFOs, board members, and general counsels, and work in teams with other students and the instructors. Students receive detailed comments about the design, content, and execution of work-products and client communications, and about their performance in client meetings and calls. Students regularly assess their own work throughout the quarter and prepare a self-evaluation at the end of the term. O&T clients are all established Northern California nonprofit corporations. Most of the clients generate annual revenues in the range of \$1 - \$75 million; some are smaller and some are considerably larger. We focus on these organizations because they are corporations that typically have substantial governance and external disclosure obligations, active boards of directors, audited financial statements, complex programs, varied collaborations, and diverse funding sources and contractual relationships – all of which are relevant to and productive of corporate work – yet are small enough that the clinic's contact is a senior executive. We think they provide excellent material for students learning about organizational representation and institutional corporate practice. The course includes a seminar that generally meets twice a week. Seminar meetings focus on student-led workshops regarding client projects, and on orientation to corporate practice, including discussion of core commercial relationships such as acquisition, credit, and licensing, and practice skills such as transaction planning and management. Evaluation and grading are based on detailed points of emphasis that reflect ways of working we believe characterize an effective lawyer and responsible colleague. Course design and operation reflect the instructors' combined 40+ years of corporate practice representing consumer products, finance, technology, and life science companies, in both law firm and senior in-house roles. Information about prior projects is available from the instructors and on the SLS website. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. **LAW 918. Advanced Religious Liberty Clinic. 2-7 Units.**

(Formerly Law 688) Advanced clinic allows students who have taken the Religious Liberty Clinic to continue working on cases. Participation in rounds is required. Advanced clinic may be taken for 2-7 units; general rule of thumb is 4 hours of work per week per unit. Students may not enroll in any clinic (basic or advanced) which would result in earning more than 27 clinical units during their law school enrollment. Elements used in grading: Class participation, written assignments, and case work. Students must have taken Religious Liberty Clinic.

**LAW 918A. Religious Liberty Clinic: Practice. 4 Units.**

(Formerly Law 632A) The Religious Liberty Clinic is the only clinic of its kind in the country. The landmark program offers participating students a full-time, first-chair experience representing a diverse group of clients in legal disputes arising from a wide range of beliefs, practices, and circumstances. Students learn in class and engage through reflective and supervised practice the laws, norms, and limits affecting the exercise of religious freedom in a pluralistic society. Students are expected to counsel individual or institutional clients and litigate on their behalf with excellence, professionalism, and maturity. In clinic, students typically handle an accommodation project - e.g., represent a prisoner, student, or employee facing obstacles in the exercise of faith - as well as a longer-term litigation or development matter - e.g., represent a small church, synagogue, or mosque with zoning issues, or an individual challenging state preferences for particular beliefs. Opportunities to draft amicus briefs also arise. The clinic involves agency, trial, and appellate practice - though time constraints may not permit each student to work in all areas - under the empowering supervision of faculty and staff. Students work in assigned case teams but are also encouraged to help develop new clients and matters. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Clinical case/project work, clinical performance, seminar preparation and participation.

**LAW 918B. Religious Liberty Clinic: Clinical Methods. 4 Units.**

(Formerly Law 632B) The Religious Liberty Clinic is the only clinic of its kind in the country. **LAW 920. Advanced Supreme Court Litigation Clinic. 2-7 Units.**

(Formerly Law 423) The Advanced Supreme Court Litigation Clinic provides an opportunity for students who have already successfully completed the Supreme Court Litigation Clinic to continue their work in the Clinic. Work includes research and drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting on drafts of briefs being filed by lawyers in other cases. Advanced students will also continue to participate in the Clinic's discussion of cases during case rounds. For a more elaborate description of the clinic's content, see the course description for Course Number 436-0-01. Special instructions: Admission is by consent of instructor. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Students have the option to receive R credit upon instructor approval. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Projects and participation.

**LAW 920A. Supreme Court Litigation Clinic: Clinical Practice. 4 Units.**

(Formerly Law 436A) The Supreme Court Litigation Clinic will expose students to the joys and frustrations of litigation before the Supreme Court of the United States. The bulk of the clinic will be run as a small law firm working on live cases before the Court. Students will participate in drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting (the technical term is "kibbitzing") on drafts of briefs being filed by lawyers in other cases. The precise nature of the cases will depend on the Court's docket, but in recent Terms, the clinic's cases have involved federal criminal law and procedure, habeas corpus, constitutional and statutory antidiscrimination and employment law, bankruptcy law, and the First Amendment. Our aim is to involve students as fully as possible in this type of litigation. The Clinic begins with an intensive introduction to the distinctive nature of Supreme Court practice, including the key differences between merits arguments and the certiorari process, the role of amicus briefs, and the Supreme Court Rules. After that, seminar meetings will be devoted primarily to collaborative work on the cases the clinic is handling. While students will be primarily responsible for working in teams on one case at a time, they will also be expected to acquire familiarity with the issues raised in other students' cases and will both edit each others' substantive work and assist each other and the instructors with the technical production work attendant on filing briefs with the Supreme Court. The course will involve substantial amounts of legal research. The Supreme Court operates on a tight, and unyielding deadline, and students must be prepared both to complete their own work in a timely fashion and to assist one another and the instructors on other cases. The instructors will not ask students to do any kind of "grunt work" that they themselves will not also be handling, but grunt work there will be: proofreading, cite-checking, dealing with the joint appendix, and the like. The nature of the work product means that while students will average thirty hours per week on their case-related work, that work will surely be distributed unevenly across the quarter. Unlike most other courts, the Supreme Court has no student practice rules. Thus, students will not be able to argue cases before the Court. But they will participate in moot courts on their cases, as both advocates and Justices. Each student will also have the opportunity to travel to Washington to see the Court in session, preferably with respect to a case on which the student has worked. Ideally students will already have experience with persuasive doctrinal writing, through a course like Federal Pretrial Litigation or through intensive supervision during their summer jobs or other clinics. Admission to the Clinic is by consent of the instructors. Students will need to submit a writing sample that reflects their facility with doctrinal legal arguments and the name of at least one reference who can comment on their legal analytic ability. -- Special instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours

**LAW 920B. Supreme Court Litigation Clinic: Clinical Methods. 4 Units.**

(Formerly Law 436B) The Supreme Court Litigation Clinic will expose students to the joys and frustrations of litigation before the Supreme Court of the United States. The bulk of the clinic will be run as a small law firm working on live cases before the Court. Students will participate in drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting (the technical term is "kibbitzing") on drafts of briefs being filed by lawyers in other cases. The precise nature of the cases will depend on the Court's docket, but in recent Terms, the clinic's cases have involved federal criminal law and procedure, habeas corpus, constitutional and statutory antidiscrimination and employment law, bankruptcy law, and the First Amendment. Our aim is to involve students as fully as possible in this type of litigation. The Clinic begins with an intensive introduction to the distinctive nature of Supreme Court practice, including the key differences between merits arguments and the certiorari process, the role of amicus briefs, and the Supreme Court Rules. After that, seminar meetings will be devoted primarily to collaborative work on the cases the clinic is handling. While students will be primarily responsible for working in teams on one case at a time, they will also be expected to acquire familiarity with the issues raised in other students' cases and will both edit each others' substantive work and assist each other and the instructors with the technical production work attendant on filing briefs with the Supreme Court. Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours

**LAW 922. Advanced Youth and Education Advocacy Clinic. 2-7 Units.**

(Formerly Law 662) The Youth and Education Advocacy Advanced Clinic provides an opportunity for students who have already successfully completed the Education Advocacy Clinic to continue their advocacy work in the Clinic and/or to pursue a discrete project related to educational equity advocacy. Examples of projects include strategic policy research and management consulting for public education institutions on specific topics (e.g., accountability programs, community outreach and engagement, school climate); investigation and preparation for impact litigation; and community education and outreach on a specific education-related issue. All projects will be jointly designed by the instructor and the advanced student. Advanced students will also continue to participate in the Clinic's discussion of cases during case rounds. Special instructions: Admission is by consent of instructor. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Elements used in grading: Projects and class participation.

**LAW 922A. Youth and Education Law Project: Clinical Practice. 4 Units.**

(Formerly Law 660A) The Youth and Education Advocacy Clinic offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or strategic policy research and consulting. All students will have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with coalitions and/or other education-sector agencies to advance equity-minded educational policies and school reform. Students working on special education matters will have the opportunity to handle all aspects of their clients' cases. Students working in this area will interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work will offer students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters will interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. Students may also have the opportunity to participate in complex school reform litigation, including the monitoring and enforcement of a consent decree and corrective action plan in an ongoing special education lawsuit or appellate and trial work in a pathbreaking educational finance reform litigation. Finally, students who are interested in strategic policy research and management consulting on behalf of public education institutional clients (school districts, charter schools, state education agencies) will have the opportunity to participate in the multi-disciplinary collaboration with Consortium for Public Research and Leadership (CPRL). Through the CPRL, students will work with our partners at Columbia University on consulting projects for clients on topics such as accountability, community outreach, and school climate. The education clinic includes a one-week intensive training program held at the beginning of the quarter, weekly seminars that focus on legal skills and issues in law and education policy, regular case review, and a many opportunities for feedback and reflection with the instructors. Admission is by consent of instructor. Special Instructions: General Structure of Clinical Courses – The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. – Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. – Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. – The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week

**LAW 922B. Youth and Education Law Project: Clinical Methods. 4 Units.**

(Formerly Law 660B) The Youth and Education Advocacy Clinic offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or strategic policy research and consulting. All students will have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with coalitions and/or other education-sector agencies to advance equity-minded educational policies and school reform. Students working on special education matters will have the opportunity to handle all aspects of their clients' cases. ## Master of Liberal Arts (MLA)

**MLA 100E. MLA Natural Science Elective. 1-2 Unit.**

**MLA 101A. Foundations I. 4 Units.**

Required of and limited to first-year MLA students. First of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.

**MLA 101B. Foundations II: the Middle Ages and Renaissance.. 4 Units.**

Required of and limited to first-year MLA students. Second of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.

**MLA 101C. Foundations III: the Enlightenment through Modernism. 4 Units.**

Required of and limited to first-year MLA students. First of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.

**MLA 102. An Introduction to Interdisciplinary Graduate Study. 4 Units.**

Limited to and required of second-year MLA students. Historical, literary, artistic, medical, and theological issues are covered. Focus is on skills and information needed to pursue MLA graduate work at Stanford: writing a critical, argumentative graduate paper; conducting library research; expectations of seminar participation. Readings include Homer, Thucydides, Camus, Mann, Kushner, and sacred, scientific, and historical writings.

**MLA 262. The Economics of Life and Death. 4 Units.**

**MLA 269. The Meaning of Life: Moral and Spiritual Inquiry through Literature. 4 Units.**

**MLA 274. From Slavery to Obama. 4 Units.**

**MLA 275. Shakespeare in Performance. 4 Units.**

**MLA 278. James Joyce's Ulysses. 4 Units.**

**MLA 279. When Worlds Collide: The Trial of Galileo. 4 Units.**

**MLA 280. British and American Fiction in the 19th and early 20th Century. 4 Units.**

**MLA 281. The Arts as History: Britain 1900-1956. 4 Units.**

**MLA 282. Indigenous Peoples and Environmental Problems. 4 Units.**

**MLA 283. Three 20th-century Minds: Eliot, Pound, and Yeats. 4 Units.**

This course considers three revolutionary thinkers as they each came to terms with what they saw as the encroaching chaos of the early 20th century.

**MLA 284. Problems in American Foreign Policy. 4 Units.**

This seminar examines in depth the problems facing American diplomacy. These include the several crises in the Middle East and relations with the Muslim World; the recent world economic recession; nuclear proliferation; problems and prospects in the relationship(s) with America's allies; persistent difficulties with and the possible promise of relations with China and Russia.

**MLA 285. The Age of Enlightenment. 4 Units.**

**MLA 286. Evolutionary Theories of Music. 4 Units.**

**MLA 287. Ancients vs Moderns. 4 Units.**

**MLA 288. Who Was Shakespeare?. 4 Units.**

**MLA 290. Conservation and Development Dilemmas in Latin America: Microcosm of the Galapagos. 4 Units.**

**MLA 291. The Politics of International Humanitarian Action. 4 Units.**

**MLA 292. The Bloomsbury Group. 4 Units.**

**MLA 293. Darwin, Marx, and Freud. 4 Units.**

**MLA 294. Text and Context: Art, Music, Poetry. 4 Units.**

**MLA 295. The American Enlightenment. 4 Units.**

**MLA 296. Reflections on the American Condition. 4 Units.**

**MLA 297. Islands as Model Systems: Geology, Evolution, Ecology, and Human Societies. 4 Units.**

**MLA 298. Heretics, Prostitutes, and Merchants: The Venetian Empire. 4 Units.**

**MLA 299. Evolution and Conservation in Galapagos. 4 Units.**

**MLA 300. Oxford Summer Programme. 2-4 Units.**

**MLA 301. Mary Magdalene: The Feminine Principle in Scripture, Literature, and Legend. 4 Units.**

**MLA 302. Paris: Capital of the Modern World. 4 Units.**

**MLA 303. CULTURES OF COLLECTING. 4 Units.**

**MLA 304. The Colorado River: A Case Study of the History and Future of Western Water. 4 Units.**

**MLA 305. Russia Encounters the Enlightenment: The Art, Culture, and Politics. 4 Units.**

**MLA 306. The Young Romantics: Mythmaking, Monstrosity, and Representation. 4 Units.**

**MLA 307. What Do We Mean When We Speak of Evil?. 4 Units.**

**MLA 308. Martin Luther King, Jr.: The Man, the Movement, and the Legacy. 4 Units.**

**MLA 309. Fairly Tales: Culture's Underground Rivers. 4 Units.**

**MLA 310. Modern Chinese History, Part I: Master Class in History and Historiography. 4 Units.**

MLA 311. Paleography: Study of Medieval and Early Modern Manuscripts. 4 Units.

MLA 312. The Visual and Literary Culture of the American Civil War. 4 Units.

MLA 313. The Responsibility of Intellectuals. 4 Units.

MLA 314. Social and Environmental Sustainability: The Costa Rican Case. 4 Units.

MLA 315. Vital Issues in American Foreign Policy. 4 Units.

MLA 316. Latin@ Literatures. 4 Units.

MLA 317. James Joyce: The Early Years. 4 Units.

MLA 318. Early English Literature: Manuscripts and Texts. 4 Units.

MLA 319. Modern Chinese History through Literature and Film. 4 Units.

MLA 320. Racial Identity in the American Imagination. 4 Units.

MLA 321. Great Ideas in Computer Science. 4 Units.

MLA 322. Coffee, Sugar, and Chocolate: Commodities and Consumption in World History. 120--1800. 4 Units.

MLA 323. What can Literature Tell Us About Human Rights?. 4 Units.

MLA 324. What is a Map?. 4 Units.

MLA 325. From Manuscript to Printed Edition: Early Works of Great English Authors. 4 Units.

MLA 326. Nature through Photography. 4 Units.

MLA 327. Modern and Contemporary Poetry. 4 Units.

MLA 328. The Scientific Revolution. 4 Units.

MLA 329. International Women's Health. 4 Units.

MLA 330. History of the African American Experience. 4 Units.

MLA 331. Monterey. 4 Units.

MLA 332. London: 101 Years in Fiction. 4 Units.

MLA 333. Brexit and the Rise of Nationalist Politics. 4 Units.

MLA 334. The Material Book: Ancient and Modern. 4 Units.

MLA 335. A Tale of Three Rivers. 4 Units.

MLA 336. Love as a force for Social Justice. 4 Units.

MLA 337. Science and Law in History. 4 Units.

MLA 338. William Blake: A Literary and Visual Exploration of the Illuminated Poetry. 4 Units.

MLA 339. The Human Predicament in Three Masterpieces. 4 Units.

MLA 340. Dante and the Sacred Feminine. 4 Units.

MLA 398. MLA Thesis in Progress. 0 Units.

Group meetings provide peer critiques, motivations, and advice under the direction of the Associate Dean.

MLA 399. MLA Thesis Final Quarter. 6 Units.

Students write a 75-100 page thesis that evolves out of work they pursued during their MLA studies.

MLA 9. European Thought and Culture in the 19th Century. 4 Units.

Major European thinkers and writers and their intellectual significance from the Enlightenment to modernism. Works by Voltaire, Austen, Wordsworth, Marx, Nietzsche, and Freud.

## Materials Science & Engineer (MATSCI)

**MATSCI 100. Undergraduate Independent Study. 1-3 Unit.**

Independent study in materials science under supervision of a faculty member.

**MATSCI 142. Quantum Mechanics of Nanoscale Materials. 4 Units.**

Introduction to quantum mechanics and its application to the properties of materials. No prior background beyond a working knowledge of calculus and high school physics is presumed. Topics include: The Schrodinger equation and applications to understanding of the properties of quantum dots, semiconductor heterostructures, nanowires, and bulk solids. Tunneling processes and applications to nanoscale devices; the scanning tunneling microscope, and quantum cascade lasers. Simple models for the electronic properties and band structure of materials including semiconductors, insulators and metals and applications to semiconductor devices. Time-dependent perturbation theory and interaction of light with materials with applications to laser technology. Recommended: ENGR 50 or equivalent introductory materials science course. (Formerly 157).

**MATSCI 143. Materials Structure and Characterization. 4 Units.**

Students will study the theory and application of characterization techniques used to examine the structure of materials at the nanoscale. Students will learn to classify the structure of materials such as semiconductors, ceramics, metals, and nanotubes according to the principles of crystallography. Methods used widely in academic and industrial research, including X-ray diffraction and electron microscopy, will be demonstrated along with their application to the analysis of nanostructures. Prerequisites: E-50 or equivalent introductory materials science course. (Formerly 153).

**MATSCI 144. Thermodynamic Evaluation of Green Energy Technologies. 4 Units.**

Understand the thermodynamics and efficiency limits of modern green technologies such as carbon dioxide capture from air, fuel cells, batteries, and solar-thermal power. Recommended: ENGR 50 or equivalent introductory materials science course. (Formerly 154).

**MATSCI 145. Kinetics of Materials Synthesis. 4 Units.**

The science of synthesis of nanometer scale materials. Examples including solution phase synthesis of nanoparticles, the vapor-liquid-solid approach to growing nanowires, formation of mesoporous materials from block-copolymer solutions, and formation of photonic crystals. Relationship of the synthesis phenomena to the materials science driving forces and kinetic mechanisms. Materials science concepts including capillarity, Gibbs free energy, phase diagrams, and driving forces. Prerequisites: MatSci 144. (Formerly 155).

**MATSCI 150. Undergraduate Research. 3-6 Units.**

Participation in a research project.

**MATSCI 151. Microstructure and Mechanical Properties. 3-4 Units.**

Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Undergraduates register in 151 for 4 units; graduates register for 251 in 3 units. Same as: MATSCI 251

**MATSCI 152. Electronic Materials Engineering. 4 Units.**

Materials science and engineering for electronic device applications. Kinetic molecular theory and thermally activated processes; band structure; electrical conductivity of metals and semiconductors; intrinsic and extrinsic semiconductors; elementary p-n junction theory; operating principles of light emitting diodes, solar cells, thermoelectric coolers, and transistors. Semiconductor processing including crystal growth, ion implantation, thin film deposition, etching, lithography, and nanomaterials synthesis.

**MATSCI 156. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.**

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Prerequisites: MATSCI 145 and 152 or equivalent coursework in thermodynamics and electronic properties. Same as: EE 293A, ENERGY 293A, MATSCI 256

**MATSCI 158. Soft Matter in Biomedical Devices, Microelectronics, and Everyday Life. 4 Units.**

The relationships between molecular structure, morphology, and the unique physical, chemical, and mechanical behavior of polymers and other types of soft matter are discussed. Topics include methods for preparing synthetic polymers and examination of how enthalpy and entropy determine conformation, solubility, mechanical behavior, microphase separation, crystallinity, glass transitions, elasticity, and linear viscoelasticity. Case studies covering polymers in biomedical devices and microelectronics will be covered. Recommended: ENGR 50 and Chem 31A or equivalent. Same as: BIOE 158, CHEMENG 160

**MATSCI 159Q. Japanese Companies and Japanese Society. 3 Units.**

Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. Same as: ENGR 159Q

**MATSCI 160. Nanomaterials Laboratory. 4 Units.**

Preference to sophomores and juniors. Hands-on approach to synthesis and characterization of nanoscale materials. How to make, pattern, and analyze the latest nanotech materials, including nanoparticles, nanowires, and self-assembled monolayers. Techniques such as soft lithography, self-assembly, and surface functionalization. The VLS mechanism of nanowire growth, nanoparticle size control, self-assembly mechanisms, and surface energy considerations. Laboratory projects. Enrollment limited to 24.

**MATSCI 161. Energy Materials Laboratory. 3-4 Units.**

A material that is currently being used in a cutting edge energy-related device such as a solar cell, battery or smart window will be thoroughly characterized throughout the quarter. Fabrication techniques could include electroplating, spin coating and thermal evaporation. There will be an emphasis in this course on characterization methods such as scanning electron microscopy, x-ray photoelectron spectroscopy, atomic force microscopy, optical microscopy, four-point probe measurements of conductivity, visible absorption and reflection spectroscopy and electrochemical measurements (cyclic voltammetry). Devices will be fabricated and their performance will be tested. In this Writing in the Major course, students will put together all of the data they collect during the quarter into a final paper. Undergraduates register for 161 for 4 units; graduates register for 171 for 3 units. Prerequisites: MATSCI 143 or equivalent course in materials characterization. Same as: MATSCI 171

**MATSCI 162. X-Ray Diffraction Laboratory. 3-4 Units.**

Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. Undergraduates register for 162 for 4 units; graduates register for 172 for 3 units. Prerequisites: MATSCI 143 or equivalent course in materials characterization. Same as: MATSCI 172, PHOTON 172

**MATSCI 163. Mechanical Behavior Laboratory. 3-4 Units.**

Technologically relevant experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. In addition to regularly scheduled lecture (M/W), this course includes a three-hour lab session every other week (T/W/Th). Register for lecture section in addition to one lab section. Undergraduates register for 163 in 4 units; graduates register in 173 for 3 units. Same as: MATSCI 173

**MATSCI 164. Electronic and Photonic Materials and Devices Laboratory. 3-4 Units.**

Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: MATSCI 152 or 199 or consent of instructor. Undergraduates register in 164 for 4 units; graduates register in 174 for 3 units. Same as: MATSCI 174

**MATSCI 165. Nanoscale Materials Physics Computation Laboratory. 3-4 Units.**

Computational exploration of fundamental topics in materials science using Java-based computation and visualization tools. Emphasis is on the atomic-scale origins of macroscopic materials phenomena. Simulation methods include molecular dynamics and Monte Carlo with applications in thermodynamics, kinetics, and topics in statistical mechanics. Undergraduates register for 165 for 4 units; graduates register for 175 for 3 units. Prerequisites: Undergraduate physics and MATSCI 144 or equivalent coursework in thermodynamics. MATSCI 145 recommended.

Same as: MATSCI 175

**MATSCI 171. Energy Materials Laboratory. 3-4 Units.**

A material that is currently being used in a cutting edge energy-related device such as a solar cell, battery or smart window will be thoroughly characterized throughout the quarter. Fabrication techniques could include electroplating, spin coating and thermal evaporation. There will be an emphasis in this course on characterization methods such as scanning electron microscopy, x-ray photoelectron spectroscopy, atomic force microscopy, optical microscopy, four-point probe measurements of conductivity, visible absorption and reflection spectroscopy and electrochemical measurements (cyclic voltammetry). Devices will be fabricated and their performance will be tested. In this Writing in the Major course, students will put together all of the data they collect during the quarter into a final paper. Undergraduates register for 161 for 4 units; graduates register for 171 for 3 units. Prerequisites: MATSCI 143 or equivalent course in materials characterization.

Same as: MATSCI 161

**MATSCI 172. X-Ray Diffraction Laboratory. 3-4 Units.**

Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. Undergraduates register for 162 for 4 units; graduates register for 172 for 3 units. Prerequisites: MATSCI 143 or equivalent course in materials characterization.

Same as: MATSCI 162, PHOTON 172

**MATSCI 173. Mechanical Behavior Laboratory. 3-4 Units.**

Technologically relevant experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. In addition to regularly scheduled lecture (M/W), this course includes a three-hour lab session every other week (T/W/Th). Register for lecture section in addition to one lab section. Undergraduates register for 163 in 4 units; graduates register in 173 for 3 units.

Same as: MATSCI 163

**MATSCI 174. Electronic and Photonic Materials and Devices Laboratory. 3-4 Units.**

Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: MATSCI 152 or 199 or consent of instructor. Undergraduates register in 164 for 4 units; graduates register in 174 for 3 units.

Same as: MATSCI 164

**MATSCI 175. Nanoscale Materials Physics Computation Laboratory. 3-4 Units.**

Computational exploration of fundamental topics in materials science using Java-based computation and visualization tools. Emphasis is on the atomic-scale origins of macroscopic materials phenomena. Simulation methods include molecular dynamics and Monte Carlo with applications in thermodynamics, kinetics, and topics in statistical mechanics. Undergraduates register for 165 for 4 units; graduates register for 175 for 3 units. Prerequisites: Undergraduate physics and MATSCI 144 or equivalent coursework in thermodynamics. MATSCI 145 recommended.

Same as: MATSCI 165

**MATSCI 190. Organic and Biological Materials. 3-4 Units.**

Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. Undergraduates register for 190 for 4 units; graduates register for 210 for 3 units.

Same as: MATSCI 210

**MATSCI 192. Materials Chemistry. 3-4 Units.**

An introduction to the fundamental physical chemical principles underlying materials properties. Beginning from basic quantum chemistry, students will learn how the electronic configuration of molecules and solids impacts their structure, stability/reactivity, and spectra. Topics for the course include molecular symmetry, molecular orbital theory, solid-state chemistry, coordination compounds, and nanomaterials chemistry. Using both classroom lectures and journal discussions, students will gain an understanding of and be well-positioned to contribute to the frontiers of materials chemistry, ranging from solar-fuel generation to next-generation cancer treatments. Undergraduates register in 192 for 4 units; graduates register in 202 for 3 units.

Same as: MATSCI 202

**MATSCI 193. Atomic Arrangements in Solids. 3-4 Units.**

Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. Undergraduates register in 193 for 4 units; graduates register in 203 for 3 units.

Same as: MATSCI 203

**MATSCI 194. Thermodynamics and Phase Equilibria. 3-4 Units.**

The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. Undergraduates register for 194 for 4 units; graduates register for 204 for 3 units.

Same as: MATSCI 204

**MATSCI 195. Waves and Diffraction in Solids. 3-4 Units.**

The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: MATSCI 193/203 or consent of instructor. Undergraduates register for 195 for 4 units; graduates register for 205 for 3 units.

Same as: MATSCI 205, PHOTON 205

**MATSCI 196. Defects in Crystalline Solids. 3-4 Units.**

Thermodynamic and kinetic behaviors of 0-D (point), 1-D (line), and 2-D (interface and surface) defects in crystalline solids. Influences of these defects on the macroscopic ionic, electronic, and catalytic properties of materials, such as batteries, fuel cells, catalysts, and memory-storage devices. Prerequisite: MATSCI 193/203. Undergraduates register for 196 for 4 units; graduates register for 206 for 3 units.

Same as: MATSCI 206

**MATSCI 197. Rate Processes in Materials. 3-4 Units.**

Diffusion and phase transformations in solids. Diffusion topics: Fick's laws, atomic theory of diffusion, and diffusion in alloys. Phase transformation topics: nucleation, growth, diffusional transformations, spinodal decomposition, and interface phenomena. Material builds on the mathematical, thermodynamic, and statistical mechanical foundations in the prerequisites. Prerequisites: MATSCI 194/204. Undergraduates register for 197 for 4 units; graduates register for 207 for 3 units.

Same as: MATSCI 207

**MATSCI 198. Mechanical Properties of Materials. 3-4 Units.**

Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: MATSCI 193/203.

Undergraduates register for 198 for 4 units; graduates register for 208 for 3 units.

Same as: MATSCI 208

**MATSCI 199. Electronic and Optical Properties of Solids. 3-4 Units.**

The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: MATSCI 195/205 or equivalent.

Undergraduates register for 199 for 4 units; graduates register for 209 for 3 units.

Same as: MATSCI 209

**MATSCI 200. Master's Research. 1-15 Unit.**

Participation in a research project.

**MATSCI 201. Applied Quantum Mechanics I. 3 Units.**

Emphasis is on applications in modern devices and systems. Topics include: Schrödinger's equation, eigenfunctions and eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, operator approach to quantum mechanics, Dirac notation, angular momentum, hydrogen atom, calculation techniques including matrix diagonalization, perturbation theory, variational method, and time-dependent perturbation theory with applications to optical absorption, nonlinear optical coefficients, and Fermi's golden rule. Prerequisites: MATH 52 and 53, EE 65 or PHYSICS 65 (or PHYSICS 43 and 45).

Same as: EE 222

**MATSCI 202. Materials Chemistry. 3-4 Units.**

An introduction to the fundamental physical chemical principles underlying materials properties. Beginning from basic quantum chemistry, students will learn how the electronic configuration of molecules and solids impacts their structure, stability/reactivity, and spectra. Topics for the course include molecular symmetry, molecular orbital theory, solid-state chemistry, coordination compounds, and nanomaterials chemistry. Using both classroom lectures and journal discussions, students will gain an understanding of and be well-positioned to contribute to the frontiers of materials chemistry, ranging from solar-fuel generation to next-generation cancer treatments.

Undergraduates register in 192 for 4 units; graduates register in 202 for 3 units.

Same as: MATSCI 192

**MATSCI 203. Atomic Arrangements in Solids. 3-4 Units.**

Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. Undergraduates register in 193 for 4 units; graduates register in 203 for 3 units.

Same as: MATSCI 193

**MATSCI 204. Thermodynamics and Phase Equilibria. 3-4 Units.**

The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. Undergraduates register for 194 for 4 units; graduates register for 204 for 3 units.

Same as: MATSCI 194

**MATSCI 205. Waves and Diffraction in Solids. 3-4 Units.**

The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: MATSCI 193/203 or consent of instructor. Undergraduates register for 195 for 4 units; graduates register for 205 for 3 units.

Same as: MATSCI 195, PHOTON 205

**MATSCI 206. Defects in Crystalline Solids. 3-4 Units.**

Thermodynamic and kinetic behaviors of 0-D (point), 1-D (line), and 2-D (interface and surface) defects in crystalline solids. Influences of these defects on the macroscopic ionic, electronic, and catalytic properties of materials, such as batteries, fuel cells, catalysts, and memory-storage devices. Prerequisite: MATSCI 193/203. Undergraduates register for 196 for 4 units; graduates register for 206 for 3 units.

Same as: MATSCI 196

**MATSCI 207. Rate Processes in Materials. 3-4 Units.**

Diffusion and phase transformations in solids. Diffusion topics: Fick's laws, atomic theory of diffusion, and diffusion in alloys. Phase transformation topics: nucleation, growth, diffusional transformations, spinodal decomposition, and interface phenomena. Material builds on the mathematical, thermodynamic, and statistical mechanical foundations in the prerequisites. Prerequisites: MATSCI 194/204. Undergraduates register for 197 for 4 units; graduates register for 207 for 3 units.

Same as: MATSCI 197

**MATSCI 208. Mechanical Properties of Materials. 3-4 Units.**

Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: MATSCI 193/203. Undergraduates register for 198 for 4 units; graduates register for 208 for 3 units.

Same as: MATSCI 198

**MATSCI 209. Electronic and Optical Properties of Solids. 3-4 Units.**

The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: MATSCI 195/205 or equivalent. Undergraduates register for 199 for 4 units; graduates register for 209 for 3 units.

Same as: MATSCI 199

**MATSCI 210. Organic and Biological Materials. 3-4 Units.**

Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. Undergraduates register for 190 for 4 units; graduates register for 210 for 3 units.

Same as: MATSCI 190

**MATSCI 230. Materials Science Colloquium. 1 Unit.**

May be repeated for credit.

**MATSCI 241. Mechanical Behavior of Nanomaterials. 3 Units.**

Mechanical behavior of the following nanoscale solids: 2D materials (metal thin films, graphene), 1D materials (nanowires, carbon nanotubes), and 0D materials (metallic nanoparticles, quantum dots). This course will cover elasticity, plasticity and fracture in nanomaterials, defect-scarce nanomaterials, deformation near free surfaces, coupled optoelectronic and mechanical properties (e.g. piezoelectric nanowires, quantum dots), and nanomechanical measurement techniques. Prerequisites: Mechanics of Materials (ME80) or equivalent.

Same as: ME 241

**MATSCI 251. Microstructure and Mechanical Properties. 3-4 Units.**

Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Undergraduates register in 151 for 4 units; graduates register for 251 in 3 units.

Same as: MATSCI 151

**MATSCI 256. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.**

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Prerequisites: MATSCI 145 and 152 or equivalent coursework in thermodynamics and electronic properties.

Same as: EE 293A, ENERGY 293A, MATSCI 156

**MATSCI 299. Practical Training. 1 Unit.**

Educational opportunities in high-technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following the internship, students complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Student is responsible for arranging own employment. See department student services manager before enrolling.

**MATSCI 300. Ph.D. Research. 1-15 Unit.**

Participation in a research project.

**MATSCI 301. Engineering Energy Policy Change. 3 Units.**

Government policy profoundly affects all aspects of the energy ecosystem, including its supply, distribution, storage and utilization. Policy decisions also influence the pace and focus of innovation of new technologies, including through government-funded research and development programs. This course will equip graduate students, who have strong science and engineering backgrounds, with a basic ability to understand and shape the ideation and implementation of sound energy policy. Building on case studies of both aspirational and reactive US energy policy-making, students will design their own policy proposals for new, ambitious and achievable goals that advance a sustainable and prosperous future.

**MATSCI 302. Solar Cells. 3 Units.**

This course takes a comprehensive view of solar cells and what will need to be done to enable them to substantially change how the world obtains its electricity. After covering the fundamentals (light trapping, current flow in pn junctions, recombination) that are important for almost all photovoltaic technologies, the course will address technologies based on highly crystalline forms of silicon and gallium arsenide. The device simulator PC1D will be used to model solar cells. The course will then go through multijunctions cells with concentrators, low-cost thin-film solar cells, organic semiconductors, hybrid perovskites and nanowires. There will be discussions of module design and the economics of the solar industry. There will be a tour of a company that makes solar cells and guest lectures.

**MATSCI 303. Principles, Materials and Devices of Batteries. 3 Units.**

Thermodynamics and electrochemistry for batteries. Emphasis on lithium ion batteries, but also different types including lead acid, nickel metal hydride, metal air, sodium sulfur and redox flow. Battery electrode materials, electrolytes, separators, additives and electrode-electrolyte interface. Electrochemical techniques; advanced battery materials with nanotechnology; battery device structure. Prerequisites: undergraduate chemistry.

**MATSCI 311. Lasers in Materials Processing. 3 Units.**

Principles of laser operation. Optically and electrically pumped lasers. Materials for solid-state lasers. Fundamentals of laser/materials interactions. Applications in thin film technology and microfabrication; laser annealing of defects and crystallization of amorphous films. Laser-induced shock waves. Extreme non-equilibrium laser processing; ultra-fast (femtosecond) lasers and their novel uses; micro- and nanofabrication of fluidic and photonic devices; intracellular nano-surgery.

**MATSCI 312. New Methods in Thin Film Synthesis. 3 Units.**

Materials base for engineering new classes of coatings and devices. Techniques to grow thin films at atomic scale and to fabricate multilayers/superlattices at nanoscale. Vacuum growth techniques including evaporation, molecular beam epitaxy (MBE), sputtering, ion beam assisted deposition, laser ablation, chemical vapor deposition (CVD), and electroplating. Future direction of material synthesis such as nanocluster deposition and nanoparticles self-assembly. Relationships between deposition parameters and film properties. Applications of thin film synthesis in microelectronics, nanotechnology, and biology. SCPD offering.

**MATSCI 316. Nanoscale Science, Engineering, and Technology. 3 Units.**

This course covers important aspects of nanotechnology in nanomaterials synthesis and fabrication, novel property at the nanoscale, tools and applications: a variety of nanostructures including nanocrystal, nanowire, carbon nanotube, graphene, nanoporous material, block copolymer, and self-assembled monolayer; nanofabrication techniques developed over the past 20 years; thermodynamic, electronic and optical property; applications in solar cells, batteries, biosensors and electronics. Other nanotechnology topics may be explored through a group project. SCPD offering.

**MATSCI 320. Nanocharacterization of Materials. 3 Units.**

Current methods of directly examining the microstructure of materials. Topics: optical microscopy, scanning electron and focused ion beam microscopy, field ion microscopy, transmission electron microscopy, scanning probe microscopy, and microanalytical surface science methods. Emphasis is on the electron-optical techniques. Recommended: 193/203.

**MATSCI 321. Transmission Electron Microscopy. 3 Units.**

Image formation and interpretation. The contrast phenomena associated with perfect and imperfect crystals from a physical point of view and from a formal treatment of electron diffraction theory. The importance of electron diffraction to systematic analysis and recent imaging developments. Recommended: 193/203, 195/205, or equivalent.

**MATSCI 322. Transmission Electron Microscopy Laboratory. 3 Units.**

Practical techniques in transmission electron microscopy (TEM): topics include microscope operation and alignment, diffraction modes and analysis, bright-field/dark-field imaging, high resolution and aberration corrected imaging, scanning TEM (STEM) imaging, x-ray energy dispersive spectrometry (EDS) and electron energy loss spectrometry (EELS) for compositional analysis and mapping. Prerequisite: 321, consent of instructor. Enrollment limited to 12.

**MATSCI 323. Thin Film and Interface Microanalysis. 3 Units.**

The science and technology of microanalytical techniques, including Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), secondary ion mass spectroscopy (SIMS), ion scattering spectroscopy (ISS), and x-ray photoelectron spectroscopy (XPS or ESCA). Generic processes such as sputtering and high-vacuum generation. Prerequisite: some prior exposure to atomic and electronic structure of solids. SCPD offering.

**MATSCI 326. X-Ray Science and Techniques. 3 Units.**

This course provides an introduction to how x-rays interact with matter and how x-ray techniques can be used for developing new understanding of the properties of materials. Course topics include diffraction from ordered and disordered materials, x-ray absorption/emission spectroscopy, photoemission, and coherent scattering. Sources including synchrotrons and x-ray lasers and an introduction to time-resolved techniques. This course includes a parallel laboratory effort in which students will have an opportunity to carry out experiments at the Stanford Synchrotron Radiation Lightsource at the SLAC National Accelerator Laboratory. Same as: PHOTON 326

**MATSCI 331. Atom-based computational methods for materials. 3 Units.**

Introduction to atom-based computational methods for materials with emphasis on quantum methods. Topics include density functional theory, tight-binding and empirical approaches. Computation of optical, electronic, phonon properties. Bulk materials, interfaces, nanostructures. Molecular dynamics. Prerequisites - undergraduate quantum mechanics.

**MATSCI 343. Organic Semiconductors for Electronics and Photonics. 3 Units.**

The science of organic semiconductors and their use in electronic and photonic devices. Topics: methods for fabricating thin films and devices; relationship between chemical structure and molecular packing on properties such as band gap, charge carrier mobility and luminescence efficiency; doping; field-effect transistors; light-emitting diodes; lasers; biosensors; photodetectors and photovoltaic cells.

**MATSCI 346. Nanophotonics. 3 Units.**

Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Sub-wavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: Electromagnetic theory at the level of 242. Same as: EE 336

**MATSCI 347. Magnetic materials in nanotechnology, sensing, and energy. 3 Units.**

This course will teach the fundamentals of magnetism, magnetic materials, and magnetic nanostructures and their myriad of applications in nanotechnology, sensing, energy and related areas. The scope of the course include: atomic origins of magnetic moments, magnetic exchange and ferromagnetism, types of magnetic order, magnetic anisotropy, domains, domain walls, hysteresis loops, hard and soft magnetic materials, demagnetization factors, magnetic nanoparticles and nanostructures, spintronics, and multiferroics. The key applications include electromagnet and permanent magnet, magnetic inductors, magnetic sensors, magnetic memory, hard disk drives, energy generation and harvesting, biomagnetism, etc. Prerequisites: College level electricity and magnetism course or equivalent.

**MATSCI 353. Mechanical Properties of Thin Films. 3 Units.**

The mechanical properties of thin films on substrates. The mechanics of thin films and of the atomic processes which cause stresses to develop during thin film growth. Experimental techniques for studying stresses in and mechanical properties of thin films. Elastic, plastic, and diffusional deformation of thin films on substrates as a function of temperature and microstructure. Effects of deformation and fracture on the processing of thin film materials. Prerequisite: 198/208.

**MATSCI 358. Fracture and Fatigue of Materials and Thin Film Structures. 3 Units.**

Linear-elastic and elastic-plastic fracture mechanics from a materials science perspective, emphasizing microstructure and the micromechanisms of fracture. Plane strain fracture toughness and resistance curve behavior. Mechanisms of failure associated with cohesion and adhesion in bulk materials, composites, and thin film structures. Fracture mechanics approaches to toughening and subcritical crack-growth processes, with examples and applications involving cyclic fatigue and environmentally assisted subcritical crack growth. Prerequisite: 151/251, 198/208, or equivalent. SCPD offering.

**MATSCI 359. Crystalline Anisotropy. 3 Units.**

Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye's *Physical Properties of Crystals*. Homework sets use Mathematica.

**MATSCI 380. Nano-Biotechnology. 3 Units.**

Literature based. Principles that make nanoscale materials unique, applications to biology, and how biological systems can create nanomaterials. Molecular sensing, drug delivery, bio-inspired synthesis, self-assembling systems, and nanomaterial based therapies. Interactions at the nanoscale. Applications and opportunities for new technology.

**MATSCI 381. Biomaterials in Regenerative Medicine. 3 Units.**

Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry. Same as: BIOE 361

**MATSCI 382. Biochips and Medical Imaging. 3 Units.**

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

Same as: EE 225, SBIO 225

**MATSCI 399. Graduate Independent Study. 1-10 Unit.**

Under supervision of a faculty member.

**MATSCI 400. Participation in Materials Science Teaching. 1-3 Unit.**

May be repeated for credit.

**MATSCI 801. TGR Project for MS Students. 0 Units.****MATSCI 802. TGR Dissertation for Ph.D Students. 0 Units.****MATSCI 81N. Bioengineering Materials to Heal the Body. 3 Units.**

Preference to freshmen. Real-world examples of materials developed for tissue engineering and regenerative medicine therapies. How scientists and engineers design new materials for surgeons to use in replacing body parts such as damaged heart or spinal cord tissue. How cells interact with implanted materials. Students identify a clinically important disease or injury that requires a better material, proposed research approaches to the problem, and debate possible engineering solutions.

**MATSCI 82N. Science of the Impossible. 3 Units.**

Imagine a world where cancer is cured with light, objects can be made invisible, and teleportation is allowed through space and time. The future once envisioned by science fiction writers is now becoming a reality, thanks to advances in materials science and engineering. This seminar will explore 'impossible' technologies - those that have shaped our past and those that promise to revolutionize the future. Attention will be given to both the science and the societal impact of these technologies. We will begin by investigating breakthroughs from the 20th century that seemed impossible in the early 1900s, such as the invention of integrated circuits and the discovery of chemotherapy. We will then discuss the scientific breakthroughs that enabled modern 'impossible' science, such as photodynamic cancer therapeutics, invisibility, and psychokinesis through advanced mind-machine interfaces. Lastly, we will explore technologies currently perceived as completely impossible and brainstorm the breakthroughs needed to make such science fiction a reality. The course will include introductory lectures and in-depth conversations based on readings. Students will also be given the opportunity to lead class discussions on a relevant 'impossible science' topic of their choosing.

**MATSCI 83N. Great Inventions That Matter. 3 Units.**

This introductory seminar starts by illuminating on the general aspects of creativity, invention, and patenting in engineering and medicine, and how Stanford University is one of the world's foremost engines of innovation. We then take a deep dive into some great technological inventions which are still playing an essential role in our everyday lives, such as fiber amplifier, digital compass, computer memory, HIV detector, personal genome machine, cancer cell sorting, brain imaging, and mind reading. The stories and underlying materials and technologies behind each invention, including a few examples by Stanford faculty and student inventors, are highlighted and discussed. A special lecture focuses on the public policy on intellectual properties (IP) and the resources at Stanford Office of Technology Licensing (OTL). Each student will have an opportunity to present on a great invention from Stanford (or elsewhere), or to write a (mock) patent disclosure of his/her own ideas.

**MATSCI 84N. Re-engineering the energy landscape. 3 Units.**

Why hasn't electricity from solar panels, wind turbines, and other environmentally friendly resources taken over our energy landscape? Why is a hybrid car or an all-electric vehicle so expensive? In this seminar we will explore energy technologies and focus on how development in materials science enables a greener future. This seminar takes a hands-on approach; we will make solar cells and batteries and generate our own electricity. We will also include field trips to companies running large-scale energy production and green energy for transportation. Lastly we will explore advanced energy materials research at Stanford and find what still needs to be done in order to achieve a sustainable energy landscape.

## Mathematics (MATH)

**MATH 101. Math Discovery Lab. 3 Units.**

MDL is a discovery-based project course in mathematics. Students work independently in small groups to explore open-ended mathematical problems and discover original mathematics. Students formulate conjectures and hypotheses; test predictions by computation, simulation, or pure thought; and present their results to classmates. No lecture component; in-class meetings reserved for student presentations, attendance mandatory. Admission is by application: <http://math101.stanford.edu>. Motivated students with any level of mathematical background are encouraged to apply. WIM.

**MATH 104. Applied Matrix Theory. 3 Units.**

Linear algebra for applications in science and engineering: orthogonality, projections, spectral theory for symmetric matrices, the singular value decomposition, the QR decomposition, least-squares, the condition number of a matrix, algorithms for solving linear systems. (Math 113 offers a more theoretical treatment of linear algebra.) Prerequisites: Math 51 and programming experience on par with CS106nnMath 104 and EE103/CME103 cover complementary topics in applied linear algebra. The focus of Math 104 is on algorithms and concepts; the focus of EE103 is on a few linear algebra concepts, and many applications.

**MATH 106. Functions of a Complex Variable. 3 Units.**

Complex numbers, analytic functions, Cauchy-Riemann equations, complex integration, Cauchy integral formula, residues, elementary conformal mappings. (Math 116 offers a more theoretical treatment.) Prerequisite: 52.

**MATH 107. Graph Theory. 3 Units.**

An introductory course in graph theory establishing fundamental concepts and results in variety of topics. Topics include: basic notions, connectivity, cycles, matchings, planar graphs, graph coloring, matrix-tree theorem, conditions for hamiltonicity, Kuratowski's theorem, Ramsey and Turan-type theorem. Prerequisites: 51 or equivalent and some familiarity with proofs is required.

**MATH 108. Introduction to Combinatorics and Its Applications. 3 Units.**

Topics: graphs, trees (Cayley's Theorem, application to phylogony), eigenvalues, basic enumeration (permutations, Stirling and Bell numbers), recurrences, generating functions, basic asymptotics. Prerequisites: 51 or equivalent.

**MATH 109. Applied Group Theory. 3 Units.**

Applications of the theory of groups. Topics: elements of group theory, groups of symmetries, matrix groups, group actions, and applications to combinatorics and computing. Applications: rotational symmetry groups, the study of the Platonic solids, crystallographic groups and their applications in chemistry and physics. Honors math majors and students who intend to do graduate work in mathematics should take 120. WIM.

**MATH 110. Applied Number Theory and Field Theory. 3 Units.**

Number theory and its applications to modern cryptography. Topics: congruences, finite fields, primality testing and factorization, public key cryptography, error correcting codes, and elliptic curves, emphasizing algorithms. WIM.

**MATH 113. Linear Algebra and Matrix Theory. 3 Units.**

Algebraic properties of matrices and their interpretation in geometric terms. The relationship between the algebraic and geometric points of view and matters fundamental to the study and solution of linear equations. Topics: linear equations, vector spaces, linear dependence, bases and coordinate systems; linear transformations and matrices; similarity; eigenvectors and eigenvalues; diagonalization. (Math 104 offers a more application-oriented treatment.)

**MATH 114. Introduction to Scientific Computing. 3 Units.**

Introduction to Scientific Computing Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, unconstrained optimization, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Implementation of numerical methods in MATLAB programming assignments. Prerequisites: MATH 51, 52, 53; prior programming experience (MATLAB or other language at level of CS 106A or higher).

Same as: CME 108

**MATH 115. Functions of a Real Variable. 3 Units.**

The development of real analysis in Euclidean space: sequences and series, limits, continuous functions, derivatives, integrals. Basic point set topology. Honors math majors and students who intend to do graduate work in mathematics should take 171. Prerequisite: 21.

**MATH 116. Complex Analysis. 3 Units.**

Analytic functions, Cauchy integral formula, power series and Laurent series, calculus of residues and applications, conformal mapping, analytic continuation, introduction to Riemann surfaces, Fourier series and integrals. (Math 106 offers a less theoretical treatment.) Prerequisites: 52, and 115 or 171.

**MATH 118. Mathematics of Computation. 3 Units.**

Notions of analysis and algorithms central to modern scientific computing: continuous and discrete Fourier expansions, the fast Fourier transform, orthogonal polynomials, interpolation, quadrature, numerical differentiation, analysis and discretization of initial-value and boundary-value ODE, finite and spectral elements. Prerequisites: MATH 51 and 53.

**MATH 120. Groups and Rings. 3 Units.**

Recommended for Mathematics majors and required of honors Mathematics majors. Similar to 109 but altered content and more theoretical orientation. Groups acting on sets, examples of finite groups, Sylow theorems, solvable and simple groups. Fields, rings, and ideals; polynomial rings over a field; PID and non-PID. Unique factorization domains. WIM.

**MATH 121. Galois Theory. 3 Units.**

Field of fractions, splitting fields, separability, finite fields. Galois groups, Galois correspondence, examples and applications. Prerequisite: Math 120 and (also recommended) 113.

**MATH 122. Modules and Group Representations. 3 Units.**

Modules over PID. Tensor products over fields. Group representations and group rings. Maschke's theorem and character theory. Character tables, construction of representations. Prerequisite: Math 120. Also recommended: 113.

**MATH 131P. Partial Differential Equations. 3 Units.**

An introduction to PDE; particularly suitable for non-Math majors. Topics include physical examples of PDE's, method of characteristics, D'Alembert's formula, maximum principles, heat kernel, Duhamel's principle, separation of variables, Fourier series, Harmonic functions, Bessel functions, spherical harmonics. Students who have taken MATH 171 should consider taking MATH 173 rather than 131P. Prerequisite: 53.

**MATH 136. Stochastic Processes. 3 Units.**

Introduction to measure theory,  $L_p$  spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and  $L_p$  convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent. <http://statweb.stanford.edu/~adembo/math-136/>.

Same as: STATS 219

**MATH 137. Mathematical Methods of Classical Mechanics. 3 Units.**

Newtonian mechanics. Lagrangian formalism. E. Noether's theorem. Oscillations. Rigid bodies. Introduction to symplectic geometry. Hamiltonian formalism. Legendre transform. Variational principles. Geometric optics. Introduction to the theory of integrable systems. Prerequisites: 51, 52, 53, or 61CM, 62CM, 63CM.

**MATH 138. Celestial Mechanics. 3 Units.**

Mathematically rigorous introduction to the classical N-body problem: the motion of N particles evolving according to Newton's law. Topics include: the Kepler problem and its symmetries; other central force problems; conservation theorems; variational methods; Hamilton-Jacobi theory; the role of equilibrium points and stability; and symplectic methods. Prerequisites: 53, and 115 or 171.

**MATH 142. Hyperbolic Geometry. 3 Units.**

An introductory course in hyperbolic geometry. Topics may include: different models of hyperbolic geometry, hyperbolic area and geodesics, Isometries and Mobius transformations, conformal maps, Fuchsian groups, Farey tessellation, hyperbolic structures on surfaces and three manifolds, limit sets. Prerequisites: some familiarity with the basic concepts of differential geometry and the topology of surfaces and manifolds is strongly recommended.

**MATH 143. Differential Geometry. 3 Units.**

Geometry of curves and surfaces in three-space and higher dimensional manifolds. Parallel transport, curvature, and geodesics. Surfaces with constant curvature. Minimal surfaces.

**MATH 145. Algebraic Geometry. 3 Units.**

An introduction to the methods and concepts of algebraic geometry. The point of view and content will vary over time, but include: affine varieties, Hilbert basis theorem and Nullstellensatz, projective varieties, algebraic curves. Required: 120. Strongly recommended: additional mathematical maturity via further basic background with fields, point-set topology, or manifolds.

**MATH 146. Analysis on Manifolds. 3 Units.**

Differentiable manifolds, tangent space, submanifolds, implicit function theorem, differential forms, vector and tensor fields. Frobenius' theorem, DeRham theory. Prerequisite: 62CM or 52 and familiarity with linear algebra and analysis arguments at the level of 113 and 115 respectively.

**MATH 147. Differential Topology. 3 Units.**

Smooth manifolds, transversality, Sard's theorem, embeddings, degree of a map, Borsuk-Ulam theorem, Hopf degree theorem, Jordan curve theorem. Prerequisite: 115 or 171.

**MATH 148. Algebraic Topology. 3 Units.**

Fundamental group, covering spaces, Euler characteristic, homology, classification of surfaces, knots. Prerequisite: 109 or 120.

**MATH 151. Introduction to Probability Theory. 3 Units.**

Counting; axioms of probability; conditioning and independence; expectation and variance; discrete and continuous random variables and distributions; joint distributions and dependence; central limit theorem and laws of large numbers. Prerequisite: 52 or consent of instructor.

**MATH 152. Elementary Theory of Numbers. 3 Units.**

Euclid's algorithm, fundamental theorems on divisibility; prime numbers; congruence of numbers; theorems of Fermat, Euler, Wilson; congruences of first and higher degrees; quadratic residues; introduction to the theory of binary quadratic forms; quadratic reciprocity; partitions.

**MATH 154. Algebraic Number Theory. 3 Units.**

Properties of number fields and Dedekind domains, quadratic and cyclotomic fields, applications to some classical Diophantine equations. Prerequisites: 120 and 121, especially modules over principal ideal domains and Galois theory of finite fields.

**MATH 155. Analytic Number Theory. 3 Units.**

Topics in analytic number theory such as the distribution of prime numbers, the prime number theorem, twin primes and Goldbach's conjecture, the theory of quadratic forms, Dirichlet's class number formula, Dirichlet's theorem on primes in arithmetic progressions, and the fifteen theorem. Prerequisite: 152, or familiarity with the Euclidean algorithm, congruences, residue classes and reduced residue classes, primitive roots, and quadratic reciprocity.

**MATH 158. Basic Probability and Stochastic Processes with Engineering Applications. 3 Units.**

Calculus of random variables and their distributions with applications. Review of limit theorems of probability and their application to statistical estimation and basic Monte Carlo methods. Introduction to Markov chains, random walks, Brownian motion and basic stochastic differential equations with emphasis on applications from economics, physics and engineering, such as filtering and control. Prerequisites: exposure to basic probability.

Same as: CME 298

**MATH 159. Discrete Probabilistic Methods. 3 Units.**

Modern discrete probabilistic methods suitable for analyzing discrete structures of the type arising in number theory, graph theory, combinatorics, computer science, information theory and molecular sequence analysis. Prerequisite: STATS 116/MATH 151 or equivalent.

**MATH 161. Set Theory. 3 Units.**

Informal and axiomatic set theory: sets, relations, functions, and set-theoretical operations. The Zermelo-Fraenkel axiom system and the special role of the axiom of choice and its various equivalents. Well-orderings and ordinal numbers; transfinite induction and transfinite recursion. Equinumerosity and cardinal numbers; Cantor's Alephs and cardinal arithmetic. Open problems in set theory. Prerequisite: students should be comfortable doing proofs.

**MATH 162. Philosophy of Mathematics. 4 Units.**

Mathematics is a very peculiar human activity. It delivers a type of knowledge that is particularly stable, often conceived as a priori and necessary. Moreover, this knowledge is about abstract entities, which seem to have no connection to us, spatio-temporal creatures, and yet it plays a crucial role in our scientific endeavors. Many philosophical questions emerge naturally: What is the nature of mathematical objects? How can we learn anything about them? Where does the stability of mathematics come from? What is the significance of results showing the limits of such knowledge, such as Gödel's incompleteness theorem? The first part of the course will survey traditional approaches to philosophy of mathematics ("the big Isms") and consider the viability of their answers to some of the previous questions: logicism, intuitionism, Hilbert's program, empiricism, fictionalism, and structuralism. The second part will focus on philosophical issues emerging from the actual practice of mathematics. We will tackle questions such as: Why do mathematicians re-prove the same theorems? What is the role of visualization in mathematics? How can mathematical knowledge be effective in natural science? To conclude, we will explore the aesthetic dimension of mathematics, focusing on mathematical beauty. Prerequisite: PHIL 150 or consent of instructor.

Same as: PHIL 162

**MATH 163. The Greek Invention of Mathematics. 3-5 Units.**

How was mathematics invented? A survey of the main creative ideas of ancient Greek mathematics. Among the issues explored are the axiomatic system of Euclid's Elements, the origins of the calculus in Greek measurements of solids and surfaces, and Archimedes' creation of mathematical physics. We will provide proofs of ancient theorems, and also learn how such theorems are even known today thanks to the recovery of ancient manuscripts.

Same as: CLASSICS 136

**MATH 171. Fundamental Concepts of Analysis. 3 Units.**

Recommended for Mathematics majors and required of honors Mathematics majors. Similar to 115 but altered content and more theoretical orientation. Properties of Riemann integrals, continuous functions and convergence in metric spaces; compact metric spaces, basic point set topology. Prerequisite: 61CM or 61DM or 115 or consent of the instructor. WIM.

**MATH 172. Lebesgue Integration and Fourier Analysis. 3 Units.**

Similar to 205A, but for undergraduate Math majors and graduate students in other disciplines. Topics include Lebesgue measure on Euclidean space, Lebesgue integration,  $L^p$  spaces, the Fourier transform, the Hardy-Littlewood maximal function and Lebesgue differentiation. Prerequisite: 171 or consent of instructor.

**MATH 173. Theory of Partial Differential Equations. 3 Units.**

A rigorous introduction to PDE accessible to advanced undergraduates. Elliptic, parabolic, and hyperbolic equations in many space dimensions including basic properties of solutions such as maximum principles, causality, and conservation laws. Methods include the Fourier transform as well as more classical methods. The Lebesgue integral will be used throughout, but a summary of its properties will be provided to make the course accessible to students who have not had 172 or 205A. In years when Math 173 is not offered, Math 220 is a recommended alternative (with similar content but a different emphasis). Prerequisite: 171 or equivalent.

**MATH 174. Calculus of Variations. 3 Units.**

An introductory course emphasizing the historical development of the theory, its connections to physics and mechanics, its independent mathematical interest, and its contacts with daily life experience. Applications to minimal surfaces and to capillary surface interfaces. Prerequisites: Math 171 or equivalent.

**MATH 175. Elementary Functional Analysis. 3 Units.**

Linear operators on Hilbert space. Spectral theory of compact operators; applications to integral equations. Elements of Banach space theory. Prerequisite: 115 or 171.

**MATH 177. Geometric Methods in the Theory of Ordinary Differential Equations. 3 Units.**

Hamiltonian systems and their geometry. First order PDE and Hamilton-Jacobi equation. Structural stability and hyperbolic dynamical systems. Completely integrable systems. Perturbation theory.

**MATH 19. Calculus. 3 Units.**

Introduction to differential calculus of functions of one variable. Review of elementary functions (including exponentials and logarithms), limits, rates of change, the derivative and its properties, applications of the derivative. Prerequisites: trigonometry, advanced algebra, and analysis of elementary functions (including exponentials and logarithms). You must have taken the math placement diagnostic (offered through the Math Department website) in order to register for this course.

**MATH 193. Polya Problem Solving Seminar. 1 Unit.**

Topics in mathematics and problem solving strategies with an eye towards the Putnam Competition. Topics may include parity, the pigeonhole principle, number theory, recurrence, generating functions, and probability. Students present solutions to the class. Open to anyone with an interest in mathematics.

**MATH 197. Senior Honors Thesis. 1-6 Unit.**

Honors math major working on senior honors thesis under an approved advisor carries out research and reading. Satisfactory written account of progress achieved during term must be submitted to advisor before term ends. May be repeated 3 times for a max of 9 units. Contact department student services specialist to enroll.

**MATH 198. Practical Training. 1 Unit.**

Only for undergraduate students majoring in mathematics. Students obtain employment in a relevant industrial or research activity to enhance their professional experience. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit up to 3 units. Prerequisite: qualified offer of employment and consent of department. Prior approval by Math Department is required; you must contact the Math Department's Student Services staff for instructions before being granted permission to enroll.

**MATH 199. Independent Work. 1-3 Unit.**

For math majors only. Undergraduates pursue a reading program; topics limited to those not in regular department course offerings. Credit can fulfill the elective requirement for math majors. Approval of Undergraduate Affairs Committee is required to use credit for honors majors area requirement. Contact department student services specialist to enroll.

**MATH 20. Calculus. 3 Units.**

The definite integral, Riemann sums, antiderivatives, the Fundamental Theorem of Calculus, and the Mean Value Theorem for integrals. Integration by substitution and by parts. Area between curves, and volume by slices, washers, and shells. Initial-value problems, exponential and logistic models, direction fields, and parametric curves. Prerequisite: Math 19 or equivalent. If you have not previously taken a calculus course at Stanford then you must have taken the math placement diagnostic (offered through the Math Department website) in order to register for this course.

**MATH 205A. Real Analysis. 3 Units.**

Basic measure theory and the theory of Lebesgue integration. Prerequisite: 171 or equivalent.

**MATH 205B. Real Analysis. 3 Units.**

Point set topology, basic functional analysis, Fourier series, and Fourier transform. Prerequisites: 171 and 205A or equivalent.

**MATH 205C. Real Analysis. 3 Units.**

Continuation of 205B.

**MATH 21. Calculus. 4 Units.**

Review of limit rules. Sequences, functions, limits at infinity, and comparison of growth of functions. Review of integration rules, integrating rational functions, and improper integrals. Infinite series, special examples, convergence and divergence tests (limit comparison and alternating series tests). Power series and interval of convergence, Taylor polynomials, Taylor series and applications. Prerequisite: Math 20 or equivalent. If you have not previously taken a calculus course at Stanford then you must have taken the math placement diagnostic (offered through the Math Department website) in order to register for this course.

**MATH 210A. Modern Algebra I. 3 Units.**

Basic commutative ring and module theory, tensor algebra, homological constructions, linear and multilinear algebra, canonical forms and Jordan decomposition. Prerequisite: 122 or equivalent.

**MATH 210B. Modern Algebra II. 3 Units.**

Continuation of 210A. Topics in field theory, commutative algebra, and algebraic geometry. Prerequisites: 210A, and 121 or equivalent.

**MATH 210C. Lie Theory. 3 Units.**

Topics in Lie groups, Lie algebras, and/or representation theory. Prerequisite: math 210B. May be repeated for credit.

**MATH 215A. Algebraic Topology. 3 Units.**

Topics: fundamental group and covering spaces, basics of homotopy theory, homology and cohomology (simplicial, singular, cellular), products, introduction to topological manifolds, orientations, Poincare duality. Prerequisites: 113, 120, and 171.

**MATH 215B. Differential Topology. 3 Units.**

Topics: Basics of differentiable manifolds (tangent spaces, vector fields, tensor fields, differential forms), embeddings, tubular neighborhoods, integration and Stokes's Theorem, deRham cohomology, intersection theory via Poincare duality, Morse theory. Prerequisite: 215A.

**MATH 215C. Differential Geometry. 3 Units.**

This course will be an introduction to Riemannian Geometry. Topics will include the Levi-Civita connection, Riemann curvature tensor, Ricci and scalar curvature, geodesics, parallel transport, completeness, geodesics and Jacobi fields, and comparison techniques. Prerequisites 146 or 215B.

**MATH 216A. Introduction to Algebraic Geometry. 3 Units.**

Algebraic curves, algebraic varieties, sheaves, cohomology, Riemann-Roch theorem. Classification of algebraic surfaces, moduli spaces, deformation theory and obstruction theory, the notion of schemes. May be repeated for credit. Prerequisites: 210ABC or equivalent.

**MATH 216B. Introduction to Algebraic Geometry. 3 Units.**

Continuation of 216A. May be repeated for credit.

**MATH 216C. Introduction to Algebraic Geometry. 3 Units.**

Continuation of 216B. May be repeated for credit.

**MATH 217C. Complex Differential Geometry. 3 Units.**

Complex structures, almost complex manifolds and integrability, Hermitian and Kahler metrics, connections on complex vector bundles, Chern classes and Chern-Weil theory, Hodge and Dolbeault theory, vanishing theorems, Calabi-Yau manifolds, deformation theory.

**MATH 21A. Calculus, ACE. 5 Units.**

Students attend MATH 21 lectures with different recitation sessions: two hours per week instead of one, emphasizing engineering applications. Prerequisite: application; see <https://web.stanford.edu/dept/soe/osa/ace.fb>.

**MATH 220. Partial Differential Equations of Applied Mathematics. 3 Units.**

First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: Basic coursework in multivariable calculus and ordinary differential equations, and some prior experience with a proof-based treatment of the material as in Math 171 or Math 61CM (formerly Math 51H). Same as: CME 303

**MATH 221A. Mathematical Methods of Imaging. 3 Units.**

Image denoising and deblurring with optimization and partial differential equations methods. Imaging functionals based on total variation and l-1 minimization. Fast algorithms and their implementation. Same as: CME 321A

**MATH 221B. Mathematical Methods of Imaging. 3 Units.**

Array imaging using Kirchhoff migration and beamforming, resolution theory for broad and narrow band array imaging in homogeneous media, topics in high-frequency, variable background imaging with velocity estimation, interferometric imaging methods, the role of noise and inhomogeneities, and variational problems that arise in optimizing the performance of array imaging algorithms. Same as: CME 321B

**MATH 226. Numerical Solution of Partial Differential Equations. 3 Units.**

Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.

Same as: CME 306

**MATH 227. Partial Differential Equations and Diffusion Processes. 3 Units.**

Parabolic and elliptic partial differential equations and their relation to diffusion processes. First order equations and optimal control. Emphasis is on applications to mathematical finance. Prerequisites: MATH 136/STATS 219 (or equivalents) and MATH 131P + MATH 115/171 or MATH 173 or MATH 220.

**MATH 228. Stochastic Methods in Engineering. 3 Units.**

The basic limit theorems of probability theory and their application to maximum likelihood estimation. Basic Monte Carlo methods and importance sampling. Markov chains and processes, random walks, basic ergodic theory and its application to parameter estimation. Discrete time stochastic control and Bayesian filtering. Diffusion approximations, Brownian motion and an introduction to stochastic differential equations. Examples and problems from various applied areas. Prerequisites: exposure to probability and background in analysis.

Same as: CME 308, MS&E 324

**MATH 228A. Probability, Stochastic Analysis and Applications. 3 Units.**

The basic limit theorems of probability theory and their application to maximum likelihood estimation. Basic Monte Carlo methods and importance sampling. Markov chains and processes, random walks, basic ergodic theory and its application to parameter estimation. Discrete time stochastic control and Bayesian filtering. Diffusion approximations, Brownian motion and basic stochastic differential equations. Examples and problems from various applied areas. Prerequisites: exposure to probability and background in analysis.

**MATH 230A. Theory of Probability I. 2-4 Units.**

Mathematical tools: sigma algebras, measure theory, connections between coin tossing and Lebesgue measure, basic convergence theorems. Probability: independence, Borel-Cantelli lemmas, almost sure and  $L_p$  convergence, weak and strong laws of large numbers. Large deviations. Weak convergence; central limit theorems; Poisson convergence; Stein's method. Prerequisites: 116, MATH 171.

Same as: STATS 310A

**MATH 230B. Theory of Probability II. 2-3 Units.**

Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory, (v) ergodic theory. Prerequisite: 310A or MATH 230A.

Same as: STATS 310B

**MATH 230C. Theory of Probability III. 2-4 Units.**

Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B. <http://statweb.stanford.edu/~adembo/stat-310c/>.

Same as: STATS 310C

**MATH 231. Mathematics and Statistics of Gambling. 3 Units.**

Probability and statistics are founded on the study of games of chance. Nowadays, gambling (in casinos, sports and the Internet) is a huge business. This course addresses practical and theoretical aspects. Topics covered: mathematics of basic random phenomena (physics of coin tossing and roulette, analysis of various methods of shuffling cards), odds in popular games, card counting, optimal tournament play, practical problems of random number generation. Prerequisites: Statistics 116 and 200.

Same as: STATS 334

**MATH 231A. An Introduction to Random Matrix Theory. 3 Units.**

Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinantal point processes.

Same as: STATS 351A

**MATH 232. Topics in Probability: Percolation Theory. 3 Units.**

An introduction to first passage percolation and related general tools and models. Topics include early results on shape theorems and fluctuations, more modern development using hyper-contractivity, recent breakthrough regarding scaling exponents, and providing exposure to some fundamental long-standing open problems. Course prerequisite: graduate-level probability.

**MATH 233A. Topics in Combinatorics. 3 Units.**

Geometry of polynomials and non-constructive proofs in combinatorics: The independence polynomial, the Lovasz Local Lemma and Shearer's Lemma. Real-rooted polynomials, stable polynomials, Ramanujan graphs and the Kadison-Singer problem. Strongly Rayleigh measures and negative dependence. Applications in algorithms.

**MATH 233B. Topics in Combinatorics: Polyhedral Techniques in Optimization. 3 Units.**

LP duality and min-max formulas; matchings, spanning trees, matroids, matroid union and intersection; packing of trees and arborescences; submodular functions, continuous extensions and optimization.

**MATH 233C. Topics in Combinatorics. 3 Units.****MATH 234. Large Deviations Theory. 3 Units.**

Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310. Offered every 2-3 years. <http://statweb.stanford.edu/~adembo/large-deviations/>.

Same as: STATS 374

**MATH 235A. Topics in combinatorics. 3 Units.**

This advanced course in extremal combinatorics covers several major themes in the area. These include extremal combinatorics and Ramsey theory, the graph regularity method, and algebraic methods.

**MATH 235B. Modern Markov Chain Theory. 3 Units.**

This is a graduate-level course on the use and analysis of Markov chains. Emphasis is placed on explicit rates of convergence for chains used in applications to physics, biology, and statistics. Topics covered: basic constructions (metropolis, Gibbs sampler, data augmentation, hybrid Monte Carlo); spectral techniques (explicit diagonalization, Poincaré, and Cheeger bounds); functional inequalities (Nash, Sobolev, Log Sobolev); probabilistic techniques (coupling, stationary times, Harris recurrence). A variety of card shuffling processes will be studied. Central Limit and concentration.

**MATH 235C. Topics in Markov Chains. 3 Units.**

Classical functional inequalities (Nash, Faber-Krahn, log-Sobolev inequalities), comparison of Dirichlet forms. Random walks and isoperimetry of amenable groups (with a focus on solvable groups). Entropy, harmonic functions, and Poisson boundary (following Kaimanovich-Vershik theory).

**MATH 236. Introduction to Stochastic Differential Equations. 3 Units.**

Brownian motion, stochastic integrals, and diffusions as solutions of stochastic differential equations. Functionals of diffusions and their connection with partial differential equations. Random walk approximation of diffusions. Prerequisite: 136 or equivalent and differential equations.

**MATH 237. Default and Systemic Risk. 3 Units.**

Introduction to mathematical models of complex static and dynamic stochastic systems that undergo sudden regime change in response to small changes in parameters. Examples from materials science (phase transitions), power grid models, financial and banking systems. Special emphasis on mean field models and their large deviations, including computational issues. Dynamic network models of financial systems and their stability.

**MATH 238. Mathematical Finance. 3 Units.**

Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent. Same as: STATS 250

**MATH 239. Computation and Simulation in Finance. 3 Units.**

Monte Carlo, finite difference, tree, and transform methods for the numerical solution of partial differential equations in finance. Emphasis is on derivative security pricing. Prerequisite: 238 or equivalent.

**MATH 243. Functions of Several Complex Variables. 3 Units.**

Holomorphic functions in several variables, Hartogs phenomenon,  $d$ -bar complex, Cousin problem. Domains of holomorphy. Plurisubharmonic functions and pseudo-convexity. Stein manifolds. Coherent sheaves, Cartan Theorems A&B. Levi problem and its solution. Grauert's Oka principle. Prerequisites: MATH 215A and experience with manifolds.

**MATH 244. Riemann Surfaces. 3 Units.**

Riemann surfaces and holomorphic maps, algebraic curves, maps to projective spaces. Calculus on Riemann surfaces. Elliptic functions and integrals. Riemann-Hurwitz formula. Riemann-Roch theorem, Abel-Jacobi map. Uniformization theorem. Hyperbolic surfaces. (Suitable for advanced undergraduates.) Prerequisites: MATH 106 or MATH 116, and familiarity with surfaces equivalent to MATH 143, MATH 146, or MATH 147.

**MATH 245A. Topics in Algebraic Geometry. 3 Units.**

Topics of contemporary interest in algebraic geometry. May be repeated for credit.

**MATH 245B. Topics in Algebraic Geometry. 3 Units.**

May be repeated for credit.

**MATH 245C. Topics in Algebraic Geometry. 3 Units.**

May be repeated for credit.

**MATH 246. Topics in number theory: L-functions. 3 Units.**

The Riemann Zeta function and Dirichlet L-functions, zero-free regions and vertical distribution of the zeros, primes in arithmetic progressions, the class number problem, Hecke L-functions and Tate's thesis, Artin L-functions and the Chebotarev density theorem, Modular forms and Maass forms. Prerequisites: Algebraic Number Theory.

**MATH 248. Introduction to Ergodic Theory. 3 Units.**

Topics may include 1) subadditive and multiplicative ergodic theorems, 2) notions of mixing, weak mixing, spectral theory, 3) metric and topological entropy of dynamical systems, 4) measures of maximal entropy. Prerequisites: Solid background in "Measure and Integration" (Math 205A) and some functional analysis, including Riesz representation theorem and Hahn-Banach theorem (Math 205B).

**MATH 249A. Topics in number theory. 3 Units.**

Topics of contemporary interest in number theory. May be repeated for credit.

**MATH 249B. Topics in Number Theory. 3 Units.**

.

**MATH 249C. Topics in Number Theory. 3 Units.**

.

**MATH 256A. Partial Differential Equations. 3 Units.**

The theory of linear and nonlinear partial differential equations, beginning with linear theory involving use of Fourier transform and Sobolev spaces. Topics: Schauder and  $L^2$  estimates for elliptic and parabolic equations; De Giorgi-Nash-Moser theory for elliptic equations; nonlinear equations such as the minimal surface equation, geometric flow problems, and nonlinear hyperbolic equations.

**MATH 256B. Partial Differential Equations. 3 Units.**

Continuation of 256A.

**MATH 257A. Symplectic Geometry and Topology. 3 Units.**

Linear symplectic geometry and linear Hamiltonian systems. Symplectic manifolds and their Lagrangian submanifolds, local properties. Symplectic geometry and mechanics. Contact geometry and contact manifolds. Relations between symplectic and contact manifolds. Hamiltonian systems with symmetries. Momentum map and its properties. May be repeated for credit.

**MATH 257B. Symplectic Geometry and Topology. 3 Units.**

Continuation of 257A. May be repeated for credit.

**MATH 257C. Symplectic Geometry and Topology. 3 Units.**

Continuation of 257B. May be repeated for credit.

**MATH 258. Topics in Geometric Analysis. 3 Units.**

May be repeated for credit.

**MATH 262. Applied Fourier Analysis and Elements of Modern Signal Processing. 3 Units.**

Introduction to the mathematics of the Fourier transform and how it arises in a number of imaging problems. Mathematical topics include the Fourier transform, the Plancherel theorem, Fourier series, the Shannon sampling theorem, the discrete Fourier transform, and the spectral representation of stationary stochastic processes. Computational topics include fast Fourier transforms (FFT) and nonuniform FFTs. Applications include Fourier imaging (the theory of diffraction, computed tomography, and magnetic resonance imaging) and the theory of compressive sensing.

Same as: CME 372

**MATH 263A. Algebraic Combinatorics and Symmetric Functions. 3 Units.**

Symmetric function theory unifies large parts of combinatorics. Theorems about permutations, partitions, and graphs now follow in a unified way. Topics: The usual bases (monomial, elementary, complete, and power sums). Schur functions. Representation theory of the symmetric group. Littlewood-Richardson rule, quasi-symmetric functions, combinatorial Hopf algebras, introduction to Macdonald polynomials. Throughout, emphasis is placed on applications (e.g. to card shuffling and random matrix theory). Prerequisite: 210A and 210B, or equivalent.

**MATH 263B. Crystal Bases: Representations and Combinatorics. 3 Units.**

Crystal Bases are combinatorial analogs of representation theory of Lie groups. We will explore different aspects of these analogies and develop rigorous purely combinatorial foundations.

**MATH 263C. Topics in Representation Theory. 3 Units.**

May be repeated for credit.

**MATH 269. Topics in symplectic geometry. 3 Units.**

May be repeated for credit.

**MATH 270. Geometry and Topology of Complex Manifolds. 3 Units.**

Complex manifolds, Kahler manifolds, curvature, Hodge theory, Lefschetz theorem, Kahler-Einstein equation, Hermitian-Einstein equations, deformation of complex structures. May be repeated for credit.

**MATH 271. The H-Principle. 3 Units.**

The language of jets. Thom transversality theorem. Holonomic approximation theorem. Applications: immersion theory and its generalizations. Differential relations and Gromov's h-principle for open manifolds. Applications to symplectic geometry. Microflexibility. Mappings with simple singularities and their applications. Method of convex integration. Nash-Kuiper  $C^1$ -isometric embedding theorem.

**MATH 272. Topics in Partial Differential Equations. 3 Units.****MATH 273. Topics in Mathematical Physics. 3 Units.**

Covers a list of topics in mathematical physics. The specific topics may vary from year to year, depending on the instructor's discretion. Background in graduate level probability theory and analysis is desirable. Same as: STATS 359

**MATH 280. Evolution Equations in Differential Geometry. 3 Units.****MATH 282A. Low Dimensional Topology. 3 Units.**

The theory of surfaces and 3-manifolds. Curves on surfaces, the classification of diffeomorphisms of surfaces, and Teichmüller space. The mapping class group and the braid group. Knot theory, including knot invariants. Decomposition of 3-manifolds: triangulations, Heegaard splittings, Dehn surgery. Loop theorem, sphere theorem, incompressible surfaces. Geometric structures, particularly hyperbolic structures on surfaces and 3-manifolds. May be repeated for credit up to 6 total units.

**MATH 282B. Homotopy Theory. 3 Units.**

Homotopy groups, fibrations, spectral sequences, simplicial methods, Dold-Thom theorem, models for loop spaces, homotopy limits and colimits, stable homotopy theory. May be repeated for credit up to 6 total units.

**MATH 282C. Fiber Bundles and Cobordism. 3 Units.**

Possible topics: principal bundles, vector bundles, classifying spaces. Connections on bundles, curvature. Topology of gauge groups and gauge equivalence classes of connections. Characteristic classes and K-theory, including Bott periodicity, algebraic K-theory, and indices of elliptic operators. Spectral sequences of Atiyah-Hirzebruch, Serre, and Adams. Cobordism theory, Pontryagin-Thom theorem, calculation of unoriented and complex cobordism. May be repeated for credit up to 6 total units.

**MATH 283. Topics in Algebraic and Geometric Topology. 3 Units.**

May be repeated for credit.

**MATH 283A. Topics in Topology. 3 Units.****MATH 284. Topics in Geometric Topology. 3 Units.**

Incompressible surfaces, irreducible manifolds, prime decomposition, Morse theory, Heegaard diagrams, Heegaard splittings, the Thurston norm, sutured manifold theory, Heegaard Floer homology, sutured Floer homology.

**MATH 284A. Geometry and Topology in Dimension 3. 3 Units.**

The Poincaré conjecture and the uniformization of 3-manifolds. May be repeated for credit.

**MATH 284B. Geometry and Topology in Dimension 3. 3 Units.**

The Poincaré conjecture and the uniformization of 3-manifolds. May be repeated for credit.

**MATH 286. Topics in Differential Geometry. 3 Units.**

May be repeated for credit.

**MATH 298. Graduate Practical Training. 1 Unit.**

Only for mathematics graduate students. Students obtain employment in a relevant industrial or research activity to enhance their professional experience. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit up to 3 units. Prerequisite: qualified offer of employment and consent of department. Prior approval by Math Department is required; you must contact the Math Department's Student Services staff for instructions before being granted permission to enroll.

**MATH 301. Advanced Topics in Convex Optimization. 3 Units.**

Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (Math 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization. Same as: CME 375

**MATH 305. Applied mathematics through toys and magic. 3 Units.**

This course is a series of case-studies in doing applied mathematics on surprising phenomena we notice in daily life. Almost every class will show demos of these phenomena (toys and magic) and suggest open projects. The topics range over a great variety and cut across areas traditionally pigeonholed as physics, biology, engineering, computer science, mathematics, but, instead of developing sophisticated mathematics on simple material, our aim is to extract simple mathematical understanding from sophisticated material which, at first, we may not yet know how to pigeonhole. In each class I will try to make the discussion self-contained and to give everybody something to take home, regardless of the background.

**MATH 355. Graduate Teaching Seminar. 1 Unit.**

Required of and limited to first-year Mathematics graduate students.

**MATH 360. Advanced Reading and Research. 1-10 Unit.****MATH 382. Qualifying Examination Seminar. 1-3 Unit.****MATH 391. Research Seminar in Logic. 1-3 Unit.**

Contemporary work. May be repeated a total of three times for credit. Same as: PHIL 391

**MATH 51. Linear Algebra and Differential Calculus of Several Variables. 5 Units.**

Geometry and algebra of vectors, matrices and linear transformations, eigenvalues of symmetric matrices, vector-valued functions and functions of several variables, partial derivatives and gradients, derivative as a matrix, chain rule in several variables, critical points and Hessian, least-squares, constrained and unconstrained optimization in several variables, Lagrange multipliers. Prerequisite: 21, 42, or the math placement diagnostic (offered through the Math Department website) in order to register for this course.

**MATH 51A. Linear Algebra and Differential Calculus of Several Variables, ACE. 6 Units.**

Students attend MATH 51 lectures with different recitation sessions: three hours per week instead of two, emphasizing engineering applications. Prerequisite: application; see <https://web.stanford.edu/dept/soe/osa/ace.fb>.

**MATH 52. Integral Calculus of Several Variables. 5 Units.**

Iterated integrals, line and surface integrals, vector analysis with applications to vector potentials and conservative vector fields, physical interpretations. Divergence theorem and the theorems of Green, Gauss, and Stokes. Prerequisite: 51 or equivalents.

**MATH 53. Ordinary Differential Equations with Linear Algebra. 5 Units.**

Ordinary differential equations and initial value problems, systems of linear differential equations with constant coefficients, applications of second-order equations to oscillations, matrix exponentials, Laplace transforms, stability of non-linear systems and phase plane analysis, numerical methods. Prerequisite: 51 or equivalents.

**MATH 61CM. Modern Mathematics: Continuous Methods. 5 Units.**

This is the first part of a theoretical (i.e., proof-based) sequence in multivariable calculus and linear algebra, providing a unified treatment of these topics. Covers general vector spaces, linear maps and duality, eigenvalues, inner product spaces, spectral theorem, metric spaces, differentiation in Euclidean space, submanifolds of Euclidean space, inverse and implicit function theorems, and many examples. The linear algebra content is covered jointly with Math 61DM. Students should know 1-variable calculus and have an interest in a theoretical approach to the subject. Prerequisite: score of 5 on the BC-level Advanced Placement calculus exam, or consent of the instructor.

**MATH 61DM. Modern Mathematics: Discrete Methods. 5 Units.**

This is the first part of a theoretical (i.e., proof-based) sequence in discrete mathematics and linear algebra. Covers general vector spaces, linear maps and duality, eigenvalues, inner product spaces, spectral theorem, counting techniques, and linear algebra methods in discrete mathematics including spectral graph theory and dimension arguments. The linear algebra content is covered jointly with Math 61CM. Students should have an interest in a theoretical approach to the subject. Prerequisite: score of 5 on the BC-level Advanced Placement calculus exam, or consent of the instructor. This sequence is not appropriate for students planning to major in natural sciences, economics, or engineering, but is suitable for majors in any other field (such as MCS ("data science"), computer science, and mathematics).

**MATH 62CM. Modern Mathematics: Continuous Methods. 5 Units.**

A continuation of themes from Math 61CM, centered around: manifolds, multivariable integration, and the general Stokes' theorem. This includes a treatment of multilinear algebra, further study of submanifolds of Euclidean space and an introduction to general manifolds (with many examples), differential forms and their geometric interpretations, integration of differential forms, Stokes' theorem, and some applications to topology. Prerequisite: Math 61CM.

**MATH 62DM. Modern Mathematics: Discrete Methods. 5 Units.**

This is the second part of a proof-based sequence in discrete mathematics. This course covers topics in elementary number theory, group theory, and discrete Fourier analysis. For example, we'll discuss the basic examples of abelian groups arising from congruences in elementary number theory, as well as the non-abelian symmetric group of permutations. Prerequisites: 61DM or 61CM.

**MATH 63CM. Modern Mathematics: Continuous Methods. 5 Units.**

A proof-based course on ordinary differential equations, continuing themes from Math 61CM and Math 62CM. Topics include linear systems of differential equations and necessary tools from linear algebra, stability and asymptotic properties of solutions to linear systems, existence and uniqueness theorems for nonlinear differential equations with some applications to manifolds, behavior of solutions near an equilibrium point, and Sturm-Liouville theory. Prerequisites: Math 61CM and Math 62CM.

**MATH 63DM. Modern Mathematics: Discrete Methods. 5 Units.**

Third part of a proof-based sequence in discrete mathematics. This course covers several topics in probability (random variables, independence and correlation, concentration bounds, the central limit theorem) and topology (metric spaces, point-set topology, continuous maps, compactness, Brouwer's fixed point and the Borsuk-Ulam theorem), with some applications in combinatorics. Prerequisites: 61DM or 61CM.

**MATH 70SI. The Game of Go: Strategy, Theory, and History. 1 Unit.**

Strategy and mathematical theories of the game of Go, with guest appearance by a professional Go player.

**MATH 79SI. Proof Positive: Principles of Mathematics. 1 Unit.**

What is a mathematical proof, and where do proofs come from? Students will become comfortable with fundamental techniques of mathematical proof through practice with interesting and accessible examples from many areas of math. Students will additionally hone their communication skills and develop their ability to formulate and answer precise mathematical questions. Topics include direct proof, proof by contrapositive, proof by contradiction, many applications of mathematical induction, constructing good definitions, and useful writing habits. The course is designed to prepare students who have completed or are concurrently enrolled in MATH 51 to succeed in introductory proof-based math classes at the level of MATH 115 or MATH 120, or to simply appreciate the nature of proof at a deeper level than is seen in high school geometry. To be considered for enrollment, please email [masonr@stanford.edu](mailto:masonr@stanford.edu) and attend the first class meeting on Tuesday, April 3 at 3PM in 300-303.

**MATH 802. TGR Dissertation. 0 Units.****MATH 80Q. Capillary Surfaces: Explored and Unexplored Territory. 3 Units.**

Preference to sophomores. Capillary surfaces: the interfaces between fluids that are adjacent to each other and do not mix. Recently discovered phenomena, predicted mathematically and subsequently confirmed by experiments, some done in space shuttles. Interested students may participate in ongoing investigations with affinity between mathematics and physics.

**MATH 87Q. Mathematics of Knots, Braids, Links, and Tangles. 3 Units.**

Preference to sophomores. Types of knots and how knots can be distinguished from one another by means of numerical or polynomial invariants. The geometry and algebra of braids, including their relationships to knots. Topology of surfaces. Brief summary of applications to biology, chemistry, and physics.

## Mechanical Engineering (ME)

**ME 1. Introduction to Mechanical Engineering. 3 Units.**

This course is intended to be the starting point for Mechanical Engineering majors. It will cover the concepts, engineering methods, and common tools used by mechanical engineers while introducing the students to a few interesting devices. We will discuss how each device was conceived, design challenges that arose, application of analytical tools to the design, and production methods. Main class sections will include lectures, demonstrations, and in-class group exercises. Lab sections will develop specific skills in freehand sketching and computational modeling of engineering systems. Prerequisites: Physics: Mechanics, and first quarter Calculus.

**ME 101. Visual Thinking. 4 Units.**

Lecture/lab. Visual thinking and language skills are developed and exercised in the context of solving design problems. Exercises for the mind's eye. Rapid visualization and prototyping with emphasis on fluent and flexible idea production. The relationship between visual thinking and the creative process. Limited enrollment, attendance at first class required.

**ME 102. Foundations of Product Realization. 3 Units.**

Students develop the language and toolset to transform design concepts into tangible models/prototypes that cultivate the emergence of mechanical aptitude. Visual communication tools such as sketching, orthographic projection, and 2D/3D design software are introduced in the context of design and prototyping assignments. Instruction and practice with hand, powered, and digital prototyping tools in the Product Realization Lab support students' implementation and iteration of physical project work. Project documentation, reflection, and in-class presentations are opportunities for students to find their design voice and practice sharing it with others.

**ME 103D. Engineering Drawing and Design. 1 Unit.**

Designed to accompany 203. The fundamentals of engineering drawing including orthographic projection, dimensioning, sectioning, exploded and auxiliary views, assembly drawings, and SolidWorks. Homework drawings are of parts fabricated by the student in the lab. Assignments in 203 supported by material in 103D and sequenced on the assumption that the student is enrolled in both courses simultaneously.

**ME 104B. Designing Your Life. 2 Units.**

The course employs a design thinking approach to help students develop a point of view about their life and career. The course focuses on an introduction to design thinking, the integration of work and worldview, and practices that support vocation formation. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching. Open to juniors, seniors and 5th year coterminals, all majors. Additional course information at <http://www.designingyourlife.org>.

**ME 104S. Designing Your Stanford. 2 Units.**

DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to Design Thinking. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Admission to be confirmed by email to Axess registered students prior to first class session. DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to design mindsets and practices. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Additional course information at <http://www.designingyourstanford.org>.

Same as: EDUC 118S

**ME 105. Designing for Impact. 3 Units.**

This course will introduce the design thinking process and skills, and explore unique challenges of solving problems and initiating action for public good. Design skills such as need-finding, insight development, and prototyping will be learned through project work, with a particular emphasis on the elements required to be effective in the social sector. ME101 recommended.

**ME 10N. Form and Function of Animal Skeletons. 3 Units.**

Preference to freshmen. The biomechanics and mechanobiology of the musculoskeletal system in human beings and other vertebrates on the level of the whole organism, organ systems, tissues, and cell biology. Field trips to labs.

Same as: BIOE 10N

**ME 110. Design Sketching. 2 Units.**

Freehand sketching, rendering, and design development. Students develop a design sketching portfolio for review by program faculty. May be repeated for credit.

**ME 110B. Digital Design Principles and Applications. 2 Units.**

Building upon foundation design principles, project-based individual / group exploration and critique facilitates a self-guided learning process, where analytical problem-solving approaches are cultivated through real-time implementation in digital tools. A series of diverse projects are brought together in conjunction with related student project portfolio development. Class Prerequisites: Students must have completed ME110 with high levels of understanding, engagement. May be repeat for credit.

**ME 112. Mechanical Systems Design. 4 Units.**

Lecture/lab. Characteristics of machine elements including gears, bearings, and shafts. Design for fatigue life. Electric motor fundamentals. Transmission design for maximizing output power or efficiency. Mechanism types, linkage analysis and kinematic synthesis. Team-based design projects emphasizing the balance of physical with virtual prototyping based on engineering analysis. Lab for dissection of mechanical systems and project design reviews. Prerequisites: 80, 101. Recommended: 203, ENGR 15.

**ME 113. Mechanical Engineering Design. 4 Units.**

Capstone course. Mechanical engineering design is experienced by students as they work on team projects. Prerequisites: 80, 101, 112, 203. Enrollment limited to ME majors. One of two available capstone design courses.

**ME 115A. Introduction to Human Values in Design. 3 Units.**

An intensive project-based class that introduces the central philosophy of the product design program. Students learn how to use the lens of human needs to innovate at the intersection of technical factors (feasibility), business factors (viability), and human values (desirability). Students work toward mastery of the human-centered design methodology through several real-world, team-based projects. Students gain fluency in designing solutions ranging from physical products, to digital interfaces, to services and experiences. Students are immersed in building their individual and team capacities around core design process and methods, and emerge with a strong foundation in needfinding, synthesis, ideation, rapid prototyping, user testing, iteration, and storytelling.

**ME 115B. Product Design Methods. 3 Units.**

Problem-finding, problem-solving, intermediate creativity methods and effective techniques for researching human factors and presenting product concepts. Individual- and team-based design projects emphasizing advanced visual thinking and prototyping skills.

**ME 115C. Design and Business Factors. 3 Units.**

Design and Business Factors: Introduces business concepts critical to determining the success of new products and services. Students will learn to estimate the cost of R&D for new product development. Using financial analysis, ROI, and tollgates to reduce development risk will be explored using case studies and simulations. Students will develop a bill of materials and a profit and loss statement for a sample product concept, prototype a design consultancy, and create a business proposal for a proposed new product company.

**ME 115C. The Art and Science of Measuring Fluid Flows. 2 Units.**

The roles of fluid flows in natural systems such as swimming protozoa and planet-forming nebulae, and technologies such as biomolecular assay devices and jet engines. The analytical background for fluid sciences. Phenomena such as shock waves and vortex formation that create flow patterns while challenging engineers. Visualization and measurement techniques to obtain full-field flow pattern information. The physics behind these technologies. Field trips; lab work. (Eaton).

**ME 120. History and Philosophy of Design. 3 Units.**

Major schools of 19th- and 20th-century design (Arts and Crafts movement, Bauhaus, Industrial Design, and postmodernism) are analyzed in terms of their continuing cultural relevance. The relation of design to art, technology, and politics; readings from principal theorists, practitioners, and critics; recent controversies in industrial and graphic design, architecture, and urbanism. Enrollment limited to 65.

**ME 123. Computational Engineering. 4 Units.**

The design of wind turbines, biomedical devices, jet engines, electronic units, and almost every other engineering system, require the analysis of its flow and thermal characteristics to ensure optimal performance and safety. The continuing growth of computer power and the emergence of general-purpose engineering software has fostered the use of computational analysis as a complement to experimental testing. Virtual prototyping is a staple of modern engineering practice. This course is an introduction to Computational Engineering using commercial analysis codes, covering both theory and applications. Assuming limited knowledge of computational methods, the course starts with introductory training on the software, using a series of lectures and hands-on tutorials. We utilize the ANSYS software suite, which is used across a variety of engineering fields. Herein, the emphasis is on geometry modeling, mesh generation, solution strategy and post-processing for diverse applications. Using classical flow/thermal problems, the course develops the essential concepts of Verification and Validation for engineering simulations, providing the basis for assessing the accuracy of the results. Advanced concepts such as the use of turbulence models, user programming and automation for design are also introduced. The course is concluded by a project, in which the students apply the software to solve a industry-inspired problem.

**ME 124. Visual Expressions. 3 Units.**

A hands-on exploration of the elements and principles of 2D and 3D design common to all the visual arts. Through a mix of theory, analysis, and practice the student will develop his/her ability to interpret visual content and produce effective imagery. Limited enrollment, attendance at first class required.

**ME 125. Visual Frontiers. 3 Units.**

The student will learn how to use graphic design to communicate online, in person, and through printed matter. Fundamentals of visual communications will be applied to branding exercises, typographic studies, color explorations, drawing exercises, use of photography, and use of grid and layout systems.

**ME 12N. The Jet Engine. 3 Units.**

Preference to freshmen. This seminar describes how a jet engine works with examples given from modern commercial and military engines. We then explore the technologies and sciences required to understand them including thermodynamics, turbomachinery, combustion, advanced materials, cooling technologies, and testing methods. Visits to research laboratories, examination of a partially disassembled engine, and probable operation of a small jet engine. Prerequisites: high school physics and preferably calculus.

**ME 12SC. Hands-on Jet Engines. 2 Units.**

How jet engines transformed the world through intercontinental travel causing internationalization in daily life. Competition driving improvements in fuel economy, engine lifetime, noise, and emissions.

**ME 131A. Heat Transfer. 3-5 Units.**

The principles of heat transfer by conduction, convection, and radiation with examples from the engineering of practical devices and systems. Topics include transient and steady conduction, conduction by extended surfaces, boundary layer theory for forced and natural convection, boiling, heat exchangers, and graybody radiative exchange. Prerequisites: 70, 30 (formerly listed at ENGR30). Recommended: intermediate calculus, ordinary differential equations.

**ME 131B. Fluid Mechanics: Compressible Flow and Turbomachinery. 4 Units.**

Engineering applications involving compressible flow: aircraft and rocket propulsion, power generation; application of mass, momentum, energy and entropy balance to compressible flows; variable area isentropic flow, normal shock waves, adiabatic flow with friction, flow with heat addition. Operation of flow systems: the propulsion system. Turbomachinery: pumps, compressors, turbines. Angular momentum analysis of turbomachine performance, centrifugal and axial flow machines, effect of blade geometry, dimensionless performance of turbomachines; hydraulic turbines; steam turbines; wind turbines. Compressible flow turbomachinery: the aircraft engine. Prerequisites: 70, ENGR 30.

**ME 137. 3D Printing for Non-Technical Innovators. 1-3 Unit.**

3D Printing is a method of creation that requires only some basic computer skills and a few rules of thumb. This class will allow students to discover for themselves the potential and limitations of 3D Printing through a build intensive design project. This course is an excellent option for anyone who ever wanted to prototype an invention, create a work of art, customize a product or just make something cool – and yet lacked the skills or a fully equipped workshop. Students may enroll for 1 unit to attend the lectures or 3 units for the complete project course. No prior technical knowledge needed. Note: Course material is targeted toward non-ME Design and non-PD majors. An application is required for the 3-unit course option. Please complete the online application by Friday, March 25th. The application is available on the course website: [web.stanford.edu/class/me137](http://web.stanford.edu/class/me137).

Same as: ME 237

**ME 139. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139, EDUC 239, ME 231

**ME 13N. The Great Principle of Similitude. 3 Units.**

Basic rules of dimensional analysis were proposed by Sir Isaac Newton. Lord Rayleigh called the method  $\zeta$ The Great Principle of Similitude. $\zeta$  On its surface, it is a look at the relationships between physical quantities which uses their basic  $\zeta$ units. $\zeta$  In fact, it is a powerful and formalized method to analyze complex physical phenomena, including those for which we cannot pose, much less solve, governing equations. The method is also valuable to engineers and scientist as it helps perform back-of-the-envelope estimates and derive scaling laws for the design of machines and processes. The principle has been applied successfully to the study of complex phenomena in biology, aerodynamics, chemistry, sports, astrophysics, and forensics, among other areas. In this course, the students will be provided with the basic tools to perform such flexible and powerful analyses. We will then review particular example analyses. These will include estimating the running speed of a hungry tyrannosaurus rex, a comparison of the flights of mosquitos and jet airliners, the cost of submarines, and the energy released by an atomic weapon. We will then work together as a class to identify problems in everyday life and/or current world events to analyze with this powerful tool.

**ME 140. Advanced Thermal Systems. 5 Units.**

Capstone course. Thermal analysis and engineering emphasizing integrating heat transfer, fluid mechanics, and thermodynamics into a unified approach to treating complex systems. Mixtures, humidity, chemical and phase equilibrium, and availability. Labs apply principles through hands-on experience with a turbojet engine, PEM fuel cell, and hybrid solid/oxygen rocket motor. Use of MATLAB as a computational tool. Prerequisites: ENGR 30, ME 70, and 131A,B.

**ME 141. Alternative Energy Systems. 5 Units.**

Capstone course. Energy analysis, diagnostics and engineering of selected alternative energy systems with an integrated thermodynamic, heat transfer, and fluid mechanic approach. Mixtures, transport, reactions, electrochemical processes and photovoltaic effects. Labs apply principles through hands-on experience with selected alternative energy systems and their components. Use of MATLAB as an analysis tool.

**ME 14N. How Stuff Is Made. 3 Units.**

The design and engineering of products and processes, such as machining, fabric, food, and electrical goods. Tradeoffs in choice of materials, features, and process selection. Final project: students research and redesign the engineering and manufacturing aspects of a product and its processes with an eye toward sustainability. Includes several field trips to manufacturing facilities.

**ME 161. Dynamic Systems, Vibrations and Control. 3-4 Units.**

(Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Demonstrations and laboratory experiments. Prerequisite: Calculus (differentiation and integration), ordinary differential equations (e.g., CME 102 or MATH53), basic linear algebra (determinants and solving linear equations), and familiarity with basic dynamics ( $F=m*a$ ) and electronics ( $v=i*R$ ). ME undergraduates must enroll for 4 units with lab. All others should enroll for 3 units without lab. Same as: ME 261

**ME 16N. Energy & The Industrial Revolution - Past, Present & Future. 3 Units.**

When you flip a light switch, or drive to your neighborhood grocery store or do a Google search, it is easy to forget that we receive the benefit of 250 years of industrial revolution, which has been arguably the most remarkable period of human history. This revolution has resulted in exponential growth in the world's economy as well as unprecedented prosperity and improvements in our quality of life. The industrial revolution has been largely about how we sourced, distributed and used energy. It was and continues to be predominantly based on fossil energy. But the impact of our traditional energy sources on climate change is one of the most daunting issues of the 21st century because it will affect the world as a whole - the 7-10 billion people, businesses, nations, ecosystems. The choice that our society is asked to make is often posed as follows: Should we continue our exponential economic growth based on fossil fuels and ignore the environment, or should we reduce our greenhouse gas emissions at the cost of our economic growth? This is a false choice because it is based on extrapolating the past. It does not account for the capacity for innovations in technology, finance and business to create sustainable energy future, one that allows the economy and our environment to be mutually inclusive. In short, we need a new industrial revolution. This seminar course will: (a) provide a view of the current energy landscape and the magnitude of the challenge; (b) discuss some techno-economic trends that we are currently witnessing; and (c) identify opportunities to innovate in technology, finance and business that could create the foundations for a new industrial revolution.

**ME 17. The Science of Flames. 3 Units.**

This course is about what causes flames to look like they do and about what causes them to propagate. The physical and chemical phenomena that govern behaviors of flames will constitute the topics for discussion. The basic principles that govern flame phenomena include the conservation of mass, the first law of thermodynamics, and the momentum principle. Since flame processes are controlled by the rates of chemical reactions, these basic principles will be applied when account is made for the chemical transformations that occur when reactant bonds are broken and new bonds are formed, producing combustion products. In essence, this course serves as an introduction to combustion science.

**ME 170A. Mechanical Engineering Design- Integrating Context with Engineering. 4 Units.**

First course of two-quarter capstone sequence. Working in project teams, design and develop an engineering system addressing a real-world problem. Projects are based on themes addressing most pressing needs of human society; for 2017-2018 the theme is clean energy. Learn and utilize industry development process; first quarter focuses on establishing requirements and narrowing to top concept. Second quarter emphasizes engineering analysis, design risk assessment, build, test and iteration. Learn and apply professional communication skills in the areas of speaking, presenting, writing, and listening. This is the first quarter of a 2-quarter course. Students must also enroll in ME 170b; completion of 170b required to earn grade in 170a. Enrollment limited, by application only.

**ME 170B. Mechanical Engineering Design: Integrating Context with Engineering. 4 Units.**

Second course of two-quarter capstone sequence. Working in project teams, design and develop an engineering system addressing a real-world problem. Projects are based on themes, addressing most pressing needs of human society; for 2017-2018 the theme is clean energy. Learn and utilize industry development process; first quarter focuses on establishing requirements and narrowing to top concept, second quarter emphasizes engineering analysis, design risk assessment, build, test and iteration. Learn and apply professional communication skills in the areas of speaking, presenting, writing, and listening.

**ME 171E. Aerial Robot Design. 4 Units.**

(Graduate students only enroll in ME 271e or AA 248e) A result-focused introduction to the design of winged aerial robots capable of vertical takeoff and landing for a wide range of applications. Students will learn how to ideate specific aerial robot applications and make an appropriate design from scratch that meets mission requirements. Design skill outcomes include: robot need identification based on mission requirements; system ideation and sizing; making design performance tradeoffs; aerodynamic wing design; CAD assembly; communicating the design and its application. The hands-on lab experience includes prototyping the aerial robot mission, to inform system design, by building and flying quadcopters. Prerequisites: intro level undergraduate fluid mechanics or aerodynamics (e.g. ME 70 or AA 100) or equivalent; Intro level undergraduate electronics or Arduino experience; MATLAB experience. Same as: AA 248E, ME 271E

**ME 177. Global Engineers' Education. 3 Units.**

A project based course for those who would like to use their engineering backgrounds to address real world challenges faced by underserved communities globally. In direct collaboration with an underserved community from a rural village in India, students will develop engineering solutions to the challenge of sanitation and hygiene. Focus will be on working with the community rather than for them. Concepts covered will include designing with what designers care about at the center, articulating and realizing individual and community aspirations, ethics of engaging with underserved communities, and methodology of working sustainably with an underserved community.

**ME 181. Deliverables: A Mechanical Engineering Design Practicum. 3 Units.**

The goal of this course is to enable students to solve industry design challenges using modern mechanical design methods. Each week a new practical skill is introduced. These skills have been identified by recently graduated Stanford engineers as being critical to their work. Students then build their command of each skill by completing a simplified yet representative project and submitting deliverables similar to those required in industry. For example, students will learn about how to properly design parts with O-rings and then will be required to design a water-tight enclosure and submit CAD, mechanical drawings, and a bill of materials. Several of the classes feature recent Stanford graduates as guest lecturers. In addition to teaching applicable skills from their job and providing examples from industry, these engineers will also expose students to the range of responsibilities and daily activities that makeup professional mechanical design work. Prerequisites: ME203, ME103d and ME112 OR consent of instructor. Enrollment limited, students complete application on first day of class.

**ME 182. Electric Transportation. 3 Units.**

Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues reconsider how we move, finding sustainable transportation solutions. An introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Students will also have a fun opportunity for a hands-on experience with an electric car. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.

**ME 185. Electric Vehicle Design. 3 Units.**

This project based class focuses on the design and prototyping of electric vehicles. Students learn the fundamentals of vehicle design in class and apply the knowledge as they form teams and work on projects involving concept, specifications, structure, systems, integration, assembly, testing, etc. The class meets once a week to learn about the fundamentals, exchange their experiences, and coordinate between projects. The teams of 3-5 will work on their projects independently.

**ME 18Q. Teamology: Creative Teams and Individual Development. 3 Units.**

Preference to sophomores. Roles on a problem solving team that best suit individual creative characteristics. Two teams are formed for teaching experientially how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities.

**ME 19. Pre-field Course for Alternative Spring Break: Design for Social Change. 1 Unit.**

Focus is on applying design, technology and innovation to catalyze social change. Topics include identifying social needs, learning different brainstorming methods, developing an applicable service model or product, prototyping, implementation, and reiteration. Reading and service components, followed by week-long Alternative Spring Break trip. See <http://d4sc.blogspot.com>. Enrollment limited to 12. May be repeated for credit.

**ME 190. Ethical Issues in Mechanical Engineering. 4 Units.**

Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; whistle blowing; engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations, and engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies and field research. Enrollment limited to 25 Mechanical Engineering majors.

**ME 191. Engineering Problems and Experimental Investigation. 1-5 Unit.**

Directed study and research for undergraduates on a subject of mutual interest to student and staff member. Student must find faculty sponsor and have approval of adviser.

**ME 191H. Honors Research. 1-5 Unit.**

Student must find faculty honors adviser and apply for admission to the honors program.nn (Staff).

**ME 199A. Practical Training. 1 Unit.**

For undergraduate students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

**ME 200. Judging Historical Significance Through the Automobile. 1 Unit.**

This seminar is for students to learn how to assess the impact of historical importance through the lens of the automobile. Students will participate in discussions about measuring and judging historical importance from a number of perspectives - engineering, aesthetic, historical, etc. They will then decide on criteria and use these to be a part of a judging team at the Pebble Beach Concours d'Elegance. The Pebble Beach event is the leading concours for automobiles in the United States. Using the criteria established by the students, the judging team, including the students, will decide the recipient of the Stanford/Revs Automotive History Trophy for 2017 and have the opportunity to present it on the lawn at Pebble Beach Lodge in August. Must apply using this application: <http://revs.stanford.edu/course/703>. Must attend first class to be considered for acceptance, no exceptions.

**ME 201. Dim Sum of Mechanical Engineering. 1 Unit.**

Introduction to research in mechanical engineering for M.S. students and upper-division undergraduates. Weekly presentations by current ME Ph.D. and second-year fellowship students to show research opportunities across the department. Strategies for getting involved in a research project.

**ME 202. Mechaphonics: Smart Phone-Enabled Mechatronic Systems. 3 Units.**

Explore the use of smartphones and tablets as enabling components within modern mechatronic systems. Emphasis on leveraging Android resources (user interface, communications, sensors) in combination with the Arduino microcontroller platform to design and build complex mechatronic devices. Topics include: basic Android application development, Android communications, sensors, Arduino, Arduino peripherals. Large, open-ended team project. Android device and programming hardware required. Limited enrollment. Prerequisites: ME210, ME218, or permission of instructor.

**ME 203. Design and Manufacturing. 4 Units.**

Integrated experience involving need finding, product definition, conceptual design, detail design, prototype manufacture, public presentation of outcomes, archiving and interpreting the product realization process and its results. Presents an overview of manufacturing processes crucial to the practice of design. Corequisite: 103D or CAD experience. Recommended: 101.

**ME 204A. Bicycle Design and Frame-Building. 1 Unit.**

Lecture/lab. The engineering and artistic execution of designing and building a bicycle frame. Fundamentals of bicycle dynamics, handling, and sizing. Manufacturing processes. Films, guest lecturers, field trips. Each student designs and fabricates a custom bicycle frame. This course is now a two part course series ME204A&B. Limited enrollment. Prerequisite: 203 or equivalent.

**ME 204B. Bicycle Design and Frame-Building. 3 Units.**

The engineering and artistic execution of designing and building a bicycle frame. The fundamentals of bicycle dynamics, handling, and sizing. Manufacturing processes. Films, guest lecturers, field trips. Each student designs a custom bicycle frame that they continue from ME204A in winter quarter. Limited enrollment, admission by consent of instructors. Attendance at first lecture is required. Both ME204A and ME204B must be taken. Prerequisite: 203 or equivalent.

**ME 206A. Design for Extreme Affordability. 4 Units.**

Design for Extreme Affordability (fondly called Extreme) is a two-quarter course offered by the d.school through the School of Engineering and the Graduate School of Business. This multidisciplinary project-based experience creates an enabling environment in which students learn to design products and services that will change the lives of the world's poorest citizens. Students work directly with course partners on real world problems, the culmination of which is actual implementation and real impact. Topics include design thinking, product and service design, rapid prototype engineering and testing, business modelling, social entrepreneurship, team dynamics, impact measurement, operations planning and ethics. Possibility to travel overseas during spring break. Previous projects include d.light, Driptech, Earthenable, Embrace, the Lotus Pump, MiracleBrace, Noora Health and Sanku. Periodic design reviews; Final course presentation and expo; industry and adviser interaction. Limited enrollment via application. Must sign up for ME206A and ME206B. See [extreme.stanford.edu](http://extreme.stanford.edu).

**ME 206B. Design for Extreme Affordability. 4 Units.**

Design for Extreme Affordability (fondly called Extreme) is a two-quarter course offered by the d.school through the School of Engineering and the Graduate School of Business. This multidisciplinary project-based experience creates an enabling environment in which students learn to design products and services that will change the lives of the world's poorest citizens. Students work directly with course partners on real world problems, the culmination of which is actual implementation and real impact. Topics include design thinking, product and service design, rapid prototype engineering and testing, business modelling, social entrepreneurship, team dynamics, impact measurement, operations planning and ethics. Possibility to travel overseas during spring break. Previous projects include d.light, Driptech, Earthenable, Embrace, the Lotus Pump, MiracleBrace, Noora Health and Sanku. Periodic design reviews; Final course presentation and expo; industry and adviser interaction. Limited enrollment via application. Must sign up for ME206A and ME206B. See [extreme.stanford.edu](http://extreme.stanford.edu).

**ME 207. Movie Design. 2 Units.**

Learn the ins and outs of high-speed filmmaking in the digital age; writing, directing, shooting, and editing. We'll do it through a rapid prototyping approach to filmmaking. Whether you have tons of experience or none, you'll leave with new tactics that will up your storytelling, filmmaking, and design chops simultaneously. These techniques are useful whether you plan to move to Hollywood or create a video for the web. Project-based: students will design, write, shoot, edit, and screen a short film in the span of one week. It's going to be quick but intense, kind of like cross-fit for your storytelling and video creating muscles. You'll sweat a bit, but you'll feel confident afterwards. Students should be prepared to spend significant amount of out of class work-time creating movies: for one week + one weekend, see "Notes" for specific dates. Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ME 208. Patent Law and Strategy for Innovators and Entrepreneurs. 2-3 Units.**

This course teaches the essentials for a startup to build a valuable patent portfolio and avoid a patent infringement lawsuit. Jeffrey Schox, who is the top recommended patent attorney for Y Combinator, built the patent portfolio for Twilio (IPO), Cruise (\$1B acquisition), and 250 startups that have collectively raised over \$2B in venture capital. This course is equally applicable to EE, CS, and Bioengineering students. For those students who are interested in a career in Patent Law, please note that this course is a prerequisite for ME238 Patent Prosecution. Same as: MS&E 278

**ME 209. Imperfections in Crystalline Solids. 3 Units.**

To develop a basic quantitative understanding of the behavior of point, line and planar defects in crystalline solids. Particular attention is focused on those defects that control the thermodynamic, structural and mechanical properties of crystalline materials.

**ME 20N. Haptics: Engineering Touch. 3 Units.**

Students in this class will learn how to build, program, and control haptic devices, which are mechatronic devices that allow users to feel virtual or remote environments. In the process, students will gain an appreciation for the capabilities and limitations of human touch, develop an intuitive connection between equations that describe physical interactions and how they feel, and gain practical interdisciplinary engineering skills related to robotics, mechanical engineering, electrical engineering, bioengineering, and computer science. In-class laboratories will give students hands-on experience in assembling mechanical systems, making circuits, programming Arduino microcontrollers, testing their haptic creations, and using Stanford's student prototyping facilities. The final project for this class will involve creating a novel haptic device that could be used to enhance human interaction with computers, mobile devices, or remote-controlled robots.

**ME 21. Renaissance Machine Design. 3 Units.**

Preference to freshmen. Technological innovations of the 1400s that accompanied the proliferation of monumental art and architecture by Brunelleschi, da Vinci, and others who designed machines and invented novel construction, fresco, and bronze-casting techniques. The social and political climate, from the perspective of a machine designer, that made possible and demanded engineering expertise from prominent artists. Hands-on projects to provide a physical understanding of Renaissance-era engineering challenges and introduce the pleasure of creative engineering design. Technical background not required.

**ME 210. Introduction to Mechatronics. 4 Units.**

Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mechatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Prerequisites: ENGR 40, CS 106, or equivalents. Same as: EE 118

**ME 212. Calibrating the Instrument. 1 Unit.**

For first-year graduate students in the Joint Program in Design. Means for calibrating the designer's mind/body instrument through tools including improvisation, brainstorming, creative imaging, educational kinesiology, and Brain Gym. Current design issues; guest speakers; shared stories; and goal setting.

**ME 215C. Analytical Product Design. 3 Units.**

Analytical design experience for consumer product. Integration of models of engineering function, manufacturing costs, and market conditions. Introduction to modeling micro economics, market models, and consumer surveying as applied in product design. Introduction to consumer product cost modeling. Draw from other coursework to build engineering function model. Student teams build and link these models in an optimization framework to maximize profitability. Build prototypes for engineering function and form expression.

Same as: APD

**ME 216A. Advanced Product Design: Needfinding. 3-4 Units.**

Human needs that lead to the conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social ethnographic issues; and needfinding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future. Prerequisites for undergraduates: ME115A, ME115B and ME203, or consent of the instructor.

**ME 216B. Advanced Product Design: Implementation 1. 4 Units.**

Summary project using knowledge, methodology, and skills obtained in Product Design major. Students implement an original design concept and present it to a professional jury. Prerequisite: 216A.

**ME 216C. Advanced Product Design: Implementation 2. 4 Units.**

ME216C: Implementation II is a continuation of ME216B. Students would develop project from ME216B to a further state of completion. Design will be completed, details about manufacturing, cost and production will be developed. Students will validate their projects by making them real in the world. Prerequisites for class are ME216A and ME216B. Prerequisite: 216A and 216B.

**ME 216M. Introduction to the Design of Smart Products. 4 Units.**

This course will focus on the technical mechatronic skills as well as the human factors and interaction design considerations required for the design of smart products and devices. Students will learn techniques for rapid prototyping of smart devices, best practices for physical interaction design, fundamentals of affordances and signifiers, and interaction across networked devices. Students will be introduced to design guidelines for integrating electrical components such as PCBs into mechanical assemblies and consider the physical form of devices, not just as enclosures but also as a central component of the smart product. Prerequisites include: CS106A, E40, and ME 210 or ME218 highly recommended, or instructor approval.

**ME 217. Design & Construction in Wood. 3 Units.**

Exploration of the design and construction of objects using wood including the rich history and current trends for furniture. Taught in the Product Realization Lab. Limited enrollment via application; see [stanford.edu/class/me217](http://stanford.edu/class/me217).

**ME 218A. Smart Product Design Fundamentals. 4-5 Units.**

Lecture/Lab. Team design project series on programmable electromechanical systems design. Topics: transistors as switches, basic digital and analog circuits, operational amplifiers, comparators, software design, state machines, programming in C. Lab fee. Limited enrollment.

**ME 218B. Smart Product Design Applications. 4-5 Units.**

Lecture/lab. Second in team design project series on programmable electromechanical systems design. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, statecharts, sensors, actuators, noise, and power supplies. Lab fee. Limited enrollment. Prerequisite: 218A or passing the smart product design fundamentals proficiency examination.

**ME 218C. Smart Product Design Practice. 4-5 Units.**

Lecture/lab. Advanced level in series on programmable electromechanical systems design. Topics: inter-processor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Team project. Lab fee. Limited enrollment. Prerequisite: 218B.

**ME 218D. Smart Product Design: Projects. 3-4 Units.**

Lecture/lab. Industrially sponsored project is the culmination of the Smart Product Design sequence. Student teams take on an industrial project requiring application and extension of knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures extend the students' knowledge of electronic and software design, and electronic manufacturing techniques. Topics: chip level design of microprocessor systems, real time operating systems, alternate microprocessor architectures, and PCB layout and fabrication. Prerequisite: 218C.

**ME 219. The Magic of Materials and Manufacturing. 3 Units.**

Intended for design-oriented students who anticipate imagining and then creating new products with a focus on materiality and brand or design and business. Assumes basic knowledge of materials and manufacturing processes which results from taking ENGR 50, ME 203, or equivalent course/life experience. Goal is to acquire professional foundation information about materials and materiality from a product design point-of-view, manufacturing processes and business systems inside a factory, and story-telling by book authorship, essay writing, and multimedia presentation. Goal is for students to exhibit a deep and life-long love of materials and manufacturing in order to make great products and tell a good story about each one.

**ME 220. Introduction to Sensors. 3-4 Units.**

Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices. Recommended Pre-requisites or equivalent knowledge: Physics 43 electromagnetism, Physics 41 mechanics, Math 53 Taylor series approximation, 2nd order Ordinary Diff Eqns, ENGR40A/Engr40 or ME210, i.e. some exposure to building basic circuits.

**ME 221. Green Design Strategies and Metrics. 2 Units.**

Foundation in sustainable product design principles, reinforced by conceptual design projects. Discuss what aspects of sustainability matter most for different products. Application of dozens of strategies to improve product sustainability. Frameworks, measurements, and decision-making tools to navigate the complexities of designing greener products. Life-cycle analysis, materials, energy use, biomimicry, product-service systems, persuasive design, design for end-of-life, and systems thinking.

**ME 224. The Consumer Mind and Behavior Design. 3 Units.**

This course will introduce new theories and research concerning neuroscience and behavioral psychology to examine models for designing user habits. Students will learn how to use the latest behavior change methodologies from industry-leading experts to design or re-design a customer experience. Course topics will be taught in the context of design thinking: empathize-define-ideate-prototype-test. Students will leave the class having prototyped, tested, and improved a user behavior.

**ME 225. Mystery of Manufacturing. 3 Units.**

Mystery of Manufacturing is intended for design- and engineering-oriented students who anticipate or have an interest in launching products. Where the cousin of this class, ME219, is an overview of fabrication and factory systems, this course will look at manufacturing systems more holistically: what does it take to get a product from your idea into peoples' hands? We'll look at factors that drive location, distribution, and supply chain decisions, and we'll look closely at the inner workings of factories. This course assumes basic knowledge of materials and manufacturing processes resulting from ENGR 50, ME 203, ME 219 or equivalent course/life experience. The goal is to acquire a professional foundation in factory manufacturing systems and the business of manufacturing through story-telling, essay writing, and multimedia presentation. We hope students will exhibit a deep and life-long love of the complexity and flexibility of manufacturing systems in order to launch great products into the world.

**ME 226. Designing Sustainable Behavior. 1 Unit.**

How do you design a product so people will use it in the most sustainable way? Through practical design exercises you experience how selected design tools can help you affect the behavior of your target group. The course consists of an 8-hour workshop on Saturday April 6th in Studio2 at the d.school, followed by a group project finishing April 24th. Students may request to only audit the workshop by emailing [jdaae@stanford.edu](mailto:jdaae@stanford.edu). The course builds upon and contributes to an ongoing research project. Prerequisite: training in product design.

**ME 227. Vehicle Dynamics and Control. 3 Units.**

The application of dynamics, kinematics, and control theory to the analysis and design of ground vehicle behavior. Simplified models of ride, handling, and braking, their role in developing intuition, and limitations in engineering design. Suspension design fundamentals. Performance and safety enhancement through automatic control systems. In-car laboratory assignments for model validation and kinesthetic understanding of dynamics. Limited enrollment. Prerequisites: ENGR 105, consent of instructor.

**ME 228. The Future of Mechanical Engineering. 1 Unit.**

This seminar series provides an overview of current research in mechanical engineering and of its interface with other engineering and non-engineering disciplines. The seminar is targeted at senior mechanical engineering undergraduates and mechanical engineering graduate students. Presenters will be selected external speakers who feature exciting, cutting-edge applications of mechanical engineering.

**ME 22N. Smart Robots in our Mix: Collaborating in High Tech Environments of Tomorrow. 3 Units.**

This course invites students to explore rules of engagement in a global digitally interconnected world they will create with the robots in their society. The material will be taught in the context of ubiquitous integrated technology that will be part of their future reality. Human-robot interactions will be an integral part of future diverse teams. Students will explore what form will this interaction take as an emerging element of tomorrow's society, be it medical implanted technology or the implications of military use of robots and social media in future society. Students will learn to foster their creative confidence to explore collaboration by differences for social innovation in a digitally networked world.

**ME 231. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139, EDUC 239, ME 139

**ME 232. Additive Manufacturing- From Fundamentals to Applications. 3 Units.**

Additive manufacturing (AM) is an emerging technique for direct conversion of 3D computer aided designs into physical objects using a variety of approaches. AM technologies are simple and flexible processes that allow for the creation of very complex and customizable 3D objects in just a few process steps. This lecture gives an overview of available processes and current research in additive manufacturing. Students will get to know how AM can change the way we prototype and manufacture products in the future.

**ME 234. Introduction to Neuromechanics. 3 Units.**

Understanding the role of mechanics in brain development, physiology, and pathology. Mechanics of brain cells: neurons, mechanobiology, mechanotransduction. Mechanics of brain tissue: experimental testing, constitutive modeling, computational modeling. Mechanics of brain development: gyrification, cortical folding, axon elongation, lissencephaly, polymicrogyria. Mechanics of traumatic brain injury: high impact loading, neural injury. Mechanics of brain tumors, brain cancer, tumor growth, altered cytoskeletal mechanics. Mechanics of neurological disorders: autism, dementia, schizophrenia. Mechanics of brain surgery.

**ME 235. Understanding Superfans and their Heroes. 2-3 Units.**

Harness the power of the hero coefficient through a radical team-based, hands-on, multidisciplinary class. Students will learn and utilize the principles of Empathy-Define-Ideate-Prototype-Test components of the d.thinking process. Why do superfans love their heroes? You'll get to prototype and explore how superfans connect with their heroes, understanding this connective tissue works will give your own ideas a boost. We'll be studying heroes the likes of Dale Earnhardt, Michael Jordan and Stephen Colbert. Expect to leave this class ready to spread the word about heroes and superfans and make everyone at your company or on your team feel like one. You will hear from special guests and take a field trip to a racetrack. Sponsored by the Revs Program. Limited enrollment. FAQ and apply here: <http://revs.stanford.edu/course/693>.

**ME 236. Tales to Design Cars By. 1-3 Unit.**

Students learn to tell personal narratives and prototype connections between popular and historic media using the automobile. Explores the meaning and impact of personal and preserved car histories. Storytelling techniques serve to make sense of car experiences through engineering design principles and social learning, Replay memories, examine engagement and understand user interviews, to design for the mobility experience of the future. This course celebrates car fascination, and leads the student through finding and telling a car story through the REVS photographic archives, ethnographic research, interviews, and diverse individual and collaborative narrative methods-verbal, non-verbal, and film. Methods draw from socio-cognitive psychology design thinking, and fine art; applied to car storytelling. Course culminates in a final story presentation and showcase. Restricted to co-term and graduate students. Class Size limited to 18.

**ME 237. 3D Printing for Non-Technical Innovators. 1-3 Unit.**

3D Printing is a method of creation that requires only some basic computer skills and a few rules of thumb. This class will allow students to discover for themselves the potential and limitations of 3D Printing through a build intensive design project. This course is an excellent option for anyone who ever wanted to prototype an invention, create a work of art, customize a product or just make something cool – and yet lacked the skills or a fully equipped workshop. Students may enroll for 1 unit to attend the lectures or 3 units for the complete project course. No prior technical knowledge needed. Note: Course material is targeted toward non-ME Design and non-PD majors. An application is required for the 3-unit course option. Please complete the online application by Friday, March 25th. The application is available on the course website: [web.stanford.edu/class/me137](http://web.stanford.edu/class/me137).

Same as: ME 137

**ME 238. Patent Prosecution. 2-3 Units.**

The course follows the patent application process through the important stages: inventor interviews, patentability analysis, drafting claims, drafting a specification, filing a patent application, and responding to an office action. The subject matter and practical instruction relevant to each stage are addressed in the context of current rules and case law. The course includes four written assignments: an invention capture, a claim set, a full patent application, and an Office Action response. Prerequisites: Law 326 (IP:Patents), Law 409 (Intro IP), ME 208, or MS&E 278.

**ME 239. Mechanics of the Cell. 3 Units.**

Understanding cells as the fundamental building blocks of life. Cell biomechanics: understanding how cell biology and biochemistry influence the mechanical properties of the cell. Cell mechanobiology: understanding how the mechanical environment, load, pressure, stress or strain can influence the cell's shape and integrity, and eventually its biology and biochemistry. Characterizing, modeling, and simulating cell behavior: energy and entropy of biopolymers and biomembranes. Characterizing mechanotransduction.

**ME 23Q. The Worldly Engineer. 3 Units.**

Preference given to sophomores. Engineering, its practice and products placed in multi-disciplinary context. Topics include the history of the engineering profession and engineering education; cultural influences on design; the role of national and international public policy and economics; dependence on natural resources; environmental impact; contemporary workforce development. Emphasis is on cultivating an appreciation of these issues to enrich the educational and professional pursuit of engineering.

**ME 241. Mechanical Behavior of Nanomaterials. 3 Units.**

Mechanical behavior of the following nanoscale solids: 2D materials (metal thin films, graphene), 1D materials (nanowires, carbon nanotubes), and 0D materials (metallic nanoparticles, quantum dots). This course will cover elasticity, plasticity and fracture in nanomaterials, defect-scarce nanomaterials, deformation near free surfaces, coupled optoelectronic and mechanical properties (e.g. piezoelectric nanowires, quantum dots), and nanomechanical measurement techniques. Prerequisites: Mechanics of Materials (ME80) or equivalent. Same as: MATSCI 241

**ME 242B. Mechanical Vibrations. 3 Units.**

For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed.

Same as: AA 242B

**ME 243. Designing Emotion- for Reactive Car Interfaces. 1-3 Unit.**

Students learn to define emotions as physiology, expression, and private experience using the automobile and shared space. Explores the meaning and impact of personal and user car experience. Reflective, narrative, and socio-cognitive techniques serve to make sense of car experiences; replay memories; examine engagement; understand user interviews. This course celebrates car fascination, and leads the student through finding and telling the car experience through discussion, ethnographic research, interviews, and diverse individual and collaborative narrative methods-verbal, non-verbal, and in car experiences. Methods draw from socio-cognitive psychology, design thinking, and fine art, and are applied to the car drive along or mobility experience. Course culminates in a final individual narrative presentation and group project demonstration.

**ME 244. Mechanotransduction in Cells and Tissues. 3 Units.**

Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted.

Same as: BIOE 283, BIOPHYS 244

**ME 24N. Designing the Car of the Future. 3 Units.**

Preference to freshmen. Automotive design drawing from all areas of mechanical engineering. The state of the art in automotive design and the engineering principles to understand vehicle performance. Future technologies for vehicles. Topics include vehicle emissions and fuel consumption, possibilities of hydrogen, drive-by-wire systems, active safety and collision avoidance, and human-machine interface issues.

**ME 250. Internal Combustion Engines. 1-5 Unit.**

Internal combustion engines including conventional and turbocharged spark ignition, and diesel engines. Lectures: basic engine cycles, engine components, methods of analysis of engine performance, pollutant emissions, and methods of engine testing. Lab involves hands-on experience with engines and test hardware. Limited enrollment. Prerequisites: 140.

**ME 257. Gas-Turbine Design Analysis. 3 Units.**

This course is concerned with the design analysis of gas-turbine engines. After reviewing essential concepts of thermo- and aerodynamics, we consider a turbofan gas-turbine engine that is representative of a business aircraft. We will first conduct a performance analysis to match the engine design with aircraft performance requirements. This is followed by examining individual engine components, including compressor, combustor, turbines, and nozzles, thereby increase the level of physical description. Aspects of modern engine concepts, environmental impacts, and advanced engine-analysis methods will be discussed. Students will have the opportunity to develop a simulation code to perform a basic design analysis of a turbofan engine. Course Prerequisites: ENGR 30, ME 70, ME 131B, CME 100. Same as: ME 357

**ME 25N. Energy Sustainability and Climate Change. 3 Units.**

One of the primary global challenges of the 21st century is providing the energy required to meet increasing demands due to population growth and economic development. A related challenge is mitigation of the effect of this energy growth on climate. This seminar will examine various scenarios for the energy resources required to meet future demand and the potential consequences on climate. The scientific issues underlying climate change and the coupling of energy use with changes in the global atmosphere that impact climate will be discussed.

**ME 260. Fuel Cell Science and Technology. 3 Units.**

Emphasis on proton exchange membrane (PEM) and solid oxide fuel cells (SOFC), and principles of electrochemical energy conversion. Topics in materials science, thermodynamics, and fluid mechanics. Prerequisites: MATH 43, PHYSICS 55, and ENGR 30 or ME 140, or equivalents.

**ME 261. Dynamic Systems, Vibrations and Control. 3-4 Units.**

(Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Demonstrations and laboratory experiments. Prerequisite: Calculus (differentiation and integration), ordinary differential equations (e.g., CME 102 or MATH53), basic linear algebra (determinants and solving linear equations), and familiarity with basic dynamics ( $F=m*a$ ) and electronics ( $v=i*R$ ). ME undergraduates must enroll for 4 units with lab. All others should enroll for 3 units without lab.

Same as: ME 161

**ME 262. Physics of Wind Energy. 3 Units.**

Formerly CEE 261. An introduction to the analysis and modeling of wind energy resources and their extraction. Topics include the physical origins of atmospheric winds; vertical profiles of wind speed and turbulence over land and sea; the wind energy spectrum and its modification by natural topography and built environments; theoretical limits on wind energy extraction by wind turbines and wind farms; modeling of wind turbine aerodynamics and wind farm performance. Final project will focus on development of a new wind energy technology concept. Prerequisites: CEE 262A or ME 351A.

Same as: CEE 261B, ENERGY 262

**ME 263. The Chair. 4 Units.**

Students design and fabricate a highly refined chair. The process is informed and supported by historical reference, anthropometrics, form studies, user testing, material investigations, and workshops in wood steam-bending, plywood forming, metal tube bending, TIG & MIG welding, upholstery & sewing. Pre-req: ME 203 Design and Manufacturing. May be repeat for credit.

**ME 264. d.science: Design for Science. 3-4 Units.**

Where does design fit into scientific research? In this class, we will design for how data are collected, how data are communicated, and how to apply scientific insights to community-based projects. This year's projects are inspired by the Citizen Science movement and The Year of the Bay. We will use human-centered design methods to understand the needs of bay area citizens through hands-on data collection, public data exploration and collaboration with local industry, government and research partners. With guest lectures from the design and science community, research mentors, and skills workshops, you will develop an actionable understanding of the challenges of collecting good data, the complexities of creating engaging stories with quantitative data, and the challenges of balancing insights from both human-centered design research and scientific research. One of the three class projects will involve visualizing and mapping big data. No prior programming or statistics experience required. Enrollment limited to 24. This course is open to graduate students from all schools and departments. Apply the first day of class.

**ME 265. Technology Licensing and Commercialization. 3 Units.**

Course focuses on how to bridge the gap between creation and commercialization with new ideas, inventions, and technology (not limited to mechanical engineering). Covers business strategies and legal aspects of determining what can be owned and licensed, how to determine commercial value, and what agreements and other paperwork is necessary. Discussion includes aspects of Contract and Intellectual Property law as well as provisions of license agreements and their negotiation. All materials provided including many sample documents.

**ME 267. Ethics and Equity in Transportation Systems. 3 Units.**

Transportation is a crucial element of human life. It enables communication with others, provides access to employment / economic opportunity, and transports goods upon which we depend. However, transportation also generates negative impacts: pollution, noise, energy consumption and risk to human life. Because of its enormous capability to affect our lives, transportation is one of the most highly regulated businesses in the world. These regulations are designed to promote social welfare, improve access, and protect vulnerable populations. This course examines the origins and impacts of transportation policy and regulation: who benefits, who bears the cost, and how social and individual objectives are achieved.

**ME 268. Robotics, AI and Design of Future Education. 1 Unit.**

The seminar will feature guest lectures from industry and academia to discuss the state of the affairs in the field of Robotics, Artificial Intelligence (AI), and how that will impact the future Education. The time of robotics/AI are upon us. Within the next 10 to 20 years, many jobs will be replaced by robots/AI. We will cover hot topics in Robotics, AI, how we prepare students for the rise of Robotics/AI, how we Re-design and Re-invent our education to adapt to the new era.

**ME 26N. Think Like a Designer. 3 Units.**

Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.

**ME 271E. Aerial Robot Design. 4 Units.**

(Graduate students only enroll in ME 271e or AA 248e) A result-focused introduction to the design of winged aerial robots capable of vertical takeoff and landing for a wide range of applications. Students will learn how to ideate specific aerial robot applications and make an appropriate design from scratch that meets mission requirements. Design skill outcomes include: robot need identification based on mission requirements; system ideation and sizing; making design performance tradeoffs; aerodynamic wing design; CAD assembly; communicating the design and its application. The hands-on lab experience includes prototyping the aerial robot mission, to inform system design, by building and flying quadcopters. Prerequisites: intro level undergraduate fluid mechanics or aerodynamics (e.g. ME 70 or AA 100) or equivalent; Intro level undergraduate electronics or Arduino experience; MATLAB experience.

Same as: AA 248E, ME 171E

**ME 277. Graduate Design Research Techniques. 3-4 Units.**

Students from different backgrounds work on real-world design challenges. The Design Thinking process with emphasis on: ethnographic techniques, need finding, framing and concept generation. The Design Thinking process as a lens to explore ways to better understand people and their culture. Cultural differences as a source of design inspiration, with the understanding that design itself is a culturally embedded practice.

**ME 27SI. Needfinding for Underserved Populations. 2 Units.**

The heart of any design process resides in empathy with users and their needs. Working in the realm of public service may engage a population to which the designer might not have been exposed. How different needfinding techniques can help designers to understand users from underserved populations and inspire them to create products and services that serve user needs.

**ME 281. Biomechanics of Movement. 3 Units.**

Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.

Same as: BIOE 281

**ME 283. Introduction to Biomechanics and Mechanobiology. 3 Units.**

Introduction to the application of mechanical engineering analysis to understand human physiology and disease. Topics include basics of musculoskeletal force analysis, cell mechanics, blood flow, and mechanical behaviors of tissues. Undergraduates should have taken ME 70 and ME 80 or equivalents.

**ME 284B. Cardiovascular Bioengineering. 3 Units.**

Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.

Same as: BIOE 284B

**ME 285. Computational Modeling in the Cardiovascular System. 3 Units.**

This course introduces computational modeling methods for cardiovascular blood flow and physiology. Topics in this course include analytical and computational methods for solutions of flow in deformable vessels, one-dimensional equations of blood flow, cardiovascular anatomy, lumped parameter models, vascular trees, scaling laws, biomechanics of the circulatory system, and 3D patient specific modeling with finite elements; course will provide an overview of the diagnosis and treatment of adult and congenital cardiovascular diseases and review recent research in the literature in a journal club format. Students will use SimVascular software to do clinically-oriented projects in patient specific blood flow simulations.

Same as: BIOE 285, CME 285

**ME 287. Mechanics of Biological Tissues. 4 Units.**

Introduction to the mechanical behaviors of biological tissues in health and disease. Overview of experimental approaches to evaluating tissue properties and mathematical constitutive models. Elastic behaviors of hard tissues, nonlinear elastic and viscoelastic models for soft tissues.

**ME 289A. Interactive Art / Performance Design. 2 Units.**

This class is for those who want the experience of designing and creating interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. This is a two-quarter long commitment during which students will first learn the design, planning, story boarding, budgeting, engineering, proposal creation and concept pitching of projects for applying for grants and presenting to funders. The second quarter will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part one of a two course series: ME 289A&B. Same as: TAPS 289A

**ME 289B. Interactive Art / Performance Creation. 3-4 Units.**

This class is the continuation of ME289A where students experience the designing and creating of interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. During this second quarter students will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part two of a two course series : ME 289A&B.

Same as: TAPS 289B

**ME 28SI. Professional Design Practices. 1 Unit.**

Lab. Professional skills are developed through web-based portfolio and resume building. Additionally, visits to local design consulting firms and in house design groups will help solidify students understanding of the designer in the professional workplace. May be repeated for credit.

**ME 290. GIVE BIG OR GO HOME. 3-4 Units.**

When individuals or organizations attempt to solve social problems by giving money, they often overlook the people at the center of the situation. The bigger the problem, the more removed the donors or funding institutions become from the human experience. You will learn how to use human centered design to shape your giving, while also considering the roles of larger systems. Students will learn design thinking methods, how to conceptualize a system in which you want to make a difference, and creative ways to think about financing change.

**ME 292. Humanize My Ride: Investigations in User-Centric Vehicle Design. 3 Units.**

Humanize My Ride is vehicle design for the extreme user. We will explore the relationship between specialized vehicles and their user's needs to inform a deep dive into designing and prototyping a unique purpose modified ride for a new type of user. Utilizing the designing thinking approach and emerging technology such as Google GLASS, student teams will interview drivers and users of specific purpose cars and trucks and then choose a new user to design and build for. Teams will work collectively on different elements of one vehicle to test with their user's needs. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the intersection of user-centric design, automotive technology, creative customization and hands-on building.

**ME 297. Forecasting for Innovators: Technology, Tools & Social Change. 3 Units.**

Technologies from the steam engine to the microprocessor have been mixed gifts, at once benefitting humankind and creating many of the problems facing humanity today. This class will explore how innovators can use forecasting methods to identify new challenges, develop responsive innovations and anticipate unintended consequences. Students will produce a long-range forecast project, applying a variety of methodologies including research, expert interviews and graphical exploration.

**ME 298. Silversmithing and Design. 3-4 Units.**

Skills involved in working with precious metals at a small scale. The course gives equal attention to design and the techniques involved in investment casting.

**ME 299A. Practical Training. 1 Unit.**

For master's students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

**ME 299B. Practical Training. 1 Unit.**

For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

**ME 29SI. Cars: A Crash Course. 1 Unit.**

Focus is on the basic mechanics and significance of cars. Topics include a basic, real-world understanding of automobile workings, histories, industries, cultural impact, and related media. Field trips to Tesla Motors and Go-Kart Racer will be organized, and there will be guest appearances by local automotive historians and enthusiasts. Students will get hands on experience with maintaining real cars, see high performance engines run, and have the opportunity to learn how to drive a manual transmission.

**ME 30. Engineering Thermodynamics. 3 Units.**

The basic principles of thermodynamics are introduced in this course. Concepts of energy and entropy from elementary considerations of the microscopic nature of matter are discussed. The principles are applied in thermodynamic analyses directed towards understanding the performances of engineering systems. Methods and problems cover socially responsible economic generation and utilization of energy in central power generation plants, solar systems, refrigeration devices, and automobile, jet and gas-turbine engines.

**ME 300A. Linear Algebra with Application to Engineering Computations. 3 Units.**

Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH51. Same as: CME 200

**ME 300B. Partial Differential Equations in Engineering. 3 Units.**

Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor. Same as: CME 204

**ME 300C. Introduction to Numerical Methods for Engineering. 3 Units.**

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B. Same as: CME 206

**ME 301. LaunchPad: Design and Launch your Product or Service. 4 Units.**

This is an intense course in product design and development offered to graduate students only (no exceptions). In just ten weeks, we will apply principles of design thinking to the real-life challenge of imagining, prototyping, testing and iterating, building, pricing, marketing, distributing and selling your product or service. You will work hard on both sides of your brain. You will experience the joy of success and the (passing) pain of failure along the way. This course is an excellent chance to practice design thinking in a demanding, fast-paced, results-oriented group with support from faculty and industry leaders. This course may change your life. We will treat each team and idea as a real start-up, so the work will be intense. If you do not have a passionate and overwhelming urge to start a business or launch a product or service, this class will not be a fit. Teams must visit office hours in winter quarter (Tuesdays 2:30p-4:00p) in order to be considered for the course.

**ME 302. The Future of the Automobile. 1 Unit.**

This quarter, the seminar will take a specific focus on "Advanced Driver Assistance Systems", which help drivers to maneuver their vehicles through traffic. Those systems range from navigation systems, adaptive cruise control, night vision, lane departure warning over automated parking, traffic jam assistance, to self-driving cars. With this breadth of applications, advanced driver assistance systems play an important role in making traffic safer, more efficient, and more enjoyable. This course, lectured by an industry expert, will introduce students to technology behind the systems, the benefits, challenges, and future perspectives of this exciting field. At the end of the quarter, students will have developed a technical understanding as well as an understanding for the interactions of the technology, business, and society with a specific automotive focus.

**ME 302A. Introduction to Automotive and Transportation Innovation at Stanford. 1 Unit.**

The objective of this course is to survey the innovative automotive and transportation community within Stanford. Stanford University has become one of the best universities on earth to to change the future of transportation and this course is a 'who's who' of that world. This is the first part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, the seminar will feature talks from Stanford experts in focus areas as varied as autonomous vehicles, entrepreneurship, design, ethics, aerodynamics, neuroscience, communications and security. At the end of the quarter, students will have developed an understanding of Stanford's portfolio of transportation work and know the specific individuals who are key to its future. To obtain credit, students must attend the first class (no exceptions) plus 7 additional classes for a total of 8 classes.

**ME 302B. The Future of the Automobile- Driver Assistance and Automated Driving. 1 Unit.**

Automated vehicles are on the verge to productization and have been subject to a lot of news recently: GM bought a self-driving tech startup for presumably more than \$1 billion. BMW, Intel and MobilEye teamed up to "bring fully autonomous driving to streets by 2021". Uber acquired Otto (another startup) for reportedly \$680 million to lead Uber's self-driving car effort. MobilEye and Delphi announced "a partnership for Level 4/5 automated Driving solution for 2019". Ford announced to put a fleet of Level 4 autonomous vehicles on the road in 2021. Tesla is continuing to working on its Autopilot. Intel bought MobilEye. Sounds exciting if you have an idea what the terms and levels mean, and what the technology actually is, which is driving the vehicle automation. This class will provide a holistic introduction to the field of vehicle automation: The first three lectures will provide an overview, clarify terminology and categories, and dive into the legal and policy aspects of automated driving. The next three lectures discuss the technologies enabling vehicle automation and outline applications. Students are asked to work on a class assignment in groups discussing current topics of vehicle automation. The results of the group work will be presented in the final 2 lectures of the class. This is the second course of a 3-quarter seminar series, which build on one another but can be taken independently. This course, lectured by an industry expert, will introduce students to the technology behind the systems, the benefits, challenges, and future perspectives of this exciting field. Students will develop an understanding for the interactions of the technology, business, and public policies with a specific automotive focus.

**ME 302C. The Future of the Automobile- Mobility Entrepreneurship. 1 Unit.**

The objective of this course is to develop an understanding for the requirements that go into the design of a highly complex yet easy-to-use product, i.e. the automobile. Students will learn about very different interdisciplinary aspects that characterize the automobile and personal mobility. This is part of a multi-quarter seminar series, which build on one another but can be taken independently. This quarter, students will learn from 10 different founders / C-level executives about how they built their mobility startup to change the world of transportation. Previous classes included speakers from Tesla, Lyft, Pearl Auto, Turo, Nauto. In hearing these founder stories, students will get an insight not only into the world of entrepreneurship but also the multidisciplinary nature of the transportation industry. The course consists of 50-minute discussions with founders, with students encouraged to participate and ask questions of the founders. To obtain credit, students must attend 8 out of 10 classes including the first class.

**ME 303. Biomechanics of Flight. 3 Units.**

Study of biological flight as an inspiration for designing robots. The goal is to give students a broad understanding of the biomechanics of natural flight, and an in-depth understanding of bird flight. This course elucidates how students can pick and choose exciting biological questions, use biological and engineering techniques to answer them, and use the results to identify bio-inspired design applications. Prerequisites: Fluid mechanics OR Aerodynamics AND Fluent Matlab skills. Course website URL: [http://lentinklab.stanford.edu/impact/stanford\\_teaching](http://lentinklab.stanford.edu/impact/stanford_teaching).

**ME 304. The Designer's Voice. 1 Unit.**

This course for Masters students in the Stanford Design Program helps students develop a point of view about their design career that will enable them to articulate their design vision, inspire a design studio, or infect a business with a culture of design-thinking. This class focuses on the integration of work and worldview, professional values, design language, and the development of the designer's voice. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching.

**ME 306. Engineering Design Theory in Practice. 3 Units.**

What is high performance in design? How could you improve your performance as a designer? Theories and frameworks from research into engineering design and design thinking are translated into action for developing insights into your design behavior and to develop strategies to improve design performance. Focus on performance in four aspects of design thinking: design as social activity, cognitive activity, physical activity and learning activity. Practice of effective team behaviors for concept generation, decision-making, and conflict-handling. Cognitive strategies from design as problem-solving, design as reflection-in-action, and C-K Theory. Prototyping performance improvements through media cascade and boundary object frameworks. Application of Perception-Action framework for improving self-learning in design. Students engage in multiple projects and a lab component.

**ME 308. Spatial Motion. 3 Units.**

The geometry of motion in Euclidean space. Fundamentals of theory of screws with applications to robotic mechanisms, constraint analysis, and vehicle dynamics. Methods for representing the positions of spatial systems of rigid bodies with their inter-relationships; the formulation of Newton-Euler kinetics applied to serial chain systems such as industrial robotics.

**ME 309. Finite Element Analysis in Mechanical Design. 3 Units.**

Basic concepts of finite elements, with applications to problems confronted by mechanical designers. Linear static, modal, and thermal formulations emphasized; nonlinear and dynamic formulations introduced. Application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques, features of various commercial codes, basic problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisites: Math 51, or equivalent. Recommended: ME80 or CEE101A, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.

**ME 310A. Engineering Design Entrepreneurship and Innovation: exploring the problem space. 4 Units.**

Reality is the best teacher. The best teachers are coaches. The best learners are in teams of 3-4 persons. We offer an extraordinary Coaching Team to help guide you towards rewarding your time at Stanford. Your mission is to create the personal self-efficacy that you need to engage wicked design problems of your own invention. In October you will Kick-Off your connection to an international team of (3-4) multi-disciplinary graduate students at distinguished universities across the world. They come to Stanford to meet you. You will also meet the team of company liaisons who are funding you to re-invent-X, to be a start-up in Silicon Valley. Expect 10 different industry funded design challenges at the human interface to Robots, AI, Internet of Things, Autonomous vehicles and Smart Cities. ME310A is dedicated to exploring the problem space (your best creative opportunity) using strategic-foresight, design thinking, team-dynamics-management, rapid prototyping, and human-centric problem RE-framing. Take ME310ABC.

**ME 310B. Engineering Design Entrepreneurship and Innovation: exploring the solution space. 4 Units.**

Your team has RE-framed a solid human-centric need/problem. You have your X. Now explore the solution space. Search for the dark-horse (the impossible solution that actually works). ME310B and ME310C are a single course with one grade in June. Your interdisciplinary team-of-teams is challenged by your industry partners to achieve breakthrough-innovation. In late March, Stanford students typically visit their international partners to converge on one solution path to be made REAL by June.

**ME 310C. Engineering Design Entrepreneurship and Innovation: making it REAL. 4 Units.**

Building X is the mission for Spring Quarter. Make it REAL. Enable user testing, technical and business evaluation. Create functional hardware, software, and human-ware. Use strategic-foresight, design thinking, team-dynamics management, rapid prototyping, and problem framing. Present your pre-production prototype to the world at the Stanford Design EXPERIENCE in June (760 attended in 2017). Tell the world what you did, why you did it, and what you learned from the doing.

**ME 310I. The Essential Elements of New Product Development: Business and Industry Perspectives. 1 Unit.**

Restricted to graduate students. Topics include new product development agenda, new product management skills, leadership and team management, ncultural awareness, organizational culture, industrial challenges and opportunities. Seminar will include in-class discussions, design thinking sessions and guest speakers from industry.

**ME 311. Leading Design Teams. 3 Units.**

The objective of this course is to help students forge a new identity as a design leader. Most people find the transition from individual contributor to team leader challenging because it's the first time that work needs to get done through others rather than doing things yourself. In a team leader role, you need to focus on getting things done and motivating, developing, and communicating with people. There is a balancing act between tasks and people and yet there is no simple rule to follow. Letting go of your identity as an individual contributor and helping you embrace a new one as a team leader is the first step into a design leadership role. This course will give you the language and concepts that will allow you to reflect on your own design leadership experience and growth while practicing it.

**ME 312. Communication in Design. 3 Units.**

Communication of design information, ideas, and concepts is central to successful design projects. In this course you will learn about various forms of communication and when/how to apply them in the design process. Topics covered include: structuring communication, selecting key points to communicate, communicating technical information to a non-technical audience. Approaches include: videography, presentations, public speaking. Visual approaches: sketching, storyboarding, journey maps, figures and charts. This course does not cover within-team communication.

**ME 313. Human Values and Innovation in Design. 3 Units.**

Introduction to the philosophy, spirit, and tradition of the product design program. Hands-on design projects used as vehicles for design thinking, visualization, and methodology. The relationships among technical, human, aesthetic, and business concerns. Drawing, prototyping, and design skills. Focus is on tenets of design philosophy: point of view, user-centered design, design methodology, and iterative design.

**ME 315. The Designer in Society. 3 Units.**

This class focuses on individuals and their psychological well being. The class delves into how students perceive themselves and their work, and how they might use design thinking to lead a more creative and committed life. As a participant you read parts of a different book each week and then engage in exercises designed to unlock learnings. In addition, there are two self-selected term project dealing with either eliminating a problem from your life or doing something you have never done before. Apply the first day during class. Attendance at first session is mandatory; otherwise, at most one absence is acceptable.

**ME 316A. Product Design Master's Project. 2-6 Units.**

For graduate Product Design or Design (Art) majors only. Student teams, under the supervision of the design faculty, spend the quarter researching master's project topics. Students are expected to demonstrate mastery of design thinking methods including; needfinding, brainstorming, field interviews and synthesis during this investigation. Masters projects are selected that involve the synthesis of aesthetics and technological concerns in the service of human need. Design Institute class; see <http://dschool.stanford.edu>. Prereq: ME277, ME312, ME313.

**ME 316B. Product Design Master's Project. 2-6 Units.**

Design Garage is a Winter/Spring class (a two quarter commitment is required). The class is a deep dive in design thinking that uses student-led projects to teach design process and methods. The projects come from investigations conducted during the Fall quarter where the preliminary need finding, customer research, and product or service ideas have been developed to provide the seed projects for the student design teams. Students will learn the methodologies of design thinking by bringing a product, service, or experience to market. Students apply to Design Garage in the Fall, and teams are formed after interviews and applications are reviewed. Prerequisite: graduate student standing.

**ME 316C. Product Design Master's Project. 2-6 Units.**

This is the second half of the two quarter Design Garage sequence. Students will complete projects begun in ME316B the prior quarter. Prerequisite: ME316B and graduate student standing. Design Institute class; see <http://dschool.stanford.edu>.

**ME 318. Computer-Aided Product Creation. 4 Units.**

Design course focusing on an integrated suite of computer tools: rapid prototyping, solid modeling, computer-aided machining, and computer numerical control manufacturing. Students choose, design, and manufacture individual products, emphasizing individual design process and computer design tools. Structured lab experiences build a basic CAD/CAM/CNC proficiency. Limited enrollment. Prerequisite: consent of instructor.

**ME 319. Fundamentals of Design for Design Thinkers. 2-4 Units.**

This course is an introduction to the fundamental principles of Design, geared toward graduate students involved and invested in innovation and design thinking. Core concepts include Contrast, Color, Materiality, Form, Proportion, Transitions, and more. Students will be introduced to the major philosophical concepts of design in readings and in class, and will practice techniques in class and via weekly hands-on projects out of class, culminating in a final personal project. Students will also be introduced to many hands-on prototyping and making skills via access to the Product Realization Lab and Room 36 ([webshop.stanford.edu](http://webshop.stanford.edu)).

**ME 320. Introduction to Robotics. 3 Units.**

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra. Same as: CS 223A

**ME 321. Optofluidics: Interplay of Light and Fluids at the Micro and Nanoscale. 3 Units.**

Many optical systems in biology have sophisticated designs with functions that conventional optics cannot achieve: no synthetic materials, for example, can provide the camouflage capability exhibited by some animals. This course overviews recent efforts—some inspired by examples in biology—in using fluids, soft materials and nanostructures to create new functions in optics. Topics include electrowetting lenses, electronic inks, colloidal photonic crystals, bioinspired optical nanostructures, nanophotonic biosensors, lens-less optofluidic microscopes. The use of optics to control fluids is also discussed: optoelectronic tweezers, particle trapping and transport, microrheology, optofluidic sorters, fabrication and self-assembly of novel micro and nanostructures.

**ME 322. Kinematic Synthesis of Mechanisms. 3 Units.**

The rational design of linkages. Techniques to determine linkage proportions to fulfill design requirements using analytical, graphical, and computer based methods.

**ME 323. Modeling and Identification of Mechanical Systems for Control. 3 Units.**

Lecture/Lab. The art and science behind developing mathematical models for control system design. Theoretical and practical system modeling and parameter identification. Frequency domain identification, parametric modeling, and black-box identification. Analytical work and laboratory experience with identification, controller implementation, and the implications of unmodeled dynamics and non-linearities. Prerequisites: linear algebra and system simulation with MATLAB/SIMULINK; ENGR 105.

**ME 324. Precision Engineering. 4 Units.**

Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience through design and manufacture of a precision engineering project, emphasizing the principles of precision engineering. Structured labs; field trips. Prerequisite: consent of instructors.

**ME 325. Making Multiples: Injection Molding. 3 Units.**

Design course focusing on the process of injection molding as a prototyping and manufacturing tool. Coursework will include creating and evaluating initial design concepts, detailed part design, mold design, mold manufacturing, molding parts, and testing and evaluating the results. Students will work primarily on individually selected projects, using each project as a tool to continue developing and exercising individual design process. Lectures and field trips will provide students with context for their work in the Stanford Product Realization Lab. Prerequisite: ME318 or consent of instructors.

**ME 327. Design and Control of Haptic Systems. 4 Units.**

Study of the design and control of haptic systems, which provide touch feedback to human users interacting with virtual environments and teleoperated robots. Focus is on device modeling (kinematics and dynamics), synthesis and analysis of control systems, design and implementation, and human interaction with haptic systems. Coursework includes homework/laboratory assignments and a research-oriented project. Directed toward graduate students and advanced undergraduates in engineering and computer science. Prerequisites: dynamic systems and MATLAB programming. Suggested experience with programming, feedback control design, and hardware prototyping.

**ME 328. Medical Robotics. 3 Units.**

Study of the design and control of robots for medical applications. Focus is on robotics in surgery and interventional radiology, with introduction to other healthcare robots. Delivery is through instructor lectures and weekly guest speakers. Coursework includes homework and laboratory assignments, an exam, and a research-oriented project. Directed toward graduate students and advanced undergraduates in engineering and computer science; no medical background required. Prerequisites: dynamic systems and MATLAB programming. Suggested experience with C/C++ programming, feedback control design, and linear systems. Cannot be taken concurrently with CS 571.

**ME 329. Mechanical Analysis in Design. 3 Units.**

This project based course will cover the application of engineering analysis methods learned in the Mechanics and Finite Element series to real world problems involving the mechanical analysis of a proposed device or process. Students work in teams, and each team has the goal of solving a problem defined jointly with a sponsoring company or research group. Each team will be mentored by a faculty mentor and a mentor from the sponsoring organization. The students will gain experience in the formation of project teams; interdisciplinary communication skills; intellectual property; and project management. Course has limited enrollment.

**ME 330. Advanced Kinematics. 3 Units.**

Kinematics from mathematical viewpoints. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.

**ME 331A. Advanced Dynamics & Computation. 3 Units.**

Newton, Euler, momentum, and road-map methods and computational tools for 3-D force and motion analysis of multibody systems. Power, work, and energy. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the static and dynamic behavior of multiple degree of freedom systems.

**ME 331B. Advanced Dynamics, Simulation & Control. 3 Units.**

Advanced methods and computational tools for the efficient formulation of equations of motion for multibody systems. D'Alembert principle. Power, work, and energy. Kane's and Lagrange's method. Computed torque control. Systems with constraints. Quaternions. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems. Team-based computational multi-body lab project (inclusion of feed-forward control optional).

**ME 332. Introduction to Computational Mechanics. 3 Units.**

Provides an introductory overview of modern computational methods for problems arising primarily in mechanics of solids and is intended for students from various engineering disciplines. The course reviews the basic theory of linear solid mechanics and introduces students to the important concept of variational forms, including the principle of minimum potential energy and the principles of virtual work. Specific model problems that will be considered include deformation of bars, beams and membranes, plates, and problems in plane elasticity (plane stress, plane strain, axisymmetric elasticity). The variational forms of these problems are used as the starting point for developing the finite element method (FEM) and boundary element method (BEM) approaches providing an important connection between mechanics and computational methods.

Same as: CME 232

**ME 333. Mechanics - Fundamentals and Lagrangian Mechanics. 3 Units.**

Goal is a common basis for advanced mechanics courses. Introduction to variation calculus. Formulation of the governing equations from a Lagrangian perspective for finite and infinite dimensional mechanical systems. Examples include systems of particles and linear elastic solids. Introduction to tensors. Definition and interpretation of Cauchy stress tensor.

**ME 335A. Finite Element Analysis. 3 Units.**

Fundamental concepts and techniques of primal finite element methods. Method of weighted residuals, Galerkin's method and variational equations. Linear elliptic boundary value problems in one, two and three space dimensions; applications in structural, solid and fluid mechanics and heat transfer. Properties of standard element families and numerically integrated elements. Implementation of the finite element method using Matlab, assembly of equations, and element routines. Lagrange multiplier and penalty methods for treatment of constraints. The mathematical theory of finite elements.

**ME 335B. Finite Element Analysis. 3 Units.**

Finite element methods for linear dynamic analysis. Eigenvalue, parabolic, and hyperbolic problems. Mathematical properties of semi-discrete (t-continuous) Galerkin approximations. Modal decomposition and direct spectral truncation techniques. Stability, consistency, convergence, and accuracy of ordinary differential equation solvers. Asymptotic stability, over-shoot, and conservation laws for discrete algorithms. Mass reduction. Applications in heat conduction, structural vibrations, and elastic wave propagation. Computer implementation of finite element methods in linear dynamics. Implicit, explicit, and implicit-explicit algorithms and code architectures.

**ME 335C. Finite Element Analysis. 3 Units.**

Newton's method for nonlinear problems; convergence, limit points and bifurcation; consistent linearization of nonlinear variational forms by directional derivative; tangent operator and residual vector; variational formulation and finite element discretization of nonlinear boundary value problems (e.g. nonlinear heat equation, nonlinear elasticity); enhancements of Newton's method: line-search techniques, quasi-Newton and arc-length methods.

**ME 337. Mechanics of Growth. 3 Units.**

Introduction to continuum theory and computational simulation of living matter. Kinematics of finite growth. Balance equations in open system thermodynamics. Constitutive equations for living systems. Custom-designed finite element solution strategies. Analytical solutions for simple model problems. Numerical solutions for clinically relevant problems such as: bone remodeling; wound healing; tumor growth; atherosclerosis; heart failure; tissue expansion; and high performance training.

**ME 338. Continuum Mechanics. 3 Units.**

Introduction to vectors and tensors: kinematics, deformation, forces, and stress concept of continua; balance principles; aspects of objectivity; hyperelastic materials; thermodynamics of materials; variational principles. Prerequisite: CEE 291 or equivalent.

Same as: CEE 292

**ME 338B. Continuum Mechanics. 3 Units.**

Constitutive theory; equilibrium constitutive relations; material frame indifference and material symmetry; finite elasticity; formulation of the boundary value problem; linearization and well-posedness; symmetries and configurational forces; numerical considerations.

**ME 339. Introduction to parallel computing using MPI, openMP, and CUDA. 3 Units.**

This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP. CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms).

Same as: CME 213

**ME 340. Mechanics - Elasticity and Inelasticity. 3 Units.**

Introduction to the theories of elasticity, plasticity and fracture and their applications. Elasticity: Definition of stress, strain, and elastic energy; equilibrium and compatibility conditions; and formulation of boundary value problems. Stress function approach to solve 2D elasticity problems and Green's function approach in 3D. Applications to contact and crack. Plasticity: Yield surface, associative flow rule, strain hardening models, crystal plasticity models. Applications to plastic bending, torsion and pressure vessels. Fracture: Linear elastic fracture mechanics, J-integral, Dugdale-Barrenblatt crack model. Applications to brittle fracture and fatigue crack growth. Computer programming in Matlab is used to aid analytic derivation and numerical solutions.

**ME 341. Design Experiments. 3 Units.**

Design experiments to learn about the relationship between users and products, with an emphasis on quantitative output that is tested with statistics. Students will be exposed to all components of the experimental design process: research proposition, literature review, detailed hypotheses, method selection, experimental instruments, subject selection, pilot studies, analysis approaches, reporting results, and discussing conclusions. Students will receive human subjects training and complete the IRB certificate. Possible experiment design tools include in-person observation and interviews, web surveys, and eye-tracking.

**ME 341X. Statistics for Design Experiments. 1 Unit.**

Feedback from users is fundamental to good design. Often this feedback is collected in the form of a survey, resulting in data requiring both analysis and synthesis. Course content will be delivered via live and on-line video lectures, with group classroom time dedicated to completing the lab assignments. You will learn the specific skills necessary to design, launch and collect data using an online survey tool (Qualtrics), how to analyze the results using R for Statistical Computing, and to create simple graphical representations of statistical data. This course is designed to complement ME341 Design Experiments although enrollment in ME341 is not a prerequisite for this course. One-unit credit requires completion of an analysis project using data collected as part of this class. Auditors welcome.

**ME 342. Theory and Application of Inelasticity. 3 Units.**

Theories of plasticity and fracture phenomena from both phenomenological and micromechanical viewpoints. Yield surface, flow rules, strain hardening models, and applications to creep. Plastic zone near crack tip. Linear fracture mechanics and other criteria for crack initiation and growth. Application to fatigue. Classical analytic solutions will be discussed together with numerical solutions of plane elastoplastic problems by Matlab.

**ME 342A. Mechanobiology and Biofabrication Methods. 3 Units.**

Cell mechanobiology topics including cell structure, mechanical models, and chemo-mechanical signaling. Review and apply methods for controlling and analyzing the biomechanics of cells using traction force microscopy, AFM, micropatterning and cell stimulation. Practice and theory for the design and application of methods for quantitative cell mechanobiology.

Same as: BIOE 342A, BIOPHYS 342A

**ME 342D. MEMS Fabrication/Projects. 1-3 Unit.**

Emphasis is on process planning, in process testing, nanofabrication training, exposure to MEMS industry applications. Prerequisite: ENGR 341.

**ME 344. Introduction to High Performance Computing. 3 Units.**

ME 344 is an introductory course on High Performance Computing (HPC), providing a solid foundation in parallel computer architectures, programming models, and essential optimization strategies. This course will discuss fundamentals of what an HPC cluster consists of, and how we can take advantage of such systems to solve large scale problems in wide ranging applications like computational fluid dynamics, image processing, machine learning and analytics. The course will consist of lectures, and practical hands-on homework assignments conducted on an Intel® Xeon Phi Processor based HPC Cluster using various software tools that are part of Parallel Studio XE. In addition to classroom instruction, experience with the latest cutting-edge hardware and interaction with industry experts, the course features hands on projects that emphasize on the application of High Performance Computing and enable students to build upon their knowledge. These include fundamental exercises wherein the students build an HPC cluster from the ground up and applied projects where the students utilize HPC paradigms to build a Deep Learning application. This course is open to both computer scientists and computational scientists who are interested in learning about data parallelism, scaling to large number of nodes, and performance tuning methodologies and tools on standards driven languages and parallel models (C/C++/Fortran/MPI/OpenMP/Threading Building Blocks/Python). As it's desirable to have such a mix of students, the course will not assume much background, though good programming skills will be needed to get the most of the course.

**ME 345. Fatigue Design and Analysis. 3 Units.**

The mechanism and occurrences of fatigue of materials. Methods for predicting fatigue life and for protecting against premature fatigue failure. Use of elastic stress and elastic-plastic strain analyses to predict crack initiation life. Use of linear elastic fracture mechanics to predict crack propagation life. Effects of stress concentrations, manufacturing processes, load sequence, irregular loading, multi-axial loading. Subject is treated from the viewpoints of the engineer seeking up-to-date methods of life prediction and the researcher interested in improving understanding of fatigue behavior. Prerequisite: undergraduate mechanics of materials.

**ME 346A. Introduction to Statistical Mechanics. 3 Units.**

The main purpose of this course is to provide students with enough statistical mechanics background to the Molecular Simulations classes (ME 346B,C), including the fundamental concepts such as ensemble, entropy, and free energy, etc. The main theme of this course is how the laws at the macroscale (thermodynamics) can be obtained by analyzing the spontaneous fluctuations at the microscale (dynamics of molecules). Topics include thermodynamics, probability theory, information entropy, statistical ensembles, phase transition and phase equilibrium. Recommended: PHYSICS 110 or equivalent.

**ME 346B. Introduction to Molecular Simulations. 3 Units.**

Algorithms of molecular simulations and underlying theories. Molecular dynamics, time integrators, modeling thermodynamic ensembles (NPT, NVT), free energy, constraints. Monte Carlo simulations, parallel tempering. Stochastic equations, Langevin and Brownian dynamics. Applications in solids, liquids, and biomolecules (proteins). Programming in Matlab.

**ME 346C. Advanced Techniques for Molecular Simulations. 3 Units.**

Advanced methods for computer simulations of solids and molecules. Methods for long-range force calculation, including Ewald methods and fast multipole method. Methods for free energy calculation, such as thermodynamic integration. Methods for predicting rates of rare events (e.g. nucleation), including nudged elastic band method and umbrella sampling method. Students will work on projects in teams.

**ME 347. Mathematical Theory of Dislocations. 3 Units.**

The mathematical theory of straight and curvilinear dislocations in linear elastic solids. Stress fields, energies, and Peach-Koehler forces associated with these line imperfections. Anisotropic effects, Green's function methods, and the geometrical techniques of Brown and Indenborn-Orlov for computing dislocation fields and for studying dislocation interactions. Continuously distributed dislocations and cracks and inclusions.

**ME 348. Experimental Stress Analysis. 3 Units.**

Theory and applications of photoelasticity, strain sensors, and holographic interferometry. Comparison of test results with theoretical predictions of stress and strain. Discussion of other methods (optical fiber strain sensors, digital image correlation, thermoelasticity, brittle coating, Moire interferometry, residual stress determination). Six labs plus mini-project. Limited enrollment. Lab fee.

**ME 349. Variational Methods in Elasticity and Plate Theory. 3 Units.**

An introduction to variational calculus methods and their applications to the theories of elasticity and plates.

**ME 350A. Design @ the Intersection of Science, Technology, and Entrepreneurship. 1 Unit.**

This 1 credit class is for graduate students who are passionate about turning their research into a product or service. This is a chance to explore the potential impact of your work beyond your lab or research group. We are looking for students from the sciences, engineering, or mathematics, or students who have business acumen or start-up experience focused on technology driven companies. If you want to get out of your lab, away from your machine, and start to design your future come join us. The class will begin your journey from research to product conceptualization and user centered design through exercises and group activities. We'll meet once a week over the quarter in 10 self-contained 2 hour workshops where students will focus on their own work as well as explore the practical applications of fellow students' ideas, experience team formation and collaboration, and begin to explore product and service design. Aside from class time you will need to commit up to one hour per week outside the class on customer and market exploration. Advisors from industry and academia will mentor student teams. The class will be structured for individuals with team formation optional.

**ME 351A. Fluid Mechanics. 3 Units.**

Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conservation. Forces and stresses in fluids. Euler's equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

**ME 351B. Fluid Mechanics. 3 Units.**

Laminar viscous fluid flow. Governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence, and turbulent boundary layers. Prerequisite: 351A.

**ME 352A. Radiative Heat Transfer. 3 Units.**

The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interests in heat transfer, as applied in high-temperature energy conversion systems. Take 352B,C for depth in heat transfer. Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

**ME 352B. Fundamentals of Heat Conduction. 3 Units.**

Physical description of heat conduction in solids, liquids, and gases. The heat diffusion equation and its solution using analytical and numerical techniques. Data and microscopic models for the thermal conductivity of solids, liquids, and gases, and for the thermal resistance at solid-solid and solid-liquid boundaries. Introduction to the kinetic theory of heat transport, focusing on applications for composite materials, semiconductor devices, micromachined sensors and actuators, and rarefied gases. Prerequisite: consent of instructor.

**ME 352C. Convective Heat Transfer. 3 Units.**

Prediction of heat and mass transfer rates based on analytical and numerical solutions of the governing partial differential equations. Heat transfer in fully developed pipe and channel flow, pipe entrance flow, laminar boundary layers, and turbulent boundary layers. Superposition methods for handling non-uniform wall boundary conditions. Approximate models for turbulent flows. Comparison of exact and approximate analyses to modern experimental results. General introduction to heat transfer in complex flows. Prerequisite: 351B or equivalent.

**ME 353. Design for Additive Manufacturing. 4 Units.**

Additive manufacturing and the associated emergence of algorithmic CAD software are changing the landscape for design engineers. The next generation of software is not solely based on geometry, but asks engineers to specify the desired performance parameters of their solution and leaves it up to the computer to create a geometry that optimizes that solution. Usually such geometries would be impossibly expensive or impossible to produce, but as additive manufacturing technologies and tools advance, we are approaching a world in which there will be virtually no geometric barriers associated with manufacturing cost.

**ME 354. Experimental Methods in Fluid Mechanics. 4-5 Units.**

Experimental methods associated with the interfacing of laboratory instruments, experimental control, sampling strategies, data analysis, and introductory image processing. Instrumentation including point-wise anemometers and particle image tracking systems. Lab. Prerequisites: previous experience with computer programming and consent of instructor. Limited enrollment.

**ME 355. Compressible Flow. 3 Units.**

Topics include quasi-one-dimensional isentropic flow in variable area ducts, normal shock waves, oblique shock and expansion waves, flow in ducts with friction and heat transfer, unsteady one-dimensional flow, and steady two-dimensional supersonic flow.

**ME 356. Hypersonic Aerothermodynamics. 3 Units.**

History of hypersonic flight technology. Inviscid hypersonic flows. Rankine-Hugoniot shock-jump relations at high Mach numbers. Newtonian approximation. Small-disturbance equations for hypersonic aerodynamics. Mach-number independence. Hypersonic similarity. Hypersonic boundary layers and viscous interactions. Aerodynamic heating. Self-similar solutions and analogies. Shock-shock interactions and shock-interference heating. Reentry aerothermodynamics. Effects of the entropy layer. Ablation shields. Thermodynamic and chemical nonequilibrium effects in hypersonics. Transition in hypersonic boundary layers. Effects of incident shock waves. Modern computational developments in hypersonics. Engineering applications of hypersonics in aeronautics and astronautics.

**ME 357. Gas-Turbine Design Analysis. 3 Units.**

This course is concerned with the design analysis of gas-turbine engines. After reviewing essential concepts of thermo- and aerodynamics, we consider a turbofan gas-turbine engine that is representative of a business aircraft. We will first conduct a performance analysis to match the engine design with aircraft performance requirements. This is followed by examining individual engine components, including compressor, combustor, turbines, and nozzles, thereby increase the level of physical description. Aspects of modern engine concepts, environmental impacts, and advanced engine-analysis methods will be discussed. Students will have the opportunity to develop a simulation code to perform a basic design analysis of a turbofan engine. Course Prerequisites: ENGR 30, ME 70, ME 131B, CME 100. Same as: ME 257

**ME 358. Heat Transfer in Microdevices. 3 Units.**

Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. The impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis is on Si and GaAs semiconductor devices and layers of unusual, technically-promising materials such as chemical-vapor-deposited (CVD) diamond. Final project based on student research interests. Prerequisite: consent of instructor.

**ME 359. Designing for Safety in Labor and Delivery. 3 Units.**

Designing For Safety In Labor & Delivery will inform students about challenges in the L&D environment through direct observation in a simulated environment and the hospital. Simultaneously, we will be studying the users: their environment, standard protocols, communication and behavior. Our goal is to identify need spaces that will lead to product, system or service innovation and improve safety and quality of care. Student groups will have structured access to OB/GYN, pediatric and neonatology clinicians at Lucile Packard Children's Hospital, as well as parents for conducting ethnography. Field trips to Lucile Packard Children's Hospital and The Kaiser Garfield Healthcare Innovation Center are planned as well. Physical prototypes and/or scenarios can be tested and presented at CAPE's simulation lab in order to give students a realistic environment in which to evaluate and present their ideas. Prior design process experience is helpful but not a prerequisite. Collaboration with teammates is required and critical for student success. To be considered for admission, you must complete the application by 12/15/16 AND attend the first class. Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ME 359A. Advanced Design and Engineering of Space Systems I. 4 Units.**

The application of advanced theory and concepts to the development of spacecraft and missile subsystems; taught by experts in their fields. Practical aspects of design and integration. Mission analysis, systems design and verification, radiation and space environments, orbital mechanics, space propulsion, electrical power and avionics subsystems, payload communications, and attitude control. Subsystem-oriented design problems focused around a mission to be completed in groups. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related engineering field or consent of instructor.

**ME 359B. Advanced Design and Engineering of Space Systems II. 4 Units.**

Continuation of 359A. Topics include aerospace materials, mechanical environments, structural analysis and design, finite element analysis, mechanisms, thermal control, probability and statistics. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related field, or consent of instructor.

**ME 360. Physics of Microfluidics. 3 Units.**

Survey of the physics underlying a wide range of microfluidic devices. Course will review basic, simple principles around fluid flow; convective heat and mass transfer; flows of bubbles, drops, and particles; Brownian particles; Taylor dispersion; capillarity; electrokinetics; mixing; jetting; and chemical reactions. Applications of these systems include molecular diagnostics, genetic and proteomic analysis, single-cell analysis, chemical detection, microelectronics cooling, and studies of basic physics and chemistry. We will review recent scientific literature with a goal of deducing simplified explanations, scaling arguments, and back-of-the-envelope approximations of the relevant physics and device performance.

**ME 361. Turbulence. 3 Units.**

The nature of turbulent flows, statistical and spectral description of turbulence, coherent structures, spatial and temporal scales of turbulent flows. Averaging, two-point correlations and governing equations. Reynolds averaged equations and stresses. Free shear flows, turbulent jet, turbulent kinetic energy and kinetic energy dissipation, and kinetic energy budget. Kolmogorov's hypothesis and energy spectrum. Wall bounded flows, viscous scales, and law of the wall. Turbulence closure modeling for Reynolds averaged Navier Stokes equations. Direct and large eddy simulation of turbulent flows. Subgrid scale modeling.

**ME 362A. Physical Gas Dynamics. 3 Units.**

Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introductory kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest such as combustion and materials processing.

**ME 362B. Nonequilibrium Processes in High-Temperature Gases. 3 Units.**

Chemical kinetics and energy transfer in high-temperature gases. Collision theory, transition state theory, and unimolecular reaction theory. Prerequisite: 362A or consent of instructor.

**ME 363. Partially Ionized Plasmas and Gas Discharges. 3 Units.**

Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applications: plasma diagnostics, plasma propulsion and materials processing. Prerequisite: 362A or consent of instructor.

**ME 364. Optical Diagnostics and Spectroscopy. 3 Units.**

The spectroscopy of gases and laser-based diagnostic techniques for measurements of species concentrations, temperature, density, and other flow field properties. Topics: electronic, vibrational, and rotational transitions; spectral lineshapes and broadening mechanisms; absorption, fluorescence, Rayleigh and Raman scattering methods; collisional quenching. Prerequisite: 362A or equivalent.

**ME 365. Making Multiples: Sand Casting. 4 Units.**

ME 365 is a product realization based course integrating designing and making with a focus on a scaled manufacturing process, sand casting. It's graduates will develop technical knowledge regarding design principles, tooling design and creation, mold making, and process parameters. This goal will be achieved by a sequence of three hands-on design and manufacturing projects, supported by lectures, curricular materials, and structured laboratories, and portfolio generation. Prerequisites: ME203, ME318, OR consent of instructor.

**ME 367. Optical Diagnostics and Spectroscopy Laboratory. 4 Units.**

Principles, procedures, and instrumentation associated with optical measurements in gases and plasmas. Absorption, fluorescence and emission, and light-scattering methods. Measurements of temperature, species concentration, and molecular properties. Lab. Enrollment limited to 16. Prerequisite: 362A or 364.

**ME 368. d.Leadership: Design Leadership in Context. 4 Units.**

d.Leadership is a course that teaches the coaching and leadership skills needed to drive good design process in groups. d.leaders will work on real projects driving design projects within organizations and gain real world skills as they experiment with their leadership style. Take this course if you are inspired by past design classes and want skills to lead design projects beyond Stanford. Preference given to students who have taken other Design Group or d.school classes. Admission by application. See dschool.stanford.edu/classes for more information. Same as: MS&E 489

**ME 368A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.**

In this two-quarter course series ( BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new health technologies to address them, and plan for their implementation into patient care. During the first quarter (winter 2018), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2018), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent health technology experts and/or investors. Class sessions include faculty-led instruction and case studies, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/programs/stanford-courses/biodesign-innovation.html> to access the application, examples of past projects, and student testimonials. More information about Stanford Biodesign, which has led to the creation of more than 40 venture-backed healthcare companies and has helped hundreds of student launch health technology careers, can be found at <http://biodesign.stanford.edu/>. Same as: BIOE 374A, MED 272A

**ME 368B. Biodesign Innovation: Concept Development and Implementation. 4 Units.**

In this two-quarter course series ( BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new health technologies to address them, and plan for their implementation into patient care. During the first quarter (winter 2018), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2018), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent health technology experts and/or investors. Class sessions include faculty-led instruction and case studies, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Same as: BIOE 374B, MED 272B

**ME 369. Cracks, Dislocations, and Waves. 3 Units.**

The 6-dimensional formalism of A. N. Stroh will be developed to treat two-dimensional problems in elastically anisotropic media. Stress fields of straight dislocations will be developed, from which the elastic fields of line cracks (treated as continuous distributions of straight dislocations) will be obtained along with stress intensity factors and energy release rates. Steady waves including plane waves, Rayleigh waves, and Stoneley waves will be treated along with problems of reflection and refraction of incident plane waves in joined anisotropic half-spaces. Anisotropic boundary element methods will be discussed. Assignments will include both analytical and semi-analytical work as well as simple numerical methods to implement Stroh's formalism. Class notes and readings will be provided.

**ME 370A. Energy Systems I: Thermodynamics. 3 Units.**

Thermodynamic analysis of energy systems emphasizing systematic methodology for and application of basic principles to generate quantitative understanding. Exergy, mixtures, reacting systems, phase equilibrium, chemical exergy, and modern computational methods for analysis. Prerequisites: undergraduate engineering thermodynamics and computer skills such as Matlab.

**ME 370B. Energy Systems II: Modeling and Advanced Concepts. 4 Units.**

Development of quantitative device models for complex energy systems, including fuel cells, reformers, combustion engines, and electrolyzers, using thermodynamic and transport analysis. Student groups work on energy systems to develop conceptual understanding, and high-level, quantitative and refined models. Advanced topics in thermodynamics and special topics associated with devices under study. Prerequisite: 370A.

**ME 370C. Energy Systems III: Projects. 3-5 Units.**

Refinement and calibration of energy system models generated in ME 370B carrying the models to maturity and completion. Integration of device models into a larger model of energy systems. Prerequisites: 370A,B, consent of instructor.

**ME 371. Combustion Fundamentals. 3 Units.**

Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multi-component reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 362A or 370A, or consent of instructor.

**ME 372. Combustion Applications. 3 Units.**

The role of chemical and physical processes in combustion; ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 371.

**ME 373. Nanomaterials Synthesis and Applications for Mechanical Engineers. 3 Units.**

This course provides an introduction to both combustion synthesis of functional nanomaterials and nanotechnology. The first part of the course will introduce basic principles, synthesis/fabrication techniques and application of nanoscience and nanotechnology. The second part of the course will discuss combustion synthesis of nanostructures in zero-, one- two- and three- dimensions, their characterization methods, physical and chemical properties, and applications in energy conversion systems.

**ME 374. Dynamics and Kinetics of Nanoparticles. 3 Units.**

Part 1: Thermodynamics, transport theories and properties, aerosol dynamics and reaction kinetics of nanoparticles in fluids. Nucleation, gas kinetic theory of nanoparticles, the Smoluchowski equation, gas-surface reactions, diffusion, thermophoresis, conservation equations and useful solutions. Part 2: Introduction to soot formation, nanoparticles in reacting flows, particle transport and kinetics in flames, atmospheric heterogeneous reactions, and nanocatalysis.

**ME 375A. StoryViz: COMMUNICATION REDESIGNED. 2-3 Units.**

StoryViz is about creating authentic & compelling communication in many media: this year's topics include sketching, video, visual design & performance. Fantastic guests and a bevy of assignments will prepare students to communicate their work and ideas genuinely, concisely, and with a keen sense of wit. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>. Please see notes.

**ME 376A. Imagining the Future of Learning: SparkTruck - Designing Mobile Interventions for Education. 4 Units.**

Created at the d.school last year, SparkTruck has traveled over 15,000 miles across the USA, teaching thousands of kids how to build stuff and unleash their creativity. In this class, students will explore the potential of a mobile platform for affecting change in the educational ecosystem. Topics will include introductions to the design process, modern prototyping tools, and the complex education ecosystem. Students will work in teams in this project-based class, and an emphasis will be placed on real-world prototyping through hands-on field work in local schools. Interested and qualified students will have the opportunity to embark on a cross-country road trip in the SparkTruck this summer. Open to all graduate students and well-qualified undergrads of any major. Enrollment is limited. Apply at [www.sparktruck.org/apply](http://www.sparktruck.org/apply). Same as: EDUC 333B

**ME 377. Design Thinking Studio. 4 Units.**

Design Thinking Studio is an immersive introduction to design thinking. You will engage in the real world with your heart, hands and mind to learn and apply the tools and attitudes of design. The class is project-based and emphasizes adopting new behaviors of work. Fieldwork and collaboration with teammates are required and are a critical component of the class. Application required, see [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ME 378. Tell, Make, Engage: Action Stories for Entrepreneurship. 1-3 Unit.**

Individual storytelling action and reflective observations gives the course an evolving framework of evaluative methods, from engineering design; socio cognitive psychology; and art that are formed and reformed by collaborative development within the class. Stories attached to an idea, a discovery or starting up something new, are considered through iterative narrative work, and small group challenges. This course will use qualitative and quantitative methods for story engagement, assessment, and class determined research projects with practice exercises, artifacts, short papers and presentations. Graduate and Co-Term students from all programs welcome.

**ME 379. Fail Faster. 1 Unit.**

Fail Faster will dive deeply into one of design thinking's key tenets: Fail early, fail often. Students will explore ways to: [1] become comfortable with uncertainty, [2] develop tools to navigate situations of failure, and [3] learn to turn failures into opportunities. This exercised-based workshop will examine the physiological impact of failure and practice the psychological traits and the power of resilience through hands-on activities. Participants will acquire techniques to help them navigate, bounce back, grow and even flourish in the face of their failures.

**ME 381. Orthopaedic Bioengineering. 3 Units.**

Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices. Same as: BIOE 381

**ME 387. Soft Tissue Mechanics. 3 Units.**

Structure/function relationships and mechanical properties of soft tissues, including nonlinear elasticity, viscoelasticity, and poroelasticity.

**ME 389. Biomechanical Research Symposium. 1 Unit.**

Guest speakers present contemporary research on experimental and theoretical aspects of biomechanical engineering and bioengineering. May be repeated for credit.

**ME 390. Thermosciences Research Project Seminar. 1 Unit.**

Review of work in a particular research program and presentations of other related work.

**ME 390A. High Temperature Gasdynamics Laboratory Research Project Seminar. 1 Unit.**

Review of work in a particular research program and presentations of other related work.

**ME 391. Engineering Problems. 1-10 Unit.**

Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under 392. Faculty sponsor required.

**ME 392. Experimental Investigation of Engineering Problems. 1-10 Unit.**

Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 391 may be required to provide background for experimental program. Faculty sponsor required.

**ME 393. Topics in Biologically Inspired or Human Interactive Robotics. 1 Unit.**

Application of observations from human and animal physiology to robotic systems. Force control of motion including manipulation, haptics, and locomotion. Weekly literature review forum led by student. May be repeated for credit. (Cutkosky, Waldron, Niemeyer).

**ME 395. Seminar in Solid Mechanics. 1 Unit.**

Required of Ph.D. candidates in solid mechanics. Guest speakers present research topics related to mechanics theory, computational methods, and applications in science and engineering. May be repeated for credit.

**ME 397. Design Theory and Methodology Seminar. 1-3 Unit.**

What do designers do when they do design? How can their performance be improved? Topics change each quarter. May be repeated for credit.

**ME 399. Fuel Cell Seminar. 1 Unit.**

Interdisciplinary research in engineering, chemistry, and physics. Talks on fundamentals of fuel cells by speakers from Stanford, other academic and research institutions, and industry. The potential to provide high efficiency and zero emissions energy conversion for transportation and electrical power generation.

**ME 400. Thesis. 2-15 Units.**

Investigation of some engineering problems. Required of Engineer degree candidates.

Same as: Engineer Degree

**ME 405. Physics-Based Computational Modeling. 3 Units.**

This course is not a standard teaching of asymptotic methods as thought in the applied math programs. Nor does it involve such elaborate algebra and analytical derivations. Instead, the class relies on students' numerical programming skills and introduces improvements on numerical methods using standard asymptotic and scaling ideas. The main objective of the course is to bring physical insight into numerical programming. Majority of the problems to be explored involve one- and two-dimensional transient partial differential equations. Topics include: 1- Review of numerical discretization and numerical stability, 2- Implicit versus explicit methods, 3- Introduction to regular and singular perturbation problems, 4- Method of matched asymptotic expansions, 5- Stationary thin interfaces: boundary layers, Debye layers, 6- Moving thin interfaces: shocks, phase interfaces, 7- Reaction-diffusion problems, 8- Directional equilibrium and lubrication theory.

**ME 406. Turbulence Physics and Modeling Using Numerical Simulation Data. 2 Units.**

Prerequisite: consent of instructor.

**ME 408. Spectral Methods in Computational Physics. 3 Units.**

Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability. Same as: CME 322

**ME 410A. Introductory Foresight and Technological Innovation. 3 Units.**

Learn to develop long-range, technology-based innovations (5+ years based on industry). This course offers an intensive, hands-on approach using multiple engineering foresight strategies and tools. Model disruptive opportunities and create far-to-near development plans. Three quarter sequence.

**ME 410B. Advanced Foresight and Technological Innovation. 1 Unit.**

Continuation of ME410A. Students will continue developing their invention, integrate additional engineering foresight, and develop an intrinsic innovation mindset. Ongoing discussion of industry examples and contemporary events demonstrate foresight principals and engineering leadership in action.

**ME 410C. Advanced Foresight and Technological Innovation. 1 Unit.**

Continuation of ME410B. Students will continue developing their invention, integrate additional engineering foresight, and develop an intrinsic innovation mindset. Ongoing discussion of industry examples and contemporary events demonstrate foresight principals and engineering leadership in action.

**ME 412. Engineering Functional Analysis and Finite Elements. 3 Units.**

Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.

Same as: CME 356

**ME 413. Quantum Confinement Structures: Physics and Fabrication. 3 Units.**

Quantum mechanics principles and the thermodynamics of confinement structures. Focus is on potential applications such as solar cells and catalysis. Student presentations. Lab demonstrations. Prerequisite: background in quantum mechanics and statistical thermodynamics.

**ME 414. Solid State Physics for Mechanical Engineering Experiments. 3 Units.**

Introductory overview of principles of statistical mechanics, quantum mechanics and solid-state physics. Provides graduate Mechanical Engineering students with the understanding needed to work on devices or technologies which rely on solid-state physics. (Alternate years, not offered summer 2012).

**ME 420. Applied Electrochemistry at Micro- and Nanoscale. 3 Units.**

Applied electrochemistry with a focus on energy conversion and storage. Basic concepts of thermodynamics, electrochemistry, and first principal calculations are presented, of which today's fundamentals of electrochemical energy conversion/storage are built. Conventional as well as advanced Li battery concepts/systems and their applications will be a main subject area. intercalation and conversion cathode and anode material families will be introduced and electrochemical function/challenges for energy storage of these materials will be highlighted. Conventional electrolyte materials such as carbonate based liquid electrolyte system and advanced solid-state material will be a topic in class.

**ME 421. European Entrepreneurship and Innovation Thought Leaders Seminar. 1 Unit.**

Lessons from real-world experiences and challenges in European startups, corporations, universities, non-profit research institutes and venture finance organizations. Speakers include entrepreneurs, leaders from global technology companies, university researchers, venture capitalists, legal experts, senior policy makers and other guests from selected European countries and regions. Geographic scope encompasses Ireland to Russia, and Scandinavia to the Mediterranean region. Enrollment open to undergraduates and graduates in any school or department at Stanford.

**ME 429. COMMERCIAL MEMS DEVICE DESIGN. 3 Units.**

This course will provide insight into designing MEMS based devices for use in commercial/consumer and automotive sensor applications. Topics to be covered in this MEMS sensor design course will include electromechanical modeling/simulation, compensation for cross-wafer and wafer-to-wafer fabrication variations in a high volume semiconductor manufacturing facility, design for extreme environments (drop shock, temperature, etc.), and some discussion of the unique challenges with respect to consumer and automotive sensor markets. Student teams will develop a MEMS sensor/transducer design (capacitive 3-axis accelerometer), electro-mechanical system model (Matlab based), fabrication process flow with manufacturing analysis (Excel based) in response to a provided design specification sheet.

**ME 440. Electronic States and Transitions In Quantum Confined Structures. 3 Units.**

Summary of selected quantum mechanical concepts with focus on phenomena related to charge separation and transfer. The physics and thermodynamics of excitons described and related to experimental observations. The energy state of electrons as function of confinement size and strength. Presentations include on electron tunneling, measuring the density of electronic states, dielectric behavior of materials, Bose Einstein condensation of quasi particles, and excitons in quantum wells and dots.

**ME 451A. Advanced Fluid Mechanics Multiphase Flows. 3 Units.**

Single particle and multi-particle fluid flow phenomena, mass, momentum and heat transfer, characteristic time and length scales, non-dimensional groups; collection of dispersed-phase elements: instantaneous and averaged descriptions for multiphase flow, Eulerian-Eulerian and Lagrangian-Eulerian statistical representations, mixture theories; models for drag, heat and mass transfer; dilute to dense two-phase flow, granular flows; computer simulation approaches for multiphase flows, emerging research topics. Prerequisites: graduate level fluid mechanics and engineering mathematics, and undergraduate engineering mechanics and thermodynamics.

**ME 451B. Advanced Fluid Mechanics Flow Instability. 3 Units.**

Waves in fluids: surface waves, internal waves, inertial and acoustic waves, dispersion and group velocity, wave trains, transport due to waves, propagation in slowly varying medium, wave steepening, solitons and solitary waves, shock waves. Instability of fluid motion: dynamical systems, bifurcations, Kelvin-Helmholtz instability, Rayleigh-Benard convection, energy method, global stability, linear stability of parallel flows, necessary and sufficient conditions for stability, viscosity as a destabilizing factor, convective and absolute instability. Focus is on flow instabilities. Prerequisites: graduate courses in compressible and viscous flow.

**ME 451C. Advanced Fluid Mechanics - Compressible Turbulence. 3 Units.**

Conservation equations. Thermodynamics of ideal gases. Isentropic flows. Crocco-Vazsonyi's equation, creation and destruction of vorticity by compressibility effects. Acoustics and generation of sound by turbulence. Shock waves. Kovasznay's modal decomposition of compressible flow, linear and nonlinear modal interactions, interaction of turbulence with shock waves. Turbulent Mach number. Shocklets. Energetics of compressible turbulence, effects of compressibility on homogeneous turbulence, free-shear flows and turbulent boundary layers. Van Driest transformation, recovery temperature, and shock/boundary layer interaction. Strong Reynolds analogy. Subgrid-scale modeling for compressible turbulence. Hypervelocity flows. Prerequisites: Familiarity with compressible laminar flows (ME 355) and incompressible turbulence (ME 361), or consent of the instructor.

**ME 451D. Microhydrodynamics. 3 Units.**

Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

Same as: CHEMENG 310

**ME 453A. Finite Element-Based Modeling and Simulation of Linear Fluid/Structure Interaction Problems. 3 Units.**

Basic physics behind many fluid/structure interaction phenomena. Finite element-based computational approaches for linear modeling and simulation in the frequency domain. Vibrations of elastic structures. Linearized equations of small movements of inviscid fluids. Sloshing modes. Hydroelastic vibrations. Acoustic cavity modes. Structural-acoustic vibrations. Applications to liquid containers and underwater signatures. Prerequisite: graduate course in the finite element method or consent of instructor.

**ME 455. Complex Fluids and Non-Newtonian Flows. 3 Units.**

Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

Same as: CHEMENG 462

**ME 457. Fluid Flow in Microdevices. 3 Units.**

Physico-chemical hydrodynamics. Creeping flow, electric double layers, and electrochemical transport such as Nernst-Planck equation; hydrodynamics of solutions of charged and uncharged particles. Device applications include microsystems that perform capillary electrophoresis, drug dispersion, and hybridization assays. Emphasis is on bioanalytical applications where electrophoresis, electro-osmosis, and diffusion are important. Prerequisite: consent of instructor.

**ME 458. Advanced Topics in Electrokinetics. 3-5 Units.**

Electrokinetic theory and electrokinetic separation assays. Electroneutrality approximation and weak electrolyte electrophoresis theory. Capillary zone electrophoresis, field amplified sample stacking, isoelectric focusing, and isotachopheresis. Introduction to general electrohydrodynamics (EHD) theory including the leaky dielectric concept, the Ohmic model formulation, and electrokinetic flow instabilities. Prerequisite: ME 457.

**ME 461. Advanced Topics in Turbulence. 3 Units.**

Turbulence phenomenology; statistical description and the equations governing the mean flow; fluctuations and their energetics; turbulence closure problem, two-equation turbulence models, and second moment closures; non-local effect of pressure; rapid distortion analysis and effect of shear and compression on turbulence; effect of body forces on turbulent flows; buoyancy-generated turbulence; suppression of turbulence by stratification; turbulent flows of variable density; effect of rotation on homogeneous turbulence; turbulent flows with strong vortices. Prerequisites: 351B and 361A, or consent of instructor.

**ME 463. Advanced Topics in Plasma Science and Engineering. 3 Units.**

Research areas such as plasma diagnostics, plasma transport, waves and instabilities, and engineering applications.

**ME 469. Computational Methods in Fluid Mechanics. 3 Units.**

The last two decades have seen the widespread use of Computational Fluid Dynamics (CFD) for analysis and design of thermal-fluids systems in a wide variety of engineering fields. Numerical methods used in CFD have reached a high degree of sophistication and accuracy. The objective of this course is to introduce classical approaches and algorithms used for the numerical simulations of incompressible flows. In addition, some of the more recent developments are described, in particular as they pertain to unstructured meshes and parallel computers. An in-depth analysis of the procedures required to certify numerical codes and results will conclude the course.

**ME 469B. Computational Methods in Fluid Mechanics. 3 Units.**

Advanced CFD codes. Geometry modeling, CAD-CFD conversion. Structured and unstructured mesh generation. Solution methods for steady and unsteady incompressible Navier-Stokes equations. Turbulence modeling. Conjugate (solid/fluid) heat transfer problems. Development of customized physical models. Batch execution for parametric studies. Final project involving solution of a problem of student's choosing. Prerequisite: ME 300C/CME 206.

**ME 47. Press Play: Interactive Device Design. 4-5 Units.**

This course provides an introduction to the human-centered and technical workings behind interactive devices ranging from cell phones and video controllers to household appliances and smart cars. This is a hands-on, lab-based course; there will be no midterm or final. Course topics include electronics prototyping, interface prototyping, sensors and actuators, microcontroller development, physical prototyping and user testing. For the final project, students will build a working MP3 player prototype of their own design, using embedded microcontrollers, digital audio decoders, component sensors and other electronic hardware. Prior experience in programming, such as CS106A (or equivalent) or electronics, such as ENG40A (or equivalent) preferred. Students should attend the first class.

**ME 470. Uncertainty Quantification. 3 Units.**

Uncertainty analysis in computational science. Probabilistic data representation, propagation techniques and validation under uncertainty. Mathematical and statistical foundations of random variables and processes for uncertainty modeling. Focus is on state-of-the-art propagation schemes, sampling techniques, and stochastic Galerkin methods. The concept of model validation under uncertainty and the determination of confidence bounds estimates. Prerequisite: basic probability and statistics at the level of CME 106 or equivalent. Same as: CEE 362A

**ME 471. Turbulent Combustion. 3 Units.**

Basis of turbulent combustion models. Assumption of scale separation between turbulence and combustion, resulting in Reynolds number independence of combustion models. Level-set approach for premixed combustion. Different regimes of premixed turbulent combustion with either kinematic or diffusive flow/chemistry interaction leading to different scaling laws and unified expression for turbulent velocity in both regimes. Models for non-premixed turbulent combustion based on mixture fraction concept. Analytical predictions for flame length of turbulent jets and NO<sub>x</sub> formation. Partially premixed combustion. Analytical scaling for lift-off heights of lifted diffusion.

**ME 472. Computational Modeling of Radiative Transfer. 3 Units.**

Overview of physical modeling and computational methods for radiation heat transfer in participating media. Review of surface transfer. Radiation hydrodynamics and the radiative transfer equation. Constitutive relations for transport coefficients of participating media. Formal solution and one-dimensional transfer. Moment methods: diffusion and spherical harmonics. The discrete ordinates method: spatial and angular discretization, false scattering and ray effects, the finite volume method, parallelization. Monte Carlo ray tracing: ray tracing, Monte Carlo simulations, surface transfer, transfer in participating media, variance reduction techniques, parallelization. Additional topics covered time permitting: spectral modeling, collimated sources, transient radiative transfer, reverse ray-tracing. Pre-requisites: ME 300C or equivalent; STATS 116 or equivalent; undergraduate heat transfer; ME 352A strongly recommended but not required.

**ME 484. Computational Methods in Cardiovascular Bioengineering. 3 Units.**

Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning. Same as: BIOE 484

**ME 485. Modeling and Simulation of Human Movement. 3 Units.**

Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent. Same as: BIOE 485

**ME 491. Ph.D. Teaching Experience. 3 Units.**

Required of Ph.D. students. May be repeated for credit.

**ME 492. Mechanical Engineering Teaching Assistance Training. 1 Unit.****ME 495A. ME Seminar Series: Product Design. 1 Unit.**

Seminars will feature accomplished product designers and product design researchers. Guest speakers will come from the U.S. and internationally, and will present on topics of current interest to the Product Design Community.

**ME 495B. ME Seminar Series: At the Interface between Mechanical Engineering and Biology. 1 Unit.**

Seminars will feature early career mechanical engineers working on leading edge problems in biomechanical engineering. Topics include mechanobiology, cell mechanics, transport phenomena in biological systems, bio-inspired design, design and analysis of biodevices or bioinstrumentation, biomaterials, and modeling of physiological systems. Guest speakers will come from top universities within the U.S. and internationally, and will discuss both their past research and plans for building a research program in the future.

**ME 500. Thesis. 1-15 Unit.**

Same as: Ph.D.

**ME 52SI. Scan, Model, Print! Designing with 3D Technology. 2 Units.**

Think 3D scanning, modeling, and printing technology is just about plastic widgets? Think again! Immerse yourself in a world of custom prosthetics, manufacturing in space, autonomous cars, and much more. This hands-on engineering design course teaches advanced 3D imaging and computational modeling skills in order to leverage the unique benefits of additive manufacturing to solve complex problems. Students will connect the theory behind these tools to direct experience with the equipment and software. Short assignments at the start of the quarter will build students' core competencies and prepare them for a team-based, open-ended project. Class time will be a mixture of lecture, lab, guest speakers, and field trips. Recommended: basic CAD, fabrication, and programming experience (e.g. ME103D, 203, CS106A or equivalents).

**ME 571. Surgical Robotics Seminar. 1 Unit.**

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. Engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role. May be repeated for credit. Same as: CS 571

**ME 66SI. Machine Dissection. 2 Units.**

This course is designed to help engineering students build their physical intuition through a series of mini-lectures, mechanical dissection activities, student presentations, and a final project. Some of the mechanisms students will dissect include a wind-up toy, fishing reel, and car transmission. Through these activities, students learn the process and value of reverse engineering, develop a better understanding of the design choices made by engineers, become familiar with historically significant mechanisms, and develop both oral and graphical communication skills necessary for working in a technical team. This course is intended for freshman/sophomore engineering students with some knowledge of physics, but little hands on experience.

**ME 70. Introductory Fluids Engineering. 4 Units.**

Elements of fluid mechanics as applied to engineering problems. Equations of motion for incompressible ideal flow. Hydrostatics. Control volume laws for mass, momentum, and energy. Bernoulli equation. Dimensional analysis and similarity. Flow in ducts. Boundary layer flows. Lift and drag. Lab experiment demonstrations. Prerequisites: ENGR 14 and 30.

**ME 80. Mechanics of Materials. 4 Units.**

Mechanics of materials and deformation of structural members. Topics include stress and deformation analysis under axial loading, torsion and bending, column buckling and pressure vessels. Introduction to stress transformation and multiaxial loading. Prerequisite: ENGR 14.

**ME 801. TGR Project. 0 Units.****ME 802. TGR Dissertation. 0 Units.**

## Mgmt Science & Engineering (MS&E) Music (MUSIC)

**MUSIC 1. Musical Genius: Exemplars in the History of Organized Sound. 3 Units.**

How does music work? A broad exploration of music as defined by three major components (i) Theories of Music (elements and parameters), (ii) Histories of Music (cultures and people), and (iii) Practitioners of Music (musicians and scholars). Lecture, discussion, guided critical listening and viewing of audio, video, and live performance, and creation of self-curated mini-projects.

**MUSIC 101. Introduction to Creating Electronic Sounds. 3-4 Units.**

Students to explore their creative voices by learning the practical nuts and bolts of making sounds with computers and professional audio equipment. Basic concepts include mixing and production techniques used in podcasts, documentaries, live performance, electronic music, and sound art. Students will create a midterm soundscape project as well as a final class project that is focused on their particular creative interests.

**MUSIC 102. Picturing Performance, Re-Envisioning the Arts. 2-4 Units.**

Critical and creative exploration of the performing body as captured on film. Viewing/listening includes musicals, dance and opera on film, music video, experimental film and video, and moments of heightened musicality in feature film. We'll focus on examples of moving media that possess a kinship with music through gesture, rhythm or affect and through visual parameters like décor, lighting, texture, camera movement and editing. Requirements include choosing and documenting a live performance, producing a short audiovisual work involving post-production, and weekly reading and viewing/listening assignments. No previous videomaking experience required.

Same as: MUSIC 202

**MUSIC 112. Creative Expression: Musical Theater. 4 Units.**

Students begin to create pieces that are fresh and innovative forms of musical theater that do not necessarily appeal to specifically popular audiences but perhaps to audiences more associated with high art, opera, or even contemporary independent music. Musical theater is an untapped resource of potential artistic innovation and has unfortunately become stuck in an ideal of universal accessibility. In present popular culture and the culture of contemporary art forms, musical theater almost exclusively refers to popular productions such as Phantom of the Opera, Rent, Wicked, Jesus Christ Superstar. Although excellent pieces of art in their own way, both dramaturgically and in their ability to evoke emotion through catchy melodies, for the most part each of them have their basis in popular and traditional musical idioms and theatrical forms, seldom exploring more advanced or avant-garde and experimental compositional and theatrical techniques.

**MUSIC 113. Introduction to Instrumental Composition. 2 Units.**

Students compose weekly exercises to improve creative fluency and develop basic control of instruments. Audio examples of diverse compositional techniques are introduced, analyzed and emulated.

**MUSIC 114. Sound Tracks: Music, Memory, and Migration in the Twentieth Century. 3-4 Units.**

This course comprises a thematic exploration of forces, experiences, and after-effects of diasporas of communities in the Americas and Europe throughout the 20th century. Through close listening accompanied by historical and theoretical readings, students will gain deeper insights into the making of meaning in music and the role of music as a creative response to the challenges of migration and minority-status in the modern nation-state. Historical examples will draw from the Romani diaspora, Eastern-European Jewish liturgical sounds, the Mexican-US border, and from Jazz and the Blues. We explore issues of race, ethnicity, identity, nationalism, minoritization as they intersect in the sound tracks of diaspora.

Same as: CSRE 114

**MUSIC 11A. Orchestral Repertoire and Technique for Violin. 1 Unit.**

Open to major and non-majors who would like to learn orchestral pieces and performance technique, including the works from the Stanford Symphony Orchestra's concert program. Priority is given to students who sign up for SSO and SPO. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 11AZ. Orchestral Repertoire and Technique for Violin. 0 Units.**

Open to major and non-majors who would like to learn orchestral pieces and performance technique, including the works from the Stanford Symphony Orchestra's concert program. Priority is given to students who sign up for SSO and SPO. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 11N. A View from the Podium: The Art of Conducting. 3 Units.**

How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor.

**MUSIC 122A. Counterpoint. 4 Units.**

Analysis and composition of contrapuntal styles from the Renaissance and Baroque periods. Use of keyboard, ear training, and sight singing underlies all written work. Prerequisites: MUSIC 23 and MUSIC 24C; passing piano-proficiency examination; or, consent of instructor.

**MUSIC 122B. Analysis of Tonal Music. 4 Units.**

Complete movements, or entire shorter works of the 18th and 19th centuries, are analyzed in a variety of theoretical approaches. Prerequisites: MUSIC 23 and MUSIC 24C; passing piano-proficiency examination; or, consent of instructor.

**MUSIC 122C. Introduction to 20th-Century Composition. 4 Units.**

Contemporary works, with emphasis on music since 1945. Projects in free composition based on 20th-century models. Prerequisites: MUSIC 23 and MUSIC 24C; passing piano-proficiency examination; or, consent of instructor.

**MUSIC 123. Undergraduate Seminar in Composition. 3 Units.**

Current trends in composition. May be repeated for credit a total of 7 times. Prerequisites: Music major; 23 or consent of instructor.

**MUSIC 123A. Undergraduate Seminar in Composition: Rhythmic Design. 1 Unit.**

Students compose weekly exercises to develop creative fluency and personal style. The course focuses on listening to examples, analysis and emulation of diverse compositional techniques involving rhythm.

**MUSIC 123B. Undergraduate Seminar in Composition: Pitch Design. 1 Unit.**

Students compose weekly exercises to develop creative fluency and personal style. The course focuses on listening to examples, analysis and emulation of diverse compositional techniques involving pitch.

**MUSIC 124A. Songwriters Workshop. 1-2 Unit.**

Laboratory for composers of any kind of vernacular music: singer-songwriters; folk singers; laptop dance music composers; rock and pop bands; rappers; writers of instrumentals or music with lyrics; solo artists and collaborators; etc. Compositional strategies for songwriting, overview of exemplars, discussion of aesthetic issues, and development of artistic personae. Weekly critique session for students and faculty to share work and offer feedback. Music theory and literacy not required. Aimed, however, at those with at least some experience as writers, whether casual or extensive. For bands at least half of members must be enrolled.

**MUSIC 124B. Songwriters Workshop. 3 Units.**

Laboratory for composers of any kind of vernacular music: singer-songwriters; folk singers; laptop dance music composers; rock and pop bands; rappers; writers of instrumentals or music with lyrics; solo artists and collaborators; etc. Compositional strategies for songwriting, overview of exemplars, discussion of aesthetic issues, and development of artistic personae. Weekly critique session for students and faculty to share work and offer feedback. Music theory and literacy not required. Aimed, however, at those with at least some experience as writers, whether casual or extensive. For bands at least half of members must be enrolled. Enrollment in 3-unit course is by permission of, and invites lessons with instructor.

**MUSIC 125. Individual Undergraduate Projects in Composition. 1-3 Unit.**

May be repeated for credit a total of 14 times. Prerequisites: music major, and one quarter of 123.

**MUSIC 126. Introduction to Thoroughbass. 1-3 Unit.**

The development of continuo techniques and skills for figured-bass realization. Performance and analysis of selected repertoire, using thoroughbass principles and exercises based on historical theoretical treatises. Prerequisite: 21.

**MUSIC 127. Instrumentation and Orchestration. 3 Units.**

Individual instruments, instrumental groups within the orchestra, and combinations of groups. Arrangements from piano to orchestral music. Score analysis with respect to orchestration. Practical exercises using chamber ensembles and school orchestra. Prerequisite: 23.

**MUSIC 128. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.**

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit. Space is limited; see <https://ccrma.stanford.edu/courses/128> for information about the application and enrollment process. May be repeat for credit. Same as: CS 170

**MUSIC 129. Advanced Ear-Training/Musicianship. 1-2 Unit.**

A course in advanced aural analysis and musicianship skills for students who have completed the Music 24 series. Topics of study include analysis by ear of large scale forms, chromatic or extended-tertiary harmony, modulations to distantly related keys, chromatic or atonal melodies, modal harmony and melody, as well as alternative forms of aural analysis.

**MUSIC 12A. Introductory Piano Class. 1 Unit.**

(A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12AS. Introductory Piano Class, Level 1. 1 Unit.**

Piano: Introductory Level 1 (Group; 10 students to a section) (A=Level 1; B=Level 2; C=Level 3). Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 12AZ. Introductory Piano Class. 0 Units.**

(A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeat for credit for 0 unit and total completion allowed 99.

**MUSIC 12B. Introductory Piano Class. 1 Unit.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12BS. Introductory Piano Class, Level 2. 1 Unit.**

Piano: Introductory Level 2 (Group; 10 students to a section) (A=Level 1; B=Level 2; C=Level 3). Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 12BZ. Introductory Piano Class. 0 Units.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12C. Introductory Piano Class. 1 Unit.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.) May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12CS. Introductory Piano Class, Level 3. 1 Unit.**

Piano: Introductory Level 3 (Group; 10 students to a section) (A=Level 1; B=Level 2; C=Level 3). Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.  
Same as: Group

**MUSIC 12CZ. Introductory Piano Class. 0 Units.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12SC. Musical Collisions and Radical Creativity. 2 Units.**

The margins of musical culture; nonconformist, maverick, and eccentric creative impulses that expand the definition of art. Laboratory atmosphere and daily rehearsals in which students create collaborative works with a final public concert involving collaborations with local musicians and presentations of student-composed works created during the course.

**MUSIC 12SZ. Introductory Piano. 0 Units.**

Introductory Piano (zero-unit option). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 130A. Introduction to Conducting. 3 Units.**

Baton techniques and rehearsal procedures. The development of coordination of the members of the body involved in conducting; fluency in beat patterns and meters; dynamics, tempi, cueing, and use of the left hand in conducting. Prerequisites: 122B and diagnostic musicianship exam given first day of class.

**MUSIC 130B. Elementary Orchestral Conducting. 3 Units.**

Prerequisites: 127 or previous orchestral performance experience, 130A.

**MUSIC 130C. Elementary Choral Conducting. 3 Units.**

Techniques specific to the conducting of choral ensembles: warm-ups, breathing, balance, blend, choral tone, isolation principles, recitative conducting, preparation, and conducting of choral/orchestral works. Prerequisite: 130A.

**MUSIC 133. Food, Text, Music: A Multidisciplinary Lab on the Art of Feasting. 3-5 Units.**

Students cook a collection of unfamiliar recipes each week while learning about the cultural milieus in which they originated. The course focuses on the fourteenth and fifteenth centuries, a time of great banquets that brought together chefs, visual artists, poets, musicians, and dancers. Students read late-medieval cookbooks under the guidance of professional chefs, learn songs and poetry with the help of visiting performers, and delve into a burgeoning scholarly literature on food history and sensory experience. We will also study trade routes and food networks, the environmental impact of large-scale banquets, the science of food, and the politics of plenty. This course may count towards the Medieval component of the French major, and corresponds to DLCL 121, a course requirement for the Medieval Studies Minor. Students interested in applying for course need to email Professors Galvez and Rodin (<mailto:mgalvez@stanford.edu> and <mailto:jrodin@stanford.edu>) with a statement of intent and dietary restrictions/preferences. Same as: FRENCH 166, FRENCH 366, MUSIC 333

**MUSIC 135. Harmonic Convergence: Music's Intersections with Science, Mathematics, History, and Literature. 3 Units.**

Topics include music and the brain; tuning and temperament; musical form; connections between music and mathematics; and readings in history and literature with strong musical elements. Readings include "The Power of Music" (Mannes), "Musicophilia" (Sacks), "From Music to Mathematics" (Roberts), "The Kreutzer Sonata" (Tolstoy), "A Clockwork Orange" and "Honey for the Bears" (Burgess). Compositions by Bach, Mozart, Beethoven, Debussy, Schoenberg, Stravinsky, Shostakovich, and others will be studied. Goals: increased understanding of music's relationship to other fields; improved writing skills. While ability to read music is not required, students with musical ability will be encouraged to perform relevant works in class.

**MUSIC 13N. Bollywood and Beyond: South Asian Popular and Folk Music. 3 Units.**

This seminar is an introduction to regional and popular music of South Asia; India, Pakistan, Sri Lanka, Bangladesh, and Nepal. An immense variety of South Asian music; everything from drumming to wedding songs to movie scores; is woven into the social lives of both audiences and performers. Through their music, people across South Asia express social criticism, bring about political change, engage in worship, mark rites of passage, and cope with rapid and unsettling socio-economic changes. For example, Marathi kirtan, a form of devotional song/storytelling from Western India, has been used to teach spiritual lessons and oppose colonial occupation; musicians from South Indian oppressed castes enlist drums to protest their low social status; and the ever-popular Bollywood dance music creates a sense of home for Indians living abroad. In this seminar you will have the opportunity to acquire listening skills that will enhance your appreciation of the variety and depth of South Asian folk and popular music. We will draw on areas such as folklore and ethnomusicology to gain an understanding about what makes these musical practices thrive. And we will go on three field trips, which will give you an opportunity to engage first-hand with South Asian music and musicians in our local community. No musical experience is required.

**MUSIC 13Q. Classical Music and Politics: Western Music in Modern China. 3 Units.**

Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians.

**MUSIC 13SC. Performing America: The Broadway Musical. 2 Units.**

This seminar explores how the themes, characters, stories, and, above all, the songs of the Broadway musical have played a key role in forming ideas of American identity from the early 20th century to the present. Musical theater is a perennial site for negotiating social themes of race, class, gender roles, and sexual identity. The American musical has been in constant dialogue with vernacular song and dance idioms, from ragtime and early jazz to rock, pop, disco, hip-hop, and electronic dance music. Jazz musicians have regularly looked to musical theater for their standards, as have talent shows from the vaudeville era to American Idol. Disney musicals, the television series *Glee* and *Smash*, and the High School Musical franchise all illustrate how musicals serve as a medium for negotiating personal identity from childhood through early adulthood, staging the conflicts and attachments that define our everyday lives while connecting these with the culture we live in through the collective medium of song. We will look at a variety of influential historical musicals (*Oklahoma*, *Guys and Dolls*, *Gypsy*, *The Music Man*, *West Side Story*) and a few recent shows such as *Wicked*, *Hairspray*, *Bloody Bloody Andrew Jackson*, *American Idiot*, and *The Book of Mormon*, asking what the relation is between individual numbers and the overall themes and structures of the shows. How do lyrics and music combine in a successful song, and how does a song contribute to shape of the show? How do the dynamics of live theater relate to the presentation of musicals in the mediums of film and television? In addition to working on selected songs and scenes with the help of Stanford voice and drama faculty, students will attend, discuss, and review Bay area productions (San Jose, San Francisco), including the Broadway by the Bay (Redwood City) production of *Cabaret* opening on September 13, 2013. Grading will be based on class discussion, production analysis and reviews, and a choice between a final creative project and a short research paper.

**MUSIC 142J. Studies in Music of the Baroque: Monteverdi's Theater Music. 3-4 Units.**

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).  
Same as: MUSIC 242J

**MUSIC 142K. Studies in Music of the Baroque: Handel the Cosmopolitan. 4-5 Units.**

Music history seminar on the operatic, sacred, and instrumental works of G.F. Handel as examples of the diversity, cosmopolitanism, expression, formal and technical features, and social uses of music in the first half of eighteenth century. Traces Handel's career from his native Germany to an elite Roman circle of musical connoisseurs, and to the Italian opera company he founded in London and his transformation of Italian opera into a new genre of English oratorio. By analyzing Handel's works in context, we examine the aesthetic, harmonic, and dramatic principles of the major European Baroque art-music genres. Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).  
Same as: MUSIC 242K

**MUSIC 143J. Studies in Music of the Classical Period: Franz Joseph Haydn. 3-4 Units.**

Music and Musicians in the Age of Enlightenment Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).  
Same as: MUSIC 243J

**MUSIC 143K. Studies in Music of the Classical Period: Mozart's Operas. 3-4 Units.**

Aesthetic, musical, and dramatic principles of 18th-century comic opera explored through W.A. Mozart's *Abduction from the Seraglio*, *Marriage of Figaro*, *Don Giovanni*, *Così fan tutte*, and *Magic Flute*. Comic strategies of exaggeration, farce, stock characters, ethnic caricature, and topsy-turvy social inversion; national traditions of Italian opera buffa and German Singspiel; musical forms and elements including recitative, aria, and ensemble. How Mozart's operas reflect 18th-century ideas about music, social organization, political authority, gender, sexuality, and rhetoric. Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).  
Same as: MUSIC 243K

**MUSIC 144J. Studies in Music of the Romantic Period: Faust in 19th-century Music. 3-4 Units.**

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.).  
Same as: MUSIC 244J

**MUSIC 144L. Studies in Music of the Romantic Period: Wagner: The Ring of the Nibelung. 3-4 Units.**

Richard Wagner's cycle of four operas, "Der Ring des Nibelungen" (1848-74), is one of the key documents of the mid nineteenth-century revolutionary fervor in Europe and a monument of radical artistic modernism of the period. The course will examine the artistic features of this unique work and place it in the complex ideological context of its time. Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.).  
Same as: MUSIC 244L

**MUSIC 145J. Studies in Western Art Music Since 1900: The Music & Ideas of Charles Ives. 4 Units.**

Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.).  
Same as: MUSIC 245J

**MUSIC 145K. Studies in Western Art Music Since 1900: Concepts of New Music. 4 Units.**

A survey of the history of Western classical music in the twentieth century, concentrating on shifts in the concept of New Music in the first half of the century. The aim is twofold: to study in depth a representative selection of works and to develop a historiographical framework for that study. Relevant concepts to be examined include Expressionism, Neo-Classicism, New Objectivity, Serialism, Aleatoricism, and Minimalism -- all of them key terms used by music historians and critics to describe and delineate the multifaceted phenomenon of "New Music." Composers to be studied include Schoenberg, Stravinsky, Berg, Weill, Shostakovich, Reich and Glass, and others. Prerequisites: MUSIC 23, MUSIC 42. (WIM course for Music majors.).  
Same as: MUSIC 245K

**MUSIC 146J. Studies in Ethnomusicology: Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.**

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing field-notes, recording, transcription, analysis, and ethnographic writing. Pre-/co-requisite (for music majors): MUSIC 22. (WIM at 4 units only.).  
Same as: CSRE 146J, MUSIC 246J

**MUSIC 146K. Studies in Ethnomusicology: Music of South Asia. 3-5 Units.**

Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Bangladesh. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 or 5 units only.).  
Same as: MUSIC 246K

**MUSIC 146L. Studies in Ethnomusicology: Musics of Africa and the African Diaspora. 3-5 Units.**

An introduction to musics of Africa and the African Diaspora. Topics include: music and nationalism, religion, embodiment, diaspora, migration, resistance, gender, globalization, and race. Musical regions and nations may include: Zimbabwe, South Africa, West Africa, Central Africa, Somalia, Ethiopia, the Caribbean, and the United States. This is a seminar-based course in which students will write short reflective papers and a final, research-based paper. Pre- or co-requisite for WIM credit: Music 22. WIM at 4 or 5 letter-graded units only.

Same as: AFRICAAM 146L, AFRICAST 246L, MUSIC 246L

**MUSIC 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 247J

**MUSIC 147K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.**

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.).

Same as: MUSIC 247K

**MUSIC 147L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: CHILATST 147L, CSRE 147L, MUSIC 247L

**MUSIC 148J. Studies in Perf Practice: Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.**

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.).

Same as: MUSIC 248J

**MUSIC 14N. Women Making Music. 3 Units.**

Preference to freshmen. Women's musical activities across times and cultures; how ideas about gender influence the creation, performance, and perception of music.

Same as: FEMGEN 13N

**MUSIC 150. Musical Acoustics. 3 Units.**

The physics of vibrating systems, waves, and wave motion. Time- and frequency-domain analysis of sound. Room acoustics, reverberation, and spatialization. The acoustics of musical instruments: voice, strings, and winds. Emphasis is on the practical aspects of acoustics in making music. Hands-on and computer-based lab. See <http://ccrma.stanford.edu/courses/150/>.

**MUSIC 150P. The Changing World of Popular Music. 2 Units.**

This course will cover changes in the business, economics, and practices of the popular music industry. It will provide a brief historical overview of the industry and its business models. The majority of the course will focus on the industry as it works today and on forces that are causing it to change rapidly. The course will feature guest artists and executives with current experience in the field, as well as project-based assignments designed to give students hands-on experience. Topics will include: Economics and business models of commercial music business, Technology and music production, Technology and music distribution, Technology and marketing, Leadership in the music industry: case studies, Managing creative projects, Copyright and legal issues. Attendance at first class required. Enrollment will be determined on the first day through a simple application process.

Same as: ARTSINST 150

**MUSIC 150R. Robert Schumann and the Idea of Musical Romanticism. 3-5 Units.**

The creative personality and musical compositions of Robert Schumann (1810-1856) as exemplars of the idea of Romanticism in European culture of the early nineteenth century. Survey of major genres (solo piano, Lieder, symphonies, chamber music, choral music) in dialogue with Romantic literary and visual cultures. Students prepare at least one or two works by Schumann or contemporary figures (Mendelssohn, Chopin, Brahms, Clara Schumann) for presentation in lecture-recital format. Prerequisites: Music 22 or equivalent (intermediate music theory), intermediate or higher performance ability in piano, strings, or voice.

**MUSIC 152A. Careers in Media Technology. 2 Units.**

Careers in Media Technology explores how leading audio, music, and video technology companies, such as Pandora, Adobe, Sonos, Dolby, Gracenote, iZotope, and Avid bring products from idea to market. We examine best practices, roles, day-to-day responsibilities, desired skillsets, and department/team function. This seminar is intended for all students considering full-time positions or internships in media technology industry. No prior engineering background required. Topics include: product management, project management (agile), software development in large organizations, UX/UI design, marketing, hardware development, R&D, sales, operations (HR, IP/patents), and the hiring process. Online lectures available. Class time includes discussion and meetings with industry professionals.

**MUSIC 153. Online Jamming and Concert Technology. 2-4 Units.**

Today's vast amount of streaming and video conferencing on the Internet lacks one aspect of musical fun and that's what this course is about: high-quality, near-synchronous musical collaboration. Under the right conditions, the Internet can be used for ultra-low-latency, uncompressed sound transmission. The course teaches open-source (free) techniques for setting up city-to-city studio-to-studio audio links. Distributed rehearsing, production and split ensemble concerts are the goal. Setting up such links and debugging them requires knowledge of network protocols, network audio issues and some ear training.

**MUSIC 154. History of Electronic Music. 1-5 Unit.**

What is electronic music? Acousmatic, computer music, algorithmic composition, tape music, glitch, electronic, musique concrète, noise, laptop music, DJ'ing, organized sound...what do these labels mean? This course will provide a brief historical survey of electroacoustic music and discuss some of the most salient questions associated with it, from both a compositional and musicological point of view. Topics to be covered include: definitions of musical sounds; Schaefferian theory and musique concrète; serialism and elektronische Musik; tape music and computer music in the USA; analysis of electroacoustic music; sampling and intellectual property; algorithmic and computer-assisted composition; live-electronics and improvisation. The course does not require previous experience in the field. Classes will be based on discussion of selected listening and reading materials, as well as hands-on digital experimentation with sounds.

**MUSIC 154A. Sound Art I. 4 Units.**

Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level).

Same as: ARTSTUDI 131

**MUSIC 154B. Aesthetics of Experimental Electronic Music, 1980 to Today. 3-5 Units.**

In this course, students will listen to, analyze, and interpret experimental electronic music since 1980. We will explore how technologies influence music making, audiences, experiences, distribution outlets and performance contexts for electronic music. How do artists generate meaning and expressivity when using experimental tools and styles? Emphasis on developing vocabulary and frameworks for informed discourse surrounding electronic music, drawing from both academic and journalistic traditions. Topics include electronic dance music, dubstep, hip hop, internet music culture, drone, noise, microsound, electroacoustic, and sound art. Highly recommended for music majors taking the MST specialization. For upper-level undergraduates and graduate students.

**MUSIC 154D. Symposium on Manufacturing Techniques for Music and Art. 1-3 Unit.**

A guided symposium on the many techniques for making music and art objects. The course will be tailored to student interest and needs as it covers computer controlled machining, traditional techniques, and innovative methods of creating physical objects for music and art.

**MUSIC 154F. Electroacoustic Music Analysis. 3-4 Units.**

This course will explore the most important methodologies for analysis of electroacoustic music that have been proposed in the literature. Class meetings include lectures, student discussions of relevant literature and listening sessions. Assignments include weekly readings, homework, and a final project. Basic musical proficiency is required. Experience with programming, music analysis, or music perception/cognition is desirable.

**MUSIC 155. Intermedia Workshop. 3-4 Units.**

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.

Same as: ARTSTUDI 239, MUSIC 255

**MUSIC 156. "sic": Improvisation Collective. 1 Unit.**

Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.

**MUSIC 156Z. "sic": Improvisation Collective. 0 Units.**

Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.

**MUSIC 158. Stanford Community Chorus. 1 Unit.**

Chorus members explore many different types of music and singing in a fun and supportive environment, including folk, spirituals, popular songs, and traditional choral music. The course culminates in an informal performance. No audition is required to join; experienced music readers and non-readers alike are welcome. The ensemble is open to both Stanford students and community members. There is a \$25 fee for music. Offered in collaboration with Stanford Continuing Studies. Enrollment limited to 15 students and 30 community members. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 159. Early Music Singers. 1 Unit.**

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 15 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 159J. Performance as Analysis: Late-Medieval Music in Action. 1-3 Unit.**

This experimental course channels embodied musical knowledge into text-based analysis and reflection. Part I features an intensive period of seven workshops and rehearsals: working closely with members of Cut Circle (<http://cutcircle.org>) as well as specialists in computer science and art history, students prepare a concert to be held during Week 2 of the quarter. Part II (Weeks 3-5) comprises a more typical twice-a-week schedule in which we reflect on, contextualize, and analyze the music and our experience performing it. A final paper is due in about Week 7; regular meetings conclude after Week 5. Prerequisites: good sight-singing skills; at least one quarter's experience in MUSIC 165 (Chamber Chorale) or an ensemble of a similar caliber. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University. Week 1: Mon 4 January: 4:30 - 7:00, MemChu; Wed 6 January: 4:30 - 7:00, MemChu; Fri 8 January: 4:30 - 7:00, DinkReh; Sat 9, and Sun 10 January: 2:30 - 6pm, BRH moving to MemChu; Week 2: Tues 12 January: 4:30 - 7:00, MemChu; Wed 13 January: 6pm call for 7:30p concert, MemChu;; Weeks 3-5: Tues/Thurs, 4:30 - 5:50 Braun 105; Weeks 6-10: No class meeting. Final paper due in week 7.

**MUSIC 159K. Stanford Facsimile Singers. 1 Unit.**

Small vocal ensemble performing late-medieval and Renaissance music from original sources. Exposes students to unfamiliar notational systems through often lavish music manuscripts and prints; builds sight-singing skills. May be repeated for credit for a total of three times. Zero-unit enrollment option available with instructor permission. Prerequisites: basic sight-singing. Prior training in voice not required.

**MUSIC 159KZ. Stanford Facsimile Singers. 0 Units.**

Small vocal ensemble performing late-medieval and Renaissance music from original sources. Exposes students to unfamiliar notational systems through often lavish music manuscripts and prints; builds sight-singing skills. May be repeated for credit for a total of three times. Zero-unit enrollment option available with instructor permission. Prerequisites: basic sight-singing. Prior training in voice not required.

**MUSIC 159Z. Early Music Singers. 0 Units.**

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 15 times for 0 unit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 15N. The Aesthetics of Data. 3 Units.**

Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression.

**MUSIC 160. Stanford Symphony Orchestra. 1 Unit.**

70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://sso.stanford.edu>). All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160A. Stanford Philharmonia. 1 Unit.**

Prerequisite: audition, one year of 160, or consent of instructor. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://sso.stanford.edu>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160AZ. Stanford Philharmonia. 0 Units.**

Prerequisite: audition, one year of 160, or consent of instructor. May be repeated for credit. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160B. Stanford New Ensemble. 1 Unit.**

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160BZ. Stanford New Ensemble. 0 Units.**

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160C. Stanford Baroque Soloists. 1 Unit.**

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. Modern instruments, modern pitch, baroque bows as available. Limited to six violins, three violas, three cellos, bass, admission by audition. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Contact instructor for audition and enrollment information: [apmartin@stanford.edu](mailto:apmartin@stanford.edu). May be repeated for credit for total completion of 15 and total 15 units. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160CZ. Stanford Baroque Soloists. 0 Units.**

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. Modern instruments, modern pitch, baroque bows as available. Limited to six violins, three violas, three cellos, bass, admission by audition. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Contact instructor for audition and enrollment information: [apmartin@stanford.edu](mailto:apmartin@stanford.edu). May be repeated for credit for 0 units. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160S. Summer Orchestra. 1 Unit.**

See website for details: <https://music.stanford.edu/academic-programs/summer-studies-stanford-music/summer-session-ensembles-chorus-and-symphony>. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160SZ. Summer Orchestra. 0 Units.**

See website for details: <https://music.stanford.edu/academic-programs/summer-studies-stanford-music/summer-session-ensembles-chorus-and-symphony>. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160Z. Stanford Symphony Orchestra. 0 Units.**

70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161A. Stanford Wind Symphony. 1 Unit.**

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161AZ. Stanford Wind Symphony. 0 Units.**

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161B. Jazz Orchestra. 1 Unit.**

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for total of 15 times. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161BZ. Jazz Orchestra. 0 Units.**

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for total completion of 15 and 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161D. Stanford Brass Ensemble. 1 Unit.**

Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161DZ. Stanford Brass Ensemble. 0 Units.**

Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161E. Stanford Afro-Latin Jazz Orchestra. 1 Unit.**

Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. African roots of the music are also presented including songs and rhythms from the Lucumi and Arara traditions. Focus is placed on learning rhythms, associated syncopations and also clave phrasing. One weekly rehearsal and a concert are required per quarter. Other playing opportunities available at the discretion of the group. Regular openings for brass/wind players, drummers, percussionists, pianists, bassists, and vocalists. Guest openings on violin, guitar and vibraphone. Inclusion of other instruments at the discretion of the director. Members should have basic reading ability and some related ensemble experience (e.g. jazz band). Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161EZ. Stanford Afro-Latin Jazz Orchestra. 0 Units.**

Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. African roots of the music are also presented including songs and rhythms from the Lucumi and Arara traditions. Focus is placed on learning rhythms, associated syncopations and also clave phrasing. One weekly rehearsal and a concert are required per quarter. Other playing opportunities available at the discretion of the group. Regular openings for brass/wind players, drummers, percussionists, pianists, bassists, and vocalists. Guest openings on violin, guitar and vibraphone. Inclusion of other instruments at the discretion of the director. Members should have basic reading ability and some related ensemble experience (e.g. jazz band). Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit for total of 0 (zero) unit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 162. Symphonic Chorus. 1 Unit.**

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 162Z. Symphonic Chorus. 0 Units.**

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 163. Memorial Church Choir. 1 Unit.**

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 163Z. Memorial Church Choir. 0 Units.**

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 165. Chamber Chorale. 1 Unit.**

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 165Z. Chamber Chorale. 0 Units.**

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167. University Singers. 1 Unit.**

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167S. Summer Chorus. 1 Unit.**

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music. For details see: <https://music.stanford.edu/academic-programs/summer-studies-stanford-music/summer-session-ensembles>. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for a total of 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167SZ. Summer Chorus. 0 Units.**

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music. For details see: <https://music.stanford.edu/academic-programs/summer-studies-stanford-music/summer-session-ensembles>. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for a total of 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167Z. University Singers. 0 Units.**

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 169. Stanford Taiko. 1 Unit.**

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 169Z. Stanford Taiko. 0 Units.**

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 170. Collaborative Piano. 1 Unit.**

Performance class in a workshop setting. Techniques of collaboration with vocalists and instrumentalists in repertoire ranging from songs and arias to sonatas and concertos. Prerequisite: private-lesson proficiency level in piano, or consent of instructor.

**MUSIC 171. Chamber Music. 1 Unit.**

Admission based on audition. Weekly one-hour coachings from Music department faculty. Search for instructor section in Axxess. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition sign up: <http://music.stanford.edu/> By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 171Z. Chamber Music. 0 Units.**

Admission based on audition. Weekly one-hour coachings from Music department faculty. Search for instructor section in Axess. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition sign up: <http://music.stanford.edu/> By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 172A. Piano. 1-3 Unit.**

Private lessons and group master class weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 172B. Organ. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 172C. Harpsichord. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 172D. Jazz Piano. 1-3 Unit.**

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 172E. Fortepiano. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 172F. Carillon. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 172G. Gu-Zheng. 1-3 Unit.**

Private lessons weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 173. Voice. 1-3 Unit.**

Private lessons and group master classes weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174A. Violin. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174B. Viola. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174C. Violoncello. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174D. Contrabass. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174E. Viola Da Gamba. 1-3 Unit.**

Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174F. Classical Guitar. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174G. Harp. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 174H. Baroque Violin. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 177A. Drum Set Lessons. 1-3 Unit.**

These lessons will be geared toward the individual student's desires and needs. All levels are welcome, but students should contact instructor to set up initial meeting, prior to enrolling in the course. Students will explore drumset technique, coordination, reading and a study various styles including, Jazz, Rock, R&B, Blues, Latin and Brazilian music. Students will use different texts as needed. These texts may include: Syncopation by Ted Reed, Modern Reading Text in 4/4 by Louis Bellson, A Funky Primer by Charles Dowd, Advanced Techniques for the Modern Drummer by Jim Chapin, and others. Students will also use material created by David for his classes "Around the World on a Drumset" and "Chart Reading Demystified." These lessons are designed to be both fun and challenging. Students will play along with recordings and are encouraged to bring in recordings of music that they enjoy. May be repeated for credit a total of 15 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 179Z. Applied Music Private Lessons. 0 Units.**

Students enroll in appropriate instructor section for private instrumental/vocal lessons using this zero unit enrollment option. Available only with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

**MUSIC 17N. The Operas of Mozart. 3 Units.**

Preference to freshmen. Four of Mozart's mature operas, the earliest works in the operatic repertoire never to go out of fashion. What accounts for this extraordinary staying power? Focus on the history of their composition, performance, and reception, and their changing significance from Mozart's time to the present.

**MUSIC 182. Diction for Singers. 1 Unit.**

The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.

**MUSIC 183A. German Art Song Interpretation. 1 Unit.**

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Beethoven, Schubert, Wolf and Strauss. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

**MUSIC 183B. French Art Song Interpretation. 1 Unit.**

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Fauré, Debussy, Ravel and Poulenc. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

**MUSIC 183C. Interpretation of Musical Theater Repertoire. 1-2 Unit.**

By audition only: Contact instructor prior to enrolling (bnies1@gmail.com). Ability to read music expected, but students with experience singing in musical theater can be accepted. For singers and pianists as partners. Performance class in a workshop setting along with lecture/discussion of important eras of musical theater history. Composers include Kern, Porter, Gershwin, Rodgers, Sondheim, Lloyd Weber, Jason Robert Brown and others. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists). Same as: TAPS 183C

**MUSIC 183CZ. Interpretation of Musical Theater Repertoire. 0 Units.**

By audition only: Contact instructor prior to enrolling (bnies1@gmail.com). Ability to read music expected, but students with experience singing in musical theater can be accepted. For singers and pianists as partners. Performance class in a workshop setting along with lecture/discussion of important eras of musical theater history. Composers include Kern, Porter, Gershwin, Rodgers, Sondheim, Lloyd Weber, Jason Robert Brown and others. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists).

**MUSIC 183D. Musical Theater. 1-3 Unit.**

In this workshop we will traverse the landscape of world of Musical Theater. It will serve as an introduction for the beginning actor and singer, and expand the more experienced performer's range in this genre. The world of Musical Theater is filled with stories of love, passion, joy, violence, heartbreak and rage. The class will include an introduction to vocal and movement skills for musical theater, beginning with exercises to build an ensemble and encourage a sense of play and relaxation in supportive environment. Our class must be a place where everyone feels safe. As ensemble members, we will be responsible for each other in this environment. Students will choose one solo song, and perform in a group number from this exciting discipline. The instructor will work with the actors on technique, utilization of action, specificity of language, personalization, and emotional truth. A professional coach from the theater community will conduct vocal coaching. Physical warm-ups and choreography will be suited for both the dancer and non-dancer. The class will culminate in the last week with live performance for friends and family. STUDENTS ARE ENCOURAGED TO BRING THEIR OWN SUGGESTIONS. (Isn't there a role you've always wanted to sing?) Required text: Broadway Musicals Show by Show: Sixth Edition - Stanley Green; Paperback. Same as: TAPS 115

**MUSIC 183E. Singing for Musicals. 2 Units.**

This course provides training in vocal technique, stylistic musical phrasing, and acting for students interested in performing musical theater. Students will learn about the physical process of singing, including posture, breath support, and vocal exercises. They will incorporate vocal technique with the study of phrasing in different styles of Broadway repertoire, and apply both to the art of acting the song. Each student will work on solo selections and ensembles, and sing in most classes. Through understanding vocal technique, students will become more confident and joyful performers. The course will culminate in a final public workshop performance. Same as: TAPS 183E

**MUSIC 184A. Editing and Performing Early Music. 1-3 Unit.**

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 184AZ. Editing and Performing Early Music. 0 Units.**

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. All participants must enroll. May be repeated for a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 184B. Topics in Opera Stagecraft. 1-3 Unit.**

This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 184BZ. Topics in Opera Stagecraft. 0 Units.**

This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 184C. Dramatic Vocal Arts: Songs and Scenes Onstage. 1-2 Unit.**

Studies in stagecraft, acting and performance for singers, culminating in a public performance. Repertoire to be drawn from the art song, opera, American Songbook and musical theater genres. Audition or consent of instructor required. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: TAPS 184C

**MUSIC 184CZ. Dramatic Vocal Arts: Songs and Scenes Onstage. 0 Units.**

Studies in stagecraft, acting and performance for singers, culminating in a public performance. Repertoire to be drawn from the art song, opera, American Songbook and musical theater genres. Audition or consent of instructor required. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 184D. Creating a Musical. 4 Units.**

This practical, hands on class in the making of musicals explores all aspects of creating musical theater, including writing, composing, producing, directing, designing, and casting this most American of theater genres. The class will include direct engagement and discussion with the producers and artists of TheatreWorks Silicon Valley's production of *The Bridges of Madison County*, book by Marsha Norman and music by Jason Robert Brown, including off-campus field trip to rehearsal of the show. The class will explore the creation of several renowned musicals including Stephen Sondheim's *Merrily We Roll Along*, and will include live Skype interviews with Broadway composers Andrew Lippa (*The Wild Party*), Paul Gordon (*Jane Eyre*), and David Hein and Irene Sankoff (*Come from Away*, winner of the 2017 Drama Desk Award for Best Musical). The quarter will culminate in the creation, production, and performance of several mini-musicals created by members of the class. Instructor Robert Kelley is the Founding Artistic Director of TheatreWorks Silicon Valley, where he has directed 170 productions, including many world and regional premieres.

Same as: TAPS 177C

**MUSIC 184E. Musical Theater Dance Styles. 1 Unit.**

Students will be able to demonstrate period specificity, character of style through learning different musical theater dances from the early 20th C. to the present. ALL students will participate in an end of quarter showing of the choreography developed and composed in class. nClass will be supplemented with the occasional guest, DJ accompaniment and video viewing.

Same as: DANCE 102

**MUSIC 185. Technologies of Musical Expression. 3 Units.**

Music is made and experienced through technology created for it. These technologies allow for expression but influence the result.

This course will utilize special collections, acoustical tools, music-making apps, live musicians, and media both historical and modern to reflect on the ways people make music expressive. The course is designed around creative projects and hands on experiences with digital and analogue media, player pianos, archival manuscripts, and sound sculptures to stimulate discussion about the role of technology in our musical experiences. Projects can include performances using digital and analogue media, performance art, creating player piano rolls, or performance ethnographies, etc. WAYS credit for 3 units and grade only.

**MUSIC 186. Religion and Music in South Asia. 4-5 Units.**

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as *ecstasy*-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 286, RELIGST 259

**MUSIC 186B. American Song in the 20th Century and after. 3-4 Units.**

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.

Same as: AMSTUD 186B, MUSIC 286B

**MUSIC 187. Music and Culture from the Land of Fire: Introduction to Azerbaijani Mugham. 1-5 Unit.**

Nestled in the Caucasus, Azerbaijan is a crossroads between East and West; its rich musical heritage contains threads of Turkish, Central Asian, Persian, Caucasian, Russian, and Arabic traditions. In this course, master-musician Imamyar Hasanov teaches students to perform and appreciate Azeri music. Content includes classical mugham, Eastern theory, improvisation and microtonality. We'll discuss Azeri music culture, supplemented by guest lecturers and Skype interviews with musicians in Azerbaijan. Open to students with any experience playing a musical instrument (including voice). No previous experience with Azeri music necessary. Supported by the SF World Music Festival. Questions? Email [schultzta@stanford.edu](mailto:schultzta@stanford.edu).

**MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940. 3 Units.**

From the beginning of jazz to the war years.

Same as: AFRICAAM 18A

**MUSIC 18B. Jazz History: Bebop to Present, 1940-Present. 3 Units.**

Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style.

Same as: AFRICAAM 18B

**MUSIC 192A. Foundations of Sound-Recording Technology. 3 Units.**

For upper division undergraduates and graduate students; preference given to Music majors with MST specialization. Topics: elementary electronics; the physics of sound transduction and microphone operation, selection, and placement; mixing consoles; connectors and device interconnection; grounding and shielding; principles of analog magnetic recording; operation maintenance of recording equipment; and principles of recording engineering. Enrollment limited. Prerequisites: MUSIC 150, algebra, physics basics, and consent of instructor.

**MUSIC 192B. Advanced Sound Recording Technology. 3 Units.**

Topics: noise reduction techniques; dynamics and time-delay audio effects; the principles of digital audio; disk- and tape-based digital recorders; digital audio workstations and editing; advanced multitrack techniques; SMPTE and MIDI time code and device synchronization; MIDI sequencing and synchronization. See <http://ccrma.stanford.edu/courses/>. Prerequisite: 192A.

**MUSIC 192C. Session Recording. 1-2 Unit.**

Independent engineering of recording sessions. May be repeated for credit a total of 14 times. Prerequisites: 192A,B.

**MUSIC 197. Undergraduate Teaching Apprenticeship. 1-2 Unit.**

Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff).

**MUSIC 198. Concentrations Project. 4 Units.**

For concentration program participants only. Must be taken in senior year. Multiple concentrators may enroll in one section of 198 per concentration.

**MUSIC 199. Independent Study. 1-5 Unit.**

For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.

**MUSIC 19A. Introduction to Music Theory. 3 Units.**

For non-music majors and Music majors or minors unable to pass the proficiency test for entry to MUSIC 21. The fundamentals of music theory and notation, basic sight reading, sight singing, ear training, keyboard harmony; melodic, rhythmic, and harmonic dictation. Skill oriented, using piano and voice as basic tools to develop listening and reading skills.

**MUSIC 19B. Intermediate Music Theory. 3 Units.**

This course is an introduction to music theory geared toward students who have basic literacy skills (i.e. fundamental notation, identifying major and minor scales, keys, etc). Using musical materials from repertoire selected from campus and area concerts, and incorporating the opportunity to attend these concerts, the course will introduce elements of harmony, melody, form, orchestration and arrangement. The course is an appropriate successor to Music 19A. Students who successfully complete Music 19B can go on directly to Music 21.

**MUSIC 1A. Music, Mind, and Human Behavior. 3 Units.**

An introductory exploration of the question of why music is a pervasive and fundamental aspect of human existence. The class will introduce aspects of music perception and cognition as well as anthropological and cultural considerations.

**MUSIC 1SI. Introduction to Indian Classical Music. 1 Unit.**

This is an introductory course in the classical music of India, with emphasis on learning to listen to and appreciate Indian classical music concerts. It will cover a broad overview of the two main genres of Indian classical music - Carnatic and Hindustani. We will have several in-class demonstrations of instruments unique to the Indian classical music tradition. Class meetings will include discussions of landmark performances and artists as well as fundamentals of this music style, such as Raaga (melody), Taala (rhythm), song structure, and improvisation.

**MUSIC 200A. Proseminar in Musicology and Music Bibliography. 3-4 Units.**

Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.

**MUSIC 200B. Proseminar in Ethnomusicology. 3-5 Units.**

A graduate-level introduction to the field of ethnomusicology. Issues and debates are traced through the history of the discipline, with emphasis on influences from anthropology, performance studies, linguistics, and cultural studies. Topics include music and: social organization, "culture," structure, practice, comparison, representation, globalization, identity, transcription, and embodiment.

**MUSIC 201. CCRMA Colloquium. 1 Unit.**

Weekly review of work being done in the field, research taking place at CCRMA, and tools to make the most of the CCRMA technical facilities.

**MUSIC 202. Picturing Performance, Re-Envisioning the Arts. 2-4 Units.**

Critical and creative exploration of the performing body as captured on film. Viewing/listening includes musicals, dance and opera on film, music video, experimental film and video, and moments of heightened musicality in feature film. We'll focus on examples of moving media that possess a kinship with music through gesture, rhythm or affect and through visual parameters like décor, lighting, texture, camera movement and editing. Requirements include choosing and documenting a live performance, producing a short audiovisual work involving post-production, and weekly reading and viewing/listening assignments. No previous videomaking experience required.

Same as: MUSIC 102

**MUSIC 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**MUSIC 20A. Jazz Theory. 3 Units.**

Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor. Same as: AFRICAAM 20A

**MUSIC 20B. Advanced Jazz Theory. 3 Units.**

Approaches to improvisation through listening and transcribing, and developing familiarity with important contributors to this music. Topics: scale theory, altered dominants, and substitute harmony. Prerequisite: 20A or consent of instructor.

**MUSIC 20C. Jazz Arranging and Composition. 3 Units.**

Jazz arranging and composition for small ensembles. Foundation for writing for big band. Prerequisite: 20A or consent of instructor.

**MUSIC 21. Elements of Music I. 3 Units.**

Preference to majors. Introduction to tonal theory. Practice and analysis. Diatonic harmony focusing on melodic and harmonic organization, functional relationships, voice-leading, and tonal structures. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Enrollment limited to 40. Prerequisites: (1) Piano Proficiency Exam (must be passed within the first two weeks of the term) or MUSIC 12A (may be taken concurrently); (2) Passing grade on a basic musical skills proficiency examination on the first day of class or MUSIC 19.

**MUSIC 22. Elements of Music II. 3 Units.**

Preference to majors. Introduction to chromatic harmony focusing on secondary functions, modulations, harmonic sequences, mode mixture, and the Neapolitan, and augmented sixth chords. Analysis of musical forms and harmonizations complemented by harmonic and melodic dictation, sight singing, and other practical skills. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 21; (2) Piano Proficiency Exam or MUSIC 12B (may be taken concurrently).

**MUSIC 220A. Fundamentals of Computer-Generated Sound. 2-4 Units.**

What are the basic tools that computer music researchers and artists use to create sound? This course will include a summary of digital synthesis techniques (additive, subtractive, wavetable, frequency modulation and physical-modeling), signal processing techniques for digital effects, (reverberation, panning, filters), and basic psychoacoustics. Programming experience is recommended, but not required. Course will use the ChuckK computer music language. Majors (undergraduate or graduate) must take for 4 units. See <http://ccrma.stanford.edu/>.

**MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music. 2-4 Units.**

The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. See <http://ccrma.stanford.edu/>. Prerequisite: 220A.

**MUSIC 220C. Research Seminar in Computer-Generated Music. 2-4 Units.**

Individual projects in composition, psychoacoustics, or signal processing. See <http://ccrma.stanford.edu/>. May be repeated for credit. Prerequisite: 220B.

**MUSIC 220D. Research in Computer-Generated Music. 1-10 Unit.**

Independent research projects in composition, psychoacoustics, or signal processing. See <http://ccrma.stanford.edu/>. May be repeated for credit. Prerequisite: 220C.

**MUSIC 221. Topics in the History of Theory. 3-5 Units.**

The intersection of music theory and compositional practice in different eras of Western music history. Primary sources in music theory and issues such as notation, rhythm, mode, dissonance treatment, counterpoint, tonality, form, rhetoric, affect and imitation, expression, linear analysis, 12-tone and set theory, in light of relevant repertoire and modern scholarship. May be repeated for credit a total of 5 times.

**MUSIC 222. Sound in Space. 1-4 Unit.**

Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.

**MUSIC 223. Composition for Electronic Musicians. 1-4 Unit.**

Composition for any combination of acoustic and electroacoustic instrumentation, computer-generated sound, invented instruments, sound-sculptures, and multi-disciplinary elements including theater and visual media. Project-based laboratory to advance original student works, supported by lectures on the fundamentals of composition. Concert performance of final works. Taught at CCRMA with a focus on engendering deliberate conversation on the enrichment of a cultural context for new media. Open to undergraduates and graduates.

**MUSIC 23. Elements of Music III. 3 Units.**

Preference to majors. Continuation of chromatic harmony and complex forms of late Romantic period. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 22; (2) Piano Proficiency Exam or MUSIC 12C (may be taken concurrently).

**MUSIC 230. Advanced Orchestral Conducting. 2-4 Units.**

May be repeated for credit a total of 8 times. Prerequisite: 130B.

**MUSIC 231. Advanced Choral Conducting. 2-4 Units.**

Individual instruction continuing trajectory of Music 130C. Focus on gestural technique and analysis of works by genre and historical period. May be repeated for credit a total of 8 times. Prerequisite: 130C.

**MUSIC 236. Future Media, Media Archaeologies. 3-4 Units.**

Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate.

Same as: ARTSTUDI 236

**MUSIC 242J. Studies in Music of the Baroque: Monteverdi's Theater Music. 3-4 Units.**

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).

Same as: MUSIC 142J

**MUSIC 242K. Studies in Music of the Baroque: Handel the Cosmopolitan. 4-5 Units.**

Music history seminar on the operatic, sacred, and instrumental works of G.F. Handel as examples of the diversity, cosmopolitanism, expression, formal and technical features, and social uses of music in the first half of eighteenth century. Traces Handel's career from his native Germany to an elite Roman circle of musical connoisseurs, and to the Italian opera company he founded in London and his transformation of Italian opera into a new genre of English oratorio. By analyzing Handel's works in context, we examine the aesthetic, harmonic, and dramatic principles of the major European Baroque art-music genres. Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).

Same as: MUSIC 142K

**MUSIC 243J. Studies in Music of the Classical Period: Franz Joseph Haydn. 3-4 Units.**

Music and Musicians in the Age of Enlightenment Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).

Same as: MUSIC 143J

**MUSIC 243K. Studies in Music of the Classical Period: Mozart's Operas. 3-4 Units.**

Aesthetic, musical, and dramatic principles of 18th-century comic opera explored through W.A. Mozart's *Abduction from the Seraglio*, *Marriage of Figaro*, *Don Giovanni*, *Così fan tutte*, and *Magic Flute*. Comic strategies of exaggeration, farce, stock characters, ethnic caricature, and topsy-turvy social inversion; national traditions of Italian opera buffa and German Singspiel; musical forms and elements including recitative, aria, and ensemble. How Mozart's operas reflect 18th-century ideas about music, social organization, political authority, gender, sexuality, and rhetoric. Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 143K

**MUSIC 244J. Studies in Music of the Romantic Period: Faust in 19th-century Music. 3-4 Units.**

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.). Same as: MUSIC 144J

**MUSIC 244L. Studies in Music of the Romantic Period: Wagner: The Ring of the Nibelung. 3-4 Units.**

Richard Wagner's cycle of four operas, "Der Ring des Nibelungen" (1848-74), is one of the key documents of the mid nineteenth-century revolutionary fervor in Europe and a monument of radical artistic modernism of the period. The course will examine the artistic features of this unique work and place it in the complex ideological context of its time. Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.). Same as: MUSIC 144L

**MUSIC 245J. Studies in Western Art Music Since 1900: The Music & Ideas of Charles Ives. 4 Units.**

Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.). Same as: MUSIC 145J

**MUSIC 245K. Studies in Western Art Music Since 1900: Concepts of New Music. 4 Units.**

A survey of the history of Western classical music in the twentieth century, concentrating on shifts in the concept of New Music in the first half of the century. The aim is twofold: to study in depth a representative selection of works and to develop a historiographical framework for that study. Relevant concepts to be examined include Expressionism, Neo-Classicism, New Objectivity, Serialism, Aleatoricism, and Minimalism – all of them key terms used by music historians and critics to describe and delineate the multifaceted phenomenon of "New Music." Composers to be studied include Schoenberg, Stravinsky, Berg, Weill, Shostakovich, Reich and Glass, and others. Prerequisites: MUSIC 23, MUSIC 42. (WIM course for Music majors.). Same as: MUSIC 145K

**MUSIC 246J. Studies in Ethnomusicology: Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.**

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing field-notes, recording, transcription, analysis, and ethnographic writing. Pre-/co-requisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: CSRE 146J, MUSIC 146J

**MUSIC 246K. Studies in Ethnomusicology: Music of South Asia. 3-5 Units.**

Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Bangladesh. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 or 5 units only.). Same as: MUSIC 146K

**MUSIC 246L. Studies in Ethnomusicology: Musics of Africa and the African Diaspora. 3-5 Units.**

An introduction to musics of Africa and the African Diaspora. Topics include: music and nationalism, religion, embodiment, diaspora, migration, resistance, gender, globalization, and race. Musical regions and nations may include: Zimbabwe, South Africa, West Africa, Central Africa, Somalia, Ethiopia, the Caribbean, and the United States. This is a seminar-based course in which students will write short reflective papers and a final, research-based paper. Pre- or co-requisite for WIM credit: Music 22. WIM at 4 or 5 letter-graded units only. Same as: AFRICAAM 146L, AFRICAST 246L, MUSIC 146L

**MUSIC 247J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 147J

**MUSIC 247K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.**

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.). Same as: MUSIC 147K

**MUSIC 247L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: CHILATST 147L, CSRE 147L, MUSIC 147L

**MUSIC 248J. Studies in Perf Practice: Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.**

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.)

Same as: MUSIC 148J

**MUSIC 24A. Ear Training I. 1-2 Unit.**

Class is closed by design. Please contact instructor Erika Arul (mailto:earul@stanford.edu) for permission to enroll.

**MUSIC 24B. Ear Training II. 1-2 Unit.**

Class is closed by design. Please contact instructor Erika Arul (mailto:earul@stanford.edu) for permission to enroll.

**MUSIC 24C. Ear Training III. 1-2 Unit.**

Class is closed by design. Please contact instructor Erika Arul (mailto:earul@stanford.edu) for permission to enroll.

**MUSIC 24K. Keyboard Harmony. 1 Unit.**

In this practical introduction to keyboard harmony, students learn to play, analyze and improvise chord progressions at the keyboard. The course covers reading figured bass, playing chord progressions in all major and minor keys, and score reading. Students also analyze and perform solo repertoire that progresses through the semester from simple pieces to the level of a Bach invention and chorale. Preference given to majors. Keyboard harmony supports material learned in MUSIC 24B and 24C and counts as an ear training course. Prerequisites: (1) Piano Proficiency Exam, (2) MUSIC 24A.

**MUSIC 25. Decoding Anime. 3 Units.**

Anime as an artistic form often boasts highly imaginative graphics, striking music, vibrant characters, and fantastical stories. The course aims at decoding the expressive power of anime by applying a method of multimedia analysis that focuses on the interaction between its component elements: story, image, sound and music. Through close reading of works by five leading and innovative directors the students will develop tools to analyze anime and interpret it in a larger cultural context.

**MUSIC 250A. Physical Interaction Design for Music. 3-4 Units.**

This lab and project-based course explores how we can physically interact with real-time electronic sound. Students learn to use and design sensors, circuits, embedded computers, communication protocols and sound synthesis. Advanced topics include real-time media, haptics, sound synthesis using physical model analogs, and human-computer interaction theory and practice. Course culminates in musical performance with or exhibition of completed design projects. A \$50 lab fee will be added to your bill upon enrollment in this course. See <http://ccrma.stanford.edu/>.

**MUSIC 250B. Interactive Sound Art. 1-4 Unit.**

A project based course where students will create Interactive Sound Art Installations focusing on the acoustical properties of reverberation. See <http://ccrma.stanford.edu/courses/250b/>.

**MUSIC 251. Psychophysics and Music Cognition. 1-5 Unit.**

Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only.)

**MUSIC 252. Introduction to Music Notation Software. 1-2 Unit.**

Learn to use music notation programs Finale®, Sibelius® and open-source alternatives.

**MUSIC 253. Symbolic Musical Information. 2-4 Units.**

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

Same as: CS 275A

**MUSIC 254. Music Query, Analysis, and Style Simulation. 2-4 Units.**

Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor. Same as: CS 275B

**MUSIC 255. Intermedia Workshop. 3-4 Units.**

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.

Same as: ARTSTUDI 239, MUSIC 155

**MUSIC 256A. Music, Computing, Design I: Art of Design for Computer Music. 3-4 Units.**

Creative design for computer music software. Programming, audiovisual design, as well as software design for musical tools, instruments, toys, and games. Provides paradigms and strategies for designing and building music software, with emphases on interactive systems, aesthetics, and artful product design. Course work includes several programming assignments and a "design+implement" final project. Prerequisite: experience in C/C++ and/or Java. See <https://ccrma.stanford.edu/courses/256a/>.

Same as: CS 476A

**MUSIC 256B. Music, Computing, Design II: Virtual and Augmented Reality for Music. 3-4 Units.**

Aesthetics, design, and exploration of creative musical applications of virtual reality (VR) and augmented reality (AR), centered around VR and mobile technologies. Comparison between AR, VR, and traditional software design paradigms for music. Topics include embodiment, interaction design, novel instruments, social experience, software design + prototyping. Prerequisite: MUSIC 256A / CS 476A.

Same as: CS 476B

**MUSIC 257. Neuroplasticity and Musical Gaming. 3-5 Units.**

What changes in a musician's brain after hours and years of daily practice? How do skills that make a great violinist transfer to other abilities? Can directed neuroplasticity be used to target skill learning? This course will include fundamentals of psychoacoustics and auditory neuroscience. Focus will be development of video games that use perceptually motivated tasks to drive neural change. Emphasis will be on music, linguistic, and acoustic based skills. Programming experience is highly recommended, but not required.

**MUSIC 264. Musical Engagement: Use correlation analysis and big data to identify and predict musical behaviors. 1-3 Unit.**

The course will use data analysis to explore why people engage in music. The course will be one part lab, one part seminar, meeting once a week for two hours. Students will learn to apply correlation analysis to a vast corpus of actual performance data using the latest analytics and query tools, developing insights into what motivates the musical preferences and behaviors of both performers and listeners. A basic proficiency in Java, MatLab, and SQL query language will be developed along the way.

**MUSIC 269. Research in Performance Practices. 1-5 Unit.**

Directed reading and research. May be repeated for credit a total of 5 times.

**MUSIC 26N. Japanese Arts: a Creative Exploration. 4 Units.**

The striking originality of Japanese contemporary culture seems to defy unifying pressures of globalization. What are the sources of this originality? Can it be traced to the unique and sophisticated art forms like rock gardens, haiku, tea ceremony, martial arts, ikebana and Noh Theater or to the illusive aesthetic notions of wabi, sabi, yūgen, ma or jo-ha-kyū? Exploration of Japanese arts through comparative examination and direct engagement. Creative projects and workshops in traditional Japanese arts.

**MUSIC 272A. Advanced Piano. 1-3 Unit.**

Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272B. Advanced Organ. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272C. Advanced Harpsichord. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272D. Advanced Jazz Piano. 1-3 Unit.**

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272E. Advanced Fortepiano. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272F. Advanced Carillon. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272G. Advanced Gu-Zheng. 1-3 Unit.**

Private lesson weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 273. Advanced Voice. 1-3 Unit.**

Private lessons and group master class weekly. May be repeated for credit. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274A. Advanced Violin. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274B. Advanced Viola. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274C. Advanced Violoncello. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274D. Advanced Contrabass. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274E. Advanced Viola da Gamba. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274F. Advanced Classical Guitar. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274G. Advanced Harp. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 274H. Advanced Baroque Violin. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 27N. The British Invasion. 3 Units.**

Examination of three generations of British popular music in the '60s and '70s: the Beatles (and the Rolling Stones, the Kinks, the Who); progressive rock (art rock) as embodied in Pink Floyd, Yes, King Crimson, Genesis, and Emerson, Lake, and Palmer; the emergence of punk in its revolutionary (the Clash) and nihilistic (the Sex Pistols) forms. Among other issues, the manner in which marginal American culture (particularly African-American blues) is neglected by Americans and venerated by foreigners and the subsequent mainstream consumption of a transformed and repackaged American minority culture is discussed.

**MUSIC 280. TA Training Course. 1 Unit.**

Required for doctoral students serving as teaching assistants. Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.

**MUSIC 286. Religion and Music in South Asia. 4-5 Units.**

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as  $\zeta$ ecstasy $\zeta$ -inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, RELIGST 259

**MUSIC 286B. American Song in the 20th Century and after. 3-4 Units.**

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.

Same as: AMSTUD 186B, MUSIC 186B

**MUSIC 28N. Queer Lives in Music. 3 Units.**

Queer Lives in Music examines music by queer musicians in genres including punk, opera, rock, symphony, musical theater, folk, and jazz. We will study lesbian, gay, bisexual, transgender, and queer composers, performers, and listeners, to learn how queer people have expressed individual identity and built communities through music. We will learn how sexual stigma, taboo, oppression, and resistance have impacted musical creativity and music history. Class is designed for students interested in music, social history, cultural studies, and gender/sexuality studies.

Same as: FEMGEN 28N

**MUSIC 2A. The Symphony. 3 Units.**

Symphonic literature 1750 to the present, with emphasis on developing listening skills and preparation for attending a live performance. Ability to read music not required.

**MUSIC 2C. An Introduction to Opera. 3 Units.**

The lasting appeal of opera as a lavishly hybrid genre from the 1600s to the present. How and why does opera set its stories to music? What is operatic singing? Who is the audience? How do words, music, voices, movement, and staging collaborate in different operatic eras and cultures? Principal works by Monteverdi, Handel, Mozart, Verdi, Wagner, Strauss, Britten, and Adams. Class studies and attends two works performed by the San Francisco Opera.

**MUSIC 300A. Medieval Notation. 3-4 Units.**

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

**MUSIC 300B. Renaissance Notation. 3-4 Units.**

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

**MUSIC 300C. Medieval Methodologies. 1-3 Unit.**

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaography will offer elementary training in these fundamental skills.

Same as: DLCL 300, ENGLISH 300

**MUSIC 302. Research in Musicology. 1-5 Unit.**

Directed reading and research. May be repeated for credit a total of 14 times.

**MUSIC 305A. Analysis and Repertoire: Medieval and Renaissance. 4 Units.**

Analytical approaches to genres, styles, forms, and techniques of Western music from [chant and early polyphony through the sixteenth century]. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

**MUSIC 305B. Analysis and Repertoire: Baroque to Early Romantic. 4 Units.**

Analytical approaches to genres, styles, forms, and techniques of Western music from the seventeenth through the mid-nineteenth centuries. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

**MUSIC 305C. Analysis and Repertoire: Late-Romantic to Contemporary. 3-4 Units.**

Analytical approaches to genres, styles, materials and techniques of Western music from the mid-nineteenth century through the present. Questions of aesthetics, history and performance explored through musical analysis. Representative repertoire and readings, and a range of analytical methods.

**MUSIC 305D. Analysis from a Compositional Perspective. 4 Units.**

Introduction to analysis, examining diverse examples in part chosen from, otherwise supplementing and illuminating, the graduate composers' qualifying exam list; consideration of aesthetic premises and motivations, and of implications for contemporary compositional practice.

**MUSIC 30N. A Stranger in a Strange Land: Jewish Musics in Translation. 3 Units.**

What does it mean to be a stranger in a strange land? For centuries Jewish people have struggled to shape their identities in unfamiliar surroundings, using music to remember the past and generate new, hybrid identities. In this class we adopt the metaphor of translation to think about how minority Jewish communities bridge distinct languages, musical idioms, and cultural practices. Our theme will take us on a journey across time and space; from Italy to India, New York, Syria, Russia, and Israel. We consider the case of Salamone Rossi, a 17th-century Italian Jewish composer who moved uneasily between dual careers in the synagogue and a secular/Christian court. We also explore a group of Indian Jews (Bene Israel) who combine idioms learned from Jewish and Christian missionaries with local Hindu musical traditions. In all our examples musicians translate languages, musical styles, and cultures to unite memories of a Jewish past with the realities of minority status in the present. The class format includes listening, discussion, some singing, student presentations, and guest lectures.

**MUSIC 310. Research Seminar in Musicology. 3-5 Units.**

For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.

**MUSIC 312A. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche. 3-4 Units.**

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

**MUSIC 312B. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today. 3-4 Units.**

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

**MUSIC 318. Advanced Acoustics. 1-5 Unit.**

Current topics. May be repeated for credit.

**MUSIC 319. Research Seminar on Computational Models of Sound Perception. 1-3 Unit.**

All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See <http://ccrma.stanford.edu/courses/>. May be repeated for credit a total of 14 times.

**MUSIC 31N. Perspectives in North American Taiko. 3 Units.**

Preference to Freshman. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity.

Same as: ASNAMST 31N

**MUSIC 320A. Introduction to Audio Signal Processing Part I: Spectrum Analysis. 3-4 Units.**

Digital signal representations and transforms for music and audio research. Topics: complex numbers, sinusoids, spectrum representation, sampling and aliasing, the Discrete Fourier Transform (DFT), Fourier theorems, z transform, Laplace transform, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

**MUSIC 320B. Introduction to Audio Signal Processing Part II: Digital Filters. 3-4 Units.**

Digital filters for music and audio research. Topics: digital filter structures, frequency response, z transforms, transfer-function analysis, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

**MUSIC 321. Readings in Music Theory. 1-5 Unit.**

Directed reading and research. May be repeated for credit a total of 15 times.

**MUSIC 323. Doctoral Seminar in Composition. 3-4 Units.**

Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.

**MUSIC 324. Graduate Composition Forum. 1 Unit.**

Community forum for all graduate student composers. Discussion of completed and in-progress work by students, faculty, and visiting composers. Repertoire listening sessions. Planning of upcoming Department events. Special area exam topic presentations, final doctoral project presentations, and review of portfolios. Many sessions are open to the public. May be repeated for credit.

**MUSIC 325. Individual Graduate Projects in Composition. 1-5 Unit.**

May be repeated for credit.

**MUSIC 32N. Sculpting with Sounds, Images, and Words. 3 Units.**

Throughout history and from East to West, cultures abound in multimedia forms. Whether in Coldplay's Music Video or Fantasia, Pepsi TV ads or Wagner's opera, Miyazaki anime or traditional Noh Theater of Japan, the three modes of expression (sounds, images, and word) are interwoven in distinctive ways. What are their individual and combined powers? How can one harness them in an online context? Can Web be a stage for multimedia theater? What is unique about the poetry of intermodal metaphor? The course will be an opportunity to face these questions in creative web-based projects as well as through in-class viewing of multimedia works, analysis and debates, readings, and student presentations. The seminar will be taught at the Center for Computer Research in Music and Acoustics where students will have access to new media technologies. Prior experience in music, literature, art practice or computer programming is welcome but not required.

**MUSIC 330. Musicology Dissertation Colloquium. 1-4 Unit.**

Weekly meetings for all musicology students 4th year and beyond to discuss research and writing strategies, share and critique work in progress, and discuss issues in professional development (preparing abstracts, conference papers, C.V. and job interviews, book reviews, submitting articles for publication). Open to 3rd-year students.

**MUSIC 333. Food, Text, Music: A Multidisciplinary Lab on the Art of Feasting. 3-5 Units.**

Students cook a collection of unfamiliar recipes each week while learning about the cultural milieus in which they originated. The course focuses on the fourteenth and fifteenth centuries, a time of great banquets that brought together chefs, visual artists, poets, musicians, and dancers. Students read late-medieval cookbooks under the guidance of professional chefs, learn songs and poetry with the help of visiting performers, and delve into a burgeoning scholarly literature on food history and sensory experience. We will also study trade routes and food networks, the environmental impact of large-scale banquets, the science of food, and the politics of plenty. This course may count towards the Medieval component of the French major, and corresponds to DLCL 121, a course requirement for the Medieval Studies Minor. Students interested in applying for course need to email Professors Galvez and Rodin (<mailto:mgalvez@stanford.edu> and <mailto:jrodin@stanford.edu>) with a statement of intent and dietary restrictions/preferences. Same as: FRENCH 166, FRENCH 366, MUSIC 133

**MUSIC 33N. Beethoven. 3 Units.**

This seminar is designed as an in-depth introduction to the music of Ludwig van Beethoven. In addition to exploring the composer's principal works in a variety of genres (symphonies, piano sonatas, string quartets, opera, etc.), we will consider broader questions of biography and reception history. How have images of the composer and the fortunes of his music changed over time? How did his compositions come to define the paradigm of Western classical music? What impact has he had on popular culture? The class is open to all levels of musical expertise; the ability to read music is not a requirement. Come prepared to discover – or rediscover – some great music!.

**MUSIC 341. Ph.D Dissertation. 1-10 Unit.**

May be repeated for credit a total of 5 times.

**MUSIC 34N. Performing America: The Broadway Musical. 3 Units.**

Musical theater as a site for the construction of American identity in the twentieth century to the present. Issues of class, race, gender, and sexuality; intersections with jazz, rock, and pop; roles of lyricist, composer, director, choreographer, producer, performers. Individual shows (Showboat, Oklahoma, South Pacific, Guys and Dolls, West Side Story, Wicked, Book of Mormon, Hamilton, Dear Evan Hansen), show tunes in jazz performance, film musicals, and television. Opportunities for performance and attendance at local productions.

**MUSIC 351A. Seminar in Music Perception and Cognition I. 1-3 Unit.**

A seminar on topics in music perception and cognition. Students will study and discuss recent research as well as design and implement experiments.

**MUSIC 351B. Seminar in Music Perception and Cognition II: Musical Gesture. 1-3 Unit.**

Exploring how musical activities are related to gestural communication by surveying recent human behavioural literature and forming own interest-driven research questions. Reviewed research topics include different techniques in music gesture recording and analysis, auditory perception related to gesture, and issues related to educational and therapeutic applications. The class activities involve discussions on articles and on experimental designs for possible research proposals.

**MUSIC 364. Data-Driven Research in Music Cognition. 2-4 Units.**

Project-based course exploring the impact of music on human behavior using evidence of user engagement with music in large-scale datasets including publicly available industrial and social-media data and corpuses published for research purposes. Data-driven research complements laboratory-based behavioral and imaging research by focusing on framing and addressing music-related questions using pre-existing datasets. Class meetings include lectures, guest speakers, and student discussions of background literature and projects. Assignments include weekly readings, labs, and a final project. Basic musical proficiency is required. Experience with programming, data visualization, statistics, or music cognition is desirable.

**MUSIC 36H. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, FRENCH 36, HISTORY 3D, PHIL 36, POLISCI 70, RELIGST 21X, SLAVIC 36

**MUSIC 36N. Humor in Music. 3 Units.**

Through theoretical readings the course will touch on psychological and neurological bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor.

**MUSIC 37N. Ki ho'alu: The New Renaissance of a Hawaiian Musical Tradition. 3 Units.**

Preference to freshman. Developed in the Hawaiian Islands during the 1830s, *ki ho'alu*, or Hawaiian slack key guitar, is an art form experiencing newfound popularity coinciding with the growth of political activism in Hawaiian culture. The musical, cultural, historical, and political perspectives of Hawaiian music and *ki ho'alu*, through hands-on experience, readings, discussion, and workshops. Hawaiian music and history and relationships among performance, cultural expression, community, and identity.

**MUSIC 38N. Singing Early Music. 3 Units.**

Preference to freshmen. 15th- and 16th-century musical repertoires and their contexts; performance practice.

**MUSIC 390. Practicum Internship. 1 Unit.**

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

**MUSIC 399. D.M.A. Final Project. 1-10 Unit.**

May be repeated for credit a total of 5 times.

**MUSIC 39A. Music, Health, and Medicine. 3 Units.**

Explore how music relates to health and medicine surveying recent medical literature. Review different techniques in music therapy, music-related health problems, and issues related to educational and medical applications. Course materials are chosen to clearly identify music as a component of health related activity or occupation, to describe responses to music in our mind and body, and to think about the roles of music in our health. The seminars also discuss related basics in psychology and neurology. Students learn how to do literature search and write essays about relevant topics.

**MUSIC 39N. The Classical String Quartet: Haydn, Mozart, Beethoven & Schubert. 3 Units.**

This seminar, an in-depth historical survey of canonic works from the string quartet repertory, is intended for performers and non-performers alike. Topics to be explored include the origins of the genre in the pre-classical period; the establishment of enduring conventions in the early quartets of Haydn; aesthetic criteria that distinguish the approaches of Haydn and Mozart; the epoch-defining shifts in musical composition that are reflected in Beethoven's works for the medium; the tension between classicism and romanticism in the chamber music of Schubert; and issues of historical performance practice. Field trips will include a visit to the Beethoven Center in San Jose and attending chamber music concerts on campus. The St. Lawrence String Quartet (Stanford's ensemble-in-residence) will be joining the seminar on a regular basis to provide live demonstrations and coaching. Students who are string players are strongly encouraged to bring their instruments to class. Class activities will cover history, criticism, analysis, and performance (usually in combination). Informed listening is a primary goal of the seminar. Assignments will be tailored to student interests and abilities.

**MUSIC 40. Music History to 1600. 4 Units.**

Pre- or corequisite: 21.

**MUSIC 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**MUSIC 41. Music History 1600-1830. 4 Units.**

Pre- or corequisite: 22.

**MUSIC 42. Music History Since 1830. 4 Units.**

Pre- or corequisite: 23.

**MUSIC 420A. Signal Processing Models in Musical Acoustics. 3-4 Units.**

Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: mass-spring-dashpot systems; electric circuit analogies; finite difference schemes; state-space models and the modal representation; impedance; ports; acoustic simulation using delay lines, digital filters, and nonlinear elements; interpolation and sampling-rate conversion; delay effects; wave digital filters; real-time computational models for musical instruments and effects, both acoustic and electronic. See <http://ccrma.stanford.edu/courses/420/>. Prerequisites: MUSIC 320A and MUSIC 320B or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.

**MUSIC 421A. Audio Applications of the Fast Fourier Transform. 3-4 Units.**

Spectrum analysis and signal processing using Fast Fourier Transforms (FFTs) with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See <http://ccrma.stanford.edu/courses/421/>. Prerequisites: Music 320A and Music 320B or equivalent background in spectrum analysis and linear systems. Same as: FFT

**MUSIC 421N. Deep Learning for Music and Audio. 1 Unit.**

Seminar reviewing the development of deep-learning methods in music and audio fields. See the course website for latest information: <http://ccrma.stanford.edu/courses/mus421n/>.

**MUSIC 422. Perceptual Audio Coding. 3 Units.**

History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such as AC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See <http://ccrma.stanford.edu/>.

**MUSIC 423. Graduate Research in Music Technology. 1-10 Unit.**

Research discussion, development, and presentation by graduate students, visiting scholars, and CCRMA faculty in the areas of music and/or audio technology. Permission of instructor required. See <http://ccrma.stanford.edu/courses/423/> for latest information. May be repeated for credit.

**MUSIC 424. Signal Processing Techniques for Digital Audio Effects. 3-4 Units.**

Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.

**MUSIC 434. Gender and Performance. 5 Units.**

This seminar seeks to investigate relationships between performance, gender, and the body politic through a discussion of embodiment, body cultures, queerness, desire, representation. Through a weekly engagement with film texts from across the world as well as theoretical perspectives on gender and performance in various geo-political contexts, we will explore the intersections of gender with race, class, national discourse, and performance traditions. The seminar is conceived to be interdisciplinary and participants are encouraged to introduce and work with texts from other disciplines, including visual arts, theatre, dance, literature etc. No prior engagement with film studies is required. Screening times may range from 90 to 180 minutes. Same as: FEMGEN 434, FILMSTUD 434, TAPS 344A

**MUSIC 451A. Basics in Auditory and Music Neuroscience. 2-5 Units.**

Understanding basic concepts and techniques in cognitive neuroscience using electroencephalography (EEG) specific to auditory perception and music cognition via seminar and laboratory exercise work. Acquiring and practicing skills in experimental design, data analysis, and interpretation, writing for scientific reports and research proposals, and giving a critical review of others' scientific work. Seminar discusses related literature in neuroanatomy, neurophysiology, psychology, and neuroimaging. Laboratory focuses on electroencephalography (EEG) techniques, classic paradigms for recording evoked response, and associated data analysis methods.

**MUSIC 451B. Advanced Research in Auditory and Music Neuroscience. 2-5 Units.**

Advancing research skills in cognitive neuroscience specific to auditory perception and music cognition by doing individual research project. Activities include surveying literature, designing own study, discussing other's research and giving constructive criticisms, writing research proposals, reports and critical reviews. Laboratory works covers advanced electroencephalography (EEG) recording and analysis techniques. Seminar discusses related literature in basic and clinical research in neurophysiology and neuropsychology. Final project is aimed at producing presentable data based on hypothesis-driven experiment. Prerequisite: Music 451A.

**MUSIC 451C. Auditory EEG Research III: Coordinated Actions and Hyperscanning. 2-5 Units.**

Advancing EEG research skills in cognitive neuroscience specific to music cognition by conducting a group research project. In particular, this course focuses on basics for 2-person EEG (hyperscanning) paradigms and explores how coordinated actions and social interactions during musical ensemble are processed in the two brains. Laboratory works covers advanced electroencephalography (EEG) recording and analysis techniques specifically for oscillation and phase coherence across brain areas and between subjects. Seminar activities include surveying literature, discussing research articles and giving criticisms, and writing research reports. Lab scheduled separately Prerequisite: Music 451A.

**MUSIC 45I. Interactive Introduction to North American Taiko. 1 Unit.**

Taught by Stanford Taiko members. Techniques and history. No experience necessary. May be repeated for credit. This course was initiated by Mitchell Fukumoto and Stanford Taiko.

**MUSIC 50. Arts in Context: The Process of Cultural Production. 1-2 Unit.**

A combination of practical skill-building and discussions with practicing arts professionals, this course will provide students with the foundational skills necessary to produce programs on campus and/or work in the arts. The talks and workshops will cover topics including curatorial practice and programming (for both visual and performing arts); grant writing and other fundraising methodology; budgeting and financial management; contracts and other legal considerations; and public relations and marketing. Every session is open for drop-in attendance, or students may take the entire series for credit. May be repeat for credit. Same as: ARTSINST 50, TAPS 50

**MUSIC 55I. Insiders Guide to Music Production: The Modern Applications of Digital Audio. 2 Units.**

Learn how to produce music on computer. Class focus on achieving fluence in a digital audio workstation and fostering creativity within the music-making process. Practical mixing techniques, fundamental audio editing practices, and ow to create sounds from scratch. Final project (song) that utilizes techniques taught in class. No prior music production experience is required.

**MUSIC 60. Singing: How it's done, how to learn to do it, and how to work with people who do it.. 1 Unit.**

A weekly lecture course for singers, pianists, directors, conductors, and anyone who is interested in the art and craft of the voice. Students will learn about the vocal instrument, how to use it efficiently and keep it healthy, how to lead and participate in vocal productions and ensembles of all periods and styles. Ability to sing and/or read music is not required; this is not a voice class. Required readings. Taught by Music Department Faculty; coordinated by Wendy Hillhouse.

Same as: TAPS 60

**MUSIC 62. CLUB - Band. 1 Unit.**

This course is offered to club members who participate on credit approved Club Sports teams. All members must complete 30 hours of participation during the quarter. To be eligible for credit, the club must practice 2x a week for a maximum total of 4 hours and participate in 1-3 events in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

Same as: ATHLETIC 62

**MUSIC 65A. Voice Class I. 1 Unit.**

Group (7 students to a section) beginning voice (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 65AS. Voice Class 1: Beginning Voice, Level 1. 1 Unit.**

Group (6 students to a section) beginning voice (A = level 1; B = level 2). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 65AZ. Voice Class I. 0 Units.**

Group (7 students to a section) beginning voice (A = level 1; B = level 2). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 unit and total completion allowed 99.

**MUSIC 65B. Voice Class II. 1 Unit.**

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 65BS. Voice Class 2: Beginning Voice, Level 2. 1 Unit.**

Group (6 students to a section) beginning voice (A = level 1; B = level 2). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 65BZ. Voice Class II. 0 Units.**

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeat for credit for 0 units and total completion of 99.

**MUSIC 65SZ. Beginning Voice. 0 Units.**

Beginning Voice (zero-unit option). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 6A. From Gamelan to Kabuki: Musical Traditions of Far East Asia. 3 Units.**

Introduction to the musical traditions of Far East Asia. Study of prominent examples from diverse regions with an emphasis on Indonesia, China and Japan. Exploration of ethnic, social, cultural, and global perspectives. Survey of instruments and ensembles in a wide range of performance contexts, from sacred rituals to secular dance and theater. Traditional genres and their impact on contemporary composers. No musical background required. Lectures, listening to live and recorded music, attendance of a concert, video screenings.

**MUSIC 6F. Art is My Occupation: Professional Development in Music. 1 Unit.**

Open to majors and non-majors. This course is designed for students who are considering careers in performance or the music industry to explore their personal and artistic identity. Weekly guest speakers provide real world insight on topics related to professional advancement.

**MUSIC 72A. Intermediate Piano Class. 1 Unit.**

For intermediate students. May be repeated for credit a total of 14 times. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72AS. Intermediate Piano Class. 1 Unit.**

Piano: Intermediate Level (Group; 10 students to a section) Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 72AZ. Intermediate Piano Class. 0 Units.**

For intermediate students. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72C. Harpsichord Class. 1 Unit.**

For beginning harpsichord students who have keyboard skills. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72CZ. Harpsichord Class. 0 Units.**

For beginning harpsichord students who have keyboard skills. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72D. Jazz Piano Class. 1 Unit.**

Priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72DZ. Jazz Piano Class. 0 Units.**

Priority to majors and jazz-ensemble participants. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72G. Gu-Zheng Class. 1 Unit.**

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee information. All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 72GZ. Gu-Zheng Class. 0 Units.**

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee information. All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 72SZ. Intermediate Piano. 0 Units.**

Intermediate Piano (zero-unit option). Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 73. Intermediate Voice Class. 1 Unit.**

For intermediate students. Admission by audition. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axxess waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 73Z. Intermediate Voice Class. 0 Units.**

For intermediate students. Admission by audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axxess waitlist and show up on the first day of class to receive a permission number for enrollment.

**MUSIC 74AA. Introductory Violin Class Level 1: Beginner. 1 Unit.**

Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74AB. Introductory Violin Class Level 2: Intermediate. 1 Unit.**

Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74AC. Introductory Violin Class Level 3: Advanced Intermediate. 1 Unit.**

Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74AZ. Introductory Violin Class. 0 Units.**

(74A.1=Level 1 beginners; 74A.2=Level 2 continuing) Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74C. Classical Guitar Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <https://music.stanford.edu/ensembles-lessons/applied-music-policies/applied-music-fees-and-policies> for class fee information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74CZ. Classical Guitar Class. 0 Units.**

There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74D. Harp Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74DZ. Harp Class. 0 Units.**

There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 75B. Renaissance Wind Instruments Class. 1 Unit.**

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 75BZ. Renaissance Wind Instruments Class. 0 Units.**

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 76. Brass Instruments Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 76A. Tuba Class. 1 Unit.**

Basic brass techniques as they apply to the tuba including warmups, breathing, and developing a daily routine. For beginning through intermediate players. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit.

**MUSIC 76AZ. Tuba Class. 0 Units.**

Basic brass techniques as they apply to the tuba including warmups, breathing, and developing a daily routine. For beginning through intermediate players. This course includes a fee of \$175 for Music majors and minors, and \$200 for non Music majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 unit.

**MUSIC 76Z. Brass Instruments Class. 0 Units.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 77. Percussion Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 77Z. Percussion Class. 0 Units.**

There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 7B. Musical Cultures of the World. 3 Units.**

An overview of selected musical cultures from Africa, Asia, Europe, and the Americas. Course objectives: cultivate an appreciation for the diversity of human musical expression; discover how music is used to shape social interactions and systems of meaning; develop active listening skills that can be used when encountering any music; gain a preliminary understanding of ethnomusicological concepts and vocabulary. No musical experience is necessary. Class format: Lecture, discussion, listening, guest performances, musical participation, and a concert analysis.

**MUSIC 801. TGR Project. 0 Units.****MUSIC 802. TGR Dissertation. 0 Units.****MUSIC 80T. Jewish Music in the Lands of Islam. 4 Units.**

An Interdisciplinary study of Music, Society, and Culture in communities of the Jewish Diaspora in Islamic countries. The course examines the diverse and rich musical traditions of the Jews in North Africa and the Middle East. Based on the "Maqamat" system, the Arabic musical modes, Jewish music flourished under Islamic rule, encompassing the fields of sacred music, popular songs, and art music. Using musicological, historical, and anthropological tools, the course compares and contrasts these traditions from their original roots through their adaptation, appropriation, and re-synthesis in contemporary art music and popular songs.

Same as: JEWISHST 80T

**MUSIC 8A. Rock, Sex, and Rebellion. 3 Units.**

Development of critical listening skills and musical parameters through genres in the history of rock music. Focus is on competing aesthetic tendencies and subcultural forces that shaped the music. Rock's significance in American culture, and the minority communities that have enriched rock's legacy as an expressively diverse form. Lectures, readings, listening, and video screenings. Attendance at all lectures is required.

**MUSIC 9. Music + Mentorship. 1-2 Unit.**

Music + Mentorship (M+M) is a coalition of Stanford University musicians who seek to empower kids in the surrounding community through music. Through M+M, volunteers commit to weekly music lessons in local schools and participate in class readings and discussions about the principles of music education. Guest lecturers include local music educators.

## Neurobiology (NBIO)

**NBIO 101. Social and Ethical Issues in the Neurosciences. 2-4 Units.**

Foundational scientific issues and philosophical perspectives related to advances in the study of brain and behavior. Implications of new insights from the neurosciences for medical therapy, social policy, and broader conceptions of human nature including consciousness, free will, personal identity, and moral responsibility. Topics include ethical issues related to genetic screening and editing, desire and addiction, criminal behavior, the biology of sexuality, fetal pain, aging and neurodegenerative disease, brain-computer interfaces, and neural enhancement and the human future. May be taken for 2 units without a research paper.

Same as: NBIO 201

**NBIO 198. Directed Reading in Neurobiology. 1-18 Unit.**

Prerequisite: consent of instructor. (Staff).

**NBIO 199. Undergraduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**NBIO 201. Social and Ethical Issues in the Neurosciences. 2-4 Units.**

Foundational scientific issues and philosophical perspectives related to advances in the study of brain and behavior. Implications of new insights from the neurosciences for medical therapy, social policy, and broader conceptions of human nature including consciousness, free will, personal identity, and moral responsibility. Topics include ethical issues related to genetic screening and editing, desire and addiction, criminal behavior, the biology of sexuality, fetal pain, aging and neurodegenerative disease, brain-computer interfaces, and neural enhancement and the human future. May be taken for 2 units without a research paper.

Same as: NBIO 101

**NBIO 206. The Nervous System. 6 Units.**

Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.

**NBIO 218. Neural Basis of Behavior. 5 Units.**

Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.

**NBIO 220. Central Mechanisms in Vision-based Cognition. 2-4 Units.**

Contemporary cognitive neuroscience, emphasizing the use of the primate visual and oculomotor systems to explore neural mechanisms underlying perception, attention, learning, and decision-making. Eight foundational topics in cognitive neuroscience; intensive study and critical discussion of selected papers from the contemporary literature. Student presentations, seminar-style discussions. Class enrollment is limited to 12 students. First priority will be given to students from the neurosciences graduate program.

**NBIO 224. Glia and Neuroimmunology. 2 Units.**

The role of glia in the brain, including development, normal functioning, and disease. Topics include astrocytes, microglia, oligodendrocyte lineage, the blood brain barrier, and neuroimmunology with special emphasis on tools for studying glia. Preference to graduate students.

**NBIO 227. Understanding Techniques in Neuroscience. 2 Units.**

Topics include molecular, genetic, behavioral, electrophysiological, imaging, and computational approaches used in the field of neuroscience. Presentations and discussions led by senior graduate students, assigned readings from the primary neuroscience literature, and optional laboratory demonstrations. Intended for graduate students from any discipline and for advanced undergraduates in the biosciences, engineering, or medicine.

**NBIO 228. Mathematical Tools for Neuroscience. 2 Units.**

Student-instructed. For students with no math background beyond basic calculus, or as a review for more advanced students. Techniques useful for analysis of neural data including linear algebra, Fourier transforms, probability and statistics, signal detection, Bayesian inference, and information theory.

**NBIO 254. Molecular and Cellular Neurobiology. 3-5 Units.**

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Same as: BIO 254

**NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits. 4 Units.**

How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

**NBIO 299. Directed Reading in Neurobiology. 1-18 Unit.**

Prerequisite: consent of instructor.

**NBIO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**NBIO 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

## Physics (PHYSICS)

**PHYSICS 100. Introduction to Observational Astrophysics. 4 Units.**

Designed for undergraduate physics majors but open to all students with a calculus-based physics background and some laboratory and coding experience. Students make and analyze observations using the telescopes at the Stanford Student Observatory. Topics covered include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, imaging and spectroscopic techniques, quantitative error analysis, and effective scientific communication. The course concludes with an independent project where student teams propose and execute an observational astronomy project of their choosing, using techniques learned in class to gather and analyze their data, and presenting their findings in the forms of professional-style oral presentations and research papers. Enrollment by permission. To get a permission number please complete form: <http://web.stanford.edu/~elva/physics100prelim.fb> If you have not heard from us by the beginning of class, please come to the first class session.

**PHYSICS 105. Intermediate Physics Laboratory I: Analog Electronics. 4 Units.**

Analog electronics including Ohm's law, passive circuits and transistor and op amp circuits, emphasizing practical circuit design skills to prepare undergraduates for laboratory research. Short design project. Minimal use of math and physics, no electronics experience assumed beyond introductory physics. Prerequisite: PHYSICS 43 or PHYSICS 63.

**PHYSICS 107. Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis. 4 Units.**

Experiments on lasers, Gaussian optics, and atom-light interaction, with emphasis on data and error analysis techniques. Students describe a subset of experiments in scientific paper format. Prerequisites: completion of PHYSICS 40 or PHYSICS 60 series, and PHYSICS 70 and PHYSICS 105. Recommended pre- or corequisites: PHYSICS 120 and 130. WIM.

**PHYSICS 108. Advanced Physics Laboratory: Project. 4 Units.**

Small student groups plan, design, build, and carry out a single experimental project in low-temperature physics. Prerequisites PHYSICS 105, PHYSICS 107.

**PHYSICS 110. Advanced Mechanics. 3-4 Units.**

Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). Prerequisites: MATH 131P or PHYSICS 111, and PHYSICS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYSICS 130. Same as: PHYSICS 210

**PHYSICS 111. Partial Differential Equations of Mathematical Physics. 4 Units.**

This course is intended to introduce students to the basic techniques for solving partial differential equations that commonly occur in classical mechanics, electromagnetism, and quantum mechanics. Tools that will be developed include separation of variables, Fourier series and transforms, and Sturm-Liouville theory. Examples (including the heat equation, Laplace equation, and wave equation) will be drawn from different areas of physics. Through examples, students will gain a familiarity with some of the famous special functions arising in mathematical physics. Prerequisite: MATH 53 or 63. Completing PHYSICS 40 or 60 sequences helpful.

**PHYSICS 112. Mathematical Methods for Physics. 4 Units.**

This course will cover methods of mathematical physics that are pertinent to physics. Topics include: Complex analysis, group theory, calculus of variations. Emphasis will be on in-depth coverage of selected topics. Prerequisites: MATH 50 or 60 series.

**PHYSICS 113. Computational Physics. 4 Units.**

Numerical methods for solving problems in mechanics, astrophysics, electromagnetism, quantum mechanics, and statistical mechanics. Methods include numerical integration; solutions of ordinary and partial differential equations; solutions of the diffusion equation, Laplace's equation and Poisson's equation with various methods; statistical methods including Monte Carlo techniques; matrix methods and eigenvalue problems. Short introduction to Python, used for class examples; class projects may be programmed in any language such as C, python or julia. No Prerequisites. Previous programming experience not required.

**PHYSICS 120. Intermediate Electricity and Magnetism I. 4 Units.**

Vector analysis. Electrostatic fields, including boundary-value problems and multipole expansion. Dielectrics, static and variable magnetic fields, magnetic materials. Maxwell's equations. Prerequisites: PHYSICS 43 or PHYS 63; MATH 52 and MATH 53. Pre- or corequisite: PHYS 111, MATH 131P or MATH 173. Recommended corequisite: PHYS 112.

**PHYSICS 121. Intermediate Electricity and Magnetism II. 4 Units.**

Conservation laws and electromagnetic waves, Poynting's theorem, tensor formulation, potentials and fields. Plane wave problems (free space, conductors and dielectric materials, boundaries). Dipole and quadrupole radiation. Special relativity and transformation between electric and magnetic fields. Prerequisites: PHYS 120 and PHYS 111 or MATH 131P or MATH 173; Recommended: PHYS 112.

**PHYSICS 12N. Black Holes: Fact and Fancy. 3 Units.**

Black Holes have been observed throughout the universe using radio waves, light, X- and gamma-rays and now with gravitational radiation. They are well-described using Einstein's theory of relativity and provide dramatic demonstrations of how physicists think about matter, energy, space, and time. They have also stimulated much science fiction. This seminar is intended primarily for non-science freshmen who should learn how some really big ideas were developed, debated, and then demonstrated to be correct. Movies and popular books will be critiqued and used to illustrate basic properties of black holes. Special attention will be paid to understanding what it takes for an interesting idea to become accepted or rejected as scientific fact. There will be visits to Stanford labs where instruments used to observe black holes were conceived, constructed and combined.

**PHYSICS 130. Quantum Mechanics I. 4 Units.**

The origins of quantum mechanics and wave mechanics. Schrödinger equation and solutions for one-dimensional systems. Commutation relations. Generalized uncertainty principle. Time-energy uncertainty principle. Separation of variables and solutions for three-dimensional systems; application to hydrogen atom. Spherically symmetric potentials and angular momentum eigenstates. Spin angular momentum. Addition of angular momentum. Prerequisites: PHYSICS 65 or PHYSICS 70 and PHYSICS 111 or MATH 131P or MATH 173. MATH 173 can be taken concurrently. Pre- or corequisites: PHYSICS 120.

**PHYSICS 131. Quantum Mechanics II. 4 Units.**

Identical particles; Fermi and Bose statistics. Time-independent perturbation theory. Fine structure, the Zeeman effect and hyperfine splitting in the hydrogen atom. Time-dependent perturbation theory. Variational principle and WKB approximation. Prerequisite: PHYSICS 120, PHYSICS 130, PHYSICS 111 or MATH 131P, or MATH 173. Pre- or corequisite: PHYSICS 121.

**PHYSICS 134. Advanced Topics in Quantum Mechanics. 3-4 Units.**

Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units). Prerequisite: PHYSICS 131.

Same as: PHYSICS 234

**PHYSICS 14N. Quantum Information: Visions and Emerging Technologies. 3 Units.**

What sets quantum information apart from its classical counterpart is that it can be encoded non-locally, woven into correlations among multiple qubits in a phenomenon known as entanglement. We will discuss paradigms for harnessing entanglement to solve hitherto intractable computational problems or to push the precision of sensors to their fundamental quantum mechanical limits. We will also examine challenges that physicists and engineers are tackling in the laboratory today to enable the quantum technologies of the future.

**PHYSICS 15. Stars and Planets in a Habitable Universe. 3 Units.**

Is the Earth unique in our galaxy? Students learn how stars and our galaxy have evolved and how this produces planets and the conditions suitable for life. Discussion of the motion of the night sky and how telescopes collect and analyze light. The life-cycle of stars from birth to death, and the end products of that life cycle -- from dense stellar corpses to supernova explosions. Course covers recent discoveries of extrasolar planets -- those orbiting stars beyond our sun -- and the ultimate quest for other Earths. Intended to be accessible to non-science majors, material is explored quantitatively with problem sets using basic algebra and numerical estimates. Sky observing exercise and observatory field trips supplement the classroom work.

**PHYSICS 152. Introduction to Particle Physics I. 3 Units.**

Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131.

Same as: PHYSICS 252

**PHYSICS 16. The Origin and Development of the Cosmos. 3 Units.**

How did the present Universe come to be? The last few decades have seen remarkable progress in understanding this age-old question. Course will cover the history of the Universe from its earliest moments to the present day, and the physical laws that govern its evolution. The early Universe including inflation and the creation of matter and the elements. Recent discoveries in our understanding of the makeup of the cosmos, including dark matter and dark energy. Evolution of galaxies, clusters, and quasars, and the Universe as a whole. Implications of dark matter and dark energy for the future evolution of the cosmos. Intended to be accessible to non-science majors, material is explored quantitatively with problem sets using basic algebra and numerical estimates.

**PHYSICS 160. Introduction to Stellar and Galactic Astrophysics. 3 Units.**

Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121. Same as: PHYSICS 260

**PHYSICS 161. Introduction to Cosmology and Extragalactic Astrophysics. 3 Units.**

What do we know about the physical origins, content, and evolution of the Universe – and how do we know it? Students learn how cosmological distances and times, and the geometry and expansion of space, are described and measured. Composition of the Universe. Origin of matter and the elements. Observational evidence for dark matter and dark energy. Thermal history of the Universe, from inflation to the present. Emergence of large-scale structure from quantum perturbations in the early Universe. Astrophysical tools used to learn about the Universe. Big open questions in cosmology. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121 or equivalent. Same as: PHYSICS 261

**PHYSICS 17. Black Holes and Extreme Astrophysics. 3 Units.**

Black holes represent an extreme frontier of astrophysics. Course will explore the most fundamental and universal force – gravity – and how it controls the fate of astrophysical objects, leading in some cases to black holes. How we discover and determine the properties of black holes and their environment. How black holes and their event horizons are used to guide thinking about mysterious phenomena such as Hawking radiation, wormholes, and quantum entanglement. How black holes generate gravitational waves and powerful jets of particles and radiation. Other extreme objects such as pulsars. Relevant physics, including relativity, is introduced and treated at the algebraic level. No prior physics or calculus is required, although some deep thinking about space, time, and matter is important in working through assigned problems.

**PHYSICS 170. Thermodynamics, Kinetic Theory, and Statistical Mechanics I. 4 Units.**

Basic probability and statistics for random processes such as random walks. The derivation of laws of thermodynamics from basic postulates; the determination of the relationship between atomic substructure and macroscopic behavior of matter. Temperature; equations of state, heat, internal energy, equipartition; entropy, Gibbs paradox; equilibrium and reversibility; heat engines; applications to various properties of matter; absolute zero and low-temperature phenomena. Distribution functions, fluctuations, the partition function for classical and quantum systems, irreversible processes. Pre- or corequisite: PHYSICS 130.

**PHYSICS 171. Thermodynamics, Kinetic Theory, and Statistical Mechanics II. 4 Units.**

Mean-field theory of phase transitions; critical exponents. Ferromagnetism, the Ising model. The renormalization group. Dynamics near equilibrium: Brownian motion, diffusion, Boltzmann equations. Other topics at discretion of instructor. Prerequisite: PHYSICS 170. Recommended pre- or corequisite: PHYSICS 130.

**PHYSICS 172. Solid State Physics. 3 Units.**

Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents. Same as: APPPHYS 272

**PHYSICS 182. Introduction to Modern Atomic Physics and Quantum Optics. 3 Units.**

Introduction to modern atomic physics, including laser cooling and trapping, collisions, ultracold and quantum gases, optical lattices, entanglement, and ion trap quantum gates. Introduction to quantum optical theory of light and atom-photon interactions, including cavity QED, quantum trajectory theory, nonlinear optics, and fundamentals of laser spectroscopy including frequency combs. Prerequisites: PHYSICS 131 or 134 and 171. Same as: PHYSICS 282

**PHYSICS 18N. Frontiers in Theoretical Physics and Cosmology. 3 Units.**

Preference to freshmen. The course will begin with a description of the current standard models of gravitation, cosmology, and elementary particle physics. We will then focus on frontiers of current understanding including investigations of very early universe cosmology, string theory, and the physics of black holes.

**PHYSICS 19. How Things Work: An Introduction to Physics. 3 Units.**

Introduction to the principles of physics through familiar objects and phenomena, including airplanes, cameras, computers, engines, refrigerators, lightning, radio, microwave ovens, and fluorescent lights. Estimates of real quantities from simple calculations. Prerequisite: high school algebra and trigonometry.

**PHYSICS 190. Independent Research and Study. 1-9 Unit.**

Undergraduate research in experimental or theoretical physics under the supervision of a faculty member. Prerequisites: superior work as an undergraduate Physics major and consent of instructor.

**PHYSICS 199. The Physics of Energy and Climate Change. 3 Units.**

Topics include measurements of temperature and sea level changes in the climate record of the Earth, satellite atmospheric spectroscopy, satellite gravity geodesy measurements of changes in water aquifers and glaciers, and ocean changes. The difference between weather fluctuations changes and climate change, climate models and their uncertainties in the context of physical, chemical and biological feedback mechanisms to changes in greenhouse gases and solar insolation will be discussed. Energy efficiency, transmission and distribution of electricity, energy storage, and the physics of harnessing fossil, wind, solar, geothermal, fission and fusion will be covered, along with prospects of future technological developments in energy use and production. Prerequisite: Physics 40 or Physics 60 series.

**PHYSICS 205. Senior Thesis Research. 1-12 Unit.**

Long-term experimental or theoretical project and thesis in Physics under supervision of a faculty member. Planning of the thesis project is recommended to begin as early as middle of the junior year. Successful completion of a senior thesis requires a minimum of 3 units for a letter grade completed during the senior year, along with the other formal thesis and physics major requirements. Students doing research for credit prior to senior year should sign up for Physics 190. Prerequisites: superior work as an undergraduate Physics major and approval of the thesis application.

**PHYSICS 21. Mechanics, Fluids, and Heat. 4 Units.**

How are the motions of objects and the behavior of fluids and gases determined by the laws of physics? Students learn to describe the motion of objects (kinematics) and understand why objects move as they do (dynamics). Emphasis on how Newton's three laws of motion are applied to solids, liquids, and gases to describe phenomena as diverse as spinning gymnasts, blood flow, and sound waves. Understanding many-particle systems requires connecting macroscopic properties (e.g., temperature and pressure) to microscopic dynamics (collisions of particles). Laws of thermodynamics provide understanding of real-world phenomena such as energy conversion and performance limits of heat engines. Everyday examples are analyzed using tools of algebra and trigonometry. Problem-solving skills are developed, including verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: high school algebra and trigonometry; calculus not required.

**PHYSICS 210. Advanced Mechanics. 3-4 Units.**

Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). Prerequisites: MATH 131P or PHYSICS 111, and PHYSICS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYSICS 130.

Same as: PHYSICS 110

**PHYSICS 211. Continuum Mechanics. 3 Units.**

Elasticity, fluids, turbulence, waves, gas dynamics, shocks, and MHD plasmas. Examples from everyday phenomena, geophysics, and astrophysics.

**PHYSICS 212. Statistical Mechanics. 3 Units.**

Principles, ensembles, statistical equilibrium. Thermodynamic functions, ideal and near-ideal gases. Fluctuations. Mean-field description of phase-transitions and associated critical exponents. One-dimensional Ising model and other exact solutions. Renormalization and scaling relations. Prerequisites: PHYSICS 131, 171, or equivalents.

**PHYSICS 216. Back of the Envelope Physics. 3 Units.**

Techniques such as scaling and dimensional analysis, useful to make order-of-magnitude estimates of physical effects in different settings. Goals are to promote a synthesis of physics through solving problems, including problems that are not usually thought of as physics. Applications include properties of materials, fluid mechanics, geophysics, astrophysics, and cosmology. Prerequisites: undergraduate mechanics, statistical mechanics, electricity and magnetism, and quantum mechanics.

**PHYSICS 21S. Mechanics and Heat with Laboratory. 5 Units.**

How are the motions of objects and the behavior of fluids and gases determined by the laws of physics? Students learn to describe the motion of objects (kinematics) and understand why objects move as they do (dynamics). Emphasis on how Newton's three laws of motion are applied to solids, liquids, and gases to describe phenomena as diverse as spinning gymnasts, blood flow, and sound waves. Understanding many-particle systems requires connecting macroscopic properties (e.g., temperature and pressure) to microscopic dynamics (collisions of particles). Laws of thermodynamics provide understanding of real-world phenomena such as energy conversion and performance limits of heat engines. Everyday examples are analyzed using tools of algebra and trigonometry. Problem-solving skills are developed, including verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Labs are an integrated part of the summer course. Prerequisite: high school algebra and trigonometry; calculus not required.

**PHYSICS 22. Mechanics, Fluids, and Heat Laboratory. 1 Unit.**

Guided hands-on exploration of concepts in classical mechanics, fluids, and thermodynamics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 21.

**PHYSICS 220. Classical Electrodynamics. 3 Units.**

Special relativity: The principles of relativity, Lorentz transformations, four vectors and tensors, relativistic mechanics and the principle of least action. Lagrangian formulation, charges in electromagnetic fields, gauge invariance, the electromagnetic field tensor, covariant equations of electrodynamics and mechanics, four-current and continuity equation. Noether's theorem and conservation laws, Poynting's theorem, stress-energy tensor. Constant electromagnetic fields: conductors and dielectrics, magnetic media, electric and magnetic forces, and energy. Electromagnetic waves: Plane and monochromatic waves, spectral resolution, polarization, electromagnetic properties of matter, dispersion relations, wave guides and cavities. Prerequisites: PHYSICS 121 and PHYSICS 210, or equivalent; MATH 106 or MATH 116, and MATH 132 or equivalent.

**PHYSICS 23. Electricity, Magnetism, and Optics. 4 Units.**

How are electric and magnetic fields generated by static and moving charges, and what are their applications? How is light related to electromagnetic waves? Students learn to represent and analyze electric and magnetic fields to understand electric circuits, motors, and generators. The wave nature of light is used to explain interference, diffraction, and polarization phenomena. Geometric optics is employed to understand how lenses and mirrors form images. These descriptions are combined to understand the workings and limitations of optical systems such as the eye, corrective vision, cameras, telescopes, and microscopes. Discussions based on the language of algebra and trigonometry. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 21 or PHYSICS 21S.

**PHYSICS 230. Graduate Quantum Mechanics I. 3 Units.**

Fundamental concepts. Introduction to Hilbert spaces and Dirac's notation. Postulates applied to simple systems, including those with periodic structure. Symmetry operations and gauge transformation. The path integral formulation of quantum statistical mechanics. Problems related to measurement theory. The quantum theory of angular momenta and central potential problems. Prerequisite: PHYSICS 131 or equivalent.

**PHYSICS 231. Graduate Quantum Mechanics II. 3 Units.**

Basis for higher level courses on atomic solid state and particle physics. Problems related to measurement theory and introduction to quantum computing. Approximation methods for time-independent and time-dependent perturbations. Semiclassical and quantum theory of radiation, second quantization of radiation and matter fields. Systems of identical particles and many electron atoms and molecules. Prerequisite: PHYSICS 230.

**PHYSICS 234. Advanced Topics in Quantum Mechanics. 3-4 Units.**

Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units). Prerequisite: PHYSICS 131.

Same as: PHYSICS 134

**PHYSICS 235. Electricity and Optics with Laboratory. 5 Units.**

How are electric and magnetic fields generated by static and moving charges, and what are their applications? How is light related to electromagnetic waves? Students learn to represent and analyze electric and magnetic fields to understand electric circuits, motors, and generators. The wave nature of light is used to explain interference, diffraction, and polarization phenomena. Geometric optics is employed to understand how lenses and mirrors form images. These descriptions are combined to understand the workings and limitations of optical systems such as the eye, corrective vision, cameras, telescopes, and microscopes. Discussions based on the language of algebra and trigonometry. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Labs are an integrated part of the summer courses. Prerequisite: PHYSICS 21 or PHYSICS 21S.

**PHYSICS 24. Electricity, Magnetism, and Optics Laboratory. 1 Unit.**

Guided hands-on exploration of concepts in electricity and magnetism, circuits and optics with an emphasis on student predictions, observations and explanations. Introduction to multimeters and oscilloscopes. Pre- or corequisite: PHYS 23.

**PHYSICS 240. Introduction to the Physics of Energy. 3 Units.**

Energy as a consumable. Forms and interconvertibility. World Joule budget. Equivalents in rivers, oil pipelines and nuclear weapons. Quantum mechanics of fire, batteries and fuel cells. Hydrocarbon and hydrogen synthesis. Fundamental limits to mechanical, electrical and magnetic strengths of materials. Flywheels, capacitors and high pressure tanks. Principles of AC and DC power transmission. Impossibility of pure electricity storage. Surge and peaking. Solar constant. Photovoltaic and thermal solar conversion. Physical limits on agriculture.

**PHYSICS 241. Introduction to Nuclear Energy. 3 Units.**

Radioactivity. Elementary nuclear processes. Energetics of fission and fusion. Cross-sections and resonances. Fissionable and fertile isotopes. Neutron budgets. Light water, heavy water and graphite reactors. World nuclear energy production. World reserves of uranium and thorium. Plutonium, reprocessing and proliferation. Half lives of fission decay products and actinides made by neutron capture. Nuclear waste. Three Mile Island and Chernobyl. Molten sodium breeders. Generation-IV reactors. Inertial confinement and magnetic fusion. Laser compression. Fast neutron production and fission-fusion hybrids. Prerequisites: Strong undergraduate background in elementary chemistry and physics. PHYSICS 240 and PHYSICS 252 recommended but not required. Interested undergraduates encouraged to enroll, with permission of instructor.

**PHYSICS 25. Modern Physics. 4 Units.**

How do the discoveries since the dawn of the 20th century impact our understanding of 21st-century physics? This course introduces the foundations of modern physics: Einstein's theory of special relativity and quantum mechanics. Combining the language of physics with tools from algebra and trigonometry, students gain insights into how the universe works on both the smallest and largest scales. Topics may include atomic, molecular, and laser physics; semiconductors; elementary particles and the fundamental forces; nuclear physics (fission, fusion, and radioactivity); astrophysics and cosmology (the contents and evolution of the universe). Emphasis on applications of modern physics in everyday life, progress made in our understanding of the universe, and open questions that are the subject of active research. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 23 or PHYSICS 23S.

**PHYSICS 252. Introduction to Particle Physics I. 3 Units.**

Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131. Same as: PHYSICS 152

**PHYSICS 26. Modern Physics Laboratory. 1 Unit.**

Guided hands-on and simulation-based exploration of concepts in modern physics, including special relativity, quantum mechanics and nuclear physics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 25.

**PHYSICS 260. Introduction to Stellar and Galactic Astrophysics. 3 Units.**

Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121. Same as: PHYSICS 160

**PHYSICS 261. Introduction to Cosmology and Extragalactic Astrophysics. 3 Units.**

What do we know about the physical origins, content, and evolution of the Universe – and how do we know it? Students learn how cosmological distances and times, and the geometry and expansion of space, are described and measured. Composition of the Universe. Origin of matter and the elements. Observational evidence for dark matter and dark energy. Thermal history of the Universe, from inflation to the present. Emergence of large-scale structure from quantum perturbations in the early Universe. Astrophysical tools used to learn about the Universe. Big open questions in cosmology. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121 or equivalent. Same as: PHYSICS 161

**PHYSICS 262. General Relativity. 3 Units.**

Einstein's General Theory of Relativity is a basis for modern ideas of fundamental physics, including string theory, as well as for studies of cosmology and astrophysics. The course begins with an overview of special relativity, and the description of gravity as arising from curved space. From Riemannian geometry and the geodesic equations, to curvature, the energy-momentum tensor, and the Einstein field equations. Applications of General Relativity: topics may include experimental tests of General Relativity and the weak-field limit, black holes (Schwarzschild, charged Reissner-Nordstrom, and rotating Kerr black holes), gravitational waves (including detection methods), and an introduction to cosmology (including cosmic microwave background radiation, dark energy, and experimental probes). Prerequisite: PHYSICS 121 or equivalent including special relativity.

**PHYSICS 268. Physics with Neutrinos. 3 Units.**

Relativistic fermions, Weyl and Dirac equations, Majorana masses. Electroweak theory, neutrino cross sections, neutrino refraction in matter, MSW effect. Three-flavor oscillations, charge-parity violation, searches for sterile neutrinos, modern long- and short-baseline oscillation experiments. Seesaw mechanism, models of neutrino masses, lepton flavor violation. Neutrinoless double beta decay. Cosmological constraints on neutrino properties. Advanced topics, such as collective oscillations in supernovae or ultrahigh energy neutrinos, offered as optional projects. The material in this course is largely complementary to PHYS 269, focusing on particle physics aspects of neutrinos. Prerequisites: PHYSICS 121, 131 and 171 or equivalent. PHYS 230-231, 269, 152 and 161 or equivalent are helpful, but not required.

**PHYSICS 269. Neutrinos in Astrophysics and Cosmology. 3 Units.**

Basic neutrino properties. Flavor evolution in vacuum and in matter. Oscillations of atmospheric, reactor and beam neutrinos. Measurements of solar neutrinos; physics of level-crossing and the resolution of the solar neutrino problem. Roles of neutrinos in stellar evolution; bounds from stellar cooling. Neutrinos and stellar collapse; energy transport, collective flavor oscillations, neutrino flavor in turbulent medium. Ultra-high-energy neutrinos. The cosmic neutrino background, its impact on the cosmic microwave background and structure formation; cosmological bounds on the neutrino sector. Prerequisites/corequisites: PHYSICS 121, 131 and 171 or equivalent. PHYS 230-231, 152 and 161 or equivalent are helpful, but not required. May be repeat for credit.

**PHYSICS 282. Introduction to Modern Atomic Physics and Quantum Optics. 3 Units.**

Introduction to modern atomic physics, including laser cooling and trapping, collisions, ultracold and quantum gases, optical lattices, entanglement, and ion trap quantum gates. Introduction to quantum optical theory of light and atom-photon interactions, including cavity QED, quantum trajectory theory, nonlinear optics, and fundamentals of laser spectroscopy including frequency combs. Prerequisites: PHYSICS 131 or 134 and 171. Same as: PHYSICS 182

**PHYSICS 290. Research Activities at Stanford. 1 Unit.**

Required of first-year Physics graduate students; suggested for junior or senior Physics majors for 1 unit. Review of research activities in the department and elsewhere at Stanford at a level suitable for entering graduate students.

**PHYSICS 291. Practical Training. 1-3 Unit.**

Opportunity for practical training in industrial labs. Arranged by student with the research adviser's approval. A brief summary of activities is required, approved by the research adviser.

**PHYSICS 293. Literature of Physics. 1-15 Unit.**

Study of the literature of any special topic. Preparation, presentation of reports. If taken under the supervision of a faculty member outside the department, approval of the Physics chair required. Prerequisites: 25 units of college physics, consent of instructor.

**PHYSICS 294. Teaching of Physics Seminar. 1 Unit.**

Weekly seminar/discussions on interactive techniques for teaching physics. Practicum which includes class observations, grading and student teaching in current courses. Required of all Teaching Assistants prior to first teaching assignment. Mandatory attendance at weekly in-class sessions during first 5 weeks of the quarter; mandatory successful completion of all practicum activities. Enrollment by permission. To get a permission number please complete form: <http://web.stanford.edu/dept/physics/academics/TA/PH294app.fb> If you have not heard from us by the beginning of class, please come to the first class session.

**PHYSICS 295. Learning & Teaching of Science. 3 Units.**

This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background. Same as: EDUC 280, ENGR 295

**PHYSICS 301. Astrophysics Laboratory. 3 Units.**

Designed for physics graduate students but open to all graduate students with a calculus-based physics background and some laboratory and coding experience. Students make and analyze observations using the telescopes at the Stanford Student Observatory. Topics covered include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, imaging and spectroscopic techniques, quantitative error analysis, and effective scientific communication. The course concludes with an independent project where student teams propose and execute an observational astronomy project of their choosing, using techniques learned in class to gather and analyze their data, and presenting their findings in the forms of professional-style oral presentations and research papers. Enrollment by permission. To get a permission number please complete form: <http://web.stanford.edu/~elva/physics301prelim.fbn> If you have not heard from us by the beginning of class, please come to the first class session.

**PHYSICS 312. Basic Plasma Physics. 3 Units.**

For the nonspecialist who needs a working knowledge of plasma physics for space science, astrophysics, fusion, or laser applications. Topics: orbit theory, the Boltzmann equation, fluid equations, magneto hydrodynamics (MHD) waves and instabilities, electromagnetic (EM) waves, the Vlasov theory of electrostatic (ES) waves and instabilities including Landau damping and quasilinear theory, the Fokker-Planck equation, and relaxation processes. Advanced topics in resistive instabilities and particle acceleration. Prerequisite: PHYSICS 220, or consent of instructor.

**PHYSICS 321. Laser Spectroscopy. 3 Units.**

Theoretical concepts and experimental techniques. Absorption, dispersion, Kramers-Kronig relations, line-shapes. Classical and laser linear spectroscopy. Semiclassical theory of laser atom interaction: time-dependent perturbation theory, density matrix, optical Bloch equations, coherent pulse propagation, multiphoton transitions. High-resolution nonlinear laser spectroscopy: saturation spectroscopy, polarization spectroscopy, two-photon and multiphoton spectroscopy, optical Ramsey spectroscopy. Phase conjugation. Four-wave mixing, harmonic generation. Coherent Raman spectroscopy, quantum beats, ultra-sensitive detection. Prerequisite: PHYSICS 230. Recommended: PHYSICS 231.

**PHYSICS 330. Quantum Field Theory I. 3 Units.**

Lorentz Invariance. S-Matrix. Quantization of scalar and Dirac fields. Feynman diagrams. Quantum electrodynamics. Elementary electrodynamic processes: Compton scattering; e+e- annihilation. Loop diagrams. Prerequisites: PHYSICS 130, PHYSICS 131, or equivalents AND a basic knowledge of Group Theory.

**PHYSICS 331. Quantum Field Theory II. 3 Units.**

Functional integral methods. Local gauge invariance and Yang-Mills fields. Asymptotic freedom. Spontaneous symmetry breaking and the Higgs mechanism. Unified models of weak and electromagnetic interactions. Prerequisite: PHYSICS 330.

**PHYSICS 332. Quantum Field Theory III. 3 Units.**

Theory of renormalization. The renormalization group and applications to the theory of phase transitions. Renormalization of Yang-Mills theories. Applications of the renormalization group of quantum chromodynamics. Perturbation theory anomalies. Applications to particle phenomenology. Prerequisite: PHYSICS 331.

**PHYSICS 351. Standard Model of Particle Physics. 3 Units.**

Symmetries, group theory, gauge invariance, Lagrangian of the Standard Model, flavor group, flavor-changing neutral currents, CKM quark mixing matrix, GIM mechanism, rare processes, neutrino masses, seesaw mechanism, QCD confinement and chiral symmetry breaking, instantons, strong CP problem, QCD axion. Prerequisite: PHYSICS 330.

**PHYSICS 360. Modern Astrophysics. 3 Units.**

Basic theory of production of radiation in stars, galaxies and diffuse interstellar and intergalactic media and transfer of radiation throughout the universe. Magnetic fields, turbulence shocks and particle acceleration and transport around magnetospheres of planets to clusters of galaxies. Application to compact objects, pulsars and accretion in binary stars and super-massive black holes, supernova remnants, cosmic rays and active galactic nuclei. Prerequisite: PHYSICS 260 or equivalent.

**PHYSICS 361. Cosmology. 3 Units.**

A comprehensive exposition of the standard model of cosmology, connecting a fundamental physics description to contemporary and proposed observations. Geometry, kinematics, dynamics, and current contents of the Universe at large. History of the universe as it expanded in size by a factor of a trillion, including nucleosynthesis, recombination, and reionization. Evolution of perturbations that eventually grow to form large scale structure, and the influence of this structure on observations of the microwave background and galaxies. Introduction to modern cosmological probes including techniques to measure the expansion history and the growth of structure. The course will conclude with a focused discussion of cosmic inflation, the nature and origin of matter, and the cosmological constant. Recommended prerequisites: PHYSICS 261 or equivalent.

**PHYSICS 362. Advanced Extragalactic Astrophysics and Cosmology. 3 Units.**

Observational data on the content and activities of galaxies, the content of the Universe, cosmic microwave background radiation, gravitational lensing, and dark matter. Models of the origin, structure, and evolution of the Universe based on the theory of general relativity. Test of the models and the nature of dark matter and dark energy. Physics of the early Universe, inflation, baryosynthesis, nucleosynthesis, and galaxy formation. Prerequisites: PHYSICS 210, PHYSICS 211, and PHYSICS 260 or PHYSICS 360.

**PHYSICS 364. Advanced Gravitation. 3 Units.**

Classical and quantum gravity in Anti-de Sitter spacetime (AdS). History and uses of AdS. Basic classical physics of AdS: metric, conformal structure, common coordinate systems. Black holes in AdS: thermodynamics, Hawking-Page transition. Classical fields in AdS: action of conformal group, singletons. Stability of AdS and positive energy theorems. Towards the holographic correspondence: geodesics and the UV-IR relation. AdS from supergravity. Recommended: PHYSICS 330, some familiarity with general relativity.

**PHYSICS 366. Special Topics in Astrophysics: Statistical Methods. 2 Units.**

Existing and emerging statistical techniques and their application to astronomical surveys and cosmological data analysis. Topics covered will include statistical frameworks (Bayesian inference and frequentist statistics), numerical methods including Markov Chain Monte Carlo, and machine learning applied to classification and regression. Hands on activities based on open-source software in python.

**PHYSICS 367. Special Topics in Astrophysics: Experimental Methods in Particle Astrophysics and Cosmology. 2 Units.**

Experimental methods in particle physics, particle astrophysics and cosmology. The course will cover detector fundamentals including the passage of radiation through matter, signal production and collection in detector media, and front-end electronics, with a focus on the fundamental limits of technology. The course will include case studies of specific experiments chosen to illustrate a range of experimental techniques, what the underlying physics questions are and how they are probed with the instrumentation. A typical case study will include instrumentation papers that describe the detector design and a physics results paper that elucidates how the measurement follows from the detector capabilities. Students will make an oral presentation on an experiment, covering both the design of the experiment, and a science result that exploits the apparatus.

**PHYSICS 368. Computational Cosmology and Astrophysics. 2 Units.**

Create virtual Universes and understand our own using your computer. Techniques for studying the dynamics of dark matter and gas as it assembles over cosmic time to form the structure in the Universe. The use of modern computer codes on supercomputers to combine modeling of gravitation, gas dynamics, radiation processes, magnetohydrodynamics, and other relevant physical processes to make detailed predictions about the evolution of the Universe. Practical exercises to explore how cosmic microwave background observations are sensitive to cosmological parameters, how key numerical algorithms work, how different cosmological observations can be combined to constrain what the Universe is made of and how it changed over time. Additional current topics in computational cosmology depending on student interest. Hands-on activities based on open-source software in C++ and Python. Pre- or corequisites: PHYSICS 361. Recommended prerequisite: PHYSICS 366.

**PHYSICS 372. Condensed Matter Theory I. 3 Units.**

Fermi liquid theory, many-body perturbation theory, response function, functional integrals, interaction of electrons with impurities. Prerequisite: APPPHYS 273 or equivalent.

**PHYSICS 373. Condensed Matter Theory II. 3 Units.**

Superfluidity and superconductivity. Quantum magnetism. Prerequisite: PHYSICS 372.

**PHYSICS 41. Mechanics. 4 Units.**

How are motions of objects in the physical world determined by laws of physics? Students learn to describe the motion of objects (kinematics) and then understand why motions have the form they do (dynamics). Emphasis on how the important physical principles in mechanics, such as conservation of momentum and energy for translational and rotational motion, follow from just three laws of nature: Newton's laws of motion. Distinction made between fundamental laws of nature and empirical rules that are useful approximations for more complex physics. Problems drawn from examples of mechanics in everyday life. Skills developed in verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Discussions based on language of mathematics, particularly vector representations and operations, and calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: High school physics or concurrent enrollment in PHYSICS 41A. MATH 20 or MATH 51 or CME 100 or equivalent. Minimum corequisite: MATH 21 or equivalent.

**PHYSICS 41A. Mechanics Concepts, Calculations, and Context. 5 Units.**

Students attend Physics 41 lectures with different recitation sessions: two sections per week instead of one. Since PH41 sections fill up, you should sign up for your desired section in PH41 now in case you do not get permission for PH41A and you have to take PH41 instead. Prerequisite: application; see [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_4OrBvKcJ5o1Baw5](https://stanforduniversity.qualtrics.com/jfe/form/SV_4OrBvKcJ5o1Baw5). nCourse content is identical to Physics 41: How are motions of objects in the physical world determined by laws of physics? Students learn to describe the motion of objects (kinematics) and then understand why motions have the form they do (dynamics). Emphasis on how the important physical principles in mechanics, such as conservation of momentum and energy for translational and rotational motion, follow from just three laws of nature: Newton's laws of motion. Distinction made between fundamental laws of nature and empirical rules that are useful approximations for more complex physics. Problems drawn from examples of mechanics in everyday life. Skills developed in verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Discussions based on language of mathematics, particularly vector representations and operations, and calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving.

**PHYSICS 42. Classical Mechanics Laboratory. 1 Unit.**

Hands-on exploration of concepts in classical mechanics: Newton's laws, conservation laws, rotational motion. Introduction to laboratory techniques, experimental equipment and data analysis. Pre- or corequisite: PHYSICS 41.

**PHYSICS 43. Electricity and Magnetism. 4 Units.**

What is electricity? What is magnetism? How are they related? How do these phenomena manifest themselves in the physical world? The theory of electricity and magnetism, as codified by Maxwell's equations, underlies much of the observable universe. Students develop both conceptual and quantitative knowledge of this theory. Topics include: electrostatics; magnetostatics; simple AC and DC circuits involving capacitors, inductors, and resistors; integral form of Maxwell's equations; electromagnetic waves. Principles illustrated in the context of modern technologies. Broader scientific questions addressed include: How do physical theories evolve? What is the interplay between basic physical theories and associated technologies? Discussions based on the language of mathematics, particularly differential and integral calculus, and vectors. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: PHYSICS 41 or equivalent. MATH 21 or MATH 51 or CME 100 or equivalent. Recommended corequisite: MATH 52 or CME 102.

**PHYSICS 43A. Electricity and Magnetism: Concepts, Calculations and Context. 1 Unit.**

Additional assistance and applications for Physics 43. In-class problems in physics and engineering. Exercises in calculations of electric and magnetic forces and field to reinforce concepts and techniques; Calculations involving inductors, transformers, AC circuits, motors and generators. Highly recommended for students with limited or no high school physics or calculus. Corequisite: PHYSICS 43-34 or PHYSICS 43-35; Prerequisite: application at [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_eIGPlvxyNxdziXX](https://stanforduniversity.qualtrics.com/jfe/form/SV_eIGPlvxyNxdziXX).

**PHYSICS 43N. Understanding Electromagnetic Phenomena. 1 Unit.**

Preference to freshmen. Expands on the material presented in PHYSICS 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: PHYSICS 43 or advanced placement.

**PHYSICS 44. Electricity and Magnetism Lab. 1 Unit.**

Hands-on exploration of concepts in electricity, magnetism, and circuits. Introduction to multimeters, function generators, oscilloscopes, and graphing techniques. Pre- or corequisite: PHYSICS 43.

**PHYSICS 45. Light and Heat. 4 Units.**

What is temperature? How do the elementary processes of mechanics, which are intrinsically reversible, result in phenomena that are clearly irreversible when applied to a very large number of particles, the ultimate example being life? In thermodynamics, students discover that the approach of classical mechanics is not sufficient to deal with the extremely large number of particles present in a macroscopic amount of gas. The paradigm of thermodynamics leads to a deeper understanding of real-world phenomena such as energy conversion and the performance limits of thermal engines. In optics, students see how a geometrical approach allows the design of optical systems based on reflection and refraction, while the wave nature of light leads to interference phenomena. The two approaches come together in understanding the diffraction limit of microscopes and telescopes. Discussions based on the language of mathematics, particularly calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: PHYSICS 41 or equivalent. MATH 21 or MATH 51 or CME 100 or equivalent.

**PHYSICS 450. Advanced Theoretical Physics I: String Theory with Applications to Cosmology and Black Hole Physics. 3 Units.**

String theory provides a strong candidate for quantum gravity as well as contributing insights into many areas of physics. The class will start by evaluating the need for an extension of general relativity and quantum field theory, and assess the circumstances under which it becomes relevant (or 'dangerously irrelevant' in the renormalization group sense). We will develop the basic tools for perturbative calculations and study their implications at short and long distances and in nontrivial spacetime geometries and topologies. The course will survey non-perturbative objects, dualities, compactification, and the structure of cosmological backgrounds of string theory, discussing their implications for early universe models and for the problem of upgrading holographic duality to cosmology.

**PHYSICS 451. Advanced Theoretical Physics II: Quantum Information Theory, Complexity, Gravity and Black Holes. 3 Units.**

This course will cover the developing intersection between quantum information theory and the quantum theory of gravity. We will focus on the central roles of entanglement and computational complexity in black hole physics. Prerequisites: Basic knowledge of quantum mechanics, quantum field theory, and general relativity.

**PHYSICS 45N. Topics in Light and Heat. 1 Unit.**

Preference to freshmen. Explores the quantum and classical properties of light from stars, lasers and other sources. Includes modern applications ranging from gravity wave interferometers to x-ray lasers.

**PHYSICS 46. Light and Heat Laboratory. 1 Unit.**

Hands-on exploration of concepts in geometrical optics, wave optics and thermodynamics. Pre- or corequisite: PHYSICS 45.

**PHYSICS 470. Topics in Modern Condensed Matter Theory I: Topological States of Matter. 3 Units.**

A brief introduction to integer quantum Hall effect. Su-Schrieffer-Heeger model and one-dimensional topological insulators. Topological band theory of time-reversal invariant topological insulators. Various approaches of determining the topological invariant from the bulk and the boundary. An overview of key experiments. Topological superconductivity. Topological response theory. A brief summary of more recent developments on interacting topological insulators/symmetry protected topological states. Prerequisite: PHYSICS 172/APPPHYS 272 or equivalent; knowledge on second quantization; knowledge on path integral. May be repeat for credit.

**PHYSICS 471. Topics in Modern Condensed Matter Theory II: Physics of the Quantum Hall Regime. 3 Units.**

Integer quantum Hall effect, Fractional quantum Hall effect, Laughlin's theory, Hierarchy states, Effective theories, topological order in the fractional quantum Hall effect, physics of the half-filled Landau level, quantum Hall plateau transitions. May be repeat for credit.

**PHYSICS 490. Research. 1-18 Unit.**

Open only to Physics graduate students, with consent of instructor. Work is in experimental or theoretical problems in research, as distinguished from independent study of a non-research character in 190 and 293.

**PHYSICS 491. Symmetry and Quantum Information. 2 Units.**

This course gives an introduction to quantum information theory through the study of symmetries. We start with Bell's and Tsirelson's inequalities, which bound the strength of classical and quantum correlations, and discuss their relation to algebraic symmetries. Next, we exploit permutation symmetry to quantify the monogamy of entanglement and explain how to securely distribute a secret key. Lastly, we study quantum information in the limit of many copies and discuss a powerful technique for constructing universal quantum protocols, based on the Schur-Weyl duality between the unitary and symmetric groups. Applications include quantum data compression, state estimation, and entanglement distillation. Prerequisite: PHYSICS 230 or equivalent. All required group and representation theory will be introduced. This course runs for the first five weeks of the quarter.

**PHYSICS 492. Topological Quantum Computation. 2 Units.**

This course will be an introduction to topological quantum computation (TQC), which has recently emerged as an exciting approach to constructing fault-tolerant quantum computers. We start with a review of some basics of quantum computing, 2D topological phases of matter, Abelian/non-Abelian anyons, etc. Then we introduce the concept of TQC and study some examples such as the toric/surface code and Levin-Wen string-net model. We continue to talk about the mathematical theory of anyons including modular tensor categories, braid groups, 6j-symbols, Pentagon Equations. We study the issue of universality for different systems. Lastly, we show the equivalence of TQC with standard circuit model. Additional topics include complexity classes, Jones polynomials, topological field theories, etc. Prerequisite: Basic knowledge of quantum mechanics and condensed matter physics. Some knowledge of category theory and representation theory is useful but is not required. The course will run the first five weeks.

**PHYSICS 50. Astronomy Laboratory and Observational Astronomy. 3 Units.**

Introduction to observational astronomy emphasizing the use of optical telescopes. Observations of stars, nebulae, and galaxies in laboratory sessions with telescopes at the Stanford Student Observatory. Meets at the observatory one evening per week from dusk until well after dark, in addition to day-time lectures each week. No previous physics required. Limited enrollment.

**PHYSICS 59. Frontiers of Physics Research. 1 Unit.**

Recommended for prospective Physics or Engineering Physics majors or anyone with an interest in learning about the big questions and unknowns that physicists tackle in their research at Stanford. Weekly faculty presentations, in some cases followed by tours of experimental laboratories where the research is conducted.

**PHYSICS 61. Mechanics and Special Relativity. 4 Units.**

(First in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course covers Einstein's special theory of relativity and Newtonian mechanics at a level appropriate for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Postulates of special relativity, simultaneity, time dilation, length contraction, the Lorentz transformation, causality, and relativistic mechanics. Central forces, contact forces, linear restoring forces. Momentum transport, work, energy, collisions. Angular momentum, torque, moment of inertia in three dimensions. Damped and forced harmonic oscillators. Uses the language of vectors and multivariable calculus. Recommended prerequisites: Mastery of mechanics at the level of AP Physics C and AP Calculus BC or equivalent. Corequisite: MATH 51 or MATH 61CM or MATH 61DM.

**PHYSICS 62. Mechanics Laboratory. 1 Unit.**

Introduction to laboratory techniques, experiment design, data collection and analysis simulations, and correlating observations with theory. Labs emphasize discovery with open-ended questions and hands-on exploration of concepts developed in PHYSICS 61 including Newton's laws, conservation laws, rotational motion. Pre- or corequisite PHYSICS 61.

**PHYSICS 63. Electricity, Magnetism, and Waves. 4 Units.**

(Second in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course covers the foundations of electricity and magnetism for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Electricity, magnetism, and waves with some description of optics. Electrostatics and Gauss' law. Electric potential, electric field, conductors, image charges. Electric currents, DC circuits. Moving charges, magnetic field, Ampere's law. Solenoids, transformers, induction, AC circuits, resonance. Relativistic point of view for moving charges. Displacement current, Maxwell's equations. Electromagnetic waves, dielectrics. Diffraction, interference, refraction, reflection, polarization. Prerequisite: PHYSICS 61 and MATH 51 or MATH 61CM or MATH 61DM. Pre- or corequisite: MATH 52 or MATH 62CM or MATH 62DM.

**PHYSICS 64. Electricity, Magnetism and Waves Laboratory. 1 Unit.**

Introduction to multimeters, breadboards, function generators and oscilloscopes. Emphasis on student-developed design of experimental procedure and data analysis for topics covered in PHYSICS 63: electricity, magnetism, circuits, and optics. Pre- or corequisite: PHYSICS 63.

**PHYSICS 65. Quantum and Thermal Physics. 4 Units.**

(Third in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course introduces the foundations of quantum and statistical mechanics for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Quantum mechanics: atoms, electrons, nuclei. Quantization of light, Planck's constant. Photoelectric effect, Compton and Bragg scattering. Bohr model, atomic spectra. Matter waves, wave packets, interference. Fourier analysis and transforms, Heisenberg uncertainty relationships. Schrödinger equation, eigenfunctions and eigenvalues. Particle-in-a-box, simple harmonic oscillator, barrier penetration, tunneling, WKB and approximate solutions. Time-dependent and multi-dimensional solution concepts. Coulomb potential and hydrogen atom structure. Thermodynamics and statistical mechanics: ideal gas, equipartition, heat capacity. Probability, counting states, entropy, equilibrium, chemical potential. Laws of thermodynamics. Cycles, heat engines, free energy. Partition function, Boltzmann statistics, Maxwell speed distribution, ideal gas in a box, Einstein model. Quantum statistical mechanics: classical vs. quantum distribution functions, fermions vs. bosons. Prerequisites: PHYSICS 61 & PHYSICS 63. Pre- or corequisite: MATH 53 or MATH 63CM or MATH 63DM.

**PHYSICS 67. Introduction to Laboratory Physics. 2 Units.**

Methods of experimental design, data collection and analysis, statistics, and curve fitting in a laboratory setting. Experiments drawn from electronics, optics, heat, and modern physics. Lecture plus laboratory format. Required for PHYSICS 60 series Physics and Engineering Physics majors; recommended, in place of PHYSICS 44, for PHYSICS 40 series students who intend to major in Physics or Engineering Physics. Pre- or corequisite: PHYSICS 65 or PHYSICS 43.

**PHYSICS 70. Foundations of Modern Physics. 4 Units.**

Required for Physics or Engineering Physics majors who completed the PHYSICS 40 series. Introduction to special relativity: reference frames, Michelson-Morley experiment. Postulates of relativity, simultaneity, time dilation. Length contraction, the Lorentz transformation, causality. Doppler effect. Relativistic mechanics and mass, energy, momentum relations. Introduction to quantum physics: atoms, electrons, nuclei. Quantization of light, Planck constant. Photoelectric effect, Compton and Bragg scattering. Bohr model, atomic spectra. Matter waves, wave packets, interference. Fourier analysis and transforms, Heisenberg uncertainty relationships. Schrödinger equation, eigenfunctions and eigenvalues. Particle-in-a-box, simple harmonic oscillator, barrier penetration, tunneling, WKB and approximate solutions. Time-dependent and multi-dimensional solution concepts. Coulomb potential and hydrogen atom structure. Prerequisites: PHYSICS 41, PHYSICS 43. Pre or corequisite: PHYSICS 45. Recommended: prior or concurrent registration in MATH 53.

**PHYSICS 801. TGR Project. 0 Units.****PHYSICS 802. TGR Dissertation. 0 Units.****PHYSICS 81N. Science on the Back of the Envelope. 3 Units.**

Understanding the complex world around us quantitatively, using order of magnitude estimates and dimensional analysis. Starting from a handful of fundamental constants of Nature, one can estimate complex quantities such as cosmological length and time scales, size of the atom, height of Mount Everest, speed of tsunami, energy density of fuels and climate effects. Through these examples students learn the art of deductive thinking, fundamental principles of science and the beautiful unity of nature.

**PHYSICS 83N. Physics in the 21st Century. 3 Units.**

Preference to freshmen. Current topics at the frontier of modern physics. This course provides an in-depth examination of two of the biggest physics discoveries of the 21st century: that of the Higgs boson and Dark Energy. Through studying these discoveries we will explore the big questions driving modern particle physics, the study of nature's most fundamental pieces, and cosmology, the study of the evolution and nature of the universe. Questions such as: What is the universe made of? What are the most fundamental particles and how do they interact with each other? What can we learn about the history of the universe and what does it tell us about its future? We will learn about the tools scientists use to study these questions such as the Large Hadron Collider and the Hubble Space Telescope. We will also learn to convey these complex topics in engaging and diverse terms to the general public through writing and reading assignments, oral presentations, and multimedia projects. The syllabus includes a tour of SLAC, the site of many major 20th century particle discoveries, and a virtual visit of the control room of the ATLAS experiment at CERN amongst other activities. No prior knowledge of physics is necessary; all voices are welcome to contribute to the discussion about these big ideas. Learning Goals: By the end of the quarter you will be able to explain the major questions that drive particle physics and cosmology to your friends and peers. You will understand how scientists study the impossibly small and impossibly large and be able to convey this knowledge in clear and concise terms.

**PHYSICS 91SI. Practical Computing for Scientists. 2 Units.**

Essential computing skills for researchers in the natural sciences. Helping students transition their computing skills from a classroom to a research environment. Topics include the Unix operating system, the Python programming language, and essential tools for data analysis, simulation, and optimization. More advanced topics as time allows. Prerequisite: CS106A or equivalent.

**PHYSICS 95Q. The Philosophies of Three Great Physicists. 3 Units.**

Richard Feynman has famously said, Philosophy of science is about as useful to scientists as ornithology is to birds. A closer look at key moments in the history of physics, however, reveals a different picture. Contrary to the misconception that philosophy has nothing to offer to science in general, and physics in particular, watershed moments in the development of physics were inspired and motivated by deeply held philosophical principles. Similarly, important developments in physics have generated important and difficult philosophical questions. In this sophomore seminar we will explore three significant moments in the development of physics surrounding the works of Newton, Einstein, and Bohr. We will analyze the relationship between the prevailing philosophical views they espoused and the physics they produced. How did Newton come to the view of absolute and fixed space and time? What led Einstein to reject the notion of a fixed space and time and propose a relativistic, and even dynamic space-time? What is Bohr's influential doctrine of complementarity, and why did several generations of physicists believe it to be an adequate philosophical response to quantum mechanics? We will see that the relationship between philosophy and physics is more similar to the relationship between mathematics and physics where progress in one area is often preceded and followed by progress in the second.

## Political Science (POLISCI)

**POLISCI 1. The Science of Politics. 5 Units.**

Why do countries go to war? How can we explain problems such as poverty, inequality, and pollution? What can be done to improve political representation in the United States and other countries? We will use scientific methods to answer these and other fundamental questions about politics.

**POLISCI 101. Introduction to International Relations. 5 Units.**

Approaches to the study of conflict and cooperation in world affairs. Applications to First and Second World Wars, the Cold War, terrorism, economic policy, and development.

**POLISCI 101Z. Introduction to International Relations. 4 Units.**

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

Same as: INTNLREL 101Z

**POLISCI 102. Politics and Public Policy. 4-5 Units.**

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, PUBLPOL 101, PUBLPOL 201

**POLISCI 103. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: ETHICSOC 171, PHIL 171, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**POLISCI 104. Introduction to Comparative Politics. 5 Units.**

(Formerly POLISCI 4) Why are some countries prone to civil war and violence, while others remain peaceful? Why do some countries maintain democratic systems, while others do not? Why are some countries more prosperous than others? This course will provide an overview of the most basic questions in the comparative study of political systems, and will introduce the analytical tools that can help us answer them.

**POLISCI 10N. International Organizations and the World Order. 3 Units.**

Since the end of World War II, there has been an explosion in the number, scope, and complexity of international organizations. International organizations such as the United Nations, North Atlantic Treaty Organization, and World Bank now play critical roles across a wide range of policy issues. Why have international organizations proliferated and expanded since the mid-20th century? How do these organizations shape the international system? Why do states sometimes conduct foreign policy through international organizations, while other times preferring traditional means? Why do some international organizations evolve over time, while others resist change? What are some of the pathologies and problems of contemporary international organizations? We will explore these questions by carefully examining the functions and operations of major international organizations. You will also complete a research project examining an international organization of your choice and present your findings in class.

**POLISCI 110C. America and the World Economy. 5 Units.**

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit.

Same as: INTNLREL 110C, POLISCI 110X

**POLISCI 110D. War and Peace in American Foreign Policy. 5 Units.**

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period.

Same as: AMSTUD 110D, INTNLREL 110D, POLISCI 110Y

**POLISCI 110G. Governing the Global Economy. 5 Units.**

Who governs the world economy? Why do countries succeed or fail to cooperate in setting their economic policies? When and how do international institutions help countries cooperate? When and why do countries adopt good and bad economic policies? How does the international economy affect domestic politics? This course examines how domestic and international politics determine how the global economy is governed. We will study the politics of monetary, trade, international investment, energy, environmental, and foreign aid policies to answer these questions. The course will approach each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence. There will be an emphasis on applying concepts through the analysis of case studies.

**POLISCI 110X. America and the World Economy. 5 Units.**

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit.

Same as: INTNLREL 110C, POLISCI 110C

**POLISCI 110Y. War and Peace in American Foreign Policy. 5 Units.**

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period.

Same as: AMSTUD 110D, INTNLREL 110D, POLISCI 110D

**POLISCI 114D. Democracy, Development, and the Rule of Law. 5 Units.**

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. Same as: INTNLREL 114D, IPS 230, POLISCI 314D

**POLISCI 114S. International Security in a Changing World. 5 Units.**

This class examines the most pressing international security problems facing the world today: nuclear crises, nuclear non-proliferation, terrorism, and climate change. Alternative perspectives—from political science, history, and STS (Science, Technology, and Society) studies—are used to analyze these problems. The class includes an award-winning two-day international negotiation simulation.

Same as: HISTORY 104D, IPS 241

**POLISCI 115A. The Rise of Asia. 3-5 Units.**

We will examine the sources and implications of the rise of Asia in the international system. Topics will include military competition, international cooperation, regional integration, domestic politics, business and investment, legalization, environmental issues, demographics, social issues, and the role of technology.

Same as: POLISCI 315A

**POLISCI 115E. Japan & the World: Innovation, Economic Growth, Globalization, and Int'l Security Challenges. 3-5 Units.**

This course introduces students to the economy, politics, and international relations of contemporary Japan. The course puts a particular emphasis on several emerging issues in Japan including innovation and economic dynamism, Japan's contributions to international peace and cooperation, and Japan's response to international economic and geopolitical challenges. The course will invite several guest instructors, each of whom is an expert on at least one of the issues that Japan faces today, to give lectures in addition to the main instructors. The guest lecturers will also be available outside of the classroom for further discussion during their stays at Stanford.

Same as: EASTASN 153, EASTASN 253, ECON 120

**POLISCI 116. The International History of Nuclear Weapons. 5 Units.**

An introduction to the history of nuclear weapons from World War II to the present. The focus is on politics, but the role of technology transfer, whether legal or illicit, in the development of nuclear weapons will be examined; so too will the theories about the military and political utility of nuclear weapons. We will look at the efforts to control and abolish nuclear weapons and at the international institutions created to reduce the danger of nuclear war.

Same as: HISTORY 103E

**POLISCI 116A. European Security Since World War Two. 4-5 Units.**

This course looks at European security during the Cold War and up to the present. There are many historical controversies to be examined, e.g. the enlargement of NATO, as well as theoretical and doctrinal debates, e.g. about extended deterrence and detente.

Same as: HISTORY 232C, HISTORY 332C, IPS 235

**POLISCI 118P. U.S. Relations in Iran. 5 Units.**

The evolution of relations between the U.S. and Iran. The years after WW II when the U.S. became more involved in Iran. Relations after the victory of the Islamic republic. The current state of affairs and the prospects for the future. Emphasis is on original documents of U.S. diplomacy (White House, State Department, and the U.S. Embassy in Iran). Research paper.

**POLISCI 11N. The Rwandan Genocide. 3 Units.**

Preference to freshmen. In 1994, more than 800,000 Tutsi and moderate Hutu Rwandans were killed in the most rapid genocide in history. What could bring humans to carry out such violence? Could it have been prevented? Why did no major power intervene to stop the killing? Should the U.N. be held accountable? What were the consequences for Central Africa? How have international actors respond to the challenges of reconstructing Rwanda? What happened to the perpetrators? Sources include scholarly and journalistic accounts.

**POLISCI 120B. Campaigns, Voting, Media, and Elections. 4-5 Units.**

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players – candidates, parties, journalists, and voters – in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process. Same as: COMM 162, COMM 262

**POLISCI 120C. American Political Institutions in Uncertain Times. 5 Units.**

This course examines how the rules that govern elections and the policy process determine political outcomes. It explores the historical forces that have shaped American political institutions, contemporary challenges to governing, and prospects for change. Topics covered include partisan polarization and legislative gridlock, the politicization of the courts, electoral institutions and voting rights, the expansion of presidential power, campaign finance and lobbying, representational biases among elected officials, and the role of political institutions in maintaining the rule of law. Throughout, emphasis will be placed on the strategic interactions between Congress, the presidency, and the courts and the importance of informal norms and political culture. Same as: PUBLPOL 124

**POLISCI 120Z. What's Wrong with American Government? An Institutional Approach. 4 Units.**

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. Fulfills the Writing in the Major Requirement for Political Science majors.

**POLISCI 121. Political Power in American Cities. 5 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

Same as: AMSTUD 121Z, PUBLPOL 133, URBANST 111

**POLISCI 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. PoliSci 150A, Stats 60 or Econ 1 is strongly recommended.

Same as: CSRE 121L, PUBLPOL 121L

**POLISCI 121Z. Political Power in American Cities. 4 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

**POLISCI 122. Introduction to American Law. 3-5 Units.**

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: AMSTUD 179, PUBLPOL 302A

**POLISCI 123A. Presidential Politics: Race, Gender, and Inequality in the 2016 Election. 3 Units.**

From the 2016 nomination process to the election. The complexities of identity and its role in uniting and dividing the electorate. Panels covering the media, political participation, and group affiliation.

Same as: AFRICAAM 109, CSRE 112

**POLISCI 124A. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, ENGLISH 124, HISTORY 151

**POLISCI 124L. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 164, COMM 264, PSYCH 170

**POLISCI 124R. The Federal System: Judicial Politics and Constitutional Law. 5 Units.**

Does the constitution matter? And if so, how exactly does it shape our daily lives? In this course, we will examine the impact of structural features, such as the separation of powers and federalism. While these features often seem boring and unimportant, they are not. As we will see, arguments over structure were at the heart of the debates over slavery, the incarceration of the Japanese during WWII, the drug war and gay marriage. Prerequisites: 2 or equivalent, and sophomore standing. Fulfills Writing in the Major requirement for PoliSci majors.

**POLISCI 124S. Civil Liberties: Judicial Politics and Constitutional Law. 5 Units.**

The role and participation of courts, primarily the U.S. Supreme Court, in public policy making and the political system. Judicial activity in civil liberty areas (religious liberty, free expression, race and sex discrimination, political participation, and rights of persons accused of crime). Prerequisites: 2 or equivalent, and sophomore standing.

**POLISCI 125M. Latino Social Movements. 5 Units.**

Social movements are cooperative attempts to change the world. This course reviews historically significant and contemporary political and social movements in Latino communities in the U.S., including the movements of the 1960s and events of the modern era such as the Spring 2006 marches and student walkouts, the 2010 resistance to Arizona's SB1070, and ongoing efforts in 2017 related to detention and deportation policies.

Same as: CHILATST 181

**POLISCI 125P. The First Amendment: Freedom of Speech and Press. 4-5 Units.**

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251).

Same as: COMM 151, COMM 251

**POLISCI 125S. Chicano/Latino Politics. 5 Units.**

The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.

Same as: CHILATST 125S

**POLISCI 125V. The Voting Rights Act. 5 Units.**

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: AFRICAAM 125V, CSRE 125V

**POLISCI 126P. Constitutional Law. 3 Units.**

This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.

Same as: COMM 152, COMM 252

**POLISCI 127A. Finance and Society for non-MBAs. 4 Units.**

The financial system is meant to help people, businesses, and governments fund, invest, and manage risks, but it is rife with conflicts of interests and may allow people with more information and control to harm those with less of both. In this interdisciplinary course we explore the forces that shape the financial system and how individuals and society can benefit most from this system without being unnecessarily harmed and endangered. Topics include the basic principles of investment, the role and "dark side" of debt, corporations and their governance, banks and other financial institutions, why effective financial regulations are essential yet often fail, and political and ethical issues in finance. The approach will be rigorous and analytical but not overly technical mathematically. Prerequisite: Econ 1.

Same as: ECON 143, IPS 227, MS&E 147, PUBLPOL 143

**POLISCI 127P. Economic Inequality and Political Dysfunction. 5 Units.**

This course will examine how two of the defining features of contemporary U.S. politics, economic inequality and political polarization, relate to each other and to Congressional gridlock. The reading list will focus on several books recently authored by preeminent political scientists on this important topic. The course will cover a range of topics, including the disparity in political representation of the preferences of the affluent over those of the poor, the origins of Congressional polarization, the influence of money in politics, budgetary politics, immigration policy, and electoral and institutional barriers to reform.

**POLISCI 128S. The Constitution: A Brief History. 5 Units.**

A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime.

Same as: AMSTUD 157, HISTORY 157

**POLISCI 130. 20th Century Political Theory: Liberalism and its Critics. 5 Units.**

In this course, students will learn and engage with the debates that have animated political theory since the early 20th century. What is the proper relationship between the individual, the community, and the state? Are liberty and equality in conflict, and, if so, which should take priority? What does justice mean in a large and diverse modern society? The subtitle of the course, borrowed from a book by Michael Sandel, is "Liberalism and its Critics" because the questions we discuss in this class center on the meaning of, and alternatives to, the liberal idea that the basic goal of society should be the protection of individual rights. Readings will include selections from works by John Rawls, Hannah Arendt, Robert Nozick, Michael Sandel, Iris Marion Young, and Martha Nussbaum. No prior experience with political theory is necessary.

Same as: PHIL 171P

**POLISCI 131A. The Ethics and Politics of Collective Action. 3-4 Units.**

Collective action problems arise when actions that are individually rational give rise to results that are collectively irrational. Scholars have used such a framework to shed light on various political phenomena such as revolutions, civil disobedience, voting, climate change, and the funding of social services. We examine their findings and probe the theoretical foundations of their approach. What does this way of thinking about politics bring into focus, and what does it leave out? What role do institutions play in resolving collective action problems? And what if the required institutions are absent? Can we, as individuals, be required to cooperate even if we expect that others may not play their part? Readings drawn from philosophy, political science, economics, and sociology.

Same as: ETHICSOC 180M, PHIL 73, PUBLPOL 304A

**POLISCI 131L. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.**

This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx.

Same as: ETHICSOC 131S

**POLISCI 132A. The Ethics of Elections. 5 Units.**

Do you have a duty to vote? How should you choose whom to vote for? Should immigrants be allowed to vote? Should we make voting mandatory? How (if at all) should we regulate campaign finance? Should we even have elections at all? In this course, we will explore these and other ethical questions related to electoral participation and the design of electoral institutions. We will evaluate arguments from political philosophers, political scientists, and politicians to better understand how electoral systems promote important democratic values and how this affects citizens' and political leaders' ethical obligations. We will focus, in particular, on questions that are particularly relevant to the 2016 U.S. presidential election, though many of the ethical issues we will discuss in this course will be relevant in any electoral democracy. Same as: ETHICSOC 134R

**POLISCI 132C. Family, Friends, and Groups: The Ethics of Association. 4 Units.**

The practice of associating with others is a fundamental part of human existence. We cultivate friendships, we grow up in families, we work for nonprofit associations or businesses, we join social movements and sport clubs, and we participate in political associations with our fellow citizens. This seminar explores the ethical dimensions of association. What grounds a right to freedom of association? Do we have, beyond a right, also a duty to participate in associational life? Do we have special obligations towards our friends, family members, or fellow-citizens that we do not have toward strangers? To what extent should the internal life of private associations, such as families or churches, be regulated by the state? Should the state support, through tax-exemptions and subsidies, the nonprofit associations of civil society? Can a state exclude non-citizens, such as immigrants, in the same way in which a private club excludes non-members? These questions have wide-ranging implications for contemporary political and legal debates.

**POLISCI 133. Ethics and Politics of Public Service. 3-5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, PUBLPOL 103D, URBANST 122

**POLISCI 133Z. Ethics and Politics in Public Service. 4 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. Same as: CSRE 133P, PUBLPOL 103Z, URBANST 122Z

**POLISCI 134L. Introduction to Environmental Ethics. 4-5 Units.**

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism. Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, PHIL 278M

**POLISCI 134P. Contemporary Moral Problems. 4-5 Units.**

Conflict is a natural part of human life. As human beings we represent a rich diversity of conflicting personalities, preferences, experiences, needs, and moral viewpoints. How are we to resolve or otherwise address these conflicts in a way fair to all parties? In this course, we will consider the question as it arises across various domains of human life, beginning with the classroom. What are we to do when a set of ideas expressed in the classroom offends, threatens, or silences certain of its members? What is it for a classroom to be safe? What is it for a classroom to be just? We will then move from the classroom to the family, considering a difficult set of questions about how we are to square the autonomy rights of children, elderly parents, and the mentally ill with our desire as family members to keep them safe. Finally, we will turn to the conflicts of citizenship in a liberal democratic society in which the burdens and benefits of citizenship have not always been fairly distributed. We will consider, among others, the question of whether or not civil disobedience is ever morally permissible, of whether there is a right to healthcare, and of whether or not some citizens are owed reparations for past injustices. Same as: ETHICSOC 185M, PHIL 72

**POLISCI 135D. The Ethics of Democratic Citizenship. 5 Units.**

We usually think about democratic citizenship in terms of rights and opportunities, but are these benefits of democracy accompanied by special obligations? Do citizens of a democracy have an obligation to take an interest in politics and to actively influence political decision making? How should citizens respond when a democracy's laws become especially burdensome? Do citizens of a democracy have a special obligation to obey the law? In this course, we will read classical and contemporary political philosophy including Plato's *Crito* and King's "Letter from a Birmingham Jail" to explore how political thinkers have understood and argued for the ethics of citizenship. Students in this course will draw on these materials to construct their own arguments, and to identify and assess implicit appeals to the ethics of citizenship in popular culture and contemporary public discourse, from The Simpsons to President Obama's speeches. Same as: ETHICSOC 135R

**POLISCI 135P. Moral Limits of the Market. 4 Units.**

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases. Same as: ETHICSOC 174A, PHIL 174A, PHIL 274A

**POLISCI 136R. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to a series of real-world issues of international concern: global poverty, human rights, natural resources, climate change, migration, and the well-being of women. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.

Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 336

**POLISCI 137A. Political Philosophy: The Social Contract Tradition. 4 Units.**

(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant. Same as: PHIL 176, PHIL 276, POLISCI 337A

**POLISCI 140L. China in World Politics. 5 Units.**

The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: POLISCI 340L

**POLISCI 140P. Populism and the Erosion of Democracy. 5 Units.**

What is populism, and how much of a threat to democracy is it? How different is it from fascism or other anti-liberal movements? This course explores the conditions for the rise of populism, evaluates how much of a danger it poses, and examines the different forms it takes.

Same as: GLOBAL 106

**POLISCI 141A. Immigration and Multiculturalism. 5 Units.**

What are the economic effects of immigration? Do immigrants assimilate into local culture? What drives native attitudes towards immigrants? Is diversity bad for local economies and societies and which policies work for managing diversity and multiculturalism? We will address these and similar questions by synthesizing the conclusions of a number of empirical studies on immigration and multiculturalism. The emphasis of the course is on the use of research design and statistical techniques that allow us to move beyond correlations and towards causal assessments of the effects of immigration and immigration policy.

Same as: CSRE 141S

**POLISCI 141S. Politics of India. 5 Units.**

This course provides an overview of the political institutions, processes, and issues in post-independence India. The purpose is not merely to familiarize students to the politics of India, but also to facilitate a good understanding of, and stimulate keen interest in, the subject. The course hopes to build a strong foundation for acquiring a deeper understanding of Indian politics. The subject-matter will be approached from a comparative perspective, and students are encouraged to think about the topics covered with a view on cases beyond India.

**POLISCI 142B. British Politics. 5 Units.**

The impact on the world's oldest democracy of major changes in policies, politics, and the institution of government made over the last two decades by Margaret Thatcher and Tony Blair.

**POLISCI 143S. Comparative Corruption. 3 Units.**

Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).

Same as: SOC 113

**POLISCI 144A. Revolution and Reconciliation Through Film. 5 Units.**

The course uses the Spanish political experience in the 20th Century, both in the Spanish civil war and in its transition to democracy in the late 1970s, as a starting point, to focus on the human and social effects of the numerous political upheavals in the transitions from democracy to authoritarianism and back again. Using films about revolutionary change in several different societies, we will treat these as the texts to motivate our thinking, and examine both the process of social breakdown during periods of civil strife and the role of reconciliation in the reconstruction of societies. We will focus on multiple elements of social consequences in political transitions, including gender, children, non-violent resistance, racism, social class, and the role of the United States. Course requirements will include weekly film screening, discussion, and two critical response papers written across the quarter.

**POLISCI 146A. African Politics. 4-5 Units.**

Africa has lagged the rest of the developing world in terms of economic development, the establishment of social order, and the consolidation of democracy. This course seeks to identify the historical and political sources accounting for this lag, and to provide extensive case study and statistical material to understand what sustains it, and how it might be overcome.

Same as: AFRICAAM 146A

**POLISCI 147. Comparative Democratic Development. 5 Units.**

Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on global third wave of democratization beginning in the mid-1970s, the recent global recession of democracy (including the rise of illiberal populist parties and movements), and the contemporary challenges and prospects for democratic change.

Same as: SOC 112

**POLISCI 147P. The Politics of Inequality. 5 Units.**

This course is about the distribution of power in contemporary democratic societies, and especially in the US: who governs? Is there a "power elite," whose preferences dominate public policy making? Or, does policy reflect a wide range of interests? What is the relationship between income and power? What are the political consequences of increasing income inequality? How do income differences across racial and ethnic groups affect the quality of their representation? What are effective remedies for unequal influence? Finally, which institutions move democratic practice furthest towards full democratic equality? This course will address these questions, focusing first on local distributions of power, and then considering the implications of inequality in state and national politics. Students will have the opportunity to study income inequality using income and labor force surveys in a mid-term assignment. Then, in a final paper, students will conduct an empirical examination of the implications of income inequality for American democracy.

Same as: PUBLPOL 247, SOC 178

**POLISCI 148. Chinese Politics. 3-5 Units.**

China, one of the few remaining communist states in the world, has not only survived, but has become a global political actor of consequence with the fastest growing economy in the world. What explains China's authoritarian resilience? Why has the CCP thrived while other communist regimes have failed? How has the Chinese Communist Party managed to develop markets and yet keep itself in power? What avenues are there for political participation? How does censorship work in the information and 'connected' age of social media? What are the prospects for political change? How resilient is the part in the face of technological and economic change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.)

Same as: POLISCI 348

**POLISCI 149S. Islam, Iran, and the West. 5 Units.**

Changes in relative power and vitality of each side. The relationship in the Middle Ages revolved around power and domination, and since the Renaissance around modernity. Focus is on Muslims of the Middle East.

**POLISCI 149T. Middle Eastern Politics. 5 Units.**

Topics in contemporary Middle Eastern politics including institutional sources of underdevelopment, political Islam, electoral authoritarianism, and the political economy of oil.

**POLISCI 150A. Data Science for Politics. 5 Units.**

Data science is quickly changing the way we understand and engage in the political process. In this course we will develop fundamental techniques of data science and apply them to large political datasets on elections, campaign finance, lobbying, and more. The objective is to give students the skills to carry out cutting edge quantitative political studies in both academia and the private sector. Students with technical backgrounds looking to study politics quantitatively are encouraged to enroll.

Same as: POLISCI 355A

**POLISCI 150B. Machine Learning for Social Scientists. 5 Units.**

Machine learning—the use of algorithms to classify, predict, sort, learn and discover from data—has exploded in use across academic fields, industry, government, and non-profit. This course provides an introduction to machine learning for social scientists. We will introduce state of the art machine learning tools, show how to use those tools in the programming language R, and demonstrate why a social science focus is essential to effectively apply machine learning techniques. Applications of the methods will include forecasting social phenomena, the analysis of social media data, and the automatic analysis of text data. Political Science 150A or an equivalent is required. (Prerequisite 150A/355A).

Same as: POLISCI 355B

**POLISCI 150C. Causal Inference for Social Science. 5 Units.**

Causal inference methods have revolutionized the way we use data, statistics, and research design to move from correlation to causation and rigorously learn about the impact of some potential cause (e.g., a new policy or intervention) on some outcome (e.g., election results, levels of violence, poverty). This course provides an introduction that teaches students the toolkit of modern causal inference methods as they are now widely used across academic fields, government, industry, and non-profits. Topics include experiments, matching, regression, sensitivity analysis, difference-in-differences, panel methods, instrumental variable estimation, and regression discontinuity designs. We will illustrate and apply the methods with examples drawn from various fields including policy evaluation, political science, public health, economics, business, and sociology. Political Science 150A and 150B or an equivalent is required.

Same as: POLISCI 355C

**POLISCI 152. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.**

Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

Same as: POLISCI 352

**POLISCI 153. Thinking Strategically. 5 Units.**

This course provides an introduction to strategic reasoning. We discuss ideas such as the commitment problem, credibility in signaling, cheap talk, moral hazard and adverse selection. Concepts are developed through games played in class, and applied to politics, business and everyday life.

Same as: POLISCI 354

**POLISCI 153Z. Thinking Strategically. 4 Units.**

This course provides an introduction to strategic reasoning. We discuss ideas such as the commitment problem, credibility in signaling, cheap talk, moral hazard and adverse selection. Concepts are developed through games played in class, and applied to politics, business and everyday life.

**POLISCI 155. Political Data Science. 5 Units.**

Introduction to methods of research design and data analysis used in quantitative political research. Topics covered include hypothesis testing, linear regression, experimental and observational approaches to causal inference, effective data visualization, and working with big data. These topics will be introduced using data sets from American politics, international relations, and comparative politics. The course begins with an intensive introduction to the R programming language used throughout the course. Satisfies quantitative methods requirement for the Political Science Research Honors Track. Prerequisites: Stat 60 or instructor consent.

Same as: PUBLPOL 157

**POLISCI 18N. Civil War and International Politics: Syria in Context. 3 Units.**

How and why do civil wars start, drag on, and end? What does focus of post-Cold War U.S. foreign policy on countries torn apart by civil war tell us about contemporary international relations? We consider these and related questions, with the conflict in Syria as our main case study.

**POLISCI 18SC. The Federal Government and the West. 2 Units.**

Historical development and current status of the relationship between the U.S. federal government and the American West. Land ownership, natural resource management, agriculture, water, energy, and environmental quality.

**POLISCI 19N. Politics of Energy Efficiency. 5 Units.**

We will examine the political context of energy efficiency and climate change. Why are some countries, such as Japan and France, able to achieve high levels of energy efficiency, while others, such as the United States and Australia, struggle to do so? What political factors facilitate or impede energy efficiency policies? Why is international cooperation on climate change so difficult?

**POLISCI 2. Introduction to American National Government and Politics. 5 Units.**

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. (This course has merged with Political Science 123/PubPol 101).

Same as: AMSTUD 2

**POLISCI 209. Curricular Practical Training. 1 Unit.**

Qualified Political Science students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. The student is responsible for arranging their own internship/employment and gaining faculty sponsorship. Prior to enrolling students must complete a petition due no later than May 15th. An offer letter will need to be submitted along with the petition. At the completion of the summer quarter, a final report must be submitted to the faculty sponsor documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit but the course will not count toward the Political Science major requirements.

**POLISCI 20Q. Democracy in Crisis: Learning from the Past. 3 Units.**

This Sophomore Seminar will focus on U.S. democracy and will use a series of case studies of major events in our national history to explore what happened and why to American democracy at key pressure points. This historical exploration should shed light on how the current challenges facing American democracy might best be handled. (Cardinal Course certified by the Haas Center).

Same as: EDUC 122Q, HISTORY 52Q

**POLISCI 210A. Special Topics: Solving Global Challenges. 5 Units.**

Most of us study international relations to help improve the state of our world. Yet, political scientists and policy makers increasingly operate in two completely different spheres. The purpose of this seminar is to help bridge this gap: to develop a social science-based toolkit for solving complex global problems. By the end of the quarter, you will be deeply familiar with the most important explanations of international relations, be comfortable reading contemporary political-scientific literature, and instinctively assess world events and identify solutions by leveraging theory and evidence. Prerequisites: POLISCI 101.

**POLISCI 211A. Special Topics: Humanizing War. 5 Units.**

War exposes the most barbarous face of human nature, so the notion that societies can impose order and morality on warfare may seem paradoxical and even futile. Yet throughout history, people have sought to, and indeed succeeded in, humanize war. Who are the political actors that have attempted this Herculean task? What strategies have they taken to do so? What are the laws, norms, and organizations structure the ways in which wars are fought? This course will answer these questions, drawing primarily from political science theory and evidence.

Same as: HUMRTS 105

**POLISCI 211B. International Cooperation and Institutions. 4 Units.**

World politics is often described as a state of war. And yet, the historical record suggests that war is the exception, not the rule. In this course, we seek to understand why relations between most states, most of the time, are defined by peace and cooperation. We will explore the causes of international conflict and how international institutions – from formal international organizations to international law and norms – promote cooperation and help states resolve their conflicts peacefully. Students will engage classic texts and cutting-edge research and leverage evidence-based theory to develop policy solutions to important contemporary global challenges in policy-design labs.

**POLISCI 211M. Past, Present, and Future of War. 4 Units.**

This course offers a forward-looking introduction to international security. Students will learn how political science historically explains conflict and assess how well these explanations describe international security threats in 2018, including those surrounding China, North Korea, Syria, and ISIS.

**POLISCI 211N. Nuclear Politics. 3-5 Units.**

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? Have international and domestic views on nuclear weapons changed since 1945? In this course, we will first examine the political science literature on these key questions about nuclear politics. We will read and critique works using different approaches in political science including quantitative analysis, experiments, game theory, historical case studies, and mixed methods. Students will then design and execute small research projects to address questions that have been inadequately addressed in the existing literature.

Same as: POLISCI 311N

**POLISCI 211S. Special Topics: The United States and Europe: A Renewed Imperative?. 5 Units.**

New challenges in Asia, the Middle-East, Europe's Eastern and Southern periphery, and even within Europe itself, are making the Transatlantic relationship more central and more critical in world politics than is usually thought. Is there a new dawn in Transatlantic relations? How are the foundations, objectives and "rules of the game" of US-Europe relations being redefined in the context of an emerging new international dis(order)? What will it take for the US and Europe to successfully defend their joint interests and values in an increasingly unstable and dangerous world? The course will discuss the main political, strategic, economic and cultural dynamics and issues at the heart of this new US-Europe relationship.

**POLISCI 212A. Special Topics: EGYPT: Politics, Terror and Society: From Vision to Reality. 5 Units.**

Egypt has for centuries been one of the world's central civilization: a country characterized by social tolerance, at the avant-garde of Middle East culture, which also occupies a critically important geostrategic position in the region. This course will examine the political, social, and security challenges Egypt has had to deal with since becoming a modern state. The course will look at the decision-making process of its different rulers, focusing on the nuances between the theoretical and the practical. The course is designed around three central pillars: a look at the country's history, its ideological undercurrents, and expectations for the future. It will look at the causes of the country's social problems and look at the deterioration of the security situation that has led to an emergence of extremism. In addition, it will address what needs to be done to restore stability and efficient government. The lecturer will bring his own first-hand testimony, as an eyewitness to the Egyptian Revolution in 2011 that led to the downfall of The President. The purpose of the course is to provide students with the tools to be able to look at the current developments in the country, conduct a self-analysis and answer one seeming endless question: Whither Egypt?.

**POLISCI 212C. Civil War and International Politics: Syria in Context. 5 Units.**

The Syrian civil war is both a humanitarian disaster and a focal point for a set of interlocking regional and international political struggles. This course uses the Syrian case as an entry for exploring broader questions, such as why do civil wars begin, how do they end, and what are the international politics of civil war. Please enroll in 212C for WIM credit. Same as: POLISCI 212X

**POLISCI 212X. Civil War and International Politics: Syria in Context. 5 Units.**

The Syrian civil war is both a humanitarian disaster and a focal point for a set of interlocking regional and international political struggles. This course uses the Syrian case as an entry for exploring broader questions, such as why do civil wars begin, how do they end, and what are the international politics of civil war. Please enroll in 212C for WIM credit. Same as: POLISCI 212C

**POLISCI 213. US-Russia Relations After the Cold War. 2 Units.**

A quarter century ago, the Soviet Union collapsed and the Cold War ended. At the time, Russian leaders aspired to build democratic and market institutions at home. They also wanted to join the West. American presidents Democrat and Republican encouraged these domestic and international changes. Today, U.S.-Russia relations are once again confrontational, reminiscent of relations during the Cold War. This course seeks to analyze shifts in U.S.-Russia relations, with special attention given to the U.S.-Russia relationship during Obama's presidency. Readings will include academic articles and a book manuscript by Professor McFaul on Obama's reset policy. Open to students with previous coursework involving Russia. Same as: POLISCI 313, REES 213

**POLISCI 213A. Russia and the West. 5 Units.**

Today, American-Russian relations, and Russia's relations with West more generally, are tense and confrontational. One has to look deep into the Cold War to find a similar era of confrontation and competition. Yet, relations between Russia and the West were not always this way. The end of the Cold War, for instance, ushered in a period of cooperation. Back then, many believed that Russia was going to develop democratic and market institutions and integrate into Western international institutions. This seminar will examine various explanations for these variations in Russia's relations with the West, starting in the 19th century, and briefly examining the Cold War period, but a real focus on the last thirty years. In evaluating competing explanations, the course will focus on balance of power theories, culture, historical legacies, institutional design, and individual actors in both the United States (and sometimes Europe) and Russia. **NOTE:** The enrollment of the class is by application only. Please send a one page document to Anya Shkurko (ashkurko@stanford.edu) by March 23rd with the following information: full name, class year, major, contact email, which version of the course you want to enroll in (PoliSci/REES/IPS). In the document please also outline previous associated coursework and/or relevant experience and write why you want to enroll in the seminar. Application results will be announced on March 30th. Any questions related to this course can be directed to Anya Shkurko. Same as: IPS 231A, REES 213A

**POLISCI 213E. Introduction to European Studies. 5 Units.**

This course offers an introduction to major topics in the study of historical and contemporary Europe. We focus on European politics, economics and culture. First, we study what makes Europe special, and how its distinct identity has been influenced by its history. Next, we analyze Europe's politics. We study parliamentary government and proportional representation electoral systems, and how they affect policy. Subsequently, we examine the challenges the European economy faces. We further study the European Union and transatlantic relations. Same as: INTNLREL 122

**POLISCI 213R. Political Economy of Financial Crisis. 5 Units.**

Political responses to domestic and international financial crises. Monetary and fiscal policy. The role of interest groups. International cooperation and the role of the IMF. Same as: POLISCI 313R

**POLISCI 213S. A Post American Century? American Foreign Policy in a Uni-Multi-unipolar World. 5 Units.**

This seminar examines recent policy from Bush to Obama in the context of two classic traditions: Wilsonianism vs. Realism. What is the role of the international system, what is the weight of domestic forces like ideology, history and identity? Prerequisite: junior or senior standing.

**POLISCI 214R. Challenges and Dilemmas in American Foreign Policy. 5 Units.**

This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Applications will be available for pick up in Political Science Department (Encina West 100) starting late-October. Same as: POLISCI 314R

**POLISCI 215. Explaining Ethnic Violence. 5 Units.**

What is ethnic violence and why does it occur? Should elite machinations, the psychology of crowds, or historical hatreds be blamed? Case studies and theoretical work on the sources and nature of ethnic violence. Counts as Writing in the Major for PoliSci majors.

**POLISCI 215A. Special Topics: State-Society Relations in the Contemporary Arab World-Key Concepts and Debates. 5 Units.**

This course looks at key concepts pertaining to state-society relations in the Arab world as they have evolved in regional intellectual and political debates since the 1990s. Citizenship, minority rights, freedom of expression, freedom of association, the rule of law, government accountability, independence of the judiciary, civil-military relations, and democratic transition will be among the concepts discussed. Same as: IPS 215

**POLISCI 215D. Special Topics: Dilemmas of Democracy and Security in Israel and the Middle East. 5 Units.**

The Middle East is known to be a volatile region, characterized by political violence, armed conflicts, and social instabilities. This volatility is of relevance for many countries including the US with its invested interests in the region and Israel that exists at the heart of the region, and along with its conflict with the Palestinians is considered to be one of the root causes of this volatility. Moreover, the volatility brings into encounter two kinds of collective goods: democracy and security. Their encounter in a conflictual and unstable environment raises a host of questions and dilemmas, both moral and practical: should we balance democracy and security and if so how? Can the two be accommodated at all? Does democracy is better or worse in addressing security problems? Does democracy and security constitute each other conceptually? Do democratic states tend to cooperate with each other when confronting security issues? And what about democratization: how good a cause is it as a foreign policy? How good a cause is it in justifying war and/or not ending one? From its establishment the State of Israel found itself torn by these and others related questions and the recent decades saw the US drawn by these dilemmas as well (think of the Bybee Memo and the Patriot acts). In the course we will introduce these dilemmas, analyze them and examine different normative and policy answers that were discussed in academia and in the policy world. Same as: JEWISHST 275D

**POLISCI 215F. Nuclear Weapons and International Politics. 5 Units.**

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required. Same as: POLISCI 315F

**POLISCI 216. State Building. 5 Units.**

How and when can external actors (others states, aid agencies, NGOs?) promote institutional change in weak and badly governed states?.

**POLISCI 216G. International Organizations and Institutions. 5 Units.**

What is the appropriate balance between government regulation and market freedom? Introduction to important theoretical and policy debates in international political economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations. Discussion of application of academic insights to key policy debates, including whether governments should offset the welfare costs of globalization, whether the IMF and World Bank should be reformed to meet the needs of the 21st century, and how the international community should respond to financial crises. Students will research, write and orally present policy briefs on specific policy questions.

**POLISCI 217A. American Foreign Policy: Interests, Values, and Process. 5 Units.**

This seminar will examine the tension in American foreign policy between pursuing U.S. security and economic interests and promoting American values abroad. The course will retrace the theoretical and ideological debates about values versus interests, with a particular focus on realism versus liberalism. The course will examine the evolution of these debates over time, starting with the French revolution, but with special attention given to the Cold War, American foreign policy after September 11th, and the Obama administration. The course also will examine how these contending theories and ideologies are mediated through the U.S. bureaucracy that shapes the making of foreign policy. \*\* NOTE: The enrollment of the class is by application only. Please provide a one page double-spaced document outlining previous associated coursework and why you want to enroll in the seminar to Anna Coll (acoll@stanford.edu) by February 22nd. Any questions related to this course can be directed to Anna Coll.

Same as: GLOBAL 220, IPS 242

**POLISCI 217M. Special Topics: International Democratization. 5 Units.**

Analyzing the international aspects of democratization involves understanding at least the following: (1) what is democracy (2) what domestic-level processes increase or decrease the level of democracy (3) what kind of influences from the outside world work, and do not work, in furthering democracy, and in what ways. This course spans all subfields of political science, and spills over into law, economics, and sociology. A complicating factor is the geographical expanse of democratic institutions and efforts to promote them. Eastern Europe, Russia, the Middle East, Sub-Saharan Africa, post-civil war El Salvador and Cambodia, are only some of the regions and countries that have been impacted. Their vastly different backgrounds challenge anyone attempting the puzzle. A further complication is the variety of ways in which the outside world may affect the scope and quality of democracy. These ways include but are not limited to: pressures exercised by regional economic institutions and alliances, the power of ideas and socialization, transfers of wealth, demands for trade liberalization, the training of civic activists, reports issued by foreign election observers. Same as: POLISCI 317M

**POLISCI 218J. Japanese Politics and International Relations. 5 Units.**

The domestic politics, political economy, and international relations of contemporary Japan. The role of political parties, the bureaucracy, and private actors. Economic development and challenges. Relations with the United States and East Asia.

Same as: POLISCI 318J

**POLISCI 218S. Political Economy of International Trade and Investment. 5 Units.**

How domestic and international politics influence the economic relations between countries. Why do governments promote or oppose globalization? Why do countries cooperate economically in some situations but not others? Why do countries adopt bad economic policies? Focus on the politics of international trade and investment. Course approaches each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence from many geographical regions around the world. Prerequisites: ECON 1A, ECON 1B, and a statistics course.

Same as: INTNLREL 118S

**POLISCI 219. Directed Reading and Research in International Relations. 1-10 Unit.**

May be repeated for credit. Requires a petition that can be found on our Political Science website.

**POLISCI 220. Place-Making Policies. 5 Units.**

This reading and research seminar considers the numerous ways that governments conduct social policy by shaping and remaking geographic places. Representative topics include: housing aid programs, exclusionary zoning, controls on internal migration and place of residence, cars and their place in cities, and the politics of western water projects. Students will conduct original field research on the consequences of these policies for economic, social, and political outcomes. Prerequisites: None.

Same as: PUBLPOL 225, URBANST 170

**POLISCI 220R. The Presidency. 3-5 Units.**

This course provides students with a comprehensive perspective on the American presidency and covers a range of topics: elections, policy making, control of the bureaucracy, unilateral action, war-making, and much more. But throughout, the goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with special attention to the dynamics of the American political system and how they condition incentives, opportunities, and power.

Same as: POLISCI 320R

**POLISCI 221A. American Political Development, 1865-present. 3-5 Units.**

In this reading-intensive course, we will conduct a wide-ranging survey of major transformations in the American political system in the post-Civil War period. Our inquiries about these transformations will focus on the origins of the modern administrative state, the interactive role of the state and social movements, and changes in the party system. We'll examine these developments not only to understand institutional change, but to learn how changing institutions have shaped the behavior of the American electorate.

Same as: POLISCI 421R

**POLISCI 222. The Political Psychology of Intolerance. 5 Units.**

This seminar explores the political psychology of intolerance. It focuses on two problems in particular: race in America and the challenge of Muslim inclusion in Western Europe. It concentrates on primary research. The readings consist of both classic and contemporary (including on-going) studies of prejudice and politics.

Same as: CSRE 222

**POLISCI 223. The Politics of Gender in the United States. 5 Units.**

Gender is one of the most recognizable and important identities in daily life. Yet it has been paid scant attention by political scientists in terms of its role on access to political power, opinion formation, group identity politics, election outcomes, and political representation. This class provides a survey of the literature on gender in American politics. We begin with the interdisciplinary research on the social construction of gender to understand what gender is and is not. Throughout the course we will use these theories to analyze and critique the approaches of quantitative research on gender politics.

Same as: FEMGEN 223X

**POLISCI 223A. Public Opinion and American Democracy. 5 Units.**

This course focuses on the public mood and politics in America today. It accordingly examines, among other things, the coherence (or lack of it) of public opinion; the partisan sorting of the electorate; and the ideological and affective polarization of mass politics. It also examines contemporary critiques of representation and citizenship in liberal democracies.

**POLISCI 223B. Money, Power, and Politics in the New Gilded Age. 5 Units.**

During the past two generations, democracy has coincided with massive increases in economic inequality in the U.S. and many other advanced democracies. The course will explore normative and practical issues concerning democracy and equality and examine why democratic institutions have failed to counteract rising inequality. Topics will include the influence of money in politics, disparity in political representation of the preferences of the affluent over those of the poor, the implications of political gridlock, and electoral and institutional barriers to reform.

**POLISCI 224A. Disasters, Decisions, Development in Sustainable Urban Systems. 3-5 Units.**

CEE 224X of the CEE 224XYZ SUS Project series is joining forces with D3: Disasters, Decisions, Development to offer D3+SUS, which will connect principles of sustainable urban systems with the challenge of increasing resilience in the San Francisco Bay Area. The project-based learning course is designed to align with the Resilient By Design | Bay Area Challenge (<http://www.resilientbayarea.org/>); students will learn the basic concepts of resilience and tools of risk analysis while applying those mindsets and toolsets to a collective research product delivered to the RBD community. Students who take D3+SUS are encouraged to continue on to CEE 224Y and CEE 224Z, in which teams will be paired with local partners and will develop interventions to improve the resilience of local communities. For more information, visit <http://sus.stanford.edu/courses>.

Same as: ESS 118, ESS 218, GEOPHYS 118X, GEOPHYS 218X, GS 118, GS 218, PUBLPOL 118

**POLISCI 225C. Fixing US Politics: Political Reform in Principle and Practice. 5 Units.**

Americans have been trying to perfect their system of government since its founding. Despite some notable achievements, there is a pervasive sense of frustration with political reform. This course will examine the goals and political consequences of American political regulation. Topics will vary by year to some degree but examples include campaign finance, lobbying, term limits, conflict of interest regulation, direct democracy, citizen commissions and assemblies, vote administration problems, transparency, and open meeting laws.

**POLISCI 226. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, CSRE 226, POLISCI 326

**POLISCI 226T. The Politics of Education. 3-5 Units.**

America's public schools are government agencies, and virtually everything about them is subject to political authority—and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.

Same as: POLISCI 326T

**POLISCI 227. U.S. Immigration Politics. 5 Units.**

This course presents an overview of immigration in the United States. We will focus on current policies, U.S. immigration history, individual immigrant groups, economic causes and consequences of immigration, attitudes toward immigrants, U.S. national identity, immigrant political behavior, undocumented immigration, immigrants and public education, language barriers and policies, and immigration reform. Although the course is crafted with a focus on the U.S. as a whole, we will also spend a little time at the end of the quarter narrowing in on the California context, before taking a broader look at immigration in Western Europe to gain a comparative perspective on immigration. Finally, while we will discuss immigrant groups beyond Latinos, the course will disproportionately focus on Latino immigrants, as this is by far the largest immigrant group in the United States.

**POLISCI 229. Directed Reading and Research in American Politics. 1-10 Unit.**

May be repeated for credit. Requires a petition that can be found on our Political Science website.

**POLISCI 22SC. The Face of Battle. 2 Units.**

Our understanding of warfare often derives from the lofty perspective of political leaders and generals: what were their objectives and what strategies were developed to meet them? This top-down perspective slights the experience of the actual combatants and non-combatants caught in the crossfire. This course focuses on the complexity of the process by which strategy is translated into tactical decisions by the officers and foot soldiers on the field of battle. We will review theories about civil-military relations and the nature of modern warfare and then visit Washington DC to discuss strategy and politics with current and former policy makers. We will also study two important battles in American history: Gettysburg (July 1863) and the Battle of Little Bighorn (June 1876). We will travel to Gettysburg, Pennsylvania, and the Little Bighorn battlefield in Montana. The course's battlefield tours are based on the "staff rides" developed by the Prussian Army in the mid-1800s and employed by the U.S. Army since the early 1900s. While at Stanford, students will conduct extensive research on individual participants at Gettysburg and Little Bighorn. Then, as we walk through the battlefield sites, students will brief the group on their subjects' experience of battle and on why they made the decisions they did during the conflict. Why did Lt. General Longstreet oppose the Confederate attack on the Union Army at Gettysburg? What was the experience of a military surgeon on a Civil War battlefield? Why did Custer divide his 7th Cavalry troops as they approached the Little Bighorn River? What was the role of Lakota Sioux women after a battle? Travel will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Center for International Security and Cooperation (CISAC). The course is open to students from a range of disciplines; an interest in the topic is the only prerequisite.

**POLISCI 230A. Classical Seminar: Origins of Political Thought. 3-5 Units.** (Formerly CLASSHIS 133/333.) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. Same as: CLASSICS 181, CLASSICS 381, PHIL 176A, PHIL 276A, POLISCI 330A

**POLISCI 231. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.**

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era. Same as: CLASSICS 382, POLISCI 331

**POLISCI 231Z. Topics in Democratic Theory. 5 Units.**

Democratic rule is rule of the people. But what does that mean? This course explores democracy's roots in ancient Athens to its modern incarnation. The course aims to familiarize students with the various strands of democratic theory as well as the way democratic theory responds to hot political issues such as immigration and freedom of speech. The goal of the course is to equip students to think critically about democracy in the modern world and the different interpretation democratic rule can have. The questions we will investigate include: What does democracy require? What is the relationship between democracy and human rights or social justice? Can democracy justify border control? What restrictions, if any, does democracy place on hate speech? What is the role of courts in a democracy? The course provides tools to answer these questions by surveying different approaches to democracy in contemporary literature, as well surveying the history of democratic theory from ancient Athenian democracy to the modern age, with a look to the future of democracy in a globalized era.

**POLISCI 232T. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized. Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 332T

**POLISCI 233. Justice and Cities. 5 Units.**

Cities have most often been where struggles for social justice happen, where injustice is most glaring and where new visions of just communities are developed and tested. This class brings political theories of justice and democracy together with historical and contemporary empirical work on city design, planning, and policies to ask the following questions: What makes a city just or unjust? How have people tried to make cities more just? What has made these efforts succeed or fail? Each session will include a case study of a particular city, largely with a focus on the United States. Students will develop research projects examining a city of their choice through the lens of a particular aspect of justice and injustice. Same as: URBANST 134

**POLISCI 233F. Science, technology and society and the humanities in the face of the looming disaster. 3-5 Units.**

How STS and the Humanities can together help think out the looming catastrophes that put the future of humankind in jeopardy. Same as: FRENCH 228, ITALIAN 228

**POLISCI 234. Democratic Theory. 5 Units.**

Most people agree that democracy is a good thing, but do we agree on what democracy is? This course will examine the concept of democracy in political philosophy. We will address the following questions: What reason(s), if any, do we have for valuing democracy? What does it mean to treat people as political equals? When does a group of individuals constitute "a people," and how can a people make genuinely collective decisions? Can democracy really be compatible with social inequality? With an entrenched constitution? With representation?. Same as: PHIL 176P

**POLISCI 234P. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion. Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, POLISCI 334P

**POLISCI 235J. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.**

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources. Same as: HISTORY 205G, HISTORY 305G, POLISCI 335J

Same as: HISTORY 205G, HISTORY 305G, POLISCI 335J

**POLISCI 236. Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.**

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? In the *Philanthropy Lab* component of the course, students will award \$100,000 in grants to local nonprofits. Students will explore how nonprofit organizations operate domestically and globally as well as the historical development and modern structure of civil society and philanthropy. Readings in political philosophy, history, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S. Same as: ETHICSOC 232T, POLISCI 236S

**POLISCI 236S. Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.**

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? In the *Philanthropy Lab* component of the course, students will award \$100,000 in grants to local nonprofits. Students will explore how nonprofit organizations operate domestically and globally as well as the historical development and modern structure of civil society and philanthropy. Readings in political philosophy, history, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S. Same as: ETHICSOC 232T, POLISCI 236S

**POLISCI 237M. Politics and Evil. 5 Units.**

In the aftermath of the Second World War, the political theorist Hannah Arendt wrote that the problem of evil will be the fundamental question of postwar intellectual life in Europe. This question remains fundamental today. The acts to which the word "evil" might apply—genocide, terrorism, torture, human trafficking, etc.—persist. The rhetoric of evil also remains central to American political discourse, both as a means of condemning such acts and of justifying preventive and punitive measures intended to combat them. In this advanced undergraduate seminar, we will examine the intersection of politics and evil by considering works by philosophers and political theorists, with occasional forays into film and media. The thinkers covered will include: Hannah Arendt, Immanuel Kant, Niccolò Machiavelli, Friedrich Nietzsche, and Michael Walzer.  
Same as: ETHICSOC 237M

**POLISCI 237S. Civil Society and Democracy in Comparative Perspective. 5 Units.**

A cross-national approach to the study of civil societies and their role in democracy. The concept of civil society—historical, normative, and empirical. Is civil society a universal or culturally relative concept? Does civil society provide a supportive platform for democracy or defend a protected realm of private action against the state? How are the norms of individual rights, the common good, and tolerance balanced in diverse civil societies? Results of theoretical exploration applied to student-conducted empirical research projects on civil societies in eight countries. Summary comparative discussions. Prerequisite: a course on civil society or political theory. Students will conduct original research in teams of two on the selected nations. Enrollment limited to 18. Enrollment preference given to students who have taken PoliSci 236S/EthicSoc 232T.  
Same as: ETHICSOC 237

**POLISCI 238C. Governing the 21st Century World. 5 Units.**

How is our world governed, and by whom? How are decisions made on the most important issues of our time, including climate change, global inequality, and protection of human rights? A traditional answer to these questions is that only official governments have the power to govern—to set and enforce rules on these and other issues. In contrast, this class explores the emerging roles of non-state actors, including NGOs, for-profit corporations, informal social movements, and international institutions, in governing our world and making decisions on these and other key issues. We will also study the ways that the governance by non-state actors challenges our ideas of democracy, legitimacy, and justice. The class thus seeks to bring together perspectives and tools from both empirical social science and political theory in order to better understand this important phenomenon.

**POLISCI 239. Directed Reading and Research in Political Theory. 1-10 Unit.**

May be repeated for credit.

**POLISCI 23Q. Analyzing the 2016 Elections. 3 Units.**

The seminar will normally meet for two hours, but after three seminars there will be lab sessions to acquaint students with basic quantitative methods and major social science databases. After every election the commentariat promulgates a story line to explain the results. Typically later analysis shows the media story line to be wrong (eg. "values voters" in 2004). Participants in this seminar will analyze the results of the 2016 elections. The seminar is about ANALYSIS, not ideology. Some familiarity with quantitative methods is a prerequisite.

**POLISCI 240A. Democratic Politics. 5 Units.**

This course examines the relationship between democratic ideals and contemporary democratic politics.  
Same as: POLISCI 340A

**POLISCI 240C. The Comparative Political Economy of Post-Communist Transitions. 3-4 Units.**

Dominant theoretical perspectives of comparative democratization and marketization; focus is on the political economy of transition in Eastern Europe and Eurasia while comparing similar processes in Latin America and Asia. Topics include: meanings of democracy, synergy between democracies and markets, causes of the collapse of communism, paths to political liberalization and democracy, civil society, constitutions, parliaments, presidents, the rule of law, electoral systems, market requirements, strategies of reform, the Russian experience of market building, exporting democracy and the market, and foreign aid and assistance.

**POLISCI 240T. Democracy, Promotion, and American Foreign Policy. 5 Units.**

Theoretical and intellectual debates about democracy promotion with focus on realism versus liberalism. The evolution of these debates with attention to the Cold War, the 90s, and American foreign policy after 9/11. Tools for and bureaucratic struggles over how to promote democracy. Contemporary case studies.

**POLISCI 241A. An Introduction to Political Economy of Development. 5 Units.**

This course is an upper-level undergraduate seminar providing an introduction to the political economy of development. This course explores sources of economic growth, inequality, poverty, and other aspects of development with a particular focus on political institutions. We first explore the patterns of development in the world and then overview basic theories of development. Second, we review the key areas of debate within the study of development, including the role of the state, the consequences of corruption, the effects of natural resources, and gender. The course consists of lectures on theoretical and empirical approaches and the discussion on the literature and cases.

**POLISCI 241B. Special Topics: Comparative Political Economy. 5 Units.**

Why do countries present public policies that are stable and coherent overtime, whereas others policies tend to be more volatile and inconsistent? This course applies theoretical tools of comparative political economy to investigate the functioning of political institutions, political systems and the policymaking process, and their effect on public policies and on economic performance with special focus on Latin America. The goal of the course, therefore, is for students to become acquainted with the diversity of institutional combinations of Latin American countries and their effect on the profile of public policies.  
Same as: Latin America

**POLISCI 241C. Campaigns and Elections in Israel. 5 Units.**

Employing a theoretical and comparative framework, this seminar focuses on campaigns and elections in Israel. The seminar is divided into two interrelated sections. In the first section, we will cover voting behavior. Here we will look at Israel's election laws, its political culture, socialization and cleavages, turnout, political sophistication, ideology, partisanship and issue voting. In the second half of the semester we will examine elections from the perspective of candidates and campaign strategists. The topics we will focus on include election laws, public and private campaign finance, campaign strategy, media, polling, and advertising. In examining these topics, we will cover a variety of elections campaigns since Israel's birth, with an emphasis on the most recent ones.

Same as: JEWISHST 271C

**POLISCI 241S. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 130D, ANTHRO 230D, URBANST 124

**POLISCI 241T. Political Economy of Gender. 5 Units.**

This course provides an introduction to the political economy of gender. The course first explores the key areas of debate on women's representation. Why are women underrepresented in formal political institutions? How do the political institutions affect women's representation? What's the effects of women's representation? Also, the course examines the quality of female politicians, women's voting behavior and political preferences, public opinion on gender issues, and women's representation in Law. No prior knowledge is required.

**POLISCI 242A. Why is Africa Poor?. 5 Units.**

Living standards around the world have increased, in many cases exponentially, throughout the previous century. Yet sub-Saharan Africa remains, by a considerable margin, the poorest region on Earth. This course asks three questions: Why is Africa poor? When did it become so? And will it remain so for the foreseeable future? The course draws on a range of social science disciplines, including anthropology, economics, history, political science, and sociology, to offer tentative answers.

**POLISCI 242C. Corruption, Conflict and Financial Crisis: Contemporary Global Politics and Journalism. 5 Units.**

This course offers students interested in contemporary global politics a unique introduction to the critical analysis of current events through the lens of award-winning non-fiction writing. Each week, we will explore a new political issue crucial to understanding today's world by reading some of the most gripping (and best written!) first- and second-hand narratives of these events, as recounted by journalists, academics and documentarians working in the field. Topics will include: global poverty, the overthrow of authoritarian regimes, terrorism, genocide and crimes against humanity, the Israel-Palestinian conflict, financial crises, and political corruption. In class, students will discuss the readings and learn to apply major social scientific theories to systematically analyze these complex political issues. Through this course, students will not only gain exposure to some exemplary writing on topics of current importance, but also acquire the skills and tools necessary to understand some of the most intractable and interesting problems in the world today.

**POLISCI 243C. The Political Economy of Development. 5 Units.**

Why are some countries rich and others poor? What explains the economic policies that governments adopt, and how do those policies affect economic performance? Why some policies persist over time while others don't? We will use tools from political science and economics to explore these important questions. The readings for this course will include conceptual and historical material from many geographic regions. As we explore the fascinating relationship between politics and economics, we will evaluate hypotheses according to robust and sound empirical evidence.

**POLISCI 243D. Special Topics: Taiwan's Democratic Evolution. 5 Units.**

This course is an introduction to the contemporary politics of Taiwan. Once a poor, insecure autocracy, today Taiwan has been transformed into a prosperous and stable liberal democracy, albeit one whose long-term security remains imperiled by the rising power of the People's Republic of China. We will draw on concepts and theories from political science to explore distinct aspects of this ongoing political evolution, including the transition to and consolidation of democracy, origins and trajectory of economic and social development, sources of Taiwanese nationalism, security of the Taiwanese state and its relationship to the PRC and the United States, parties and elections, and public policy processes and challenges.

**POLISCI 243L. Politics of Economic Reform. 5 Units.**

Description to come.

**POLISCI 244. An Introduction to Political Development. 5 Units.**

Political development concerns the evolution of three categories of institutions: (1) the state itself; (2) the rule of law; and (3) accountable government. Focus on many of the major theories of political development, beginning with some classic social theorists and continuing up through the present.

**POLISCI 244A. Authoritarian Politics. 3-5 Units.**

Examination of how authoritarian regimes govern. Topics include: historical determinants of authoritarian government, typologies of authoritarian rule and impact of authoritarian governance on economic growth.

Same as: POLISCI 344A

**POLISCI 244C. Political Change in Latin America: The contemporary challenge to democracy. 5 Units.**

The purpose is to present the contemporary tendencies that characterize the mutation of democracy in Latin America. Along with a general conceptualization, focus will be given to specific cases that illustrate concepts. Three axes constitute the frame of the course: the background, the new trends of democracy on the eve of the 21st century, and the emergence of "refoundational" government and movements.

**POLISCI 244P. Religion and Politics in Latin America. 5 Units.**

The purpose of this seminar is to introduce students to the complexities of Politics and Religion in Latin America from a historical and sociological perspective. The seminar will examine the evolution of Church-State-Society-Community-Individual relations in Latin America, from Independence to present day. Topics will include new definitions of religious freedom, debates concerning the so called "lay State" (Estado laico), secularization, and the role of the lay or secular state and religious groups in the development of democratic or authoritarian regimes, as well as civil and religious freedoms, particularly sexual and reproductive rights and bioethical issues (contraception, abortion, euthanasia, stem cell research, homosexual rights and homophobia). The course will combine a series of reading tests designed to introduce central questions of the texts with a critical discussion of the assigned source material, in order to develop a knowledgeable approach and research interest in the student.

**POLISCI 244U. Political Culture. 3-5 Units.**

The implications of social norms, preferences and beliefs for political and economic behavior and societal outcomes.

Same as: POLISCI 344U

**POLISCI 245A. Politics and Public Finance. 5 Units.**

The main related but different questions addressed by course are: how states have, through history, financed their expenditures, e.g. by taxing people or issuing public debt; how different political and fiscal institutions have been shaped by the varying need of the state to collect revenues (such as war, revolution threats, increasing demand of redistribution by the "median voter"). We will focus mainly, but not only, on the historical experience of the Western World (e.g. Europe and the US), and pay special attention to the nature of political institutions in place (e.g. absolutist regimes, constitutional monarchies, different forms of democracy), over a relatively long period of time (i.e. beginning with the). The exposition will not necessarily follow a chronological order, but rather a logical one (in some sense).

**POLISCI 245E. Middle East Politics. 5 Units.**

This course offers a thematic approach to the study of Middle Eastern politics. We will overview the major areas of political science research on the contemporary Middle East while simultaneously building empirical knowledge about the politics of individual countries in the region.

Topics to be covered include: state capacity and democracy; economic development and mineral resources; the politics of religion and gender; international relations and civil conflict; terrorism and revolution.

**POLISCI 245R. Politics in Modern Iran. 5 Units.**

Modern Iran has been a smithy for political movements, ideologies, and types of states. Movements include nationalism, constitutionalism, Marxism, Islamic fundamentalism, social democracy, Islamic liberalism, and fascism. Forms of government include Oriental despotism, authoritarianism, Islamic theocracy, and liberal democracy. These varieties have appeared in Iran in an iteration shaped by history, geography, proximity to oil and the Soviet Union, and the hegemony of Islamic culture.

**POLISCI 246A. Paths to the Modern World: Islam and the West. 5 Units.**  
How and why did Europe develop political institutions that encouraged economic growth and industrialization? And why has the Islamic world lagged in the creation of growth-promoting institutions? This course uses a comparative approach to understanding two routes to the modern world – the historical experiences of Christian Europe and the Islamic world. We will explore questions including, when do representative parliamentary assemblies emerge and how does urbanization affect economic development?.

**POLISCI 246P. The Dynamics of Change in Africa. 4-5 Units.**  
Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.  
Same as: AFRICAST 301A, HISTORY 246, HISTORY 346, POLISCI 346P

**POLISCI 247A. Games Developing Nations Play. 5 Units.**  
If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required.  
Same as: ECON 162, POLISCI 347A

**POLISCI 247G. Governance and Poverty. 5 Units.**  
Poverty relief requires active government involvement in the provision of public services such as drinking water, healthcare, sanitation, education, roads, electricity and public safety. Failure to deliver public services is a major impediment to the alleviation of poverty in the developing world. This course will use an interdisciplinary approach to examining these issues, bringing together readings from across the disciplines of political science, economics, law, medicine and education to increase understanding of the complex causal linkages between political institutions, the quality of governance, and the capacity of developing societies to meet basic human needs. Conceived in a broadly comparative international perspective, the course will examine cross-national and field-based research projects, with a particular focus on Latin America and Mexico.

**POLISCI 248S. Latin American Politics. 3-5 Units.**  
Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic policies. The nature of this dual transformation.  
Same as: POLISCI 348S

**POLISCI 249. Directed Reading and Research in Comparative Politics. 1-10 Unit.**  
May be repeated for credit. Requires a petition that can be found on our Political Science website.

**POLISCI 24Q. Law and Order. 3 Units.**  
Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy?.

**POLISCI 24SC. Conservatism and Liberalism in American Politics and Policy. 2 Units.**  
What influence do political ideologies have in American politics and government? In this course, students will study liberal and conservative ideology in American politics and public policy from the mid-20th century onward. The course begins with an examination of ideology in the American public and then considers ideology among political activists and elected officials, focusing on members of Congress and the president. The course will also cover the ideological polarization of political elites and its impact on the policy-making process. In the final part of the course, through a series of policy case studies, students will also evaluate how well certain public policies have met the ideological goals of their liberal and conservative sponsors. The course will include several lunches and dinners with guest speakers.

**POLISCI 251A. Introduction to Machine Learning for Social Scientists. 4 Units.**  
This course introduces techniques to collect, analyze, and utilize large collections of data for social science inferences. The ultimate goal of the course is to introduce students to modern machine learning techniques and provide the skills necessary to apply these methods widely. Students will leave the course equipped with a broad understanding of machine learning and on how to continue building new skills.

**POLISCI 259. Directed Reading and Research in Political Methodology. 1-10 Unit.**  
May be repeated for credit.

**POLISCI 25N. The US Congress in Historical and Comparative Perspective. 3 Units.**  
This course traces the development of legislatures from their medieval European origins to the present, with primary emphasis on the case of the U.S. Congress. Students will learn about the early role played by assemblies in placing limits on royal power, especially via the power of the purse. About half the course will then turn to a more detailed consideration of the U.S. Congress's contemporary performance, analyzing how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide.

**POLISCI 27N. Thinking Like a Social Scientist. 3 Units.**  
Preference to freshman. This seminar will consider how politics and government can be studied systematically: the compound term Political SCIENCE is not an oxymoron. The seminar will introduce core concepts and explore a variety of methodological approaches. Problems of inference from evidence will be a major concern. Classic and contemporary research studies will be the basis of discussion throughout.

**POLISCI 28N. The Changing Nature of Racial Identity in American Politics. 3 Units.**  
Almost one-third of Americans now identify with a racial/ethnic minority group. This seminar examines the relationship between racial identity, group consciousness, and public opinion. Topics include the role of government institutions in shaping identification, challenges in defining and measuring race, attitudes towards race-based policies, and the development of political solidarity within racial groups. Particular attention will be paid to the construction of political identities among the growing mixed-race population.

**POLISCI 291. Political Institutions. 5 Units.**

This course focuses on the role of political institutions in shaping policy outcomes around the world, with special attention to the United States. Students will become familiar with a wide range of theoretical approaches to the study of institutions, and they will learn the basics of applied quantitative empirical analysis. Enrollment is restricted to Political Science Research Honors Track students.

**POLISCI 292. Political Behavior. 5 Units.**

This research seminar will survey important topics in the study of mass political behavior including public opinion, political participation, partisanship and voting. Open only to students in the Political Science Research Honors Track.

**POLISCI 299A. Research Design. 5 Units.**

This course is designed to teach students how to design a research project. The course emphasizes the specification of testable hypotheses, the building of data sets, and the inferences from that may be drawn from that evidence.

**POLISCI 299B. Honors Thesis Seminar. 5 Units.**

Restricted to Research Honors students who have completed PoliSci 299A.

**POLISCI 299C. Honors Thesis. 1-5 Unit.**

(Previously 299B) Students conduct independent research work towards a senior honors thesis.

**POLISCI 299D. Honors Thesis. 1-5 Unit.**

(Previously 299C) Students conduct independent research work towards a senior honors thesis.

**POLISCI 29N. Mixed-Race Politics and Culture. 3 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? In this course, we approach issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st century U.S. We will examine issues surrounding the role of multiculturalism, immigration, acculturation, racial representation and racial prejudice in American society. Topics we will explore include the political and social formation of "race"; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of Census categories and the rise of the Multiracial Movement.

Same as: AFRICAAM 52N, ENGLISH 52N

**POLISCI 30SI. Digital Security and Civil Society. 2 Units.**

This class will instruct students in the political economy of software and digital infrastructure as they relate to civil society in democracies. We will consider the role of privacy, anonymity, free expression and free association in democracies and examine the digital tools and practices that enable these freedoms. The class consists of three interwoven themes: n1) The role of civil society in democracies n2) The political economy of digital tools and their influence on society n3) Individual and collective digital security.

**POLISCI 311E. Political Economy I. 2-5 Units.**

Theoretical models of political economy. Potential topics include: basic social choice theory, democracy, electoral competition, political accountability, legislative bargaining, lobbying, corruption, autocratic politics, democratization, conflict and arms races, and institutional change. Attention to economics implications, including taxation, redistribution, and public goods. Prerequisite: Econ 203 or permission of instructors.

Same as: ECON 220

**POLISCI 311N. Nuclear Politics. 3-5 Units.**

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? Have international and domestic views on nuclear weapons changed since 1945? In this course, we will first examine the political science literature on these key questions about nuclear politics. We will read and critique works using different approaches in political science including quantitative analysis, experiments, game theory, historical case studies, and mixed methods. Students will then design and execute small research projects to address questions that have been inadequately addressed in the existing literature.

Same as: POLISCI 211N

**POLISCI 313. US-Russia Relations After the Cold War. 2 Units.**

A quarter century ago, the Soviet Union collapsed and the Cold War ended. At the time, Russian leaders aspired to build democratic and market institutions at home. They also wanted to join the West. American presidents Democrat and Republican encouraged these domestic and international changes. Today, U.S.-Russia relations are once again confrontational, reminiscent of relations during the Cold War. This course seeks to analyze shifts in U.S.-Russia relations, with special attention given to the U.S.-Russia relationship during Obama's presidency. Readings will include academic articles and a book manuscript by Professor McFaul on Obama's reset policy. Open to students with previous coursework involving Russia.

Same as: POLISCI 213, REES 213

**POLISCI 313R. Political Economy of Financial Crisis. 5 Units.**

Political responses to domestic and international financial crises. Monetary and fiscal policy. The role of interest groups. International cooperation and the role of the IMF.

Same as: POLISCI 213R

**POLISCI 314D. Democracy, Development, and the Rule of Law. 5 Units.**

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.

Same as: INTNLREL 114D, IPS 230, POLISCI 114D

**POLISCI 314R. Challenges and Dilemmas in American Foreign Policy. 5 Units.**

This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Applications will be available for pick up in Political Science Department (Encina West 100) starting late-October.

Same as: POLISCI 214R

**POLISCI 315A. The Rise of Asia. 3-5 Units.**

We will examine the sources and implications of the rise of Asia in the international system. Topics will include military competition, international cooperation, regional integration, domestic politics, business and investment, legalization, environmental issues, demographics, social issues, and the role of technology.

Same as: POLISCI 115A

**POLISCI 315F. Nuclear Weapons and International Politics. 5 Units.**

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required. Same as: POLISCI 215F

**POLISCI 316S. Decision Making in U.S. Foreign Policy. 5 Units.**

Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies. Interested students should attend the first day of class. Admission will be by permission of the instructor. Priority to IPS students. Same as: IPS 316S

**POLISCI 317M. Special Topics: International Democratization. 5 Units.**

Analyzing the international aspects of democratization involves understanding at least the following: (1) what is democracy (2) what domestic-level processes increase or decrease the level of democracy (3) what kind of influences from the outside world work, and do not work, in furthering democracy, and in what ways. This course spans all subfields of political science, and spills over into law, economics, and sociology. A complicating factor is the geographical expanse of democratic institutions and efforts to promote them. Eastern Europe, Russia, the Middle East, Sub-Saharan Africa, post-civil war El Salvador and Cambodia, are only some of the regions and countries that have been impacted. Their vastly different backgrounds challenge anyone attempting the puzzle. A further complication is the variety of ways in which the outside world may affect the scope and quality of democracy. These ways include but are not limited to: pressures exercised by regional economic institutions and alliances, the power of ideas and socialization, transfers of wealth, demands for trade liberalization, the training of civic activists, reports issued by foreign election observers. Same as: POLISCI 217M

**POLISCI 318J. Japanese Politics and International Relations. 5 Units.**

The domestic politics, political economy, and international relations of contemporary Japan. The role of political parties, the bureaucracy, and private actors. Economic development and challenges. Relations with the United States and East Asia. Same as: POLISCI 218J

**POLISCI 319. Directed Reading in International Relations. 1-10 Unit.**

May be repeated for credit.

**POLISCI 31N. Political Freedom: Rights, Justice, and Democracy in the Western Tradition. 3 Units.**

Freedom is one of our core values. Most people can agree that freedom is a good thing. Yet there is far less agreement about how to understand the concept itself and what kinds of political arrangements are best suited to protect and enhance freedom. Is freedom about being left alone? Undertaking action with others? Participating in governance? Does freedom require a limited state? An active and interventionist government? A robustly participatory political system? How is freedom connected to other political values, like justice and equality? This seminar will consider and evaluate some of the most controversial and challenging answers that have been given to these questions by both historical and contemporary political thinkers from Europe and North America. Thinkers covered will include: Plato, Thomas Hobbes, John Locke, Alexis de Tocqueville, John Stuart Mill, Karl Marx, Robert Putnam, and Jeremy Waldron.

**POLISCI 31Q. Justice and the City. 3 Units.**

Cities have most often been where struggles for social justice happen, where injustice is most glaring and where new or renewed visions of just communities are developed and tested. What makes a city just or unjust? How have people tried to make cities more just? Why have these efforts succeeded or failed? Each of our sessions will focus on questions like these and include a case study of a particular city, largely with a focus on the United States, including very local cases like San Francisco, Palo Alto and East Palo Alto. The central goal of this class is for you to gain an understanding of the roles of urban design and urban policies in making cities just or unjust places. You will critically engage with some of the debates on cities and justice and gain experience connecting theoretical debates about justice and democracy to empirical data and contemporary work on city design, planning, and policies through readings, our class discussions, and a sustained research project looking a particular city in depth.

**POLISCI 320R. The Presidency. 3-5 Units.**

This course provides students with a comprehensive perspective on the American presidency and covers a range of topics: elections, policy making, control of the bureaucracy, unilateral action, war-making, and much more. But throughout, the goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with special attention to the dynamics of the American political system and how they condition incentives, opportunities, and power. Same as: POLISCI 220R

**POLISCI 321. Law and Politics Workshop. 2-3 Units.**

This workshop will feature guest speakers who are political scientists or law professors specializing in the legal regulation of politics. Students will be responsible for response papers to each scholarly paper presented. On weeks without guest speakers, topics to be covered will include election law, administrative law, legislation, judicial behavior and public opinion, as well as the political science relevant to those areas of law. The final grade will be determined by class participation (10%), response papers (30%) and final research paper (60%). Students can take the course for R credit for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation (10%), Response papers (30%) and final paper of no less than 18 pages for 2 units of credit and 26 pages for 3 units of credit (60%). (Cross-listed as POLISCI 321).

**POLISCI 322A. Advances in Political Psychology. 3-5 Units.**

Among the topics: the comparative contributions of rational choice and political psychology; political information process; coordinating vs. inducing preferences; identities and values; and prejudice and politics.

**POLISCI 322S. Topics in Constitutional History. 5 Units.**

Originalism has become the dominant topic in contemporary constitutional interpretation. Is it possible to interpret the Constitution according to its original, meaning, intentions, and understandings? Should we think of the Constitution as a fixed set of rules laid down linguistically, or a set of understandings shaped by the nation's history? How should modern interpreters assess the legacy of major epochs of constitutional change, from the founding era through Reconstruction and on to the great disputes over the New Deal and civil rights? These are the questions this course will entertain.

**POLISCI 323. Pivotal Moments in American Institutions and Public Law, 1781-Present. 5 Units.**

(Same as Law 680) American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now too often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur? Drawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, 1964-75, and the emergence of the modern administrative state. Although the primary focus is on the American experience, we place these developments in comparative context as well.

**POLISCI 324. Graduate Seminar in Political Psychology. 1-3 Unit.**

For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.  
Same as: COMM 308

**POLISCI 326. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, CSRE 226, POLISCI 226

**POLISCI 326T. The Politics of Education. 3-5 Units.**

America's public schools are government agencies, and virtually everything about them is subject to political authority—and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.

Same as: POLISCI 226T

**POLISCI 327. Minority Behavior and Representation. 5 Units.**

Politics of minorities in the U.S. Topics include: historic and contemporary struggles of Latinos, African Americans, and gays and lesbians for political power and social acceptance; group-level public opinion and electoral behavior; scholarship on group influence in the policy making process and policy issues of importance; and the jurisprudence shaping minority political access and civil rights.

**POLISCI 327C. Law of Democracy. 3-5 Units.**

Combined with LAW 7036 (formerly Law 577). This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577).

Same as: COMM 361

**POLISCI 329. Directed Reading and Research in American Politics. 1-10 Unit.**

May be repeated for credit.

**POLISCI 330A. Classical Seminar: Origins of Political Thought. 3-5 Units.**

(Formerly CLASSHIS 133/333.) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: CLASSICS 181, CLASSICS 381, PHIL 176A, PHIL 276A, POLISCI 230A

**POLISCI 331. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.**

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: CLASSICS 382, POLISCI 231

**POLISCI 332. Topics in Political Philosophy. 5 Units.**

Leading ideas in *A Theory of Justice*, *Political Liberalism*, and *The Law of Peoples*.

Same as: PHIL 372D

**POLISCI 332T. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 232T

**POLISCI 333. Social Agency. 2-4 Units.**

Humans are agents who live in a social world. Philosophical reflection on human agency needs to include reflection both on the agency of individual human agents and on forms of social agency that involve multiple individuals. This seminar will focus on aspects of the latter. What is it for multiple individuals to think and to act together – to engage in shared intentional/shared cooperative activity? to deliberate together? to engage in what some have called team reasoning? What kinds of social agency are characteristic of larger social organizations or groups? What would it be for larger groups themselves to be agents, ones who have their own distinctive intentions on the basis of which they act? What is the relation between these larger forms of social agency and small-scale shared cooperative activity? In all these cases how do we best understand what we are talking about when we speak of what we intend or believe and of what we are doing? Readings to be drawn from recent work of Michael Bratman, Margaret Gilbert, Christian List, Kirk Ludwig, Philip Pettit, John Searle, Scott Shapiro, and others, as well as classic work of H.L.A. Hart. Prerequisite: graduate standing in Philosophy or permission of instructor. 2 unit option for PhD students only; all others must enroll for 4 units. Same as: PHIL 377

**POLISCI 333M. Research and Methods in Political Theory. 3-5 Units.**

This seminar has two aims. First, we discuss recent scholarship that examines the relationship between normative and empirical (or positive) work. In particular, we focus on normative work in political theory/philosophy and empirical work in political science and other social sciences. Second, we discuss in an informal workshop setting the ongoing work of graduate students, considering how, if at all, the readings on methodology could inform this work.

**POLISCI 333S. Marx. 2-4 Units.**

This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls. Same as: PHIL 339

**POLISCI 334. Philanthropy and Civil Society. 1-3 Unit.**

Cross-listed with Law (LAW 781), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units. Same as: EDUC 374, SOC 374

**POLISCI 334P. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion. Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, POLISCI 234P

**POLISCI 335A. Adam Smith: From Moral Philosophy to Political Economy. 3-5 Units.**

This course is designed for graduate students and advanced undergraduates interested in moral philosophy or modern political economy. The course blends two approaches to Adam Smith. We use political thought and intellectual history to introduce students to the intellectual roots of classical Liberalism; asking: What are the moral psychological foundations of justice?, Does the free market make everyone, including the least advantaged, better off? How do we sustain a good society? We use social science to study Smith's integrated approach to human cooperation in three realms, society, politics, and markets; asking: Why isn't the entire world developed? How did Europe develop out of feudalism? How does a community sustain moral behavior? The two perspectives allow us to discover that Smith has ideas on these subjects that expand today's frontiers of both positive and normative social science.

**POLISCI 335J. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.**

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources. Same as: HISTORY 205G, HISTORY 305G, POLISCI 235J

**POLISCI 336. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to a series of real-world issues of international concern: global poverty, human rights, natural resources, climate change, migration, and the well-being of women.. The final section of the course asks whether a democratic international order is necessary for global justice to be realized. Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 136R

**POLISCI 336S. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: ETHICSOC 171, PHIL 171, POLISCI 103, PUBLPOL 103C, PUBLPOL 307

**POLISCI 337A. Political Philosophy: The Social Contract Tradition. 4 Units.**

(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant. Same as: PHIL 176, PHIL 276, POLISCI 137A

**POLISCI 337L. Ancient Greek Law and Justice. 3-5 Units.**

The development and practice of law and legal procedure in the ancient Greek world, emphasizing the well documented case of classical Athens. Constitutional, criminal, and civil law, approached through analysis of actual laws and speeches by litigants in Athenian courtrooms. Review of a growing scholarship juxtaposing Greek law to other prominent legal traditions and exploring the role of law in Greek social relations, economics, and literature, and its relationship to Greek conceptions of justice.

Same as: CLASSICS 378

**POLISCI 338. Universal Basic Income: the philosophy behind the proposal. 4 Units.**

The past three decades have seen the elaboration of a vast body of literature on unconditional basic income a radical policy proposal Philippe Van Parijs referred to as a disarmingly simple idea. It consists of a monthly cash allowance given to all citizens, regardless of personal desert and without means test to provide them with a standard of living above the poverty line. The seminar will seek to engage students in normative debates in political theory (feminism, liberalism, republicanism, communism, libertarianism, etc.) by appealing to the concrete example of basic income. It will allow students to learn a great deal about a policy that is gaining tremendous currency in academic and public debates, while discussing and learning about prominent political theorists - many of whom have written against or for basic income at one point in their career. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites. We will ask questions such as: is giving people cash no strings attached desirable and just? Would basic income promote a more gender equal society through the remuneration of care-work, or would it risks further entrenching the position of women as care-givers? Would alternative policies be more successful (such as the job guarantees, stakeholder grants or a negative income tax)? How can we test out basic income? What makes for a reliable and ethical basic income pilot? Students in Politics, Philosophy, Public Policy, Social Work, and Sociology should find most of those questions relevant to their interests. Some discussions on how to fund basic income, on the macro-economic implications of basic income and on the existing pilots projects (in Finland, Namibia, India, Canada and the US) may be of interest to Economists; while our readings on the impact of new technologies and artificial intelligence on the future of work and whether a basic income could be a solution, are likely to be on interest to computer scientists and engineers. By the end of the class, students will have an in depth knowledge of the policy and will have developed skills in the normative analysis of public policy. They will be able to deploy those critical and analytical skills to assess a broad range of other policies.

Same as: ETHICSOC 174X, ETHICSOC 274X, PHIL 174B, PHIL 274B

**POLISCI 339. Directed Reading and Research in Political Theory. 1-5 Unit.**

May be repeated for credit.

**POLISCI 340A. Democratic Politics. 5 Units.**

This course examines the relationship between democratic ideals and contemporary democratic politics.

Same as: POLISCI 240A

**POLISCI 340L. China in World Politics. 5 Units.**

The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: POLISCI 140L

**POLISCI 343A. Field Methods. 3-5 Units.**

Familiarizes students with a variety of field methods potentially applicable to ongoing research projects and dissertations. Topics include case selection, process tracing, participant observation, interviewing, archival research, survey design, lab experiments, field experiments, and ethical concerns in the field. Students develop a field research strategy as a final project. Prerequisites: 440A,B,C.

**POLISCI 344. Politics and Geography. 3-5 Units.**

The role of geography in topics in political economy, including development, political representation, voting, redistribution, regional autonomy movements, fiscal competition, and federalism.

**POLISCI 344A. Authoritarian Politics. 3-5 Units.**

Examination of how authoritarian regimes govern. Topics include: historical determinants of authoritarian government, typologies of authoritarian rule and impact of authoritarian governance on economic growth.

Same as: POLISCI 244A

**POLISCI 344U. Political Culture. 3-5 Units.**

The implications of social norms, preferences and beliefs for political and economic behavior and societal outcomes.

Same as: POLISCI 244U

**POLISCI 346P. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, HISTORY 246, HISTORY 346, POLISCI 246P

**POLISCI 347A. Games Developing Nations Play. 5 Units.**

If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required.

Same as: ECON 162, POLISCI 247A

**POLISCI 347D. Rebooting Government with Design Thinking. 3-4 Units.**

Students apply tools of human-centered design to issues of government performance. Small project teams work with NGO and government partners (in the U.S. and abroad) on concrete design challenges focused on issues such as how to deliver services more effectively and ensure that citizens' voices are heard. Students identify needs, generate concepts, create prototypes, and test their appropriateness. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s).

Same as: PUBLPOL 347D

**POLISCI 347G. Governance and Poverty. 3-5 Units.**

Poverty relief requires active government involvement in the provision of public services such as drinking water, healthcare, sanitation, education, roads, electricity and public safety. Failure to deliver public services is a major impediment to the alleviation of poverty in the developing world. This course will use an interdisciplinary approach to examining these issues, bringing together readings from across the disciplines of political science, economics, law, medicine and education to increase understanding of the complex causal linkages between political institutions, the quality of governance, and the capacity of developing societies to meet basic human needs. Conceived in a broadly comparative international perspective, the course will examine cross-national and field-based research projects, with a particular focus on Latin America and Mexico.

**POLISCI 348. Chinese Politics. 3-5 Units.**

China, one of the few remaining communist states in the world, has not only survived, but has become a global political actor of consequence with the fastest growing economy in the world. What explains China's authoritarian resilience? Why has the CCP thrived while other communist regimes have failed? How has the Chinese Communist Party managed to develop markets and yet keep itself in power? What avenues are there for political participation? How does censorship work in the information and 'connected' age of social media? What are the prospects for political change? How resilient is the part in the fave of technological and economic change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.).

Same as: POLISCI 148

**POLISCI 348S. Latin American Politics. 3-5 Units.**

Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic policies. The nature of this dual transformation.

Same as: POLISCI 248S

**POLISCI 349. Directed Reading and Research in Comparative Politics. 1-10 Unit.**

May be repeated for credit.

**POLISCI 34S. Religion and Politics. 3 Units.**

What is the relationship between religion, international conflict and peace? This course takes up this question by examining contemporary thinking in international relations, conflict management, political science, and religious ethics. Topics to be taken up include: whether religion is fundamentally a positive or negative force in conflict management; how do major world religions think about war and peace; the relationship of religion to terrorism; whether thinking about religion in international conflict requires its own categories, distinct from models concerning ethnic or nationalistic communities in conflict; varieties of religious militancy; religion's potential role in conflict resolution; among others. Through these investigations, students will better grasp the contemporary scholarship on the place of religion in international conflict and peace building. Readings are interdisciplinary in nature, and include case studies. No prerequisite. Open to all majors/minors, and will be particularly beneficial to students in International Relations, Religious Studies, International Policy Studies, and Political Science, as well as students with specific regional political interests where the themes of the course are especially relevant (e.g., Middle East, Latin America, Russia and Eastern Europe, Africa, and so on).

**POLISCI 351A. Foundations of Political Economy. 3 Units.**

Introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition.

**POLISCI 351B. Economic Analysis of Political Institutions. 4 Units.**

Applying techniques such as information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations of microeconomic analysis and game theory to political behavior and institutions. Applications include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules.

**POLISCI 351C. Institutions and Bridge-Building in Political Economy. 4 Units.**

This course critically surveys empirical applications of formal models of collective-choice institutions. It is explicitly grounded in philosophy of science (e.g., Popperian positivism and Kuhn's notions of paradigms and normal science). Initial sessions address the meanings and roles of the concept of institutions in social-science research. Historically important works of political science and/or economics are then considered within a framework called Components of Institutional Analysis (or CIA), which provides a fully general way of evaluating research that is jointly empirical and formal theoretical. The course concludes with contemporary instances of such bridge-building. The over-arching objectives are to elevate the explicitness and salience of desirable properties of research and to illustrate the inescapable tradeoffs among the stipulated criteria. Although this is a core course in the GSB Political Economy PhD curriculum, its substantive foci may differ across years depending on the instructor. For Professor Krehbiel's sessions, the emphasis is on legislative behavior, organization, and lawmaking, and on inter-institutional strategic interaction (e.g. between executive, legislative, and judicial branches in various combinations). Students should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

**POLISCI 352. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.**

Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

Same as: POLISCI 152

**POLISCI 353A. Workshop in Statistical Modeling. 1 Unit.**

Mathematical and statistical models and applications to political science. Guest speakers, faculty, and students present research papers. Prerequisite: 356A and 450B.

**POLISCI 353C. Workshop in Statistical Modeling. 1-2 Unit.**

Continuation of 353B. May be repeated for credit. Prerequisite: 353A and B. May be repeated for credit.

**POLISCI 354. Thinking Strategically. 5 Units.**

This course provides an introduction to strategic reasoning. We discuss ideas such as the commitment problem, credibility in signaling, cheap talk, moral hazard and adverse selection. Concepts are developed through games played in class, and applied to politics, business and everyday life.

Same as: POLISCI 153

**POLISCI 355A. Data Science for Politics. 5 Units.**

Data science is quickly changing the way we understand and engage in the political process. In this course we will develop fundamental techniques of data science and apply them to large political datasets on elections, campaign finance, lobbying, and more. The objective is to give students the skills to carry out cutting edge quantitative political studies in both academia and the private sector. Students with technical backgrounds looking to study politics quantitatively are encouraged to enroll.

Same as: POLISCI 150A

**POLISCI 355B. Machine Learning for Social Scientists. 5 Units.**

Machine learning—the use of algorithms to classify, predict, sort, learn and discover from data—has exploded in use across academic fields, industry, government, and non-profit. This course provides an introduction to machine learning for social scientists. We will introduce state of the art machine learning tools, show how to use those tools in the programming language R, and demonstrate why a social science focus is essential to effectively apply machine learning techniques. Applications of the methods will include forecasting social phenomena, the analysis of social media data, and the automatic analysis of text data. Political Science 150A or an equivalent is required. (Prerequisite 150A/355A).

Same as: POLISCI 150B

**POLISCI 355C. Causal Inference for Social Science. 5 Units.**

Causal inference methods have revolutionized the way we use data, statistics, and research design to move from correlation to causation and rigorously learn about the impact of some potential cause (e.g., a new policy or intervention) on some outcome (e.g., election results, levels of violence, poverty). This course provides an introduction that teaches students the toolkit of modern causal inference methods as they are now widely used across academic fields, government, industry, and non-profits. Topics include experiments, matching, regression, sensitivity analysis, difference-in-differences, panel methods, instrumental variable estimation, and regression discontinuity designs. We will illustrate and apply the methods with examples drawn from various fields including policy evaluation, political science, public health, economics, business, and sociology. Political Science 150A and 150B or an equivalent is required.

Same as: POLISCI 150C

**POLISCI 356A. Formal Theory I: An Introduction to Game Theory. 3-5 Units.**

An introduction to noncooperative game theory through applications in political science. Topics will include the Hotelling-Downs model, the probabilistic voting model, political bargaining models and political agency models, among others.

**POLISCI 356B. Formal Theory II: Models of Politics. 3-5 Units.**

A continuation of Formal Theory I covering advanced topics, including classical political economy, comparative institutions, theories of conflict and cooperation, dynamic political economy, and the new behavioral political economy.

**POLISCI 357. Sampling and Surveys. 5 Units.**

The importance of sample surveys as a source of social science data including public opinion, voting, welfare programs, health, employment, and consumer behavior. Survey design, sampling theory, and estimation. Nonresponse, self-selection, measurement error, and web survey methods. Prerequisite: 350B or equivalent.

**POLISCI 358. Data-driven Politics. 3-5 Units.**

Covers advanced computational and statistical methods for collecting and modeling large-scale data on politics. Topics will include automated and computer-assisted methods for collecting, disambiguating, and merging unstructured data (web-scraping, identity resolution, and record-linkage), database management (SQL, data architecture), data-reduction techniques for measuring the political preferences for large numbers of individuals, topic models applied to political text/speech, and social network analysis for mapping relationships and identifying influential actors.

**POLISCI 359. Advanced Individual Study in Political Methodology. 1-10 Unit.**

May be repeated for credit.

**POLISCI 362. New Economics of Organization. 5 Units.**

Survey of economic approaches to organization, emphasizing theory and application, with attention to politics.

**POLISCI 400. Dissertation. 1-18 Unit.****POLISCI 400C. Research Design. 5 Units.**

Required of Political Science PhD candidates with International Relations, American Politics, or Comparative Politics as their first or second field. Other by consent of instructor. Students develop their own research design. Prerequisites: 410A&B or 420A&B or 440A&B.

**POLISCI 404. Dispute Resolution in International Economic Law. 1 Unit.**

(Same as LAW 356.) Topics include: theoretical work on international trade and investment disputes; empirical work on WTO dispute resolution and the efficacy of developing country participation; and legal analysis of current, prominent disputes in the WTO and under international investment treaties. Substantial paper required. May be repeated for credit.

**POLISCI 40SI. Rejecting Tyranny: Civil Resistance in Times of Crisis. 1 Unit.**

Donald Trump's rise to power was anything but conventional. Although divisive among both Democrats and Republicans, he was still popular enough in the eyes of the electorate to become the leader of the free world. Is he a hero? Is he a dictator? Or something different altogether? As Trump often elicits comparisons to famous and infamous leaders of the past such as Hitler, Mussolini, and FDR, as well as right wing nationalists leaders in the present day such as Duterte and Le Pen, this class will examine the extent to which Trump's behavior resembles these authority figures and what our society should do to respond. Learning will be facilitated through discussion sections and guest professors from various Stanford departments including History, Political Science, and the Hoover Institution. Views from all sides of the political spectrum are welcome. Note: this class does not begin until the Tuesday of the second week of Spring quarter (Apr 11). Enrollment will be decided on the first day of class.

**POLISCI 410A. International Relations Theory, Part I. 3-5 Units.**

This course offers a PhD-level introductory overview of the field of international relations. The primary purpose is to understand and evaluate the main theories, arguments, claims, and conjectures made by scholars in the field so as to enable students to situate arguments in the conceptual structure and intellectual history of IR theory.

**POLISCI 410B. International Relations Theory, Part II. 3-5 Units.**

Second of a three-part graduate sequence. History of international relations theory, current debates, and applications to problems of international security and political economy. Prerequisite: 410A.

**POLISCI 410C. Security and Armed Conflict. 3-5 Units.**

Third of a three-part graduate sequence. Theory and evidence on domestic and international armed conflict, terrorism, nuclear deterrence and proliferation, and some "new security" issues. Prerequisite: POLISCI 410A.

**POLISCI 411A. Workshop in International Relations. 1 Unit.**

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

**POLISCI 411B. Workshop in International Relations. 1-2 Unit.**

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

**POLISCI 411C. Workshop in International Relations. 1 Unit.**

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

**POLISCI 412. The Politics and Economics of Modern Europe. 3-5 Units.**

What are the implications of European integration for social and economic policy and outcomes? In this course, we will examine how EU membership has altered the democratic politics of Europe, with a special focus on policymaking during Europe's most recent financial crisis.

**POLISCI 420A. American Political Institutions. 3-5 Units.**

Theories of American politics, focusing on Congress, the presidency, the bureaucracy, and the courts.

**POLISCI 420B. Topics in American Political Behavior. 3-5 Units.**

For graduate students with background in American politics embarking on their own research. Current research in American politics, emphasizing political behavior and public opinion. Possible topics: uncertainty and ambivalence in political attitudes, heterogeneity in public opinion, the structure of American political ideology, political learning, the media as a determinant of public opinion, and links between public opinion and public policy.

**POLISCI 420C. Discovery in American Politics. 5 Units.**

What are the "novel facts" being generated in the study of American politics, and how are these discoveries being made? Emphasis on strengths and limitations of emerging methodologies and review of the substantive contributions they yield. Student-led replication of extant research and development of original research ideas a key component of the course. Prerequisites: 420A,B.

**POLISCI 421K. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.**

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: COMM 339, PSYCH 231

**POLISCI 421R. American Political Development, 1865-present. 3-5 Units.**

In this reading-intensive course, we will conduct a wide-ranging survey of major transformations in the American political system in the post-Civil War period. Our inquiries about these transformations will focus on the origins of the modern administrative state, the interactive role of the state and social movements, and changes in the party system. We'll examine these developments not only to understand institutional change, but to learn how changing institutions have shaped the behavior of the American electorate.

Same as: POLISCI 221A

**POLISCI 422. Workshop in American Politics. 1 Unit.**

Research seminar. Frontiers in mass political behavior. Prerequisite: 420B or equivalent. Course may be repeated for credit.

**POLISCI 422F. Seminar on Electoral Change. 3-5 Units.**

This seminar will examine contemporary American and European public opinion and elections using a variety of databases, several of which have become newly available to scholars this decade (eg. YouGov/Polimetrix, ongoing FSI-Hoover Comparative Surveys). Department faculty will present research and some visitors will appear. Students will be expected to complete a significant research paper.

**POLISCI 423A. The Laboratory of the Study of American Values I. 1-5 Unit.**

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

**POLISCI 423B. The Laboratory of the Study of American Values II. 1-5 Unit.**

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

**POLISCI 424A. Democratic Elections. 3-5 Units.**

How do democratic elections work? Do elections make representatives accountable, and if so, under what conditions? What preferences do electorates reveal to us when they choose candidates for office, and how do candidates and representatives respond to these preferences? What external factors change the dynamics between candidates and electorates? In this class we will study the functioning of democratic elections, mainly in the context of legislative elections. Because this is an elections course, the unit of analysis will be the constituency or the candidate rather than the individual voter, as it might be in a behavior course. We want to understand how candidates make it to office, i.e., the aggregated choices of many voters, and how the prospect of reelection shapes their behavior in office.

**POLISCI 425. Political Communication. 1-5 Unit.**

An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students. Prerequisite: 260 or consent of instructor.

Same as: COMM 360G

**POLISCI 425S. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.**

This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students).

Same as: COMM 362

**POLISCI 426S. Theories of Racism in American Politics: A Critique. 0 Units.****POLISCI 427R. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

**POLISCI 428. Political Economy and Political Behavior. 4 Units.**

[Same as POLECON 677] This seminar will expose students to cutting-edge research in political behavior and political economy published in the leading political science (and other social science) journals. The aim is for students to learn the contemporary literature so that they can be producers of research. To that end, the required assignments in the class will be aimed at professional development: writing an original research note, writing a review, and delivering a scholarly presentation.

**POLISCI 42Q. The Rwandan Genocide. 5 Units.**

Between April and July of 1994 more than 800,000 Rwandans, mostly Tutsi but also moderate Hutus, were killed in the most rapid genocide the world has ever known. The percentage of Rwandans killed in a single day of the genocide was ten times greater than the percentage of Americans killed in the entire Vietnam war. What could bring humans to plan and carry out such an orgy of violence? Could it have been prevented? Why did the United States or any other major power not intervene to stop the killing? To what extent should the United Nations be held accountable for the failure to end the genocide? What were the consequences of the genocide for the region of Central Africa? How did international actors respond to the challenges of reconstructing Rwanda after the killings? What has happened to the perpetrators of the genocide? This course surveys scholarly and journalistic accounts of the genocide to seek answers to these questions. This seminar will be residence based in Crothers, but will be open to Crothers residents and non-residents.

**POLISCI 430. Origins of Political Thought. 3-5 Units.**

Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: CLASSICS 390, PHIL 276D

**POLISCI 430A. Ancient Greek Economic Development. 4-5 Units.**

(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: CLASSICS 384A

**POLISCI 430B. Ancient Greek Economic Development. 1-5 Unit.**

(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: CLASSICS 384B

**POLISCI 431L. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

Same as: ECON 380, ETHICSOC 371R, PHIL 371D

**POLISCI 432R. Selections in Modern Political Thought. 3-5 Units.**

This graduate-level seminar explores selections from the canon of Western political thought from the late fifteenth through nineteenth centuries. Throughout the course, we will engage in close textual readings of individual thinkers and consider some of the larger questions raised by political modernity. The Fall 2015 offering of the course will focus on the three modern social contract thinkers: Thomas Hobbes, John Locke, and Jean-Jacques Rousseau.

Same as: ETHICSOC 432X

**POLISCI 433. Workshop in Political Theory. 1-2 Unit.**

For graduate students. May be repeated for credit.

**POLISCI 434. Egalitarianism. 5 Units.**

This seminar will explore different theories of equality in contemporary political philosophy. Topics include: the currency of equality (equality of what?); equality versus sufficiency or prioritarianism; the relationship between equality and responsibility; the value of equality; and different interpretations of equality of opportunity. Readings will be drawn from the work of Elizabeth Anderson, G.A. Cohen, Ronald Dworkin, Thomas Nagel, Derek Parfit, John Rawls, Thomas Scanlon, Amartya Sen, and others.

**POLISCI 434A. Ethics, Economics and the Market. 4 Units.**

Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.

Same as: ETHICSOC 303R, PHIL 375

**POLISCI 435R. Political Realism. 3-5 Units.**

This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau.

Same as: PHIL 372R

**POLISCI 436R. Amartya Sen's capability theory. 2-4 Units.**

Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers.

Same as: PHIL 378

**POLISCI 437. Autonomy. 5 Units.**

.

**POLISCI 437C. 20th Century and Contemporary Political Theory. 3-5 Units.**

This course provides a survey of some of the major contributions to political thought in the past century. The course will place special emphasis on the development of theories of political authority and legitimacy in the context of the modern bureaucratic state, as well as the connection between authority and other key concepts in normative political authority: democracy, justice, and freedom.

**POLISCI 438. Democracy and the Constitution. 5 Units.**

(Same as LAW 268) Connections between democratic theory and constitutional theory. Sources include literature from political philosophy, constitutional law, and jurisprudence, and arguments about freedom of expression, campaign finance, legislative apportionment, federalism, and separation of powers. Readings from Scalia, Breyer, Ely, Ackerman, Dahl, Rawls, Habermas, Dworkin, Riker, and Schumpeter, as well as constitutional cases.

Same as: PHIL 374C

**POLISCI 43Q. Immigration Crisis? Policy Dilemmas in the US and Europe. 3 Units.**

Immigration is a hotly contested social, economic, and political phenomenon in countries throughout the world. People migrate for many reasons, including the desire to start careers, reunite families, and escape oppression. While each story of migration is unique, migration in the modern world has certain commonalities, and these patterns often manifest as political conflict. Labor migration promises economic productivity and efficiency but may threaten existing labor protections and social welfare guarantees to natives. Facilitating migration from failed nation-states may protect the human rights of migrants but introduce security concerns. In the 21st century, the world has witnessed political violence by natives and migrants, both first and second generations including the September 11th attacks, the London bombings, the mass killings in Norway, and the Paris attacks. How can policymakers harness the promises of immigration without succumbing to its pitfalls? Why do some countries respond so differently than others in similar circumstances? When does the meaning of citizenship evolve and when does it stay the same? What lessons do other countries have for the United States as it considers immigration reform? This course is designed to provide students with an overview of immigration law and politics in the United States and other countries, particularly in the European Union. Students will develop the necessary tools to critically analyze immigration policies, starting with the historical evolution of immigration policy in the United States. We will visit Angel Island and discuss the legacy of the Chinese Exclusion Act as well as contemporary immigration politics in San Francisco, a so-called sanctuary city for undocumented immigrants. There will also be a screening on La Haine (Hate), an acclaimed French film which chronicles the challenges of immigrant integration. Students will study the economics of immigration and the politics of refugees in the context of post-9/11 security dilemmas. Students will design a concrete immigration policy proposal.

**POLISCI 440A. Theories in Comparative Politics. 3-5 Units.**

Required of Political Science Ph.D. students with comparative politics as first or second concentration; others by consent of instructor. Theories addressing major concerns in the comparative field including democracy, regime change, the state, revolutions, national heterogeneity, and economic performance.

**POLISCI 440B. Comparative Political Economy. 3-5 Units.**

Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.

**POLISCI 440C. Methods in Comparative Politics. 5 Units.**

Required of Political Science Ph.D. candidates with comparative politics as a first or second concentration; others by consent of instructor. Current methodological standards in comparative politics. Students develop their own research design that meets these standards.

**POLISCI 440D. Workshop in Comparative Politics. 1-2 Unit.**

Faculty, guest speakers, and graduate students conducting research in comparative politics present work-in-progress. Auditors welcome. Course may be repeated for credit.

**POLISCI 441L. Grad Seminar on Middle Eastern Politics. 3-5 Units.**

Survey of major topics in the study of Middle Eastern politics including state formation, authoritarian resilience and political Islam.

**POLISCI 443S. Political Economy of Reform in China. 3-5 Units.**

Content, process, and problems of China's post-Mao reforms. Changes in property rights, markets, credit, and the role of the state in economic development. Comparative insights about reform in the Chinese communist system that distinguishes it from the experience of regimes in E. Europe and the former Soviet Union.

**POLISCI 443T. Approaches to Chinese Politics. 3-5 Units.**

Major secondary literature on Chinese politics, involving the evolution of theoretical concepts and social scientific approaches characterizing the field. Subjects include changes made to defining fundamental issues of Chinese political theory, and the implications of shifts in research methods and analytical tools. Prerequisite: basic knowledge of politics of post-1949 China.

**POLISCI 444. Comparative Political Economy: Advanced Industrial Societies. 3-5 Units.**

Political economy approaches to key policy outcomes including redistribution, the size of government, fiscal behavior, and pork-barrel politics. Theories related to institutions, interest groups, and geography, focusing on middle- and upper-income countries.

**POLISCI 446E. Field Experiments in Political Economy. 3-5 Units.**

This seminar introduces recent field experimental work in political economy and comparative politics. Instead of surveying research in this area broadly, we will work through a number of recent working papers. The first objective of the seminar is to develop an understanding of different elements of a field experiment. To this end, we will untangle project parts related to implementation, data collection, analysis, and writing. A typical weekly meeting will include the following: discussion on framing and contribution to literature, replication of the study material, and potential extensions of the analysis. We will also go through survey instruments and any other material made available by authors. A second objective is to introduce students to writing pre-analysis plans for their own research. Each student will be expected to prepare a detailed pre-analysis plan for a proposed field experiment and will have the opportunity to workshop this plan with the class towards the end of the quarter.

**POLISCI 448R. Workshop: China Social Science. 1 Unit.**

For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor. Same as: SOC 368W

**POLISCI 450A. Political Methodology I: Regression. 5 Units.**

Introduction to statistical research in political science, with a focus on linear regression. Teaches students how to apply multiple regression models as used in much of political science research. Also covers elements of probability and sampling theory.

**POLISCI 450B. Political Methodology II: Causal Inference. 5 Units.**

Survey of statistical methods for causal inference in political science research. Covers a variety of causal inference designs, including experiments, matching, regression, panel methods, difference-in-differences, synthetic control methods, instrumental variables, regression discontinuity designs, quantile regression, and bounds. 450A is a prerequisite for this class.

**POLISCI 450C. Political Methodology III: Model-Based Inference. 3-5 Units.**

Provides a survey of statistical tools for model-based inference in political science. Topics include generalized linear models for various data types and their extensions, such as discrete choice models, survival outcome models, mixed effects and multilevel models.

**POLISCI 450D. Political Methodology IV: Advanced Topics. 3-5 Units.**

Covers advanced statistical tools that are useful for empirical research in political science. Possible topics include missing data, survey sampling and experimental designs for field research, machine learning, text mining, clustering, Bayesian methods, spatial statistics, and web scraping.

**POLISCI 451. Design and Analysis of Experiments. 3-5 Units.**

Political scientists increasingly rely on experimental methods. This course covers the principles and logic of experimental design as applied to laboratory, field and survey experiments. We discuss the strengths and limitations of experiments in relation to observational methods. Design considerations include randomization, the construction of treatments, the use of deception, the ethical implications of deception, and new developments in subject recruitment. Turning to the analysis of experimental data, we describe the methods for estimating treatment effects, interactions, and more complex indirect effects stemming from either mediator or moderator variables. We also cover appropriate data analytic strategies for quasi-experimental designs including interrupted time series, matching and propensity scores.

**POLISCI 452. Text as Data. 3-5 Units.**

Topics covered will include preprocessing texts (unigrams, bigrams, and a brief introduction to natural language processing), unsupervised learning (clustering, topic models, and computer-assisted methods), supervised learning (including SVM, lasso, naive Bayes, and a matrix smoothing method), and methods for evaluation (cross-validation, model based, expert based). This class is ideal for students in the dissertation phase of research who have texts they would like to analyze, but aren't quite sure what to do with them. Prerequisites are at least 350a and 350b and an willingness to learn programming skills (including Python and R).

**POLISCI 45N. Civil War Narratives. 3 Units.**

Preference to freshmen. Focus is on a new statistics-based theory to account for the susceptibility of countries to civil war. How to write a theory-based historical narrative. Students write and present an original historical narrative focusing on how well the theory explains a particular history and on the importance of factors that are absent from the theory in explaining civil war onsets.

**POLISCI 474. Design and Analysis of Surveys. 1-5 Unit.****POLISCI 51K. Election 2016. 1 Unit.**

The 2016 Presidential Election season has been anything but ordinary. So much in the Democratic and Republican primaries consistently defied conventional wisdom and upended the predictions of experts. This course will attempt, with the help of distinguished guests, to make sense of an election that defies all historical precedent and to take stock of the health of American democracy. This class is jointly offered for Continuing Studies students and Stanford students. As a 1 unit, online course for Stanford students, enrollment is unlimited. Registration for the course offers online access to a livestream of each class session, participation in online discussions, access to course website and materials, and admission to a lottery for attending each class in person.

Same as: CSRE 51K, HISTORY 51K

**POLISCI 57E. State of the Union 2014. 1 Unit.**

This course will examine major themes that contribute to the health, or disease, of the US body politic. Challenges and opportunities abound: we live in an age of rising inequality, dazzling technological innovation, economic volatility, geopolitical uncertainty, and the accumulating impact of climate change. These conditions confront our political leaders and us as citizens of a democracy plagued by dysfunction. What are the implications for the body politic? Led by Rob Reich (Political Science, Stanford), David Kennedy (History, Stanford), and James Steyer (CEO, Common Sense Media), the course will bring together distinguished analysts of American politics. Together, we will examine the following topics: inequality; energy and the environment; media and technology; the economy; and the 2014 midterm elections. The course is designed for the entire Stanford community: jointly offered for undergraduate and graduate students at Stanford (through listings in Political Science and History) and for community members through the Continuing Studies Program. For students, the course is available for 1 credit. This course may not be taken for a Letter Grade.

Same as: HISTORY 57E

**POLISCI 70. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, RELIGST 21X, SLAVIC 36

**POLISCI 71. Current Issues in European Security. 1 Unit.**

Russia's annexation of Crimea in Spring 2014 posed not only a threat to post-World War II Europe formed around the norm of national sovereignty, but possibly also the very real threat that Russia had awakened from its 20 years of peacefulness to once again impose its will on Eastern Europe. Is Europe again under threat from the East? In Current Issues in European Security, students will attend public events organized by Stanford's Europe Center and Freeman Spogli Institute for International Studies. These events – talks by political leaders and scholars from the U.S. and Europe – will engage and encourage students to understand the deepening crises in Ukraine, conflict in the Baltics, and European security as a whole. Students will leave the course with a better understanding of the multi-faceted dilemmas policy makers face, historical background, and possible paths forward for global decision makers. In addition to attending the events, students will write a final memo recommending a course of action for US policy makers. Events will typically be scheduled from 12 noon to 1:30 p.m. but may be held at other times. There will be approximately six events in spring quarter, and students may also be required to attend one or two separate discussion sessions.

**POLISCI 72. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

(Same as LAW 7057). In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter.

Same as: COMM 153A, COMM 253A, PUBLPOL 146, PUBLPOL 246

**POLISCI 73. Energy Policy in California and the West. 1 Unit.**

This seminar provides an in-depth analysis of the role of California state agencies and Western energy organizations in driving energy policy development, technology innovation, and market structures, in California, the West and internationally. The course covers three areas: 1) roles and responsibilities of key state agencies and Western energy organizations; 2) current and evolving energy and climate policies; and 3) development of the 21st century electricity system in California and the West. The seminar will also provide students a guideline of what to expect in professional working environment. Specific meeting dates for the course are as follows: April 21 10am-2pm/ May 12 10am-1pm/ June 2 10am-1pm.

Same as: CEE 263G, PUBLPOL 73

**POLISCI 74. Presidential Politics: Race, Gender, and Inequality in the 2016 Election. 1 Unit.**

From the 2016 nomination process to the election. The complexities of identity and its role in uniting and dividing the electorate. Panels covering the media, political participation, and group affiliation.

Same as: AFRICAAM 12, CSRE 12

**POLISCI 801. TGR Project. 0 Units.**

**POLISCI 802. TGR Dissertation. 0 Units.**

**POLISCI 96X. Mobilizing Democracy: Campaigns, Elections, and Voting. 1 Unit.**

Alternative Spring Break: America is often thought of as the archetypal democracy. While most democracies have surprisingly short lifespans, America has persisted for 238 years. However, in the 21st century, we have grounds to question the quality of our democracy. Turnout of the Voting Age Population hovers around 50 percent and today, we are seeing increasing legal challenges to voting rights. In the backdrop of these statistics, there is an entire industry devoted to campaigns. In the 2012 presidential race alone, almost \$2.5 billion was poured into the campaign-industrial complex. Given that this cycle is a presidential election year, those amounts are expected to be surpassed. As a consequence, many questions arise: How do politicians engage voters in elections at the various levels of government? Where do they spend their money and why? In the age of big data, how accurately can elections be predicted? How do we maximize participation in elections?.

**POLISCI 97X. Bridging the Civil-Military Divide: Military Service as Public Service in the 21st Century. 1 Unit.**

Alternative Spring Break: Today, fewer than 0.5 percent of Americans serve in the military, as compared to roughly 12 percent during the second World War. This has led to a widening gap in knowledge about the military, its members and the functions they perform, as well as its basic structure and tradition of service. This course is intended to introduce students to the notion of military service as public service and explore how misperceptions on both sides affect the civil-military divide. We will explore military service from the life of an enlisted soldier deployed to Afghanistan, to an officer working at the Pentagon on broad national security strategy. How does society conceive of a soldier, a sailor, an airman, a marine? How do Americans perceive military service and what role do service members play in our society?.

**POLISCI 99Z. Introduction to the Science of Politics. 4 Units.**

Why do countries go to war? Why are some countries democratic and others autocratic? How can we improve political representation in the United States and other countries? We will use scientific methods to answer these and other fundamental questions about politics.

## Program in Writing & Rhetoric (PWR)

**PWR 191. Advanced Writing. 3 Units.**

Open to undergraduates and graduate students. Crafting nonfiction prose in a range of genres. Focus is on the relationship of genre and form; attention to developing stylistic versatility. Individual conferences with instructor. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 192. Projects in Research, Writing, and Rhetoric. 1-5 Unit.**

Advanced work on research projects, early drafts of theses, proposals. Shared work, discussions, and examination of methods, rhetorics, and styles in all disciplines. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 193. Writing the Honors Thesis. 1-5 Unit.**

For students from all majors in the process of writing an honors thesis. Review of key elements of thesis process, including literature reviews, structure, argumentation, style, and documentation. Group and individual workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 194. Topics in Writing and Rhetoric. 4 Units.**

Understanding rhetoric as readers and interpreters of texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 194AB. Topics in Writing & Rhetoric: Freedom's Mixtape: DJing Contemporary African American Rhetorics. 4 Units.**

Black music in all its genres, styles and eras has always been about freedom and transformation. About both Black people and the whole society. About the US Black experience, the African continent and the diaspora. These musical forms and the social movements they reflect and help shape are therefore central to the study of African American rhetoric. From overtly translating the ideas of social movements for mass audiences, to capturing the mood of a moment or move, to reflecting and influencing the aesthetics and styles that attend public discourse, to simply being a space where debates get worked out in community, music in Black traditions are as important a space of engagement as political speeches, sermons, websites, or even #BlackTwitter. This course will use Black music and its relationship to both social movements and everyday dialogue and debate to introduce study in African American Rhetoric as a field of study.

Same as: AFRICAAM 194A

**PWR 194ABA. Topics in Writing & Rhetoric: Contemporary Black Rhetorics: Prince. 2-3 Units.**

This course will examine Prince's music, life and impact and their relationship to both social movements and everyday dialogue and debate to introduce African American Rhetoric as a field of study. Students in the course will trace specific themes in Prince's music throughout his career, write an album review, and create a blog on some aspect of Prince.

**PWR 194AJ. Topics in Writing & Rhetoric: Contemporary Black Rhetorics: Black Twitter and Black Digital Cultures. 4 Units.**

Does not fulfill NSC requirement. This course will examine Black engagements with digital culture as sites for community building, social action and individual and collective identity formation. By studying phenomena like #BlackTwitter, memes, Vine, selfie culture, blogging, "social watching," and more, we will explore how Black technology use addresses questions like identity performance and expression, hyper visibility and invisibility of Black lives, Black feminisms, misogynoir and Black women/femme leadership in social movements, the roles and influence of Black Queer cultures online, and social activism and movements in online spaces. From #YouOKSis, #BlackLivesMatter and #AfroLatinidad to the Clapback, roasts and "reads," we will work from the serious to the silly, from individuals to collectives, from activism to everyday life, and from distinct Black cultures to diasporic connections and exchange. Participants in the course will create a social media autobiography, a "read/ing" of a Black cultural practice or phenomenon online, host an online discussion, and prepare a pitch for a longer research project they might pursue as a thesis or an ongoing study. Bring your GIFs, memes, and emoji, and a willingness to be in community both online and off for this new course! Prerequisite: first level of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>. Same as: AFRICAAM 194

**PWR 194BR. Topics in Writing & Rhetoric: The Rhetoric of Health and Medicine. 4 Units.**

This course will aim to give students a foundation in the rhetoric of health and medicine across major stakeholders researchers, government, institutions, doctors, patients, journalists, and a general public obsessed with health and wellness. For example, we will analyze key theories about the relation of institutions, doctors, and patients, from Foucault's Birth of the Clinic to Rita Charon's Narrative Medicine: Honoring the Stories of Illness. We will also investigate how patients make sense of their illnesses through art and memoirs, how doctors are trained in an empathetic bedside manner, and the rhetoric of medical breakthroughs. From this foundation, students will choose an issue to tackle in their own research projects, from the politicization of Planned Parenthood and women's healthcare, to the experience of trans patients seeking care, to the rhetoric of access vs. coverage in current debates about health insurance. Prerequisite: completion of WR-1 & WR-2 req or permission of instructor. For full description, see <https://undergrad.stanford.edu/programs/pwr/courses/additional-elective-courses/rhetoric-health-and-medicine>.

**PWR 194C. Make Them Laugh: Comedy as Persuasion and Argument. 4 Units.**

Exploration of major theories of comedy and application of these theories to historical and contemporary comedic practice, with particular attention to comedy as a form of argument in a range of contexts. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr). Prerequisite: first two levels of the undergraduate writing requirement or equivalent transfer credit. Not repeatable for credit.

**PWR 194DH. Topics in Writing and Rhetoric: Empathy, Ethics, and Compassion Meditation. 4 Units.**

Does not fulfill NSC requirement. In this course, we'll extend this discussion by expanding our thinking about rhetoric as a means of persuasion to consider its relation to empathy-as a mode of listening to and understanding audiences and communities we identify with as well as those whose beliefs and actions can be lethal. We'll also practice compassion meditation and empathetic rhetoric to see how these ethical stances affect us individually and investigate the ways they may and may not be scaled to address social justice more broadly. Finally, with the course readings and discussions in mind, you will explore a social justice issue and create an essay, a workshop, campaign or movement strategy, podcast, vlog, infographic, Facebook group, syllabus, etc. to help move us closer to positive change. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>. Same as: CSRE 94

**PWR 194KD. Topics in Writing and Rhetoric: Technology and Human Values. 4 Units.**

Pining for a job in Google X but a little afraid of what disrupting the next social system will do to humans when all is said and done? Unsure where the real conversation is happening at Stanford about how to think more carefully and thoughtfully about the tech we are being trained to make? Curious to know what underlying common ground might link fuzzies with techies, humanists with engineers, scientists with philosophers? These are some of the issues we'll address in this seminar. You will be able to choose your own current topic: drones, tech and medicine, Big Data, Cloud applications, AI and consciousness, cybersecurity, tech and the law, for which you will choose readings and write a seminar paper and then co-lead discussion. The class goals are to know better the ethical value of one's tech work and research and to be able to express to scientists and non-scientists alike the ways in which this work contributes to the greater human good (beyond strict convenience or short-term profit). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

**PWR 194KT. Topics in Writing & Rhetoric: The Last Hopi On Earth: The Rhetoric of Entertainment Inequity. 4 Units.**

While #OscarsSoWhite brought attention to the Academy's overwhelmingly White, male membership, the underbelly of the entertainment industry itself is rife with inequitable hiring of not only on-camera and on-stage performers but also directors, writers, and others behind the scenes. While there are several organizations from Racebending.com to the Geena Davis Institute on Gender in Media that seek to usher in more equitable representation, push back against the Industry's disparate employment practices has been documented for more than fifty years with what many argue is not proportionally positive movement. White males still garner almost half of all theatrical and television roles and represent more than 80% of episodic directors while entertainment hubs Los Angeles and New York City are more than 50% people of color and female. What will it take to attain equity in the entertainment industry? Why does it matter? In this course, students will examine rhetorical issues in promoting, defending, and opposing entertainment industry practices - writing and speaking across genres in persuasive response - and ultimately develop a collaborative 5-year strategic plan to usher in equity. This course is part of the PWR advanced elective track in Social and Racial Justice (SRJ). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For video course description, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/last-hopi-earth-rhetoric-entertainment-inequity>. Same as: CSRE 194KT

**PWR 194MF. Topics in Writing & Rhetoric: In the Margins: Race, Gender and the Rhetoric of Science. 4 Units.**

Every day a new headline alerts us to the lack of race and gender diversity in the tech sector in Silicon Valley. At the same time, science and technology are often lauded as objective systems capable of producing color- and gender-blind truths and social good for all of us. This course pushes beyond the headlines and the hashtags to think about the complex relationship between gender, race and science. Together we will research chronically understudied voices and contributions in the history of science and technology and have the opportunity to read and participate in some of the efforts to highlight their stories through a Wikipedia edit-a-thon and final research project. We will also rigorously think through why the historical and current under-representation of women and people of color matters for the questions that are asked, methodologies that are used, and science and technology that is eventually produced. This course fulfills the advanced PWR requirement for the Notation in Science Communication (NSC). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

**PWR 194SB. Topics in Writing and Rhetoric: Rhetoric of Science. 4 Units.**

Understanding rhetoric as readers and interpreters of texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

**PWR 194SS. Topics in Writing & Rhetoric: Making Rhetoric Matter: Human Rights at Home. 4 Units.**

'Human rights' often sounds like it needs defending in far-off places: in distant public squares where soldiers menace gatherings of citizens, in dark jails where prisoners are tortured for their politics, in unknown streets where gender inequality has brutal consequences. But Bryan Stevenson, a lawyer fighting for social and racial justice in the jails of Alabama, proposes that we try 'proximity': that we get close to the injustices that are already close to us. This class thus takes human rights as a local issue, focusing on how terms like 'human' and 'rights' are interpreted on our campus and in our neighborhoods, cities, and region. Instead of a traditional human rights policy framework, we'll use the lens of intersectional ethics to explore specific rhetorical issues in gender politics, citizenship, higher education, police brutality, and mass incarceration. We will write, speak, and move across genres, responding to the work of incarcerated artists, creating embodied workshops, 'translating' ideas into new media (does someone you know need an animated video about gender pronouns? Or maybe it's time for a podcast about #PrisonRenaissance?), doing collaborative research, and 'writing back' to our audiences. For course video and full description see: <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/making-rhetoric-matter-human-rights-home>. This course is part of the PWR advanced elective track in Social and Racial Justice (SRJ). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

Same as: CSRE 194SS

**PWR 195. Writing Center Peer Tutor Seminar. 2-3 Units.**

For students selected to serve as peer writing tutors in the Hume Center for Writing and Speaking and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work. Instructor permission required. WR 1 pre-/co-requisite. Same as: PWR 295

**PWR 1A. Introduction to Writing at Stanford: Rhetorics of Popular Culture. 3 Units.**

Popular culture studies breaks down barriers between so-called "low" and "high" culture and uses the textual practices of everyday people to understand our social world. As a reaction to the "high culture" mediums of canonical literature and museum-worthy art, popular culture studies takes the perspective that everyday people, their practices, media, communication, and principles afford provocative insights into our social worlds. PWR1A students will study the rhetorical features and functions of popular culture, from young adult literature, to music, film, games, social media, and comics in order to develop our critical reading, writing, and research skills in preparation for academic work in both PWR1 and PWR2 as well as other writing and research intensive courses. Readings, writing, and other activities prompt students to consider the relationship between language, rhetoric and popular culture in an aim to interrogate popular culture broader social values and assumptions. Enrollment exclusive to incoming Stanford freshman student athletes. PWR1A classes are small, workshop-style meetings that encourage extensive interaction between students and instructors. PWR1A does not meet the Stanford first-year writing requirement.

**PWR 1AB. Writing & Rhetoric 1: Podcasts to Broadcasts: The Rhetoric of Radio. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1AH. Writing & Rhetoric 1: The Rhetoric of American Multicultural Experience. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of multicultural experience and cultural assimilation, focusing on the theme of social acceptance. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1AK. Writing & Rhetoric 1: The Rhetoric of Humor. 4 Units.**

In this class we will explore the how and why of humor through readings, classroom discussion, rhetorical analysis, and, most importantly, through writing, and examine the ways that humor, as a rhetorical tool, is deployed in written and oral texts. As we consider theories of humor, we will begin to understand how humor works and why it is so powerful. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. Enrollment is handled by the PWR office.

**PWR 1AM. Writing & Rhetoric 1: King Tut's Tomb, Penicillin, and Lilliputians: The Rhetoric of Discovery. 4 Units.**

In this course, as we investigate the power of the archetype of discovery, we also critically consider what these stories hide or gloss over. How revolutionary are most discoveries after all? What perspectives are left out? What is a truthful way to portray new insights? How do we capture popular attention but include the broader context of experiment and expeditions? You will gain a complex understanding of how writing and rhetoric both structure and hide knowledge from the audience, and how you can use this in your writing in both persuasive and responsible ways. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1AN. Writing & Rhetoric 1: The Rhetoric of Identity Cultivated Through a Hip-Hop World. 4 Units.**

This course seeks to explore the ways that we read and write ourselves into a world that is engrossed in Hip-Hop culture by asking: What does it mean to live in a world where Hip-Hop permeates every aspect of society? How can Hip-Hop culture be used to understand the rhetoric that is used in broader society in reference to both this moment in history and the culture itself? By engaging both Hip-Hop artists such as Kendrick Lamar and Nicki Minaj, and artists that operate in a Hip-Hop world like Beyoncé, this course investigates the ways that we write ourselves into a world engrossed in Hip-Hop culture that denies the humanity and value of its members. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1AO. Writing & Rhetoric 1: Visual Rhetoric Across the Globe: Capturing Culture in Images. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1AT. Writing & Rhetoric 1: A Mountain for Itself: The Rhetoric of Wilderness. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1BK. Writing & Rhetoric 1: Writing What You Eat: The Rhetoric of Food. 4 Units.**

In this course, we will focus on the rhetoric of food in order to explore how our relationship to what we eat is reflected in writing about ourselves, our society, and our world. Essays, recipes, blog posts, and newspaper articles are some of the genres we will examine in order to explore how issues of identity, community, ethics, and wellness can be expressed in food writing. How does what we choose to eat reflect on how we see ourselves and the world around us? What responsibilities do we have, if any, as consumers of food in one of the world's richest nations? For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1BR. Writing & Rhetoric 1: Healthy or Cutthroat: The Rhetoric of Competition. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1BRA. Writing & Rhetoric 1: Growing Up Millennial: The Rhetoric of Coming of Age. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1BRB. Writing & Rhetoric 1: In Another's Shoes: The Rhetoric of Empathy. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1BW. Writing & Rhetoric 1: The Loyal Opposition: The Rhetoric of Dissent. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1CA. Writing & Rhetoric 1: The Rhetoric of Gaming. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1CG. Writing & Rhetoric 1: Mixtapes & Meetups: The Interactive Rhetoric of Media and Relationships. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CGA. Writing & Rhetoric 1: Popular Science to Girl Talk: Writing as Adaptation and Remix. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CK. Writing & Rhetoric 1: Investigating the News: Journalism, Technology & the Future. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1CL. Writing & Rhetoric 1: The Politics of Difference, Identity, and Harm: The Rhetoric of Hate Crimes. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1CLA. Writing & Rhetoric 1: Hate Crime: Writing on Law and Politics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1CS. Writing & Rhetoric 1: Debating the Environment. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CW. Writing & Rhetoric 1: Sporting Rhetoric: Power, Performance, Profit and Politics. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1D. Writing Well: An Introduction to College Writing. 3 Units.**

Offered only to participants in the Summer College for High School Students. Develops critical reading, writing, and research skills applicable to any area of study. Emphases include close reading, analysis of varied texts, development of strong theses, revision strategies, and introduction to research-based argument. Classes are small, encouraging extensive interaction between students and instructors. Discussions of readings, peer work, and individual conferences with instructors. Each section has a thematic emphasis developed by the instructor; students choose sections based on their individual interests. Does not meet the Stanford first-year writing requirement.

**PWR 1DC. Writing & Rhetoric 1: Is This What a Feminist Looks Like? Race/Gender in the Obama Age. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the coverage of and activism in a post-racial U.S., including evaluation of the debate over the intersections of racial activism and feminist activism in U.S. politics. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1DH. Writing & Rhetoric 1: The Virtue of Vice and the Vice of Virtue: The Rhetoric of Criminality. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students investigate language and images that construct criminals, analyzing how these representations shape personal and cultural beliefs. Analysis of the costs and benefits of retributive, restorative, and transformative justice systems. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1DW. Writing & Rhetoric 1: Gangsters, Glamour Girls & Gold-diggers: Dialectic of Am. Culture & Hollywoo. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of American film and its conversation with American culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uual/AP_univ_req_PWR_Courses.html).

**PWR 1EC. Writing & Rhetoric 1: From the Galleries to the Streets: The Rhetoric of Public Space Art. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1ECA. Writing & Rhetoric 1: Where I'm From: The Rhetorics of Mapping and Human Geography. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1EE. Writing & Rhetoric 1: Prowling Toward Certainty: Exploration as Argument. 4 Units.**

In a culture that rewards people who write and speak with conviction, ambivalence often seems like a personal shortcoming that must be remedied with certainty. Isn't it better to be confident and decisive? Writing teachers and textbooks tend to reinforce this view, insisting that students present a strong thesis as soon as possible. Even if you address counterarguments and offer concessions, your argument should override if not demolish them in the end. Even if you feel deeply ambivalent about a topic during your research, your final draft must demonstrate unwavering conviction: you slam your fist and make your point. Recent research questions the value of unwavering conviction. For example, management scholar Christina Ting Fong notes, "The results from two laboratory experiments demonstrate that individuals experiencing emotional ambivalence are better at recognizing unusual relationships between concepts, therefore showing an ability believed to be important to organizational creativity." What if, instead of sweeping your ambivalence under the rug, you tried to embrace it in your research and foreground it in your writing? Is ambivalence always a liability? What advantages can be found in the deep, risky waters of uncertainty? How do scientists, social scientists, and humanists regard ambivalence? What do ambivalent texts look and feel like? Can they move and persuade us? Is it possible to map and tap into a rhetoric of ambivalence? In this course, we'll explore such questions in an attempt to understand the relationship between ambivalence and persuasion. We'll analyze and discuss the ways that writers such as Annie Dillard, Stephen Jay Gould, and Michael Pollan not only engage their ambivalence but weave it into their prose. Most importantly, we'll explore how you can develop rhetorical strategies and habits of mind to achieve results in your own analytical and persuasive writing. We'll study how to craft compelling arguments that do fuller justice to complex emotions and ideas.

**PWR 1EL. Writing & Rhetoric 1: Propaganda: The Dark Side of Rhetoric. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1EP. Writing & Rhetoric 1: The Rhetoric of Global Development and Social Change. 4 Units.**

Since World War II, international development projects have marked every sector of global society. We will unpack and interrogate the numerous discourses around international "development" as a strategy for achieving social change and look at how culture, history, politics, and economics have informed development's connections to capitalism, modernity, and most recently, globalization. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1EV. Writing & Rhetoric 1: The Rhetoric of Globalization. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAD. Writing & Rhetoric 1: Display Cases and Databases: The Rhetoric of Collection. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAF. Writing & Rhetoric 1: Little Boxes: The Rhetoric of the American Suburb. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the suburbs as a site of cultural debate through investigation of the ways that authors and artists imagine the physical landscape of the suburb and the inner lives of suburbanites. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uual/AP_univ_req_PWR_Courses.html).

**PWR 1GAJ. Writing & Rhetoric 1: The Rhetoric of Eating. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uual/AP_univ_req_PWR_Courses.html).

**PWR 1GAK. Writing & Rhetoric 1: No Filter: The Rhetoric of Young Adulthood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAL. Writing & Rhetoric 1: The Rhetoric of Disgust. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAT. Writing & Rhetoric 1: Size Matters: The Writing and Rhetoric of Short Stories. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uual/AP_univ_req_PWR_Courses.html).

**PWR 1GAU. Writing & Rhetoric 1: Mind vs. Brain: The Rhetoric of Consciousness. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAW. Writing & Rhetoric 1: Global Exchange: Intercultural Communication. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The American cultural apparatus, its limitations, and development of other world views. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GBJ. Writing & Rhetoric 1: The Rhetoric of Cultural Memories of Violence. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GBR. Writing & Rhetoric 1: Spill: The Rhetoric of Confessions and Self-Revelations. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GBW. Writing & Rhetoric 1: Deathbeds: Art and the Rhetoric of Disease. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCD. Writing & Rhetoric 1: Domsdays: The Rhetoric of Apocalypse. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GCX. Writing & Rhetoric 1: "I Do": The Rhetoric of Consent. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the idea of consent and the underlying principles of free will and autonomy in the fields of law, intellectual property, marriage contracts, political philosophy, medical ethics, and sex. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GDM. Writing & Rhetoric 1: Revolution and Revolt: Political Writing for Political Action. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GDS. Writing & Rhetoric 1: From Trash Talk to Toxic Discourse: Rhetorics of Waste. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GEM. Writing & Rhetoric 1: The Rhetoric of Foodie Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GER. Writing & Rhetoric 1: The Rhetoric of Social Media. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the multifaceted and hypertextual rhetoric of social media, the intersection between rhetoric and social media, and how new types of online media have heightened participation, openness, and a sense of community. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GEV. Writing & Rhetoric 1: All the World's a Stage: The Rhetoric of Theater. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students investigate the role theater plays in the rhetorical strategies of various literary and non-literary texts as well as visual materials such as films and cartoons. See [http://ual.stanford.edu/AP/univ\\_req/PWR/Req.html](http://ual.stanford.edu/AP/univ_req/PWR/Req.html).

**PWR 1GFL. Writing & Rhetoric 1: From Con Artists to Catfish: The Rhetoric of Trickery. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GGK. Writing & Rhetoric 1: Ladies, Tramps, and Other Furry Friends: The Rhetoric of Pets. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GGZ. Writing & Rhetoric 1: The Rhetoric of Race in American Cinema. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GIF. Writing & Rhetoric 1: Dark Humor: A Rhetoric of Social Taboos. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of dark humor as it deals with the most delicate subject matter, topics we designate as sacred and beyond criticism: violence and bodily damage, illness, aging and death, race and ethnicity, and gender and sexuality. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GIY. Writing & Rhetoric 1: Jekylls and Hydes: The Rhetoric of the Scientist. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GJE. Writing & Rhetoric 1: Gay Ghettoes, Queer Hoods: The Rhetoric of Race and Urban Sexual Subcultures. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of urban sexual subcultures, and how the rhetoric in medical science, journalism, and popular entertainment defines queers of color in intellectual thought and pop culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GJU. Writing & Rhetoric 1: 'Surface of Past Time': The Rhetoric of Nostalgia. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLA. Writing & Rhetoric 1: Code Orange: Post-9/11 America and the Rhetoric of Alarm. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLB. Writing & Rhetoric 1: In Poor Taste: The Rhetoric of Catastrophe Comedy. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GLD. Writing & Rhetoric 1: The Cyborg Body: The Rhetoric of Disability. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of disability, using the analogy of the cyborg, in an era when the human body has become plastic, digitized and surgically manipulated. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLR. Writing & Rhetoric 1: Are you Fuzzy and Techie?: The Rhetoric of Art and Science. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GM. Writing & Rhetoric 1: Writing for the Wild and the Tame. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the tension between reverence and science, language and feeling, natural and unnatural in the interrelationship of rhetoric and nature. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMC. Writing & Rhetoric 1: Dancing about Architecture: Or Finding Words for the Wordless. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1GMD. Writing & Rhetoric 1: A History of Innocence: Stories We Tell About America. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1GMG. Writing & Rhetoric 1: Love to Hate: The Rhetoric of Misanthropy. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMH. Writing & Rhetoric 1: Transformative Turns: The Rhetoric of Revolution. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GML. Writing & Rhetoric 1: The Rhetoric of Migrant Protest. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GMV. Writing & Rhetoric 1: Don't Take it Personally!: The Rhetoric of The Insult. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of how insults function rhetorically in specific situations and how they have catalyzed prolonged confrontations around race, education, politics, sexual orientation, and national standing. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMX. Writing & Rhetoric 1: 'Too Much Information?': The Rhetoric of Social Networking and Online Privacy. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GNL. Writing & Rhetoric 1: Punk Rock and Rhetoric of Protest Music. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GNV. Writing & Rhetoric 1: Rhetoric of Bioethics and Biopolitics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GPS. Writing & Rhetoric 1: The Rhetoric of English. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRA. Writing & Rhetoric 1: Millions Like Us: The Rhetoric of Crowds. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include symbolic meaning of rock, sports, and political events; virtual crowds online; and use of crowds to shape ideology. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRK. Writing & Rhetoric 1: Plugged In: The Rhetoric of Networks. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GRL. Writing & Rhetoric 1: Queer Rhetoric: The Language of Sex, Gender, and Identity. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GRY. Writing & Rhetoric 1: Fashionable Fables: The Rhetoric of Modern Mythology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GSG. Writing & Rhetoric 1: From Cowboys to Computers: Rhetoric of the American West. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GSO. Writing & Rhetoric 1: The Varieties of Conservative Experience. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GTJ. Writing & Rhetoric 1: Rhetoric of the Unruly: Iconoclasts and Their Controversies. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GTL. Writing & Rhetoric 1: Love at First Sight and Forever: The Rhetoric of Romance. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GVC. Writing & Rhetoric 1: The Rhetoric of Circus. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GVG. Writing & Rhetoric 1: The Way of the Dodo: Rhetoric of Extinction. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GVN. Writing & Rhetoric 1: Noise Machines: The Rhetoric of Sound and Technology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GWT. Writing & Rhetoric 1: Money for 'Nothing': The Rhetoric of Silicon Valley. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1HJ. Writing & Rhetoric 1: Not Just Art: The Rhetoric of Museums. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1HJA. Writing & Rhetoric 1: What None Can Avoid: The Rhetoric of Death. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1HZ. Introduction to College Writing. 3 Units.****PWR 1IF. Writing & Rhetoric 1: The Rhetoric of Language and Social Identity in America. 4 Units.**

Language and social identity are closely intertwined. Have you ever noticed that you change the way you speak to present a particular social identity? For example, have you ever switched between dialects or languages to show alignment with certain social groups or mark your 'in-group' status? Because language is flexible (and somewhat controllable), it can be used as a resource to create and index identity. However, given its flexible nature, criticizing someone's language often becomes a more socially acceptable way of attacking someone than something that seems like bald-faced racism/sexism/homophobia, etc. In this course we'll explore this complex link between identity and language. This course explores the way language and social identity are defined, discussed, and debated in America, and the assumptions this rhetoric presents about race, class, education and other social identities more broadly. Together, we'll consider: What's it like to grow up monolingual versus bilingual or multilingual? What role do our ethnicity and/or race play in how our language skills are perceived? What role do language attitudes and stereotypes play in influencing our daily lives? What role does the media play? How is language discussed in politics? Students will be able to work on a research project related to social identity and language on a topic of their choice.

**PWR 1IY. Writing & Rhetoric 1: Rhetorics of Travel and Tourism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1IYA. Writing & Rhetoric 1: The Art and Science of Gender and its Bending. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1JC. Writing & Rhetoric 1: Modern Family: The Rhetoric of Sex and Reproduction. 4 Units.**

The issue of reproduction provides a powerful rhetorical lens for looking critically and incisively into our own assumptions about race, gender, class, sexuality, power, rights, justice, "nature," technology, and modernity. With an intention to challenge assumptions, we will explore issues through a variety of perspectives. For example, we will explore theoretical debates over the "family" and its viability as a vehicle for securing recognition and rights, place liberal feminist ideas like "bodily autonomy" in conversation with complicatedly contradictory concepts like natal endangerment or father's rights in abortion and family planning, investigate legal and medical histories of eugenics, sterilization abuse, and practices of coercive and disciplinary contraception, and analyze rhetoric associated with different forms of commodified reproduction, from black women's forced "manufacture" of slave labor to practices of transnational gestational surrogacy. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1JD. Writing & Rhetoric 1: Frog Princes and Ugly Ducklings: The Rhetoric of Self-Transformation. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JH. Writing & Rhetoric 1: Lies and the Lying Liars Who Tell Them: Rhetoric and Deception. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of untruth, misrepresentation, and deception in journalistic and scientific rhetoric. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JJ. Writing & Rhetoric 1: The Rhetoric of Language and Thought. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1JL. Writing & Rhetoric 1: 'Saving Strangers': Rhetoric and Humanitarian Intervention. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how media representations of world crises are crafted to persuade us to action, appealing to our senses of justice, pragmatism, outrage, and compassion. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JM. Writing & Rhetoric 1: Rhetoric of the Startups. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JO. Writing & Rhetoric 1: Join the #LoveArmy: The Rhetoric of Radical Compassion. 4 Units.**

In this writing class, we will examine the power and possibility of radical compassion. We will briefly explore love's myriad forms before turning almost exclusively to *love of humanity* a deep social concern for all people and the willingness to act on that concern as an important foundation for justice. Our inquiry will take us through the fields of neuroscience, evolutionary biology, psychology, sociology, history, philosophy as well as cultural, feminist and religious studies. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1JP. Writing & Rhetoric 1: The Rhetoric of Consumer Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore what consumerism says about the larger culture and the segmented groups within it, analyzing popular and scholarly texts as well as current trends in pop culture, to research how the activities of consumerism shape culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JPA. Writing & Rhetoric 1: The Rhetoric of Liberal Arts Education. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1JS. Writing & Rhetoric 1: Beyond DNA: The Omics Revolution. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KB. Writing & Rhetoric 1: Authentic Experience: The Rhetoric of Tourism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KBA. Writing & Rhetoric 1: On Display: The Rhetoric of Museums and Exhibition Spaces. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KC. Writing & Rhetoric 1: The Rhetoric of Gender and Sexuality in Popular Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KD. Writing & Rhetoric 1: The Feature Article: Writing and Change. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. How various feature article writers argue the issues of soaring energy and food prices, serious market volatility, climate change, an ongoing war in the Middle East, and how terms like *“crisis”* or *“change”* impact the discussion. See [http://ual.stanford.edu/AP/univ\\_req/PWR/Courses.html](http://ual.stanford.edu/AP/univ_req/PWR/Courses.html).

**PWR 1KE. Writing & Rhetoric 1: The Science of Sports. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include sports at the level of cells and psychology, the science of sports equipment and sports spaces, the ethics of performance enhancement, and sports-related research projects on the Stanford campus. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KG. Writing & Rhetoric 1: Rhetoric of McDonough. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KJ. Writing & Rhetoric 1: The Rhetoric of Film. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KM. Writing & Rhetoric 1: If These Walls Could Talk: The Rhetoric of Places and Spaces. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Explores the *“language”* of man-made environments such as universities, theme parks, monuments, shopping malls, museums, and public buildings. Students analyze space through physical exploration and critical inquiry and discover the applications of rhetoric not only to traditional texts but to physical structures and spaces as well. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KMC. Writing & Rhetoric 1: Staying Cool on a Hot Planet: Environmental Rhetoric for a Changing World. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KS. Writing & Rhetoric 1: Imagining Others: 21st Century Cosmopolitanism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of cosmopolitanism, questions related to globalization, nationalism, citizenship, cultural values, aesthetics, and identity. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KSA. Writing & Rhetoric 1: Constructing Childhood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KSB. Writing & Rhetoric 1: Health Matters: Health Innovation and Communication. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1KT. Writing & Rhetoric 1: The Emperor's New Clothes: The Rhetoric of Modern Mythology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LC. Writing & Rhetoric 1: Truth, Lies, and Contestation: Rhetorics of Sexual Victimization and Survival. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1LF. Writing & Rhetoric 1: The New Normal: The Rhetoric of Disability. 4 Units.**

In this class we will move beyond definitions of disability as “abnormality” or “deviance” to explore how advances in science, technology, medicine, and culture have transformed our understanding of what constitutes a “normal” human body. We will ask how arguments about disability incorporate concepts such as neurodiversity, chronic illness, and other invisible conditions. At the same time, we will study how contemporary perspectives on disability interact with issues such as technology, metaphors of the prosthesis, cultural constructions of the body, and even what it means to be human. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1LFA. Writing & Rhetoric 1: Back to the Future: The Rhetoric of Futurity. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1LH. Writing & Rhetoric 1: Ask What You Can Do: The Rhetoric of Public Leadership. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1LM. Writing & Rhetoric 1: Two Truths and a Lie: The Rhetoric of Authenticity. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LMA. Writing & Rhetoric 1: From Page to Stage: The Rhetoric of American Drama. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LO. Writing & Rhetoric 1: What Are We Trying to Sustain? Rhetoric of Nature's Values and Services. 4 Units.**

With increasing rates of environmental impacts from human activity, communities across the planet face challenges for sustainability. Given the many benefits we derive from nature - from cultural and spiritual benefits, to basic goods like food and water, to economic benefits from the use of natural resources - defining what we value and what we wish to sustain is a top priority. This class will examine diverse perspectives on the value and services we derive from nature and consider challenges for balancing multiple uses of nature in the context of sustainable resource management and conservation. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. Enrollment is handled by the PWR office.

**PWR 1LP. Writing & Rhetoric 1: Crafting Credibility: Rhetoric and Authority. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LPG. Writing & Rhetoric 1: Power Lines and Water Pipes: Writing The Global City Through Infrastructure. 4 Units.**

What can power lines, water pipes, and fibre optic cables tell us about how different groups of people navigate life in global cities? While such infrastructures are often considered to be the mere "background" of socio-cultural life in cities, this course will center on them and their rhetorical contexts in order to explore how opportunity and inequality are imagined and discussed in urban spaces. We will contemplate how knowledge, relations of power, and practices of governance work within the framework of deep rhetorical analysis of urban infrastructures. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. Enrollment is handled by the PWR office.

**PWR 1LS. Writing & Rhetoric 1: Unequal by Design? The Rhetoric of Race, Class, and Education. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1MC. Writing & Rhetoric 1: Oppositional Rhetoric: Resistance and Public Protest. 4 Units.**

In 2010, the University of Michigan hosted an international conference entitled "Against Health," which questioned how health has become a moralizing system dictating how people should behave and make decisions. In 2014, the Whitney Biennial selected Jackie Wang's anti-racist essay "Against Innocence" to be sold as part of their elite art exhibition. But how can one be "against health" or "against innocence"? These titles pose riddles for their readers. They use a strategy of oppositional rhetoric to challenge foundational assumptions in provocative ways. How can we as writers contend with the challenges at the heart of such rhetoric? For a full course description, see <https://vcapwr-catalog.stanford.edu>. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. Enrollment is handled by the PWR office.

**PWR 1MD. Writing & Rhetoric 1: Heavenly Bodies: The Rhetoric of Sanctity and Martyrdom. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1MF. Writing & Rhetoric 1: Writing about Cities: Exploration, Observation, Research, Analysis. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MG. Writing & Rhetoric 1: The Rhetoric of the American West. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MGD. Writing & Rhetoric 1: Who speaks for nature? Rhetorics of environmentalism and justice. 4 Units.**

The last hundred years have seen organized environmentalism become a major force on the world stage. But the environment is still essentially contested. Who is at risk from environmental problems? What environmental problems should be prioritized? And who should be able to speak out as authentic protectors of the earth? In this course, we examine the ways that environmental and conservation writers from classic environmental writers to contemporary activists talk about nature to see how close readings of their work highlight fundamental disagreements about justice and politics in societies across the globe. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. Enrollment is handled by the PWR office.

**PWR 1MN. Writing & Rhetoric 1: Liberation or Occupation?: The Rhetoric of War. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1MO. Writing & Rhetoric 1: Imagining Technology: The Rhetoric of Humans and Machines. 4 Units.**

This course explores the ways that technology has been imagined on the page and on the screen. We look at how a diverse group of sources from Cold War comics to Elon Musk's twitter account contribute to an ever-changing definition of 'technology.' And we consider how our hopes and anxieties about technology are represented in creative genres and media. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1MR. Writing & Rhetoric 1: "Did You Hear That?": The Rhetoric of Ghost Story. 4 Units.**

This class will explore varied aspects of the rhetoric of haunting, considering the supernatural, the psychoanalytical, the traumatic, and the simply hard to believe. We will examine how ghosts represent cultural values and fears, investigating the rhetorical elements of the ghost story: How are supernatural accounts constructed? How are they debunked? What strategies do writers use to prove the impossible, to convince the world that ghosts can exist? We will use our explorations of the supernatural to shape our ability to make nuanced arguments, to draw effectively from research materials, and to think critically about what we see and hear. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1MS. Writing & Rhetoric 1: Seeing Nature: The Power of Environmental Visual Rhetoric. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1NA. Writing & Rhetoric 1: The Rhetoric of Childhood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1NF. Writing & Rhetoric 1: Language 2.0: Investigating the Rhetoric of Digital Language. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1PB. Writing & Rhetoric 1: Supreme Court Rhetoric. 4 Units.**

Applying a rhetorical framework, we will discuss and analyze historical cases such as *Barron v Baltimore* (1833), in which the Court found that federal Bill of Rights guarantees were not binding upon states, as well as contemporary Supreme Court issues such as the debate surrounding the status of *Roe v. Wade* under the recently re-configured Roberts Court. We'll also discuss and examine the rhetoric of "amicus curiae" briefs, editorials about Court opinions, and pertinent lower court decisions. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1PF. Writing & Rhetoric 1: Body Rhetoric East and West: Gender, Sport, Art, and Medicine. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1PH. Writing & Rhetoric 1: He Said, She Said: The Rhetoric of Gender Politics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the ways in which news articles, movie clips, magazine advertisements, television commercials, and other texts present gender roles, and how the roles and bodies of both sexes are presented as objects open to scrutiny, critique, exploitation, abuse, and awe. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1RC. Writing & Rhetoric 1: Domestication: How Humans Shape the Natural World. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1RL. Writing & Rhetoric 1: The Rhetoric of Happiness. 4 Units.**

In this course, we will examine the notion of happiness &#8212; and some of its adjacent or "opposing" feelings, such as contentment, or depression and anger &#8212; and the rhetoric around it by studying an array of examples from various sources, such as books, websites, or films. Students will explore the contexts, motives, and ramifications of the representational strategies, while developing critical skills to analyze and articulate their research findings and arguments regarding topics of their choice. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1RP. Writing & Rhetoric 1: The Rhetoric of Archaeology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1RT. Writing & Rhetoric 1: The War Between Wars: the "isms" of modernism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of modernism in art, literature, and thought between the two world wars. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SB. Writing & Rhetoric 1: The Rhetoric of Technology. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SBB. Writing & Rhetoric 1: The Rhetoric of Robots, Cyborgs, Mutants and Other Posthumans. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SC. Writing & Rhetoric 1: Banksy, B-girls, and the Rhetoric of Public Art. 4 Units.**

In the 21st century, public art is opening up: the 'hero-on-a-horse' is in decline, and hulkingly abstract metal sculptures are no longer commissioned for each urban plaza. In this class, we'll investigate together what public art might mean now. For example, should it made by a public or for a public, or in public places, or with public funding, or because of its political value in the public sphere? Who owns it, where does it belong, and what are its limits? Can public art be illegal, temporary, intangible, or created by people who don't even think of themselves as artists? For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SE. Writing & Rhetoric 1: Rhetoric of Social Justice: Writing about Marginalization and Oppression. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SG. Writing & Rhetoric 1: Body and Mind: The Rhetoric of Gesture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SH. Writing & Rhetoric 1: Strange Art, Stranger Politics: Absurdism and the Rhetoric of Social Action. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the benefits and drawbacks of deploying strange art as artistic and political protest, how breaking the aesthetic rules sometimes serves to argue for social change, and how absurdist protests succeed or fail to gain social traction. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SHA. Writing & Rhetoric 1: Bench to Byline: The Life of Scientific Facts. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SI. Writing & Rhetoric 1: Super-Storms, Polar Bears, and Droughts: The Rhetoric of Climate Change. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SL. Writing & Rhetoric 1: New Media Rhetoric and Web 2.0. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students define new media and debate the ideas of web 2.0; the virtue of Web 2.0 in digital game modifications and the potential subversive effects of web 2.0 on advertising restrictions; and look into the possibilities and limitations of democracy 2.0. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SLA. Writing & Rhetoric 1: "Advertising R Us": The Rhetoric of Advertising. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SM. Writing & Rhetoric 1: The Elephant, the Tiger, and the Cellphone: Rhetoric of India and Indian Film. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of the India of the new millennium, including issues of gender, caste, class, religion, sexuality, nationalism, diaspora, outsourcing, and globalization. Service Learning Course (certified by Haas Center). See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SN. Writing & Rhetoric 1: The Rhetoric of Containment: Cold War Ideology Post 9/11. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SP. Writing & Rhetoric 1: Growing Up Global: The Rhetoric of Children's Culture Today. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SR. Writing & Rhetoric 1: The Rhetoric of California. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1SS. Writing & Rhetoric 1: The Page and the Stage: Writing and Performance. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore identity as a social, political, and cultural performance; how different situations call for particular styles of rhetorical performance; and how people evaluate and analyze different types of performances, including artistic and political performances, as well as the performances of everyday life. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SSA. Writing & Rhetoric 1: Real and Imagined Lives: Narrative, Rhetoric, and Identity. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of identity as constructed in a range of narrative forms including fiction, memoirs, political campaigns, and social media. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1ST. Writing & Rhetoric 1: The Rhetoric of Biomedical Ethics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SUA. Writing & Rhetoric 1: Such a Long Journey: South Asian Diaspora in the World. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SW. Writing & Rhetoric 1: Scandals, Private Lives, and Public Faces: The Rhetoric of Stanford. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the early history and rhetoric of the public face of Stanford University, from the post-Gold Rush and Big Four railroad era to the building of the University. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1TB. Writing & Rhetoric 1: Hashtag Activism. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1TD. Writing & Rhetoric 1: Anatomy of a Discipline: Rhetorics of Health, Illness, and Medicine. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1TS. Writing & Rhetoric 1: White Mice and White Coats: The Rhetoric of Biomedical Science. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1TSA. Writing & Rhetoric 1: 10,000 Ways That Didn't Work: The Rhetoric of Innovation. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1TSC. Writing & Rhetoric 1: Academic Identity/ies: Culture and Politics in Higher Education. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1VK. Writing & Rhetoric 1: Rhetorics of Trauma. 4 Units.**

Spurred, in part, by the events of September 11th and the plight of American service members returning from combat experiences in the Middle East, the public's gaze has been drawn toward the concept of trauma. This course considers the rhetorics of trauma, that is, how survivors of traumatic incidents, witnesses, psychologists, doctors, civil and military leaders, politicians, and the general public interpret trauma. These different understandings of trauma compete for social awareness and limited resources. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1VL. Writing & Rhetoric 1: It's All Relative: The Rhetoric of the Modern American Family. 4 Units.**

The September 2017 issue of Interview Magazine features Kim Kardashian West dressed as Jackie Kennedy on the cover, along with her daughter, North. In the article, the magazine calls Kardashian West's popular reality show, a rooted-in-real life mirror to what the American family looks like today, bringing up topics such as race, gender, and more recently, trans identity. As early as 50 years ago, it would have been nearly impossible for a magazine to feature a white woman, especially one as notorious as Kim Kardashian, on its cover with her biracial, black daughter. So how did the mirror of the American Family change from the Mad Men ideal of a white, wealthy, suburban, nuclear family to a sprawling mega-family who document every moment of their lives for television screens? And is it even accurate to call the Kardashians the mirror? Who is left out of this reflection? In this class, we will explore how representations of American families reflect shifting trends on the national level, including increasingly nuanced understandings of race, gender, sexuality, and citizenship. Through engagements with various texts (television, films, articles, advertisements) we will practice making nuanced written arguments about the rhetoric of families as we work toward the final assignment, a research-based argument. We will analyze several topics in class to develop and improve analytic and argumentative writing skills, from debates over LGBTQ+ parenting to mixed race families and generational conflicts while asking, what makes a family? Which aspects of families are represented as ideal? And what do those ideals say about issues beyond the family?

**PWR 1WG. Writing & Rhetoric 1: Reading Minds: The Rhetoric of Consciousness. 4 Units.**

Rhetorical analysis of readings, research, and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1WI. Writing & Rhetoric 1: By Any Means Necessary: The Rhetoric of Black Radical Movements. 4 Units.**

In this class, students in this course will explore the many ways communities of color have effectively used writing and rhetoric to persuade, to educate, to inspire, to awaken, to motivate. Some potential examples of materials include persuasive pieces written by formerly enslaved Black people to abolish slavery; letters written from Japanese internment camps, trial statements from Native American political prisoners; videos of Black Panthers' speeches; and comedy sketches by undocumented queer youth organizers. For more information about PWR 1, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 1WS. PWR 1 Studio. 1 Unit.**

The PWR 1 Studio is designed for multilingual and/or international student writers and is taken concurrently with PWR 1. The Writing Studio provides students an opportunity to work with other multilingual students and an instructor with a background in second language writing to develop writing habits and strategies to support their work in PWR 1 and other communication contexts. Please see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1/pwr-writing-studio> for more information. Prerequisite: Application. Co-requisite: PWR 1.

**PWR 1ZS. Writing & Rhetoric 1: On Cages, Boxes & Boundaries: The Rhetoric of Limits. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 295. Writing Center Peer Tutor Seminar. 2-3 Units.**

For students selected to serve as peer writing tutors in the Hume Center for Writing and Speaking and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work. Instructor permission required. WR 1 pre-/co-requisite. Same as: PWR 195

**PWR 2AB. Writing & Rhetoric 2: Makers, Crafters, Hackers: The Rhetoric of DIY. 4 Units.**

Prerequisite: PWR 1. In this course we will delve into the fascinating world of DIY (do it yourself) movements. You will examine the values, politics and ethics of DIY, such as what making has to do with empowerment and resistance, or whether our ideas of making and makers are gendered or attached to assumptions about class, ethnicity and ideology. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2AH. Writing & Rhetoric 2: Ethnic Narratives and the Rhetoric of American Identity. 4 Units.**

Prerequisite: PWR 1. In this class we will explore how race and ethnicity in America have become subjects of personal negotiations and public perception. The readings will address various topics such as biracial and bicultural identity, acculturation, stereotyping and self-image. In addition, we will approach each of the writings in this class as an opportunity to practice in-class rhetorical analysis and oral presentation skills and to practice discovering specific research questions. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2AM. Writing & Rhetoric 2: From Fossils to Fables: The PWR of Prehistory. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2AN. Writing & Rhetoric 2: Hear Me Out: The Rhetoric of Hip-Hop in Social Uprisings. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2ANA. Writing & Rhetoric 2: The Message in the Music. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2AO. Writing & Rhetoric 2: Rhetoric and Global Leadership. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2AT. Writing & Rhetoric 2: House Red, Hot Bellies, and High Velocity Lead Therapy: The Rhetoric of Trauma. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2BK. Writing & Rhetoric 2: To Thine Own Self Be True: The Rhetoric of Authenticity. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2BR. Writing & Rhetoric 2: "I Feel Your Pain": The Rhetoric of Sympathy. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2BRB. Writing & Rhetoric 2: Eureka and Epiphanies: The Rhetoric of Inspiration. 4 Units.**

Prerequisite: PWR 1. In this course, we will inquire into how, exactly, inspiration works. Where do good ideas come from? What fosters creativity? And how do we inspire ourselves and others to follow through on those ideas? We'll address these questions from many disciplinary angles, including the history of theories of genius and creativity, the uses of spiritual and literary epiphany, and recent psychology research into growth mindsets. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2CA. Writing & Rhetoric 2: Networked Rhetoric: Social Networks, Participatory Media and the Future of Wr. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the issues surrounding participatory media and social networking in contemporary digital culture from the perspective of both theory and practice. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CAB. Writing & Rhetoric 2: The Rhetoric of Gender and Technology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2CG. Writing & Rhetoric 2: Sounds of Stanford: Authoring, Archiving, and Podcasting. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CGA. Writing & Rhetoric 2: Stories, Jokes, and Anecdotes: How to Engage an Audience. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CK. Writing & Rhetoric 2: Speaking Out: Claiming Citizenship, Demanding Rights. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CKA. Writing & Rhetoric 2: Rhetoric of Distraction. 4 Units.**

Prerequisite: PWR 1. In this class we will explore how race and ethnicity in America have become subjects of personal negotiations and public perception. The readings will address various topics such as biracial and bicultural identity, acculturation, stereotyping and self-image. In addition, we will approach each of the writings in this class as an opportunity to practice in-class rhetorical analysis and oral presentation skills and to practice discovering specific research questions. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2CL. Writing & Rhetoric 2: Crime, Media & Law: Critical Approaches to Violence. 4 Units.**

Prerequisite: PWR 1. Despite our fascination with extreme acts of violence, those who study the nature of illegality know the opposite to be true: Far from a problem of murder, crime is instead predominantly composed of everyday acts of offense that never garner police attention, such as tax evasion, the violation of environmental regulations, computer hacking, and recreational drug use. Critical criminologists term this kind of unprosecuted crime "crime's dark figure" because it flies below the radar of public awareness and judicial action. This course will take the divergence between cultural representations of crime and crime's "dark figure" as a point of departure. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2CR. Writing & Rhetoric 2: Communicating Science to the Public. 4 Units.**

As scientific knowledge and technology grow increasingly complex, the ability to explain science clearly and articulate science-based arguments to public audiences becomes more crucial, and more in demand. In this class, we will explore what makes written, spoken, and visual communication of science effective, compare the conventions of scholarly writing in the sciences to rhetorical strategies employed by popular science writers, and analyze problems with coverage of scientifically based issues in popular media and the promise and pitfalls of data visualization in conveying scientific information. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2CW. Writing & Rhetoric 2: Rhetorical Games: Sport (for) Development Policy in the 21st Century. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2CWA. Writing & Rhetoric 2: Global Games: Rhetoric of Sport for Development. 4 Units.**

Prerequisite: PWR 1. Sport has become "the" international relations and development concept of the new millennium. As a result, sport development is a source of much praise and criticism as scholars, activists, philanthropists, and journalists struggle to understand the rhetorical games at play in the global sport development policy landscape. As students deepen their awareness of rhetorical praxis and explore new modes as writers and communicators, they will survey seminal scholarship, case studies, and grassroots activist campaigns surrounding sport development in preparation for a sustained research project that addresses the sociopolitical implications of tying sport to development in the 21st century. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2CWB. Writing & Rhetoric 2: Hear/Say: The Art of Rhetorical Listening. 4 Units.**

Prerequisite: PWR 1. Why do we listen? How do we listen to learn, to understand? And to whom do we listen? And how does listening impact how we orient ourselves in the world? Rhetorical listening has been central to feminist rhetorical praxis, which has traditionally focused on the rescue, recovery, and (re)inscription of non-majority cultures and communities into the rhetorical tradition. In short, rhetorical listening asks us to reconsider the role listening plays, and the values which we ascribe to listening, in processes of knowledge construction inside and outside the academy. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2DC. Writing & Rhetoric 2: The Popular Science of Sex. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the intersection between social debate and scientific research about sex and gender; how social debates draw on, represent, respond to, and influence scientific studies; and how the process shapes our knowledge and beliefs about sex and gender. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2DH. Writing & Rhetoric 2: I \_\_\_\_ Therefore I Am? The Rhetoric of 21st Century Identity. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2DHA. Writing & Rhetoric 2: Action Research: Making Time for Social Justice. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2DHB. Writing & Rhetoric 2: Feel Me? The Rhetoric, Practice and Complication of Empathy. 4 Units.**

Prerequisite: PWR 1. In this course, we'll be examining what empathy is&#8212;both affective and cognitive&#8212;and what role it might, or might not, play in our everyday lives and in promoting ethical action. To do so, we'll study the psychological, biological, and neurological bases of empathy, its significance in philosophy, contemplative/religious practices and ethics, and its possibilities as a rhetorical strategy and a political tool. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2EC. Writing & Rhetoric 2: 'Like' this Class: The Rhetoric of Public Relations. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2EE. Writing & Rhetoric 2: Once Upon a Cause: Producing Picture Books for Local Children. 4 Units.**

Prerequisite: PWR 1. Whether our favorite picture books as kids were timeless classics or new arrivals, whether they scared us or amused us, consoled us or challenged us, they moved and shaped us in profound ways. How could a few dozen pages and a few hundred words affect us so powerfully? Why did we want to hear and see and read our favorite picture books again and again? What was the secret to their magic? In this course you'll not only analyze that "magic" but will also collaborate closely with a group of classmates to create an original, compelling, and educationally appropriate picture book for second-graders in a local school. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2EL. Writing & Rhetoric 2: Rhetoric of Silence. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2ELA. Writing & Rhetoric 2: The Remix, the Original, and the Voice. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2EP. Writing & Rhetoric 2: Global Protest and Civil Unrest: The Rhetoric of Resistance. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2EPA. Writing & Rhetoric 2: Slacktivism to Hacktivism: The Rhetoric of Technology and Social Change. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2EPB. Writing & Rhetoric 2: Communicating Climate Justice in the Current Era. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2EPC. Writing & Rhetoric 2: Rhetoric of Resilience: Telling our Survival Stories. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2EV. Writing & Rhetoric 2: The Global Politics of Protest and Change. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GAW. Writing & Rhetoric 2: 'Don't Stand so Close to Me': Cross-cultural Communication. 4 Units.**

Prerequisite: PWR 1. Despite universal attributes such as facial expressions and emotions, humans also have culturally based assumptions, values, and beliefs - from the shared assumptions and collectivist views of high-context cultures to the explicit and highly articulated rhetoric of more individualistic and low-context groups. Our course will explore rhetorical challenges in verbal and nonverbal communication across cultures. We'll consider not only language and argument but also proxemics - determined spatial distance between people - as well as eye contact and gestures. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2GM. Writing & Rhetoric 2: Unpredictable Dialogue: Art of the Interview, Art of the Essay. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetorical craft of the interview, exploring structure, language, timing, and development in a range of forums, including documentaries, radio, transcription, campus conversations, and television. Research of a Stanford professor's work, including interview. Presentation of findings from research and interview to the class. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GMA. Writing & Rhetoric 2: Breaking News, Making News 1.0. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GMC. Writing & Rhetoric 2: A Thousand Words: When Art is Not Enough. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GMD. Writing & Rhetoric 2: Archi-texts: Building Rhetorically. 4 Units.**

Prerequisite: PWR 1. Architecture is always the solution to a problem: Where am I going to sleep? What am I going to do with my dead? Where can I speak to my gods? In this sense, the structure, siting, materials and lighting that inhere in a work of architecture are direct responses to a lived problem. In this way, our class will draw on the rhetoric of architecture to illuminate the rhetoric of communication; we will do this under the premise that understanding the one can lead to a better understanding and practice of the other. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2GME. Writing & Rhetoric 2: Our America: Conviction, Passion, Paranoia. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2HL. Writing & Rhetoric 2: Developing and Communicating Your Expertise: The Rhetoric of Excellence. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2IY. Writing & Rhetoric 2: Many Faces of Sherlock: Race, Gender, Power, and the Rhetoric of the Detective. 4 Units.**

Prerequisite: PWR 1. In this class we'll look at the ways detective fiction has expanded with empowering results to genders, ethnicities, and social backgrounds that mainstream representations of Holmes haven't traditionally represented. We'll consider, for example, the Botswanan women sleuths of *The No. 1 Ladies' Detective Agency*, the hoodie-wearing, super strong *Luke Cage*, and Japanese manga's Detective Conan. We'll ask how movements such as Afrofuturism and G&#233;nero Negro combine the detective and speculative traditions with social commentary. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2JB. Writing & Rhetoric 2: Rhetoric of Ethics in Research and Technology. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetoric of ethical discourse, including the ethical standards guiding research at Stanford and examples of ethical misconduct. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JC. Writing & Rhetoric 2: Walk(s) of Shame: The Rhetoric of Respectability. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2JD. Writing & Rhetoric 2: Straight A's and Sports Cars: The Rhetoric of Success. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JDC. Writing & Rhetoric 2: The Rhetoric of Collaboration: From Fandoms to Entrepreneurs. 4 Units.**

Prerequisite: PWR 1. In this class, we will research how collaboration between and among producers and consumers shapes our society. For example, we'll look at how *Harry Potter* and *Star Wars* fans have influenced their franchises marketing and how advocates for open information (like WikiLeaks) have impacted the political climate. We'll debate the impacts of collaborative efforts and consider both the rewards and risks that arise from collaboration. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2JH. Writing & Rhetoric 2: Cred: Rhetoric and Credibility in Research, Politics, and Everyday Life. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Work on making students more effective researchers and communicators in their areas of interest, with a focus on gaining and projecting credibility. Exploration of how speakers and writers gain and lose credibility, how people evaluate the credibility of others, and how the rules of credibility are different in politics, in scholarship, and in popular culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JJ. Writing & Rhetoric 2: The Rhetoric of Language, Identity and Power. 4 Units.**

Prerequisite: PWR 1. In this writing and speaking course, you'll consider the construction and negotiation of power and difference through language as it intersects with gender, sexuality, race, ability, and class. We'll explore how this happens across spheres such as politics, education, science, sports and the media, intertwined with forces like globalization, immigration, and technology. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2JL. Writing & Rhetoric 2: Doomsday Rhetoric. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Investigation of how the doomsday epic expresses real concerns emerging from fields like technology, environmental studies, pathobiology, and politics. Consideration of apocalypticism as a mode of argument. Examination of how belief in the imminent destruction of the present world order influences our political decisions and personal behavior. Topics in religious eschatology and apocalypticism illuminate the genre's origins. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JLA. Writing & Rhetoric 2: Speaking About Art: Narrating the Collections of the Cantor Art Center. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration and theory of successful strategies of oral communication, considering how words and images (in this case works of art) work together to create meaning, culminating in creation of an audio guide for the Cantor Arts Center. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JLB. Writing & Rhetoric 2: Rhetoric and Education Reform. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of social, ideological, and pedagogical perspectives on education reform. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JLC. Writing & Rhetoric 2: Illness Narratives: Attention, Empathy, and Storytelling. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2JM. Writing & Rhetoric 2: Criminal Matters: Evidence, Detection, Expertise. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JO. Writing & Rhetoric 2: Rhetoric of J. O.. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2JP. Writing & Rhetoric 2: The Rhetoric of Art and Commerce. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of unspoken rules regarding the separation of creativity and commerce and arguments about how consumer culture influences the work of the artist. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JPA. Writing & Rhetoric 2: How We Got Schooled: The Rhetoric of Literacy and Education. 4 Units.**

Prerequisite: PWR 1. In this course, we will look closely these learning processes. Students will invent individual research projects and craft oral presentations to critically analyze conventional forms of learning and explore ways of learning that are not always obvious. We will research together the work of cultural critic Henry Giroux on global media as a force of education, poet and scholar bell hooks on classrooms as potential sites of both oppression and liberation, and education scholar Ken Robinson on creativity and schools. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2JS. Writing & Rhetoric 2: In Science We Trust. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2KC. Writing & Rhetoric 2: Technology and the Rhetoric of Embodiment. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2KD. Writing & Rhetoric 2: Un-Performing Ourselves: The Design and Craft of Presentations. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the application of performance techniques makes academic or professional presentations more compelling. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KDA. Writing & Rhetoric 2: Remix Culture. 4 Units.**

Prerequisite: PWR 1. What does a musical about founding fathers (*Hamilton*) have to say about current political upheaval? What do plastic surgery resorts have to say about identify politics? What does Steph Curry's game have to say about Hamlet - and about Prince - with alternative forms of masculinity? In this course we will examine contemporary mashups and remixers and you will build a research project to ground our work across the quarter creating interesting, meaningful, and dynamic presentations and papers. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2KEB. Writing & Rhetoric 2: Sports Appeal: Packaging and Promoting Stanford Athletics. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KEC. Writing & Rhetoric 2: It's About Time: Seizing Opportunity in Rhetoric, Writing, and Performance. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KM. Writing & Rhetoric 2: A Planet on the Edge: The Rhetoric of Sustainable Energy. 4 Units.**

Prerequisite: PWR 1. Sea-level rise, the halting of major ocean circulatory currents, outbreaks of superstorms leading to floods and droughts - can an energy revolution still save a planet on the edge? This class explores the intricacies of sustainable energy, focusing on the myths, slogans, and rhetorical narratives that surround these debates. For example, is environmentalism inherently at odds with economic prosperity? Does living an environmentally conscious lifestyle require personal sacrifice and suffering? How does rhetorical framing affect the research, implementation, and public perception of new technologies in the field of sustainable energy? For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2KMA. Writing & Rhetoric 2: Natural Enemies: The Rhetoric of Invasion Biology. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the use of metaphors and argument in the context of invasion biology and species conservation, especially the effects those metaphors and claims have on practice and policy outcomes. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KS. Writing & Rhetoric 2: Happy Now? The Anatomy of Happiness. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. How the emerging field of happiness studies involves psychologists, economists and policy-makers in defining what happiness is and determining how society might create the conditions in which it can flourish. Exploration of how happiness studies can uncover happiness at the heart of arguments about democracy, religion, and personal lifestyles, exploring what makes people happy across cultural, social, and national contexts. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KSA. Writing & Rhetoric 2: The Rhetoric of Childhood and Children's Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KSB. Writing & Rhetoric 2: Design Thinking: Bringing d. thinking to Research, Writing & Presentation. 4 Units.**

Prerequisite: PWR 1. There is no area of contemporary life where design is not a significant factor in shaping human experience. In this class, you will have the opportunity to learn more about design thinking and design studies. We will read works about play and creativity, the process of design thinking, and the ethics of design. You will choose a project idea and pursue research that will ultimately culminate in a print-based argument as well as a live oral presentation. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2KT. Writing & Rhetoric 2: The Great and Powerful Oz: The Rhetoric of Spokespersons. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2KTA. Writing & Rhetoric 2: A Rebel With A Cause: The Rhetoric of Giving a Damn. 4 Units.**

Prerequisite: PWR 1. In this course, we will explore a variety of movements from marriage equality and civil rights to climate change. We will also examine individuals and the manner in which they advance the causes that matter to them most, including astrophysicist Neil deGrasse Tyson, anti-racism activist Tim Wise, and equal education activist Malala Yousafzai. Ultimately, students will use knowledge gained to assist delivery of research, both in written and oral form, in cultural contexts and from the disciplinary perspective of students' choosing. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2LK. Writing & Rhetoric 2: Rhetoric in Crisis!. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2LM. Writing & Rhetoric 2: The Rhetoric and Aesthetic of War. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2LO. Writing & Rhetoric 2: Facing the Future: Climate Change Science, Impacts, and Solutions. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2LS. Writing & Rhetoric 2: Comics for Social Justice: The Rhetoric of Sequential Art. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MBR. Writing & Rhetoric 2: Buying a Better You: The Rhetoric of Self Improvement and the American Ideal. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MC. Writing & Rhetoric 2: Cultural Icons: The Rhetoric of Branding and Celebrity. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MF. Writing & Rhetoric 2: Speaking About Art: Narrating the Cantor's Collections. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of strategies for developing museum audio guides, including analysis of existing guides and behind-the-scenes work in the Cantor Arts Center. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MFA. Writing & Rhetoric 2: Searching for San Jose: Urban Studies Audio Walking Tours. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MFB. Writing & Rhetoric 2: Sustainability: Making an Impact with Research and Rhetoric. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MFC. Writing & Rhetoric 2: March for Science? Social Justice and the Rhetoric of Science. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MGD. Writing & Rhetoric 2: Silicon Valley and the Future of Work: Rhetoric of Labor Utopias and Dystopias. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MGE. Writing & Rhetoric 2: Rationality and culture: rhetorics of reason, madness, and science. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MO. Writing & Rhetoric 2: Rhetoric of Scientific Controversies. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2MS. Writing & Rhetoric 2: Seriously Funny: The Rhetoric of Humor. 4 Units.**

Prerequisite: PWR 1. As a rhetorical technique, humor holds unique persuasive power on a variety of political and cultural stages, evident in popular parody, satire, roasts, alternative news sources, public relations campaigns, and advertisements. Given this importance, we might ask, "what makes humor persuasive?" In this course, we will study humor through a variety of critical lenses, including those that examine humor as a unique appeal to pathos and those that argue it is entirely reliant upon logic. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2NF. Writing & Rhetoric 2: Language Gone Viral: Investigating the Rhet. of Social Media and Digital Comm.. 4 Units.**

Prerequisite: PWR 1. In this course, we will reinforce our understanding of the research writing process and develop oral communication skills to investigate changes in digital language use. This course also examines the extent to which our daily lives have become deeply dependent on our usage of personal electronic devices for online communication. Is our attachment to technology truly limiting the quality of our conversations? Or could such interactions provide a means for introverts to better interact with others? For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2PB. Writing & Rhetoric 2: The Power of Political Photography. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Topics include the role of photographers and photo-journalists in helping viewers see the world differently and the political implications of fashion photography, environmental photography, music photography, and fashion photography. Traditional readings as well as archival and field research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PBA. Writing & Rhetoric 2: Calling All Astronauts: Researching, Writing, and Talking about Tomorrow. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2PBC. Writing and Rhetoric 2: Why Do Geniuses Come in all Sizes, Shapes, and Colors?. 4 Units.****PWR 2PH. Writing & Rhetoric 2: Equal Treatment: The Rhetoric of Public Health. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of how public health discourses influence policymaking, practitioners, and community members, how the public understands the rhetoric of public health, and how that understanding affects public and government support of health-related research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PHA. Writing & Rhetoric 2: You Go Girl: The Rhetoric of Gender Equality. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PHB. Writing & Rhetoric 2: Indecision 2012: The Rhetoric of Politics. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RC. Writing & Rhetoric 2: Red Pill or Blue Pill? : The Rhetoric of Drugs. 4 Units.**

Prerequisite: PWR 1. The theme of this course is the relationship between humans and drugs, particularly how the human brain interacts with and is altered by ingested substances. Simultaneously we will explore how drug use is promoted, regulated, sensationalized, and commercialized. We will examine a wide range of perspectives: indigenous discovery, cultural and medical applications, biological mechanisms, sociological implications, artistic and poetic interpretation, and constitutional law. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2RHC. Writing & Rhetoric 1: The Rhetoric of Speaking. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2RL. Writing & Rhetoric 2: The Rhetoric of the Natural and Beyond. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2RP. Writing & Rhetoric 2: The Power of Sports: Rhetoric and Athletics in Contemporary Society. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RT. Writing & Rhetoric 2: Stepping Out of the Shadows: Music, Bass Guitar, and the Rhetoric of Revoluti. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of how the emergence of the electric bass in the fifties helped usher in a revolution that challenged commonplace assumptions concerning nationality, race, gender, and sexuality. Exploration of the history of the electric bass as a case study of musical revolutions, focusing on how music revolutions reflect emerging ideologies in any given culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RTA. Writing & Rhetoric 2: Postmodernism and the Rhetoric of Uncertainty. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Inquiry into major theories of the postmodern and analysis of postmodernism's effect on culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SB. Writing & Rhetoric 2: Writing 'Science': Fact, Fiction, and Everything Between. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of science fiction and popular writing about science and technology as arguments about where we are headed, where we are, who we are, and what we value. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SBA. Writing & Rhetoric 2: The Rhetoric of Human Enhancement. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of science fiction and popular writing about science and technology as arguments about where we are headed, where we are, who we are, and what we value. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SC. Writing & Rhetoric 2: Are We There Yet?: The Rhetoric of Mobility. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2SG. Writing & Rhetoric 2: Bodies of Knowledge: The bodily foundations of human thought and reason. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SGA. Writing & Rhetoric 2: Lie Detection and the Social Functions of Deception. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SH. Writing & Rhetoric 2: The Ugly American: Tourism and the Rhetoric of Power. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of the Ugly American in aesthetics and culture, in films and novels, tourist locations and business conferences, to illuminate America's complex role in the world. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SI. Writing & Rhetoric 2: The Rhetoric of Privilege. 4 Units.**

Prerequisite: PWR 1. Drawing from academic articles, newspaper and magazine stories, social media, television, and film, we will examine rhetoric in moments like the Rio Olympics to bring to the forefront the privilege that lies beneath. We will analyze various forms of privilege and their intersections, from race and gender to socioeconomic class, sexual orientation, citizenship, physical ability, and so on. We will also scrutinize our own privilege as part of the Stanford community. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2SL. Writing & Rhetoric 2: Got Ads: Visual Design in Print Advertising. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Introduction to the rhetorical interplay of visuals, text, and design layout in print advertising, and narrative, classificatory, and dynamic patterns in print advertisement campaigns. Culminates in design and presentation of an original ad campaign. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SLA. Writing & Rhetoric 2: Information Design: The Visual Language of Graphic Communication. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SM. Writing & Rhetoric 2: Dirty, Pretty Things: The Rhetoric of Objects and Objectification. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of objects and objectification, from the relationships shared by cultures, objects, and people to how human beings have been objectified through colonialism, enslavement, sex-trafficking, and organ trade. Material objects discussed in terms of staging, collecting, design, location, inheritance, and cultural meaning. Service Learning Course (certified by Haas Center). See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SN. Writing & Rhetoric 2: Rhetoric of Activism. 4 Units.**

Prerequisite: PWR 1. This course examines the role of rhetoric in discussions surrounding political inactivity as well as the burgeoning activism of today. Quintessential to our investigation of the rhetorical modes of activism is our exploration of varied and often contesting definitions of "democracy" and "civic engagement." For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2SPA. Writing & Rhetoric 2: Other Selves: The Art & Science of Friendship. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SS. Writing & Rhetoric 2: Mass Audiences and Modern Communication. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the ability to reproduce a work for increasingly large audiences has fundamentally changed the nature of art and its effect on culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SSB. Writing & Rhetoric 2: Superfans and Scholars: Writing Fan Culture. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2ST. Writing & Rhetoric 2: Science, Democracy and Social Media. 4 Units.**

Prerequisite: PWR 1. Social media have greatly enlivened and democratized science communication so that it now moves between scientists and various audiences. Scientific content is no longer static, nor is it merely for advanced researchers. Scientists using social media are learning to assess content collaboratively to help provide better science in public communication. One of the particular obligations of university science students is to join the conversation, help review and revise content in the public sphere. Students in this course will actively engage in the evolving world of science communication and practice their scientific writing, research and oral presentation skills. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2STA. Writing & Rhetoric 2: Ethics and AI. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2SU. Writing & Rhetoric 2: Hollywood Bollywood: Rhetoric of India in Global Cinema. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the rhetoric of India is constructed for an international audience through films and how such representations have coincided with India's recent economic success to give rise to a new trend in global popular culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SW. Writing & Rhetoric 2: Propaganda of World War II: Strategies of Persuasion. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Through work with the Hoover Archives, exploration of how written, visual, and film sources were used by a variety of countries to influence their citizens during WWII. Topics include the rhetoric of eugenics, political speeches, war posters, and how advertising during WWII pursued clear agendas to support government goals. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2TB. Writing & Rhetoric 2: Hip-hop, Orality, and Dialect Diversity. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2TS. Writing & Rhetoric 2: The Rhetoric of the Experiment. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2TSC. Writing & Rhetoric 2: Dangerous Emotions: The Rhetoric of Feeling and Identity. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2VK. Writing & Rhetoric 2: Framing Reality: The Rhetoric of Documentaries. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2WG. Writing & Rhetoric 2: All That Jazz: The Rhetoric of American Musical Theater. 4 Units.**

Prerequisite: PWR 1. Building on a series of written assignments and oral presentations that culminate in a major research project, we'll explore the conventions and strategies that define the genre of American musical theater, analyzing how contemporary musicals mirror, revise, and even subvert these traditional rules. Watching musicals on film, reading reviews by theater critics, and attending a local production, we'll examine a range of cultural arguments made by American musicals. For more information about PWR 2, see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>. For full course descriptions, see <https://vcapwr-catalog.stanford.edu>. Enrollment is handled by the PWR office.

**PWR 2WS. PWR 2 Studio. 1 Unit.**

The PWR 2 Studio is designed for multilingual and/or international student writers and is taken concurrently with PWR 2. The Studio provides students an opportunity to work with other multilingual students and an instructor with a background in second language writing and speaking to develop writing habits and oral presentation strategies to support their work in PWR 1 and other communication contexts. Please see <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2/pwr-writing-studio> for more information. Prerequisite: Application. Co-requisite: PWR 2.

**PWR 2ZS. Writing & Rhetoric 2: Designing Memorials: Building Rhetoric into Commemoration. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 4. Directed Writing. 3-4 Units.**

Further work on developing writing. Analysis and research-based argument, writing for a range of audiences and in varied disciplinary contexts. Workshops and individual conferences. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 5. Independent Writing. 1-5 Unit.**

Individual writing project under the guidance of a PWR instructor. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 6. Writing Workshop. 1-3 Unit.**

Writing workshop for collaborative, group, and individual projects guided by a specific theme or genre.

**PWR 6ASB. ASB 2016-17: Redefining Stem. 1 Unit.**

Redefining STEM is an Alternative Spring Breaks course and trip organized through the Haas Center. This class aims to examine STEM as a social issue through four main intersections: culture/history of STEM, STEM education, science communication, and corporate science & service. See <http://asb.stanford.edu> for more information.

**PWR 6LSP. PWR 6 Leland Scholars Program: Academic Writing and Argument. 1 Unit.**

What does it mean to write effectively in today's culture? How do we best persuade others in the different contexts situations that we encounter each day? How can we argue effectively about ideas that matter to us, whether in the classroom, with friends, or in broader social contexts? These questions form the basis for this course, which focuses on providing an introduction to rhetorical thinking, college-level research, academic writing, and crafting well-reasoned arguments.

**PWR 6VT. Researching and Writing About Popular Culture. 3 Units.**

What does popular culture say about the larger culture? In this class, we use questions about pop culture – such as video games, pop music, sports, TV, and other popular products – as a basis for writing and researching. How do video games help us to learn about engineering and physics? How do the virtues of leadership and teamwork get exploited by the extraordinary amounts of money made by owners of professional sports teams? Have TV police shows shaped what courtroom juries expect from DNA evidence? We'll learn how to look at pop culture through the lens of the cultural critic – someone who uses concepts about sociology and anthropology, even biology and economics, to analyze human behavior and its implications. We'll be analyzing clips from pop culture samples – videos, magazines, advertisements, movies – as well as theories about media and pop culture to research how these everyday artifacts are at the same time both trashy, meaningless moments, and poignant reminders of who we are. We start by writing an analytical essay about popular culture commentary, move into writing about library research regarding a topic of your choice, and close by sharing research in oral presentations. At each step, we work together as a group, doing workshops and peer review to practice collaboration and project-based learning.

**PWR 91. Intermediate Writing. 3 Units.**

For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91CG. Intermediate Writing: Science and Technology Writing for Popular Audiences. 3 Units.**

Whether you're a fuzzy or a techie, chances are you've had to explain the content of the classes you've taken to outside audiences. You've had to explain to your parents how your/their tuition dollars are at work, or you've advocated for your well-rounded background during a job interview. Your access to Stanford has granted you a certain expert label, even if it doesn't always feel that way. This course leverages your growing expertise by introducing you to writing styles and genres that will allow you to communicate your technical interests to a non-expert, or popular, audience. We'll talk about stylistic points including story ledes and anecdotes, metaphor, and organizing familiar and non-familiar language in our writing. We'll also experiment with different genres that accomplish these translation goals by experimenting with writing abstracts, journalism pieces, provocative podcasts, first-person narratives, visual essays, and creative non-fiction essays. Our ultimate goal will be to not only better understand these styles and genres in order to communicate more effectively with a wide variety of audiences, but to also seek publication in local newspapers, blogs, and sources such as *Salon*, *Slate*, *The Huffington Post*, *The Atlantic*, and even *Wired* or *Radiolab*.

**PWR 91CL. Intermediate Writing: Self & Science. 4 Units.**

"Self & Science" mines the intersection of memoir and science writing. In this advanced experimental writing course, students will read a selection of essays by writers including Lewis Thomas, Oliver Sacks, Annie Dillard, and Mark Doty, which illustrate the shared intellectual foundation in observation of scientific and poetic inquiry. Building on these readings, students will be challenged to produce an experimental essay that transgresses genre boundaries in the service of considering how personal reflection can narrate researched discoveries. Over the course of the quarter, students are invited to bolster their overall communication acumen, enhance their ability to share valuable discoveries beyond the confines of their major discipline, and practice the difficult bliss of engaging a discerning public audience. Click here for course video and full description: <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/self-science>.

**PWR 91CW. Intermediate Writing: Seeing is Believing. 4 Units.**

In this course, students will study and practice techniques and rhetorics of data visualization based on principles of rhetorical history, visual rhetorics and graphic design as well as cognitive science, design thinking, and other disciplines that inform critical conversations around information display and data visualization. For more information visit <https://undergrad.stanford.edu/programs/pwr/courses/additional-elective-courses/seeing-isand-believing-rhetoric-big-data-visualization>.

**PWR 91D. Intermediate Writing: Your American Life. 3 Units.**

In this course, you'll read and listen to some of the most moving and insightful pieces of the last decade, explore the important differences between print and oral storytelling, and then script and record your own full-length audio piece. Along the way, we will explore many craft elements that apply equally to print and audio pieces. You will learn, for example, how to organize your material, choose an effective structure, blend dramatization and reflection, ground insights in concrete scenes, create a strong narrative arc, and manage elements such as characterization, description, and dialogue. We will also, of course, explore craft elements unique to the audio form and you will learn how to use your voice and other sonic elements to craft the kind of piece you might hear on *This American Life*. Through a special arrangement with the Stanford Storytelling Project, in the spring of 2012 this course will feature special sessions with prominent contributors to *This American Life*. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91E. Intermediate Writing: The Oral Tradition: Myth, Folklore, and Fairy Tale. 3 Units.**

Contemporary storytelling covers a variety of media - from movies to novels, theatre and beyond. What this course offers is an in depth study of the roots of that practice - the oral tradition. Over the course we will explore many different motifs and structures that arise in the oral tradition, myth, folklore and fairy tale. What universal themes do we detect, and what separates the progression of a Pacific Northwest Trickster story from an Arthurian romance? Why is it that in the early twenty first century many of our most acclaimed art forms carry narrative forms that are thousands of years old? Star Wars, Lord of the Rings and the recent Broadway show Jerusalem, all follow scenic progressions informed by myth. The first encounter with the story will be an oral narrative - the myth told unscripted in the classroom. The stories, which range from the Arthurian romance Parzival to Trickster folk tales, will be told in several sections - with a running exegesis and student response alongside. Many of these stories are now transcripts and have become works of literature. We will explore both the complementary aspects of this development, and areas of tension. During the course each student will embark on a project that demonstrates a thorough understanding of the topics covered, and utilizes those elements in their wider practice of writing and rhetoric. The project will be to research a story handed down within the family - an adventure of some distant relative, or a family migration from one country to another. Factoring in elements from the taught class, the student will mythologize the story: by writing an in depth commentary on its implications - factoring in contemporary, psychological and metaphorical associations. The second element will be to tell the story to the class. In these ways we experience myth as a living principle, not something just from a long time ago.

**PWR 91EC. Intermediate Writing: Farmers, Scientists, & Activists: Public Discourse of Food Economies. 4 Units.**

What are the possibilities in rethinking our food, the way we talk about it, the way we grow it, and the way we eat it? In this course, you will be paired with local organizations concerned with food economies, such as food activists, food banks, farmers, and farm collectives, to collaboratively draft and produce writing specific to the client. You will analyze and respond to a variety of professional writing situations, and practice project management, focusing on benchmarking and deliverables. The end result will be a multimodal, collaboratively-produced document or set of documents you can add to your public-facing portfolios. Students taking this course as part of the Notation in Science Communication can include their final project in their NSC e-portfolio. This course fulfills the advanced PWR requirement for the Notation in Science Communication (NSC). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For video course description, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/farmers-scientists-activists-public-discourse-food-economies>. (Cardinal Course certified by the Haas Center).

**PWR 91EP. Intermediate Writing: Communicating Climate Change: Navigating the Stories from the Frontlines. 4 Units.**

In the next two decades floods, droughts and famine caused by climate change will displace more than 250 million people around the world. In this course students will develop an increased understanding of how different stakeholders including scientists, aid organizations, locals, policy makers, activists, and media professionals communicate the climate change crisis. They will select a site experiencing the devastating effects and research the voices telling the stories of those sites and the audiences who are (or are not) listening. Students might want to investigate drought-ridden areas such as the Central Valley of California or Darfur, Sudan; Alpine glaciers melting in the Alps or in Alaska; the increasingly flooded Pacific islands; the hurricane ravaged Gulf Coast, among many others. Data from various stakeholders will be analyzed and synthesized for a magazine length article designed to bring attention to a region and/or issue that has previously been neglected. Students will write and submit their article for publication. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

Same as: EARTHSYS 154

**PWR 91F. Finding Your Story. 3 Units.**

Life challenges us to become aware of the stories that shape us—family stories, cultural mythologies, even popular movies, television shows, and songs—and then create and live our own story. We face this challenge throughout our lives but perhaps most acutely as we move into adulthood; this is the period when we most need to become conscious of stories and their power, to gather wisdom, practices, and resources for finding our own story. This class, designed with seniors in mind, will illuminate and explore these resources and give you the opportunity to reflect deeply, in discussion and writing, on what truly calls to you in this life. We will engage with some of the world's great stories—myths, parables, teaching tales, modern fiction, even aphorisms, koans, and riddles. In them we can find both elements that resonate with our own story and provocations that help us unearth and cultivate our native gifts—the genius in each of us. We will look at short excerpts from masterworks and myths from around the world, all voices in the largest conversation we have as humans, the one that asks: who am I? why am I here? what truly matters? how can I be happy? Together we will investigate how these stories, and stories like them, can be used to help us find our own story. Students in this course will have a special opportunity to meet personally with poet Billy Collins and singer Aimee Mann when they visit campus in April. Does not fulfill NSC requirement. For students who have completed the first level of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first level of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91JS. Intermediate Writing: Stanford Science Podcast. 3 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91KS. Intermediate Writing: Design Thinking and Science Communication. 4 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91KSA. Intermediate Writing: Storytelling and Science. 4 Units.**

What is story? What is storytelling? And why would storytelling be crucial for science communication? In this class we will develop your Story IQ: we will learn how humans evolved to be the storytelling animal, how stories shape our lives, and why and how science communication needs storytelling in order to be relevant to public audiences. We'll move from looking at story architecture, to critiquing story structures (and stories) in science communications, and then to creating compelling stories of our own that communicate and/or correct science research or discovery. For course video and full description, visit <https://undergrad.stanford.edu/programs/pwr/courses/additional-elective-courses/science-and-storytelling>.

**PWR 91KT. Intermediate Writing: Game Set Match: Shaping Publics to Shape Movements. 4 Units.**

The success of a movement is never the work of one individual. In this course, students will investigate the specific case of Los Alamos scientist Wen Ho Lee and the media advocacy that aided in his release from solitary confinement after being accused of spying for China. Students will then analyze the role the public and news media frequently must play in the success of a cause, ultimately developing a website that publishes resources and interventions including students own digital media that moves a civil rights issue of their choice. For course video and full description, visit <https://undergrad.stanford.edu/courses/additional-elective-courses/game-set-match-shaping-publics-shape-movements>.

**PWR 91MC. Intermediate Writing : Activist Rhetoric. 4 Units.**

How do activists effectively strategize for social change? In this hands-on approach to studying activism and social justice issues, students will encounter new methods for mass communication, collaboration, and self-inquiry. First, we will consider how activists address practical problems in a variety of contexts, from protest movements to direct action, political lobbying to philanthropic capitalism, from Black Lives Matter to immigration activists. We will visit Stanford Special Collections to find inspiration in the Huey P. Newton Collection—the archive of the Black Panther Party. To inform these experiences, we will read and analyze texts by the Combahee River Collective, Angela Davis, Judith Butler, Fred Moten, and Jackie Wang, as well as inviting several activists to visit our classroom. Through collaborative and creative coursework, students will gain experience in intersectional thinking, community organizing, and collective action by conducting teach-ins, writing their own social justice manifesto, and planning a final campus-wide action. This course is part of the PWR advanced elective track in Social and Racial Justice (SRJ). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. See <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/activist-rhetoric> for full course description.

**PWR 91NSC. Intermediate Writing: Introduction to Science Communication. 4 Units.**

With the growing impact of science and technology on our society, the emphasis on communicating that science well has never been greater. But what is effective science communication? Is it ever ok to use jargon? Is it ok to say "I" in my research report? How do I communicate complex topics in simple, but accurate, ways? In this course, we will explore the variety of formats that science communication can take—from technical research papers on particle physics to children's books about genetics. We will explore how different audiences shape the way science is communicated, and we will develop a set of best practices for effective science communication. Students will then apply these strategies in their own science communication projects. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/nsc>. Required of students admitted into the Notation for Science Communication after January 2015.

**PWR 91OID. Creating Your Digital Story: Learn How to Build Your Online Identity and Why it Matters. 3 Units.**

Have you ever Googled yourself? If so, what information about you rises to the top? A picture of you in your band uniform from your high school? A poem you wrote and published on your Tumblr? Maybe your scores from a 5K you ran last year? It might seem like you don't have much control over what you see about yourself in a Google search, but the fact is, you do. The more that you create your own content, the more that your self-created information will rise to the top. Through learning the theories, tools, and techniques behind digital image management, this class will help prepare you for curating your digital self. In so doing, we can get better connected with the individuals and/or organizations that interest us. We will practice several pragmatic techniques for building our own personal ePortfolio (i.e. a website). Through participating in hands-on activities, storytelling exercises, and in-class discussions, you will have the opportunity to enact what we're learning and to experiment with different forms of expressing yourself online.

**PWR 91RS. Intermediate Writing: Communicating Bioinformation. 3 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91S. Intermediate Writing: Communicating Science. 3 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 99A. Portfolio Preparation I. 1 Unit.**

A 1-unit course introducing ePortfolios and folio thinking for students in the Notation in Science Communication (NSC). The course will assist students in designing a rhetorical ePortfolio and in selecting and reflecting on writing samples that represent student learning in science communication. This is the first of a two-part ePortfolio requirement for the NSC. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 99B. Portfolio Preparation II. 2 Units.**

A 2-unit culminating course on ePortfolios for students in the Notation in Science Communication (NSC). In this course, students will continue building, revising, and editing a portfolio of documents, slides, and videos that will demonstrate development as a science communicator. This is the second of a two-part ePortfolio requirement for the NSC. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

## Psychology (PSYCH)

**PSYCH 1. Introduction to Psychology. 5 Units.**

An introduction to the science of how people think, feel, and behave. We will explore such topics as intelligence, perception, memory, happiness, personality, culture, social influence, development, emotion, and mental illness. Students will learn about classic and cutting edge research, a range of methods, and discover how psychology informs our understanding of what it means to be human, addresses other fields, and offers solutions to important social problems. An alternative version of the course, PSYCH 1L, is also offered for reduced (3) units, but does not count for major/minor requirements for Psychology or other disciplines. For more information on PSYCH 1 and PSYCH 1L, visit <http://psychone.stanford.edu>.

**PSYCH 10. Introduction to Statistical Methods: Precalculus. 5 Units.**

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.

Same as: STATS 60, STATS 160

**PSYCH 101. Community Health Psychology. 4 Units.**

Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent.

Same as: HUMBIO 128

**PSYCH 101S. Introduction to Neuroscience. 4 Units.**

Introduction to structure and function of the nervous system. The course first surveys neuroscience research methods, physiology, and gross anatomy. We then study the brain systems which produce basic functions such as perception and motion, as well as complex processes like sleep, memory, and emotion. Finally, we examine these principles in cases of neurological and psychiatric disorders.

**PSYCH 102. Longevity. 4 Units.**

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

Same as: HUMBIO 149L, NENS 202

**PSYCH 102S. Introduction to Neuroscience. 4 Units.**

Introduction to structure and function of the nervous system. The course first surveys neuroscience research methods, physiology, and gross anatomy. We then study the brain systems which produce basic functions such as perception and motion, as well as complex processes like sleep, memory, and emotion. Finally, we examine these principles in cases of neurological and psychiatric disorders.

**PSYCH 103. Intergroup Communication. 3 Units.**

In an increasingly globalized world, our ability to connect and engage with new audiences is directly correlated with our competence and success in any field. How do our intergroup perceptions and reactions influence our skills as communicators? This course uses experiential activities and discussion sections to explore the role of social identity in effective communication. The objective of the course is to examine and challenge our explicit and implicit assumptions about various groups to enhance our ability to successfully communicate across the complex web of identity.

Same as: CSRE 103

**PSYCH 103F. Intergroup Communication Facilitation. 1 Unit.**

This is a TA training course for Psych 103 - Intergroup Communication.

Same as: CSRE 103F

**PSYCH 104S. Affective Science. 3 Units.**

This course will provide an introduction to a growing field known as affective science, which focuses on the study of emotion and other related phenomena (i.e., motivation, pain, etc.). We will explore core questions in affective science, including: 1) What is emotion and why is it useful? 2) How do emotions influence the way we perceive, attend to, and understand the world? 3) How do emotions become dysfunctional, and how can individuals control them? We will attempt to approach these questions from multiple perspectives, including i) neurobiological ii) behavioral, and iii) sociocultural perspectives.

**PSYCH 105. Social Neuroscience. 4 Units.**

Over the last 20 years, neuroscientists have become increasingly interested in studying topics that were previously the purview of social psychologists. In this seminar, we will survey neuroimaging research on topics such as self perception, person perception, empathy, and social influence. More broadly, we will consider the contributions that neuroscience can (and cannot) make to social psychological theory. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

**PSYCH 105S. General Psychology. 3 Units.**

In what ways does the scientific study of psychology increase our understanding of the thoughts, feelings, and behaviors we observe and experience in everyday life? What are the main areas of psychology and the different questions they seek to answer? This course will give you an introduction to the field of psychology and its many different areas. You will learn about the central methods, findings, and unanswered questions of these areas, as well as how to interpret and critically evaluate research findings.

**PSYCH 107S. Introduction to Social Psychology. 3 Units.**

A comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. Focus is on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Topics include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making.

**PSYCH 108. Longevity through Film. 3 Units.**

The media informs the understanding of life stages and shapes expectations about our futures. This course will explore the realities and fictions about life-span development through film. This course will revolve around selected films compared with the literature on life stages. Guest filmmakers, psychologists, sociologists and thought leaders will join the class to discuss human development.

**PSYCH 108S. Introduction to Social Psychology. 3 Units.**

This course aims to blend a comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. The course will focus on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Some of the topics covered in this class will include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making. The course, overall, will attempt to foster interest in social psychology as well as scientific curiosity in a fun, supportive and intellectually stimulating environment.

**PSYCH 109S. Introduction to Cognitive Neuroscience. 3 Units.**

3) Introduction of the neurobiology of behavior including the biology of nervous system, the neural basis for perception, learning, memory, decision making and neurological disorders. Introduction to different research techniques that are prevalent in current neuroscience studies including fMRI, EEG, TMS and single unit recording.

**PSYCH 10N. Kids, Culture, and Poverty: From Biology to Social Action. 4 Units.**

Years before they set foot in school, children growing up in poor families begin to diverge from children in richer families in their trajectories of cognitive and language growth. These differences have powerful and enduring consequences for the health, well-being, educational success, and longevity of individuals, as well as for the future prosperity of the societies in which children become adults. Early childhood is a time of both enormous promise and considerable risk, and parents in different cultures have widely differing practices and beliefs about their role in enabling children to avoid risk and achieve their potential. In this seminar we will evaluate evidence from the biological and social sciences showing how positive and negative experiences in infancy have profound and enduring effects on early brain architecture, with cascading consequences for later development in childhood and adulthood. We will also consider the challenges of designing more effective programs and social policies to provide support for families in diverse cultural contexts, with the goal of helping more children to reach their full potential.

**PSYCH 110S. Introduction to Cultural Psychology. 3 Units.**

In an increasingly globalized world, the ability to understand people from different cultural backgrounds, as well as understand how we are influenced by our own cultural contexts, is an essential skill. In this course, we will consider the many ways in which individuals shape, and are shaped by, institutions (e.g., education system; media; religion), social interactions (e.g., family; employers), and broad cultural ideas (e.g., democracy). Drawing from psychological research, we will analyze sociocultural sources of diversity in self, agency, cognition, emotion, motivation, development, and relationships. We will also analyze past and modern cultural products - including films, literature, music, and art - to better understand the transmission of culture. Each discussion will contribute to a better understanding of the hidden factors that guide daily experiences and the various opportunities and barriers to creating social change. The course will empower students to recognize and analyze the influence of culture on everyday functioning and apply that understanding to improving their own and other people's outcomes.

**PSYCH 111S. Abnormal Psychology. 3 Units.**

This course will provide an introduction to abnormal psychology. It will be targeted towards students who have had little or no exposure to coursework on mental disorders. The course will have three core aims: 1) Explore the nature of mental disorders, including the phenomenology, signs/symptoms, and causal factors underlying various forms of mental illness, 2) Explore conventional and novel treatments for various mental disorders, 3) Develop critical thinking skills in the theory and empirical research into mental disorders. The course will explore a wide range of mental disorders, including depression, anxiety, schizophrenia, addiction, eating disorders, and personality disorders.

**PSYCH 113S. Developmental Psychology. 3 Units.**

This class will introduce students to the basic principles of developmental psychology. As well as providing a more classic general overview, we will also look towards current methods and findings. Students will gain an appreciation of how developmental psychology as a science can be applied to their general understanding of children and the complicated process of growing into adults.

**PSYCH 115S. Personality Psychology. 3 Units.**

This course will focus on current empirical and theoretical approaches to personality. Lectures will be organized around the following questions central to personality research: How and why do people differ? How do we measure individual differences? Does personality change over time? How does personality interact with sociocultural factors to influence behavior? What makes people happy? What are the physical, mental, and social consequences of personalities?

**PSYCH 11N. Origin of Mental Life. 3 Units.**

Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops.

**PSYCH 120. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.**

Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology.

Same as: BIO 153

**PSYCH 121. Ion Transport and Intracellular Messengers. 3 Units.**

(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology.

Same as: PSYCH 228

**PSYCH 125S. Language and Thought. 3 Units.**

How are we able to produce and comprehend language in all its complexity? How does language processing interact with other parts of cognition? In this course, we will focus on several main themes: language production and comprehension, discourse, language acquisition, bilingualism, and linguistic relativity. We will explore these themes through lecture, demonstrations, analysis of empirical work, and student-led discussion. Special attention will also be given to the various experimental methods we use to conduct psycholinguistic and developmental research (e.g., self-paced reading, eye-tracking, cross-modal priming, and neural imaging).

**PSYCH 12N. Self Theories. 3 Units.**

Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed.

**PSYCH 130. Experimental Pragmatics. 3 Units.**

How do we understand language as it is used in context? Pragmatic reasoning allows us to go beyond the literal semantics of what someone says to infer what they actually meant. This course will be an in-depth investigation of recent experimental work on pragmatics. Students will read the primary research literature as they learn the skills necessary to develop and run an original experiment investigating our pragmatic inference abilities. Required: Psych 131, Linguist 130A, Linguist 188, or permission of instructor.

**PSYCH 135. The Psychology of Diverse Community. 3 Units.**

This course is an exploration. Its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities e.g. schools, universities, academic disciplines, etc.

Same as: CSRE 135P

**PSYCH 136. The Psychology of Scarcity: Its Implications for Psychological Functioning and Education. 3 Units.**

This course brings together several literatures on the psychological, neurological, behavioral and learning impact of scarcities, especially those of money (poverty) time and food. It will identify the known psychological hallmarks of these scarcities and explore their implications for psychological functioning, well-being and education—as well as, how they can be dealt with by individuals and in education.

Same as: PSYCH 236A

**PSYCH 136S. Learning and Memory: Theory and Applications. 3 Units.**

This course explores how our behavior in the present is guided by our past experiences, and how we can apply these principles to our own learning and to the broader world around us. We will explore the theory of learning and memory, including an introduction to multiple memory systems, the ways in which memory can succeed but also fail, and how memory integrity changes across the lifespan and across clinical populations. We will also explore applications of this theoretical content to the real world technologies and policies that touch our everyday lives, such as applications in brain training, advertising, the legal system, and the classroom.

**PSYCH 138. Wise Interventions. 4 Units.**

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.

Same as: PSYCH 238, PUBLPOL 238

**PSYCH 138S. Motivation to Learn. 3 Units.**

Why do some students delight at the thought of challenging tasks while others only care about getting the grade? Why do some seek out opportunities to learn in and out of school while others feel anxious just showing up to class? Why do our failures sometimes debilitate and other times invigorate? How do we turn our desires to achieve into concrete action? Where do these motivational processes come from and how might we use our understanding of motivation to improve educational systems? This course will address these and other fascinating questions as we consider theory and research on motivation, primarily as it applies to educational contexts. The course will be based largely around interactive discussions of primary source articles, with some lecture in order to provide you with important background information and a framework for discussing the readings.

**PSYCH 139S. Psychology of Women. 3 Units.**

Women comprise half of the human population, yet throughout much of history, the study of human thought and behavior has been largely male focused. In fact, some of the earliest psychological studies of women were conducted primarily to argue for the evolutionary supremacy of men. During the past fifty years, the field of psychology has made significant strides towards considering women and men equally worthy subjects of inquiry. In this course, we will discuss this growing body of research related to gender and the female experience. We will focus on six main themes: social and biological approaches to studying gender, evidence for gender similarities and differences, gender stereotypes and sexism, gender and language use, women in the workplace, and female sexuality. We will explore these themes through lectures, in class demonstrations, analysis of empirical work, and student led discussion.

**PSYCH 13N. Emotion Regulation. 3 Units.**

This seminar provides a selective overview of the scientific study of emotion regulation. Topics include: theoretical foundations, cognitive consequences, developmental approaches, personality processes and individual differences, and clinical and treatment implications. Our focus is on interesting, experimentally tractable ideas. Meetings will be discussion based.

**PSYCH 140. Introduction to Psycholinguistics. 4 Units.**

How do people do things with language? How do we go from perceiving the acoustic waves that reach our ears to understanding that someone just announced the winner of the presidential election? How do we go from a thought to spelling that thought out in a sentence? How do babies learn language from scratch? This course is a practical introduction to psycholinguistics – the study of how humans learn, represent, comprehend, and produce language. The course aims to provide students with a solid understanding of both the research methodologies used in psycholinguistic research and many of the well-established findings in the field. Topics covered will include visual and auditory recognition of words, sentence comprehension, reading, discourse and inference, sentence production, language acquisition, language in the brain, and language disorders. Students will conduct a small but original research project and gain experience with reporting and critiquing psycholinguistic research.

Same as: LINGUIST 145

**PSYCH 140S. Sport Psychology. 3 Units.**

Focus is on research methods and findings and how to apply these findings to students' own performance. Topics include methods of performance enhancement, psychological characteristics of top performers, group dynamics and processes, effective leadership practices, the effects of stereotyping on sport participation and performance, and debates in the field. Emphasis will be on sports, although most topics can be applied to performance in general.

**PSYCH 141. Cognitive Development. 3 Units.**

This course aims to offer an understanding of how human cognition & the ability to think, reason, and learn about the world & changes in the first few years of life. We will review and evaluate both classic findings and state-of-the-art research on cognitive development, and learn about the methods used to reveal what children know and think about the world. The course will help students to understand, discuss, and critically evaluate the major theories and explanations of intellectual growth, and consider implications of cognitive development research on real-world issues in education and social policy. Prerequisites: Psych 1.

**PSYCH 141S. Health Psychology. 3 Units.**

Why is it so difficult for people to stick to an exercise plan? Why don't people take their doctor's advice? Why aren't public health announcements more effective? This course addresses these questions by providing an overview of health psychology: the scientific study of behaviors and cognitive processes related to health states. In this course, we will discuss the mind/body connection, the influence of social/cultural and physical environments on our health, cognitive processing of health information, health belief models, and the link between emotion and health. Understanding the interactions between these biological, psychological, and social influences on individuals' health states is crucial for developing effective health communication and intervention programs. We will approach all course topics from both theory-driven and applied perspectives.

**PSYCH 145. Seminar on Infant Development. 1-2 Unit.**

For students preparing honors research. Conceptual and methodological issues related to research on developmental psycholinguistics; training in experimental design; and collection, analysis, and interpretation of data.

**PSYCH 146. Observation of Children. 3-5 Units.**

Learning about children through guided observations at Bing Nursery School, Psychology's lab for research and training in child development. Physical, emotional, social, cognitive, and language development. Recommended: 60.

**PSYCH 147. Development in Early Childhood. 3-5 Units.**

Supervised experience with young children at Bing Nursery School. 3 units require 4 hours per week in Bing classrooms throughout the quarter; 4 units require 7 hours per week; 5 units require 10.5 hours per week. Seminar on developmental issues in the Bing teaching/learning environment. Recommended: 60 or 146, or consent of instructor.

**PSYCH 147S. Introduction to the Psychology of Emotion. 3 Units.**

Our emotions influence how we perceive the world, inform how we make critical life decisions, and connect us with other people. Affective science, the scientific study of emotion, investigates how emotions shape our lives. In this course, we explore how emotions arise as feelings we experience, behaviors we commit, and physiological reactions to our environments. Across these levels of analysis, we will consider how emotions interact with our personalities, past experiences, future goals, stages of development, and socio-cultural surroundings. We will learn how affective science has clarified the nature of emotion, how emotions evolved across diverse animal species, and how emotions impact our health and relationships with others. You will leave this class with an improved, scientifically-informed understanding of your own and others emotions, and strategies for how to effectively use and manage your feelings in daily life.

**PSYCH 148S. The Psychology of Bias: Stereotyping, Prejudice, and Discrimination. 3 Units.**

From Black Lives Matter to mansplaining, issues of stereotyping, prejudice, and discrimination grab our attention and draw our concern. This course brings together research from social, cognitive, affective, developmental, cultural, and neural perspectives to examine the processes that reflect and perpetuate group biases. Along with these various research perspectives, we will consider perspectives of both privileged and disadvantaged group members. Where do stereotypes come from? Why is race so hard to talk about? Can we be biased without knowing it? How can we reduce prejudice and conflict? We will address these and other questions through lectures, class discussion, and group presentations.

**PSYCH 150. Race and Crime. 3 Units.**

The goal of this course is to examine social psychological perspectives on race, crime, and punishment in the United States. Readings will be drawn not only from psychology, but also from sociology, criminology, economics, and legal studies. We will consider the manner in which social psychological variables may operate at various points in the criminal justice system- from policing, to sentencing, to imprisonment, to re-entry. Conducted as a seminar. Students interested in participating should attend the first session and complete online application for permission at <https://goo.gl/forms/CAut7RKX6MewBluG3>. Same as: CSRE 150A

**PSYCH 150B. RACE AND CRIME PRACTICUM. 2-4 Units.**

This practicum is designed to build on the lessons learned in Psych 150: Race & Crime. In this community service learning course, students will participate in community partnerships relevant to race and crime, as well as reflection to connect these experiences to research and course content. Interested students should complete an application for permission at: <https://goo.gl/forms/CAut7RKX6MewBluG3>. Prerequisite: Psych 150 (taken concurrently or previously). Same as: CSRE 150B

**PSYCH 152. Mediation for Dispute Resolution. 3 Units.**

Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions. Same as: EDUC 131

**PSYCH 152F. Doing Race and Ethnicity: How and Why it Matters. 3 Units.**

Going to school and work, renting an apartment, going to the doctor, watching television, voting, reading, and attending religious services are all activities that involve doing, consciously or unconsciously, race and ethnicity. In this course, we draw from history, psychology, genetics, and literary studies to understand contemporary racial formations and cultural representations. Course will include two 50-minute lectures with a required online discussion section. Enrollment capped at 20 students.

**PSYCH 154. Judgment and Decision-Making. 3 Units.**

Survey of research on how we make assessments and decisions particularly in situations involving uncertainty. Emphasis will be on instances where behavior deviates from optimality. Overview of recent works examining the neural basis of judgment and decision-making.

**PSYCH 155. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section. Same as: CSRE 196C, ENGLISH 172D, SOC 146, TAPS 165

**PSYCH 156. Communicating Neuroscience. 3 Units.**

Understanding the structure and function of the brain is presently an international goal with Brain Initiatives in the United States, Europe, and Japan. Due to this global interest, knowledge about the brain is influencing all aspects of society. As such, accurate communication and translation of neuroscience findings are of utmost importance. This course will examine ways to translate and to communicate neuroscience research for public outreach, with a focus on the role of technology. Topics include: television, feature articles, blogs, documentaries, and online videos. Students will learn different ways to accurately translate and communicate neuroscience topics in the context of theoretical and methodological approaches and to apply these tools in an original way to generate a completed outreach piece by the end of the course.

**PSYCH 161. Emotion. 3 Units.**

(Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas. Same as: PSYCH 261

**PSYCH 164. Brain decoding. 3 Units.**

Can we know what someone is thinking by examining their brain activity? Using knowledge of the human visual system and techniques from machine learning, recent work has shown impressive ability to decode what people are looking at from their brain activity as measured with functional imaging. The course will use a combination of lectures, primary literature readings, discussion and hands-on tutorials to understand this emerging technology from basic knowledge of the perceptual (primarily visual) and other cognitive systems (such as working memory) to tools and techniques used to decode brain activity. Prerequisites: Either Psych 30 or Psych 50 or Consent of Instructor.

**PSYCH 168. Emotion Regulation. 3 Units.**

(Graduate students register for 268.) The scientific study of emotion regulation. Topics: historical antecedents, conceptual foundations, autonomic and neural bases, individual differences, developmental and cultural aspects, implications for psychological and physical health. Focus is on experimentally tractable ideas. Same as: PSYCH 268

**PSYCH 169. Advanced Seminar on Memory. 3 Units.**

Memory and human cognition. Memory is not a unitary faculty but consists of multiple systems that support learning and remembering, each with its own processing characteristics and neurobiological substrates. This advanced undergraduate seminar will consider recent discoveries about the cognitive and neural architectures of working, declarative, and nondeclarative memory. Required: 45.

**PSYCH 16N. Amines and Affect. 3 Units.**

Preference to freshmen. How serotonin, dopamine, and norepinephrine influence people's emotional lives. This course is ideal for students that would like to get deeper exposure to cutting edge concepts and methods at the intersection of psychology and biology, and who plan to apply their knowledge to future research.

**PSYCH 170. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 164, COMM 264, POLISCI 124L

**PSYCH 171. Research Seminar on Aging. 4 Units.**

Two quarter practicum exposes students to multiple phases of research by participating in a laboratory focusing on social behavior in adulthood and old age. Review of current research; participation in ongoing data collection, analysis, and interpretation. Prerequisites: 1, research experience, and consent of instructor. May be repeated for credit.

**PSYCH 172. Self-fashioning. 3 Units.**

This undergraduate and graduate seminar will examine philosophical and psychological literature relevant to self-fashioning. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: consent of instructor. May be repeat for credit.

Same as: PHIL 186A, PHIL 286A

**PSYCH 175. Social Cognition and Learning in Early Childhood. 4 Units.**

Social cognition - the ability to recognize others, understand their behaviors, and reason about their thoughts - is a critical component of what makes us human. What are the basic elements of social cognition, and what do children understand about other people's actions, thoughts, and feelings? How do these capacities help us understand the world, as learning unfolds in the first few years of life? This course will take a deeper look at the intersection of social cognition and cognitive development to better understand how children learn about the world. Students will explore various topics on social cognition with an emphasis on (but not limited to) developmental perspectives, including face perception, action understanding, Theory of Mind, communication, and altruism, and think about how these abilities might be linked to the developmental changes in children's understanding of the world. The course will encourage students to think hard about the fundamental questions about the human mind and how it interacts with other minds, and the value of studying young children in addressing these questions. Students should expect to read, present, and discuss theoretical and empirical research articles and to develop original research proposals as a final project. Students will have an opportunity to develop their proposals into a research project in PSYCH 187, a lab course offered every other year in Spring (next offer expected to be Spring 2018) as a sequel to this course. This course fulfills the WIM requirement. Prerequisites Psych 60 or Psych141, or see instructor.

**PSYCH 176. Biology, Culture and Family in Early Development. 3-4 Units.**

Early childhood is a time of both enormous promise and vulnerability. Parents differ widely in their practices and beliefs about their role in enabling children to avoid risk and to achieve their potential for a healthy and productive life in the particular physical, social and cultural contexts of the communities and societies in which they live. In this seminar we will evaluate evidence from the biological and social sciences showing how experiences in infancy have profound and enduring effects on early brain architecture, with consequences for later language, cognitive, and socio-emotional development in childhood and adulthood. We will also consider the challenges of designing more effective social policies and programs to provide support for families in diverse socioeconomic and cultural contexts, who all want to help their children thrive. A community-service learning option, working with children as a reading tutor, is included for students taking this class for 4-units. Enrollment is limited and consent of instructor is required. Please send a brief statement of your interests, goals, and academic preparation relevant to the themes of this class to Prof. Fernald (afernald@stanford.edu). Pre-requisites: Psych 01 and Psych 60, or Human Biology 3B.

Same as: HUMBIO 147

**PSYCH 178. New Methods for Old Questions: Linking Social Cognition and Social Cognitive Neuroscience. 3 Units.**

Novel technology can fuel new discoveries and generate new questions for future research. For instance, looking-time methods for studying infants or response time (RT) measures in cognitive psychology have been enabled by the use of computers and video cameras. More recently, neuroimaging techniques (such as fMRI) have transformed the field by offering a more direct look into the working human brain. These methods are, in a way, 'old' and 'new' ways of studying what psychologists want to study - mental representations. What are the promises and challenges of using these methods to study human cognition and its development? What have we learned, where have we fallen short, and why? Most importantly, how can we make the most out of these new methods to bear on our understanding of social cognition and its development? After the first two weeks of lectures on basic methods, each week we will consider a topic that has been extensively studied in cognitive development literature. Topics will include: perception of agency, theory of mind, and morality; on each topic, we will compare two different ways of studying mental representations - the 'old' way (behavior) and the 'new' way (neural response) - to assess their relative benefits and shortcomings, and to discuss the promises and pitfalls for combining the two. This course will be a combination of lectures, presentations, and discussions aimed primarily for upper-class undergraduate students or graduate students who do not have much background in neuroimaging methods, but interested in learning more about neuroimaging methods and think about how these methods can (and cannot) help address questions about social cognition and development. Prerequisite: Psych 60 or Psych141, or see instructor.

**PSYCH 180. Social Psychological Perspectives on Stereotyping and Prejudice. 4 Units.**

The seminar will review classic and current literature from social psychology on stereotyping and prejudice. We will cover the perceiver's perspective including the formation and maintenance of stereotypes, the functions and costs of stereotyping, and stereotype change. We will also explore how targets are affected by stereotypes and prejudice, as well as intergroup relations. Recent research concerning the role of cognitive, affective, motivational and behavioral processes will be emphasized.

**PSYCH 180A. SPARQshop: Social Psychological Answers to Real-world Questions. 3 Units.**

Undergraduate and graduate students will work in teams to design, build, test, and distribute online toolkits that help practitioners solve real-world problems by applying social science. Graduate students can build toolkits for their own research. Students will learn how to assess the needs of practitioner audiences; write text, design graphics, and program activities for these audiences; prepare, deliver, and produce a TED-style online video; design surveys in Qualtrics; and build and user-test the toolkit. Readings and class discussions will include modules on design thinking, storytelling, science writing, information design, and impact evaluation. For an example of a toolkit in progress, please visit [spacereface.org](http://spacereface.org). Permission of instructor required.

Same as: PSYCH 283A

**PSYCH 183. SPARQ Lab. 2-3 Units.**

Join SPARQ (Social Psychological Answers to Real-world Questions) as a research assistant and help with projects addressing real-world issues.

**PSYCH 186. The Psychology of Racial Inequality. 3 Units.**

Our topic is the psychology of racial inequality - thinking, feeling, and behaving in ways that contribute to racial stereotyping, prejudice, and discrimination, and how these processes in turn maintain and perpetuate inequality between racial groups. We will examine how these processes unfold at both the individual and the institutional levels. Throughout this course, you will familiarize yourself with the psychological perspectives, methods, and findings that help explain racial inequality, and we will explore ways to promote racial equality. The course will be conducted as a seminar, but most of what you learn will be through the readings and discussions. That is, this course is minimally didactic; the goal is to have you engage thoughtfully with the issues and readings spurred in part by sharing perspectives, confusions, and insights through writing and discussion. Each student will facilitate at least one class session by providing an introductory framework for the readings (~10-minute presentation with handouts that overviews the concepts, issues, and controversies). Together, we will broaden our knowledge base on the subject and explain, from a psychological perspective, the pervasiveness of racial inequality. Prerequisites: PSYCH 1 and PSYCH 10.

Same as: CSRE 186, PSYCH 286

**PSYCH 187. Research Design, Implementation, and Communication in Cognitive Development. 3-4 Units.**

As educated consumers of scientific literature, we read reports of research findings in our everyday lives, sometimes through primary sources (e.g., journal articles) or through popular media reports of these sources. In particular, findings from cognitive development research often attract a lot of public interest, particularly from parents, caregivers, and educators, as these findings have implications for how best to educate young children. However, reports of scientific findings in cognitive development and their real-world implications often fail to convey the importance of tightly controlled experimental designs, the issues and challenges in conducting experiments, and the difficulty of interpreting the results and linking them to real-world practices in early education. This course originates from the idea that having a first-hand experience in the actual research process is an effective way to provide a deeper understanding of these issues, and help us become better consumers of scientific knowledge. This course is an advanced, lab-based research class in cognitive development, primarily offered for those who have completed PSYCH175 or equivalent. Students will conduct a replication/extension of a published study (or, depending on instructor approval, develop their final proposal into a research project if the project fits certain criteria). In this course, students will form a small research team and experience the role of an independent researcher to partake in the process of designing and conducting an experiment. At the end of the quarter, students will present their findings in front of a scientific audience and submit a full empirical report. All prospective students must have completed PSYCH 175 (or have written an equivalent research proposal on a related topic), and contact the instructor at least three weeks before the term begins for instructor approval. Student should expect to spend a significant number of hours outside the classroom for data collection. Prerequisites: PSYCH175 (strongly recommended) and instructor approval.

**PSYCH 188. Special Research Projects. 1-6 Unit.**

For research in the Stanford Neurodevelopment, Affect, and Psychopathology Lab only.

**PSYCH 188A. Research and special lab with Bing. 1-6 Unit.**

Research and special lab with Bing. May be repeat for credit.

**PSYCH 189. Stanford Center on Longevity Practicum. 3 Units.**

Student involvement in an interdisciplinary center aimed at changing the culture of human aging using science and technology. May be repeated for credit.

**PSYCH 190. Special Research Projects. 1-6 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 191. Special Research Projects in the Mind & Body Lab. 1-6 Unit.**

May be repeated for credit or for grade. Prerequisites: consent of instructor.

**PSYCH 192. Career and Personal Counseling. 3 Units.**

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 134, EDUC 234

**PSYCH 193. Special Laboratory Research. 1-6 Unit.**

May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

**PSYCH 194. Reading and Special Work. 1-3 Unit.**

Independent study. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 195. Special Laboratory Projects. 1-6 Unit.**

Independent study. May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

**PSYCH 197. Advanced Research. 1-4 Unit.**

Limited to students in senior honors program. Weekly research seminar, independent research project under the supervision of an appropriate faculty member. A detailed proposal is submitted at the end of Autumn Quarter. Research continues during Winter and Spring quarters as 198. A report demonstrating sufficient progress is required at the end of Winter Quarter.

**PSYCH 198. Senior Honors Research. 1-4 Unit.**

Limited to students in the senior honors program. Finishing the research and data analysis, written thesis, and presentation at the Senior Honors Convention. May be repeated for credit.

**PSYCH 1L. Introduction to Psychology. 3 Units.**

A reduced-unit version of Stanford's popular Psych 1 class. An introduction to the science of how people think, feel, and behave. We will explore such topics as intelligence, perception, memory, happiness, personality, culture, social influence, development, emotion, and mental illness. Students will learn about classic and cutting edge research, a range of methods, and discover how psychology informs our understanding of what it means to be human, addresses other fields, and offers solutions to important social problems. The primary version of the course, PSYCH 1, is offered for 5 units and counts for major/minor requirements for Psychology and other disciplines. For more information on PSYCH 1 and PSYCH 1L, visit <http://psychone.stanford.edu>.

**PSYCH 201S. Bayesian Statistics for Psychologists. 3 Units.**

Have you ever collected data and then not know how to analyze it? Bayesian data analysis is a general purpose data analysis approach for making explicit hypotheses about where the data came from (e.g. the hypothesis that data from 2 experimental conditions came from two different distributions). In this course, we will explore and learn how to use Bayesian data analytic tools for analyzing data from psychology experiments. Students will develop a strong foundation for statistical intuitions and build on these intuitions to conduct Bayesian analyses of experimental data. The course will focus on the practicalities of running Bayesian analyses, of describing analyses for purposes of publication, and of making inferences about data and design decisions for subsequent experiments. This course is ideal for graduate or advanced-undergraduate students in Psychology, Linguistics, and related fields, who conduct experiments on human behavior; also appropriate for students without experience in psychological experiments but with experience in statistics.

**PSYCH 202. Cognitive Neuroscience. 3 Units.**

Graduate core course. The anatomy and physiology of the brain. Methods: electrical stimulation of the brain, neuroimaging, neuropsychology, psychophysics, single-cell neurophysiology, theory and computation. Neuronal pathways and mechanisms of attention, consciousness, emotion, language, memory, motor control, and vision. Prerequisite: For psychology graduate students, or consent of instructor.

**PSYCH 203. MODELS OF LANGUAGE ACQUISITION. 3 Units.**

How do children learn to understand and produce their native language? Language acquisition is a core topic in cognitive science and has been a key test case for formal approaches. Topics include: learnability theory, grammatical approaches, connectionist models, and probabilistic models.

**PSYCH 204. Computation and cognition: the probabilistic approach. 3 Units.**

This course will introduce the probabilistic approach to cognitive science, in which learning and reasoning are understood as inference in complex probabilistic models. Examples will be drawn from areas including concept learning, causal reasoning, social cognition, and language understanding. Formal modeling ideas and techniques will be discussed in concert with relevant empirical phenomena.

Same as: CS 428

**PSYCH 204A. Human Neuroimaging Methods. 3 Units.**

This course introduces the student to human neuroimaging using magnetic resonance scanners. The course is a mixture of lectures and hands-on software tutorials. The course begins by introducing basic MR principles. Then various MR measurement modalities are described, including several types of structural and functional imaging methods. Finally algorithms for analyzing and visualizing the various types of neuroimaging data are explained, including anatomical images, functional data, diffusion imaging (e.g., DTI) and magnetization transfer. Emphasis is on explaining software methods used for interpreting these types of data.

**PSYCH 204B. Computational Neuroimaging: Methods & Analyses. 3 Units.**

This course introduces the student to human neuroimaging using magnetic resonance scanners. The course is a mixture of lectures and hands-on software tutorials. The course begins by introducing basic MR principles. Then various MR measurement modalities are described, including several types of structural and functional imaging methods. Finally algorithms for analyzing and visualizing the various types of neuroimaging data are explained, including anatomical images, functional data, diffusion imaging (e.g., DTI) and magnetization transfer. Emphasis is on explaining software methods used for interpreting these types of data. Required: Psych 204a; Recommended: Cognitive Neuroscience.

**PSYCH 205. Foundations of Cognition. 1-3 Unit.**

Topics: attention, memory, language, similarity and analogy, categories and concepts, learning, reasoning, and decision making. Emphasis is on processes that underlie the capacity to think and how these are implemented in the brain and modeled computationally. The nature of mental representations, language and thought, modular versus general purpose design, learning versus nativism. Prerequisite: 207 or consent of instructor. Open to Psychology PhD students only.

**PSYCH 206. Cortical Plasticity: Perception and Memory. 1-3 Unit.**

Seminar. Topics related to cortical plasticity in perceptual and memory systems including neural bases of implicit memory, recognition memory, visual priming, and perceptual learning. Emphasis is on recent research with an interdisciplinary scope, including theory, behavioral findings, neural mechanisms, and computational models. May be repeated for credit. Recommended: 30, 45.

**PSYCH 207. Professional Seminar for First-Year Ph.D. Graduate Students. 2-3 Units.**

Required of and limited to first-year Ph.D. students in Psychology. Major issues in contemporary psychology with historical backgrounds.

**PSYCH 207B. Professional Development Seminar in Psychology. 0-1 Units.**

For graduate students who wish to gain professional development skills to pursue an academic career. May be repeated for credit. Course is intended for second year Ph.D. student in Psychology but open to all years.

**PSYCH 209. Neural Network Models of Cognition: Principles and Applications. 4 Units.**

Neural Network models of cognitive and developmental processes and the neural basis of these processes, including contemporary deep learning models. Students learn about fundamental computational principles and classical as well as contemporary applications and carry out exercises in the first six weeks, then undertake projects during the last four weeks of the quarter. Recommended: computer programming ability, familiarity with differential equations, linear algebra, and probability theory, and one or more courses in cognition, cognitive development or cognitive/systems neuroscience.

**PSYCH 20N. How Beliefs Create Reality. 3 Units.**

This seminar will take an interdisciplinary approach to exploring how subjective aspects of the mind (e.g., thoughts, beliefs, and expectations) can fundamentally change objective reality. Over the course of the semester, students will be challenged to think critically about research from psychology, sociology, and medicine, which suggests that what we think, believe and expect plays a significant role in determining our physical health, performance and well-being. Students will explore research on how mindsets about nutrition, exercise, and stress can alter the body's response to those phenomena. Students will also uncover how social interactions with friends, family, colleagues and the media influence the perceived quality and impact of cultural products such as art, music, and fashion. And students will learn about the neurological and physiological underpinnings of the placebo effect, a powerful demonstration of expectation that produces real, healing changes in the body. Finally, students will have the opportunity to consider real world applications in disciplines including policy, business, medicine, academics, athletics and public health and consider the ethical implications of those applications. Throughout the class active participation and an open mind will be critical to success. The final weeks of class will be dedicated to student designed studies or interventions aimed to further explore the power of self-fulfilling prophecies, placebo effects, and the social-psychological creation of reality.

**PSYCH 211. Developmental Psychology. 1-3 Unit.**

Prerequisite: 207 or consent of instructor.

**PSYCH 212. Classic and contemporary social psychology research. 1-3 Unit.**

Evolution of ideas from early experiments on group dynamics, attitude change, and cognitive dissonance to later work on behavioral and emotional attribution, and more contemporary work on strategies and shortcomings in judgment and decision-making and on implicit influences on attitudes and behavior. Other topics include social dilemmas, conflict and misunderstanding, positive psychology, and the application of social psychological principles and findings to ongoing social problems including social inequality, education, and the challenge of addressing climate change.

**PSYCH 213. Affective Science. 3 Units.**

This seminar is the core graduate course on affective science. We consider definitional issues, such as differences between emotion and mood, as well as issues related to the function of affect, such as the role affect plays in daily life. We review autonomic, neural, genetic, and expressive aspects of affective responding. Later in the course we discuss the role of affect in cognitive processing, specifically how affective states direct attention and influence memory, as well as the role of affect in decision making. We will also discuss emotion regulation and the strategic control of emotion; the cultural shaping of emotional experience and regulation; disorders of emotion; and developmental trajectories of experience and control from early to very late life. Meetings are discussion based. Attendance and active participation are required. Prerequisite: 207 or consent of instructor.

**PSYCH 215. Mind, Culture, and Society. 3 Units.**

Social psychology from the context of society and culture. The interdependence of psychological and sociocultural processes: how sociocultural factors shape psychological processes, and how psychological systems shape sociocultural systems. Theoretical developments to understand social issues, problems, and polity. Works of Baldwin, Mead, Asch, Lewin, Burner, and contemporary theory and empirical work on the interdependence of psychology and social context as constituted by gender, ethnicity, race, religion, and region of the country and the world. Prerequisite: 207 or consent of instructor.

**PSYCH 216. Public Policy and Social Psychology: Implications and Applications. 4 Units.**

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, and climate change. Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.

Same as: IPS 207B, PUBLPOL 305B

**PSYCH 217. Topics and Methods Related to Culture and Emotion. 1-3 Unit.**

Preference to graduate students. How cultural factors shape emotion and other feeling states. Empirical and ethnographic literature, theories, and research on culture and emotion. Applications to clinical, educational, and occupational settings. Research in psychology, anthropology, and sociology. May be repeated for credit.

**PSYCH 21N. How to Make a Racist. 3 Units.**

How do children, with no innate beliefs or expectations about race, grow up to be racist? To address this complex question, this seminar will introduce students to the cognitive, social, and cultural factors that contribute to the development of racial stereotyping, prejudice, and discrimination. We will begin by defining key concepts (e.g., 'What is race and what is racism?'), and will then take a developmental approach to examine racist thought from early childhood until adulthood. The seminar will include lectures that will provide an introduction to each topic. These lectures will be supplemented by readings and discussion. Students will engage thoughtfully and critically with the topics and readings by sharing experiences, perspectives, confusions, and insights through discussion and in writing. Students with diverse experiences and perspectives will be welcomed and encouraged to participate.

Same as: AFRICAAM 121N, CSRE 21N

**PSYCH 220. Special Topics in Cognitive Development. 1-3 Unit.**

In the last few years, research at the intersection of cognitive and social development has burgeoned, yielding unprecedented knowledge about the roots of the human (social) mind in infants and children. In this course, using an outstanding new volume edited by Susan Gelman and Mahzarin Banaji, we will discuss work that highlights the social nature of cognitive development (e.g., the degree to which social learning may account for uniquely human cognitive abilities) and that explores the early emergence of social knowledge and understanding (e.g., mental models of relationships, knowledge of good and bad, beliefs about ingroups and outgroups, and knowledge of other people's minds). Prerequisites: Psychology 207 or permission of instructor.

**PSYCH 221. Image Systems Engineering. 1-3 Unit.**

This course is an introduction to digital imaging technologies. We focus on the principles of key elements of digital systems components; we show how to use simulation to predict how these components will work together in a complete image system simulation. The early lectures introduce the software environment and describe options for the course project. The following topics are covered and software tools are introduced:

- Basic principles of optics (Snell's Law, diffraction, adaptive optics).
- Image sensor and pixel designs
- Color science, metrics, and calibration
- Human spatial resolution
- Image processing principles
- Display technologies

A special theme of this course is that it explains how imaging technologies accommodate the requirements of the human visual system. The course also explains how image systems simulations can be useful in neuroscience and industrial vision applications. The course consists of lectures, software tutorials, and a course project. Tutorials and projects include extensive software simulations of the imaging pipeline. Some background in mathematics (linear algebra) and programming (Matlab) is valuable. Pre-requisite: EE 261 or equivalent. Or permission of instructor required.

**PSYCH 222. From Classic Experiments to Cutting Edge Neuroimaging: The Functional Neuroanatomy of Visual Cortex. 1-3 Unit.**

We will discuss the fundamental organizational principles of the visual system starting by discussing classic papers in non-human primates and proceeding to discuss recent neuroimaging studies in humans. We will then examine how understanding these organizational principles has influenced mapping the functional organization of visual system. Finally, we will analyze neuroimaging datasets and examine how well one can evaluate and define visual areas in the human brains by understanding these principles.

**PSYCH 223. Social Norms. 3 Units.**

This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions.

**PSYCH 224. Research Topics in Emotion Regulation. 1 Unit.**

Current research findings and methods, ongoing student research, and presentations by visiting students and faculty. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 226. Models and Mechanisms of Memory. 1-3 Unit.**

Current topics in memory as explored through computational models addressing experimental findings and physiological and behavioral investigations. Topics include: episodic and statistical learning; impact of prior knowledge on new learning; and the role of MTL structures in learning and memory. May be repeated for credit.

**PSYCH 228. Ion Transport and Intracellular Messengers. 3 Units.**

(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology. Same as: PSYCH 121

**PSYCH 231. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.**

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: COMM 339, POLISCI 421K

**PSYCH 232. Brain and Decision Making. 3 Units.**

Neuroeconomics combines experimental techniques from neuroscience, psychology, and experimental economics, such as electrophysiology, fMRI, eye tracking, and behavioral studies, and models from computational neuroscience and economics. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 234. Special Topics in Depression. 3 Units.**

In this course we will discuss current issues in the study of major depression, including the epidemiology and phenomenology of depression and other affective disorders, psychological and biological theories of depression, gender differences in depression, cognitive and social functioning of depressed persons, findings from neuroimaging studies of depression, depression in children, risk factors for depression, issues involving suicide, and implications of the NIMH RDoC initiative for the study of depression and other psychiatric diagnostic categories. Prerequisite: graduate standing in Psychology or consent of instructor.

**PSYCH 235. Motivation and Emotion. 3 Units.**

This graduate seminar will take a social-cognitive perspective on motivation and emotion. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: 207 or consent of instructor.

**PSYCH 236A. The Psychology of Scarcity: Its Implications for Psychological Functioning and Education. 3 Units.**

This course brings together several literatures on the psychological, neurological, behavioral and learning impact of scarcities, especially those of money (poverty) time and food. It will identify the known psychological hallmarks of these scarcities and explore their implications for psychological functioning, well-being and education—as well as, how they can be dealt with by individuals and in education. Same as: PSYCH 136

**PSYCH 236C. Seminar in Semantics: Formal semantics and the psychology of reasoning. 2-4 Units.**

Discussion of topics at the interface of natural language semantics and psychology of reasoning, such as conditionals, causal language, the language of uncertainty, generics, and syllogistic reasoning. Same as: LINGUIST 236

**PSYCH 237. Mathematical Cognition. 2-4 Units.**

The course will examine the basis of numerical and mathematical abilities, and the acquisition and learning of mathematical skills, drawing on experimental and modeling studies. Topics will include numerosity, counting, basic arithmetic, and fractions, as well as algebraic and geometric reasoning as well as insight into mathematical and scientific problems. Roles of rules, procedures and symbolic, spatial, and sensory-motor representations; relationship between skill and understanding; nature of discovery and insight in mathematical reasoning; the relationship between insight and proof. Open to PhD and Masters students and to Juniors and Seniors who have completed an introductory level course in cognitive or developmental psychology.

**PSYCH 238. Wise Interventions. 4 Units.**

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy. Same as: PSYCH 138, PUBLPOL 238

**PSYCH 239. Formal and Computational Approaches in Psychology and Cognitive Science. 3 Units.**

Do psychology and cognitive science need formal theories and/or explicit computational models? What insights should such things provide? What is the proper relationship between different theoretical and modeling approaches? Between different levels or kinds of analysis? Where do informally stated theories fit in and what are the roles of formal and computational modeling approaches in relation to other less explicitly specified forms of theorizing? This seminar will explore these issues and compare different formal and computational model variants, especially connectionist and probabilistic models, within 3-4 different target domains. Possible target domains include categorization, property induction, causal learning, perceptual decision making, language acquisition, semantics and pragmatics, and mid-level vision.

**PSYCH 240. What Changes?. 3 Units.**

When children get older, they start to behave differently. What's changing? In other words, what specific mechanisms underlie different developmental correlations between age and behavioral competence. Of course, the answer (or more likely, answers plural) to this question will differ vastly from domain to domain, but are there generalizations that we can make about the ways that different factors affect behavior across domains - differences in developmental drivers for so-called "lower-level" tasks versus "higher-level" tasks, or age-related differences in the determinants of change during specific time periods? In this course, we'll try to get a handle on some of the extant proposals on these questions, and maybe offer some of our own.

**PSYCH 241. Probabilistic Models of Social Behavior and Affect. 4 Units.**

How do we reason about other people and ourselves? Is human behavior in social situations a set of ad-hoc and irrational responses—or can we understand humans as making rational inferences under uncertainty about the people they are interacting with? This project-based seminar will re-examine classic findings from social psychology and affective science through the lens of rational analysis and probabilistic models. In collaboration with instructors, students will develop projects focused on making testable theoretical models of classic tasks and literatures with the goal of creating a publishable end product. Phenomena under consideration include but are not limited to: cognitive dissonance, attribution theory, mindset theory, stereotyping, and emotion perception.

**PSYCH 242. Theoretical Neuroscience. 3 Units.**

Survey of advances in the theory of neural networks, mainly (but not solely) focused on results of relevance to theoretical neuroscience. Synthesizing a variety of recent advances that potentially constitute the outlines of a theory for understanding when a given neural network architecture will work well on various classes of modern recognition and classification tasks, both from a representational expressivity and a learning efficiency point of view. Discussion of results in the neurally-plausible approximation of back propagation, theory of spiking neural networks, the relationship between network and task dimensionality, and network state coarse-graining. Exploration of estimation theory for various typical methods of mapping neural network models to neuroscience data, surveying and analyzing recent approaches from both sensory and motor areas in a variety of species. Prerequisites: calculus, linear algebra, and basic probability theory, or consent of instructor.

Same as: APPPHYS 293

**PSYCH 243. General Development Seminar. 1-2 Unit.**

May be repeated for credit. Prerequisite: consent of instructors. Restricted to Developmental graduate students.

**PSYCH 244. Psychology of Aging. 1-3 Unit.**

Theory and research in gerontology. Normal and abnormal changes that occur in biological, cognitive, and psychological aging. Emphasis is on the environmental factors that influence the aging process. Prerequisite: graduate standing in Psychology or consent of instructor.

**PSYCH 246. Cognitive and Neuroscience Friday Seminar. 1 Unit.**

Participant presentations. May be repeated for credit. Prerequisite: graduate standing in psychology or neuroscience program.

**PSYCH 248. Advanced fMRI modeling and analysis. 3 Units.**

This seminar will discuss the state of the art in methods for the modeling and analysis of functional magnetic resonance imaging data. Potential topics include connectivity modeling, causal modeling, multivariate pattern analysis, encoding models, and classification analysis. The seminar will include hands-on analysis exercises in addition to lectures.

**PSYCH 248A. fMRI Analysis Bootcamp. 3 Units.**

This course will provide a hands-on overview of methods for processing and analysis of functional magnetic resonance imaging data. Topics include preprocessing, statistical modeling, spatial normalization, statistical power analysis, multiple comparison correction, connectivity modeling, machine learning, and Bayesian modeling. The seminar will include hands-on analysis exercises in addition to lectures.

**PSYCH 249. Large-Scale Neural Network Modeling for Neuroscience. 3 Units.**

Introduction to designing, building, and training neural networks for modeling brain and behavioral data, including: deep convolutional neural network models of sensory systems (vision, audition, somatosensation); recurrent neural networks for dynamics, memory and attention; integration of variational and generative methods for cognitive modeling; and methods and metrics for comparing such models to real-world neural data. Attention will be given both to established methods as well as cutting-edge techniques. Students will learn conceptual bases for deep neural network models, and will also implement learn to implement and train large-scale models in Tensorflow using GPUs. Requirements: Fluency in Unix shell and Python programming, familiarity with differential equations, linear algebra, and probability theory, and one or more courses in cognitive or systems neuroscience.

Same as: CS 375

**PSYCH 249L. Workshop on Incremental Language Processing. 1 Unit.**

Language is processed incrementally over time. This has consequences for language comprehension, production, acquisition, and change, all of which occur at different timescales. What is the role of time in language? The class will be based around visiting lectures by major researchers in this area, along with meetings to prepare for their visits by discussing key readings. May be repeated for credit.

Same as: LINGUIST 249L

**PSYCH 24N. Neuroforecasting. 3 Units.**

Preference to freshmen. This course explores whether brain activity can be used not only to predict the choices of individuals, but also of separate groups of individuals in the future (e.g., in markets). Questions include how neuroforecasting is possible, whether it can add value to other forecasting tools (e.g., traditional measures like behavioral choice and subjective ratings), and when it extends to different aggregate scenarios. The course is ideal for students that would like to extend neural predictions about individual choice to group choice, and who plan to apply this knowledge in future research.

**PSYCH 250. High-level Vision: From Neurons to Deep Neural Networks. 3 Units.**

Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations.

Same as: CS 431

**PSYCH 250A. High-level Vision: From Neurons to Deep Neural Networks. 1-2 Unit.**

This advanced level seminar is an interdisciplinary course focusing on understanding how computations in the brain enable rapid and efficient object perception. The course will cover topics from multiple perspectives drawing on recent research in neuroscience, computer science and psychology. Emphasis will be placed on examining recent findings pertaining to computational theories of high-level vision, ongoing debates in the field, and discussion of recent empirical findings.

**PSYCH 251. Lab in Experimental Methods. 4 Units.**

Laboratory class in experimental methods for psychology, with a focus on technical/computer-based methods. Programming experience helpful although not required. Topics include data collection on the web, data management and data analysis.

**PSYCH 252. Statistical Methods for Behavioral and Social Sciences. 1-6 Unit.**

For students who seek experience and advanced training in empirical research. Analysis of data from experimental through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through two-way tables. Integrated with the use of statistical computing packages. Prerequisite: 10 or equivalent.

**PSYCH 253. High-Dimensional Methods for Behavioral and Neural Data. 3 Units.**

Introduction to high-dimensional data analysis and machine learning methods for use in the behavioral and neurosciences, including: supervised methods such as SVMs, linear and nonlinear regression and classifiers, and regularization techniques; statistical methods such as bootstrapping, signal detection, factor analysis, and reliability theory; metrics for model/data comparison such as representational similarity analysis; and unsupervised methods such as clustering. Students will learn theory as well as a programming framework for implementing all methods in practice. Prerequisites: Math 51 or equivalent and Psych 251 or programming background.

**PSYCH 254. Affective Neuroscience. 3 Units.**

Theory and research. Comparative and human research approaches map affective function to neuroanatomical and neurochemical substrates. Prerequisite: consent of instructor.

**PSYCH 255. Seminar on Motivation. 3 Units.**

Selective overview of the scientific study of motivation. Our focus is on interesting, experimentally tractable ideas. Meetings will be discussion based.

**PSYCH 257. Individually Supervised Practicum. 3-5 Units.**

Satisfies INS requirements for curricular practical training. Relevant experience for graduate students as part of their program of study. May be repeated for credit. Prerequisites: graduate standing in Psychology, consent of adviser.nn (Staff).

**PSYCH 258. Graduate Seminar in Social Psychology Research. 1-3 Unit.**

For students who are already or are planning to become involved in research on social construal and the role that it plays in a variety of phenomena, notably the origin and escalation of conflict.

**PSYCH 25N. Psychology, Inequality, and the American Dream. 3 Units.**

Despite legal prohibitions against discrimination and the fact that many people endorse egalitarian values, inequality persists in America. What role do psychological factors play in perpetuating inequality? How can psychologically "wise" reforms promote equal opportunity? Topics include prejudice and discrimination, school achievement, social class, and race/ethnicity.

**PSYCH 261. Emotion. 3 Units.**

(Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas. Same as: PSYCH 161

**PSYCH 261A. Learning and Cognition in Activity. 3 Units.**

Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments. Same as: EDUC 295

**PSYCH 263. Cognitive Neuroscience: Vision. 3 Units.**

Decision, categorization. Bayesian inference, working memory, attention, cognitive control, conscious perception and awareness. The neural basis for all of these cognitive functions have been extensively studied in the domain of vision. Why vision? Because a great deal of scientific inquiry has delineated both the behavioral and physiological aspects of basic sensory processing in vision. Because of this, cognitive neuroscience questions can be precisely formulated in the context of vision. As a result we have some of the best answers to the question of what neural mechanisms underlie cognitive functions in the domain of vision. The course will combine lectures and in-depth discussions of primary literature to develop key concepts in the neuroscience of vision and how these concepts have been built on to understand the neural basis of higher cognition. Guest instructors will include Bill Newsome, Tirin Moore and Kalanit Grill-Spector.

**PSYCH 265. Social Psychology and Social Change. 2-3 Units.**

The course is intended as an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome, but priority for enrollment will be given to graduate students. In order to foster a vibrant, discussion-based class, enrollment will be capped at 20 students. Interested students should enroll in the class through simple enroll or axess, and complete this survey (<https://tinyurl.com/SPSC17>) to be considered for admission to the course. Please contact the course TA, Michael Schwalbe ([schwalbe\[at\]stanford.edu](mailto:schwalbe[at]stanford.edu)), if you have any further questions. Same as: EDUC 371

**PSYCH 266. Current Debates in Learning and Memory. 1-3 Unit.**

Memory is not a unitary faculty, but consists of multiple forms of learning and remembering. The cognitive and neural architectures of memory, focusing on the application of functional brain imaging (primarily fMRI and ERP). Psych 45 and Psych 169 required if undergraduate student.

**PSYCH 268. Emotion Regulation. 3 Units.**

(Graduate students register for 268.) The scientific study of emotion regulation. Topics: historical antecedents, conceptual foundations, autonomic and neural bases, individual differences, developmental and cultural aspects, implications for psychological and physical health. Focus is on experimentally tractable ideas. Same as: PSYCH 168

**PSYCH 269. Graduate Seminar in Affective Science. 1 Unit.**

May be repeated for credit. Prerequisite: graduate standing in Psychology. (Gotlib).

**PSYCH 26N. Language Acquisition: Exploring the Minds of Children. 3 Units.**

Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate 'bioprogram' or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.

**PSYCH 270. The Self: Representations and Interventions. 3 Units.**

We will examine research and theory on mental models of the self, others, and the social world; how these develop; and how interventions can alter or leverage these mental models to improve human functioning and outcomes.

**PSYCH 271. Writing About Psychology. 3 Units.**

Writing clear and compelling prose is a vital skill for any psychologist, but one that is often not formally taught. This graduate seminar will provide a chance for students to think systematically about writing for audiences within and outside of psychology, and to concretely improve pieces of writing that matter to them. The course will take the form of a "writer's workshop", in which each student will bring two pieces of writing: one empirical, and one intended for a popular audience, to be discussed by the class. All class members will discuss each piece of writing twice, providing constructive feedback for the target student to revise her or his work. The workshop will be supplemented by general discussions of writing principles and examples of good writing in psychology.

**PSYCH 274. Graduate Research Workshop on Psychological Interventions. 3 Units.**

Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor. Same as: EDUC 287

**PSYCH 275. Graduate Research. 1-15 Unit.**

Intermediate-level research undertaken with members of departmental faculty. Prerequisite: consent of instructor.nn (Staff).

**PSYCH 276. Graduate Research. 1-15 Unit.**

Intermediate-level research undertaken with psychology faculty. Prerequisite: consent of instructor.

**PSYCH 278. Social Cognitive Development: New Methods for Answering Old Questions. 1-2 Unit.**

Novel technology can fuel new discoveries and generate new questions for future research, for instance, the use of video cameras has transformed the field of developmental psychology. More recently, the use of neuroimaging techniques (such as fMRI) to study the developing brain has been gaining lots of interest among developmental psychologists. What are the promises and challenges of using these neuroimaging methods to study cognitive development? This course will be a discussion-based seminar class (with some lectures from the instructor and from students) aimed for graduate students who are interested in learning more about how these methods can help address questions about cognitive development, with a particular focus on children's developing understanding of their social world.

**PSYCH 279. Topics in Cognitive Control. 1-3 Unit.**

The processes that enable flexible behavior by biasing contextually relevant perceptual, mnemonic, and response representations or processing pathways. Cognitive control is central to volitional action, allowing work with memory, task/goal states, and overriding inappropriate responses. Current models of cognitive control, functional neuroimaging, and neuropsychological evidence. Recommended: 45. May be repeated for credit.

**PSYCH 280. Foundations and Contemporary Topics in Social-Educational Psychology. 2-4 Units.**

At its core, social psychology is concerned with educational problems because it addresses the problem of how to change hearts and minds in lasting ways. This course explores the major ideas, theories, and findings of social psychology, their educational implications, and the insights they shed into how and when people change. There will be a focus on educational issues. Intersections with other disciplines, in particular social development and biology, will be addressed. Historical tensions and traditions, as well as classic studies and theories, will be covered. Graduate students from other disciplines, and advanced undergraduates, are welcome (class size permitting). Same as: EDUC 307

**PSYCH 281. Practicum in Teaching. 1-5 Unit.**

Enrollment limited to teaching assistants in selected Psychology courses. May be repeated for credit.

**PSYCH 282. Practicum in Teaching PSYCH 1. 1-2 Unit.**

Logistical TA training including: preparing for sections; creating, correcting exams; grading an iterative writing assignment; office hours; review sessions; developing audiovisual expertise; communicating via coursework. Review of student evaluations with instructor to set goals and strategies. Second quarter focuses on pedagogical improvement. Limited to current PSYCH 1 TAs. May be repeated for credit.

**PSYCH 283. International Conflict Resolution Colloquium. 1 Unit.**

(Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology. Same as: IPS 250A

**PSYCH 283A. SPARQshop: Social Psychological Answers to Real-world Questions. 3 Units.**

Undergraduate and graduate students will work in teams to design, build, test, and distribute online toolkits that help practitioners solve real-world problems by applying social science. Graduate students can build toolkits for their own research. Students will learn how to assess the needs of practitioner audiences; write text, design graphics, and program activities for these audiences; prepare, deliver, and produce a TED-style online video; design surveys in Qualtrics; and build and user-test the toolkit. Readings and class discussions will include modules on design thinking, storytelling, science writing, information design, and impact evaluation. For an example of a toolkit in progress, please visit [spacereface.org](http://spacereface.org). Permission of instructor required. Same as: PSYCH 180A

**PSYCH 284. Computational Modeling of a Range of Neural Circuits. 1-3 Unit.**

Lectures, student presentations, and extensive software exercises. Focus on quantifiable models of neural signaling, starting with physical specification of input signals, sensory transductions, spiking, and mean electrical field potentials, and the inter-relation to BOLD signals (fMRI). Applications will be drawn from many examples, but a there will be a particular focus on the visual pathways and how measurements and models relate to visual perception.

**PSYCH 285. Graduate Seminar on Theory of Mind. 3 Units.**

Theory of Mind is the ability to reason and think about other minds. It has been a topic of extensive research and heated debates in the past few decades. The course will provide an in-depth overview of the major theories that have motivated empirical research. Students will read and discuss theoretical papers as well as empirical work that have supported or refuted these theories, and the latest research on Theory of Mind, from various disciplines including (but not limited to), cognitive development, comparative psychology, and cognitive neuroscience.

**PSYCH 286. The Psychology of Racial Inequality. 3 Units.**

Our topic is the psychology of racial inequality - thinking, feeling, and behaving in ways that contribute to racial stereotyping, prejudice, and discrimination, and how these processes in turn maintain and perpetuate inequality between racial groups. We will examine how these processes unfold at both the individual and the institutional levels. Throughout this course, you will familiarize yourself with the psychological perspectives, methods, and findings that help explain racial inequality, and we will explore ways to promote racial equality. The course will be conducted as a seminar, but most of what you learn will be through the readings and discussions. That is, this course is minimally didactic; the goal is to have you engage thoughtfully with the issues and readings spurred in part by sharing perspectives, confusions, and insights through writing and discussion. Each student will facilitate at least one class session by providing an introductory framework for the readings (~10-minute presentation with handouts that overviews the concepts, issues, and controversies). Together, we will broaden our knowledge base on the subject and explain, from a psychological perspective, the pervasiveness of racial inequality. Prerequisites: PSYCH 1 and PSYCH 10. Same as: CSRE 186, PSYCH 186

**PSYCH 287. Brain Machine Interfaces: Science, Technology, and Application. 1-3 Unit.**

This course explores the current state of brain-machine interfaces: technologies that directly stimulate and/or record neural activity. Such interfaces are being used to treat nervous system disorders, including hearing, seeing, and motor dysfunction. We expect that the range of applications will expand over the next decade to other neurological conditions and to augmentation of function. The material we cover aims to explain some of the existing technology and to clarify its limitations and promise. The course organization is designed to develop new ideas and promote new collaborations for extending the reach of these technologies. The class will feature lecturers with expertise in brain-machine interfaces of various sorts or related technologies and methods, as well as directed readings and discussion about new work in the field. In the previous year lectures were given by: Brian Wandell, Daniel Palanker, Nikos Logothetis, John Oghalai, Stephen Baccus, Paul Nuyujukian, Dan Yoshor and Nick Melosh. Same as: NSUR 287

**PSYCH 290. Graduate Research Methods. 2 Units.**

Primary tool use for psychologists: basics of experiment design; computer-based experiments; web-based experiments; data analysis packages and data presentation; exploratory statistics; eye-tracking methods; psychophysiology methods; survey construction; corpus and discourse analysis; and perhaps hypnosis. Prerequisite: Ph.D. student in Psychology.

**PSYCH 292. Special Topics in Emotion Regulation. 1 Unit.**

This seminar will consider special topics in emotion regulation. Admission is by invitation only.

**PSYCH 293. Communication, Intentionality, and the Origins of Language. 3 Units.**

How did language evolve to become a ubiquitous, definitional part of human life? What relationship does children's early language have to their understanding of intentionality and other methods of non-verbal communication? This seminar will survey theoretical and experimental work on the foundations of human language, communication, and intentionality, with the goal of understanding what we know and what questions are still open. Areas of focus include developmental work on communication; whether early language use is referential/intentional and whether early words are general or particular; and research on language evolution and animal communication.

**PSYCH 294. Human Prosociality. 3 Units.**

Human beings engage in a vast amount of prosocial behaviors (including altruism and cooperation) that critically support our success as a social species. That said, the psychological underpinnings of prosociality remain surprisingly enigmatic. This seminar will survey classic and modern theories of prosocial behavior from evolutionary biology, economics, psychology, and neuroscience, with an emphasis on common ideas about the cognitive and affective mechanisms supporting such behaviors. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

**PSYCH 295. Seminar on the Science of Meditation. 3 Units.**

What is meditation? What immediate and longer-term effects does this practice have on cognition? What are the mechanisms of these effects? In this small seminar we will try to gain insight into these questions by reading and discussing recent papers drawn from psychology and neuroscience. Emphasis will be placed on careful consideration of the evidence within papers and theoretical synthesis across papers. We will also use ancient and modern studies of meditation to reflect on possibilities for the scientific study subjective experience. May be repeat for credit.

**PSYCH 298. Advanced Studies in Health Psychology. 3 Units.**

This course provides an overview of the major concepts and questions in the field of health psychology. Through reading, lecture and interactive discussion, students have the opportunity to explore and think critically about a number of psychological and social influences in determining health including: emotions, beliefs, relationships, stress, motivation, behavior change, spirituality, culture, and social influence. Students will also discuss the role of important and current topics in the field of health psychology and medicine such as the changing role of the patient and provider relationship, health-care policy and the environment, placebo effects, wearable health devices, and the use of technology in medicine. Course is offered to graduate students and advanced undergraduates with permission from the instructor.

**PSYCH 29N. Growing Up in America. 3 Units.**

Preference to freshmen. To what extent is it possible to describe an "American" experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Native Americans, Latina/os, and European Americans.

**PSYCH 30. Introduction to Perception. 3 Units.**

Behavioral and neural aspects of perception focusing on visual and auditory perception. Topics include: scientific methods for studying perception, anatomy and physiology of the visual and auditory systems, color vision, depth perception, motion perception, stereopsis, visual recognition, pitch and loudness perception, speech perception, and reorganization of the visual system in the blind.

**PSYCH 303. Human and Machine Hearing. 3 Units.**

Topics: Linear and nonlinear system theory applied to sound and hearing; understanding how to model human hearing in the form of algorithms that can process general sounds efficiently; how to construct, display, and interpret "auditory images"; how to extract features compatible with machine-learning systems; how to build systems that extract information from sound to do a job; and example applications of machine hearing to speech, music, security and surveillance, personal sound diaries, smart house, etc. Prerequisites: basic calculus and algorithms.

**PSYCH 30N. The Science of Diverse Communities. 3 Units.**

This course is an exploration. Most generally, its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities - all with a particular focus on educational communities like schools, universities, academic disciplines, etc., but with the hope that such principles might generalize to other kinds of organizations and the broader society. The readings range from those on the origins of human communities and social identities to those on intergroup trust building. They also aim to embed our discussions in the major diversity issues of the day, or example, what's in the news about campus life. Thus the course has a practical purpose: to develop testable ideas for improving the comfort level, fairness and goodness-for-all of identity diverse communities—especially in educational settings. The course also has a basic science purpose: to explore the psychological significance of community. Is there a psychological need for community? Is there something about a need for community that can't be reduced to other needs, for example, for a gender, racial or sexual-orientation identity? How strong is the need for community against other needs? What kinds of human groupings can satisfy it? In meeting this need, can membership in one community substitute for membership in others? What do people need from communities in order to thrive in them? Do strong diverse communities dampen intergroup biases? Can strong community loyalty mitigate identity tensions within communities? Such questions, the hope is, will help us develop a more systematic understanding of the challenges and opportunities inherent in diverse human communities.

Same as: CSRE 30N, EDUC 30N, SOC 179N

**PSYCH 35. Minds and Machines. 4 Units.**

(Formerly SYMSYS 100). An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Undergraduates considering a major in symbolic systems should take this course as early as possible in their program of study.

Same as: LINGUIST 35, PHIL 99, SYMSYS 1

**PSYCH 373. Research Seminar: Mind, Brain, and Computation. 1 Unit.**

Faculty and student research presentations focusing on work linking cellular, systems, cognitive, behavioral, and computational neuroscience. Limited to affiliates of the Center for Mind, Brain and Computation. May be repeated for credit.

**PSYCH 383. International Conflict Resolution. 2 Units.**

Same as LAW 5009; formerly Law 656) This seminar examines the challenges of managing and resolving intractable political and violent intergroup and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach examines the need for the parties to conflicts to address the following questions in order to have prospects of creating peaceful relationships: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? We will consider both particular conflicts, such as the Israeli-Palestinian conflict and the South African transition to majority rule, as well as cross-cutting issues, such as the role international legal rules play in facilitating or impeding conflict resolution, the intragroup dynamics that affect intergroup conflict resolution efforts, and the role of criminal accountability for atrocities following civil wars. Special Instructions: Section 01: Grades will be based on class participation, written assignments, and a final exam. Section 02: Up to five students, with consent of the instructor, will have the option to write an independent research paper for Research (R) credit in lieu of the written assignments and final exam for Section 01. After the term begins, students (max 5) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Same as: IPS 250

**PSYCH 45. Introduction to Learning and Memory. 3 Units.**

The literature on learning and memory including cognitive and neural organization of memory, mechanisms of remembering and forgetting, and why people sometimes falsely remember events that never happened. Cognitive theory and behavioral evidence integrated with data from patient studies and functional brain imaging. Required prerequisite: PSYCH 1.

**PSYCH 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOC 459, BIOE 459, CHEM 459, CHEMENG 459

**PSYCH 4N. Predicting aggregate choice. 3 Units.**

Preference to freshmen. Is prediction of group choice possible and how can it be done? This course is ideal for students that would like to extend predictions about individual choice to group choice, and who plan to apply this knowledge to future research.

**PSYCH 50. Introduction to Cognitive Neuroscience. 4 Units.**

Survey of topics relating brain activity to cognitive processes and behavior. The course begins with an overview of neurophysiology and techniques to measure brain activity. We then discuss perceptual and motor processes before investigating neural responses related to attention, memory, and cognitive control. The course concludes with a discussion of brain processes related to reward, decision making, and social cognition.

**PSYCH 50A. Practicum in Teaching: Intro to Cognitive Neuroscience. 3-4 Units.**

TA training for Intro to Cognitive Neuroscience: preparing for sections, grading assignments, reviewing and answering questions in Canvas online forums and supporting office hours and review sections. Enrollment limited to teaching assistants for Psych 50: Intro to Cognitive Neuroscience. May be repeat for credit.

**PSYCH 60. Introduction to Developmental Psychology. 3 Units.**

Psychological development from birth to adulthood, emphasizing infancy and the early and middle childhood years. The nature of change during childhood and theories of development. Recommended: PSYCH 1.

**PSYCH 60A. Introduction to Developmental Psychology Section. 2 Units.**

Guided observation of children age 2-5 at Bing Nursery School. Corequisite: 60.

**PSYCH 70. Self and Society: Introduction to Social Psychology. 4 Units.**

Why do people behave the way they do? This is the fundamental question that drives social psychology. Through reading, lecture, and interactive discussion, students have the opportunity to explore and think critically about a variety of exciting issues including: what causes us to like, love, help, or hurt others; the effects of social influence and persuasion on individual thoughts, emotion, and behavior; and how the lessons of social psychology can be applied in contexts such as health, work, and relationships. The social forces studied in the class shape our behavior, though their operation cannot be seen directly. A central idea of this class is that awareness of these forces allows us to make choices in light of them, offering us more agency and wisdom in our everyday lives. Same as: SOC 2

**PSYCH 75. Introduction to Cultural Psychology. 5 Units.**

The cultural sources of diversity in thinking, emotion, motivation, self, personality, morality, development, and psychopathology.

**PSYCH 7N. Learn to Intervene, Wisely. 3 Units.**

Do you ever look around and see ways that the world could be a better place, especially if people behaved a little differently? Do you wonder what prevents better outcomes? In this seminar, we will examine social-psychological processes that lie behind diverse social problems, especially how people make sense of themselves, other people, or important situations, sometimes in pejorative ways that undermine outcomes. Then we will examine interventions that address critical processes to promote human flourishing. You'll have the opportunity to read and discuss classic and contemporary 'wise' psychological interventions such as: how a change in the sign on a hospital soap dispenser can increase soap use; how a change in survey items can raise voter turnout; how a change in a single question can improve dating relationships; and how reading-and-writing exercises that address students' beliefs about intelligence and belonging in school can improve achievement years into the future. In learning about this research, you will discover more about psychological processes, how basic research helps clarify these processes, how they contribute in complex field settings to social problems, and how they can be altered. As you learn from past research, you'll have the opportunity to design your very own 'wise intervention' and to workshop others' efforts. You will identify a social problem on campus of interest to you, say: How can you reduce waste in the cafeteria? How can you get more people to take the stairs? How can you get people to hold more inclusive attitudes? Then you will identify a psychological process you think contributes to this problem, implement an intervention in the field and track the results. When you have completed this seminar, you will more fully understand the psychological aspect of social problems and how this can be addressed through rigorous research.

**PSYCH 7Q. Language Understanding by Children and Adults. 3 Units.**

How do we first learn to find meaning in strings of speech sounds? Understanding spoken language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.

**PSYCH 80. Introduction to Personality and Affective Science. 3 Units.**

How do we measure personality and emotion? What parts of your personality and emotions are set at birth? What parts of your personality and emotions are shaped by your sociocultural context? Can your personality and emotions make you sick? Can you change your personality and emotions? There are questions we begin to address in this introductory course on personality and emotion. Prerequisite: Psych 1.

**PSYCH 801. Master's TGR Project. 0 Units.**

.

**PSYCH 802. PhD TGR Dissertation. 0 Units.**

.

**PSYCH 8N. The New Longevity. 3 Units.**

Adult development from the perspective of life-span theory -- a conceptual framework that views development as a series of adaptations to physical, societal and individual resources and constraints. Students will learn about demographic and medical changes, ways that individuals typically change socially, emotionally and cognitively as they move through adulthood. An understanding of the conceptual foundations of the life-span approach and place aging of young people today in historical context.

**PSYCH 90. Introduction to Clinical Psychology. 3 Units.**

History of clinical psychology, models and assessment of personality, behavior, cognition, psychopathology, and approaches to the treatment of abnormal behavior. Emphasis is on current theory, research, issues in, and the role of clinical psychology in contemporary society. Recommended: 1.

**PSYCH 95. Introduction to Abnormal Psychology. 3 Units.**

Theories of and approaches to understanding the phenomenology, etiology, and treatment of psychological disorders among adults and children. Research findings and diagnostic issues. Recommended: PSYCH 1.

**PSYCH 9N. Reading the Brain: the Scientific, Ethical, and Legal Implications of Brain Imaging. 3 Units.**

It's hard to pick up a newspaper without seeing a story that involves brain imaging, from research on psychological disorders to its use for lie detection or "neuromarketing". The methods are indeed very powerful, but many of the claims seen in the press are results of overly strong interpretations. In this course, you will learn to evaluate claims based on brain imaging research. We will also explore the deeper ethical and philosophical issues that arise from our ability to peer into our own brains in action. The course will start by discussing how to understand and interpret the findings of brain imaging research. We will discuss how new statistical methods provide the ability to accurately predict thoughts and behaviors from brain images. We will explore how this research has the potential to change our concepts of the self, personal responsibility and free will. We will also discuss the ethics of brain imaging, such as how the ability to detect thoughts relates to personal privacy and mental illness. Finally, we will discuss the legal implications of these techniques, such as their use in lie detection or as evidence against legal culpability.

## Public Policy (PUBLPOL)

### **PUBLPOL 101. Politics and Public Policy. 4-5 Units.**

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, POLISCI 102, PUBLPOL 201

### **PUBLPOL 103C. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, PHIL 171, POLISCI 103, POLISCI 336S, PUBLPOL 307

### **PUBLPOL 103D. Ethics and Politics of Public Service. 3-5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, URBANST 122

### **PUBLPOL 103E. Ethics on the Edge Public Policy Core Seminar. 3 Units.**

This seminar-style course will explore additional foundational readings on organizational ethics (business, non-profit, and governmental organizations) and policy ethics. Themes will include, among others: race and police brutality incidents; national security (including cyber threats); the Iran nuclear agreement; Brexit; non-profit organizations in the policy and US landscape; sexual harassment networks; and various corporate matters. Organizing themes include, among others: ethics of leadership; ethics of persuasion and compromise; influence of bias in organizational and policy ethics; ethics of social movements; discrepancies between discourse and action; emotion and ethics; and interpreting and explaining ethics. In addition, the course will offer training in a wide variety of skills for effective communication of ethics for policy purposes (developing succinct arguments, presentations, website discourse, commenting in meetings and conferences, interviews, statement of personal views, interacting with the media and social media, and mapping complex ethical analysis). Most of the assignments allow students flexibility to explore topics of their choice. The objective is to engage actively and improve skills in a supportive environment. A short, analytically rigorous final paper in lieu of final exam. Attendance required. Grading will be based on short assignments, class participation, and the short final paper. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). This three-credit seminar accompanies PUBLPOL 134 Ethics on the Edge but can also be taken as a stand-alone course. \*Public Policy majors taking the course to complete the core requirements and students taking the course for Ways credit must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

Same as: PUBLPOL 203E

**PUBLPOL 103F. Ethics of Truth in a Post-Truth World. 3 Units.**

This course will explore changing notions of truth in a world in which technology, global risks, and societal developments are blurring the boundaries of humanity and boring through traditional notions of nation states, institutions, and human identity. We will ask one overarching question: does truth matter anymore? If so, why and how? If not, why not? Either way, how does truth relate to ethical decision-making by individuals and institutions and to an ethical society? Five themes will organize our exploration of more specific topics: honesty; identity; memory; authenticity and integrity; and religious truth. Examples of topics to be explored include, among others: fake news; President Trump's campaign strategy and presidency; Syrian refugees and the Rohingyas; University history (Rhodes, Georgetown slavery, Yale Calhoun College...); new questions in gender and racial identity; Chinese beautifying app Meitu and other social media "truth modifiers"; the sharing economy; the impact of compromised truth on history; and Brexit. Scotty McClennan will explore truth through major literary characters and the impact of religion on truth. We will consider how we determine and verify the truth; how we "do" truth; the role of truth in ethical decision-making; the importance of truth to effective ethical policy; and the relationship of the truth to a life well lived. An analytically rigorous short final paper in lieu of exam. This three-credit seminar may be taken as a stand-alone course or may accompany PUBLPOL 134 Ethics on the Edge. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. \*Public Policy majors taking the course to complete the core requirements and students taking the course for Ways credit must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

Same as: PUBLPOL 203F

**PUBLPOL 103Z. Ethics and Politics in Public Service. 4 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 133P, POLISCI 133Z, URBANST 122Z

**PUBLPOL 104. Economic Policy Analysis. 4-5 Units.**

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: ECON 150, PUBLPOL 204

**PUBLPOL 105. Empirical Methods in Public Policy. 4-5 Units.**

Methods of empirical analysis and applications in public policy. Emphasis on causal inference and program evaluation. Public policy applications include health, education, and labor. Assignments include hands-on data analysis, evaluation of existing literature, and a final research project. Objective is to obtain tools to 1) critically evaluate evidence used to make policy decisions and 2) perform empirical analysis to answer questions in public policy. Prerequisite: ECON 102B. Enrollment is limited to Public Policy students. Public Policy students must take the course for a letter grade.

Same as: PUBLPOL 205

**PUBLPOL 106. Law and Economics. 4-5 Units.**

This course explores the role of law in promoting well-being (happiness). Law, among its other functions, can serve as a mechanism to harmonize private incentives with cooperative gains, to maintain an equitable division of those gains, and to deter "cheating" and dystopia. Law is thus essential to civilization. Economic analysis of law focuses on the welfare-enhancing incentive effects of law and its enforcement and on law's role in reducing the risks of cooperation, achieved by fixing expectations of what courts or the state will do in various futures. Prerequisite: ECON 51 or PUBLPOL 51.

Same as: ECON 154, PUBLPOL 206

**PUBLPOL 107. Public Finance and Fiscal Policy. 5 Units.**

What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic, historical and statistical analyses and current policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget deficits, the national debt and intergenerational equity; tax systems and tax reform; social security and healthcare programs and reforms; transfers to the poor; public goods and externalities; fiscal federalism; public investment and cost-benefit analysis; and the political economy of government decision-making. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 52 (can be taken concurrently).

Same as: ECON 141

**PUBLPOL 111. Leadership Challenges. 4-5 Units.**

This course will examine the responsibilities and challenges for those who occupy leadership roles in professional, business, non-profit, and academic settings. Topics will include characteristics and styles of leadership, organizational dynamics, forms of influence, decision making, diversity, social change, and ethical responsibilities. Class sessions will include visitors who have occupied prominent leadership roles. Readings will include excerpts of relevant research, problems, exercises, and case studies. Requirements will include class participation and short written weekly reflection papers (2 to 3 pages) on the assigned readings. The class will be capped at 50 students.

Same as: ETHICSOC 111

**PUBLPOL 115. Practical Training. 1-5 Unit.**

Qualified Public Policy students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Prior to enrolling students must get internship approved by the Public Policy Program. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit.

**PUBLPOL 118. Disasters, Decisions, Development in Sustainable Urban Systems. 3-5 Units.**

CEE 224X of the CEE 224XYZ SUS Project series is joining forces with D3: Disasters, Decisions, Development to offer D3+SUS, which will connect principles of sustainable urban systems with the challenge of increasing resilience in the San Francisco Bay Area. The project-based learning course is designed to align with the Resilient By Design | Bay Area Challenge (<http://www.resilientbayarea.org/>); students will learn the basic concepts of resilience and tools of risk analysis while applying those mindsets and toolsets to a collective research product delivered to the RBD community. Students who take D3+SUS are encouraged to continue on to CEE 224Y and CEE 224Z, in which teams will be paired with local partners and will develop interventions to improve the resilience of local communities. For more information, visit <http://sus.stanford.edu/courses>.

Same as: ESS 118, ESS 218, GEOPHYS 118X, GEOPHYS 218X, GS 118, GS 218, POLISCI 224A

**PUBLPOL 120. Social Science Field Research Methods and Applications. 5 Units.**

Fundamentals of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course introduces observational field research and compares it with experimental field research. Significant attention devoted to explaining the details of research design as well as what can and cannot be learned through each type of field research. Emphasis placed on the theory of the design and analysis of statistical experiments. Topics include: sample size selection, power and size of statistical hypothesis tests, partial compliance, sample selection bias and methods for accounting for it. Development of critical reading skills emphasized through class discussions of academic journal articles and popular media accounts of field research. Examples of best practice field research studies presented as well as examples of commonly committed errors; students are expected to articulate and challenge or defend underlying assumptions and the extent to which real-world research matches up with concepts covered in lecture. Practical aspects of field work, including efficient and cost-effective data collection, teamwork, field team supervision, budget management, and common ethical considerations. Grading based on weekly problem sets that focus on developing data analysis skills using statistical software, a midterm examination, and a final project in which students write a detailed research proposal. Students can also apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 and either STATS 60 or Econ 102A or equivalent.

Same as: EARTHSYS 120, ECON 121, PUBLPOL 220

**PUBLPOL 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. PoliSci 150A, Stats 60 or Econ 1 is strongly recommended.

Same as: CSRE 121L, POLISCI 121L

**PUBLPOL 122. Biosecurity and Bioterrorism Response. 4-5 Units.**

Overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. How well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. 4 units for twice weekly attendance (Mon. and Wed.); additional 1 unit for writing a research paper for 5 units total maximum.

Same as: BIOE 122, EMED 122, EMED 222, PUBLPOL 222

**PUBLPOL 123. Thinking About War. 4-5 Units.**

Introduction to the ideas, important writers, and policy decisions about warfare. Topics include: what causes wars, great strategists of warfare, whether nuclear weapons require different strategy than conventional war, fostering innovation, what creates stable peace, and what warfare feels like to those who fight it. Each class session is organized around a question; first half of each session will explore concepts, second half will apply them in a historical case or policy decision.

Same as: PUBLPOL 223

**PUBLPOL 124. American Political Institutions in Uncertain Times. 5 Units.**

This course examines how the rules that govern elections and the policy process determine political outcomes. It explores the historical forces that have shaped American political institutions, contemporary challenges to governing, and prospects for change. Topics covered include partisan polarization and legislative gridlock, the politicization of the courts, electoral institutions and voting rights, the expansion of presidential power, campaign finance and lobbying, representational biases among elected officials, and the role of political institutions in maintaining the rule of law. Throughout, emphasis will be placed on the strategic interactions between Congress, the presidency, and the courts and the importance of informal norms and political culture.

Same as: POLISCI 120C

**PUBLPOL 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings. Same as: AFRICAAM 126B, CSRE 126B, EDUC 136B, EDUC 236B

**PUBLPOL 129. Conversations on the Indian Economy. 1 Unit.**

This course is intended to give students the opportunity to engage with Stanford faculty, across the University's different schools, who undertake research related to the modern Indian economy, including professors from the Humanities and Sciences, Engineering, GSB and schools of medicine, as well as from different research centers across the University. In addition, the course will feature conversations with several members of the Silicon Valley Community, as well as from India. The format is intended to promote discussion and debate, and to provide students an opportunity to learn about new developments and initiatives regarding India. Class meetings will be in the form of round-table interactions and exchanges.

**PUBLPOL 132. The Politics of Policy Making. 3 Units.**

Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform. Same as: PUBLPOL 232

**PUBLPOL 133. Political Power in American Cities. 5 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

Same as: AMSTUD 121Z, POLISCI 121, URBANST 111

**PUBLPOL 134. Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.**

(Same as LAW 7020) The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: the Rohingya crisis in Myanmar; civilian space travel (Elon Musk's Mars plans); designer genetics; social media ethics (e.g. Facebook and Russia and on-line sex trafficking); free speech on University campuses (and Gawker type cases); artificial intelligence; Brexit; corporate and financial sector scandals (Epi pen pricing, hedge funds, Wells Fargo, Volkswagen emissions testing manipulation); and non-profit sector ethics challenges (e.g. should NGOs engage with ISIS). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with PUBLPOL 103E or PUBLPOL 103F), and Science, Technology and Society majors and satisfies the undergraduate Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Same as: ETHICSOC 234R, PUBLPOL 234

**PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley and the Greater Bay Area. 4 Units.**

Dynamics of regional leadership and decision making in Silicon Valley, a complex region composed of 40 cities and four counties without any overarching framework for governance. Formal and informal institutions shaping outcomes in the region. Case studies include transportation, workforce development, housing and land use, and climate change.

**PUBLPOL 136. The Sharing Economy. 3 Units.**

The rapid growth of the sharing economy, sometimes also called the peer to peer economy, is made possible by the ubiquity of smart phones, inefficiency of ownership, and measures designed to create and measure trust among participants. The course will explore not only the rapid rise of certain companies but also the shadow side of commercialized relationships. We will examine the economics and development consequences of the sharing economy, primarily with an urban focus, along an emphasis on the design of platforms and markets, ownership, the nature of work, environmental degradation and inequality. Same as: URBANST 136

**PUBLPOL 137. Innovations in Microcredit and Development Finance. 3 Units.**

The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B. Same as: URBANST 137

**PUBLPOL 14. Navigating Financial Crises in the Modern Global Economy. 1 Unit.**

What causes financial crises? What are the keys to anticipating, preventing, and managing disruptions in the global financial system? This course prepares students to navigate future episodes as policymakers, finance professionals, and citizens by going inside the practical decisions made in an unfolding crisis, from the U.S. government and IMF to the boardroom and trading floor. Students will learn warning signs of distress; market structures that govern crisis dynamics; strategic interactions among the key actors; and lessons learned for creating a more resilient system. Concepts will be applied to real-world experiences in emerging market crises, the U.S. housing and global financial crisis, and the European sovereign crisis, as well as prospective risks from China's financial system and unwinding of extraordinary central bank stimulus.

Same as: ECON 14

**PUBLPOL 143. Finance and Society for non-MBAs. 4 Units.**

The financial system is meant to help people, businesses, and governments fund, invest, and manage risks, but it is rife with conflicts of interests and may allow people with more information and control to harm those with less of both. In this interdisciplinary course we explore the forces that shape the financial system and how individuals and society can benefit most from this system without being unnecessarily harmed and endangered. Topics include the basic principles of investment, the role and "dark side" of debt, corporations and their governance, banks and other financial institutions, why effective financial regulations are essential yet often fail, and political and ethical issues in finance. The approach will be rigorous and analytical but not overly technical mathematically. Prerequisite: Econ 1.

Same as: ECON 143, IPS 227, MS&E 147, POLISCI 127A

**PUBLPOL 144. Giving 2.0: Philanthropy by Design. 4 Units.**

Seminar and practicum. Students drive an actual \$10,000 philanthropic process and design their own social change strategy. Topics: strategic planning, nonprofit assessment and site visits, innovative social change models, and leadership development. Speakers include philanthropic leaders and social entrepreneurs. Class activities: group grant assessments and selection, creative problem solving, and decision-making simulations. Individual project: Social Impact Strategic Plan. Must attend first class; limited enrollment. Recommended: PUBPOL 183.

**PUBLPOL 146. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

(Same as LAW 7057). In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter.

Same as: COMM 153A, COMM 253A, POLISCI 72, PUBLPOL 246

**PUBLPOL 147. Ending Poverty with Technology. 5 Units.**

There are growing worries that new technologies may eliminate work, increase inequality, and create a large dependent class subsisting on transfers. But can technology instead be turned against itself and used to end poverty? This class explores the sources of domestic poverty and then examines how new technologies might be developed to eliminate poverty completely. We first survey existing poverty-reducing products and then attempt to imagine new products that might end poverty by equalizing access to information, reducing transaction costs, or equalizing access to training. In a follow-up class in the spring quarter, students who choose to continue will select the most promising ideas, continue to develop them, and begin the design task within Stanford's new Poverty and Technology Lab.

Same as: SOC 157

**PUBLPOL 148. Ending Poverty with Technology: A Practicum.. 5 Units.**

Will robots, automation, and technology eliminate work and create a large poverty-sticken dependent class? Or will they eliminate poverty, free us from the tyranny of work, and usher in a new society defined by leisure and creative pursuits? This two-quarter class is dedicated to exploring new theories about poverty while at the same time incubating applied technology solutions. The first quarter is devoted to examining the theory of technology-based solutions to poverty, and the second quarter is devoted to planning a viable technology-based product that will reduce poverty. This product may then be built in a follow-up Using Tech for Good (Computer Science 50) class in the first quarter of 2018 (but class participants are not required to take that follow-up class). The course is premised on the view that innovative solutions to poverty will be based on new conversations and an authentic collaboration between Silicon Valley and leaders from education, government, and low-income communities.

Same as: SOC 158

**PUBLPOL 152. Negotiation. 3 Units.**

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; students should enroll on Axess and complete the application on Canvas before March 18.

Same as: CEE 151, CEE 251, EARTH 251

**PUBLPOL 154. Politics and Policy in California. 5 Units.**

State politics and policy making, including the roles of the legislature, legislative leadership, governor, special interests, campaign finance, advocacy groups, ballot initiatives, state and federal laws, media, and research organizations. Case studies involving budgets, education, pensions, health care, political reform, environmental reforms, water, transportation and more. Evaluation of political actions, both inside and outside of government, that can affect California policy and social outcomes. Meetings with elected officials, policymakers, and advocates in class and during a day-long field trip to Sacramento.

**PUBLPOL 156. Health Care Policy and Reform. 5 Units.**

Focuses on healthcare policy at the national, state, and local levels. Includes sessions on international models, health insurance, the evolution of healthcare policy in the U.S., key U.S. healthcare topics (Patient Protection and Affordable Care Act, Medicare, Medicaid, public employee retiree health care), the role of technology, reform proposals (single payer, national health care, consumer-based systems, regulated markets, state and local reform efforts), efficiency/cost drivers and prospects for future policy. The course includes sessions on effective memo writing and presentation of policy proposals.

**PUBLPOL 157. Political Data Science. 5 Units.**

Introduction to methods of research design and data analysis used in quantitative political research. Topics covered include hypothesis testing, linear regression, experimental and observational approaches to causal inference, effective data visualization, and working with big data. These topics will be introduced using data sets from American politics, international relations, and comparative politics. The course begins with an intensive introduction to the R programming language used throughout the course. Satisfies quantitative methods requirement for the Political Science Research Honors Track. Prerequisites: Stat 60 or instructor consent.

Same as: POLISCI 155

**PUBLPOL 158. Housing & Community Development--Policy and Practice. 3 Units.**

How federal, state and local governments have worked with private and nonprofit sector actors in creating housing, as well as downtown, waterfront and neighborhood development. Legal and financial mechanisms, tax policy, reuse of historic structures, affordable shelter.

Same as: URBANST 168

**PUBLPOL 159. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.**

This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. It will address economic issues, legal constraints, and political challenges associated with various emissions-reduction strategies, and it will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies, the strengths and weaknesses of alternative policy instruments, trade-offs among alternative policy objectives, and decision making under uncertainty. Prerequisites: Econ 50 or its equivalent.

Same as: EARTHSYS 159, ECON 159, ECON 209

**PUBLPOL 167. How To Be a Politician. 2 Units.**

Do you want to run for political office one day? This course will give you a full toolkit for winning elections. It will help students think about their personal narrative, how to present themselves to the electorate, and the issues and messages that should underpin their future campaign. It will also provide students with a practical understanding of how to build a campaign apparatus, fundraise effectively, and develop a winning strategy. The class will be highly interactive giving each student the chance to hone their candidacy, and there will be opportunities to work on debate skills, speech giving, and media performance. We will look at campaigns from across the world, as well as invite politicians and political consultants to speak to us. This class is designed for any student who has dreamed of running for office: be it locally or becoming President.

Same as: PUBLPOL 267

**PUBLPOL 168. Global Organizations: The Matrix of Change. 4 Units.**

We derive analytical tools from the social sciences in studying a variety of organizations given their strategies, and in particular, when their strategies change. Focus is on how to design effective organizations and projects within and across institutional settings. This class is associated with a study trip to India during spring break. Recommended: FINANCE 377, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 268, SOC 168, SOC 268

**PUBLPOL 172. Children, Youth, and the Law. 5 Units.**

How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; freedom of speech; and sex. The class is interactive, using hypotheticals for discussion and analysis. A and B alternate; students may take one or both. Prerequisite: Upper division course with preference given to upperclassmen.

Same as: HUMBIO 172B

**PUBLPOL 174. The Urban Economy. 4 Units.**

Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation. Prerequisite: Econ 1A or permission of instructor.

Same as: URBANST 173

**PUBLPOL 178. The Science and Practice of Effective Advocacy. 3-5 Units.**

How can purposeful collective action change government policy, business practices and cultural norms? This course will teach students about the components of successful change campaigns and help develop the practical skills to carry out such efforts. The concepts taught will be relevant to both issue advocacy and electoral campaigns, and be evidence-based, drawing on lessons from social psychology, political science, communications, community organizing and social movements. The course will meet twice-a-week for 90 minutes, and class time will combine engaged learning exercises, discussions and lectures. There will be a midterm and final. Students will be able to take the course for 3 or 5 units. Students who take the course for 5 units will participate in an advocacy project with an outside organization during the quarter, attend a related section meeting and write reflections. If you enroll in the course for 5 units, you also need to enroll in the section URBANST 178-section 02.

Same as: CSRE 178P, URBANST 178

**PUBLPOL 190. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3 Units.**

This interdisciplinary seminar explores pressing questions relating to the protection, practice and repatriation of the cultural heritage of Indigenous peoples from North America and beyond. Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will explore and problematize, among other subjects: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples; cultural rights; international, domestic, and tribal heritage protection and repatriation laws/initiatives including the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the 1990 US Native American Graves Protection and Repatriation Act (NAGPRA), and others; past and present Western museum practices and guidelines relating to display, preservation, provenance research and repatriation of indigenous cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. Each week students will brainstorm actionable ideas for amending/supplementing current frameworks in order to give force to the cultural rights enumerated in UNDRIP. The overall seminar experience will involve discussions of lectures and video content, assigned readings, quizzes, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by experts. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent).

Same as: ARTHIST 190A, ARTHIST 490A, PUBLPOL 290

**PUBLPOL 197. Junior Honors Seminar. 5 Units.**

Primarily for students who expect to write an honors thesis. Weekly sessions go through the process of selecting a research question, finding relevant bibliography, writing a literature review, introduction, and study design, culminating in the write-up of an honors thesis proposal (prospectus) and the oral presentation of each student's research project. Students also select an adviser and outline a program of study for their senior year. Enrollment limited to 15.

Same as: ECON 198

**PUBLPOL 198. Directed Readings in Public Policy. 1-5 Unit.****PUBLPOL 199. Senior Research. 1-15 Unit.**

May be repeated for credit.

**PUBLPOL 19Q. Measuring the Performance of Governments in the U.S.. 3 Units.**

Spending by federal, state, and local governments accounts for about one-third of U.S. GDP and governments employ more than one-in-seven workers in the U.S. For most U.S. residents, government is represented by a complicated web of federal, state, and local policies. There is an increasingly contentious debate about the proper role of the government and regarding the impact of specific government policies. This debate is rarely grounded in a common set of facts. In this seminar, we will explore how each level of government interacts with U.S. residents through government services, public programs, taxes, and regulations. We will examine financial results for different levels of government while considering the net effects of government intervention on the health and economic well-being of individuals and families. Particular attention will be paid to certain sectors (e.g. education, health care, etc.) and to certain groups (e.g. those in poverty, the elderly, etc.). Along the way we will accumulate a set of metrics to assess the performance of each level of government while highlighting the formidable challenges of such an exercise. Prerequisite: Econ 1.

Same as: ECON 19Q

**PUBLPOL 200A. Senior Practicum. 5 Units.**

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

**PUBLPOL 200B. Senior Practicum. 5 Units.**

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

**PUBLPOL 200C. Senior Practicum. 5 Units.**

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

**PUBLPOL 200H. Senior Honors Seminar. 3 Units.**

Honors students conduct original research for oral presentations and a paper on their policy-related Honors thesis topic. The course is designed to help students make progress on their theses and improve their analytical, research, and communication skills.

**PUBLPOL 201. Politics and Public Policy. 4-5 Units.**

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, POLISCI 102, PUBLPOL 101

**PUBLPOL 203E. Ethics on the Edge Public Policy Core Seminar. 3 Units.**

This seminar-style course will explore additional foundational readings on organizational ethics (business, non-profit, and governmental organizations) and policy ethics. Themes will include, among others: race and police brutality incidents; national security (including cyber threats); the Iran nuclear agreement; Brexit; non-profit organizations in the policy and US landscape; sexual harassment networks; and various corporate matters. Organizing themes include, among others: ethics of leadership; ethics of persuasion and compromise; influence of bias in organizational and policy ethics; ethics of social movements; discrepancies between discourse and action; emotion and ethics; and interpreting and explaining ethics. In addition, the course will offer training in a wide variety of skills for effective communication of ethics for policy purposes (developing succinct arguments, presentations, website discourse, commenting in meetings and conferences, interviews, statement of personal views, interacting with the media and social media, and mapping complex ethical analysis). Most of the assignments allow students flexibility to explore topics of their choice. The objective is to engage actively and improve skills in a supportive environment. A short, analytically rigorous final paper in lieu of final exam. Attendance required. Grading will be based on short assignments, class participation, and the short final paper. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). This three-credit seminar accompanies PUBLPOL 134 Ethics on the Edge but can also be taken as a stand-alone course. \*Public Policy majors taking the course to complete the core requirements and students taking the course for Ways credit must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

Same as: PUBLPOL 103E

**PUBLPOL 203F. Ethics of Truth in a Post-Truth World. 3 Units.**

This course will explore changing notions of truth in a world in which technology, global risks, and societal developments are blurring the boundaries of humanity and boring through traditional notions of nation states, institutions, and human identity. We will ask one overarching question: does truth matter anymore? If so, why and how? If not, why not? Either way, how does truth relate to ethical decision-making by individuals and institutions and to an ethical society? Five themes will organize our exploration of more specific topics: honesty; identity; memory; authenticity and integrity; and religious truth. Examples of topics to be explored include, among others: fake news; President Trump's campaign strategy and presidency; Syrian refugees and the Rohingyas; University history (Rhodes, Georgetown slavery, Yale Calhoun College...); new questions in gender and racial identity; Chinese beautifying app Meitu and other social media "truth modifiers"; the sharing economy; the impact of compromised truth on history; and Brexit. Scotty McClennan will explore truth through major literary characters and the impact of religion on truth. We will consider how we determine and verify the truth; how we "do" truth; the role of truth in ethical decision-making; the importance of truth to effective ethical policy; and the relationship of the truth to a life well lived. An analytically rigorous short final paper in lieu of exam. This three-credit seminar may be taken as a stand-alone course or may accompany PUBLPOL 134 Ethics on the Edge. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. \*Public Policy majors taking the course to complete the core requirements and students taking the course for Ways credit must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

Same as: PUBLPOL 103F

**PUBLPOL 204. Economic Policy Analysis. 4-5 Units.**

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: ECON 150, PUBLPOL 104

**PUBLPOL 205. Empirical Methods in Public Policy. 4-5 Units.**

Methods of empirical analysis and applications in public policy. Emphasis on causal inference and program evaluation. Public policy applications include health, education, and labor. Assignments include hands-on data analysis, evaluation of existing literature, and a final research project. Objective is to obtain tools to 1) critically evaluate evidence used to make policy decisions and 2) perform empirical analysis to answer questions in public policy. Prerequisite: ECON 102B. Enrollment is limited to Public Policy students. Public Policy students must take the course for a letter grade.

Same as: PUBLPOL 105

**PUBLPOL 206. Law and Economics. 4-5 Units.**

This course explores the role of law in promoting well-being (happiness). Law, among its other functions, can serve as a mechanism to harmonize private incentives with cooperative gains, to maintain an equitable division of those gains, and to deter "cheating" and dystopia. Law is thus essential to civilization. Economic analysis of law focuses on the welfare-enhancing incentive effects of law and its enforcement and on law's role in reducing the risks of cooperation, achieved by fixing expectations of what courts or the state will do in various futures. Prerequisite: ECON 51 or PUBLPOL 51.

Same as: ECON 154, PUBLPOL 106

**PUBLPOL 220. Social Science Field Research Methods and Applications. 5 Units.**

Fundamentals of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course introduces observational field research and compares it with experimental field research. Significant attention devoted to explaining the details of research design as well as what can and cannot be learned through each type of field research. Emphasis placed on the theory of the design and analysis of statistical experiments. Topics include: sample size selection, power and size of statistical hypothesis tests, partial compliance, sample selection bias and methods for accounting for it. Development of critical reading skills emphasized through class discussions of academic journal articles and popular media accounts of field research. Examples of best practice field research studies presented as well as examples of commonly committed errors; students are expected to articulate and challenge or defend underlying assumptions and the extent to which real-world research matches up with concepts covered in lecture. Practical aspects of field work, including efficient and cost-effective data collection, teamwork, field team supervision, budget management, and common ethical considerations. Grading based on weekly problem sets that focus on developing data analysis skills using statistical software, a midterm examination, and a final project in which students write a detailed research proposal. Students can also apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 and either STATS 60 or Econ 102A or equivalent.

Same as: EARTHSYS 120, ECON 121, PUBLPOL 120

**PUBLPOL 221. Sentencing, Corrections, and Criminal Justice Policy. 3 Units.**

This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore sentencing theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, the effectiveness of rehabilitation, the relationship between sanctions and crime, and the consequences of prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation, and either: (1) three reflection papers of 5 to 7 pages each, or (2) a longer research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the research (R) requirement, with consent of the instructor. Elements used in grading: Class participation, reflection papers or research paper. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 221) and open to Juniors and Seniors, Law (LAW 621), Public Policy (PUBLPOL 221). Same as: CSRE 221

**PUBLPOL 222. Biosecurity and Bioterrorism Response. 4-5 Units.**

Overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. How well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. 4 units for twice weekly attendance (Mon. and Wed.); additional 1 unit for writing a research paper for 5 units total maximum. Same as: BIOE 122, EMED 122, EMED 222, PUBLPOL 122

**PUBLPOL 223. Thinking About War. 4-5 Units.**

Introduction to the ideas, important writers, and policy decisions about warfare. Topics include: what causes wars, great strategists of warfare, whether nuclear weapons require different strategy than conventional war, fostering innovation, what creates stable peace, and what warfare feels like to those who fight it. Each class session is organized around a question; first half of each session will explore concepts, second half will apply them in a historical case or policy decision. Same as: PUBLPOL 123

**PUBLPOL 224. Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health. 3 Units.**

Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health is a new Collaboratory workshop for students/fellows to design/develop innovative social ventures/solutions addressing key challenges in public health and the environment, in support of the UN Sustainable Development Goals (SDGs 2030). SE Lab is open to students/fellows across Stanford and combines design thinking exercises, short lectures & case studies, workshops, small group teamwork, presentations, guest speakers, and faculty, practitioner and peer feedback to support/advance development of your ideas/plans. Join SE Lab with an idea or simply the desire to join a team. Enrollment limited to 50. Instructor's permission required.

Same as: HRP 224, MED 224

**PUBLPOL 225. Place-Making Policies. 5 Units.**

This reading and research seminar considers the numerous ways that governments conduct social policy by shaping and remaking geographic places. Representative topics include: housing aid programs, exclusionary zoning, controls on internal migration and place of residence, cars and their place in cities, and the politics of western water projects. Students will conduct original field research on the consequences of these policies for economic, social, and political outcomes. Prerequisites: None.

Same as: POLISCI 220, URBANST 170

**PUBLPOL 231. Health Law: Finance and Insurance. 3 Units.**

(SAME AS LAW 3001, MGTECON 331) This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at <https://syllabus.stanford.edu>. Elements used in grading: Participation, attendance, class presentation, and final exam.

Same as: HRP 391

**PUBLPOL 232. The Politics of Policy Making. 3 Units.**

Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.

Same as: PUBLPOL 132

**PUBLPOL 234. Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.**

(Same as LAW 7020) The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: the Rohingya crisis in Myanmar; civilian space travel (Elon Musk's Mars plans); designer genetics; social media ethics (e.g. Facebook and Russia and on-line sex trafficking); free speech on University campuses (and Gawker type cases); artificial intelligence; Brexit; corporate and financial sector scandals (Epi pen pricing, hedge funds, Wells Fargo, Volkswagen emissions testing manipulation); and non-profit sector ethics challenges (e.g. should NGOs engage with ISIS). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with PUBLPOL 103E or PUBLPOL 103F), and Science, Technology and Society majors and satisfies the undergraduate Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at [susanl1@stanford.edu](mailto:susanl1@stanford.edu). \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Same as: ETHICSOC 234R, PUBLPOL 134

**PUBLPOL 238. Wise Interventions. 4 Units.**

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy. Same as: PSYCH 138, PSYCH 238

**PUBLPOL 242. Design Thinking for Public Policy Innovators. 3 Units.**

What happens when new technology is developed so quickly that society isn't sure if it poses an opportunity or a danger? How should we regulate it when there are real risks but also real potential for societal benefit? Both of which are hard to measure? These kinds of dilemmas are arising now in bioengineering, information technology, and beyond. The scientific and policy communities are trying to address these issues, but the clash of cultures between a fast-moving innovation mindset and a risk-averse safety and security mindset affects how this work progresses. In this experimental class, you will explore how design thinking can be used to reinvent a policy ecosystem by focusing on the challenge policymakers face in trying to establish new rules and/or standards that they hope a wide variety of constituent groups will accept and follow and will keep pace with future innovations. This is a new approach to a critical problem & you must be willing to dig into unknown territory. If you're looking for a survey course in design methods, this class is not for you. Limited enrollment. Admission by application. See <http://dschool.stanford.edu/classes>.

**PUBLPOL 245. Does Google Need a Foreign Policy? Private Corporations & International Security in the Digital Age. 4 Units.**

Facebook has more users than any nation has citizens. Apple CEO Tim Cook speaks more often with Chinese President Xi Jinping than President Trump does. Google's revenues exceed the GDPs of more than half the world's countries. Cybersecurity companies produce weapons that once only foreign governments wielded. These and other technology companies are increasingly caught in the maw of global politics whether it's entering challenging new foreign markets, developing platforms that enable millions of people around the world to organize for both noble and nefarious aims, or developing products that can become tools of intelligence agencies worldwide for surveillance, counterintelligence, and information warfare. In several respects, tech companies wield more power than governments. We examine the changing role of corporations in international politics, the role of the state, and critical challenges that large technology companies face today in particular. We discuss contending perspectives about key issues with guest lectures by industry and US government leaders as well as simulations of foreign policy crises from the board room to the White House Situation Room. No background in political science or computer science is required. Admission based on application. Instructor consent required. See course notes for details. Same as: IPS 245

**PUBLPOL 246. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

(Same as LAW 7057). In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter. Same as: COMM 153A, COMM 253A, POLISCI 72, PUBLPOL 146

**PUBLPOL 247. The Politics of Inequality. 5 Units.**

This course is about the distribution of power in contemporary democratic societies, and especially in the US: who governs? Is there a "power elite," whose preferences dominate public policy making? Or, does policy reflect a wide range of interests? What is the relationship between income and power? What are the political consequences of increasing income inequality? How do income differences across racial and ethnic groups affect the quality of their representation? What are effective remedies for unequal influence? Finally, which institutions move democratic practice furthest towards full democratic equality? This course will address these questions, focusing first on local distributions of power, and then considering the implications of inequality in state and national politics. Students will have the opportunity to study income inequality using income and labor force surveys in a mid-term assignment. Then, in a final paper, students will conduct an empirical examination of the implications of income inequality for American democracy.

Same as: POLISCI 147P, SOC 178

**PUBLPOL 267. How To Be a Politician. 2 Units.**

Do you want to run for political office one day? This course will give you a full toolkit for winning elections. It will help students think about their personal narrative, how to present themselves to the electorate, and the issues and messages that should underpin their future campaign. It will also provide students with a practical understanding of how to build a campaign apparatus, fundraise effectively, and develop a winning strategy. The class will be highly interactive giving each student the chance to hone their candidacy, and there will be opportunities to work on debate skills, speech giving, and media performance. We will look at campaigns from across the world, as well as invite politicians and political consultants to speak to us. This class is designed for any student who has dreamed of running for office: be it locally or becoming President.

Same as: PUBLPOL 167

**PUBLPOL 268. Global Organizations: The Matrix of Change. 4 Units.**

We derive analytical tools from the social sciences in studying a variety of organizations given their strategies, and in particular, when their strategies change. Focus is on how to design effective organizations and projects within and across institutional settings. This class is associated with a study trip to India during spring break. Recommended: FINANCE 377, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 168, SOC 168, SOC 268

**PUBLPOL 290. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3 Units.**

This interdisciplinary seminar explores pressing questions relating to the protection, practice and repatriation of the cultural heritage of Indigenous peoples from North America and beyond. Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will explore and problematize, among other subjects: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples; cultural rights; international, domestic, and tribal heritage protection and repatriation laws/initiatives including the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the 1990 US Native American Graves Protection and Repatriation Act (NAGPRA), and others; past and present Western museum practices and guidelines relating to display, preservation, provenance research and repatriation of indigenous cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. Each week students will brainstorm actionable ideas for amending/supplementing current frameworks in order to give force to the cultural rights enumerated in UNDRIP. The overall seminar experience will involve discussions of lectures and video content, assigned readings, quizzes, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by experts. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent).

Same as: ARTHIST 190A, ARTHIST 490A, PUBLPOL 190

**PUBLPOL 298. Directed Readings in Public Policy. 1-5 Unit.****PUBLPOL 301A. Microeconomics for Policy. 4-5 Units.**

Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Undergraduate Public Policy students may take PublPol 51 as a substitute for the Econ 51 major requirement. Economics majors still need to take Econ 51. Prerequisites: ECON 50 and MATH 51 or equiv.

Same as: IPS 204A, PUBLPOL 51

**PUBLPOL 301B. Economic Policy Analysis for Policymakers. 4-5 Units.**

This class provides economic and institutional background necessary to conduct policy analysis. We will examine the economic justification for government intervention and illustrate these concepts with applications drawn from different policy contexts. The goal of the course is to provide you with the conceptual foundations and the practical skills and experience you will need to be thoughtful consumers or producers of policy analysis. Prerequisites: ECON 102B or PUBLPOL 303D.

Same as: IPS 204B

**PUBLPOL 302A. Introduction to American Law. 3-5 Units.**

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: AMSTUD 179, POLISCI 122

**PUBLPOL 302B. Economic Analysis of Law. 3 Units.**

(Same as LAW 7502.) This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differs from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. Because this course is taught jointly with Law 7502 in the Law School, it will not be mathematically oriented; there are no prerequisites to take the course.

**PUBLPOL 303D. Applied Econometrics for Public Policy. 4-5 Units.**

This course aims to present the theory and practice of empirical research in economics with particular emphasis on topics relating to public policy questions. We will start with basic regression analysis and introduce the statistical software STATA. The course will put a substantial amount of effort on work with STATA in analyzing actual data sets, reproducing and criticizing results in scientific research and learning the actual practice of econometrics. We will focus on the identification of causal effects and the various econometric techniques available to learn about causality. While this is primarily a methodology module, most examples and applications will be drawn from the area of public policy. The final will be a 3-5 hour take-home exam. Prerequisite: Econ 102A.

**PUBLPOL 304A. The Ethics and Politics of Collective Action. 3-4 Units.**

Collective action problems arise when actions that are individually rational give rise to results that are collectively irrational. Scholars have used such a framework to shed light on various political phenomena such as revolutions, civil disobedience, voting, climate change, and the funding of social services. We examine their findings and probe the theoretical foundations of their approach. What does this way of thinking about politics bring into focus, and what does it leave out? What role do institutions play in resolving collective action problems? And what if the required institutions are absent? Can we, as individuals, be required to cooperate even if we expect that others may not play their part? Readings drawn from philosophy, political science, economics, and sociology. Same as: ETHICSOC 180M, PHIL 73, POLISCI 131A

**PUBLPOL 305B. Public Policy and Social Psychology: Implications and Applications. 4 Units.**

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, and climate change. Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.

Same as: IPS 207B, PSYCH 216

**PUBLPOL 306. Writing and Rhetoric for Policy Audiences. 4 Units.**

This course offers hands-on learning of effective writing and presentation techniques for audiences that include policy makers, decision stakeholders, interest groups, the media, and the public. Class time will be spent learning lessons in rhetoric, analyzing multiple written genres (memo, op-ed, report, media communications), participating in peer review, and practicing presentation strategies (elevator pitch, press conference, media interview, board meeting, formal presentation). Course texts include sample memos, op-eds, and white papers, as well as rhetoric handouts and videos. Students will draft, revise, and submit writing for policy audiences in the compilation of a final portfolio. Students will also produce oral and multimedia arguments, individually and in teams. Students will be responsible for timely peer review and short presentations on course materials. Enrollment limited. Prerequisite: consent of instructor.

**PUBLPOL 307. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: ETHICSOC 171, PHIL 171, POLISCI 103, POLISCI 336S, PUBLPOL 103C

**PUBLPOL 308. Political Analysis for Public Policymakers. 4 Units.**

Policymakers in the United States, whether elected or unelected, operate in a governmental system where politics pervades nearly every element of their daily activity. This course provides students with both the theory and real-world examples they need to understand and evaluate the impact of politics, political institutions, and the political process on policymaking. Readings will include selections from the public policy, political science, legal, and economics literatures.

**PUBLPOL 309. Practicum. 1-10 Unit.**

Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

**PUBLPOL 309X. Public Policy Research Project. 1-10 Unit.**

Supervised research internship. Individual students perform policy research for outside client, applying analytical skills from core curriculum. Requires permission of program director.

**PUBLPOL 310. Master of Arts Thesis. 1-5 Unit.**

Restricted to students writing a master's thesis in Public Policy. May be repeated for credit.

**PUBLPOL 311. Public Policy Colloquium. 1 Unit.**

Weekly colloquia speaker series required for M.P.P. and M.A. in Public Policy students. Themes vary each quarter. Open only to Public Policy graduate students; permission number required to enroll.

**PUBLPOL 315. Practical Training. 1-5 Unit.**

Qualified Public Policy students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Prior to enrolling students must get internship approved by the Public Policy Program. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit.

**PUBLPOL 316. Global Education Policy & Organization. 3-5 Units.**

Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.

Same as: EDUC 306B

**PUBLPOL 317. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.**

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

Same as: EDUC 377, GSBGEN 346, SOC 377

**PUBLPOL 319. Legislation. 3 Units.**

(Same as Law 7048) Lawyers work in a legal system largely defined by statutes, and constantly shaped by the application of legislative power. This course is about statutes and the legislative institutions that create them. It discusses some of the key laws governing access to legislative power and the procedures that culminate in the production of statutes in the legislature. The course is divided into two parts. The first part will focus on the acquisition of legislative power. Key topics include bribery laws, lobbying and indirect influence on legislative activity, and campaign finance regulations. The second part will focus on the exercise of legislative power. Through a number of public policy case studies, students will better understand the organization of the U.S. Congress, the ways in which power is exercised in that institution, and the intersection between politics, the law, and policymaking. Elements used in grading: Class participation and final exam.

**PUBLPOL 342. Energy Efficiency: Technology, Policy, and Investment. 1-2 Unit.**

Provides students with a basic understanding of the technologies, policies, and investments behind energy efficiency. Explores each of these dimensions, and their interplay, through structured lectures and expert perspectives from leading professionals and practitioners. The seminar covers the following energy efficiency topics: fundamental concepts; history and achievements; role of policy and new policy frameworks; investment, strategy and finance; evolving digital/analytical and platform tools; low income programs; international development; relationship between efficiency and climate change; energy efficiency and the changing grid; and new entrants and business models. Limited to 30 students. Prerequisite: at least one  $\zeta$  or equivalent  $\zeta$  of CEE 100, CEE 226A, CEE 107A/207A, ENVRES 280, LAW 2503, GSBGEN 532. Same as: MS&E 442

**PUBLPOL 347D. Rebooting Government with Design Thinking. 3-4 Units.**

Students apply tools of human-centered design to issues of government performance. Small project teams work with NGO and government partners (in the U.S. and abroad) on concrete design challenges focused on issues such as how to deliver services more effectively and ensure that citizens' voices are heard. Students identify needs, generate concepts, create prototypes, and test their appropriateness. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s). Same as: POLISCI 347D

**PUBLPOL 353A. Science and Technology Policy. 4-5 Units.**

U.S. policies for science, technology, and innovation; political institutions that create and carry out these policies; government programs that support scientific research and the development and use of new technologies; political controversies surrounding some science and technologies and the regulation of research and technology; international aspects of science and technology; the roles of scientists, engineers, and physicians in creating and implementing policy; and opportunities to do policy work in government and other organizations. Assignments: analyzing the politics of particular executive and legislative proposals, assessing options for trying to reach specific policy objectives, and preparing mock memos and testimony. This course is designed primarily for graduate students in science, engineering, and medicine who want to learn more about science and technology policy and how it is made. Public Policy 353A is a "gateway course" - an introduction - both for students pursuing a joint degree or co-terminal degree in Public Policy and for other graduate students interested in S&T policy or possible careers in the policy world. Junior and senior undergraduate students are also welcome to enroll.

**PUBLPOL 354. Economics of Innovation. 5 Units.**

The role of innovation and technological change in long run economic growth and the sources of innovation in science, technology, and commercialization. Founding of new industries and new markets. Commercialization of new technologies. Incentives and organization of science. Entrepreneurship. Openness and proprietary/controlled innovation. Selected public policies toward invention and innovation. The industrial revolution, the shifting international location of innovation, and the information revolution. Focus of the second half of the course is on the newest research on the newest industries. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51) and Econ 102B. Same as: ECON 113

**PUBLPOL 364. The Future of Finance. 2 Units.**

(Same as Law 1038) If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of global financial markets such as how the world has evolved post-financial crisis, how it is being disrupted by FinTech, RegTech, artificial intelligence, crowd financing, blockchain, machine learning & robotics (to name a few), how it is being challenged by IoT, cyber, financial warfare & crypto currency risks (to name a few) and how it is seizing new opportunities in fast-growing areas such as ETFs, new instruments/payment platforms, robo advising, big data & algorithmic trading (to name a few). The course will include guest-lecturer perspectives on how sweeping changes are transforming business models and where the greatest opportunities exist for students entering or touching the world of finance today including existing, new and disruptive players. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which is available on the Public Policy Program's website at <https://publicpolicy.stanford.edu/academics/undergraduate/forms>. See Consent Application Form for submission deadline.

Same as: ECON 152, ECON 252, STATS 238

**PUBLPOL 51. Microeconomics for Policy. 4-5 Units.**

Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Undergraduate Public Policy students may take PublPol 51 as a substitute for the Econ 51 major requirement. Economics majors still need to take Econ 51.

Prerequisites: ECON 50 and MATH 51 or equiv.

Same as: IPS 204A, PUBLPOL 301A

**PUBLPOL 55N. Public Policy and Personal Finance. 3 Units.**

The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.

Same as: ECON 25N

**PUBLPOL 73. Energy Policy in California and the West. 1 Unit.**

This seminar provides an in-depth analysis of the role of California state agencies and Western energy organizations in driving energy policy development, technology innovation, and market structures, in California, the West and internationally. The course covers three areas: 1) roles and responsibilities of key state agencies and Western energy organizations; 2) current and evolving energy and climate policies; and 3) development of the 21st century electricity system in California and the West. The seminar will also provide students a guideline of what to expect in professional working environment. nnSpecific meeting dates for the course are as follows: April 21 10am-2pm/ May 12 10am-1pm/ June 2 10am-1pm.

Same as: CEE 263G, POLISCI 73

**PUBLPOL 74. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EARTHSYS 9, EDUC 9, HUMBIO 9, URBANST 101

**PUBLPOL 78N. Economic Policies of the Presidential Candidates. 3 Units.**

In nearly all polls, American voters rank the economy as one of their most important concerns. In the presidential election, much of the debate for voters will be on questions of economic policy. In this course, we will delve deeply into economic policy issues to understand options for government intervention and possible outcomes. We will combine economic analysis with political science methodology to understand efficient and implementable policy proposals.nnSpecific areas of interest will be taxation, budget, entitlement programs, economic regulation and competition policy, trade, demography, income inequality, and monetary policy. The course will incorporate other timely and salient policy issues as they arise during the course of the campaign. n nStudents will be expected to write a short paper and make an oral presentation to the class. A wide range of topics will be acceptable, including those directly related to campaign issues as well as other long-term economic issues facing the country.

Same as: ECON 78N

**PUBLPOL 801. TGR Project. 0 Units.**

Instructor and program consent required prior to enrollment.

**PUBLPOL 85. Environmentalism in California. 1 Unit.**

Alternative Spring Break: With climate change posed to be one of the most pressing issues of the 21st Century, environmental preservation is emerging at a top priority. In addition to the federal government, state and local governments regulate the environment. In this course, we will learn about what environmental policy looks like in at the state level in California. Since the Golden State has an ambitious environmental preservation plan, there will be a lot of content. To make this class more manageable, we will be focusing on two areas specifically: water and energy. Finally, we will spend that last few weeks of the course learning about environmental justice, and specifically, how climate change impacts Indigenous communities in California and how the state is mitigating the impact. All major backgrounds are welcome.

**PUBLPOL 95S. Protest in Modern China. 5 Units.**

How has protest impacted the history of China? In this course, we study the history of state-citizen confrontation from the fall of the Qing Dynasty in 1911 to the Occupy Central movement in 2014. We seek to understand the politics of civic engagement in China today as part of politicized, global conversation about human rights, democracy, and revolution. We will examine a wide range of primary sources, explore archival offerings on campus, and hone critical reading and analytical writing skills.

Same as: HISTORY 95S

## Religious Studies (RELIGST)

**RELIGST 1. Religion Around the Globe. 4 Units.**

This course surveys major religious traditions of the world. Through examination of a variety of materials, including scriptures and other spiritual writings, religious objects and artifacts, and modern documentary and film, we explore Buddhism, Christianity, Hinduism, Islam, Judaism, and Daoism as rich historical and living traditions.

**RELIGST 105. Religion and War in America. 4 Units.**

Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.

Same as: AMSTUD 105R, CSRE 105, HISTORY 254D, HISTORY 354D

**RELIGST 10Q. Literature, Medicine and Empathy. 3 Units.**

In recent years, there has been a groundswell of interest in empathy as a key competency of the emotionally intelligent, and a primary motivator of moral behavior. But what is empathy, exactly? This seminar will seek to find out, exploring the concept through the lens of literature and medicine. nReading novels and exploring the philosophical beginnings of the term empathy, we will learn about the range of ways in which human beings have attempted to know and understand the other. Guided by research studies and our own experience, we will explore the critical question of whether empathy really does lead to altruism. We will consider why it can be so hard for human beings to walk in another's shoes and why we so often fail to do so. Through memoirs of suffering, we will learn about empathy in medicine and about what the latest studies in biology and neuroscience can teach us about how we relate to each other. Lastly, we will explore the dangers and limitations of empathy, reading scholarly circuits and discussing the role of empathy in life and society.

Same as: MED 10Q

**RELIGST 114. Yoga Ancient and Modern. 4 Units.**

Originating in ancient India, yoga went through many developments over more than 4000 years in India and other parts of Asia. Having migrated to Euro-America in the late nineteenth century, today yoga is everywhere—studios, schools, gyms, malls, resorts, ashrams, retreat centers. It comes in many flavors— austere, with meditative instructors and Sanskrit chants; stylish, in 105-degree heat, with portable-miked instructors loudly motivating students to go through poses with speed and intensity; niche-crafted to meet the needs of busy professionals, pregnant women, senior citizens, or people with back problems. It may appear as a spiritual path or as a heavily marketed commodity. It generates lawsuits as teachers dispute ownership of certain styles, or as some Americans oppose its teaching yoga in public schools. In the first half of the course we will study the history of yoga in India, reading primary texts composed between about 500 BCE and 1600 CE. In the second half we will learn about yoga's globalization in the last century. Participating in a yoga class is recommended. 2 units of independent study (S-NC) are offered for those who participate in a weekly yoga class and write short reflections on the experience.

**RELIGST 115X. Europe in the Middle Ages, 300-1500. 3-5 Units.**

This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we'll concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it.

Same as: HISTORY 15D, HISTORY 115D

**RELIGST 117. Christianity in 21st-century America. 4 Units.**

As the largest religion practiced in the United States, Christianity not only shapes the lives of a large number of its citizens but also impinges on public discourse, policies, and debates. This course investigates the ways in which Christianity in America is changing and what these changes bode for its role in the public and private spheres. Issues include shifting demographics lead to declining numbers in 'mainline' denominations; the polarization of Christian conservatives and religious 'nones'; interfaith toleration and cooperation alongside interreligious conflict; the rise of 'spiritual, not religious' young adults; the effects of immigration; religion and science.

Same as: AMSTUD 117R

**RELIGST 118. Gandhi, Nonviolence, Religion. 4 Units.**

We will study Gandhi and his era, focusing on sources that relate Gandhi's theory and practice of nonviolence to religion and ethics. Topics include Gandhi's biography and personal influences; his construction of Hinduism and inclination to asceticism; his encounters with Jainism and Christianity; his attempts to negotiate the increasingly intractable and violent issues between Hindus and Muslims leading up to independence/partition; and the religious arguments involved in his bitter break with the leader of the anti-caste and untouchable liberation movement, B.R. Ambedkar. We will locate discussions of religion within larger political and social circumstances. Readings include *The Story of My Experiments with Truth*, *Hind Swaraj*, and other writings by Gandhi; the *Bhagavad Gita*; Erik Erikson's psychoanalytic study, *Gandhi's Truth*; and recent critical works on Gandhi and religion.

**RELIGST 119. Religion, Violence, and Nonviolence. 4 Units.**

College courses and public events often address "religion and violence"—an important topic, but one-sided. We will study ways in which religious leaders, movements, and discourses have (1) promoted violent conflict, aggression, and oppression; and (2) contributed to nonviolence, peacebuilding, and liberation of the oppressed. An overarching theme will be a view of religions as fields of interpretation. No religion is essentially violent or peaceful; intricately connected to the world around them, religions become what they become through interpretation and action. Each week will have two meetings: one featuring an outstanding guest lecturer and one to discuss the lecture topic, with assigned readings and films. Topics under consideration include: Buddhism and Violence; Dorothy Day and Catholic Nonviolent Resistance to Nuclear Weapons; Just War and Jihad; The Contribution of Negro Spirituals to Liberation; The Quakers: Pacifist Convictions and Activism; Violence/Nonviolence in Jainism; The Role of Christian Faith in M.L. King's Political Work; Spirituality and Religious Peacebuilding. For lecture series with required attendance and written reflections for 2 units, take RELIGST 29.

**RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives. 3 Units.**

Raise ultimate questions about life. Yes, the unexamined life is not worth living, but also the un-lived life is not worth examining. Students and professor examine their own lives in the light of questions that the readings and lectures bring up: 1. The big picture: Is there such a thing as "the" meaning of life? 2. What is entailed in making personal-existential sense of one's own life? 3. What constitutes the good life, lived in society? 4. How can a university education bear upon the search for a meaningful life? 5. What "methods" for or approaches to life can one learn from studies in the humanities? After introductory lectures, the seminar studies a series of artworks, poems, diverse texts, and a film, all of which bear on the questions mentioned above – works such: 1. Plato's Allegory of the Cave, from "The Republic" 2. Manet's "A bar at the Folies Bergere" 3. A comparison/contrast of Monet's early (1862) "Still Life" and van Gogh's late (1889) "Irises" 4. Lyric poetry T.S. Eliot: "The Love Song of J. Alfred Prufrock," "The Waste Land," and "East Coker"; Edwin Muir: "The Heart Could Never Speak"; Philip Larkin: "Days" 5. Martin Heidegger's "What Is Metaphysics?" 6. Jean-Paul Sartre's novel "Nausea" 7. Marx's Paris Manuscripts of 1844 8. Bergman's "The Seventh Seal".

**RELIGST 124. Sufi Islam. 4 Units.**

The complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi mystical philosophies and historical and social evolution. Major examples include: Qushayrî, Râbî'a, Junayd, Hallâj, Sulamî, Ibn al-'Arabî, Rûmî, Nizâm al-Dîn Awliyâ'. Social and political roles of Sufi saints and communities. Readings include original prose and poetry in translation, secondary discussions, and ethnography.

**RELIGST 126. Protestant Reformation. 3-5 Units.**

The emergence of Protestant Christianity in 16th-century Europe. Analysis of writings by evangelical reformers (Luther, Calvin, Zwingli, Sattler, Hubmeier, Müntzer) and study of reform movements (Lutheran, Reformed, Anabaptist, Spiritualist) in their medieval context and as expressions of new and influential visions of Christian belief, life, social order.

Same as: HISTORY 126B

**RELIGST 12N. Perspectives on the Good Life. 3-4 Units.**

The question is how to approach and evaluate different perspectives on the good life, especially when those perspectives are beautifully, and elusively, presented to us as texts. We will consider both classic and modern writers, from the West and from China; some are explicitly religious, some explicitly secular; some literary, some philosophical. Most of the class will revolve around our talk with each other, interpreting and questioning relatively short texts. The works we will read - by Dante, Dickenson, Zhuangzi, Shklar, and others - are not intended to be representative of traditions, of eras, or of disciplines. They do, however, present a range of viewpoint and of style that will help frame and re-frame our views on the good life. They will illustrate and question the role that great texts can play in a modern 'art of living.' Perhaps most important, they will develop and reward the skills of careful reading, attentive listening, and thoughtful discussion. (Note: preparation and participation in discussion are the primary course requirement. Enrollment at 3 units requires a short final paper; a more substantial paper is required for the 4-unit option.)

**RELIGST 130. Sex and Gender in Judaism and Christianity. 3 Units.**

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jewish and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.

Same as: FEMGEN 130, JEWISHST 120

**RELIGST 132. Jesus the Christ. 4 Units.**

How did Jesus of Nazareth, who never claimed to be Christ or divine, become the son of God after his death? Sources include the history of first-century Judaism and Christianity.

**RELIGST 132C. How Jesus the Jew became God. 4 Units.**

Contemporary historical-critical methods in investigating how one might study Jewish and Christian texts of the 1st century CE. Social contexts including economic realities and elite ideological views. What can be known historically about 1st-century Judaism and Jesus' part in it. How Jewish apocalyptic messianism shaped the birth of Christianity and its trajectory through the 1st century.

**RELIGST 132D. Early Christian Gospels. 4 Units.**

An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.

Same as: CLASSICS 145

**RELIGST 135. Islam in America. 4 Units.**

This course explores the history of Islam in North America with special emphasis on the experience of Muslims in the United States. Contrary to popularly held belief, Muslims have been critical participants in the construction of American identity from the 16th century onwards when Muslim slaves were forcibly brought to Colonial America. Our course will explore the diverse ways Muslims in America have imagined, practiced, and negotiated their religious identity. We will move chronologically, and we will focus upon three crucial themes: the convergence of constructions of racial, religious, and national identities in America; the ever-shifting terrain of notions of authority and authenticity amongst Muslims in America; and global resonances of the practices and ideas of American Muslims.

Same as: AFRICAAM 135A, AMSTUD 135X, CSRE 135, GLOBAL 137

**RELIGST 139. Religion along the Silk Road. 4 Units.**

From roughly the year 1 to the year 1000, a vibrant trade route stretched across Central Asia, linking Europe, India and East Asia. Along this route, merchants bought and sold the silk that gave the route its name, along with paper, ceramics, spices, precious stones and any number of other commodities. Together with these trade goods, merchants, missionaries, farmers and artisans who participated in this vast commercial network, exchanged ideas, scriptures, practices and beliefs, including those associated with major religious traditions; Buddhism, Zoroastrianism, Christianity, Judaism, Manichaeism and Islam followed the same routes as silk and spice. In this course we will examine the spread of all of these religions across the Silk Road, what happened when they interacted, and what this tells us about the relation between commerce, trade and geography in the pre-modern world.

**RELIGST 13N. Losing My Religion: Secularism and Spirituality in American Lives. 2-4 Units.**

In this seminar you will explore theory and practice, sociological data, spiritual writing, and case studies in an effort to gain a more nuanced understanding about how religion, spirituality, and secularism attempt to make legible the constellation of concerns, commitments, and behaviors that bridge the moral and the personal, the communal and the national, the sacred, the profane, and the rational. Together we will cultivate critical perspectives on practices and politics, beliefs and belonging that we typically take for granted.

Same as: AMSTUD 117N, EDUC 117N

**RELIGST 13Q. Mystical Journeys: Beyond Knowing and Reason. 3 Units.**

What makes a mystic a mystic? This question has many sides. Why do we call someone a mystic? Is there such a thing as mystical experience? Do experiences make a mystic? Do beliefs? Practices? Many religious traditions have records of visionaries whose lives and writings open windows on the more hidden and aspirational aspects of belief and practice. These writings also take many forms: poems, letters, teachings, and accounts of visions, which we will encounter in the course of the quarter. Readings for the course will cover a cross-section of texts taken from Christian, Jewish, Muslim, Buddhist, and Native American sources.

**RELIGST 140. RELIGION AND ETHICS: The Limits of Dialogue. 3 Units.**

How do religious traditions address ethical problems? Although *the good* seems like a universal goal, religious traditions force us to consider non-universal ways of defining it. From marriage to genetic engineering, from abortion to organ donation, issues of community, faith, and practice continue to complicate our ethical thinking. Exploration of case-studies and concepts, with readings from Kant, Foucault, Butler and others, as well as Jewish and Christian interpretations of the Bible.

**RELIGST 143. Empathy. 3 Units.**

Empathy is fashionable these days - whether in Silicon Valley or the latest neuroscience. There is a deep sense that we need to learn how to walk in the shoes of another. This course will trace the meaning and practice of empathy through Buddhist compassion; Christianity's commandments to love our neighbor; Enlightenment moral philosophy; nineteenth-century aesthetics; and twenty-first century neuroscience. We will also explore how the arts - drama, novels, poetry, and the visual arts - especially enable us to understand and empathize with the other.

**RELIGST 144. John Calvin and Christian Faith. 5 Units.**

Close reading and analysis of Calvin's *Institutes of the Christian Religion* as a classic expression of Christian belief.

**RELIGST 148A. St. Paul and the Politics of Religion. 4 Units.**

The major letters written by Paul, the Apostle, and his biography, Acts of the Apostles. Historical context in first century Jewish cultural politics. Origins of Christianity, and the split into Judaism and Christianity. The relationship between Jews and non-Jews. The juxtaposition of law and faith. Origins of cultural universalism. Paul as Jewish radical versus Paul, the first Christian thinker and theologian. Recent philosophical readings of Paul (Taubes, Badiou, and Agamben).

**RELIGST 14N. Demons, Death, and the Damned: The 'Other' and the Otherworldly in America. 3 Units.**

This course will examine how beliefs about the "other world" actually shape and are shaped by Americans' this-worldly actions and interactions (i.e. in the demonization of the "other," whether defined religiously, racially, ethnically, or in gendered terms). Students will ask how ideas about demons and death, heaven and hell have reflected the concerns, values, and identities of Americans over time. Students will learn how to read primary sources against secondary literature.

**RELIGST 150. The Lotus Sutra: Story of a Buddhist Book. 4 Units.**

The Lotus school of Mahayana, and its Indian sources, Chinese formulation, and Japanese developments.

**RELIGST 151. Religious Poetry of India. 4 Units.**

India has a rich literature of devotional and mystical poetry composed by "poet-saints" in common vernacular languages. This passionate and contemplative poetry flourished between the 6th and 18th centuries, inspiring religious and social movements that are still vibrant today. It also lives as music, remaining popular and powerful in the form of songs in many styles. We will study this material through the lenses of poetry, religion, performance, and politics.

**RELIGST 160. Religion in Modern African Literature. 4 Units.****RELIGST 161. Modern Religious Thought: From Galileo to Freud. 4-5 Units.**

The three centuries following the Protestant Reformation led to a gradual clarification of the notions of the religious and secular and gave rise to a new genre of religious thought, ideally freed from theology, church or synagogue—a secular philosophy of religion, or in some cases a religiously-imbued philosophy. We will examine some of the foundations of religious thought in modernity, including Galileo, Spinoza, Diderot, Kant, Hegel, Schleiermacher, Kierkegaard, Feuerbach, Marx, Nietzsche and Freud.

**RELIGST 162X. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.**

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).

Same as: CSRE 162A, URBANST 126

**RELIGST 165. Modern Jewish Mystics: Devotion in a Secular Age. 4 Units.**

The twentieth-century was a time of tremendous upheaval and unspeakable tragedy for the Jewish communities of Europe. But the past hundred years were also a period of great renewal for Jewish spirituality, a renaissance that has continued into the present day. We will explore the mystic writings of figures from the Safed Renaissance, the Hasidic masters, with a particular focus on the works of Martin Buber, Hillel Zeitlin, Abraham Isaac Kook, Abraham Joshua Heschel, and Arthur Green. We will examine their teachings in light of the challenges of the two World Wars, the Holocaust, and the processes of modernity and secularism. Consideration will be made of the unique cultural contexts of modern Israel and contemporary America.

Same as: JEWISHST 125

**RELIGST 166. The Divine Feminine in India. 4 Units.**

What happens when God is a woman? Is the Goddess a feminist? The Goddess, in her numerous incarnations, is foundational to much of Indian religiosity, whether Hindu, Buddhist, or even Jain; and in turn, without her story, much of the theology and practice of these religions remains incomprehensible. This course examines the principal expressions of the theology and ritual worship of the Goddess in Indian history, from the Vedas to the Hindu Epics, to Indian philosophy, tantric ritual practice and modern global and new age movements in order to understand how the gendering of divinity affects theological speculation, religious experience, and embodied religious identity.

Same as: FEMGEN 166

**RELIGST 169. Sacred Words: Jewish Thought and the Question of Language. 4 Units.**

Jews have long been referred to as the people of the book, but they might better be referred to as the people of the word. Drawing upon texts from the Hebrew Bible to the works of modern Hebrew writers like of Hayyim Nahman Bialik and Amos Oz, this seminar will chart the development of Jewish thinking on language over the past two millennia. We will explore issues such as: the idea of canonization; oral versus written language; the nature and possibility of translation; the origins of language; notions of negative theology; mystical approaches to the word; the rebirth of Hebrew as a spoken and cultural language; and the limits of language after the Holocaust. This course will also bring Jewish thought into dialogue with contemporary philosophical reflections on issues of language. Modern explorations of language will prove an interesting way of deepening our understanding of the Jewish thinkers on one hand, and enriching contemporary intellectual discourse on the other.

Same as: JEWISHST 129

**RELIGST 170A. Biblical Hebrew, First Quarter. 2 Units.**

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or own their own.

Same as: AMELANG 170A, JEWISHST 107A

**RELIGST 170D. Readings in Talmudic Literature. 1 Unit.**

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Class meets on Fridays, from 12:00-1:15 pm in Hillel (Koret Pavilion Taube Hillel House; Ziff Center for Jewish Life). May be repeat for credit.

Same as: JEWISHST 127D, JEWISHST 227D

**RELIGST 170E. Readings in Talmudic Literature Advanced. 1 Unit.**

Readings of the talmudic texts. Knowledge of Hebrew is required. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Meeting time and location TBA. May be repeated for credit.

Same as: JEWISHST 127E, JEWISHST 227E

**RELIGST 171A. Biblical Greek. 3-5 Units.**

(Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.

Same as: CLASSICS 6G, JEWISHST 5

**RELIGST 171X. Intensive Biblical Greek. 8 Units.**

Equivalent to two quarters of Biblical Greek (CLASSICS 6G, 7G). Students will learn the core of New Testament Greek with the goal of learning to accurately translate and read the New Testament. Students will read one-third of the Gospel of John during the course and will be well-prepared to read the Greek New Testament independently after the course. Focus on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. No previous knowledge of Greek required. Course does not fulfill the Stanford language requirement.

Same as: JEWISHST 5G

**RELIGST 173. What is Enlightenment? Religion in the Age of Reason. 4 Units.**

Many contemporary attitudes towards religion were forged in 17th- and 18th-century Europe in the midst of heated debates over the meaning and value of Christianity in a world 'come of age': Liberal calls for justice, toleration, and pluralism in matters religious; secular suspicions about religious superstition, fanaticism, and ideology; skepticism regarding the solubility of ultimate questions of meaning and metaphysics. Seminal readings on religion from Descartes, Pascal, Leibniz, Voltaire, Hume, Mendelssohn and Kant.

**RELIGST 173X. Latin 400-1700 CE. 1-2 Unit.**

Readings in later Latin, drawing on the vast bodies of texts from the late antique, medieval and early modern periods. Each week students will prepare selections in advance of class meetings; class time will be devoted to translation and discussion. Students taking this course will gain exposure to a wide range of later Latin texts; hone translation skills; and develop an awareness of the grammatical and stylistic features of post-classical Latin. The course is aimed both at classical Latinists seeking to broaden their reading experience and at medievalists and early modernists seeking to consolidate their Latin language skills. Sample readings: K.P. Harrington et al, *Medieval Latin* 2nd edn. M. Riley, *The Neo-Latin Reader*: selections from Petrarch to Rimbaud. Prior experience in Latin is required, preferably CLASSICS 11L. Equivalent accepted. Anyone unsure whether to take this course is encouraged to contact the instructor in advance.

Same as: CLASSICS 6L, CLASSICS 208L

**RELIGST 176. Religious Diversity: Theoretical and Practical Issues. 4 Units.**

What does it mean for a religion to be true? If one religion is true, what about the truth of other religious possibilities? How, and why, should religious traditions be compared? Readings address tolerance and pluralism, relativism, comparative theory, and new religious virtues.

**RELIGST 179. Doing the Sacred: Religion and Performance. 4 Units.**

This course investigates religion as practice and performance, rather than as belief and doctrine. A performance-centered emphasis helps us understand how domination and authority, as well as creativity and individual resistance, underlie culture. From initiatory rites to cyber sermons, human action offers raw, physical data that unveils the mechanisms of social control, ideology, and individual resistance. Reorienting religion from the perspective of religious acts / actors – those who are doing something they consider sacred – evokes many interpretive possibilities: How do these performances create and maintain communities? How do they resolve conflicts that arise within everyday affairs? In what ways do they generate meaning and shape identity? What can these enactments reveal about the constructions of power, gender, and race? This course explores such issues, probing the complicated relationship between human intention and social reality. Ultimately, a study of religion and performance seeks to understand how performance and transcendence interact to make participants into who they are. The readings cover an array of religious traditions – medieval and evangelical Christian, Hindu, Native American, Jewish, Buddhist, African and Haitian Vodou – all of which present a rich repertoire of sacred drama, dance, and music. We will discuss performances that make modern readers uncomfortable, such as sacrifice and flagellation, and examine why they are meaningful within their specific cultural context. Finally, we will consider how secular practices and the internet mimic religious behavior. However divergent, all of these examples demonstrate how religious performance is no mere artifice, but a vehicle for the practitioner's own pious posturing – one that is spiritually innovative and self-affirming – yet shaped by hierarchical regimes.

**RELIGST 17N. Love, Power, and Justice: Ethics in Christian Perspective. 3 Units.**

From its inception, the Christian faith has, like all religions, implied an ethos as well as a worldview, a morality and way of life as well as a system of beliefs, an ethics as well as a metaphysics. Throughout history, Christian thinkers have offered reasoned accounts of the moral values, principles, and virtues that ought to animate the adherents of what eventually became the world's largest religion. We will explore a variety of controversial issues, theological orientations, and types of ethical reasoning in the Christian tradition, treating the latter as one 'comprehensive doctrine' (John Rawls) among many; a normative framework (actually a variety of contested religious premises, moral teachings, and philosophical arguments) formally on par with the religious ethics of other major faiths as well as with the various secular moral theories typically discussed in the modern university. We will learn to interpret, reconstruct, criticize, and think intelligently about the coherence and persuasiveness of moral arguments offered by a diverse handful of this religious tradition's best thinkers and critics, past and present.

**RELIGST 180. Gender Relations in Islam. 4 Units.**

This course investigates the ways in which gender identities and relationships between men and women have been articulated, constructed, and refashioned throughout the Muslim world. Starting with problematizing the fixed notions of gender and sexuality, we map the attitudes toward these notions through visiting a diverse array of sources from the Qur'an, Sunna, and legal documents to historical and anthropological case studies, literature, and film from South East Asia to Europe and North America. We examine the notions of femininity and masculinity in the Qur'an, family laws, and attitudes toward homosexuality and transgendered populations. We read examples of ambiguous use of language with regards to gender and sexuality in Persian poetry and mystical traditions. We study the dynamic relationship between Islam and Feminism in the Muslim world. Finally, we witness the implications of these attitudes in our case studies and stories, from a divorce court in Iran to a wedding in Sudan.

Same as: FEMGEN 180

**RELIGST 181. Heidegger and Mysticism. 5 Units.**

The new paradigm for understanding Heidegger makes possible a fresh look at his long-standing interest in western mysticism as well as in Daoism. Part One: a radical recasting of Heidegger's thought, including his readings of the Presocratics (6th century BCE). In light of that, Part Two: a reading of selected texts of western mystics as well as Laozi's *Dao De Jing* / *Tao Te Ching* (6th century BCE).  
Same as: PHIL 133S

**RELIGST 183. Atheism: Hegel to Heidegger. 5 Units.**

The radical changes in ideas of God between Hegel and Heidegger, arguing that their questions about theism and atheism are still pertinent today. Texts from Hegel, Feuerbach, Marx, Nietzsche, and Heidegger: on God, history, and the social dimensions of human nature. N.B.: Class size limited. Apply early at [tsheehan@stanford.edu](mailto:tsheehan@stanford.edu).  
Same as: PHIL 133T

**RELIGST 18N. Religion and Politics: Comparing Europe to the U.S.. 3-4 Units.**

Interdisciplinary and comparative. Historical, political, sociological, and religious studies approaches. The relationship between religion and politics as understood in the U.S. and Europe. How this relationship has become tense both because of the rise of Islam as a public religion in Europe and the rising influence of religious groups in public culture. Different understandings and definitions of the separation of church and state in Western democratic cultures, and differing notions of the public sphere. Case studies to investigate the nature of public conflicts, what issues lead to conflict, and why. Why has the head covering of Muslim women become politicized in Europe? What are the arguments surrounding the Cordoba House, known as the Ground Zero Mosque, and how does this conflict compare to controversies about recent constructions of mosques in Europe? Resources include media, documentaries, and scholarly literature.  
Same as: JEWISHST 18N

**RELIGST 199. Individual Work. 1-15 Unit.**

Prerequisite: consent of instructor and department. May be repeated for credit.

**RELIGST 19N. Everyone Eats: Food, Religion and Culture. 3 Units.**

Food is one of the most essential aspects of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. In this seminar we will study how food habits have shaped religious traditions, and vice versa, how religious traditions have shaped food ways. Some traditions are centered around food regimens such as the dietary laws, derived from biblical law that shapes Jewish and Christian tradition very differently. Indeed, many religious and ethical thinkers, as well as anthropologists, have interpreted the meanings of the dietary laws very differently. Further, in many religious traditions the killing of animals and consumption of meat is deeply fraught. We will explore the history of food practices and their contemporary impact; the connections between food, religion, and identity; the meanings that religious thinkers and anthropologists have attributed to food habits; as well as the creative translations of religious traditions into contemporary food ethics by various social movements and groups, predominantly in the U.S.  
Same as: CSRE 19N, JEWISHST 19N

**RELIGST 2. Is Stanford a Religion?. 4 Units.**

This course seeks to introduce students to the study of religion by posing a two-part question: What is a religion, and does Stanford qualify as one? Scientific, pragmatic, seemingly secular, Stanford may not seem at all similar to religions like Christianity, Judaism or Buddhism, but a deeper look reveals that it has many of the qualities of religion—origin stories, rituals and ceremonies, sacred spaces and times, visions of the future, even some spirits. By learning some of the theories and methods of the field of religious studies, students will gain a better understanding not just of Stanford culture but of what motivates people to be religious, the roles religion plays in people's lives, and the similarities and differences between religious and secular culture.

**RELIGST 201. Islamic Law. 3-5 Units.**

(This course is combined with LAW 586) Topics include marriage, divorce, inheritance, ritual, war, rebellion, abortion, and relations with non-Muslims. The course begins with the premodern period, in which jurists were organized in legal traditions called *schools of law*. After examining the nature and functions of these institutions, we turn to the present era to study the relationship between customary law, state law, and the Islamic legal heritage in Egypt and Indonesia. The course explores Muslim laws and legal institutions and the factors that have shaped them, including social values and customs, politics, legal precedents, and textual interpretation.  
Same as: RELIGST 301

**RELIGST 201A. Gender in Classical Islamic Law. 3-5 Units.**

The course examines classical Islamic society and law. It covers historical development, the unity and diversity of Muslim legal traditions, and the relationship between laws and values. Constructions of gender in law are examined through rituals, marriage, divorce, birth control, child custody, and sexuality.  
Same as: RELIGST 301A

**RELIGST 204. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.**

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.  
Same as: CLASSICS 215, DLCL 209, HISTORY 309G

**RELIGST 205. Religious Poetry. 4 Units.**

Religious poetry drawn from the Islamic, Christian, Confucian and Daoist traditions. Limited enrollment or consent of the instructor required.

**RELIGST 208A. Ex Oriente Lux: Orientalism and the Study of Religion. 3-5 Units.**

This seminar is designed to expose students to issues relating to discourse and subjectivity within the textual constructions of Oriental religions in the colonial era. We will begin with Edward W. Said's provocative work on notions of representation and power embedded in the discourse on the Orient that established, produced, and, ultimately, perpetuated western knowledge about the Other. We will then discuss the impact of the Oriental Renaissance and the vital role that Eastern wisdom played in constructing the field of Comparative Religious Studies. In addition, students will also read ethnographies, fables, and travelogues that both support and undermine Said's thesis of an active West constructing a largely passive East.  
Same as: RELIGST 308A

**RELIGST 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.  
Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 308C

**RELIGST 209. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian-Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 147, CLASSICS 247, RELIGST 309

**RELIGST 209A. Sugar in the Milk: Modern Zoroastrianism as Race, Religion, and Ethnicity. 4-5 Units.**

Modern Zoroastrian experience as race, religion, and ethnic identity. Some 60,000 Zoroastrians now live in India and have resided there for a millennium. In the 19th century, these peoples from Persia became colonial elites yet were acutely aware that they were not quite Indian, British, or Persian. Diverse ways this experience of dislocation has served as a defining characteristic in Parsi communal identity and contrast these South Asian experiences with the minority socio-politics of those who remained in Iran. Survey the colonial and post-colonial communities in England, East Africa, Hong Kong, Australia, and North America and examine the expression of these global diasporic experiences in literature and the arts.

Same as: RELIGST 309A

**RELIGST 209D. 'Crow Eaters' & 'Fire Worshippers': Exploring Contemporary Zoroastrianism Thru Reading Parsi Lit. 3-5 Units.**

In the past three decades Parsi fiction has rapidly emerged as a unique and creative voice in modern Anglophone literature from South Asia. From Bapsi Sidhwa to Thrity Umrigar to Rohinton Mistry, Parsi novelists address the most poignant concerns of Zoroastrians living in an era of rapid social, political, and religious transformation. The erosion of tradition; the breakdown of the Parsi family; the demise of religion among the young; and the cultural losses and gains of living in diaspora are common themes in their works. The unique vantage point of the Parsis; neither Hindu nor Muslim, neither quite Indian nor quite British; will serve as a lens for examining the inherent tensions in multicultural societies both East and West.

Same as: RELIGST 309D

**RELIGST 209E. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 148, CLASSICS 248, RELIGST 309E

**RELIGST 212. Chuang Tzu. 5 Units.**

The *Chuang Tzu* (Zhuangzi) in its original setting and as understood by its spiritual progeny. Limited enrollment.

**RELIGST 216. Japanese Buddhism. 4 Units.**

Focus on the religious lives of lay people in medieval Japan, as evidenced in collections of Buddhist stories (setsuwashu), narrative picture scrolls (emaki), and related historical materials. All readings are in English, but the instructor will also work with students interested in reading the original Japanese.

**RELIGST 217. Japanese Studies of Religion in China. 3 Units.**

(Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.

Same as: RELIGST 317

**RELIGST 217X. Minorities In Medieval Europe. 5 Units.**

This course examines attitudes towards outsider groups within medieval society and the treatment of these groups by medieval Christians. Heretics, Jews, Muslims, homosexuals, prostitutes and usurers occupied ambivalent and at times dangerous positions within a society that increasingly defined itself as Christian. Differences in the treatment of these various 'outcast' groups, their depiction in art, their legal segregation, and their presumed association with demonic activity are addressed through discussion, and readings from primary and secondary source material.

Same as: HISTORY 217S

**RELIGST 218. Islam, Race and Revolution: A Pan-American Approach. 3-5 Units.**

Taking a pan-American approach to the study of religious traditions, this upper-level course traces the history of the critical intersection between race, religion and revolution among Muslims from the turn of the nineteenth century until the present day. Moving from the Atlantic Revolutions of the late eighteenth and early nineteenth centuries, to the United States, to the decolonizing Third World, and then finally to the contemporary Middle East, this class will emphasize that Islam and race together have been used by many groups in order to challenge existing power structures, agitate for change, and more than occasionally, transform the social, cultural and governmental structures comprising their worlds. Moreover, although this class is concentrated upon religious formations in the Americas, students will explore global events throughout the Muslim world in order to examine how global politics contribute to religious formations, solidarities and identities. At the conclusion of this course, students will be expected to write a 10-15 page research paper, and a topic will be chosen in consultation with the instructor. Students will also be expected to write weekly reflection papers, which will serve to facilitate class discussion. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.

Same as: AMSTUD 218, CSRE 218, RELIGST 318

**RELIGST 218X. The Holy Dead: Saints and Spiritual Power in Medieval Europe. 4-5 Units.**

Examines the cult of saints in medieval religious thought and life. Topics include martyrs, shrines, pilgrimage, healing, relics, and saints' legends.

Same as: HISTORY 218, HISTORY 318, RELIGST 318X

**RELIGST 21X. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

**RELIGST 221B. What is Talmud?. 5 Units.**

In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: reading Hebrew with some understanding of biblical Hebrew.  
Same as: RELIGST 321B

**RELIGST 221D. Readings in Syriac Literature. 2-5 Units.**

In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts.  
Same as: JEWISHST 221D, JEWISHST 321D, RELIGST 321D

**RELIGST 222B. Sufism Seminar. 3-5 Units.**

Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).  
Same as: RELIGST 322B

**RELIGST 223. Studying Islam: History, Methods, Debates. 4 Units.**

Islam as a subject of academic inquiry since the 19th century. Origins and critiques of major methodological perspectives in Islamic studies such as philology, religious studies, history, art history, and anthropology. Landmarks in the development of the field and the work of major scholars. Academic debates regarding unity versus diversity, orientalism, fundamentalism and Islamism, Sufism, and gender. Current trends in scholarship on medieval and modern Muslim societies. Prerequisite: course work in Islamic studies or methodology in religious studies.

**RELIGST 224. Classical Islamic Texts. 3 Units.**

The course is based on readings in primary Arabic sources in the key fields of pre-modern Islamic scholarship. The list of readings and topics will depend on the interests of the students. In addition to focusing on the language, contents, and context of the texts covered, the course introduces genre-specific historical research methods. The reading selections may be derived from Qurʾānic interpretation (tafsir), the hadith literature, adab, biographical dictionaries, fiqh, taʾrikh, kalam, or Sufism. Reading knowledge of Arabic is required.  
Same as: RELIGST 324

**RELIGST 224B. Unveiling the Sacred: Explorations in Islamic Religious Imagination. 3-5 Units.**

Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shiʿism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.  
Same as: RELIGST 324B

**RELIGST 226A. Judaism and Hellenism. 3-5 Units.**

interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.  
Same as: RELIGST 326A

**RELIGST 226D. Jewish-Christian Relations in Antiquity. 1-2 Unit.**

Constructions of identity, community, ethnicity: these considerations frame the investigation of ancient Christian rhetoric and theology contra Iudaeos. This historical project will be set within the larger intellectual and cultural context of a) learned Graeco-Roman traditions of ethnic stereotyping; b) forensic rhetoric; and c) philosophical paideia; and these traditions will be considered within their larger social context of the Mediterranean region (I-III). Specifically, various Christian, and especially Latin traditions contra Iudaeos (IV-VI) will be studied.  
Same as: CLASSGEN 126B

**RELIGST 227. The Qurʾan. 5 Units.**

Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.  
Same as: RELIGST 327

**RELIGST 228. The Buddha's Word at Stanford. 3-5 Units.**

Linked to an exhibition at the Cantor Museum, this course investigates the history of Buddhist manuscript and print culture in Asia using manuscripts and woodblock prints in Stanford's own collections (5 units for 228).  
Same as: RELIGST 328

**RELIGST 229. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire the largest empire before Rome has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film *300* and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.  
Same as: CLASSICS 146, CLASSICS 246, RELIGST 329

**RELIGST 230B. Zen Studies. 4 Units.**

Readings in recent English-language scholarship on Chan and Zen Buddhism.  
Same as: RELIGST 330B

**RELIGST 231X. Learning Religion: How People Acquire Religious Commitments. 4 Units.**

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education. May be repeat for credit.  
Same as: AMSTUD 231X, EDUC 231, JEWISHST 291X

**RELIGST 234. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.**

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy. Same as: JEWISHST 224, JEWISHST 324, RELIGST 334

**RELIGST 235. Religion in Modern Society: Secularization and the Sacred. 4 Units.**

What is the status of religion in modern life? Is the modern world "secular" in some fundamental, irreversible way and what does this mean? This course will explore these questions through variety of readings from leading sociologists, philosophers, and anthropologists. Our goal will be to understand in what ways industrialization, political liberalization, the rise of technology, and the success of modern science have been used to support the "secularization" thesis that the modern West rendered religion a thing of the past. A central question to be asked will be: do assessments of the place of religion in modernity necessitate a philosophy of history i.e., a theory not only of historical change, but of the meaning of this change as well? The course will begin by looking at the origins of the theory of secularization from its beginnings in Enlightenment attempts to understand the meaning of history. We will then turn to contemporary debates over the term "secular" against its counterpart, "religious", and the problems with their application to non-Western societies. We will read works by Talal Asad, Saba Mahmood, Max Weber, Charles Taylor, Jürgen Habermas, and Pope Benedict XVI. Same as: RELIGST 335

**RELIGST 238. Christian Neo-Platonism, East and West. 3-5 Units.**

Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine. Same as: RELIGST 338

**RELIGST 239. Luther and the Reform of Western Christianity. 3-5 Units.**

Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world. Same as: RELIGST 339

**RELIGST 24. Sexuality, Gender, and Religion. 2 Units.**

From ancient times to the present, religious texts, authority figures, adherents, and critics have had a great deal to say about sexuality and gender, with powerful impacts in personal, social and political spheres. Today these debates are more wide ranging and public than ever. In this lecture and discussion series, distinguished scholars from within and beyond Stanford will consider how sexuality and gender become "religious" in Judaism, Islam, Christianity, Hinduism, and Buddhism. Same as: FEMGEN 24

**RELIGST 244. Explaining Religion. 3-5 Units.**

There are broadly two different, and sometimes mutually exclusive, ways of explaining social religious phenomena: idealism and materialism. One gives ideas ultimate causal primacy while the other emphasizes economic, technological, geographical, and demographic factors. This course examines arguments for and against each approach. Topics include rational choice theory, functionalism, Marxism, cultural materialism, and the unconscious. Case studies include Jewish and Indian dietary restrictions, competition between Christian denominations, survival strategies of minority religions, apocalyptic movements, etc. For the final paper, each student will write on a religious tradition of his/her choice. Same as: RELIGST 344

**RELIGST 245. Religion, Reason, and Romanticism. 5 Units.**

The late 18th-century European cultural shift from rationalist to romantic modes of thought and sensibility. Debates about religion as catalysts for the new *Zeitgeist*. Readings include: the Jewish metaphysician, Mendelssohn; the dramatist, Lessing; the philosopher of language and history, Herder; the critical idealist, Kant; and the transcendental idealist, Fichte.

**RELIGST 246. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time. Same as: AFRICAAM 236, AMSTUD 246, CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 346

**RELIGST 247B. Readings in Chinese Religious Texts: The Lingbao Scriptures. 4 Units.**

A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese 22 required). Same as: RELIGST 347B

**RELIGST 251. Readings in Indian Buddhist Texts. 3-5 Units.**

(Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units. Same as: RELIGST 351

**RELIGST 252A. The Story of a Buddhist Megascripture: Readings in the Avatamsaka. 3-5 Units.**

In this course we will explore the massive Mahayana Buddhist scriptural compilation known as the Avatamsaka Sutra (more correctly: Buddhavatamsaka Sutra). We will investigate the development of the text in India, study its contents, and consider its later reception in East Asia. Since much of the course will be devoted to reading sections of the Buddhavatamsaka, a reading knowledge of Chinese is required. Same as: RELIGST 352A

**RELIGST 253. Recent Research on Japanese Buddhism. 3-5 Units.**

Readings in recent English-language scholarship on Japanese Buddhism. Undergraduates must enroll for 5 units; graduate students can enroll for 3-5 units. Prerequisite: Solid foundation in either Buddhist studies or East Asian Studies (5 units for 253, 3-5 units for 353). Same as: RELIGST 353

**RELIGST 254. Recent Contributions to Buddhist Studies. 3-5 Units.**

This reading intensive course will examine nine areas in recent work in Buddhist studies, including ethnography, archaeology, monasticism, the study of "experience," and gender. May be repeated for credit. Same as: RELIGST 354

**RELIGST 255. Religion and Power in the Making of Modern South Asia. 3-5 Units.**

This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. Undergraduates must enroll in RELIGST 255 for 5 units. Graduate students must enroll RELIGST 355 for 3-5 units. HISTORY297F must be taken for 4-5 units. Same as: HISTORY 297F, RELIGST 355

**RELIGST 256. The Brahma Net Sutra (Fanwang Jing). 4 Units.**

A study of an important Chinese Buddhist apocryphal work, with special attention to interpretation of content, impact on monastic codes in medieval China, transmissional history and commentarial tradition. Same as: RELIGST 356

**RELIGST 257. Readings in Daoist Texts. 4 Units.**

Readings from primary sources. Prerequisite: classical Chinese. Same as: RELIGST 357

**RELIGST 257X. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: FEMGEN 293E, HISTORY 293E, HISTORY 393E, RELIGST 357X

**RELIGST 258. Japanese Buddhist Texts. 3-5 Units.**

Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese. Same as: RELIGST 358

**RELIGST 259. Religion and Music in South Asia. 4-5 Units.**

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as *ecstasy*-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, MUSIC 286

**RELIGST 26. The Bible and its Interpreters. 4 Units.**

Introduction to major stories, figures, and themes of the Christian Bible and their retellings in theological writing, art, literature, film, and music throughout the ages.

**RELIGST 260. Buddhism & Modernity. 3-5 Units.**

Is Buddhism a philosophy? A mind science? An ancient mystical path? A modern construct? This seminar will evaluate a variety of answers to these questions by exploring how Buddhism has been understood in the modern era. Our primary source materials will range from Orientalist poetry to Zen essays to Insight Meditation manuals to 21st-century films. We will examine how these works shape Buddhism, consider their pre-modern influences, and turn to recent scholarship to discuss how romantic, imperialist, anti-modern, nationalist, therapeutic, and scientific frames depict one of today's most popular religions. This course is cross-listed as RELIGST 260/360. Undergraduates must enroll in RELIGST 260 for 5 units. Graduate students must enroll RELIGST 360 for 3-5 units.

Same as: RELIGST 360

**RELIGST 262. Sex and the Early Church. 4 Units.**

Sex and the Early Church examines the ways first- through sixth-century Christians addressed questions regarding human sexuality. We will pay particular attention to the relationship between sexuality and issues of gender, culture, power, and resistance. We will read a Roman gynecological manual, an ancient dating guide, the world's first harlequin romance novels, ancient pornography, early Christian martyrdom accounts, stories of female and male saints, instructions for how to best battle demons, visionary accounts, and monastic rules. These will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality. The purpose of our exploration is not simply to better understand ancient views of gender and sexuality. Rather, this investigation of a society whose sexual system often seems so surprising aims to denaturalize many of our own assumptions concerning gender and sexuality. In the process, we will also examine the ways these first centuries of what eventually became the world's largest religious tradition has profoundly affected the sexual norms of our own time. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history.

Same as: FEMGEN 262, RELIGST 362

**RELIGST 263. Judaism and the Body. 4 Units.**

Representations and discourses of the body in Jewish culture; theories of body and ritual. Case studies of circumcision, menstrual impurity, and intersexuality. Readings include classical texts in Jewish tradition and current discussions of these textual traditions.

**RELIGST 263A. A Ripple on the Ocean of Zen: Reading the Zenkai Ichiran. 3-5 Units.**

Imakita Ksen (1816-1892), the master of D. T. Suzuki's teacher, wrote the Zenkai Ichiran in 1862 for his feudal lord, a staunch supporter of Confucianism, in order to convey the attraction of Zen to him in Confucian language. One way of reading this short work in Classical Chinese is as a product of religious conflict within the nineteenth century Japanese world, but the text also reflects the form that had been taken by a lengthy tradition of polemical Buddhist writing dating back over one and a half millennia in East Asia at the very point that Buddhists were about to turn to resisting the inroads not of Confucianism but of Christianity. This reading class will allow students familiar with original East Asian Buddhist materials to appreciate some related non-Buddhist sources. But it possible to translate into English a book that itself translated Buddhism into Confucian terms? Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units. Same as: RELIGST 363

**RELIGST 264. Hindu Tantra. 4 Units.**

What is Tantra? Tantric forms of ritual and philosophy have been integral to the practice of Hinduism for most of its history. Tantra has provided initiates with a spiritual technology for embodying the divine and transcending the cycle of rebirth; on a social and political level, Tantra has mediated the institutions of Hindu kingship and appealed to a diverse population of initiates. This course covers a number of influential and well-documented Hindu tantric traditions, exploring several prominent features of Tantric religion as they develop historically, including: tantric ritual practice (core technologies of the subtle body, mantras, ma, alas, etc., along with the more notorious elements of sex and transgression), theology and philosophical speculation, as well as Tantra's relationship to the outside world and state power.

Same as: RELIGST 364

**RELIGST 265. Creating the Universe: Buddhist Science, Ritual and Art. 5 Units.**

Much of Buddhist ritual and art can usefully be thought of as technology--physical pieces that, when arranged systematically, make a given practice effective. This class is about the Buddhist scientific perspectives underlying the production of such ritual and art in Tibet, Nepal, and India. The course is organized around cosmological and biological topics such as physical models of the universe, the types of beings that dwell in the world, and the cycles of life and death. Within these topics, we will investigate the relationships between sacred texts, ritual practices, and visual arts as the material culture of religion.

Same as: RELIGST 365

**RELIGST 269. Plotinus and Augustine. 3-5 Units.**

Professor's permission required to register. A reading course focused on the influence of Plotinus Enneads on Augustine's Confessions, early dialogues, and sections on reason and memory in the De trinitate. Proficiency in Greek and Latin will be helpful but is not required. Professor's prior permission required, interested students should contact the professor about course schedule: tsheehan@stanford.edu. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.

Same as: PHIL 229, PHIL 329, RELIGST 369

**RELIGST 271A. Dante's Spiritual Vision. 4-5 Units.**

Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas Aquinas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Students may take 271A without taking 271B. Consent of the instructor required.

**RELIGST 271B. Dante's Spiritual Vision. 4-5 Units.**

Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Prerequisite: 271A.

**RELIGST 273. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.**

Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.

Same as: RELIGST 373

**RELIGST 274. From Kant to Kierkegaard. 3-5 Units.**

(Graduate students register for 374. Undergrads register for 274 for 5 units.) The philosophy of religion emerged from the European Enlightenment as a new genre of reflection on religion distinct from both dogmatic theology and rationalist dreams of a "natural" religion of reason. Neither beholden to pre-critical tradition, nor dismissive of what Thomas Nagel has termed "the religious attitude," this new, ostensibly secular, genre of religious thought sought to rethink the meaning of Christianity at a time of immense philosophical ferment. The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.

Same as: RELIGST 374

**RELIGST 275. Kierkegaard. 3-5 Units.**

(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.

Same as: RELIGST 375

**RELIGST 277. The Later Heidegger: Art, Poetry, Language. 3 Units.**

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry. Same as: PHIL 234B, RELIGST 377

**RELIGST 278. Heidegger: Confronting the Ultimate. 3-5 Units.**

Heidegger's work on meaning, the self, and the sacred. Texts include *Being and Time*, courses and opuscula up to 1933, the *Letter on Humanism*, and *Contributions of Philosophy*.

Same as: RELIGST 378

**RELIGST 279. After God: Why religion at all?. 4 Units.**

God is dead, but where does religion come from? The end of the quest for God in twentieth century philosophy. Robert Bellah's Religion in Human Evolution plus seminal works of Heidegger, including *Being and Time*, 'What Is Metaphysics?' 'Nietzsche's Saying 'God is Dead.' 'N.B.: Class size limited. Apply early at tsheehan@stanford.edu.

Same as: RELIGST 379

**RELIGST 279A. Heidegger on human being and God. 4 Units.**

This lecture-seminar first raises the question of essential characteristics of human being, such as temporality, mortality, hermeneutics and the relation to meaning, and then, via readings from Karl Rahner, asks whether human being is open to a possible relation to a supernatural divinity.

Same as: RELIGST 379A

**RELIGST 279X. American Jewish History: Learning to be Jewish in America. 2-4 Units.**

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units. Same as: AMSTUD 279X, EDUC 279, HISTORY 288D, JEWISHST 297X

**RELIGST 280. Schleiermacher: Reconstructing Religion. 3-5 Units.**

Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.

Same as: RELIGST 380

**RELIGST 281. Asian Religions in America; Asian American Religions. 4 Units.**

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, ASNAMST 281, RELIGST 381

**RELIGST 282. King Solomon and the Search for Wisdom. 4 Units.**

What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

Same as: RELIGST 382

**RELIGST 283. Religion and Literature. 4 Units.**

A wide-ranging exploration of religious themes in literary works. Readings will include prose and poetry stemming from various world regions, time periods, and religious traditions.

**RELIGST 290. Majors Seminar. 5 Units.**

Required of all majors and combined majors. The study of religion reflects upon itself. Representative modern and contemporary attempts to "theorize," and thereby understand, the phenomena of religion in anthropology, psychology, sociology, cultural studies, and philosophy. WIM.

**RELIGST 293X. Church, State, & Schools: Issues in Education & Religion. 4 Units.**

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: AMSTUD 293, EDUC 293

**RELIGST 297. Senior Essay/Honors Essay Research. 3-5 Units.**

Guided by faculty adviser. May be repeated for credit. Prerequisite: consent of instructor and department.

**RELIGST 298. Senior Colloquium. 5 Units.**

For Religious Studies majors writing the senior essay or honors thesis. Students present work in progress, and read and respond to others. Approaches to research and writing in the humanities.

**RELIGST 300. Theory in the Study of Religion. 4 Units.**

This course explores how religious belief, ritual, and tradition, interact with, embed, or respond to aspects of social reality or human nature, such as economics, institutions, law, art, values, and psychology. The course examines a number of approaches to the study of religion, including sociological and anthropological ones. The course is intended for Religious Studies MA students and graduate students from other departments.

**RELIGST 301. Islamic Law. 3-5 Units.**

(This course is combined with LAW 586) Topics include marriage, divorce, inheritance, ritual, war, rebellion, abortion, and relations with non-Muslims. The course begins with the premodern period, in which jurists were organized in legal traditions called *çschools of law.*ç After examining the nature and functions of these institutions, we turn to the present era to study the relationship between customary law, state law, and the Islamic legal heritage in Egypt and Indonesia. The course explores Muslim laws and legal institutions and the factors that have shaped them, including social values and customs, politics, legal precedents, and textual interpretation.

Same as: RELIGST 201

**RELIGST 301A. Gender in Classical Islamic Law. 3-5 Units.**

The course examines classical Islamic society and law. It covers historical development, the unity and diversity of Muslim legal traditions, and the relationship between laws and values. Constructions of gender in law are examined through rituals, marriage, divorce, birth control, child custody, and sexuality.

Same as: RELIGST 201A

**RELIGST 302. Islamic Studies Proseminar. 1-5 Unit.**

Research methods and materials for the study of Islam. May be repeated for credit.

**RELIGST 304A. Theories and Methods. 4 Units.**

Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

**RELIGST 304B. Theories and Methods. 4 Units.**

Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

**RELIGST 308A. Ex Oriente Lux: Orientalism and the Study of Religion. 3-5 Units.**

This seminar is designed to expose students to issues relating to discourse and subjectivity within the textual constructions of Oriental religions in the colonial era. We will begin with Edward W. Said's provocative work on notions of representation and power embedded in the discourse on the Orient that established, produced, and, ultimately, perpetuated western knowledge about the Other. We will then discuss the impact of the Oriental Renaissance and the vital role that Eastern wisdom played in constructing the field of Comparative Religious Studies. In addition, students will also read ethnographies, fables, and travelogues that both support and undermine Said's thesis of an active West constructing a largely passive East.

Same as: RELIGST 208A

**RELIGST 308C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C

**RELIGST 309. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian- Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the ArabçIslamicçconquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 147, CLASSICS 247, RELIGST 209

**RELIGST 309A. Sugar in the Milk: Modern Zoroastrianism as Race, Religion, and Ethnicity. 4-5 Units.**

Modern Zoroastrian experience as race, religion, and ethnic identity. Some 60,000 Zoroastrians now live in India and have resided there for a millennium. In the 19th century, these peoples from Persia became colonial elites yet were acutely aware that they were not quite Indian, British, or Persian. Diverse ways this experience of dislocation has served as a defining characteristic in Parsi communal identity and contrast these South Asian experiences with the minority socio-politics of those who remained in Iran. Survey the colonial and post-colonial communities in England, East Africa, Hong Kong, Australia, and North America and examine the expression of these global diasporic experiences in literature and the arts.

Same as: RELIGST 209A

**RELIGST 309D. 'Crow Eaters' & 'Fire Worshippers': Exploring Contemporary Zoroastrianism Thru Reading Parsi Lit. 3-5 Units.**

In the past three decades Parsi fiction has rapidly emerged as a unique and creative voice in modern Anglophone literature from South Asia. From Bapsi Sidhwa to Thrity Umrigar to Rohinton Mistry, Parsi novelists address the most poignant concerns of Zoroastrians living in an era of rapid social, political, and religious transformation. The erosion of tradition; the breakdown of the Parsi family; the demise of religion among the young; and the cultural losses and gains of living in diaspora are common themes in their works. The unique vantage point of the Parsis; neither Hindu nor Muslim, neither quite Indian nor quite British; will serve as a lens for examining the inherent tensions in multicultural societies both East and West.

Same as: RELIGST 209D

**RELIGST 309E. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 148, CLASSICS 248, RELIGST 209E

**RELIGST 31. The Religious Life of Things. 3-5 Units.**

Temples, prayer beads, icons, robes, books, relics, candles and incense, scarves and hats, sacred food and holy water; objects of all sorts play a prominent role in all religions, evoking a wide range of emotional responses, from reverence, solace and even ecstasy, to fear, hostility and violence. What is it about these things that makes them so powerful? Is it beliefs and doctrines that inspire particular attitudes towards certain objects, or is it the other way around? Many see a tension or even contradiction between religion and material pursuits and argue that the true religious life is a life without things. But is such a life even possible? This course adopts a comparative approach, drawing on a variety of traditions to examine the place of images, food, clothing, ritual objects, architecture and relics in religious thought and practice. Materials for the course include scholarship, scripture, images and at least one museum visit.

**RELIGST 312. Buddhist Studies Proseminar. 1-5 Unit.**

Research methods and materials for the study of Buddhism. May be repeated for credit. Prerequisite: reading knowledge of Chinese or Japanese.

**RELIGST 313. Graduate Seminar in Chinese Buddhist Texts. 3-5 Units.**

Graduate Seminar in Chinese Buddhist Texts: An in-depth reading of Zongmi's Chanyuan zhuquanji duxu ("Preface to the Collected Writings on the Source of Chan") (T#2015). Written in 833, the "Preface" is Zongmi's most ambitious and well-known work. It seeks to delineate the historical and doctrinal origins of the Chan tradition. In doing so, it is the first work to formulate the paradigm of a multi-branched genealogical tree that becomes the template in terms of which the subsequent Chan tradition described itself. It also tries to harmonize Chan (the practice of meditation) with the canonical teachings (doctrinal study) by adapting a Huayan philosophical framework to correlate different Chan traditions with different Chinese Buddhist doctrinal schools. In addition, it is particularly noteworthy for its analysis of the so-called sudden/gradual controversy, in which Zongmi develops an overarching scheme in which the different contending positions can all be seen to fit. The text is an excellent vehicle for giving students a grounding in both Tang-dynasty Chan history and teachings as well as the teachings of the main philosophical schools of Chinese Buddhism. The seminar will focus on a close reading of selected sections from Zongmi's text, especially those bearing on his strategies for harmonizing Chan and doctrinal teachings as well as his analysis of the sudden/gradual controversy. In doing so it will pay special attention to problems of translation. Meetings will be held in Buddhist Studies Library, located in Bldg 70 (Main Campus Quad).

**RELIGST 313X. The Education of American Jews. 4 Units.**

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Same as: EDUC 313, JEWISHST 393X

**RELIGST 314. Seminar in Buddhist Historiography. 3-5 Units.**

The focus of this course is on approaches to the past from within Buddhist traditions rather than modern academic writing on Buddhist history. We will briefly examine research on religious conceptions of the past in other religions before turning to the full range of Buddhist historiography, including writings from India, Ceylon, China, Tibet and Japan. The first half of the class will be dedicated to reading and discussing scholarship as well as some primary sources in translation. In the second half of the course, students will develop projects based on their interests, culminating in presentations and a research paper.

**RELIGST 315. Third Bhavanakrama & the Writings of Héshang Moheyan: Scripture in Buddhist Scholastic Polemics. 3-5 Units.**

Readings in the original languages (Sanskrit, Tibetan and Chinese) of materials from the debates of late 8th Century Tibet (so-called debate at Bsam-yas). The course focuses on the use of scriptural quotations in those passages where the arguments of Kamalasila, the leading Indian representative at the debates, best map on to the arguments of his Chinese rival, Héshang Moheyan.

**RELIGST 315A. Chinese Buddhism. 3-5 Units.**

This course provides an overview of the major themes and historical developments in 2000 years of Buddhist history in China, from its early transmission from India to contemporary developments in the PRC, Taiwan and Hong Kong. Themes include monasticism, doctrine, popular devotion, state policy and the encounter with modernity.

**RELIGST 317. Japanese Studies of Religion in China. 3 Units.**

(Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.

Same as: RELIGST 217

**RELIGST 318. Islam, Race and Revolution: A Pan-American Approach. 3-5 Units.**

Taking a pan-American approach to the study of religious traditions, this upper-level course traces the history of the critical intersection between race, religion and revolution among Muslims from the turn of the nineteenth century until the present day. Moving from the Atlantic Revolutions of the late eighteenth and early nineteenth centuries, to the United States, to the decolonizing Third World, and then finally to the contemporary Middle East, this class will emphasize that Islam and race together have been used by many groups in order to challenge existing power structures, agitate for change, and more than occasionally, transform the social, cultural and governmental structures comprising their worlds. Moreover, although this class is concentrated upon religious formations in the Americas, students will explore global events throughout the Muslim world in order to examine how global politics contribute to religious formations, solidarities and identities. At the conclusion of this course, students will be expected to write a 10-15 page research paper, and a topic will be chosen in consultation with the instructor. Students will also be expected to write weekly reflection papers, which will serve to facilitate class discussion. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.

Same as: AMSTUD 218, CSRE 218, RELIGST 218

**RELIGST 318X. The Holy Dead: Saints and Spiritual Power in Medieval Europe. 4-5 Units.**

Examines the cult of saints in medieval religious thought and life. Topics include martyrs, shrines, pilgrimage, healing, relics, and saints' legends. Same as: HISTORY 218, HISTORY 318, RELIGST 218X

**RELIGST 32. Spiritualism and the Occult. 4 Units.**

This course will examine the popular mystical practices of the nineteenth and early twentieth centuries when millions of people in Europe and America described themselves as spiritualists and shared a recognizable set of practices. These served as a platform for spiritual immediacy guided by the central questions: What is the relationship between seen and unseen? How can the living communicate with the dead? What technologies apply to our inner lives?

**RELIGST 320. Religion and Literature. 4 Units.**

grad seminar in religion and literature-description to follow.

**RELIGST 321. The Talmud. 4 Units.**

Strategies of interpretation, debate, and law making. Historical contexts. Prerequisite: Hebrew.

Same as: RELIGST 221

**RELIGST 321B. What is Talmud?. 5 Units.**

In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: reading Hebrew with some understanding of biblical Hebrew.

Same as: RELIGST 221B

**RELIGST 321D. Readings in Syriac Literature. 2-5 Units.**

In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts.

Same as: JEWISHST 221D, JEWISHST 321D, RELIGST 221D

**RELIGST 322B. Sufism Seminar. 3-5 Units.**

Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).

Same as: RELIGST 222B

**RELIGST 324. Classical Islamic Texts. 3 Units.**

The course is based on readings in primary Arabic sources in the key fields of pre-modern Islamic scholarship. The list of readings and topics will depend on the interests of the students. In addition to focusing on the language, contents, and context of the texts covered, the course introduces genre-specific historical research methods. The reading selections may be derived from Qur'anic interpretation (tafsir), the hadith literature, adab, biographical dictionaries, fiqh, ta'rikh, kalam, or Sufism. Reading knowledge of Arabic is required.

Same as: RELIGST 224

**RELIGST 324B. Unveiling the Sacred: Explorations in Islamic Religious Imagination. 3-5 Units.**

Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shi'ism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.

Same as: RELIGST 224B

**RELIGST 326A. Judaism and Hellenism. 3-5 Units.**

interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.

Same as: RELIGST 226A

**RELIGST 327. The Qur'an. 5 Units.**

Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.

Same as: RELIGST 227

**RELIGST 328. The Buddha's Word at Stanford. 3-5 Units.**

Linked to an exhibition at the Cantor Museum, this course investigates the history of Buddhist manuscript and print culture in Asia using manuscripts and woodblock prints in Stanford's own collections (5 units for 228).

Same as: RELIGST 228

**RELIGST 328S. The Study of the Midrash. 1-2 Unit.**

Two-week block seminar; four sessions. Talmudic philology; development and transmission of the Talmudic text and manuscripts. Relationship between Midrash and Mishnah and between Mishnah and Tosefta; development of talmudic sugiot; relationship between the Babylonian and Palestinian Talmud.

**RELIGST 329. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire the largest empire before Rome has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film *300* and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

Same as: CLASSICS 146, CLASSICS 246, RELIGST 229

**RELIGST 329X. Advanced Paleography. 5 Units.**

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: CLASSICS 216, HISTORY 315

**RELIGST 32S. Buddhism in America. 3 Units.**

This course examines the transmission, growth, and transformation of Buddhism in America from the nineteenth century to the present day. We will treat American Buddhism as a distinct regional variety of Buddhism with its own history, characteristics, and debates. Through select readings, films, discussions, and research, students will explore the main events and issues that have shaped the American encounter with Buddhism. We will learn the history of Buddhism in the United States, major traditions of American Buddhism, and contemporary issues and debates. Topics covered will include Orientalism, gender, race, science and meditation, and Buddhism in classrooms and prisons.

**RELIGST 330B. Zen Studies. 4 Units.**

Readings in recent English-language scholarship on Chan and Zen Buddhism.

Same as: RELIGST 230B

**RELIGST 332X. Religion and Modernity. 5 Units.**

What role has the category of religion played in the development of the modern state, both colonial and national? How have central concepts of liberal political thought, such as freedom, progress, and history, depended on certain normative ideas of religion? Through various genealogical, historical, and ethnographic inquiries, this course examines how the category of religion has both subtended and disturbed formations of colonial and post-colonial modernity.

Same as: ANTHRO 347

**RELIGST 333X. Workshop in Religion and Education. 1 Unit.**

This 1-unit workshop will explore the intersection of religion and education across a variety of learning environments and demographics. It invites an ongoing conversation of the relationships between schools, congregations, religious bodies, learners, seekers, philanthropy, and public education. Advanced students and visiting scholars will have an opportunity to present their work for discussion. May be repeat for credit.

Same as: EDUC 412

**RELIGST 334. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.**

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 224, JEWISHST 324, RELIGST 234

**RELIGST 335. Religion in Modern Society: Secularization and the Sacred. 4 Units.**

What is the status of religion in modern life? Is the modern world "secular" in some fundamental, irreversible way and what does this mean? This course will explore these questions through variety of readings from leading sociologists, philosophers, and anthropologists. Our goal will be to understand in what ways industrialization, political liberalization, the rise of technology, and the success of modern science have been used to support the "secularization" thesis that the modern West rendered religion a thing of the past. A central question to be asked will be: do assessments of the place of religion in modernity necessitate a philosophy of history i.e., a theory not only of historical change, but of the meaning of this change as well? The course will begin by looking at the origins of the theory of secularization from its beginnings in Enlightenment attempts to understand the meaning of history. We will then turn to contemporary debates over the term "secular" against its counterpart, "religious", and the problems with their application to non-Western societies. We will read works by Talal Asad, Saba Mahmood, Max Weber, Charles Taylor, Jürgen Habermas, and Pope Benedict XVI.

Same as: RELIGST 235

**RELIGST 338. Christian Neo-Platonism, East and West. 3-5 Units.**

Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine.

Same as: RELIGST 238

**RELIGST 339. Luther and the Reform of Western Christianity. 3-5 Units.**

Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world.

Same as: RELIGST 239

**RELIGST 340. Contemporary Religious Reflection. 3-5 Units.**

Focus is on normative and prescriptive proposals by recent and contemporary philosophers and theologians, as opposed to the domination of Religious Studies by textual, historical, cultural, and other largely descriptive and interpretive approaches. Do such normative and prescriptive proposals belong in the academy? Has Religious Studies exorcised its theological nimbus only to find contemporary religious reflection reappearing elsewhere in the university?.

**RELIGST 341. Comparative Perspectives on Classical Chinese Texts. 4-5 Units.**

Classical Chinese texts, in prose and poetry, interpreted through comparative perspectives drawn from both inside and outside China. Consent of the instructor required.

**RELIGST 344. Explaining Religion. 3-5 Units.**

There are broadly two different, and sometimes mutually exclusive, ways of explaining social religious phenomena: idealism and materialism. One gives ideas ultimate causal primacy while the other emphasizes economic, technological, geographical, and demographic factors. This course examines arguments for and against each approach. Topics include rational choice theory, functionalism, Marxism, cultural materialism, and the unconscious. Case studies include Jewish and Indian dietary restrictions, competition between Christian denominations, survival strategies of minority religions, apocalyptic movements, etc. For the final paper, each student will write on a religious tradition of his/her choice.

Same as: RELIGST 244

**RELIGST 345. Christianity Seminar. 3-5 Units.**

Topics in the study of Christianity for doctoral students. Recent scholarship and approaches to research.

**RELIGST 346. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: AFRICAAM 236, AMSTUD 246, CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 246

**RELIGST 347B. Readings in Chinese Religious Texts: The Lingbao Scriptures. 4 Units.**

A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese 22 required).

Same as: RELIGST 247B

**RELIGST 350. Modern Western Religious Thought Proseminar. 1-5 Unit.**

Selected topics in recent and contemporary religious thought. May be repeated for credit.

**RELIGST 351. Readings in Indian Buddhist Texts. 3-5 Units.**

(Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.

Same as: RELIGST 251

**RELIGST 352A. The Story of a Buddhist Megascripture: Readings in the Avatamsaka. 3-5 Units.**

In this course we will explore the massive Mahayana Buddhist scriptural compilation known as the Avatamsaka Sutra (more correctly: Buddhavatamsaka Sutra). We will investigate the development of the text in India, study its contents, and consider its later reception in East Asia. Since much of the course will be devoted to reading sections of the Buddhavatamsaka, a reading knowledge of Chinese is required.

Same as: RELIGST 252A

**RELIGST 353. Recent Research on Japanese Buddhism. 3-5 Units.**

Readings in recent English-language scholarship on Japanese Buddhism. Undergraduates must enroll for 5 units; graduate students can enroll for 3-5 units. Prerequisite: Solid foundation in either Buddhist studies or East Asian Studies (5 units for 253, 3-5 units for 353).

Same as: RELIGST 253

**RELIGST 354. Recent Contributions to Buddhist Studies. 3-5 Units.**

This reading intensive course will examine nine areas in recent work in Buddhist studies, including ethnography, archaeology, monasticism, the study of "experience," and gender. May be repeated for credit.

Same as: RELIGST 254

**RELIGST 355. Religion and Power in the Making of Modern South Asia. 3-5 Units.**

This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. Undergraduates must enroll in RELIGST 255 for 5 units. Graduate students must enroll RELIGST 355 for 3-5 units. HISTORY297F must be taken for 4-5 units.

Same as: HISTORY 297F, RELIGST 255

**RELIGST 356. The Brahma Net Sutra (Fanwang Jing). 4 Units.**

A study of an important Chinese Buddhist apocryphal work, with special attention to interpretation of content, impact on monastic codes in medieval China, transmissional history and commentarial tradition.

Same as: RELIGST 256

**RELIGST 357. Readings in Daoist Texts. 4 Units.**

Readings from primary sources. Prerequisite: classical Chinese.

Same as: RELIGST 257

**RELIGST 357X. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: FEMGEN 293E, HISTORY 293E, HISTORY 393E, RELIGST 257X

**RELIGST 358. Japanese Buddhist Texts. 3-5 Units.**

Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese.

Same as: RELIGST 258

**RELIGST 359. Readings in Buddhist Studies. 3-5 Units.****RELIGST 36. Philosophy of Religion. 3 Units.**

(Formerly RELIGST 62S) Explores fundamental questions about the existence of God, free will and determinism, faith and reason, through traditional philosophical texts. Course is divided into four sections: first asks what is religion; second surveys the western philosophical tradition from Boethius through Descartes, Hume, Kant, and Kierkegaard regarding the foundation for theist beliefs; third investigates questions mystical experience raises through both western and Buddhist materials; and fourth takes up the ethics of belief, what we have a right to believe, through the Clifford and James debate and the opposing stances of Camus and Pascal.

Same as: PHIL 77S

**RELIGST 360. Buddhism & Modernity. 3-5 Units.**

Is Buddhism a philosophy? A mind science? An ancient mystical path? A modern construct? This seminar will evaluate a variety of answers to these questions by exploring how Buddhism has been understood in the modern era. Our primary source materials will range from Orientalist poetry to Zen essays to Insight Meditation manuals to 21st-century films. We will examine how these works shape Buddhism, consider their pre-modern influences, and turn to recent scholarship to discuss how romantic, imperialist, anti-modern, nationalist, therapeutic, and scientific frames depict one of today's most popular religions. This course is cross-listed as RELIGST 260/360. Undergraduates must enroll in RELIGST 260 for 5 units. Graduate students must enroll RELIGST 360 for 3-5 units.

Same as: RELIGST 260

**RELIGST 361. Precepts and Ordinations in East Asia. 4 Units.**

Japanese Buddhism is well-known for its very loose interpretation of monastic precepts and ordinations. Although some may think that these subjects are nothing more than out-of-date lists of rules, the study of the precepts involves social history, doctrine, and religious practice. In this course, we examine the origins and the development of the bodhisattva precepts, beginning with a brief outline of the vinaya, and then progressing to Indian and Chinese views of the bodhisattva precepts. The last half of the course focuses on how Japanese Tendai's unique interpretation of the precepts was based on Chinese apocryphal texts and Chinese Tiantai doctrines. We conclude with reading Japanese Tendai texts written in Chinese. Because the Tendai tradition had a loose administrative structure, a variety of interpretations developed. The course is composed of reading texts written in Chinese by East Asian monks. Although I will lecture for approximately 30 minutes of each class, the focus of the class will be on reading and translating short sections of primary sources together. We will also pay attention to the use of such tools as dictionaries, encyclopedias, bibliographies, and data bases of texts. Students are expected to participate in discussions and to come to class prepared to read the primary sources in class.

**RELIGST 362. Sex and the Early Church. 4 Units.**

Sex and the Early Church examines the ways first- through sixth-century Christians addressed questions regarding human sexuality. We will pay particular attention to the relationship between sexuality and issues of gender, culture, power, and resistance. We will read a Roman gynecological manual, an ancient dating guide, the world's first harlequin romance novels, ancient pornography, early Christian martyrdom accounts, stories of female and male saints, instructions for how to best battle demons, visionary accounts, and monastic rules. These will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality. The purpose of our exploration is not simply to better understand ancient views of gender and sexuality. Rather, this investigation of a society whose sexual system often seems so surprising aims to denaturalize many of our own assumptions concerning gender and sexuality. In the process, we will also examine the ways these first centuries of what eventually became the world's largest religious tradition has profoundly affected the sexual norms of our own time. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history.

Same as: FEMGEN 262, RELIGST 262

**RELIGST 363. A Ripple on the Ocean of Zen: Reading the Zenkai Ichiran. 3-5 Units.**

Imakita Ksen (1816-1892), the master of D. T. Suzuki's teacher, wrote the Zenkai Ichiran in 1862 for his feudal lord, a staunch supporter of Confucianism, in order to convey the attraction of Zen to him in Confucian language. One way of reading this short work in Classical Chinese is as a product of religious conflict within the nineteenth century Japanese world, but the text also reflects the form that had been taken by a lengthy tradition of polemical Buddhist writing dating back over one and a half millennia in East Asia at the very point that Buddhists were about to turn to resisting the inroads not of Confucianism but of Christianity. This reading class will allow students familiar with original East Asian Buddhist materials to appreciate some related non-Buddhist sources. But it possible to translate into English a book that itself translated Buddhism into Confucian terms? Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units. Same as: RELIGST 263A

**RELIGST 364. Hindu Tantra. 4 Units.**

What is Tantra? Tantric forms of ritual and philosophy have been integral to the practice of Hinduism for most of its history. Tantra has provided initiates with a spiritual technology for embodying the divine and transcending the cycle of rebirth; on a social and political level, Tantra has mediated the institutions of Hindu kingship and appealed to a diverse population of initiates. This course covers a number of influential and well-documented Hindu tantric traditions, exploring several prominent features of Tantric religion as they develop historically, including: tantric ritual practice (core technologies of the subtle body, mantras, ma, alas, etc., along with the more notorious elements of sex and transgression), theology and philosophical speculation, as well as Tantra's relationship to the outside world and state power.

Same as: RELIGST 264

**RELIGST 365. Creating the Universe: Buddhist Science, Ritual and Art. 5 Units.**

Much of Buddhist ritual and art can usefully be thought of as technology—physical pieces that, when arranged systematically, make a given practice effective. This class is about the Buddhist scientific perspectives underlying the production of such ritual and art in Tibet, Nepal, and India. The course is organized around cosmological and biological topics such as physical models of the universe, the types of beings that dwell in the world, and the cycles of life and death. Within these topics, we will investigate the relationships between sacred texts, ritual practices, and visual arts as the material culture of religion.

Same as: RELIGST 265

**RELIGST 367. Seminar in Religion and Material Culture. 3-5 Units.**

The first part of the course will examine approaches to the role of material culture in religion, including scholarship on icons, sacred space, clothing and food. In the second part of the course, students will develop research projects in their area of specialization.

**RELIGST 369. Plotinus and Augustine. 3-5 Units.**

Professor's permission required to register. A reading course focused on the influence of Plotinus Enneads on Augustine's Confessions, early dialogues, and sections on reason and memory in the De trinitate. Proficiency in Greek and Latin will be helpful but is not required. Professor's prior permission required, interested students should contact the professor about course schedule: tsheehan@stanford.edu . Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.

Same as: PHIL 229, PHIL 329, RELIGST 269

**RELIGST 370. Comparative Religious Ethics. 4 Units.**

The difference that the word religious makes in religious ethics and how it affects issues of genre. Theoretical analyses with examples from W. and E. Asia. Prerequisite: consent of instructor.

**RELIGST 371. Writing Religious History. 4-5 Units.**

This course offers graduate students a sustained opportunity to think about the craft of writing religious history. We will work together on issues ranging from structuring sentences, to revising an article, to conceptualizing a dissertation. Students will be encouraged to establish a daily writing habit and to formulate clear and searchable research strategies. Readings will include exemplars of different kinds of writing in the field. Students will write and workshop several brief (3-5 page) papers applying different approaches. The final project will be a revision of an article-length paper.

**RELIGST 373. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.**

Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.

Same as: RELIGST 273

**RELIGST 374. From Kant to Kierkegaard. 3-5 Units.**

(Graduate students register for 374. Undergrads register for 274 for 5 units.) The philosophy of religion emerged from the European Enlightenment as a new genre of reflection on religion distinct from both dogmatic theology and rationalist dreams of a "natural" religion of reason. Neither beholden to pre-critical tradition, nor dismissive of what Thomas Nagel has termed "the religious attitude," this new, ostensibly secular, genre of religious thought sought to rethink the meaning of Christianity at a time of immense philosophical ferment. The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.

Same as: RELIGST 274

**RELIGST 374F. Science, Religion, and Democracy. 3-5 Units.**

How should conflicts between citizens with science-based and religion-based beliefs be handled in modern liberal democracies? Are religion-based beliefs as suitable for discussion within the public sphere as science-based beliefs? Are there still important conflicts between science and religion, e.g., Darwinian evolution versus creationism or intelligent design? How have philosophy and recent theology been engaged with such conflicts and how should they be engaged now? What are the political ramifications? This is a graduate-level seminar; undergraduates must obtain permission of the instructors.

Same as: ETHICSOC 374R, PHIL 374F

**RELIGST 375. Kierkegaard. 3-5 Units.**

(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.

Same as: RELIGST 275

**RELIGST 377. The Later Heidegger: Art, Poetry, Language. 3 Units.**

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and *Elucidations of Holderlin's Poetry*.

Same as: PHIL 234B, RELIGST 277

**RELIGST 378. Heidegger: Confronting the Ultimate. 3-5 Units.**

Heidegger's work on meaning, the self, and the sacred. Texts include *Being and Time*, courses and opuscula up to 1933, the *Letter on Humanism*, and *Contributions of Philosophy*.

Same as: RELIGST 278

**RELIGST 379. After God: Why religion at all?. 4 Units.**

God is dead, but where does religion come from? The end of the quest for God in twentieth century philosophy. Robert Bellah's *Religion in Human Evolution* plus seminal works of Heidegger, including *Being and Time*, "What Is Metaphysics?" Nietzsche's *Saying 'God is Dead.'* N.B.: Class size limited. Apply early at tsheehan@stanford.edu.

Same as: RELIGST 279

**RELIGST 379A. Heidegger on human being and God. 4 Units.**

This lecture-seminar first raises the question of essential characteristics of human being, such as temporality, mortality, hermeneutics and the relation to meaning, and then, via readings from Karl Rahner, asks whether human being is open to a possible relation to a supernatural divinity.

Same as: RELIGST 279A

**RELIGST 380. Schleiermacher: Reconstructing Religion. 3-5 Units.**

Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.

Same as: RELIGST 280

**RELIGST 381. Asian Religions in America; Asian American Religions. 4 Units.**

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, ASNAMST 281, RELIGST 281

**RELIGST 382. King Solomon and the Search for Wisdom. 4 Units.**

What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

Same as: RELIGST 282

**RELIGST 384. Research in Christian Studies. 1-15 Unit.**

Independent study in Christianity. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 385. Research in Buddhist Studies. 1-15 Unit.**

Independent study in Buddhism. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 387. Research in Jewish Studies. 1-15 Unit.**

Independent study in Jewish Studies. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 388. Research in Modern Religious Thought, Ethics, and Philosophy. 1-15 Unit.**

Independent study in Modern Religious Thought, Ethics, and Philosophy. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 389. Individual Work for Graduate Students. 1-15 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 390. Teaching Internship. 3-5 Units.**

Required supervised internship for PhDs.

**RELIGST 391. Teaching Religious Studies. 3 Units.**

Workshop/seminar for doctoral students in Religious Studies and adjacent fields designed to cultivate methods for teaching Religious Studies in an academic setting.

**RELIGST 392. Paper in the Field. 1-15 Unit.**

Prerequisite: consent of graduate director. May be repeated for credit.

**RELIGST 395. Master of Arts Thesis. 2-9 Units.**

**RELIGST 399. Recent Works in Religious Studies. 1-2 Unit.**

Readings in secondary literature for Religious Studies doctoral students. May be repeated for credit.

**RELIGST 50. Exploring Buddhism. 5 Units.**

From its beginnings to the 21st century. Principal teachings and practices, institutional and social forms, and artistic and iconographical expressions. (Formerly RELIGST 14.)

**RELIGST 53. Exploring Jewish Spirituality. 4 Units.**

It was once accepted as fact that Judaism is a purely rational religion devoid of any authentic mystical tradition. But the past century of scholarship has reversed this claim, demonstrating that the spiritual life has been integral to Judaism's vital heart since ancient times. This yearning for a direct immediate experience of God's Presence, a longing to grasp the mysteries of the human soul and know the inner dynamics of the Divine realm, has taken on many different forms across the centuries. This course will introduce students to the major texts and core ideas of Jewish mysticism and spirituality, tracking their development from the Hebrew Bible to the present day. Close attention will be paid to the sources, historical context, and we will also engage with broader methodological questions regarding the academic study of religion and the comparative approach to mysticism.

Same as: JEWISHST 53

**RELIGST 55. Exploring Zen Buddhism. 4 Units.**

This course is an introduction to Chan/Zen Buddhism. We will study the historical and doctrinal development of this tradition in China and Japan and examine various facets of Zen, such as the philosophy, practices, rituals, culture, and institution. For this aim, we will read and discuss classical Zen texts in translation and important secondary literature. This course will further feature a fieldtrip to a local Zen center.

**RELIGST 56. Exploring Chinese Religions. 4 Units.**

An overview of major themes and historical developments in 5000 years of Chinese religion. In this course, we will try as much as possible to appreciate Chinese religion from the Chinese perspective, paying particular attention to original texts in translation in an attempt to discern the logic of Chinese religion and the role it has played in the course of Chinese history. To a greater extent perhaps than any other civilization, Chinese have left behind a continuous body of written documents and other artifacts relating to religion stretching over thousands of years, providing a wealth of material for studying the place of religion in history and society.

**RELIGST 61. Exploring Islam. 4 Units.**

This course introduces some of the most important features of the Islamic religious tradition. It explores the different ways in which Muslims have interpreted and practiced their religion. The main subjects of discussion — including the life of the Prophet Muhammad, the Qur'an, law, ritual, mysticism, theology, politics, and art — will be considered with reference to their proper historical contexts. Some of the topics covered include abortion, gender, rebellion and violence, and the visual vocabulary of paintings. Students will be exposed to important theories and methods in the academic study of religion. No prior knowledge is required.

**RELIGST 65. Exploring Global Christianity. 4 Units.**

Explore the world's largest religion as a multicultural, global faith, with attention to Christianity's origins, spread and impact around the world up to the present. Special attention to recent shifting demographics leading to declining numbers in mainline Christian denominations in North America and Europe and the rapid expansion of Christianity in Africa, Asia, and South America; the explosion of international Pentecostalism and other new Christianities; Christianity, global politics, and the global economy; Christian-Muslim relations and conflicts.

**RELIGST 6N. Religion in Anime and Manga. 3 Units.**

Religious themes and topics are ubiquitous in Japanese anime and manga. In this course, we will examine how religions are represented in these new media and study the role of religions in contemporary Japan. By doing this, students will also learn fundamental concepts of Buddhism and Shinto.

**RELIGST 71. Jews and Christians: Conflict and Coexistence. 3 Units.**

The relationship between Judaism and Christianity has had a long a controversial history. Christianity originated as a dissident Jewish sect but eventually evolved into an independent religion, with only tenuous ties to its Jewish past and present. Since the Holocaust, Jews and Christians have begun the serious work of forging more meaningful relationships with each other. This course explores the most significant moments that have shaped the relationship between Judaism and Christianity and examines some of the theological complexities imbedded in these traditions, while searching constructive ways of situating oneself amidst such complexities.

Same as: JEWISHST 71

**RELIGST 801. TGR Project. 0 Units.**

(Staff).

**RELIGST 802. TGR Dissertation. 0 Units.****RELIGST 81. Exploring Indian Religions. 4 Units.**

This course provides an overview of Indian religious traditions, including Hinduism, Buddhism, Jainism, Islam, and Sikhism. We will spend approximately half the course on Hindu thought and traditions from the Vedic period until the present day, emphasizing the diverse forms of this religion in different times and places. The second half of the course will be devoted to religions that emerged in South Asia (e.g., Jainism) and those that came to find a home and particular forms of expression on the subcontinent (e.g., Islam). Throughout students will read selections from a range of theological texts, epics, and literature that have permeated many aspects of daily religious life in India. We will also emphasize ritual activities, visual experiences in temples, and networks of pilgrimage places that dot the subcontinent. We will often pair primary sources (in translation) with later interpretations and impacts of those texts in modern South Asia. We will also survey the modern incarnations of particular Indian religious traditions throughout South Asia and the diaspora. By the conclusion of this course, students will be conversant with the texts, beliefs, and practices of the major Indian religions in their cultural and historical contexts and also have a working knowledge of basic categories important for the study of religion more broadly.

**RELIGST 82. Approaches to the Study of Religion: Exploring Christianity. 4 Units.**

Historical and contemporary Christianity from four viewpoints: ritual and prayer; sacred texts and creeds; ethics and life; and community governance.

**RELIGST 86. Exploring the New Testament. 4 Units.**

To explore the historical context of the earliest Christians, students will read most of the New Testament as well as many documents that didn't make the final cut. Non-Christian texts, Roman art, and surviving archeological remains will better situate Christianity within the ancient world. Students will read from the Dead Sea Scrolls, explore Gnostic gospels, hear of a five-year-old Jesus throwing divine temper tantrums while killing (and later resurrecting) his classmates, peruse an ancient marriage guide, and engage with recent scholarship in archeology, literary criticism, and history.

Same as: CLASSICS 43, JEWISHST 86

**RELIGST 91. Exploring American Religious History. 4 Units.**

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: AMSTUD 91, CSRE 91, HISTORY 260K

**RELIGST 9N. What Didn't Make it into the Bible. 3 Units.**

Over two billion people alive today consider the New Testament to be sacred scripture. But how did the books that made it into the bible get there in the first place? Who decided what was to be part of the bible and what wasn't? How would the history of the world's largest modern religion look differently if a given book didn't make the final cut and another one did? Hundreds of ancient Christian texts are not included in the New Testament. What Didn't Make It in the Bible focuses on these excluded writings. We will explore Gnostic gospels, hear of a five-year-old Jesus throwing temper tantrums while killing (and later resurrecting) his classmates, peruse ancient Christian romance novels, tour heaven and hell, read the garden of Eden story told from the perspective of the snake, and learn how the world will end. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history. It is designed for students who are part of faith traditions that consider the bible to be sacred, as well as those who are not. The only prerequisite is an interest in exploring books, groups, and ideas that eventually lost the battles of history and to keep asking the question "why." In critically examining these ancient narratives and the communities that wrote them, you will learn about the content and history of the New Testament, better appreciate the diversity of formative Christianity, understand the historical context of the early church, and explore the politics behind what did and did not make it into the bible.

## Russian E Euro Eurasia Studies (REES)

**REES 100. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.**

Enrollment limited to REES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.  
Same as: REES 200

**REES 105. Central and East European Politics. 5 Units.**

Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe.  
Same as: REES 205

**REES 130. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries. 4-5 Units.**

The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.  
Same as: REES 330

**REES 145D. Jewish American Literature. 5 Units.**

From its inception, Jewish-American literature has taken as its subject as well as its context the idea of Jewishness itself. Jewish culture is a diasporic one, and for this reason the concept of Jewishness differs from country to country and across time. What stays remarkably similar, though, is Jewish self-perception and relatedly Jewish literary style. This is as true for the first-generation immigrant writers like Isaac Bashevis Singer and Anzia Yezierska who came to the United States from abroad as it is for their second-generation children born in the United States, and the children of those children. In this course, we will consider the difficulties of displacement for the emigrant generation and their efforts to sustain their cultural integrity in the multicultural American environment. We'll also examine the often comic revolt of their American-born children and grandchildren against their (grand-)parents nostalgia and failure to assimilate. Only by considering these transnational roots can one understand the particularity of the Jewish-American novel in relation to mainstream and minority American literatures. In investigating the link between American Jewish writers and their literary progenitors, we will draw largely but not exclusively from Russia and the countries of Eastern Europe.

Same as: AMSTUD 145D, ENGLISH 145D, JEWISHST 155D

**REES 18. Understanding the Jews of Russia and Poland. 1 Unit.**

A preparatory course, for field trip to Moscow and Warsaw, that would cover Russian and Polish History, former Soviet Jewry, international relations, and current social realities.

**REES 185B. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 4-5 Units.**

(Same as HISTORY 85B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life – all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 185B, HISTORY 185B, HISTORY 385C, JEWISHST 185B

**REES 200. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.**

Enrollment limited to REES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.  
Same as: REES 100

**REES 204. Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean. 3-5 Units.**

This course explores the cities of the Habsburg, Ottoman and Russian empires in the dynamic and turbulent period of their greatest transformation from the 19th century through the Two World Wars. Through the reading of urban biographies of Venice and Trieste, Vienna, Budapest, Cracow, Lviv, Sarajevo, Belgrade, Salonica, and Odessa, we consider broad historical trends of political, economic, and social modernization, urbanization, identity formation, imperialism, cosmopolitanism, and orientalism. As vibrant centers of coexistence and economic exchange, social and cultural borderlands, and sites of transgression, these cities provide an ideal lens through which to examine these themes in the context of transition from imperial to post-imperial space.

Same as: HISTORY 223E, HISTORY 323E, REES 304

**REES 205. Central and East European Politics. 5 Units.**

Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe.

Same as: REES 105

**REES 206. Media, Democratization and Political Transformations in Post-Soviet Societies. 3-5 Units.**

The course provides an introduction to the study of media transformations in post-Soviet countries and the role of media in the democratization of post-communist societies. The course addresses theoretical approaches and concepts developed for the study of media and their role in the democratization of societies in transition, provides an extensive empirical overview of media developments in the post-Soviet countries, with a central focus on Ukraine and Russia, and explores the relationship between media and politics in these countries.

Same as: REES 306

**REES 208. Constitutional Cultures in Transition: Constitutional Identities and Values in the Post-Soviet Space. 3-5 Units.**

This course examines post-Soviet constitutional cultures and identities (with a focus on Armenia, Moldova and Ukraine). It explores the role of constitutional identity in post-Soviet transformation, regional integration and 'Europeanization' processes; analyzes constitutional values in post-Soviet countries; discusses why there is a disharmony between declared values and constitutional reality; and explores the role of the judiciary in the formation and preservation of constitutional identity.

Same as: REES 308

**REES 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 408C, RELIGST 208C, RELIGST 308C

**REES 209. Democratic Transition in Ukraine: Values, Political Culture, Conflicts. 3-5 Units.**

This course introduces students to issues of social and political transition in Ukraine from the early 1990s through the Orange Revolution to the Euromaidan and the present-day Russian-Ukrainian crisis in a comparative perspective. Topics to include: democratization, shifts in values, identity, dynamics of political protest and revolutions, economics, corruption, and the international security context (NATO, EU). Class discussions to be based on analysis of relevant survey data and live, online interviews with experts on selected topics.

**REES 213. US-Russia Relations After the Cold War. 2 Units.**

A quarter century ago, the Soviet Union collapsed and the Cold War ended. At the time, Russian leaders aspired to build democratic and market institutions at home. They also wanted to join the West. American presidents Democrat and Republican encouraged these domestic and international changes. Today, U.S.-Russia relations are once again confrontational, reminiscent of relations during the Cold War. This course seeks to analyze shifts in U.S.-Russia relations, with special attention given to the U.S.-Russia relationship during Obama's presidency. Readings will include academic articles and a book manuscript by Professor McFaul on Obama's reset policy. Open to students with previous coursework involving Russia.

Same as: POLISCI 213, POLISCI 313

**REES 213A. Russia and the West. 5 Units.**

Today, American-Russian relations, and Russia's relations with West more generally, are tense and confrontational. One has to look deep into the Cold War to find a similar era of confrontation and competition. Yet, relations between Russia and the West were not always this way. The end of the Cold War, for instance, ushered in a period of cooperation. Back then, many believed that Russia was going to develop democratic and market institutions and integrate into Western international institutions. This seminar will examine various explanations for these variations in Russia's relations with the West, starting in the 19th century, and briefly examining the Cold War period, but a real focus on the last thirty years. In evaluating competing explanations, the course will focus on balance of power theories, culture, historical legacies, institutional design, and individual actors in both the United States (and sometimes Europe) and Russia. **NOTE:** The enrollment of the class is by application only. Please send a one page document to Anya Shkurko (ashkurko@stanford.edu) by March 23rd with the following information: full name, class year, major, contact email, which version of the course you want to enroll in (PoliSci/REES/IPS). In the document please also outline previous associated coursework and/or relevant experience and write why you want to enroll in the seminar. Application results will be announced on March 30th. Any questions related to this course can be directed to Anya Shkurko.

Same as: IPS 231A, POLISCI 213A

**REES 219. The Russian Economy. 4-5 Units.**

Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.

Same as: ECON 119

**REES 220A. Literature and Cultural Politics in the Former Yugoslavia. 3-5 Units.**

Socialist Yugoslavia disintegrated after 46 years. The story is a telling one, let's read it! Literature in Yugoslavia went through transformations from socialist-realism at the beginning toward nationalist-realism at the end. To understand this process, it is crucial to relate it to its political and ideological background: social myths and taboos, questions of language, cultural and class identity, individual and collective rights. These issues will be explored through fictional texts by prominent Yugoslav writers, including Ivo Andric, Miroslav Krleža, Milos Crnjanski, Mesa Selimovic, Danilo Kis.

Same as: REES 320A

**REES 220G. Demons, Witches, Old Believers, Holy Fools, and Folk Belief: Popular Religion in Russia. 4-5 Units.**

19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

Same as: HISTORY 220G, HISTORY 320G, REES 320G

**REES 224A. The Soviet Civilization. 4-5 Units.**

Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

Same as: HISTORY 224A, HISTORY 424A

**REES 227. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.**

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.  
Same as: HISTORY 227D, HISTORY 327D, REES 327

**REES 23. Issues in Global Health: Russia and Eastern Europe. 1-2 Unit.**

Activity course features Stanford faculty and researchers who lecture weekly on their experiences working international health issues. Focus this year will be on the global region including Russia, and East Europe.

**REES 231. Russia, the West and the Rest. 4 Units.**

Focus on understanding the diversity of political, social, and economic outcomes in Russia since the collapse of the Soviet Union. Exploration of questions, including: Is Russia still a global power? Where does it have influence internationally, how much, and why? Developmentally, what is the relevant comparison set of countries? Is Russia's economic growth over the last decade truly similar to Brazil, China, and India or is it more comparable to Kazakhstan, Nigeria, and Kenya? How has Russia's domestic political trajectory from liberalizing country to increasingly autocratic affected its foreign policy toward Ukraine, Georgia, and other formerly Soviet states? Finally, is Russia's reemergence as an important global actor more apparent than real?  
Same as: IPS 231

**REES 244A. Practice of Everyday Life in Kazakhstan: From Nomadism to Modernity. 3-5 Units.**

An interdisciplinary introduction to the historically nomadic land of Kazakhstan, its peoples and their lifestyles & the practice of everyday life. Ranked as the ninth largest country in the world, Kazakhstan is also the world's largest landlocked country; its territory is greater than Western Europe: it stretches from the fringes of Europe to the borders of Mongolia and China. The seminar surveys language and society, traditional economics and customary law, rituals and folk customs, local dwelling, craft and art, the cultural panorama, the historical relationship between sedentary and nomadic peoples as well as new approaches to the study of nomads in modernity. Speaking of the present time, we will follow the changing nomads in a changing world. The instructor is going to base, to the extent possible, on the extremely rich fieldwork data recently discovered in Kazakhstan -- the data is yet little known in the West. The seminar will make extensive use of audio-visual materials and films.  
Same as: ANTHRO 144A

**REES 247A. Folklore, Mythology, and Islam in Central Asia. 3-5 Units.**

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch *Manas*. The cultural universe of Central Asian peoples as a symbol of their modern outlook.  
Same as: ANTHRO 147A

**REES 250A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.**

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.  
Same as: ANTHRO 150A, FEMGEN 150A

**REES 259C. Ecological Humanities. 3 Units.**

What sort of topics, research questions, approaches, theories and concepts lead to an integration of various kinds of knowledges? Ecological Humanities provides a conceptual platform for a merger of humanities and social sciences with earth and life sciences, soil science and forensic sciences. The course will discuss such selected topics as the Anthropocene, geologic/mineral and exhumed subjects/personae, bio- and geosocial collectives, symbiotic life-forms, non-human agencies, and forensic landscapes as examples of this merger.  
Same as: ANTHRO 159C, ANTHRO 259C, DLCL 259C

**REES 260. History and Politics of Russian Language. 3-4 Units.**

How did standard Russian develop? Who determines how the language is spoken and written? How does Russian interact with other languages of the region (such as Ukrainian and Yiddish)? This class examines the development of the standard literary Russian language, focusing on the 19th century, the Soviet period, and post-Soviet language politics. Taught in English, reading in Russian.

**REES 299. Directed Reading. 1-12 Unit.****REES 300. MA Capstone Seminar. 1-3 Unit.**

Required for and limited to REES MA candidates. Colloquia with CREEES Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing.

**REES 301. An Introduction to Russian, East European and Eurasian Studies. 5 Units.**

This seminar investigates the origins and evolution of the field and exposes students to major debates about the history, geography, politics, societies, economies, cultures, and languages of the region.

**REES 301B. History and Politics in Russian and Eastern European Cinema. 5 Units.**

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.  
Same as: FILMSTUD 245B, FILMSTUD 445B

**REES 304. Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean. 3-5 Units.**

This course explores the cities of the Habsburg, Ottoman and Russian empires in the dynamic and turbulent period of their greatest transformation from the 19th century through the Two World Wars. Through the reading of urban biographies of Venice and Trieste, Vienna, Budapest, Cracow, Lviv, Sarajevo, Belgrade, Salonica, and Odessa, we consider broad historical trends of political, economic, and social modernization, urbanization, identity formation, imperialism, cosmopolitanism, and orientalism. As vibrant centers of coexistence and economic exchange, social and cultural borderlands, and sites of transgression, these cities provide an ideal lens through which to examine these themes in the context of transition from imperial to post-imperial space.  
Same as: HISTORY 223E, HISTORY 323E, REES 204

**REES 306. Media, Democratization and Political Transformations in Post-Soviet Societies. 3-5 Units.**

The course provides an introduction to the study of media transformations in post-Soviet countries and the role of media in the democratization of post-communist societies. The course addresses theoretical approaches and concepts developed for the study of media and their role in the democratization of societies in transition, provides an extensive empirical overview of media developments in the post-Soviet countries, with a central focus on Ukraine and Russia, and explores the relationship between media and politics in these countries.

Same as: REES 206

**REES 308. Constitutional Cultures in Transition: Constitutional Identities and Values in the Post-Soviet Space. 3-5 Units.**

This course examines post-Soviet constitutional cultures and identities (with a focus on Armenia, Moldova and Ukraine). It explores the role of constitutional identity in post-Soviet transformation, regional integration and 'Europeanization' processes; analyzes constitutional values in post-Soviet countries; discusses why there is a disharmony between declared values and constitutional reality; and explores the role of the judiciary in the formation and preservation of constitutional identity.

Same as: REES 208

**REES 310. Identity, Memory and Cultural Politics in Post-Soviet Societies. 3-5 Units.**

Although often undifferentiated, post-Soviet societies demonstrate a variety of transformation trajectories and diverse approaches to identity and memory politics. This course draws on cases from Ukraine, Belarus and Moldova, the Baltic States, the Caucasus, Russia, and Kazakhstan to explore the sociocultural transformation of post-Soviet countries in comparative perspective. We will analyze the construction of new identities and related issues, including language politics and collective memory and mythscapes as well as their media discourses. We will also examine political and civic participation in reforms, including citizens; value orientations and attitudes towards human rights and the rule of law.

**REES 312. Socio-Economic Issues in Contemporary Russia and Eastern. 3-5 Units.**

Course focus on the political dynamics of market liberalization and response to economic crisis in these emerging markets, including the sources of support and opposition to reform, the interplay between international organizations and domestic politics, and the challenges of protecting the losers of economic liberalization.

**REES 313. Transformation of Socialist Societies. 3-5 Units.**

A quarter-century from the fall of the Berlin Wall, we have gained broad perspective on the challenges of wholesale transformations away from socialism. This course explores the process and social consequences of opening the economies of Eastern Europe, Eurasia, and China to market forces. We will answer questions about how individuals and social systems respond to the particular challenges of rapid economic and political openings, including demographic challenges, corruption, nationalism, and growing inequality. We will compare the Eastern European and Post-Soviet experiences of these issues with the Chinese experience, and highlight the similarities and distinctions between transformations in these societies.

Same as: SOC 213A, SOC 313A

**REES 320. State and Nation Building in Central Asia. 3-5 Units.**

Issues of identity, development, and security following the dissolution of the Soviet Union and the emergence of independent states in Central Asia and the Southern Caucasus. Topics include the impact of 9/11, the spread of radical Islamist movements in the region, its growing role as a transit route for drugs, weapons, and possibly nuclear materials, the impact of the Soviet legacy, the nature of political and economic transformations, relations with neighboring countries, security challenges, and options facing U.S. policy makers.

**REES 320A. Literature and Cultural Politics in the Former Yugoslavia. 3-5 Units.**

Socialist Yugoslavia disintegrated after 46 years. The story is a telling one, let's read it! Literature in Yugoslavia went through transformations from socialist-realism at the beginning toward nationalist-realism at the end. To understand this process, it is crucial to relate it to its political and ideological background: social myths and taboos, questions of language, cultural and class identity, individual and collective rights. These issues will be explored through fictional texts by prominent Yugoslav writers, including Ivo Andric, Miroslav Krleža, Milos Crnjanski, Mesa Selimovic, Danilo Kis.

Same as: REES 220A

**REES 320G. Demons, Witches, Old Believers, Holy Fools, and Folk Belief: Popular Religion in Russia. 4-5 Units.**

19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

Same as: HISTORY 220G, HISTORY 320G, REES 220G

**REES 326. The Russian Revolution: Politics, Society, Culture. 3-5 Units.**

The centennial of the Russian Revolution of 1917 serves as the occasion for this course, which surveys the political, social, and cultural upheavals that transformed Russia under the last Tsars and the first Soviet commissars. The course will be offered in conjunction with the exhibition "The Crown under the Hammer: Russia, Romanovs & Revolution," jointly sponsored by the Hoover Institution and the Cantor Arts Center at Stanford and opening at both venues on October 18, 2017. Several class sessions will be held at the Hoover Institution, where students will be invited to examine archival documents, rare books and periodicals, and the visual arts, including propaganda posters, photographs, motion picture film, and paintings in the collections of the Hoover Institution Library & Archives. One class session will be held at the Cantor Arts Center. The course is open to undergraduate and graduate students.

**REES 327. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.**

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.

Same as: HISTORY 227D, HISTORY 327D, REES 227

**REES 330. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries. 4-5 Units.**

The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.

Same as: REES 130

**REES 335A. Animism and Alter-Native Modernities. 5 Units.**

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour). Same as: ANTHRO 335A, FRENCH 335A

**REES 340A. Post-secular Humanities: Religion and Spirituality in the Contemporary World. 5 Units.**

The term *postsecularism* refers to various theories and approaches regarding the revival of religion in the present, as well as current reevaluations of the relationship between faith and reason in knowledge building. When thinking about a postsecular humanities, the course would follow scholars that are usually associated with this trend (like Agamben, Badiou, Derrida, Habermas), on the one hand, and discuss Braidotti's ideas of a new vitalism, Chakrabarty's postcolonial postsecularism, and Harvey's new animism, on the other. The course will examine the way interactions and collisions among various worldviews can provoke the rethinking of key ideas of our times: what it means to be secular, religious, a citizen, a hybrid, an indigenous, a non-human. Same as: ANTHRO 340A, FRENCH 341A

**REES 35. Films of Central Asia. 1-2 Unit.**

Films with English subtitles from Tajikistan, Uzbekistan, Kazakhstan, Kyrgyzstan, and Turkmenistan. May be repeated once for credit. (AU).

**REES 371B. New Methodologies in the Humanities and Social Sciences. 3-5 Units.**

The course will discuss how social virtues are converted into methods of research (hope, friendship, sincerity, trust, utopia), and how they affect processes of knowledge building within the humanities and social sciences in terms of revival of futurity. The concepts will be critically examined in their positive as well as negative potential for practicing prefigurative politics the creation of desirable modes of social relationships of conviviality and co-existence in the world. Same as: ANTHRO 371B, DLCL 371

**REES 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

**REES 409. Iconoclasm. 5 Units.**

By the seventh century three large political entities formed in the Mediterranean the Umayyads, the Carolingians, and the Byzantines each competed for legitimacy; all three emerged from the ashes of Late Antique culture, yet each tried to carve out an identity out of this common foundation. In this parting of the ways, the three empires took among others the issue of what constitutes an image and what role it plays in devotion. Eik'n, imago, ura became the basis on which to built differences and accuse the other political players of idolatry. This course explores medieval image theory, especially the phenomena of iconoclasm, iconophobia, and aniconism. The discussions focus on monuments in the Mediterranean as well as objects in the Cantor collection and facsimiles of manuscripts at the Bowes Art Library.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, CLASSICS 258

**REES 54A. Central Asia Through Films: A Weekly 3-Hour Seminar. 3-5 Units.**

Through films this course explores major issues of contemporary peoples of Central Asia while learning fundamental concepts in cultural anthropology. In this seminar we will consider a wide range of examples, including first of all the new feature films, which will be used as a window into the modern reality and therefore could be served in a certain sense as anthropological fieldwork data. Films are prearranged by the instructor according to certain thematic subjects for in-class discussions.

Same as: ANTHRO 54A

**REES 801. TGR Project. 0 Units.****REES 85B. Jews in the Contemporary World: Faith and Ethnicity, Visibility and Vulnerability. 3 Units.**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life – all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 85B, HISTORY 85B, JEWISHST 85B

**Sci Comput & Comput'l Math (SCCM)****SCCM 398. Curricular Practical Training. 1 Unit.**

Provides students with on-the-job training under the guidance of experienced, on-site supervisors. Students must register the quarter after their training. Students receive credit and a grade after submitting a concise report detailing work activities, problems worked on, and key results. Prerequisite: written consent of adviser. (Staff).

**SCCM 499. Advanced Reading and Research. 1-15 Unit.**

Prerequisites: majoring in SC/CM; consent of adviser. (Staff).

## Science, Technology, & Society (STS)

### STS 1. The Public Life of Science and Technology. 4 Units.

The course focuses on key social, cultural, and values issues raised by contemporary scientific and technological developments through the STS interdisciplinary lens by developing and applying skills in three areas: (a) The historical analysis of contemporary global matters (e.g., spread of technologies; climate change response); (b) The bioethical reasoning around health issues (e.g., disease management; privacy rights); and (c) The sociological study of knowledge (e.g., intellectual property, science publishing). A discussion section is required and will be assigned the first week of class.

### STS 103Q. Reading and Writing Poetry about Science. 4 Units.

Preference to sophomores. Students will study recent poetry inspired by the phenomena and history of the sciences in order to write such poems themselves. These poems bring sensuous human experience to bear on biology, ecology, astronomy, physics, earth science, and medicine, as well as on technological advances and calamities. Poets such as Linda Bierds, Mark Doty, Albert Goldbarth, Sarah Lindsay, W.S. Merwin, Adrienne Rich, Pattiann Rogers, Tracy K. Smith, Arthur Sze, and C. K. Williams. Grounding in poetics, research in individually chosen areas of science, weekly analytical and creative writing. Fulfills the Creative Expression requirement. Enrollment limited to 12.

### STS 123. Making of a Nuclear World: History, Politics, and Culture. 4 Units.

Nuclear technology has shaped our world through its various applications (e.g., weapons, energy production, medicine) and accidents and disasters (e.g., Chernobyl, Three Mile Island, Fukushima). This course will examine the development of nuclear technology and its consequences to politics and culture at the global, national, regional and local levels from interdisciplinary perspectives. Some of the key questions addressed are: How did different countries and communities experience and respond to the 1945 bombings of Hiroshima and Nagasaki? How did such experiences affect the later development of the technology in different national contexts? How have nuclear tests and disasters change the ways in which risks are understood and managed globally and locally? What kinds of political activism, international arrangements, and cultural tropes and imageries emerged in response to nuclear technology? We explore these questions through key works and recent studies in history, anthropology, sociology, and science and technology studies, as well as through films and literature.

### STS 131. Science, Technology, and Environmental Justice. 4 Units.

The Bay Area is renowned for its technological innovations and progressive politics, including environmental justice activism. This course explores the multifaceted intersections of science, technology, and environmental issues, in the Bay Area and beyond. Throughout, students investigate the politics of place, with an eye to inequalities of race, class, gender, generation, and citizenship. Topics include: histories of environmentalism; socio-technological systems; urban and regional planning; public health and biomedicine; food systems; climate change; innovation ecosystems; undone science.

### STS 136. Anthropological Inquiries: Cold War, Nuclear Testing, Energy, and Human Rights. 4 Units.

The atomic age has remade communities, public cultures, and the consciousness of individuals all across the globe. What are the political, social, cultural, and scientific legacies of nuclear testing and disasters? Think: Hiroshima, Nagasaki, Chernobyl, Fukushima and Soviet, French, and American nuclear weapons testing. But also think: nuclear energy production as a *“forward thinking”* solution to carbon emissions. Indeed, the military and peaceful use of the atom is a transnational phenomenon with local manifestations and consequences, but what are the social implications of the nuclear age? How do scientists and institutions attempt to manage and control risk? This class explores these questions by studying the aftermath of the nuclear age through full-length ethnographies, journal articles, and film. Each week we will investigate the contested nature of this topic through a diversity of perspectives, past and present. This is a survey course, designed for advanced placement high school, undergraduate, and graduate students.

### STS 140. Science, Technology and Politics. 5 Units.

This course will critically interrogate the relationship between science and technology and politics. Politics plays a significant role in the production of scientific knowledge and technological artifacts. Science and technology in turn constitute crucial elements of politics and governance in modern democracy. This course will explore these interactions through (1) key theoretical texts in STS and (2) case studies of such issues as climate change, race and science, urban planning, elections and technology, and information technology in social movements. Preference to juniors and seniors. First class attendance mandatory. Enrollment limited to 16.

### STS 151. The Future of Information. 4 Units.

As information has a fascinating history (see HISTORY 5A), so it possesses a promising if concerning future. Through lecture, demonstration, and in-class web-work, this course will provide students with advanced strategies in (a) identifying sources and tools for advancing the quest for information; (b) assessing elements of trust, authority, and chicanery in the provision of information; (c) recognizing the economic and legal structures shaping information sources, services, and rights; and (d) discovering who is behind what information. With a focus on the info-worlds of journalism, learning, governance, students will acquire and practice the forensic skills and web savvy of fact-checkers and investigative reporters, activists and scholars. Here's a class set to determine the future course of information.

Same as: EDUC 151

### STS 160Q. Technology in Contemporary Society. 4 Units.

Preference to sophomores. Introduction to the STS field. The natures of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12.

### STS 165N. Cars: Past, Present, and Future. 3 Units.

(Formerly COMM 165N.) Preference to freshmen. Focus is on the past, present and future of the automobile, bridging the humanities, social sciences, design, and engineering. Focus on the human experiences of designing, making, driving, being driven, living with, and dreaming of the automobile. A different theme featured each week in discussion around a talk and supported by key readings and media. Course is informed by history, archaeology, ethnography, human-technology interaction, mechanical engineering, and cognitive science.

**STS 166. Knowledge and Information Infrastructures. 3-4 Units.**

This course introduces historical, theoretical, and comparative perspectives on knowledge and information systems from the medieval world to the present. Cases include libraries, meteorology, climate science, the Internet, the World Wide Web, and social science data systems. It theorizes how infrastructures form, how they change, and how they shape (and are shaped by) social systems. The course ends with challenges to modern knowledge infrastructures, such as crowdsourcing, citizen science, and alternative and bogus knowledge. Same as: HISTORY 242D

**STS 181. Techno-metabolism: technology and society in the Anthropocene. 3-5 Units.**

The technosphere metabolizes energy, materials, and information to feed human consumption. It transforms not only fossil fuels, but also solar energy, through processes such as photosynthesis (agriculture), wind, and hydroelectric power. The technosphere also metabolizes information, ingesting some kinds of data as inputs and producing other data as outputs. Techno-metabolism's waste products-greenhouse gases, microplastics, nuclear waste, etc. - are transforming both the biosphere and the geosphere, with radically different effects on disparate peoples and places. Scientists, historians, and others have proposed new ways to conceptualize techno-metabolism in order to reduce energy requirements and material waste. Meanwhile, "data exhaust" - the "waste" data generated by individual activity, from web searches to Facebook and Instagram - is increasingly "recycled" to detect patterns, trends, and individual preferences. Can data exhaust be harnessed to tame the technosphere's destructive effects? Course assignments include readings and group projects that creatively visualize the interplay of energy, materials and information in the radical inequality of the technosphere.

**STS 190. Issues in Technology and the Environment. 4 Units.**

Humans have long shaped and reshaped the natural world with technologies. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. This course will examine humanity's varied relationship with the environment, with a focus on the role of technology. Topics include: industrialization, modernism, nuclear technology, and biotechnology. Students will explore theoretical and methodological approaches in STS and conduct original research that addresses this human-nature-technology nexus. Enrollment limited to juniors and seniors, or with consent of instructor. First week attendance mandatory.

**STS 191. Introduction to Research in STS. 4 Units.**

This seminar introduces key analytical approaches and methodologies in STS, as well as basic tools for conducting original research in STS. Students survey a series of influential empirical studies; identify productive questions of their own interest; and explore how to pursue them through strong research design. Research proposal as final assignment. Preference to STS juniors and those seeking Interdisciplinary Honors in STS; others require consent of instructor. The final proposal can serve as an honors prospectus for students who seek to participate in the STS honors program.

**STS 199. Independent Study. 1-5 Unit.**

Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. Instructor consent required. Please contact the department for a permission number.

**STS 199A. Curricular Practical Training. 1 Unit.**

Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by the STS Program Director. At the end of the quarter, a one-page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to declared STS majors only. Course may be repeated twice. Instructor consent required. Please contact the department for a permission number.

**STS 199J. Editing a Science Technology and Society Journal. 1-2 Unit.**

The Science Technology and Society (STS) Program has a student journal, *Intersect*, that has been publishing STS student papers for a number of years. This course involves learning about how to serve as an editor of a peer-reviewed journal, while serving as one of the listed editors of *Intersect*. Entirely operated online, the journal uses a work-flow management to help with the submission process, peer-review, editing, and publication. Student editors learn by being involved in the publishing process, from soliciting manuscripts to publishing the journal's annual issue, while working in consultation with the instructor. Students will also learn about current practices and institutional frameworks around open access and digital publishing.

**STS 200A. Food and Society: Politics, Culture and Technology. 5 Units.**

This course will examine how politics, culture, and technology intersect in our food practices. Through a survey of academic, journalistic, and artistic works on food and eating, the course will explore a set of key analytical frameworks and conceptual tools in STS, such as the politics of technology, classification and identity, and nature/culture boundaries. The topics covered include: the industrialization of agriculture; technology and the modes of eating (e.g., the rise of restaurants); food taboos; globalization and local foodways; food and environmentalism; and new technologies in production (e.g., genetically modified food). Through food as a window, the course intends to achieve two broad intellectual goals. First, students will explore various theoretical and methodological approaches in STS. In particular, they will pay particular attention to the ways in which politics, culture, and technology intersect in food practices. Second, student will develop a set of basic skills and tools for their own critical thinking and empirical research, and design and conduct independent research on a topic related to food. First class attendance mandatory. STS majors must have Senior status to enroll in this Senior Capstone course.

**STS 200D. Predictive Technologies of Text. 5 Units.**

This course will examine conventions and patterns in the history of recorded human communication to consider how future technologies of text (methods of recording, modes of information exchange, devices for reading text) might develop. All forms of communication from the earliest times to today belong to discrete, discernible systems, whether that's writing, or representational (art, music, binary code) or paralinguistic (gesture, radio-waves, the stars) and all, it might be argued, follow similar biographies that we'll describe, authenticate, and model predictively. Same as: ENGLISH 184G

**STS 200E. Technology, Nature, and Environmentalism. 5 Units.**

Humans have long shaped and reshaped the natural world with technologies. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. Humanity's relationships with the environment have changed over time and differed across societies. In this course, students (1) explore diverse ways in which people in different historical and cultural settings have conceptualized nature and their relationships with it, with a focus on the role of technology; and (2) learn the basics of STS research and conduct an original study that addresses this human-nature-technology nexus. First class attendance mandatory. STS majors must have senior status to enroll in this senior capstone course.

**STS 200F. Sociology of Innovation and Invention. 5 Units.**

This course examines the social, cultural, and economic factors that foster novelty. We will study a wide array of historical contexts, from the Renaissance to the present day, in which clusters of related innovations transformed the way things are done. We ask when do such innovations cascade out and produce social inventions that, for good and bad, create profound changes in how things are done, leading to new forms of organizations and new categories of people. Seminar/lecture format, reading intensive, final term paper. Prerequisite: admission to the course is restricted to declared STS seniors and is by application only. Email Emily Van Poetsch (emilyvp@stanford.edu) for an application. Applications must be submitted by 5pm on November 1st.

**STS 200H. Ethics, Science, & Technology. 4 Units.**

Critical analysis of ethical issues raised by recent or emerging advances in science and engineering. Issues: privacy, intellectual property, design equity, the public interest, ethical responsibilities of technical practitioners, research ethics, and freedom of inquiry. Advances from fields such as IT, biotechnology, nanotechnology, neurotechnology, construction technology, and transport technology. Seminar limited to 20 senior STS majors. Prerequisite: a course in ethics or permission of the instructor.

**STS 200K. Sciences of Learning. 4 Units.**

Understanding the process of learning has enticed and eluded scientists for generations. Abetted by the rise of massive open online courses (MOOCs), learning has attracted new cadres of researchers and stars from scientists in adjacent fields, as well as new forms of financial support and visibility. This seminar investigates the recent dynamics of learning science as a case study in the politics of knowledge. Student projects will enable focused empirical inquiry.

**STS 200L. Critique of Technology. 3-5 Units.**

Informed citizens living in today's world, and especially in Silicon Valley, should be able to formulate their own articulate positions about the role of technology in culture. The course gives students the tools to do so. Against the trend towards the thoughtless celebration of all things technological, we will engage in critique in the two senses of the term: as careful study of the cultural implications of technology and as balanced, argumentative criticism. Can technology make life more meaningful, society more fair, people smarter, and the world smaller? We will pay special attention to the insights that literature, and other arts, can offer for reframing digital culture. Selections by Latin American fiction writers (Cortázar, Zambra), philosophers and thinkers (Heidegger and Beller), as well as recent popular works of social commentary, such as *You are not a Gadget*, *The Shallows*, *24/7*, and *Present Shock*. Taught in English.

**STS 200M. Tobacco and Health in World History. 4-5 Units.**

Cigarettes are the world's leading cause of death—but how did we come into this world, where 6 trillion cigarettes are smoked every year? Here we explore the political, cultural, and technological origins of the cigarette and cigarette epidemic, using the tobacco industry's 80 million pages of secret documents. Topics include the history of cigarette advertising and cigarette design, the role of the tobacco industry in fomenting climate change denial, and questions raised by the testimony of experts in court.

**STS 200N. Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures. 4 Units.**

From texts to techne, from artifacts to discourses on science and technology, this course is an examination of how Black people in this society have engaged with the mutually constitutive relationships that endure between humans and technologies. We will focus on these engagements in vernacular cultural spaces, from storytelling traditions to music and move to ways academic and aesthetic movements have imagined these relationships. Finally, we will consider the implications for work with technologies in both school and community contexts for work in the pursuit of social and racial justice.

Same as: AFRICAAM 200N

**STS 299. Advanced Individual Work. 1-5 Unit.**

For students in the STS Honors program. Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. May be repeated for credit.

## Slavic Languages & Literatures (SLAVIC)

**SLAVIC 118N. Other People's Words: Folklore and Literature. 4 Units.**

What happens when you collect and use other people's words? This class considers folklore and literature based on it, focusing on the theme of objects that come to life and threaten their makers or owners (including Russian fairy tales and Nikolai Gogol's stories, the Golem legend and Michael Chabon's *Amazing Adventures of Kavalier and Clay*, and Ovid's and Shaw's *Pygmalion*). We read essays by Jacob Grimm, Sigmund Freud, Roman Jakobson, and others, to understand what folklore can mean and how the oral and the written can interact. Students collect living folklore from a group of their choosing. This course fulfills the second-level Writing and Rhetoric Requirement (Write-2) and emphasizes oral and multimedia presentation. Prerequisite: PWR 1. Same as: JEWISHST 148N

**SLAVIC 120. Hacking Russia: Technological Dreams and Nightmares of Russian Culture. 3-5 Units.**

At a time being termed the Second Cold War, it is of key importance to examine Russian cultural and political phenomena and their international repercussions. In particular, this course will explore the role of technology in constructing the social and ideological fabric, as well as the material reality, of Soviet and Russian society. From the early Soviet period, when technological progress was linked to humanistic utopia, through dystopian critiques of a totalitarian machine of conformity and constraint, we proceed along the assembly line of communist production, avant-garde and constructivist artistic utopia, socialist realism, the space race, and information technology, using examples from Russian literature, film, art, visual arts, performance, and current events. With the media's concern for fake news and Russian hacking today, it is our course's goal to "hack Russia": to understand the politics and technology shaping Russia, and the creative responses that have made its society a site of both dreamlike promise and nightmarish threat, through its history and today. NOTE: This course must be taken for a Letter Grade to be eligible for WAYS credit. "Counts towards Europe and Russia specialization (International Relations)". Same as: SLAVIC 220

**SLAVIC 129. Russian Versification: History and Theory. 1-5 Unit.**

A survey of metric forms, rhyming principles and stanzaic patterns in the Russian poetry of the 18th - 21st centuries. Taught in Russian. Prerequisite: Two years of Russian. NOTE: To be eligible for WAYS credit, you must take SLAVIC 129 for a minimum of 3 Units and a Letter Grade. Same as: SLAVIC 329

**SLAVIC 145. Survey of Russian Literature: The Age of Experiment. 1-5 Unit.**

This course discusses the transition from predominantly poetic to predominantly prosaic creativity in the Russian literature of the first half of the 19th century Russian literature and the birth of the great Russian novel. It covers three major Russian writers -- Alexander Pushkin, Mikhail Lermontov and Nikolai Gogol -- and examines the changes in the Russian literary scene affected by their work. An emphasis is placed on close reading of literary texts and analysis of literary techniques employed in them. Taught in English. NOTE: To be eligible for WAYS credit, you must take SLAVIC 145 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 345

**SLAVIC 146. The Great Russian Novel: Tolstoy and Dostoevsky. 1-5 Unit.**

Connections of philosophy and science to literary form in War and Peace, Brothers Karamazov, Chekhov stories: alternative shapes of time, perception, significant action. Taught in English. Note: To be eligible for WAYS/WIM credit, you must take SLAVIC 146 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 346

**SLAVIC 148. Slavic Literature and Culture since the Death of Stalin. 1-5 Unit.**

The course offers a survey of Soviet and post-Soviet literary texts and films created by Russian, Ukrainian and Belarusian artists and marginalized or repressed by the Soviet regime. The first part of the course will focus on the topics of opposition and dissent, generational conflict, modernization, Soviet everyday life, gender, citizenship and national identity, state-published and samizdat literature, "village" and "cosmopolitan" culture, etc. The second part of it will be devoted to the postmodernist aesthetics and ideology in the dismantlement of totalitarian society, as well in the process of shaping post-Soviet identities. The reading materials range from the fictional, poetic, and publicistic works written by Noble-prize (Solzhenitsyn, Brodsky, Alexievich) and other major writers of the period to the drama, film, and popular culture. nNOTE: To be eligible for WAYS credit, you must take SLAVIC 148 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 348

**SLAVIC 155. St. Petersburg: Imagining a City, Building a City. 1-2 Unit.**

St. Petersburg, the world's most beautiful city, was designed to display an 18th-century autocrat's power and to foster ties between Russia and the West - on the tsar's terms. It went through devastating floods and a deadly siege; it birthed the "Petersburg myth," poems and prose that explore the force of the state and the individual's ability to resist. This class addresses the struggle between the authorities and the inhabitants; the treacherous natural environment; the city as a node in national and international networks of communication; the development of urban transportation networks; and the supply of goods. NOTE: *This course is required of students attending the overseas seminar to St. Petersburg in September 2018.* Class times to be determined upon the availability of all enrolled students. Please contact instructor(s) via email if you have any questions.

Same as: URBANST 156

**SLAVIC 156. Vladimir Nabokov: Displacement and the Liberated Eye. 1-5 Unit.**

How did the triumphant author of "the great American novel" *Lolita* evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels *The Luzhin Defense*, *Invitation to a Beheading*, *Lolita*, *Lolita* the film, and *Pale Fire*, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces *Lolita* and *Pale Fire*. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.

Same as: COMPLIT 115, COMPLIT 315, SLAVIC 356

**SLAVIC 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81

**SLAVIC 188. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 1-5 Unit.**

Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian. NOTE: To be eligible for WAYS credit, you must take SLAVIC 188 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 388

**SLAVIC 195. Russian and East European Theater. 1-5 Unit.**

Evolution of modernist Russian/Eur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English.

Same as: SLAVIC 395

**SLAVIC 198. Writing Between Languages: The Case of Eastern European Jewish Literature. 1-5 Unit.**

Eastern European Jews spoke and read Hebrew, Yiddish, and their territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well. \*\*\*This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit\*\*\*.

Same as: JEWISHST 148, JEWISHST 348, SLAVIC 398

**SLAVIC 199. Individual Work for Undergraduates. 1-5 Unit.**

Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

**SLAVIC 220. Hacking Russia: Technological Dreams and Nightmares of Russian Culture. 3-5 Units.**

At a time being termed the Second Cold War, it is of key importance to examine Russian cultural and political phenomena and their international repercussions. In particular, this course will explore the role of technology in constructing the social and ideological fabric, as well as the material reality, of Soviet and Russian society. From the early Soviet period, when technological progress was linked to humanistic utopia, through dystopian critiques of a totalitarian machine of conformity and constraint, we proceed along the assembly line of communist production, avant-garde and constructivist artistic utopia, socialist realism, the space race, and information technology, using examples from Russian literature, film, art, visual arts, performance, and current events. With the media's concern for fake news and Russian hacking today, it is our course's goal to "hack Russia": to understand the politics and technology shaping Russia, and the creative responses that have made its society a site of both dreamlike promise and nightmarish threat, through its history and today. n NOTE: This course must be taken for a Letter Grade to be eligible for WAYS credit. "Counts towards Europe and Russia specialization (International Relations)".

Same as: SLAVIC 120

**SLAVIC 226. Bakhtin and his Legacy. 3-5 Units.**

"Quests for my own word are in fact quests for a word that is not my own, a word that is more than myself," writes Mikhail Bakhtin towards the end of his life. It was this ceaseless pursuit of another word that allowed Bakhtin, one of the most distinguished literary critics of the twentieth century, to author several influential literary theory concepts, many of which deal with the ideas of multiplicity, diversity and unfinalizability. The seminar explores these core concepts through close reading of key texts in English and investigates their reverberations in the writings of other thinkers such as Kristeva, de Man and Derrida.

**SLAVIC 230. 18th Century Russian Literature. 2-4 Units.**

For graduate students and upper-level undergraduates. Russian literature of the long 18th century, from the late 1600s to 1800. Readings in the Baroque, Neoclassicism and Sentimentalism. Major works are examined in their literary and historical context and also in relation to the principal subcultures of the period, including the court, academy, church and Old Believer diaspora. NOTE: This course must be taken for a minimum of 3 units and a letter grade to be eligible for WAYS credit.

**SLAVIC 231. Tarkovsky. 3-5 Units.**

The relatively slim body of work produced by the great Russian director Andrei Tarkovsky helped redefine the possibilities of the art of cinema. Older and younger generations of directors continue to be inspired by his trademark long shot, unconventional narrative techniques, reverence for landscape and nature, and by general spatio-temporal discontinuity. The course provides a systematic examination of the director's complete oeuvre (seven feature films and his works for radio and opera) along with his main theoretical treatise *Sculpting in Time*. NOTE: To be eligible for WAYS credit, you must take SLAVIC 231 for a minimum of 3 Units and a Letter Grade.

**SLAVIC 261. Reading Leo Tolstoy in the Digital Age. 3-5 Units.**

The novelist and philosopher Leo Tolstoy pioneered ideas of multi-perspectivism, relativism, "contagious" art, and literary montage. How can we analyze the link between his prose fiction and modernist art by means of digital humanities methods? This course is arranged as a series of digital labs and seminar discussions and utilizes a project-based learning approach, with individual and collaborative projects. We create character networks in Gephi, side-by-side visualization of different versions of Tolstoy's texts in Beyond Compare, and text mining in RStudio. Taught in English. Note: To be eligible for WAYS credit, you must take SLAVIC 261 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 361

**SLAVIC 300B. Research Tools and Professionalization Workshop. 1 Unit.**

This course introduces graduate students in Slavic Studies to library, archival, and web resources for research, grant opportunities, publication strategies, and professional timelines. Open to PhD students in the Slavic Department and other departments and to MA students in CREEES.

NOTE: Those wishing to enroll, please contact Prof. Safran to obtain the course's meeting time and location.

**SLAVIC 325. Readings in Russian Realism. 3-4 Units.**

For graduate students or upper-level undergraduates. What did Realism mean for late imperial Russian writers? What has it meant for twentieth-century literary theory? As we seek to answer these questions, we read Tolstoy, Dostoevsky, Turgenev, and Chekhov, alongside their brilliant but less often taught contemporaries such as Goncharov, Saltykov-Shchedrin, Leskov, Garshin, Korolenko, Gorky, Andreev, and Bunin. Taught in English; readings in Russian. Prerequisite: Three years of Russian.

**SLAVIC 329. Russian Versification: History and Theory. 1-5 Unit.**

A survey of metric forms, rhyming principles and stanzaic patterns in the Russian poetry of the 18th - 21st centuries. Taught in Russian. Prerequisite: Two years of Russian. NOTE: To be eligible for WAYS credit, you must take SLAVIC 129 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 129

**SLAVIC 340. Russia's Castaway Classic: Andrei Platonov. 3-5 Units.**

"The power of devastation [Platonov's texts] inflict upon their subject matter exceeds by far any demands of social criticism and should be measured in units that have very little to do with literature as such," wrote Joseph Brodsky. Explores key texts of Andrei Platonov, who is frequently considered the greatest Russian prose writer of the twentieth century, and covers major critical approaches to his "devastating" oeuvre. The texts will be read in Russian, discussion in English.

**SLAVIC 345. Survey of Russian Literature: The Age of Experiment. 1-5 Unit.**

This course discusses the transition from predominantly poetic to predominantly prosaic creativity in the Russian literature of the first half of the 19th century Russian literature and the birth of the great Russian novel. It covers three major Russian writers -- Alexander Pushkin, Mikhail Lermontov and Nikolai Gogol -- and examines the changes in the Russian literary scene affected by their work. An emphasis is placed on close reading of literary texts and analysis of literary techniques employed in them. Taught in English. NOTE: To be eligible for WAYS credit, you must take SLAVIC 145 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 145

**SLAVIC 346. The Great Russian Novel: Tolstoy and Dostoevsky. 1-5 Unit.**

Connections of philosophy and science to literary form in *War and Peace*, *Brothers Karamazov*, Chekhov stories: alternative shapes of time, perception, significant action. Taught in English. Note: To be eligible for WAYS/WIM credit, you must take SLAVIC 146 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 146

**SLAVIC 347. Modern Russian Literature and Culture: The Age of War and Revolution. 1-5 Unit.**

The Age of Revolution: Readings in Russian Modernist Prose of the 1920-30s: What makes Russian modernist prose special? Or is there anything special about Russian modernist prose? This course aims to answer these questions through close readings of works by Babel, Mandelstam, Zoshchenko, Platonov, Olesha and Bulgakov. Aesthetic issues such as hero, plot, and narrative devices will be addressed with the aid of contemporaneous literary theory (Shklovsky, Tynianov, Eikhenbaum, Bakhtin). Novels and theory will be read in English. (This course must be taken for a letter grade and a minimum of 3 units to satisfy a WAYS requirement.)

**SLAVIC 348. Slavic Literature and Culture since the Death of Stalin. 1-5 Unit.**

The course offers a survey of Soviet and post-Soviet literary texts and films created by Russian, Ukrainian and Belarusian artists and marginalized or repressed by the Soviet regime. The first part of the course will focus on the topics of opposition and dissent, generational conflict, modernization, Soviet everyday life, gender, citizenship and national identity, state-published and samizdat literature, "village" and "cosmopolitan" culture, etc. The second part of it will be devoted to the postmodernist aesthetics and ideology in the dismantlement of totalitarian society, as well in the process of shaping post-Soviet identities. The reading materials range from the fictional, poetic, and publicistic works written by Noble-prize (Solzhenitsyn, Brodsky, Alexievich) and other major writers of the period to the drama, film, and popular culture. NOTE: To be eligible for WAYS credit, you must take SLAVIC 148 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 148

**SLAVIC 356. Vladimir Nabokov: Displacement and the Liberated Eye. 1-5 Unit.**

How did the triumphant author of "the great American novel" <em>Lolita</em> evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels <em>The Luzhin Defense, Invitation to a Beheading, Lolita, Lolita</em> the film, and <em>Pale Fire</em>, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces <em>Lolita</em> and <em>Pale Fire</em>. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.

Same as: COMPLIT 115, COMPLIT 315, SLAVIC 156

**SLAVIC 36. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, RELIGST 21X

**SLAVIC 361. Reading Leo Tolstoy in the Digital Age. 3-5 Units.**

The novelist and philosopher Leo Tolstoy pioneered ideas of multi-perspectivism, relativism, "contagious" art, and literary montage. How can we analyze the link between his prose fiction and modernist art by means of digital humanities methods? This course is arranged as a series of digital labs and seminar discussions and utilizes a project-based learning approach, with individual and collaborative projects. We create character networks in Gephi, side-by-side visualization of different versions of Tolstoy's texts in Beyond Compare, and text mining in RStudio. Taught in English. Note: To be eligible for WAYS credit, you must take SLAVIC 261 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 261

**SLAVIC 370. Pushkin. 2 Units.**

Pushkin's poems, prose, and drafts in dialogue with contemporaries and cultural milieu. Emphasis on innovation and controversy in genre, lyrical form and personal idiom, shaping a public discourse. Taught in English.

**SLAVIC 388. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 1-5 Unit.**

Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian. NOTE: To be eligible for WAYS credit, you must take SLAVIC 188 for a minimum of 3 Units and a Letter Grade.

Same as: SLAVIC 188

**SLAVIC 395. Russian and East European Theater. 1-5 Unit.**

Evolution of modernist Russian/Eur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English.

Same as: SLAVIC 195

**SLAVIC 398. Writing Between Languages: The Case of Eastern European Jewish Literature. 1-5 Unit.**

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well. \*\*\*This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit\*\*\*.

Same as: JEWISHST 148, JEWISHST 348, SLAVIC 198

**SLAVIC 399. INDIVIDUAL WORK. 1-15 Unit.**

Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

**SLAVIC 680. Curricular Practical Training. 1-3 Unit.**

CPT course required for international students completing degree.

Prerequisite: Slavic Languages and Literatures Ph.D. candidate.

**SLAVIC 77Q. Russia's Weird Classic: Nikolai Gogol. 3-4 Units.**

Preference to sophomores. An investigation of the works and life of Nikolai Gogol, the most eccentric of Russian authors and the founder of what is dubbed Fantastic Realism. Our investigation will be based on close reading of works written in various genres and created in various stages of Gogol's literary career. Taught in English.

**SLAVIC 801. TGR PROJECT. 0 Units.****SLAVIC 802. TGR Dissertation. 0 Units.**

## Structured Liberal Education (SLE)

**SLE 199. Teaching SLE. 1 Unit.****SLE 299. Structured Liberal Education Capstone Seminar. 1 Unit.**

Senior capstone project for students who were enrolled in SLE their freshman year.

**SLE 81. Public Service Program. 1 Unit.**

This one-unit course is for participation in quarter-long service programs set up by the SLE program and conducted in consultation with the Haas Public Service Center. Available programs will vary by quarter. May be repeat for credit.

**SLE 91. Structured Liberal Education. 8 Units.**

Focusing on great works of philosophy, religion, literature, painting, and film drawn largely from the Western tradition, the SLE curriculum places particular emphasis on artists and intellectuals who brought new ways of thinking and new ways of creating into the world, often overthrowing prior traditions in the process. These are the works that redefined beauty, challenged the authority of conventional wisdom, raised questions of continuing importance to us today, and for good or ill created the world we still live in. Texts may include: Homer, Sappho, Greek tragedy, Plato, Aristotle, Zhuangzi, Confucius, the Heart Sutra, Hebrew Bible, New Testament, and the Aeneid.

**SLE 92. Structured Liberal Education. 8 Units.**

Focusing on great works of philosophy, religion, literature, painting, and film drawn largely from the Western tradition, the SLE curriculum places particular emphasis on artists and intellectuals who brought new ways of thinking and new ways of creating into the world, often overthrowing prior traditions in the process. These are the works that redefined beauty, challenged the authority of conventional wisdom, raised questions of continuing importance to us today, and for good or ill created the world we still live in. Texts may include: Augustine, the Qur'an, Dante, Rumi, Machiavelli, Montaigne, Shakespeare, Cervantes, Las Casas, Descartes, Locke, Mill, Schleiermacher, and Flaubert.

**SLE 93. Structured Liberal Education. 8 Units.**

Focusing on great works of philosophy, religion, literature, painting, and film drawn largely from the Western tradition, the SLE curriculum places particular emphasis on artists and intellectuals who brought new ways of thinking and new ways of creating into the world, often overthrowing prior traditions in the process. These are the works that redefined beauty, challenged the authority of conventional wisdom, raised questions of continuing importance to us today, and created the world we still live in. Texts may include: Marx, Nietzsche, Freud, Du Bois, Eliot, Woolf, Kafka, Brecht, Vertov, Beauvoir, Sartre, Fanon, Gandhi, and Morrison.

**SLE 98. Directed Reading. 1 Unit.**

Directed reading for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor.

**SLE 99. Directed Reading. 1 Unit.**

Directed reading for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor."

## Surgery (SURG)

**SURG 100. Virtual and Real: Clinical Anatomy and Sports Injuries. 3 Units.**

This undergraduate course is designed to teach human anatomy through radiographs, CT scans, MRIs and cadaver material with the emphasis on the understanding of common clinical conditions and sports injuries. To aid students in developing their image interpretive skills, additional resources such as virtual interactive scans, the 3D anatomy table, and interactive digital applications will be utilized. This course divides the anatomy of the body into five areas; each area will be presented in a two-week block. In the first week of each block, students will develop an understanding of human anatomy through the identification of relevant structures on prosecutions (cadaver material), and in the second week, students will utilize this knowledge in the interpretation of radiographs, CT scans and MRIs. The anatomy will be taught in relation to common clinical conditions and sports injuries; and, student projects will focus on the understanding of the anatomy and treatment of these conditions and injuries.

**SURG 101. Regional Study of Human Structure. 5 Units.**

Enrollment limited to seniors and graduate students. Comprises two parts, lecture and lab, both of which are required. Lectures in regional anatomy and dissection of the human cadaver; the anatomy of the trunk and limbs through the dissection process, excluding the head and neck.

**SURG 101A. Head and Neck Anatomy. 3 Units.**

Introduces students to human anatomy of the head and neck through a dissection based course. Students use proper anatomical terminology to describe structures and their relationships. Emphasis on typical anatomy as seen in healthy individuals, with some examples of anatomical variation introduced through dissection and clinical cases. Ideal for senior undergraduate students who have completed SURG 101 or equivalent, are familiar with basic anatomy, and have some dissection experience. Prerequisites: Surgery 101 or equivalent.

**SURG 150. Principles and Practice of International Humanitarian Surgery. 4 Units.**

Open to undergraduate students. Focus is on understanding the theory behind medical humanitarianism, the growing role of surgery in international health, and the clinical skills necessary for students to partake in global medical service. Guest speakers include world-renowned physicians and public health workers. Students work in groups to complete a substantial final project on surgical program development. Same as: SURG 250

**SURG 199. Undergraduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**SURG 201. Embryology. 1 Unit.**

The course focuses on the structural development of the human body from embryo to fetus to early post-natal life. Topics include formation of the cardiovascular, respiratory, musculoskeletal, gastrointestinal, reproductive, and renal systems, as well as common clinical conditions which arise from abnormalities of development. Course open to MD and MSPA students only.

**SURG 202B. Practical Applications for Qualitative Data Analysis. 3 Units.**

Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of PEDS 202A.

Same as: PEDS 202B

**SURG 202C. Qualitative Research Methods and Study Design. 2-3 Units.**

In-depth introduction to qualitative research methods and study design. Gain theoretical and practical knowledge necessary to design and implement a qualitative study. Explore qualitative methods through class lectures, foundational readings and hands-on learning. Core topics include: theoretical frameworks, research questions, methodological approaches (i.e. interviews, focus groups, participant observation, photovoice), data collection, sampling, reliability and validity, and IRB protocols. Students enrolled for 2-units participate in journal club-style discussions of literature employing qualitative methods to gain an appreciation for how qualitative projects are conducted, and what settings and research questions are relevant to qualitative inquiry. Students enrolled for 3-units plan and design an independent research project (i.e. Med Scholars, dissertation, honors thesis), receiving extensive support and feedback to further develop individual study designs and data collection instruments. Prerequisite: Consent from instructor for undergraduates.

Same as: PEDS 202C

**SURG 203. Clinical Anatomy. 15 Units.**

Introduction to human structure and function presented from a clinical perspective. Includes clinical scenarios, medical imaging techniques, and interventional procedures to illustrate the underlying anatomy. Course consists of lectures and dissection of the human body in the anatomy laboratory. Surgery 203 presents structures of the thorax, abdomen, pelvis, back, upper and lower limbs, and head & neck. Course opened to MD, MSM, and MSPA students only.

**SURG 204. Introduction to Surgery. 1 Unit.**

This lunch seminar is designed to give preclinical medical students a broad overview of surgical specialties and life as a surgeon. Interactive talks by leading surgeons from the General Surgery, Plastic Surgery, Neurosurgery, Orthopedic Surgery, Head and Neck Surgery, Transplantation Surgery, and Cardiac Surgery departments will highlight the array of operation types performed and diseases and conditions encountered in their disciplines. In addition, each lecturer will provide students with a "road map" as to how to successfully enter each specialty field of surgery. Lunch will be provided.

**SURG 205. Technical Training and Preparation for the Surgical Environment. 1 Unit.**

This course is designed for preclinical medical students interested in acquiring the technical skills and clinical orientation necessary to learn and participate in the surgical environment. Scrub training starts the course to facilitate the learning of sterile technique required prior to participation in the operating room, and students will learn basic surgical techniques (including basic knot tying, suturing, hand-sewn bowel anastomoses, and laparoscopic skills) to enhance their operating room experiences. The class requires one mandatory operative shadowing experience with an attending surgeon outside of normal class hours. The course will introduce students to the field of surgery both in this technical sense, as well as in regards to life as a surgeon, as opportunities for one-on-one surgical faculty membership will be provided. Preference is given to second year students.

**SURG 208. Plastic Surgery Tutorial. 2 Units.**

Diagnosis, theory, and practice of plastic and reconstructive surgery. Limited to two students per faculty member.

**SURG 209. Plastic Surgery. 1-18 Unit.**

Students participate in plastic and reconstructive surgery as functioning members of the clinical team. Students are exposed to operative surgery, emergency and trauma care, evaluation of operative candidates in the outpatient setting, and also attend teaching conferences. Limited to four students. Prerequisite: completion of first year or clinical experience.

**SURG 214. Medical Etymology. 1 Unit.**

A survey of medical etymology and terminology that parallels preclinical medical education. Topics focus on Greek and Latin roots and their appearances in the medical lexicon.

**SURG 230. Obesity in America. 1 Unit.**

Prevalence and effects of the obesity epidemic in America and the growing prevalence of associated comorbidities such as diabetes, hypertension, hyperlipidemia, sleep apnea, and joint problems. Risk factors, multi-disciplinary treatment options, the role of food in society, patients' perspectives, and current research in the field.

**SURG 231. Healthcare in Haiti and other Resource Poor Countries. 1 Unit.**

Originally developed to highlight healthcare in extreme poverty in Haiti, related lectures have been added covering healthcare in resource poor environments with the objective to introduce students to the complexity and unique problems of working in the Third World's healthcare morass.

**SURG 233. Close Encounters, Distance Learning by Telemedicine. 1 Unit.**

Students will attend weekly lectures where they can meet and interact with telemedicine leaders who will deliver a 30-minute lecture followed by a 30-minute question and answer session. Course topics include: Present Landscape of Telemedicine in the XXI Century; Finding what is suitable to evaluate, diagnose and treat via Telemedicine; Challenges and opportunities of Telemedicine; Building a successful Telemedicine program; Telemedicine Business models; Ethics, Law and Telemedicine; Entrepreneurial opportunities in Telemedicine; Education in Telemedicine. All students are welcome regardless of their medical related experience.

**SURG 234. Service Through Surgery: Surgeons with an Impact. 1 Unit.**

Surgeons with an Impact is a weekly seminar course with guest lectures and facilitated workshops with the following objectives: 1) Participants will be able to understand the role of surgeons in addressing health inequities, social justice and poverty 2) Participants will be exposed to the potential of expert surgeons through lectures from diverse professionals 3) Participants will reflect on how addressing inequities can align with their career goals in surgery. Topic covered will include; building diversity in surgery, inequities in pediatric surgery, immigration and surgery, access to colorectal surgery, Medecins Sans Frontieres, surgery and global health, policy advocacy and surgery, LGBTQ advocacy and surgery, inequities and neurosurgery, women in surgery, transplant justice, and race and surgery. Course open to MD and PA students only.

**SURG 236. Seminar in Global Surgery and Anesthesia. 1-2 Unit.**

Providing safe, mutually beneficial, and sustainable surgical services in low-resource settings presents a unique set of considerations. This seminar, formatted as five two-hour sessions, will explore the background rationale for the evolving field of Global Surgery and discuss the unique implications surrounding implementation of global surgical programs. Course format will blend didactic presentation, discussion-based journal clubs, and case-based study. Topics covered will include the burden of surgical disease, human and infrastructure capacity building, outcomes, ethics/equity, economics, innovation/technology, volunteerism, training, safety, and research agenda. Instructors will provide mentorship to participants, helping them to formulate feasible research or potential MedScholar project.

**SURG 241. Portraiture and Facial Anatomy for Artists. 4 Units.**

Focus is on the art of portraiture and underlying structures of the face, fundamental anatomical elements such as the skull and muscles of facial expressions, and the intersections between human anatomy and art. Studio sessions incorporate plastic models, dry bones, cadaveric specimens, and live models. Encourages use of proper anatomical terminology for describing structures and their relationships. Same as: ARTSTUDI 139

**SURG 242. Art and Anatomy Studio. 1 Unit.**

Lectures highlight the intersections and influences between human anatomy and art. Studio sessions provide an opportunity for students to immerse in anatomically inspired studio projects. Drawing, mixed media, and some painting mediums will be used during the studio sessions. Plastic models, dry bones, cadaveric specimens, and live models will be used for the studio sessions. Class time includes art instruction, creation and feedback. May be repeated for credit. Honing individual style is encouraged; both beginning and advanced students are welcome. Previous coursework in anatomy is recommended, but not required.

**SURG 243. Anatomy for Artists. 3 Units.**

Lectures highlight the intersections and influences between human anatomy and art. Studio sessions provide an opportunity for students to immerse in anatomically inspired studio projects. Drawing, mixed media, and some painting mediums will be used during the studio sessions. Plastic models, dry bones, cadaveric specimens, and live models will be used for the studio sessions. Class time includes art instruction, creation and feedback. May be repeated for credit. Honing individual style is encouraged; both beginning and advanced students are welcome. Same as: ARTSTUDI 243

**SURG 250. Principles and Practice of International Humanitarian Surgery. 4 Units.**

Open to undergraduate students. Focus is on understanding the theory behind medical humanitarianism, the growing role of surgery in international health, and the clinical skills necessary for students to partake in global medical service. Guest speakers include world-renowned physicians and public health workers. Students work in groups to complete a substantial final project on surgical program development. Same as: SURG 150

**SURG 251A. Imaging Anatomy. 1 Unit.**

Accompanies existing clinical anatomy course for first year medical students (SURG 203A). Sessions focus on the anatomical region being taught and dissected during the same week in SURG 203A. Students revisit anatomy using a variety of basic and advanced imaging modalities. Emphasis on correlating imaging to dissection, studying anatomical variations, discussing clinical vignettes. Enrollment limited to MD students.

**SURG 251B. Imaging Anatomy (Head & Neck) II. 1 Unit.**

Accompanies existing clinical anatomy course for first year medical students (SURG 203B) concentrating on the head and neck region. Sessions focus on the anatomical region being taught and dissected during the same week in SURG 203B. Students revisit anatomy using a variety of basic and advanced imaging modalities. Emphasis on correlating imaging to dissection, studying anatomical variations, discussing clinical vignettes. Enrollment limited to MD students.

**SURG 252. Bedside Anatomy. 1 Unit.**

Provides an opportunity to revisit anatomy in a clinical context. Using case discussions, clinical vignettes, radiological imaging, and hands-on exercises, students are challenged to apply their knowledge of anatomy to explain common diagnostic maneuvers and interventional procedures performed at the bedside or in the outpatient setting. Emphasis will be on anatomical considerations in successfully performing these procedures and avoiding errors that may arise due to anatomical changes, oddities, or variations.

**SURG 253. Topics in Simulation of Human Physiology & Anatomical Systems. 1 Unit.**

Biweekly interdisciplinary lecture series on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lectures by instructors and guest speakers on topics such as surgical simulation, anatomical & surgical Modeling, neurological Systems, and biomedical models of human movement. Group discussions, team based assignments, and project work. Prerequisite: Medical students, residents or fellows from school of medicine, and computationally oriented students with a strong interest to explore computational and mathematical methods related to the health sciences.

Same as: CME 520

**SURG 254. Operative Anatomy and Techniques. 1 Unit.**

For preclinical students; provides a background in and integrates knowledge of surgical anatomy and therapy. Surgical or operative anatomy differs from gross anatomy in that the area exposed during surgery may be limited, the dissection may require exposing other seemingly unrelated anatomic structures with unique landmarks, and the procedure may require unusual technical facility. Provides an opportunity for students to understand the goals of representative surgical procedures (translating pathophysiology to surgical decision making to actual incision). Students learn surgical skills and perform the dissection of a number of commonly performed operations in the bio-skills laboratory. Emphasizes hands-on participation in surgical procedures in the laboratory and is taught by attending physicians in general, cardiothoracic, vascular, plastic, head and neck, urologic, and orthopedic surgery.

**SURG 255. Quality & Safety in U.S. Healthcare. 3 Units.**

The course will provide an in-depth examination of the quality & patient safety movement in the US healthcare system, the array of quality measurement techniques and issues, and perspectives of quality and safety improvement efforts under the current policy landscape.

Same as: BIOMEDIN 254, HRP 254

**SURG 256. Clinical Anatomy and Surgical Education Series. 2 Units.**

Intended for first-year MD students. Builds on prior experience in the first-year medical curriculum consisting of the required Clinical Anatomy and the elective Operative Anatomy courses. Focuses on case-based didactic sessions for teaching the approach to a variety of surgical cases and their management. Students perform simulated cadaveric surgical procedures using standard operative instruments and techniques based on clinical case presentations and analysis. Covers hand surgery, vascular surgery, minimally invasive surgery, ear surgery and eye surgery specialties.

Same as: CASES

**SURG 257. Clinical Teaching Seminar Series. 1 Unit.**

The Clinical Teaching Seminar Series (CTSS) is a year-long program in medical education, designed to introduce clinical educators to fundamental concepts in education. The seminars are high-yield, relevant, and interactive, providing practical tips for bedside teaching, curriculum development, and education research. The HONORS CERTIFICATE PROGRAM IN MEDICAL EDUCATION is meant to recognize participants with a dedication to medical education, who regularly attend the seminars and complete a scholarly project. The Honors Program is a multi-disciplinary program open to all medical students, residents, fellows, staff, and faculty with an interest in medical education.

**SURG 271. Anatomy of Medical Mysteries. 1 Unit.**

This elective course for medical students explores areas of health and disease that are poorly understood presently. A variety of topics are covered such as placebo effect, techniques of meditation, presence of extra-sensory perception, and near death experiences. Scientific evidence for and against these topics presented and discussed. Current literature is evaluated and reading assignments are included. Pre-requisites: SURG 203A and SURG 203B.

**SURG 281A. Musculoskeletal Disorders. 1 Unit.**

Focuses on in-depth understanding of human musculoskeletal anatomy, biomechanics, and disease processes. Emphasis will be on the dynamic nature of musculoskeletal tissue with its complex biochemistry and cellular activity. Topics include fundamentals of musculoskeletal development, growth, repair and vascularization. In addition, students receive an introduction to musculoskeletal imaging, forensics, pathology, and the clinical principals of fixation and treatment protocols.

**SURG 281B. Musculoskeletal Disorders II. 1 Unit.**

Continuation of in-depth understanding of human musculoskeletal anatomy, biomechanics, and disease processes. Emphasis will be on the dynamic nature of musculoskeletal tissue with its complex biochemistry and cellular activity. Topics include fundamentals of musculoskeletal development, growth, repair and vascularization. In addition, students receive an introduction to musculoskeletal imaging, forensics, pathology, and the clinical principals of fixation and treatment protocols.

**SURG 290. 3D Biomedical Visualization: Techniques, Methods, and Applications. 1 Unit.**

Explores the power of digital anatomy. How 3D anatomical data sets like CT and MRI scans are created from human specimens; how they are processed, analyzed, and rendered. Focus on how digital content is best used for learning anatomy, patient education, and clinical practice.

**SURG 296. Individual Work: Human Anatomy. 1-18 Unit.**

Carried out under the supervision of one or more members of the staff. Prerequisite: consent of instructor.

**SURG 298. Procedure-Based Specialty Capstone Course. 1 Unit.**

Designed for graduating medical students entering a procedure-based internship or residency (e.g. general surgery, surgical sub-specialties, obstetrics-gynecology, anesthesia, and emergency medicine). Prepares students with practical, high-yield clinical and procedural skills. Clinical skills include fielding common calls regarding surgical patients, obtaining informed consent, completing operative dictations, discharging patients, writing prescriptions, running trauma surveys, and interpreting surgically relevant radiology studies. The hands-on portion of the course covers basic open and laparoscopic surgical skills utilizing bench models, laparoscopic box trainers, and full cadaveric simulations. Prerequisite: graduating medical student. For those students who are not enrolled for the quarter in which this Capstone Course is offered, please contact Karen Cockerill at [misskay@stanford.edu](mailto:misskay@stanford.edu) to register.

**SURG 299. Directed Reading in Surgery. 1-18 Unit.**

Consists of studies in progress, including cardiovascular and circulatory problems; gastric physiology; hemostatic disorders; homotransplantation; liver disorders; orthopedic pathology; bone growth; radiation injury; immunology, bacteriology, pathology, and physiology of the eye; physiological optics; comparative ophthalmology; neurophysiology of hearing; spatial orientation and disorientation; nasal function; and psychophysics of sensation. Prerequisite: consent of instructor.

**SURG 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**SURG 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members.

**SURG 60Q. Virtual to Real: Fundamentals of Human Anatomy. 3 Units.**

Advances in imaging technologies allow us to interact with anatomical information in ways that have not been previously possible. This course is designed to teach human anatomy through the interpretation of radiographs and CT scans, and the correlation of these images to real anatomy. Utilizes resources such as virtual interactive scans via the virtual anatomy table and interactive digital applications to aid students in developing their image interpretive skills. First six weeks focus on image interpretation and the remaining four weeks on the utilization of this knowledge in the understanding and identification of human anatomy on human prosecutions (cadaver material).

**SURG 68Q. Current Concepts in Transplantation. 3 Units.**

Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the popular media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation.

**SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction. 2 Units.**

The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation.

**SURG 71Q. Procedural Anatomy. 3 Units.**

Study of human anatomy through the understanding of eight to ten common conditions, such as diseases, injuries, and genetic defects, that affect the head and neck region and the associated surgical procedures to treat these conditions. Students are exposed to the modalities involved in confirming the diagnosis of these common conditions, the benefits and risks of the procedures to treat these conditions, and the anatomy affected by the conditions and procedures. The laboratory component exposes students to surgical procedures on cadaver material and the learning of anatomy via 3D digital images, the 3D dissection table and models. The focus is on learning clinically relevant anatomy of the head and neck region.

**SURG 72Q. Anatomy in Society. 3 Units.**

Preference to sophomores. The influence of human anatomy on the design of commercial products and performance (such as headphone and ear bud design, automobile interior design, table music performance and handicap devices design). How societal advancements have evolved to increasingly accommodate human form and function. Guest speakers are experts in the fields of audiology, design and music. Exposure to human anatomy via cadaver material, 3D digital images, the 3D dissection table and models.

## Theater and Performance Studies (TAPS)

**TAPS 1. Introduction to Theater and Performance Studies. 4 Units.**

TAPS 1 provides you with a solid foundation in Theater Studies and traces the development of the burgeoning field of Performance Studies. We will consider a range of canonical plays and emerging performance forms, and explore how performance can also function as an interpretive framework for analyzing a broad range of social behaviors, sites, and institutions. Through a series of close readings, discussions, written and practical exercises, and viewings of live performance, this course will help you achieve a richer understanding of the performances you see and the performances you may wish to make. This quarter, TAPS 1 will serve as the platform for the Theater & Performance Studies professionalization series. We will host several guest speakers (directors, actors, playwrights, and dance practitioners), who will give you some real connections in the theater world and will provide you with information and skills to help you build a career in the arts.

**TAPS 101P. Theater and Performance Making. 4 Units.**

A creative workshop offering a range of generative exercises and techniques in order to devise, compose and perform original works. Students will explore a variety of texts (plays, poems, short stories, paintings) and work with the body, object and site. Students will be encouraged to think critically about various compositional themes and ideas including: the relationship between form and content, aesthetics, space, proximity, and audience. Students will work independently and collaboratively creating original performances. Same as: TAPS 371P

**TAPS 103. Beginning Improvising. 3 Units.**

The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment. Improv, Improvisation, creativity and creative expression. All who sign up are placed on a waitlist. Official enrollment will be determined after the first day of class. Attendance at the first class session is mandatory to be considered for enrollment in the course.

**TAPS 104. Intermediate Improvisation. 3 Units.**

This class is the continued study of improvisational theater with a focus on stage skills, short and long form performance formats, and offstage applications of collaborative creativity. It is open to any students who have taken TAPS 103 or have previous onstage improv experience AND consent of the instructor. May be repeat for credit.

**TAPS 108. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, CSRE 108, FEMGEN 101

**TAPS 115. Musical Theater. 1-3 Unit.**

In this workshop we will traverse the landscape of world of Musical Theater. It will serve as an introduction for the beginning actor and singer, and expand the more experienced performer's range in this genre. The world of Musical Theater is filled with stories of love, passion, joy, violence, heartbreak and rage. The class will include an introduction to vocal and movement skills for musical theater, beginning with exercises to build an ensemble and encourage a sense of play and relaxation in supportive environment. Our class must be a place where everyone feels safe. As ensemble members, we will be responsible for each other in this environment. Students will choose one solo song, and perform in a group number from this exciting discipline. The instructor will work with the actors on technique, utilization of action, specificity of language, personalization, and emotional truth. A professional coach from the theater community will conduct vocal coaching. Physical warm-ups and choreography will be suited for both the dancer and non-dancer. The class will culminate in the last week with live performance for friends and family. STUDENTS ARE ENCOURAGED TO BRING THEIR OWN SUGGESTIONS. (Isn't there a role you've always wanted to sing?) Required text: Broadway Musicals Show by Show: Sixth Edition - Stanley Green; Paperback.  
Same as: MUSIC 183D

**TAPS 119. Modern Theatre. 1-5 Unit.**

Modern theatre in Europe and the US, with a focus on the most influential works from roughly 1880 to the present. What were the conventions of theatrical practice that modern theatre displaced? What were the principal innovations of modern playwriting, acting, stage design, and theatrical architecture? How did modern theatrical artists wrestle with the revolutionary transformations of the modern age? Plays by Büchner, Ibsen, Strindberg, Shaw, Chekhov, Wilde, Wedekind, Treadwell, Pirandello, Brecht, O'Neill, Beckett, Smith, Parks, and Nottage.  
Same as: GERMAN 319, TAPS 319

**TAPS 11N. Dramatic Tensions: Theater and the Marketplace. 3 Units.**

Preference to freshmen. The current state of the American theater and its artists. Conventional wisdom says that theater is a dying art, and a lost cause, especially in an age of multi-media entertainment. But there are more young playwrights, actors, and directors entering the field today than at any other time in American history. Focus is on the work of today's theater artists, with an emphasis on an emerging generation of playwrights. Students read a cross-section of plays from writers currently working in the US and UK, covering a spectrum of subjects and styles from serious to comic, from the musical to the straight play. Hits and misses from recent seasons of the New York and London stages and some of the differences of artistic taste across the Atlantic. Hands-on exploration of the arts and skills necessary to make a play succeed. Students develop their own areas of interest, in guided projects in design, direction or performance. Conversations with playwrights, designers, and directors. Labs and master classes to solve problems posed in areas of creative production. Class meets literary managers and producers who are on the frontlines of underwriting new talent. Class trips include two plays at major Bay Area Stages.

**TAPS 120A. Acting I: Fundamentals of Acting. 4 Units.**

A substantive introduction to the basics of the craft of acting, this course gives all incoming students the foundation of a common vocabulary. Students will learn fundamental elements of dramatic analysis, and how to apply it in action. Topics include scene analysis, environment work, psychological and physical scoring, and development of a sound and serviceable rehearsal technique. Scene work will be chosen from accessible, contemporary, and realistic plays. Outside rehearsal time required.

**TAPS 120B. Acting II: Advanced Acting. 3 Units.**

Learn how to expand character work, beyond what is immediately familiar. Continuing basic practices from the first part of the sequence, in this quarter they will look beyond the strictly contemporary, and may begin to approach roles drawn from more challenging dramatic texts. This might include plays chosen from mid-century American classics, World Theater, or other works with specific historic or cultural requirements. Actors begin to learn how a performing artist researches and how that research can be used to enrich and deepen performance. Prerequisite: 120A or consent of instructor. Priority given to TAPS majors and minors.

**TAPS 121C. Physical Characterization. 3 Units.**

A practical course in movement, acting and character development for stage or screen. This course is appropriate for all artists; no prior movement training is required. We will explore expressive possibilities in the body in order to build characters with nuanced physicality and rich emotional life. Students will learn strategies for awakening the body, find a greater range of expression, and widen the variety of characters they can inhabit. We will conduct live observations and take inspiration from photographs, memories, dramatic texts and other sources to build vivid portraits of character in performance. Actors will work independently and as an ensemble, learning techniques derived from Michael Chekhov. We will also practice physical conditioning for the actor through a daily warm-up sequence that improves strength, flexibility and alignment.

**TAPS 121P. Period and Style: Acting. 3 Units.**

This course is designed for the actor and theater-lover who has completed 120a or an equivalent basic acting class. Students will develop their acting skills towards the ability to perform in some of the major classics of the theater, from Shakespeare's plays through the fast-paced physical comedies of twentieth-century farce. Acting in "big" plays without damaging the voice, working physically with safety, how to research like an artist, and rehearse like a professional are all topics that will be covered. Class culminates in an open Scene Showing of Period Plays.

**TAPS 121V. Voice for the Actor. 3 Units.**

This course will focus on releasing a voice that effectively reaches the listener and is responsive to the actor's thoughts and feelings. Through work on breath awareness, alignment, resonance, and muscularity, students will learn to identify habits that help or hinder performance. Students will practice exercises to develop vocal strength, clarity, ease, and expressiveness while exploring the vocal demands of various texts and performing environments. Course will culminate in a presentation of classical and contemporary monologues. This course is a good preparation for auditions, rehearsal, and performance, and is appropriate for all levels. Priority space reserved for TAPS majors and minors.

**TAPS 122A. Expressive Techniques in Multimedia Installation And Live Art. 4 Units.**

The course focus on multimedia installation and live performances. The theme of the course will be an offshoot of the campus wide celebration of the 200th year anniversary of the *Frankenstein* novel written by Mary Shelly. For the course the issues of advance medical science in the areas of artificial life forms, stem cell research, biological ethical questions, fictional and non fictional approaches and mythical creation stories will be included. Students will obtain an understanding of alternative ways to speak to issues using various art forms.  
Same as: ARTSTUDI 122A

**TAPS 122P. Undergrad Performance Project: Life is a Dream. 1-9 Unit.**

The Undergraduate Performance Project provides students the opportunity to study and perform in major dramatic works. The Winter 2018 Undergraduate Performance Project presents *Life is a Dream*. Students learn to form an artistic ensemble, develop dramaturgical materials, learn professional arts protocols and practice, devise within the ensemble, and develop live performance ability. Audition required. Preference to majors/minors. Maybe repeated for credit. 3 maximum completions allowed. If repeated, 15 total units allowed.

**TAPS 124D. Acting for Non-Majors. 1-3 Unit.**

Formerly TAPS 20. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

**TAPS 125. Acting Shakespeare. 3 Units.**

This course explores the unique demands of playing Shakespeare on the stage. Through deep exploration of language and performance techniques in sonnets, speeches and scenes, the student will learn how to bring Shakespeare's passions to life through research, analysis, and a dynamic use of voice, body and imagination. This course is designed to increase the actor's physical, vocal, emotional, and intellectual responsiveness to the demands, challenges and joys of playing Shakespeare.

**TAPS 125C. Acting Chekhov. 3 Units.**

Playwright Anton Chekhov helped revolutionize the theater with his naturalistic representation of life onstage. In this course, students will explore the creation of character and ensemble by doing scenes from Chekhov's plays with a particular focus on relationship, subtext, sensory life, and Russian history and culture in 1900. Students will practice the improvisational technique of Active Analysis to connect with and embody characters and events, as well as exploring various exercises of Michael Chekhov's such as the Psychological Gesture, and exercises involving tempo-rhythm, physical centers, and archetypes. Prerequisite: Acting 120A. Priority given to TAPS majors and minors.

**TAPS 125S. Shakespeare Now: An Actor's Lab. 3 Units.**

This active workshop will provide the actor with skills for performing Shakespeare with clarity, joy and power. Actors work with scenes and monologues to develop ease with scansion, freedom of voice, and to expand their physical and imaginative range. We will also become acquainted with some of the ways that Shakespeare and other classic texts are being re-invigorated at the hands of modern writers and adapters. We will investigate the world of styles and approaches an actor may encounter in new takes on classic plays in our own time. (Priority to TAPS majors-minors. Previous acting class required, or instructor permission.)

**TAPS 126. Sound Stories. 4 Units.**

This special seminar is designed for students interested in creating stories for radio, podcast, and other sound media. Students will learn both the core principles of telling strong stories, whatever the medium, and the strategies of telling entertaining, persuasive stories for the ear. Just like film or the novel, sonic stories offer a fascinating mix of constraints and opportunities, and you'll learn how to invite listeners into an experience or insight that combines theories, facts and feelings into a single space of empathy. This is a hybrid class, equal parts classic seminar and creative workshop, and students will create stories from start to finish and learn skills from pitching and interviewing to writing, editing, and digital production. Students will work in small groups to document places through the stories that inhabit them, from the Menlo Park Police department to local shelters and community centers. Recommended for students interested in creative nonfiction, documentary, film, and even sound art. No prior experience necessary. Students wishing to enroll in this course must complete the following survey: <http://web.stanford.edu/~jwarga/S17TAPS126.fb> (Cardinal Course certified by the Haas Center).

**TAPS 127. Movement for the Actor. 3-4 Units.**

This course is an exploration of movement techniques for the actor, designed to provide a foundation for performance practice. Students will develop a more grounded sense of ease and breath onstage, learn fundamentals of physical partnership, and acquire an expanded physical vocabulary. Areas of study include Laban movement analysis, observation and embodiment, basic contact improvisation, and physical characterization. Students will also engage a personalized warmup process for rehearsal and performance. All coursework will be entirely experiential, practical, and participatory. No previous experience necessary. Some outside rehearsal/investigation time required.

**TAPS 127C. Introduction to Stage Combat. 3 Units.**

A course designed to cover the fundamental techniques to safely and convincingly create the illusion of violence. Stressing safety, storytelling, and partnering, this class will explore the most commonly used unarmed combat techniques, including fighting with found objects and comedic violence. Additionally, students will explore the essential techniques and vocabulary for theatrical broadsword including parries, cuts, thrusts, footwork and evasions. Students will have the opportunity to take a "skills proficiency test" in both disciplines for recognition as a beginning theatrical combatant with Dueling Arts International. This class will be taught by Dave Maier.

**TAPS 127S. Acting Through Song. 2-4 Units.**

How does a singer develop the strategies to shape nuanced, emotional performances? What clues does the singer mine from lyrics and a score in order to communicate through song? This is a studio course in acting and movement techniques for vocal performers who want to expand their expressive range, refine multi-faceted performances, and cultivate compelling stage presence. This course is suitable for any vocalist; classical singers, a cappella performers, musical theater actors and others are all welcome. The three foundational underpinnings of our work will be actor personalization technique, basic movement training and text analysis strategies. We will develop flexibility, relaxation and the freedom to follow expressive impulses while also deepening our knowledge of character, narrative and theme. Students should be prepared to engage in intensive work with performance pieces, selected according to each student's preferred style and tradition. We will focus on close textual analysis and find connections between the ways performers use various written scores (for spoken dialogue, song lyrics and musical composition) as the blueprints for dynamic performances that tell a powerful story. The course will culminate in a public performance of material from a musical performance genre.

**TAPS 127W. Introduction to Clown. 3 Units.**

This course is an introduction to the world and play of the theatrical clown, constructed for actors to explore truth in size, vulnerability, and a personal sense of humor. Students will develop their ability to play with the audience, a greater capacity for freedom and abandon onstage, and a healthier relationship to failure and human idiocy. Areas of study include partnership and status play, comic rhythm and timing, the structure and development of comic material, and the beginnings of a personal eccentric Clown character. All coursework will be experiential and practical. Some stage experience is recommended but not required. Some outside rehearsal/investigation time required.

**TAPS 12N. To Die For: Antigone and Political Dissent. 3 Units.**

(Formerly CLASSGEN 6N.) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. Same as: CLASSICS 17N

**TAPS 130. ReDesigning Theater: Live & Digital Performance. 3 Units.**

This quarter's version of ReDesigning Theater looks at Live and Digital Performance. We will examine the use of digital technology in collaboration with live performance. Students will learn and employ the design thinking process as well as improv and theatrical techniques. We aim to create user-centric, interactive experiences where technology enables the audience to become part of and/or influence the outcome of the story or its presentation. Student projects will begin with the concepts enabled by personal technology such as smart phones and expand to animation, video projection, and other media. Students will work in small groups to investigate and experiment with formats that blur the lines between live and digital, performer and audience, and physical and virtual platforms. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the frontiers of technology, art, and live performance.

**TAPS 131. Lighting Design. 4 Units.**

With the tools newly acquired from the previous quarter, this hands-on course features laboratory projects in lighting and designing live stage productions. Prerequisite TAPS 31.

**TAPS 132. Costume Design. 4 Units.**

This course introduces the goals, directives and techniques of designing costumes for performance. From the first reading of the script to opening night, all aspects will be covered including director/designer relationships, design approach, research, rendering, fabric selection, procurement or construction of costumes, fittings and final dress rehearsals. Each student will work on, or be assigned one main project of their choice. This class can coincide or be taken in advance of a student's involvement in a campus show, utilizing the campus project as their main project in the class. Smaller exercises will be given throughout the quarter to emphasize principles and invigorate design discussions. All students will be required to attend the performances of their peers' projects. One field trip to a professional theater may be planned.

**TAPS 133. Stage Scenery Design. 3-4 Units.**

Craft and Theory of stage scenery design including visual research, spatial organization, basic drafting, sketching and model-building. Prerequisite: 30, or consent of instructor.

**TAPS 133D. Set Design Practicum. 3-4 Units.**

This course is intended for students who are in the process of designing scenery for a Stanford club or department production and seek guidance in developing and refining their design. It is also open to students who have not yet committed to a fully realized set design project but would like to in the future, or anyone who would like to focus on the practical aspects of set design in general. Each week students present their work on a current or future set design and receive feedback and suggestions from classmates and the instructor. Also, the instructor will create project oriented assignments adapted to the needs and timeline of each individual project and student. Topics include: visual research, sketching, computer and hand drafting, and model making. During the first two weeks of the course students and instructor will determine a final project, such as a color model or design drafting, which will be required for completion of the course.

**TAPS 133T. Transgender Performance and Performativity. 4 Units.**

This course examines theater, performance art, dance, and embodied practice by transgender artists. Students will learn the history and politics of transgender performance while considering the creative processes and formal aesthetics trans artists use to make art. We will analyze creative work in conversation with critical and theoretical texts from the fields of performance studies, art history, and queer studies. Same as: FEMGEN 133

**TAPS 134. Stage Management Project. 3-5 Units.**

For students stage managing a production in the Department of Theater and Performance Studies.

**TAPS 135C. Theory & Craft of the Scenographic Model. 3 Units.**

Students learn studio techniques for constructing dimensional models for stage designs. Students will work with their hands using common materials such as cardboard, paint and wood. Use of Stanford's Product Realization Lab encouraged for specialty items such as miniature furniture depending on departmental coordination.

**TAPS 135M. Introduction to Media Production. 3 Units.**

Students will explore ways to incorporate video and other multimedia tools in their theatrical work. We will analyze the use of prerecorded sound, video and slides in theater productions, both as scripted and as staged -- from Beckett's Krapp's Last Tape to The Wooster Group's Hamlet to Young Jean Lee's Untitled Feminist Show. Hands-on practical instruction will cover the fundamentals of cinematography, sound recording, picture and sound editing, directing for camera, and producing (planning, budgets, scheduling, permits, fair use, rights and clearances). Students will work in teams to create multimedia projects that can be used in a theatrical production.

**TAPS 136S. Hidden Gems: Bay Area Theater Architecture post 1906. 3 Units.**

An active investigation of Bay Area theater architecture through a close look at five buildings built specifically for performance and how their use has changed over time. Students uncover building histories by researching drawing plans, photographs and other contextual documents in public and university archives in addition to site visits when possible. Particular attention will be paid to understanding shifting attitudes toward the proscenium arch in American popular culture. Possible buildings to be included: California Theater (San Jose), Memorial Auditorium (Stanford), Lucie Stern Theater (Palo Alto), Fox Theater (Redwood City) and The Curran Theater (San Francisco).

**TAPS 137. Hand Drafting for Designers. 3 Units.**

Fundamentals of hand-drafting. Standard drawing conventions; the use of line weight, color, composition, and graphic style. Creation of construction documents for real-world applications. May be repeated for credit.

**TAPS 140. Introduction to Projects in Theatrical Production. 1-4 Unit.**

A seminar course for students performing significant production work on Theater and Performance Studies Department or other Stanford University student theater projects. Students serving as producers, directors, designers or stage managers, who wish mentorship and credit for their production work sign up for this course and contact the instructor, Laxmi Kumaran. Prerequisite: consent of instructor.

**TAPS 150G. Performing Race, Gender, and Sexuality. 4 Units.**

This theory and practice-based course will examine performances by and scholarly texts about artists who critically and mindfully engage race, gender, and sexuality. Students will cultivate their skills as artist-scholars through written assignments and the creation of performance-based works in response to the assigned material. Attendance and written reflection on the TAPS Vital Signs: Performance Art in the 21st Century performance art series are required. The practical component of the class will also incorporate meditation into the process of preparing for, making, and critiquing performance. We will approach mindfulness as method and theory in our own practice, as well in relation to the works studied, while attending to the ethics and current debates concerning its use. Examples of artists studied include James Luna, Nao Bustamante, William Pope.L, Yoko Ono, Cassils, Adrian Piper, Guillermo Gomez-Peña, Nikki S. Lee, and Ana Mendieta. Same as: CSRE 150G, FEMGEN 150G

**TAPS 151. Dramaturgy. 4 Units.**

In this seminar, we will take the conventional idea of dramaturgy for narrative performance as developed in Western European theater since the enlightenment, and investigate its relation to non-narrative forms of performance in 20th and 21st (performance art, conceptual dance). Further, we will use dramaturgical procedures to explore the ideological content of performance and position of art institutions in our society. Finally, the students will get acquainted with production dramaturgy and get necessary tools to take the role of dramaturgs in actual performance productions.

Same as: TAPS 315

**TAPS 152. Introduction to Improvisation in Dance: From Salsa to Vodun to Tap Dance. 3-4 Units.**

This seminar introduces students to Dance Studies by exploring the topic of improvisation, a central concept in multiple genres of dance and music. We will survey a range of improvised dance forms from salsa to vodun to tap dance through readings, video viewings, discussion, and movement exercises (no previous dance experience required).

When studying each genre, we will examine how race, gender, sexuality, citizenship, and other power structures affect the practices and theorizations of improvisation. Topics include community and identity formation; questions of technique versus natural ability; improvisation as a spiritual practice; and the role of history in improvisers' quest for spontaneity. Course material will focus on improvised dance, but we will also read pertinent literature in jazz music, theatre, and the law.

Same as: AFRICAAM 52, CSRE 152

**TAPS 153. Revenge: From Aeschylus to ABC. 4 Units.**

How has the topic of revenge inspired some of theatre history's most dramatic masterpieces? Covering works from ancient Greek and Roman tragedy to Chinese Opera, from Japanese samurai intrigues to Renaissance drama, and from nineteenth-century comedy to postcolonial plays, this course examines how the powerful impetus to take revenge has spurred or stymied some of theatre's most compelling characters. Blending theory and practice, we will experiment with an array of theatrical forms and styles; we will also discuss the philosophical dimensions and moral implications of revenge, including various cultural understandings of retribution and redress.

**TAPS 153M. Mechanics of the Theater: The Technologies of Stagecraft. 3-4 Units.**

This course explores the history of technologies vital to the theatre: traps, lifts, lights, and sounds have been crucial for creating stage illusion. Divided into three main sections, Mechanics and Machines, Lighting and Projections, and Acoustics and Sound, we will examine the history of technological innovation and theatrical experimentation from the Enlightenment to the present. We will also be conducting case studies for each section with a core text or texts. We will cover Shakespeare's Hamlet, Ibsen's Ghosts, Chekhov's The Seagull, and Dreamgirls, The Musical. Technologies such as mechanical traps, electrical lights, and sound machines have been used to create stunning illusions and spectacular theater. Many of these technologies were also significant for the histories of industrialization and modernization. We will ask: How did theater makers develop and innovate using technological innovations? What role does technological aesthetics play in understanding human culture? What are the relationships between theater, technology, and society? In class, we will be reading, experimenting, and performing with various technological artifacts. We will be conducting experiments alongside our reading practice to better understand our historical subjects.

**TAPS 154G. Black Magic: Ethnicity, Race, and Identity in Performance Cultures. 3-4 Units.**

In 2013, CaShawn Thompson devised a Twitter hashtag, #blackgirlmagic, to celebrate the beauty and intelligence of black women. Twitter users quickly adopted the slogan, using the hashtag to celebrate everyday moments of beauty, accomplishment, and magic. In contrast, #blackmagic is used to describe everything from the uncanny to the personal. This course examines the discursive phenomenon of "black magic" and its permutations throughout Anglo-American histories. We will investigate the binaries of black/dark, white/light magic that has entered our contemporary lexicon, reading material on religion, magic performance, and theater.

Same as: AFRICAAM 154G, CSRE 154D, FEMGEN 154G

**TAPS 155. Social Sculpture. 4 Units.**

This course investigates the immediacy of the body as material and sculpture in order to investigate private and social spaces. Actions are often used to understand or question the function and psychological aspects of a space and are documented for the perpetuation of these ideas. Throughout the quarter we will investigate the body as material and develop site specific performances enacted for: Private/Domestic and Public Space; Constructed Space & Physical Space; ecological systems; and generate both Individual & Collaborative based Actions, Interventions, & Events."

Same as: ARTSTUDI 155

**TAPS 156. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.**

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.

Same as: AFRICAAM 156, CSRE 156T, TAPS 356

**TAPS 156A. Warhol: Painting, Photography, Performance. 4 Units.**

This course focuses on the career of Andy Warhol as a means to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warhol's visual production (e.g. his career as a commercial artist in the 1950s and his everyday photographs of the 1970s and 1980s) alongside his now-canonical Pop paintings of the 1960s. Warhol's critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warhol's legacy and wide-ranging influence on American culture in the decades since his death in 1987.

Same as: ARTHIST 156A, ARTHIST 356A, TAPS 356A

**TAPS 156V. Vital Signs: Performance in the 21st Century. 1 Unit.**

The first decade and a half of the 21st century have been transformative for performance art. On the one hand, it brought an unprecedented cultural acceptance of this art form, which is now featured in most prestigious museums and art festivals; on the other, the most recent generation of performance artists is showing a great awareness of the historicity and complexity of this form. In this class, we will try to recognize and investigate these and other prominent features of performance art produced since the turn of the millennium. We will use as our primary case studies performances that will be featured in the series *Vital Signs: Contemporary Performance Art Series*, hosted by TAPS in 2017-2018. The primary objective of the series is to highlight and showcase underrepresented performance forms such as experimental performance art, durational art, and body art, among others, by artists from communities that remain invisible or underrepresented in mainstream performing arts. The series is curated by the Los Angeles-based artist Cassils, who has been listed by the Huffington Post as 'one of ten transgender artists who are changing the landscape of contemporary art' and has achieved international recognition for a rigorous engagement with the body as a form of social sculpture. Cassils's curatorial vision is to present established performance artists alongside emerging artists. Each quarter, a pair of artists will visit Stanford for two days (Thursday-Friday). On day one of their visit they will offer a workshop or a public performance, and on the second day they will engage in a public dialogue. The class will meet each quarter for three weeks: before, during, and after the artists' visit. This way, the students will have an opportunity to prepare for the visit, engage with the visiting artists, and reflect on their work. They will receive their grades upon completion of the class, in the spring of 2018. Same as: ARTSTUDI 256V, TAPS 256V

**TAPS 157. World Drama and Performance. 4 Units.**

This course takes up a geographically expansive conversation by looking at modern and contemporary drama from nations including Ghana, Egypt, India, Argentina, among others. Considering influential texts from the Global South will also enable us to explore a range of themes and methodologies that are radically re-shaping the field of Performance Studies. We will examine the relationship between colonialism and globalization, empire and capital, cosmopolitanism and neoliberalism. Re-situating our perspective from the Global South and the non-western world, we will ¿provincialize Europe¿ and probe the limits of its universalizing discourses. Same as: TAPS 357

**TAPS 160. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries. Same as: DANCE 160, FEMGEN 160, TAPS 260

**TAPS 160M. Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture. 3-4 Units.**

This course will introduce students to the ways in which the Middle East has been represented and performed by/in the 'West' through dance, performance, and popular culture in both historical and contemporary contexts. A brief look through today's media sources exposes a wide range of racialized and gendered representations of the Middle East that shape the way the world imagines the Middle East to be. As postcolonial theorist Edward Said explains, the framework we call Orientalism establishes the ontological character of the Orient and the Oriental as inherently 'Other'. Starting with 19th century colonialism and continuing into the post-9/11 era, this course will trace the Western production, circulation, and consumption of representations of the Middle East as 'Other' in relation to global geopolitics. We will further examine dance forms produced in mid-twentieth century Iran and Egypt, with particular attention to nation-state building and constructions of gender. Finally, we will examine artistic productions and practices from the Middle East and Middle Eastern diasporic communities that respond to colonialism, war, displacement, secularism, and Euro-American Empire. Using dance studies, postcolonial feminist, and critical race theoretical frameworks, we will consider the gender, racial, political, and cultural implications of selected performance works and practices in order to analyze how bodies produce meaning in dance, performance art, theater, film, photography, and new media. Students will engage in multiple modes of learning; the course will include lectures, engaged group discussions, viewing of live and recorded performance, embodied participation in dance practice, student oral presentations, and a variety of writing exercises. Course assignments will culminate in a final research project related to class themes and methods. Same as: CSRE 160M, DANCE 160M, FEMGEN 160M

**TAPS 161D. Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders. 3-4 Units.**

This introduction to dance studies course explores dance practice and performance as means for producing cultural meaning. Through theoretical and historical texts and viewing live and recorded dance, we will develop tools for analyzing dance and understanding its place in social, cultural, and political structures. This uses dance and choreography as a lens to more deeply understand a wide range of identity and cultural formations, such as gender, race, sexuality, (dis)ability, (trans)nationality, and empire. We will analyze dancing bodies that move across stages, dance clubs, film screens, and border zones. We will examine dance from diverse locales and time periods including ballet, modern and contemporary dance, contact improvisation, folkloric dance, burlesque, street dance, queer club dance, drag performance, music videos, TV dance competitions, and intermedia/new media performance. In addition to providing theoretical and methodological grounding in dance studies, this course develops performance analysis skills and hones the ability to write critically and skillfully about dance. No previous experience in dance is necessary to successfully complete the course. Same as: CSRE 61, DANCE 161D, FEMGEN 161D

**TAPS 161H. Dance, History and Conflict. 4 Units.**

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict. Same as: DANCE 161H

**TAPS 162I. The Idea of a Theater. 5 Units.**

Examines the idea of a theater from the religious street theater of Medieval York, through Shakespeare's Globe, and onto the mental theater of the Romantic reader and the alienation effects of Brecht's radical playhouse in the 20th cent.

**TAPS 164T. Queer Art and Performance. 4-5 Units.**

Examines the late 19th, 20th and 21st century forms of performance—including examples from drama, theater, cabaret, and performance art – through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: TAPS 364T

**TAPS 165. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: CSRE 196C, ENGLISH 172D, PSYCH 155, SOC 146

**TAPS 165C. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, CLASSICS 237, TAPS 265C

**TAPS 167. Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice. 4 Units.**

(Formerly CLASSGEN 110.) Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.

Same as: CLASSICS 112

**TAPS 167H. Revolutions in Theater. 4 Units.**

This course surveys the period from the turn of the 20th century until WWII, during which the European avant-garde movements transformed modern art. This period in history is marked by dynamic political events that had a deep impact on experimental art and on culture in general. This interaction between poetics and politics makes the first decades of the 20th century the formative period of western and global theater.

Same as: TAPS 267

**TAPS 168H. Poor Theater. 4 Units.**

The goal of this class is not to offer a survey of Happenings and other happening-related art of the late twentieth century. Instead, we will use Happenings as a paradigm of "poor theater" and "poor art" - umbrella terms for a number of experimental performance and art practices that emerged in the aftermath of the WWII. We will use the idea of poor theater as an organizing principle in our investigation of the main currents in the experimental performance in the last five decades. The class has a tripartite structure. First we will outline the paradigm of happenings, then trace the origins of Happenings in music, visual arts and theater of the mid twentieth century, and finally look at Happenings' immediate impact, as well as at its ripple effects that continued to reverberate long after the disappearance of this new art form. This course counts as a Writing in the Major course for TAPS in 2016-17.

Same as: TAPS 268H

**TAPS 169. Hysteria and Modern Culture. 3-5 Units.**

The term "hysteria" has been used for centuries to categorize the mysterious ailments of others. This course will focus on the history of hysteria's representation and production from the late nineteenth century through WWI. Readings will include medical writings (Charcot, Bernheim, Freud), plays (Ibsen, Strindberg, Toller), and feminist theory (Cixous, Clément, Diamond). We will also devote some attention to the ongoing influence of the discourse of hysteria on contemporary medical and popular cultures.

**TAPS 170. Directing and Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.**

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material.

Same as: TAPS 370

**TAPS 170A. The Director's Craft. 4 Units.**

This workshop class guides students through the directing process from investigating the big ideas of a play and analysing the action to organizing and running rehearsals to building up the world of the play through character work and visual composition. Over the quarter we will look at the use of creative visualization and improvisation alongside working with actors on ideas, emotions, relationships, textual analysis and blocking. This course also attends to the process of communicating with designers and production teams as well as structuring rehearsals, run-throughs and technical and dress rehearsals. Each student will select a theatrical text to work from across the quarter. In many cases the student's text will be a play that they are planning to direct in future, such as productions for student groups like Ram's Head or Stanford Shakespeare Company, TAPS capstone projects, TAPS 2nd year grad shows and/or TAPS Second Stage productions. No previous directing experience is necessary.

Same as: TAPS 370A

**TAPS 170B. Directing Workshop: The Actor-Director Dialogue. 4 Units.**

This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

Same as: TAPS 372

**TAPS 171. Performance Making. 4 Units.**

A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

Same as: TAPS 371

**TAPS 173D. Theater Production Lab: Dramaturgy and Development. 4 Units.**

173/373: In this course students will explore general dramaturgical history and methodology as well as engaging in applied dramaturgy from evaluating works for a productions seasons, to developing dramaturgical materials for specific productions. Students will agree the focus of their course-work with the instructor depending on their specific interests. The TAPS 2nd year grad students enrolled in this course will act as a dramaturgical team, supporting the TAPS winter production of *The Tempest* in Pigott Theater March 2-11 2017, directed by Amy Freed. Students will support the actors and the creative team through providing research materials and presentations and helping actors with guided research, write program essays for general audiences, attend rehearsals and provide constructive notes, and curate and/or present on a Preface panel prior to opening night.

Same as: TAPS 373

**TAPS 175T. Collaborative Theater-Making. 1-4 Unit.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. In this workshop, students will collaborate on the creation of one of these plays, which explores the intersection of class and race. The point of this class will be to replicate as closely as possible Lee's process for developing a new play in a professional setting. Students will "learn by doing" as they serve as actors, assistant directors, and dramaturgs in the same way that her actual actors, assistant directors, and dramaturgs would do. Please note that this is not designed to be an acting class with lots of fun moving around. There is no guarantee that every student will have a chance to perform. Also, Lee's new play development process is challenging, slow, and often requires sitting around a table having gruelingly intense conversations for hours at a time. This class is designed to teach students skills they need to succeed in a professional theater environment. Please contact the instructor ASAP at [yjl@stanford.edu](mailto:yjl@stanford.edu) for an application, which will be due on March 1, with notifications being sent out on March 15. If you find out about this class after the application deadline and send the instructor an email asking her to allow you to apply late, you must present a convincing explanation for why an exception should be made in your case. Nobody who misses the first class will be permitted to take the course.

Same as: TAPS 275T

**TAPS 176. Living with Mindfulness, Meaning, and Compassion. 5 Units.**

Living with mindfulness, meaning, and compassion is a journey of contemplation, self reflection, and guided action. We examine "the good life" through the insightful eyes and inspirational words of others as well as through the light of our own experience. We explore success, happiness, and well being through the wisdom of spiritual traditions and scientific discoveries. Our focus is on acceptance, vulnerability, humility, kindness, and courage. Our integrative learning approach creates a transformative, synergistic community through appreciative inquiry and connected knowing.

**TAPS 176N. The Inside Story. 3 Units.**

The Inside Story is a workshop that focuses on the generation of autobiographical material by exploring the connections between biology and biography. Students will gather autobiographical and autobiographical material, investigate stories of their bodies and explore "gut feelings". They will work on individual and group exercises looking at cellular and body memory from which they will create text, gesture, image, performance and installation. The exercises will include autobiographical writing prompts, body memory exercises, Yin Yoga, and body mapping.

**TAPS 176S. Finding Meaning in Life's Struggles: Narrative Ways of Healing. 5 Units.**

We can find meaning in life's struggles through narrative ways of healing. The self-reflective, dynamic process of finding, telling, and living our stories connects us with our whole selves as well as with others. We find our stories through vulnerability and courage; tell them with humility and honesty; and live them authentically and responsibly. Our shared stories will focus on gratitude, acceptance, reconciliation, forgiveness and compassion, empowering us to overcome personal, community, and historical traumas and wounds. In a respectful, caring community we will discover our hidden wholeness by improvising with various experiential and embodied means of finding our stories; telling our stories in diverse ways, including writing, storytelling, music, and art; and living our stories by putting values into action.

Same as: CSRE 176S

**TAPS 177. Dramatic Writing: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, FEMGEN 177, TAPS 277

**TAPS 177C. Creating a Musical. 4 Units.**

This practical, hands on class in the making of musicals explores all aspects of creating musical theater, including writing, composing, producing, directing, designing, and casting this most American of theater genres. The class will include direct engagement and discussion with the producers and artists of TheatreWorks Silicon Valley's production of *The Bridges of Madison County*, book by Marsha Norman and music by Jason Robert Brown, including off-campus field trip to rehearsal of the show. The class will explore the creation of several renowned musicals including Stephen Sondheim's *Merrily We Roll Along*, and will include live Skype interviews with Broadway composers Andrew Lippa (*The Wild Party*), Paul Gordon (*Jane Eyre*), and David Hein and Irene Sankoff (*Come from Away*, winner of the 2017 Drama Desk Award for Best Musical). The quarter will culminate in the creation, production, and performance of several mini-musicals created by members of the class. Instructor Robert Kelley is the Founding Artistic Director of TheatreWorks Silicon Valley, where he has directed 170 productions, including many world and regional premieres.

Same as: MUSIC 184D

**TAPS 177W. Workshop with Young Jean Lee. 2-4 Units.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. In this workshop, students will help to collaboratively perform, direct, and rewrite the script of one of these plays, which is about the intersection of class and race. The class will involve acting for students who want to act, directing for students who want to direct, and writing for students who want to write. The current character breakdown is as follows: 2 black women, 1 Asian-American woman, 1 Colombian woman, 1 Mexican-American man, 2 black men, 2 white women, 2 white men.

Same as: CSRE 177I, TAPS 277W

**TAPS 178B. Intensive Playwriting. 4 Units.**

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: CSRE 178B, TAPS 278

**TAPS 178C. Writing a Full-Length Play. 2-4 Units.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. This workshop will guide students through the process of writing a full-length play, and will focus on helping students to find their own voices. Students will be required to write every week and share their work with the class, completing a full-length first draft by the end of the term. This class will be geared towards generating new material, rather than on editing in response to critiques, which will be covered in a spring course, EDITING A FULL-LENGTH PLAY. Topics to be discussed: the relationship between naturalistic and experimental theater; writing about unfamiliar subjects; and writing what you are afraid to write. Students must contact the instructor at [yjl@stanford.edu](mailto:yjl@stanford.edu) ASAP in order to obtain an application for the class, which will be due on December 1.

Same as: TAPS 278C

**TAPS 178D. Editing a Full-Length Play. 1-4 Unit.**

To participate in this workshop, students must bring in a draft of a full length straight play for revision, which was written in part one of this course, WRITING A FULL-LENGTH PLAY. In conjunction with a variety of other editing techniques, students will focus on editing in collaboration with others. They will learn how to edit in response to hearing their plays read aloud; how to give and solicit the most useful kinds of feedback; how to cope with harsh criticism; what to do when people are offended by what they have written; how to know which notes to pay attention to and which notes to ignore; and how to let go of ideas and text that are not working. Other topics to be discussed: getting your work produced vs. self-producing; directing your own work vs. working with a director; and starting your own theater company. Enrollment for this course is closed. Same as: TAPS 278D

**TAPS 17N. Acting for Activists. 3 Units.**

Acting for Activists is designed for students who are interested in combining acting with activism, performance with politics. We will work with theatre that responds to specific political events and crisis such as hate crimes or war through the performance of activist texts. We will also explore works that challenge inequalities of income, race, gender and sexual orientation. By the end of the course students will cultivate a critical vocabulary for discussing and critiquing work within acting/activist contexts and develop new strategies for creating theatre in relation to issues they are passionate about. Acting for Activists encourages students to think about what they want to say and helps them craft how they want to say it.

**TAPS 180P. Color. 3-4 Units.**

Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (lower level).

Same as: ARTSTUDI 180

**TAPS 180Q. Noam Chomsky: The Drama of Resistance. 3 Units.**

Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance.

**TAPS 183C. Interpretation of Musical Theater Repertoire. 1-2 Unit.**

By audition only: Contact instructor prior to enrolling (bnies1@gmail.com). Ability to read music expected, but students with experience singing in musical theater can be accepted. For singers and pianists as partners. Performance class in a workshop setting along with lecture/discussion of important eras of musical theater history. Composers include Kern, Porter, Gershwin, Rodgers, Sondheim, Lloyd Weber, Jason Robert Brown and others. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists). Same as: MUSIC 183C

**TAPS 183E. Singing for Musicals. 2 Units.**

This course provides training in vocal technique, stylistic musical phrasing, and acting for students interested in performing musical theater. Students will learn about the physical process of singing, including posture, breath support, and vocal exercises. They will incorporate vocal technique with the study of phrasing in different styles of Broadway repertoire, and apply both to the art of acting the song. Each student will work on solo selections and ensembles, and sing in most classes. Through understanding vocal technique, students will become more confident and joyful performers. The course will culminate in a final public workshop performance.

Same as: MUSIC 183E

**TAPS 184C. Dramatic Vocal Arts: Songs and Scenes Onstage. 1-2 Unit.**

Studies in stagecraft, acting and performance for singers, culminating in a public performance. Repertoire to be drawn from the art song, opera, American Songbook and musical theater genres. Audition or consent of instructor required. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: MUSIC 184C

**TAPS 190. Special Research. 1-5 Unit.**

Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.

**TAPS 191. Independent Study. 1-18 Unit.**

Individual research with a faculty member. Prerequisite: consent of instructor.

**TAPS 192. Nitery Board Practicum. 1 Unit.**

Credit given for student board members of the Experimental Nitery Studio. Undergraduate students should enroll in TAPS 192. Ph.D. students should enroll in TAPS 292.

Same as: TAPS 292

**TAPS 200. Senior Project. 2-9 Units.**

All TAPS Majors must complete a Senior Project that represents significant work in any area of theater and/or performance. The project must be an original contribution and can consist of any of the following: devising a performance, choreographing a dance, stage managing a production, designing a large theater work, performing a major role, writing a play, directing a show, or researching and writing a senior essay. Work for this project normally begins in Spring Quarter of the junior year and must be completed by the end of the senior year. Students receive credit for senior projects through TAPS 200. A minimum of 4 units is required, but additional units are available for larger projects. Students pursuing senior projects must submit a two-page proposal to a faculty advisor of their choice, which must be approved by the Undergraduate Advisor and the department faculty no later than the end of Spring Quarter of the junior year.

**TAPS 201. Theater History. 4 Units.**

A survey of the history of theatre and dance from the ancient Greeks to the modern world. While primarily intended to help TAPS graduate students prepare for their Comprehensive Exam, this course may also be taken by undergraduates or non-TAPS graduate students in order to gain a broad understanding of some of the seminal plays, dances, theories, and performance practices of the past 2500 years.

**TAPS 202. Honors Thesis. 1-2 Unit.**

An advanced written project to fulfill the requirements for the Honors degree in TAPS. There are two ways to undertake an honors thesis. The first is to write a 40-50 page essay, which presents research on an important issue or subject of the student's choice. The second option is a 30-page essay that takes the student's capstone project as a case study and critically analyzes the creative work. Students are expected to work consistently throughout the year with their advisor, whom they identify at the time of application. Advisors can be selected from Academic Council faculty or artists-in-residence. Students should enroll in TAPS 202 each quarter during the senior year (1 unit in Autumn; 1 unit in Winter; 2 units in Spring).

**TAPS 20A. Acting for Non-Majors. 2 Units.**

A class designed for all interested students. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text. This version of the class is offered in summer only. During the year, students should register for TAPS 124D.

**TAPS 20N. Prisons and Performance. 3 Units.**

Preference to Freshmen. This seminar starts with the unlikely question of what can the performing arts – particularly dance and theater – illuminate about the situation of mass incarceration in America. Part seminar, part immersive context building, students will read and view a cross-section of dance and theater works where the subject, performers, choreographers or authors, belong to part of the 2.4 million people currently behind bars in US prisons. Class includes conversations with formerly incarcerated youth, prison staff, juvenile justice lawyers and artists working in juvenile and adult prisons as well as those who are part of the 7.3 million people currently on parole or probation. Using performance as our lens we will investigate the unique kinds of understanding the arts make possible as well as the growing use of theater and dance to affect social change and personal transformation among prison inmates. Class trips will include visits to locked facilities and meetings with artists and inmates working behind bars.

**TAPS 21. StoryCraft. 2 Units.**

StoryCraft is a hands-on, experiential workshop offering participants the opportunity, structure and guidance to craft compelling personal stories to be shared in front of a live audience. The class will focus on several areas of storytelling: Mining (how do you find your stories and extract the richest details?); Crafting (how do you structure the content and shape the language?); and Performing (how do you share your stories with presence, authenticity and connection?).

**TAPS 210V. Vocal Production and Audition. 1-3 Unit.**

An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range.

**TAPS 21N. The Idea of Virtual Reality. 3 Units.**

What is virtual reality and where is it heading? Was there VR before digital technology? What is the value of the real in a virtual culture? How, where, and when do we draw the line between the virtual and the real, the live and the mediated today? Concentrating on three aspects of VR simulation, immersion, and interactivity this course will examine recent experiments alongside a long history of virtual performance, from Plato's Cave to contemporary CAVEs, from baroque theatre design to Oculus Rift.

**TAPS 21S. StoryCraft: On Relationships. 2 Units.**

This class prepares students to tell their stories in front of the audience for Beyond Sex Ed: Intimacy & Relationships in Spring 2018. Do we need love? And if so, what does it look like? In this class, students will learn about relationships from the inside-out: through an examination and telling of their lived experiences. We will explore various perspectives on intimacy and relationships that illuminate different aspects of our lives, and then dive into our own stories to discover the many facets of intimacy. Due to the personal nature of the topic, we will emphasize safety, trust, and confidentiality throughout. The class offers the structure and guidance to 1) mine your life for stories, 2) craft the structure and shape of your stories, and 3) perform with presence, authenticity, and connection.

Same as: FEMGEN 21S

**TAPS 21T. StoryCraft: On Sexuality. 2 Units.**

What is "sexuality education", and what could it be? How do I tell a compelling story? In this class, students will learn about sexuality and storytelling from the inside out. We will explore various perspectives on sexuality that illuminate different aspects of our lives and then dive into our own stories to discover the richness and vibrancy of human sexuality. Due to the personal nature of the topic, we will emphasize safety, trust, and confidentiality throughout. The class offers the structure and guidance to 1) mine your life for stories, 2) craft the structure and shape of your stories, and 3) perform with presence, authenticity, and connection. Students will be selected from this class to tell their stories in Beyond Sex Ed: Consent & Sexuality at Stanford during NSO 2018. Before enrolling, ensure that you will be on campus Sept 20-22, 2018 for rehearsal and performance. Email the TA, Eisa, with any questions, equalshamma@stanford.edu. Class will be held in KINGSCOTE Gardens First Floor Conference Room.

Same as: FEMGEN 21T

**TAPS 22. Scene Work. 1-2 Unit.**

For actors who complete substantial scene work with graduate directors in the graduate workshop.

**TAPS 220A. Being John Wayne. 5 Units.**

John Wayne's imposing corporeality and easy comportment combined to create an icon of masculinity, the American West, and America itself. Focus is on the films that contributed most to the establishment, maturation, and deconstruction of the iconography and mythology of the John Wayne character. The western and war film as genres; the crisis of and performance of masculinity in postwar culture; gender and sexuality in American national identity; relations among individualism, community, and the state; the Western and national memory; and patriotism and the Vietnam War.

Same as: AMSTUD 220B, FILMSTUD 220

**TAPS 231. Advanced Stage Lighting Design. 1-5 Unit.**

Individually structured class in lighting mechanics and design through experimentation, discussions, and written reports. Prerequisite: 131 or consent of instructor.

**TAPS 232. Advanced Costume Design. 1-5 Unit.**

Individually structured tutorial for costume designers. May be repeated for credit. Prerequisite: 132 or consent of instructor.

**TAPS 233. Advanced Scene Design. 1-5 Unit.**

Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.

**TAPS 234. Advanced Stage Management Project. 2-9 Units.**

For students stage managing a Department of Drama production. Prerequisite: 134.

**TAPS 248. Family Drama: American Plays about Families. 5 Units.**

Focus on great dramas about family life (Albee, Kushner, Shephard, Vogel, Kron, Nottage, Parks). Communication in writing and speaking about conflict central to learning in this class.

Same as: ENGLISH 148

**TAPS 25. Acting Short Narrative: From Shakespeare to YouTube. 2 Units.**

This course will help beginning students understand basic dramatic structure for acting short scenes. Using classic models (Euripides, Shakespeare, Noel Coward, Stephen Sondheim), we will explore how compelling dramatic scenes are constructed. Students will work with the instructor and with professional actors from Stanford Repertory Theater to come to grips with what makes these scenes successful and how best to bring them to life. As a final project, students will work together to develop and write their own short dramatic scenes, suitable for posting on YouTube.

**TAPS 252. Objects and Things: Theater, Performance, and Material Culture. 4 Units.**

Objects, devices, machines, technologies—how do we engage with the material things that come across our research, into our performances, and out of our lives? This course examines how various scholars, theorists, and practitioners have defined and engaged with material culture. We will read popular theories of thing-ness including but not limited to object-oriented ontology (Bill Brown and Jane Bennett), commodity things (Arjun Appadurai), actor-network theory (Bruno Latour), scriptive things (Robin Bernstein), and prop theory (Andrew Sofer). The course will use their theories as lenses on the objects of our own research, countering the Western historiography through case studies, alternative readings, and in-class presentations. New work from performance studies (Uri McMillian etc.) will also provide current case studies in scholarship. Focusing on theater and performance studies, this class will also draw on sociology, anthropology, the history of technology, and art history.

**TAPS 253T. Virtual Realities: Art, Technology, Performance. 2-4 Units.**

Contemporary virtual reality extends a long-standing quest to create a fully immersive, multisensory environment, a quest that may go back to the earliest cave paintings and includes such projects as cathedrals, operas, panoramas, theme parks, video games, and multimedia "happenings." What is VR's relation to this long and varied history? What are the ethics, aesthetics, promises, and perils of this new medium? What is meant by "immersion," "interactivity," and "presence," and how is VR changing those terms? How might VR relate to contemporary immersive theater and installation art - as well as to the mediatization of society more generally?.

**TAPS 256V. Vital Signs: Performance in the 21st Century. 1 Unit.**

The first decade and a half of the 21st century have been transformative for performance art. On the one hand, it brought an unprecedented cultural acceptance of this art form, which is now featured in most prestigious museums and art festivals; on the other, the most recent generation of performance artists is showing a great awareness of the historicity and complexity of this form. In this class, we will try to recognize and investigate these and other prominent features of performance art produced since the turn of the millennium. We will use as our primary case studies performances that will be featured in the series *Vital Signs: Contemporary Performance Art Series*, hosted by TAPS in 2017-2018. The primary objective of the series is to highlight and showcase underrepresented performance forms such as experimental performance art, durational art, and body art, among others, by artists from communities that remain invisible or underrepresented in mainstream performing arts. The series is curated by the Los Angeles-based artist Cassils, who has been listed by the Huffington Post as 'one of ten transgender artists who are changing the landscape of contemporary art' and has achieved international recognition for a rigorous engagement with the body as a form of social sculpture. Cassils's curatorial vision is to present established performance artists alongside emerging artists. Each quarter, a pair of artists will visit Stanford for two days (Thursday-Friday). On day one of their visit they will offer a workshop or a public performance, and on the second day they will engage in a public dialogue. The class will meet each quarter for three weeks: before, during, and after the artists' visit. This way, the students will have an opportunity to prepare for the visit, engage with the visiting artists, and reflect on their work. They will receive their grades upon completion of the class, in the spring of 2018.

Same as: ARTSTUDI 256V, TAPS 156V

**TAPS 258. Black Feminist Theater and Theory. 4 Units.**

From the rave reviews garnered by Angelina Weld Grimke's lynching play, Rachel to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorriane Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan-Lori Parks, Ntzoze Shange, Pearl Cleage, Sarah Jones, Anna DeVeare Smith, Alice Childress, Lydia Diamond and Zora Neale Hurston.). Same as: AFRICAAM 258, CSRE 258, FEMGEN 258X

**TAPS 260. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, FEMGEN 160, TAPS 160

**TAPS 265C. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, CLASSICS 237, TAPS 165C

**TAPS 267. Revolutions in Theater. 4 Units.**

This course surveys the period from the turn of the 20th century until WWII, during which the European avant-garde movements transformed modern art. This period in history is marked by dynamic political events that had a deep impact on experimental art and on culture in general. This interaction between poetics and politics makes the first decades of the 20th century the formative period of western and global theater.

Same as: TAPS 167H

**TAPS 268H. Poor Theater. 4 Units.**

The goal of this class is not to offer a survey of Happenings and other happening-related art of the late twentieth century. Instead, we will use Happenings as a paradigm of "poor theater" and "poor art" - umbrella terms for a number of experimental performance and art practices that emerged in the aftermath of the WWII. We will use the idea of poor theater as an organizing principle in our investigation of the main currents in the experimental performance in the last five decades. The class has a tripartite structure. First we will outline the paradigm of happenings, then trace the origins of Happenings in music, visual arts and theater of the mid twentieth century, and finally look at Happenings' immediate impact, as well as at its ripple effects that continued to reverberate long after the disappearance of this new art form. This course counts as a Writing in the Major course for TAPS in 2016-17.

Same as: TAPS 168H

**TAPS 275T. Collaborative Theater-Making. 1-4 Unit.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. In this workshop, students will collaborate on the creation of one of these plays, which explores the intersection of class and race. The point of this class will be to replicate as closely as possible Lee's process for developing a new play in a professional setting. Students will "learn by doing" as they serve as actors, assistant directors, and dramaturgs in the same way that her actual actors, assistant directors, and dramaturgs would do. Please note that this is not designed to be an acting class with lots of fun moving around. There is no guarantee that every student will have a chance to perform. Also, Lee's new play development process is challenging, slow, and often requires sitting around a table having gruelingly intense conversations for hours at a time. This class is designed to teach students skills they need to succeed in a professional theater environment. Please contact the instructor ASAP at [yjl@stanford.edu](mailto:yjl@stanford.edu) for an application, which will be due on March 1, with notifications being sent out on March 15. If you find out about this class after the application deadline and send the instructor an email asking her to allow you to apply late, you must present a convincing explanation for why an exception should be made in your case. Nobody who misses the first class will be permitted to take the course.

Same as: TAPS 175T

**TAPS 277. Dramatic Writing: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, FEMGEN 177, TAPS 177

**TAPS 277W. Workshop with Young Jean Lee. 2-4 Units.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. In this workshop, students will help to collaboratively perform, direct, and rewrite the script of one of these plays, which is about the intersection of class and race. The class will involve acting for students who want to act, directing for students who want to direct, and writing for students who want to write. The current character breakdown is as follows: 2 black women, 1 Asian-American woman, 1 Colombian woman, 1 Mexican-American man, 2 black men, 2 white women, 2 white men.

Same as: CSRE 177I, TAPS 177W

**TAPS 278. Intensive Playwriting. 4 Units.**

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: CSRE 178B, TAPS 178B

**TAPS 278C. Writing a Full-Length Play. 2-4 Units.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. This workshop will guide students through the process of writing a full-length play, and will focus on helping students to find their own voices. Students will be required to write every week and share their work with the class, completing a full-length first draft by the end of the term. This class will be geared towards generating new material, rather than on editing in response to critiques, which will be covered in a spring course, EDITING A FULL-LENGTH PLAY. Topics to be discussed: the relationship between naturalistic and experimental theater; writing about unfamiliar subjects; and writing what you are afraid to write. Students must contact the instructor at [yjl@stanford.edu](mailto:yjl@stanford.edu) ASAP in order to obtain an application for the class, which will be due on December 1.

Same as: TAPS 178C

**TAPS 278D. Editing a Full-Length Play. 1-4 Unit.**

To participate in this workshop, students must bring in a draft of a full length straight play for revision, which was written in part one of this course, WRITING A FULL-LENGTH PLAY. In conjunction with a variety of other editing techniques, students will focus on editing in collaboration with others. They will learn how to edit in response to hearing their plays read aloud; how to give and solicit the most useful kinds of feedback; how to cope with harsh criticism; what to do when people are offended by what they have written; how to know which notes to pay attention to and which notes to ignore; and how to let go of ideas and text that are not working. Other topics to be discussed: getting your work produced vs. self-producing; directing your own work vs. working with a director; and starting your own theater company. Enrollment for this course is closed. Same as: TAPS 178D

**TAPS 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, CSRE 279C, FEMGEN 179C

**TAPS 28. Makeup for the Stage. 2 Units.**

Techniques of make-up application and design for the actor and artist including corrective, age, character, and fantasy. Emphasis placed on utilizing make-up for development of character by the actor. Limited enrollment.

**TAPS 284. Empathy Lab. 5 Units.**

This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor.

Same as: ANTHRO 379

**TAPS 289. Buechner and Wedekind. 3-5 Units.**

Modern theatre owes an incalculable debt to two German playwrights: Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). We will read their still-shocking portraits of sex, madness, and social brutality in plays such as *Woyzeck* and *Spring's Awakening*, and explore the international journeys these works have made from stage to film and from opera to musical theatre.

**TAPS 289A. Interactive Art / Performance Design. 2 Units.**

This class is for those who want the experience of designing and creating interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. This is a two-quarter long commitment during which students will first learn the design, planning, story boarding, budgeting, engineering, proposal creation and concept pitching of projects for applying for grants and presenting to funders. The second quarter will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part one of a two course series: ME 289A&B.

Same as: ME 289A

**TAPS 289B. Interactive Art / Performance Creation. 3-4 Units.**

This class is the continuation of ME289A where students experience the designing and creating of interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. During this second quarter students will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part two of a two course series : ME 289A&B.

Same as: ME 289B

**TAPS 29. Theater Performance: Acting. 1-3 Unit.**

Students cast in department productions receive credit for their participation as actors; 1-2 units for graduate directing workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated for credit. Prerequisite: consent of instructor.

**TAPS 290. Special Research. 1-5 Unit.**

Individual project on the work of a playwright, period, or genre.

**TAPS 292. Nitery Board Practicum. 1 Unit.**

Credit given for student board members of the Experimental Nitery Studio. Undergraduate students should enroll in TAPS 192. Ph.D. students should enroll in TAPS 292.

Same as: TAPS 192

**TAPS 30. Introduction to Theatrical Design. 4 Units.**

Introduction to Theatrical Design is aimed at students interested in exploring the fundamentals of design for the stage. Students are introduced to the practical and theoretical basics of design and are challenged to answer the question: What makes good design? Students should expect to try their hand at communicating their ideas visually through research, drawing, sketching and model making. Readings, field trips, guest lecturers and class discussion will complement these projects. This course is intended as a gateway to more specialized courses in set, costume and lighting design and is also an excellent primer for actors, directors and scholars who wish to know more about design. Collaboration will be emphasized. No prior experience in these areas is necessary.

**TAPS 31. Introduction to Lighting and Production. 4 Units.**

Good visual storytelling begins and ends with good lighting. All visual storytelling forms—from photos to films to stage productions—provide a canvas in which lighting paints the scene. Lighting sets a mood, a tone, and can shape character and stories. This course teaches critical thinking, how to conduct thorough research, practical skills, and a mindfulness for live artforms.

**TAPS 311. Performance and Historiography. 4 Units.**

This graduate seminar introduces you to advanced methodologies in two key areas of theatre and performance studies research: historiography and ethnography. The course is divided into two sections. The first concentrates on questions of historiography and the archive as they relate to studies of theater, dance, and performance. We will think about how events have been historicized, how absence has been represented, and how bodies are re-figured and remembered, and we will investigate important principles and best practices of performance documentation and historiography. The second part of the course explores the relationship between performance and ethnography. We will discuss different critical perspectives on ethnographic methods and data gathering, including participant-observation fieldwork and interview techniques. This course purposefully blends theory and practice, connecting philosophical discussions to concrete case studies, field trips, and your own research practices. In this spirit, you will also be encouraged to conduct research and present findings in different modes and media.

**TAPS 313. Performance and Performativity. 1-4 Unit.**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specular/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

Same as: ENGLISH 313, FEMGEN 313

**TAPS 314. Performing Identities. 4 Units.**

This course examines claims and counter-claims of identity, a heated political and cultural concept over the past few decades. We will consider the ways in which theories of performance have offered generative discursive frameworks for the study of identities, variously shaped by vectors of race, gender, sexuality, religion, class, nation, ethnicity, among others. How is identity as a social category different from identity as a unique and personal attribute of selfhood? Throughout the course we will focus on the inter-locking ways in which certain dimensions of identity become salient at particular historical conjunctures. In addition, we will consider the complex discourses of identity within transnational and historical frameworks. Readings include Robin Bernstein, Ann Pellegrini, Tavia Nyong'o, Jose Munoz, Michael Taussig, Wendy Brown, Talal Asad, Jasbir Puar, among others.

Same as: FEMGEN 314

**TAPS 315. Dramaturgy. 4 Units.**

In this seminar, we will take the conventional idea of dramaturgy for narrative performance as developed in Western European theater since the enlightenment, and investigate its relation to non-narrative forms of performance in 20th and 21st (performance art, conceptual dance). Further, we will use dramaturgical procedures to explore the ideological content of performance and position of art institutions in our society. Finally, the students will get acquainted with production dramaturgy and get necessary tools to take the role of dramaturgs in actual performance productions.

Same as: TAPS 151

**TAPS 319. Modern Theatre. 1-5 Unit.**

Modern theatre in Europe and the US, with a focus on the most influential works from roughly 1880 to the present. What were the conventions of theatrical practice that modern theatre displaced? What were the principal innovations of modern playwriting, acting, stage design, and theatrical architecture? How did modern theatrical artists wrestle with the revolutionary transformations of the modern age? Plays by Büchner, Ibsen, Strindberg, Shaw, Chekhov, Wilde, Wedekind, Treadwell, Pirandello, Brecht, O'Neill, Beckett, Smith, Parks, and Nottage.

Same as: GERMAN 319, TAPS 119

**TAPS 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, CSRE 32A, EDUC 32, EDUC 432

**TAPS 321. Proseminar. 3 Units.**

Prepares PhD students for the academic profession by honing skills in presenting and publishing research, navigating the job market, and managing a career.

**TAPS 32F. Godiva to Gaga: A Survey of Western Fashion and Societal Implications. 4 Units.**

The evolution of fashion and costume with an emphasis on the relationship between social, cultural, and political events and clothing style. Attention to major designers and creators and their shaping of resultant fashion and artistry in clothing.

**TAPS 33. Introduction to Technical Theater and Production. 2-3 Units.**

A fun, collaborative, hands-on course subjecting students to the basics of scenery, props, painting, rigging, sound, lighting, costumes, and other production elements used in theater. This class is good for all types of theater students interested in producing theater at Stanford and beyond.

**TAPS 335. Introduction to Graduate Production. 1 Unit.**

This course introduces first-year TAPS PhD student to the TAPS production process and resources. Meetings will be scheduled ad hoc.

**TAPS 336. Comprehensive 1st Year Exam. 2 Units.**

Required course for first-year Ph.D. students in Theater & Performance Studies. Credits for work toward the Comprehensive 1st-year Exam taken in late February or Early March.

**TAPS 34. Stage Management Techniques. 3 Units.**

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.

**TAPS 341E. English Drama Before Shakespeare. 5 Units.**

English dramatic and theatrical culture from the mystery cycles of the late medieval period to the establishment of professional playhouses in late sixteenth-century London. Different dramatic genres (interludes, moralities, farces, tragedies, comedies, histories, pastoral plays), performance venues (streets, households, inns, schools, universities, court, playhouses), and dramatic traditions (classical, native, continental European) will be represented. Authors (of those who have names) range from Medwall, Skelton, Heywood, Preston, and Edwards to Lyly, Kyd, Greene, Peele, and Marlowe.

**TAPS 344A. Gender and Performance. 5 Units.**

This seminar seeks to investigate relationships between performance, gender, and the body politic through a discussion of embodiment, body cultures, queerness, desire, representation. Through a weekly engagement with film texts from across the world as well as theoretical perspectives on gender and performance in various geo-political contexts, we will explore the intersections of gender with race, class, national discourse, and performance traditions. The seminar is conceived to be interdisciplinary and participants are encouraged to introduce and work with texts from other disciplines, including visual arts, theatre, dance, literature etc. No prior engagement with film studies is required. Screening times may range from 90 to 180 minutes.

Same as: FEMGEN 434, FILMSTUD 434, MUSIC 434

**TAPS 351. Great Books: Dramatic Traditions. 4 Units.**

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons. This course counts as a Writing in the Major course for TAPS in 2016-17.

**TAPS 356. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.**

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.

Same as: AFRICAAM 156, CSRE 156T, TAPS 156

**TAPS 356A. Warhol: Painting, Photography, Performance. 4 Units.**

This course focuses on the career of Andy Warhol as a means to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warhol's visual production (e.g. his career as a commercial artist in the 1950s and his everyday photographs of the 1970s and 1980s) alongside his now-canonical Pop paintings of the 1960s. Warhol's critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warhol's legacy and wide-ranging influence on American culture in the decades since his death in 1987.

Same as: ARTHIST 156A, ARTHIST 356A, TAPS 156A

**TAPS 356T. Intro to Psychoanalysis as a Critical Method. 3-5 Units.**

Primary reading in Freud, Lacan, Laplanche, Irigaray and Kristeva. Secondary readings in film theory (Mulvey to Silverman), art history (Bryson, Bersani) and poststructuralism (Derrida, Foucault, Butler). Same as: ENGLISH 356T

**TAPS 357. World Drama and Performance. 4 Units.**

This course takes up a geographically expansive conversation by looking at modern and contemporary drama from nations including Ghana, Egypt, India, Argentina, among others. Considering influential texts from the Global South will also enable us to explore a range of themes and methodologies that are radically re-shaping the field of Performance Studies. We will examine the relationship between colonialism and globalization, empire and capital, cosmopolitanism and neoliberalism. Re-situating our perspective from the Global South and the non-western world, we will provincialize Europe and probe the limits of its universalizing discourses.

Same as: TAPS 157

**TAPS 359. The Other Body/The Body Other. 4 Units.**

Writing creatively through critical thinking. Writing critically through creative imagination. Advanced Creative/Critical Writing course, designed for those "other" creative writers and thinkers who want to use language in original, innovative and embodied introspective ways to respond to (and from) non-dominant cultures, themes and identities. All genres. Readings, performances, films assigned to provoke an(other) response. Permission of Instructor.

**TAPS 364T. Queer Art and Performance. 4-5 Units.**

Examines the late 19th, 20th and 21st century forms of performance—including examples from drama, theater, cabaret, and performance art – through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: TAPS 164T

**TAPS 370. Directing and Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.**

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material.

Same as: TAPS 170

**TAPS 370A. The Director's Craft. 4 Units.**

This workshop class guides students through the directing process from investigating the big ideas of a play and analysing the action to organizing and running rehearsals to building up the world of the play through character work and visual composition. Over the quarter we will look at the use of creative visualization and improvisation alongside working with actors on ideas, emotions, relationships, textual analysis and blocking. This course also attends to the process of communicating with designers and production teams as well as structuring rehearsals, run-throughs and technical and dress rehearsals. Each student will select a theatrical text to work from across the quarter. In many cases the student's text will be a play that they are planning to direct in future, such as productions for student groups like Ram's Head or Stanford Shakespeare Company, TAPS capstone projects, TAPS 2nd year grad shows and/or TAPS Second Stage productions. No previous directing experience is necessary.

Same as: TAPS 170A

**TAPS 371. Performance Making. 4 Units.**

A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

Same as: TAPS 171

**TAPS 371P. Theater and Performance Making. 4 Units.**

A creative workshop offering a range of generative exercises and techniques in order to devise, compose and perform original works. Students will explore a variety of texts (plays, poems, short stories, paintings) and work with the body, object and site. Students will be encouraged to think critically about various compositional themes and ideas including: the relationship between form and content, aesthetics, space, proximity, and audience. Students will work independently and collaboratively creating original performances.

Same as: TAPS 101P

**TAPS 372. Directing Workshop: The Actor-Director Dialogue. 4 Units.**

This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

Same as: TAPS 170B

**TAPS 373. Theater Production Lab: Dramaturgy and Development. 4 Units.**

173/373: In this course students will explore general dramaturgical history and methodology as well as engaging in applied dramaturgy from evaluating works for a production season, to developing dramaturgical materials for specific productions. Students will agree the focus of their course-work with the instructor depending on their specific interests. The TAPS 2nd year grad students enrolled in this course will act as a dramaturgical team, supporting the TAPS winter production of *The Tempest* in Pigott Theater March 2-11 2017, directed by Amy Freed. Students will support the actors and the creative team through providing research materials and presentations and helping actors with guided research, write program essays for general audiences, attend rehearsals and provide constructive notes, and curate and/or present on a Preface panel prior to opening night.

Same as: TAPS 173D

**TAPS 376. Projects in Performance. 4 Units.**

Creative projects to be determined in consultation with Drama graduate faculty and production advisor.

**TAPS 377. Graduate Directors' Staged Reading Project. 2 Units.**

Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.

**TAPS 379. Chicano & Chicana Theater: Politics In Performance. 4 Units.**

This is a practicum course, where the basic tenets and evolving politics and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the-quarter play performance in the Niteri Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: CHILATST 179

**TAPS 379A. Empathy Lab II: The Potential of Anthropology for the 21st Century. 1-5 Unit.**

This interdisciplinary arts/anthropology lab class will study and practice methods from performing arts to expand our understandings of cultural contact and develop methods of thinking more expansively about the creative elements and possibilities for ethnographic fieldwork and critical cultural studies. Prerequisite, by instructor consent.

Same as: ANTHRO 379A

**TAPS 39. Theater Crew. 1-3 Unit.**

For students working backstage, on run crew, or in the theater shops on TAPS department productions. Night and weekend time required. Pre-approval from Jane Casamajor (janecasa@stanford.edu) is required for enrollment.

**TAPS 390. Directed Reading. 1-6 Unit.**

Students may take directing reading only with the permission of their dissertation advisor. Might be repeatable for credit twice for 6 units total.

**TAPS 39D. Small Project Stage Management. 2-4 Units.**

For students Stage Managing a TAPS Senior Project or Assistant Stage Managing a TAPS department production. Pre-approval by Laxmi Kumaran (laxmik@stanford.edu) required for enrollment.

**TAPS 41N. Inventing Modern Theatre: Georg Büchner and Frank Wedekind. 3 Units.**

The German writers Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). Many of the most important theater and film directors of the last century, including Max Reinhardt, G. W. Pabst, Orson Welles, Robert Wilson, and Werner Herzog, have wrestled with their works, as have composers and writers from Alban Berg and Bertolt Brecht through Christa Wolf and Thalia Field. Rock artists as diverse as Tom Waits, Lou Reed, Duncan Sheik, and Metallica have recently rediscovered their urgency. Reading these works in translation and examining artistic creations they inspired. Classroom discussions and written responses; students also rehearse and present in-class performances of excerpts from the plays. The aim of these performances is not to produce polished stagings but to creatively engage with the texts and their interpretive traditions. No previous theatrical experience required.

**TAPS 42. Costume Construction. 2 Units.**

Course will cover the basics of costume and garment construction. Includes hand and machine skills as well as basic patterning ideas that may be applied to more advanced projects. Lecture/Lab.

**TAPS 50. Arts in Context: The Process of Cultural Production. 1-2 Unit.**

A combination of practical skill-building and discussions with practicing arts professionals, this course will provide students with the foundational skills necessary to produce programs on campus and/or work in the arts. The talks and workshops will cover topics including curatorial practice and programming (for both visual and performing arts); grant writing and other fundraising methodology; budgeting and financial management; contracts and other legal considerations; and public relations and marketing. Every session is open for drop-in attendance, or students may take the entire series for credit. May be repeat for credit. Same as: ARTSINST 50, MUSIC 50

**TAPS 802. TGR Dissertation. 0 Units.**

(Staff).
