The student's plan of courses is subject to approval by the Graduate Director. No field of specialization is expected, but students may focus work in particular areas. Advanced and graduate courses in other departments may be taken in consultation with the adviser. No thesis is required; a thesis, if elected, may count for as many as 9 units.

Each student demonstrates reading knowledge of at least one foreign language.

The department allows coterminals to count courses as early as their first quarter of sophomore year toward their master's degree. Course transfers require department approval and cannot be processed after the bachelor's degree has been conferred. All University coterminal policies apply.

## Application and Admissions

At this time, eligibility for admission to the master's program is restricted to current Stanford undergraduates and graduate students.

### Current Stanford Undergraduates

Religious Studies accepts coterminal applications in Winter Quarter (due end of the second week of classes) for admission starting Spring Quarter. Only complete applications submitted by the deadline are reviewed. A complete application includes the following:

- Complete Coterminal Application
- Two confidential letters of recommendation, one of which must be from a Stanford faculty member familiar with applicant's academic work
- Statement of purpose, not to exceed two pages
- Undergraduate transcript(s)
- Preliminary program proposal

### Current Stanford Graduate Students

- Application for Current Stanford Graduate Students
- Two confidential letters of recommendation, one of which must be from a Stanford faculty member familiar with applicant's academic work
- Undergraduate and graduate transcripts
- Statement of purpose, not to exceed two pages
- Preliminary program proposal

## University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer

of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Financial Aid

The Religious Studies department does not provide financial assistance to coterminal or master's students. For information on student loans and other sources of support, consult the Financial Aid Office (<http://financialaid.stanford.edu>).

## Doctor of Philosophy in Religious Studies

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 50)" section of this bulletin. The Ph.D. in Religious Studies signifies special knowledge of an interdisciplinary field of study and potential mastery of an area of specialization within it. The faculty of the department have established certain fields of study in which the department's strengths and those of other Stanford departments cohere. They are: Buddhist studies, Islamic studies, Jewish studies, and modern religious thought, ethics, and philosophy. Students who wish to specialize in other fields must obtain early approval by the faculty. Each of these areas of specialization follows a shared structure of study.

## Degree Requirements

The following requirements are in addition to the University's basic requirements.

### 1. Residence

Each student completes three years (nine quarters) of full-time study, or the equivalent, in graduate work beyond the B.A. degree, and a minimum of 135 units of graduate course work (excluding the dissertation).

### 2. Required Courses

The 135 units of graduate course work must include the following:

a.			
	RELIGST 304A	Theories and Methods	4
	RELIGST 304B	Theories and Methods	4
	RELIGST 391	Teaching Religious Studies	3

b. Two courses in an area outside the student's field.

c. The remainder of the course work is individually designed, in consultation with the adviser.

### 3. Languages

Each student demonstrates a reading knowledge of two foreign languages, including French or German. One of those language requirements should be fulfilled by the time of advancing to candidacy at the end of the second year. Competence in the second language must be demonstrated at the time of the qualifying examination. Each student also demonstrates reading knowledge of other ancient or modern languages necessary for the field of study, area of specialization, and dissertation topic.

### 4. Candidacy

At the end of each academic year, the department's faculty recommend second-year students for candidacy on the basis of all relevant information, and especially on the student's candidacy dossier that includes the approved declaration of an area of specialization, certification for one foreign language, and two substantial papers written for courses during the previous two years. Students are required to take RELIGST 304A Theories and Methods, RELIGST 304B Theories and Methods, and RELIGST 391 Teaching Religious Studies prior to candidacy.

### 5. Paper-in-Field

During the third year, under the supervision of their advisers, students prepare a paper suitable for submission to an academic journal in their field. The paper is read and approved by at least two faculty members in the department. Students are encouraged to register for RELIGST 392 Paper in the Field while working on the paper.

### 6. Teaching Internship

At least one teaching internship under the supervision of faculty members is undertaken at a time negotiated with the Graduate Director. Students receive academic credit for the required internship, which is a part of academic training and not of employment.

### 7. Qualifying Examination

To qualify for writing a dissertation, the student must pass a comprehensive examination in the chosen field and the area of specialization, typically during the first quarter of their fourth year. The student must complete the second language requirement before taking the qualifying examination. The qualifying examination is normally conducted by a committee of at least three Academic Council members of the department, one of whom is the adviser. One faculty member may be from outside the department with permission of the Director of Graduate Studies.

### 8. Dissertation

The dissertation contributes to the humanistic study of religion and is written under the direction of the candidate's dissertation adviser and at least two other members of the Academic Council. The University Oral examination is a defense of a completed draft of the dissertation.

- Dissertation Committee*—The dissertation committee is formed after successful completion of the qualifying examinations. It is normally composed of the dissertation adviser and at least two Academic Council members of the Religious Studies department. One non-departmental faculty member may serve as a reader when approved by the Director of Graduate Studies.
- Dissertation Proposal*—Candidates submit their dissertation proposal in consultation with their advisers. It is read and approved by the three members of the dissertation committee.

### 9. University Oral Examination

This examination, required by the University of Ph.D. students, is a defense of a completed draft of the dissertation. The composition of the examination committee is set by University regulation: five or more faculty, normally all of whom are members of the Academic Council, one of whom must be outside the department to serve as chair of the committee. Normally, the examining committee includes all members of the dissertation committee. A majority of those voting must be Academic Council faculty from within the department.

## Ph.D. Minor in Religious Studies

Candidates for the Ph.D. in other departments may select a Ph.D. minor in Religious Studies.

### Degree Requirements

The minor requires at least 24 units in Religious Studies at the 200 level or above. Four of the 24 units should be in:

RELIGST 304A Theories and Methods

Units

4

RELIGST 304B Theories and Methods 4

**Optional Courses for the Minor**

The student should choose any of the courses offered in the department at the 200 level or above, for the equivalent of at least 24 units. Other courses can be chosen in consultation with the Graduate Director.

**Faculty**

*Emeriti: (Professors)* Carl W. Bielefeldt, Arnold Eisen, Bernard Faure, Hester G. Gelber, Robert C. Gregg, Van Harvey

*Chair:* John Kieschnick

*Director of Graduate Study:* Paul Harrison

*Director of Undergraduate Study:* Brent Sockness

*Professors:* Paul Harrison, John Kieschnick, Michael Penn, Jane Shaw, Thomas Sheehan, Lee Yearley

*Associate Professors:* Charlotte Fonrobert (on leave), Brent Sockness

*Assistant Professors:* Elaine Fisher, Kathryn Gin Lum, Ariel Mayse, Michaela Mross

*Senior Lecturer:* Barbara Pitkin

*Lecturers:* Manuel de Oliveira, Eric Huntington, Alaina Morgan, Sarah Wilburn

*Courtesy Professor:* Mark Lewis

*Courtesy Associate Professor:* Ari Y. Kelman

*Affiliated Faculty:* Fiona Griffiths

**Cognate Courses**

The following courses in other departments/programs have been approved by the Chair as fulfilling requirement 2 (p. ) for the bachelor's degree.

	<b>Units</b>
POLISCI 149S Islam, Iran, and the West	5
HISTORY 293E Female Divinities in China	4-5

**Overseas Studies Courses in Religious Studies**

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

	<b>Units</b>
OSPKYOTO 13 Contemporary Religion in Japan's Ancient Capital: Sustaining and Recasting Tradition	4
OSPMADRD 74 Islam in Spain and Europe: 1300 Years of Contact	4

# RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

Courses offered by the Center for Russian, East European and Eurasian Studies are listed under the subject code REES on the Stanford Bulletin's ExploreCourses web site.

The Center for Russian, East European and Eurasian Studies (CREEES) coordinates the University's teaching, research, and extracurricular activities related to Russia, Eastern Europe, Central Asia, and the Caucasus and administers a one-year interdisciplinary M.A. graduate degree program. Information on the center's degree programs and other activities is available at the CREEES (<http://CREEES.stanford.edu>) web site. CREEES and its degree programs are directed by the CREEES Steering Committee, composed of faculty members associated with the Center. The program draws on the strengths of nationally recognized area faculty and research affiliates and significant library and archival collections at Stanford. The Center is a U.S. Department of Education Title VI National Resource Center for Russia, East Europe, and Eurasia.

## Undergraduate Programs in Russian, East European and Eurasian Studies

Students interested in a minor should consult the Director of Undergraduate Studies in the Department of Slavic Languages and Literatures which offers the following relevant minors:

- Russian, East European and Eurasian Studies
- Russian Language
- Russian Language, Literature and Culture
- Russian Culture

## Slavic Theme House

Slavianskii Dom (SlavDom), at 650 Mayfield Avenue, is an undergraduate residence which houses 50 students and offers a wide variety of opportunities to expand knowledge, understanding and appreciation of Russia and the nations of East Europe, the Caucasus and Central Asia.

## Overseas Studies Programs

Undergraduates interested in the study of languages, history, culture and social organization of the countries of Russia, Eurasia and East Europe may apply to study at the Stanford centers in Istanbul and Berlin. Information about these programs is available at the Bing Overseas Studies Program (<http://bossp.stanford.edu>) at web site.

## Graduate Programs in Russian, East European and Eurasian Studies

The center offers an M.A. in Russian, East European and Eurasian Studies, a coterminal M.A. in Russian, East European and Eurasian Studies, and a joint M.A./J.D. in conjunction with the Stanford Law School.

## Learning Outcomes (Graduate)

The purpose of the master's program and the joint M.A./J.D. program is to further develop knowledge and skills in Russian, East European and Eurasian Studies and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

## Financial Aid

Subject to funding, CREEES may have a limited number of Foreign Language and Area Studies (FLAS) fellowships for U.S. citizens or permanent residents. Additional financial aid may also be available from CREEES. Applicants to the M.A. program have priority in the annual FLAS competition; in recent years CREEES has also awarded FLAS fellowships to students enrolled in the School of Education and the School of Law. Consult the CREEES associate director for further information about the application and award process. Applications for FLAS fellowships can be obtained at the CREEES (<http://CREEES.stanford.edu/grants>) web site.

## Doctoral Programs

Since the University does not offer a Ph.D. in Russian, East European and Eurasian Studies, students wishing to pursue a REEES-related doctoral program must apply to one of the departments offering a Ph.D. with an emphasis on Russia, Eurasia, or Eastern Europe, such as the departments of History, Anthropology, Political Science, or Slavic Languages and Literatures.

## Undergraduate Minor in Russian, East European, and Eurasian Studies

Students interested in a minor should consult the "Minors in Slavic Languages and Literatures (p. 739)" section of this bulletin which describes the following relevant minors:

- Russian, East European, and Eurasian Studies
- Russian Language
- Russian Language, Literature, and Culture
- Russian Culture

## Master of Arts in Russian, East European and Eurasian Studies

CREEES offers a one-year interdisciplinary master's degree program in Russian, East European and Eurasian Studies for students with a strong prior language and area studies background.

The program structure allows students the flexibility to pursue their particular academic interests, while providing intellectual cohesion through a required core curriculum that addresses historical and contemporary processes of change in the Russian Federation, Eastern Europe, the Caucasus, and Central Asia.

The core curriculum consists of three courses (one each quarter), the REES 200 Current Issues in Russian, East European, and Eurasian Studies seminar series in Autumn and Winter quarters, and REES 300 MA Capstone Seminar in Spring Quarter. The program may be taken separately or coterminal with a bachelor's degree program.

The interdisciplinary M.A. program typically serves three types of students:

1. Those who intend to apply to a Ph.D. program involving Russian, East European and Eurasian studies and who need to enhance their academic skills and credentials
2. Those who intend to pursue careers and/or advanced degrees in such fields as journalism, education, business, government, law, or medicine, and who wish to establish competence in Russian, East European and Eurasian studies.
3. Those who are mid-career professionals and/or students interested in gaining competence or continuing their interest in and wish to gain competence in Russian, East European and Eurasian studies.

## Advising

The advising structure is two-tiered: each M.A. candidate works with the CREEES associate director who advises on the program of course work and monitors the student's progress toward completing the degree. Candidates are also assigned a faculty adviser from the Academic Council faculty, who provides intellectual and academic guidance.

## Admission

Applicants apply electronically; see the Office of Graduate Admissions (<http://gradadmissions.stanford.edu>) web site for a link to the electronic application and general information regarding graduate admission. In addition, prospective applicants may consult with the CREEES associate director regarding the application process.

To qualify for admission to the program, the following apply:

1. Applicants must have earned a B.A. or B.S. degree, or the equivalent.
2. At least three years of college-level language study in Russian, an East European or Central Asian language is preferred. Candidates with fewer years of area language study will be considered.
3. A one-page statement of purpose that explains how the program would advance the applicant's academic or career goals.
4. Applicants must include the following additional materials in their online application: a writing sample of 20 pages or less in English on an academic topic in Russian, East European, or Eurasian studies and a resume of college-level courses taken that are relevant to Russian, East European & Eurasian Studies, including language courses, with self-reported final grades. These additional materials may be uploaded as "Additional Materials" in a single file along with the application.
5. Applicants must send official transcripts from all post-secondary institutions attended to CREEES.
6. All applicants must take the General Test of the Graduate Record Examination (GRE) and have the results sent to Graduate Admissions, Office of the University Registrar.
7. Applicants whose native language is not English and do not possess a U.S. bachelor's degree are expected to take the Test of English as a Foreign Language (TOEFL) and have the results sent to Graduate Admissions, Office of the University Registrar.

The deadline for submission of applications for admission and for financial aid is January 9, 2018. Admission is normally granted for Autumn quarter, but requests for exceptions are considered.

The successful applicant generally demonstrates the following strengths: requisite foreign language study, significant course work in Russian, East European and Eurasian studies in multiple disciplines, outstanding grades in previous academic work, strong analytical writing skills, high GRE scores (particularly verbal and analytical writing), study or work experience in the region, strong letters of recommendation from faculty members in the Russian, East European, and Eurasian Studies field (one letter may be from a language instructor), and a persuasive statement of purpose explaining how the program would advance the applicant's academic and career goals.

## Degree Requirements

Candidates for the M.A. degree must meet University requirements for an M.A. degree as described in the "Graduate Degrees (p. 50)" section of this bulletin.

The M.A. program in REEES can ordinarily be completed in one academic year by a well-prepared student; longer periods of study are permitted.

Requirements to complete the interdisciplinary M.A. degree are principally ones of distribution, with the exception of three required core courses and a core seminar, as described below. Each student, with the

advice of the CREEES associate director, selects courses according to the student's interests, needs, and goals.

All students in the M.A. REEES program must complete a minimum of 48 academic credit units within the following guidelines.

1. *Core Courses:* Students must complete the following 3 core courses during the 2017-18 academic year for 5 units each: REES 301B History and Politics in Russian and Eastern European Cinema during Autumn Quarter (5 units), either REES 224A The Soviet Civilization during Winter Quarter (5 units), and REES 213A Russia and the West during Spring Quarter (5 units).
2. *Core Seminar Series:* REES 200 Current Issues in Russian, East European, and Eurasian Studies is required of all students in the M.A. program in Autumn and Winter quarters (2 units total). The goal of this seminar series is to survey current methodological and substantive issues in Russian, East European and Eurasian studies, acquaint students with Stanford resources and faculty, and present professional development and career options.
3. *Interdisciplinary Course Work:* All courses (other than language courses and approved activity courses) must be taken on the graduate level (200-level or higher). Courses in Russian, East European and Eurasian studies must be completed and distributed among at least three disciplines. All course work applied to the 48-unit minimum must deal primarily with Russian, Eurasian, or East European studies.
4. *Language Study:* Students in the program are encouraged to study Russian, an East European or Central Asian language, or a language from the Caucasus. Credit towards the 48-unit minimum (maximum 4 units per quarter, 12 units total) is allowed for advanced language work.
5. Course work qualifying for the 48-unit minimum must have a letter grade of 'B' or higher. ('B-' does not count for degree credit, nor does 'CR'). Students may apply a maximum of three units of course work with a final grade of 'S' to the 48-unit minimum. 'S' units counting towards the 48-unit minimum must be approved by the CREEES associate director.
6. All courses counting towards the 48-unit minimum must be approved by the CREEES associate director, who ensures that planned course work satisfies requirements towards the degree. The CREEES director and steering committee determine the requirements. The list of pre-approved courses for the current academic year appears below. Students can petition to have courses that do not appear on this list counted towards the degree.
7. *Capstone Requirement:* Students must complete a capstone project (research paper and/or research presentation) in consultation with a faculty advisor, the CREEES director and associate director. Students will enroll in REES 300 MA Capstone Seminar for 1 unit in Spring Quarter.

### Pre-approved courses for 2017-18

The following courses are those that have been pre-approved to satisfy the M.A. interdisciplinary course work requirement for 2017-18. Students may choose from:

		Units
HISTORY 302G	Peoples, Armies and Governments of the Second World War	5
HISTORY 322A	Crime and Punishment in Early Modern Europe and Russia	4-5
HISTORY 324C	Genocide and Humanitarian Intervention	3
HISTORY 326E	Famine in the Modern World	3
HISTORY 329A	Nationhood and Belonging: Poles and Jews	3
IPS 210	The Politics of International Humanitarian Action	3-5
IPS 213	International Mediation and Civil Wars	3-5
IPS 241	International Security in a Changing World	5

IPS 280	Transitional Justice, Human Rights, and International Criminal Tribunals	3-5
MS&E 293	Technology and National Security	3
POLISCI 314D	Democracy, Development, and the Rule of Law	5
REES 200	Current Issues in Russian, East European, and Eurasian Studies	1-2
REES 213A	Russia and the West	5
REES 224A	The Soviet Civilization	4-5
REES 227	All Quiet on the Eastern Front? East Europe and Russia in the First World War	3-5
REES 300	MA Capstone Seminar	1-3
REES 301B	History and Politics in Russian and Eastern European Cinema	5
REES 310	Identity, Memory and Cultural Politics in Post-Soviet Societies	3-5
REES 326	The Russian Revolution: Politics, Society, Culture	3-5
SLAVIC 220	Hacking Russia: Technological Dreams and Nightmares of Russian Culture	3-5
SLAVIC 226	Bakhtin and his Legacy	3-5
SLAVIC 230	18th Century Russian Literature	2-4
SLAVIC 231	Tarkovsky	3-5
SLAVIC 261	Reading Leo Tolstoy in the Digital Age	3-5
SLAVIC 300B	Research Tools and Professionalization Workshop	1
SLAVIC 325	Readings in Russian Realism	3-4
SLAVIC 329	Russian Versification: History and Theory	3-4
SLAVIC 340	Russia's Castaway Classic: Andrei Platonov	3-5
SLAVIC 345	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 346	The Great Russian Novel: Tolstoy and Dostoevsky	2-5
SLAVIC 348	Slavic Literature and Culture since the Death of Stalin	1-5
SLAVIC 356	Vladimir Nabokov: Displacement and the Liberated Eye	1-5
SLAVIC 361	Reading Leo Tolstoy in the Digital Age	3-5
SLAVIC 370	Pushkin	2
SLAVIC 388	20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky	1-5
SLAVIC 395	Russian and East European Theater	1-5

This list of courses may be updated as relevant courses are offered. Courses not appearing on this list may be counted towards the M.A. through a petition process in consultation with the CREEES associate director.

A description of the M.A. program is also available on the web at the CREEES (<https://creees.stanford.edu/content/ma-program>) web site and by request from the Center for Russian, East European and Eurasian Studies.

## Coterminal Master's Program in Russian, East European, and Eurasian Studies

To qualify for a coterminal M.A. degree in Russian, East European, and Eurasian Studies, besides completing University requirements for the B.A. degree, a student must:

1. Submit the Coterminal Online Application (<https://applyweb.com/stanterm>) for admission to the program by the CREEES M.A. admission deadline.
2. Include in the application a proposal which outlines, by quarter, the schedule of courses the student plans to complete toward the M.A.

degree. The student should seek the advice of the CREEES associate director in drafting this schedule. The application also should include:

- a. a current Stanford transcript
  - b. a one-page statement of purpose
  - c. three letters of recommendation from Stanford faculty (one may be from a language instructor)
  - d. a writing sample of 20 pages or less in English on an academic topic in Russian, East European, or Eurasian Studies
3. Applicants must have a grade point average (GPA) of at least 3.0 (B). Coterminal applicants must take the general test of the Graduate Record Examination and have the results sent to Graduate Admissions, Office of the University Registrar.
  4. Complete 15 full-time quarters or the equivalent, or three quarters in full-time residence after completing 180 units; and complete, in addition to the 180 units required for the bachelor's degree, a minimum of 48 units for the master's degree.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Joint Degree Program in Russian, East European, and Eurasian Studies

The joint degree program in Russian, East European, and Eurasian Studies and Law allows students to pursue the M.A. degree in REES concurrently with the Doctor of Jurisprudence (J.D.) degree, with a significant number of courses that may apply to both degrees. It is designed to train students interested in a career in teaching, research, or the practice of law related to REES legal affairs. Students must apply separately to the REES M.A. program and to the Stanford School of Law and be accepted by both. Completing this combined course of study requires approximately four academic years, depending on the student's background and level of language training. For more information, see the Joint Degree Programs (p. 54) section of this bulletin and the Stanford Law School (<http://www.law.stanford.edu>)'s website. Students who have been accepted by both programs should consult with the departments to determine which courses can be double-counted.

*Director of the Center:* Pavle Levi

### Affiliated Faculty and Staff:

*Anthropology:* Ewa Domanska (visiting)

*Art and Art History:* Srđan Keca, Pavle Levi, Karla Oeler, Bissera Pentcheva

*Biology:* Dmitri Petrov

*Comparative Literature:* Burcu Karahan

*Economics:* Geoffrey Rothwell

*Education, School of:* Martin Carnoy

*Engineering, School of:* Margaret Brandeau, Siegfried Hecker, William Perry (emeritus)

*English:* Nancy Ruttenburg

*Freeman Spogli Institute for International Studies:* Coit Blacker, Christophe Crombez, Gail Lapidus (emerita), Kathryn Stoner

*Graduate School of Business:* Ilya Strebulaev

*History:* Robert Crews, Terence Emmons (emeritus), David Holloway, Katherine Jolluck, Nancy Kollmann, Norman Naimark, Aron Rodrigue, Edith Sheffer, Amir Weiner, Ali Yaycioglu, Steven Zipperstein

*Hoover Institute:* Elena Danielson (emerita), John Dunlop (emeritus), Timothy Garton Ash, Paul Gregory, Bertrand Patenaude, Anatol Shmelev, Maciej Siekierski

*International Policy Studies:* Eric Morris

*International Relations:* Jasmina Bojic, Robert Rakove

*Language Center:* Jara Dusatko, Shahla Fahimi, Rima Greenhill, Lessia Jarboe, Leelo Kask, Eugenia Khassina, Alma Kunanbaeva, Suzan Negijp Schatt, Bisera Rakicevic, Eva Soos Szoke, Gerardina Malgorzata Szudelski

*Law, School of:* Allen Weiner

*Linguistics:* Vera Gribanova, Asya Pereltsvaig

*Medicine, School of:* Jayanta Bhattacharya, Grant Miller, Douglas Owens

*Political Science:* Anna Grzymala-Busse, David Holloway, David Laitin, Michael McFaul

*Psychology:* Lera Boroditsky

*Slavic Languages and Literatures:* Lazar Fleishman, Gregory Freidin (emeritus), Monika Greenleaf, Yuliya Ilchuk, Gabriella Safran, Richard Schupbach (emeritus), Nariman Skakov

*Sociology:* Nancy Tuma (emerita), Patricia Young

*Stanford Humanities Center:* TBD

*Stanford Libraries:* Zachary Baker, Liisi Esse, John Eilts, Margarita Nafpaktitis, Karen Rondestvedt (emeritus), Wojciech Zalewski (emeritus)

*Theater and Performance Studies:* Branislav Jakovljevic

# SCIENCE, TECHNOLOGY, AND SOCIETY

Courses offered by the Program in Science, Technology, and Society are listed under the subject code STS on the (<https://explorecourses.stanford.edu/search?filter-term-Autumn=on&filter-catalognumber-STS=on&filter-term-Summer=on&page=0&q=STS&filter-coursestatus-Active=on&view=catalog&filter-term-Spring=on&collapse=&filter-term-Winter=on&academicYear=20142015>) ExploreCourses web site (<https://explorecourses.stanford.edu/search?filter-term-Autumn=on&filter-catalognumber-STS=on&filter-term-Summer=on&page=0&q=STS&filter-coursestatus-Active=on&view=catalog&filter-term-Spring=on&collapse=&filter-term-Winter=on&academicYear=20142015>).

## Mission of the Undergraduate Program in Science, Technology, and Society

The Program in Science, Technology, and Society (STS) aims to provide students with an interdisciplinary framework through which to understand the complex interactions of science, technology and the social world. To major in STS, students work through a common core of courses drawn from the social sciences, the humanities, the natural and physical sciences and engineering. Students pursue coursework in one of five specialized areas:

- Communication and Media
- Innovation and Organization
- Nature and Environment
- Life Sciences and Health
- Politics and Policy

Students may also undertake research in affiliated laboratories and through the honors program for course units. All students complete a capstone project, either by taking one of the senior capstone courses (STS 200) or by applying for and completing an STS honors thesis. Students are encouraged to pursue mastery in at least one field from within the humanities or social sciences and at least one field from within the sciences or engineering. Majors may declare either a B.A. or a B.S. degree (see the specific requirements for each degree).

The Program's affiliated faculty represent over a dozen departments, including Anthropology, Communication, Computer Science, Education, Electrical Engineering, History, Law, Management Science and Engineering, Political Science and Sociology. By learning to bring such a rich collection of disciplinary approaches to bear on questions of science and technology, students graduate uniquely equipped to succeed in professions that demand fluency with both technical and social frameworks. Recent graduates of STS have entered top-ranked Ph.D. and MBA programs and forged successful careers in a variety of fields, including business, engineering, law, public service, medicine and academia.

## Learning Outcomes (Undergraduate)

The Program expects undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Program in Science, Technology, and Society. Students are expected to demonstrate:

1. A knowledge of core theories and methods in the interdisciplinary field of STS.

2. An ability to deploy these theories and methods to analyze interactions between science, technology and society in particular historical and cultural contexts.
3. An ability to critically evaluate empirical evidence and theoretical claims in STS-related debates.
4. An ability to communicate clearly and persuasively about STS issues to a general audience in multiple media including oral presentation and writing.

## Advising and Course Selection

The Program in Science, Technology, and Society offers an advising process that includes faculty, staff and peer advisers. Prospective majors must first meet with a peer adviser and then with the Program's Student Services Officer to determine which degree they will pursue (the B.A. or B.S.) and how they will fulfill the Program's basic requirements. When they are ready to declare, they meet with the Program's Student Services Officer to submit their degree plan and then the Associate Director reviews the coursework for intellectual coherence. Majors are then assigned to a faculty adviser who serves as an intellectual mentor and helps them identify the core questions driving their interest in the field. The Program also sponsors a wide variety of events designed to help students meet their colleagues and Program alumni, discover research and internship opportunities, and make their way toward the career of their choice.

## STS Core

The program offers a Bachelor of Arts and Bachelor of Science in Science, Technology, and Society. Both degree programs require that the student complete the STS Core.

### Units

With a grade of 'C' or higher in each course, complete 8 courses satisfying the following requirements:

#### A. Gateway Requirement

STS 1	The Public Life of Science and Technology	4
-------	---	---

#### B. Disciplinary Requirement: six courses, one of these courses must be a STS WIM course and at least one of these courses must be a STS Global course.

1. Social Sciences and Humanities Courses (complete 4 courses)<sup>Note 1 & 2</sup>  
3 & 4 13-20

ANTHRO 41	Genes and Identity	
ANTHRO 82	Medical Anthropology	
ANTHRO 90C	Theory of Ecological and Environmental Anthropology	
ANTHRO 93B	Prefield Research Seminar: Non-Majors	
ANTHRO 126	Urban Culture in Global Perspective	
ANTHRO 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	
ANTHRO 167A	A Wilderness Empire: The Political Ecology of California	
ANTHRO 179	Cultures of Disease: Cancer and HIV/AIDS	
ANTHRO 186	Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness	
CLASSICS 151	Ten Things: An Archaeology of Design	
COMM 120W	Digital Media in Society	
COMM 142W	Media Economics	
ECON 106	World Food Economy	
EDUC 120	Sociology of Science	
HISTORY 104D	International Security in a Changing World	
HISTORY 140	World History of Science	
HISTORY 140A	The Scientific Revolution	
PHIL 60	Introduction to Philosophy of Science	

PHIL 167A	Philosophy of Biology	
POLISCI 233F	Science, technology and society and the humanities in the face of the looming disaster	
RELIGST 31	The Religious Life of Things	
SOC 114	Economic Sociology	
STS 151	The Future of Information	
STS 166	Knowledge and Information Infrastructures	
STS 181	Techno-metabolism: technology and society in the Anthropocene	
2. Engineering and Science Courses (complete 2 courses)		6-10
BIOE 131	Ethics in Bioengineering	
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	
CS 181W	Computers, Ethics, and Public Policy	
EARTHSYS 112	Human Society and Environmental Change	
ENGR 60	Engineering Economics and Sustainability	
ENGR 131	Ethical Issues in Engineering	
HUMBIO 173	Science, Innovation and the Law	
MS&E 193	Technology and National Security	
<b>C. Senior Requirement</b>		4-10
STS 200A	Food and Society: Politics, Culture and Technology	
or STS 200D	Predictive Technologies of Text	
or STS 200H	Ethics, Science, & Technology	
or STS 200J		
or STS 200K	Sciences of Learning	
STS 299	Advanced Individual Work	
Total Units		27-44

<sup>1</sup>WIM courses: ANTHRO 90C, COMM 120W, CS 181W, HISTORY 140A, HISTORY 232F, MS&E 193 or MS&E 197

<sup>2</sup>Global courses: ANTHRO 41, ANTHRO 126, ANTHRO 138, ANTHRO 186, ECON 106, HISTORY 131, HISTORY 140, HISTORY 44Q, HISTORY 144, HISTORY 203J, HISTORY 208A, CEE 64, POLISCI 233F

<sup>3</sup>May only take HISTORY 140A or HISTORY 232F

<sup>4</sup>May only take HISTORY 144 or HISTORY 44Q

## Concentration Area

In addition to the Core requirements common to all STS students, a minimum of 50 units, at least twelve courses, are required from among those designated on the appropriate Concentration Area course list (available in the Related Courses tab and on the STS website). All courses must be taken for a letter grade if offered and may not be double-counted with core coursework. Students may count no more than two course petitions outside the list of approved Concentration Area courses toward their STS degree plan. Thematic concentrations are organized around an STS-related area or topic:

1. Communication and Media
2. Innovation and Organization
3. Nature and Environment
4. Life Sciences and Health
5. Politics and Policy
6. Self-Designed Concentration

A student pursuing a Bachelor of Arts degree must take at least 8 classes from the Socio-Cultural Course menus, including at least 3 designated as Foundational, and at least 4 classes from the Technical Course menus.

A student pursuing a Bachelor of Science degree must take at least 8 classes from the Technical Course menu, and at least 4 classes from the Socio-Cultural Course menus, including at least 3 designated as Foundational.

Students in both degree programs are encouraged to pursue sequences of courses that build on one another to increase the coherence of their program and give depth to their skill set and knowledge related to STS.

Alternatively, subject to program approval, a student may choose to design a self-designed concentration. Students interested in designing their own concentration must work with the associate director and have their proposal approved at least 2 quarters prior to your graduating quarter. A proposal (5 to 10 pages) should (a) describe your intellectual objectives in detail, (b) explain why a self-designed concentration is the optimal way to pursue these objectives (as opposed to the five STS concentrations or other majors at Stanford), and (c) list at least 12 courses and 50 units that comprise the plan of study. Students with a self-designed concentration must fulfill the same core requirements as other STS students. More information can be found on the STS website (<https://sts.stanford.edu/major-sts/thematic-concentrations>).

Each student's Concentration Area, certified or self-designed, requires the approval of the STS Associate Director.

## Interdisciplinary Honors in Science, Technology, and Society

The Program in Science, Technology, and Society (STS) offers an opportunity for undergraduates to graduate with Interdisciplinary Honors in STS. The STS honors program is open to STS majors as well as students from other majors.

Students accepted into the program carry out an original honors project, working with a faculty adviser. For STS majors, this project also fulfills the requirements for a capstone course and a sociocultural concentration course. An STS honors thesis tackles a significant problem or question related to the intersection of science, technology, and society. Students draw research methods from one or more of the disciplines that shape STS, such as history, sociology, communication, anthropology, environmental science, computer programming/modeling, engineering, economics, political science, and art history, while also capitalizing on unique analytical perspectives of STS as an intellectual field. STS interdisciplinary honors signals expertise in a given area, organizational skills, and intellectual rigor, and students have used it as a springboard for graduate studies and for careers in fields such as information technology, entrepreneurship, finance, public policy, media, education, law, medicine, and the nonprofit sector. Past honors projects are on file in the STS office library, as well as the digital repository.

### Admission

Students are encouraged to apply to the STS honors program during the Spring Quarter of their junior year. Late application is considered up to the add/drop deadline of the Autumn Quarter of their senior year.

### For Majors in Science, Technology, and Society

In preparation for applying to the honors program in STS, students should:

1. Select an area of research interest in STS, prepare related research questions, and identify potential faculty advisers for an honors thesis based on those questions.
2. Attend one or more of the quarterly STS workshops offered for prospective honors students, and/or take STS 191 Introduction to

Research in STS (offered Winter Quarter) or an alternative course on research methods approved by the STS honors program director, and/or speak with the STS honors program director.

3. Submit a research statement and an honors program application, following the parameters set out at STS Honors Program (<https://sts.stanford.edu/major-sts/honors-program>) web site.

### For Majors in Other Departments and Programs

In addition to the requirements for STS majors, applicants from other departments should:

1. Meet with the honors program director as early as possible to ensure that they have sufficient background in relevant analytical and methodological approaches.
2. Satisfy one of the following:
  - Complete STS 1 The Public Life of Science and Technology, and either two courses approved as sociocultural foundational courses in STS, or two alternative courses approved by the STS honors program director as relevant to the proposed honors research in STS; or
  - Complete three courses approved by the STS honors program director as relevant to the proposed honors research in STS.

### Interdisciplinary Honors Requirements

To graduate with Interdisciplinary Honors in STS, seniors in the honors program need to meet the following criteria:

1. Enroll in STS 299 with an honors faculty adviser to oversee the thesis for a minimum of 10 units total, with up to 5 units per quarter, over Autumn, Winter and Spring quarters. Students who choose to obtain Permit for Services Only (PSO) status during their final quarter may do so with the consent of the STS honors program director but they must still have enrolled in a minimum of 10 units of STS 299 during previous quarters.
2. Attend required monthly workshops for current STS honors students.
3. Complete a thesis judged worthy of an honors program by the faculty adviser and STS adviser.
4. Have an overall Stanford GPA of 3.4 at the end of Winter Quarter, senior year, or demonstrated academic competence.

### Minor in Science, Technology, and Society

The program no longer offers a minor. Students currently enrolled in the minor should consult the Stanford Bulletin 2011-12 (<http://www.stanford.edu/dept/registrar/bulletin1112/6074.htm>) for degree requirements.

### STS Affiliated Faculty

*Director and Professor of Education:* John Willinsky

*Associate Director:* Kyoko Sato

William J. Perry Fellow in International Security: Paul N. Edwards

*Executive Board:* Paula Findlen (History), Duana Fullwiley (Anthropology), Mark Granovetter (Sociology), Hank Greely (Law), Sarah Lochlann Jain (Anthropology), Robert McGinn (Management Science and Engineering), Brad Osgood (Electrical Engineering), Eric Roberts (Computer Science), Scott Sagan (Political Science), Fred Turner (Communication), John Willinsky (Education)

*Affiliated Faculty and Staff:* Jeremy Bailenson (Communication), Adam Banks (Graduate School of Education), Thomas Byers (Management Science and Engineering), Angèle Christin (Communication), Jean-Pierre Dupuy (French), Paula Findlen (History), Duana Fullwiley (Anthropology), Mark Granovetter (Sociology), Hank Greely (Law), Ann Grimes (Communication), James T. Hamilton (Communication), Pamela

Hinds (Management Science and Engineering), Hector Hoyos (Iberian and Latin American Cultures), Miyako Inoue (Anthropology), Sarah Lochlann Jain (Anthropology), Robert Laughlin (Physics), Pamela Lee (Art and Art History), Sandra Soo-Jin Lee (Biomedical Ethics), Helen Longino (Philosophy), Henry Lowood (Stanford University Libraries), Robert McGinn (Management Science and Engineering), Thomas Mullaney (History), Brad Osgood (Electrical Engineering), Walter Powell (Education), Robert Proctor (History), Jessica Riskin (History), Scott Sagan (Political Science), Kyoko Sato (STS), Londa Schiebinger (History), Michael Shanks (Classics, Anthropology), Mitchell Stevens (Education), Elaine Treharne (English), Fred Turner (Communication), John Willinsky (Education)

*Emeriti:* James Adams (Management Science and Engineering, Mechanical Engineering), Barton Bernstein (History), Martin Hellman (Electrical Engineering), Eric Roberts (Computer Science), Walter Vincenti (Aeronautics and Astronautics), Gavin Wright (American Economic History)

## Thematic Concentrations Course Lists

### Communication and Media

Thematic concentration in Communication and Media:

Units

#### Socio-Cultural Courses

AMSTUD 133	Technology and American Visual Culture	
AMSTUD 143X	Starstuff: Space and the American Imagination	
ARTHIST 164A	Technology and the Visual Imagination	
ARTHIST 245	Art, Business & the Law	
ARTSTUDI 173f	Cell Phone Photography	
ARTSTUDI 174E	Creativity in the Age of Facebook: Making Art for and from Networks	
ARTSTUDI 236	Future Media, Media Archaeologies	
COMM 106	Communication Research Methods	
COMM 108	Media Processes and Effects	
COMM 120W	Digital Media in Society	
COMM 131	Media Ethics and Responsibility	
COMM 137W	The Dialogue of Democracy	
COMM 142W	Media Economics	
COMM 154	The Politics of Algorithms

# SLAVIC LANGUAGES AND LITERATURES

Courses offered by the Department of Slavic Languages and Literatures are listed on the Stanford Bulletin's ExploreCourses web site (<http://bulletin.stanford.edu>) under the subject codes SLAVIC (Slavic Studies) (<https://explorecourses.stanford.edu/search?q=SLAVIC&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-SLAVIC=on>), and SLAVLANG (Slavic Language).

The department supports coordinated study of Russian language, literature, literary and cultural history, theory, and criticism. The department's programs may also be combined with the programs in Russian, East European and Eurasian Studies, Jewish Studies, Film Studies, Drama, International Relations, Stanford's Overseas Studies, and the Special Languages Program. The department is a part of the Division of Literatures, Cultures, and Languages (p. 482).

A full undergraduate program provides a choice of several tracks leading to a B.A. (with a major or a minor) or to a B.A. with Honors. The department offers a full graduate program leading to an M.A. in Russian and a Ph.D. in Slavic Languages and Literatures. Stanford undergraduates are eligible to apply to the department for a coterminal B.A./M.A. degree. Students in the department's Ph.D. program are required to choose among minor programs in other national literatures, linguistics, Russian, East European, and Eurasian Studies, Jewish Studies, art and music history, theater, or film studies; or they may design their own minor or choose the related field option.

The department runs a colloquium series, which brings distinguished speakers to Stanford; organizes international conferences and symposia; and since 1987 maintains a continuing publication series, Stanford Slavic Studies. Along with the Center for Russian, East European and Eurasian Studies, the department offers qualified undergraduates summer grants (on a competitive basis) for intensive Russian language instruction in accredited programs in Russia and the U.S.

Improving cultural understanding is a critical part of the department's mission, and the department offers a full range of courses at all levels devoted to Russian literature, music and visual arts that do not require specialized knowledge, as well as advanced research seminars for graduate students. The Slavic theme house, Slavianskii Dom, serves as an undergraduate residence for many students in the program and hosts program-related activities. The undergraduate program has attracted students seeking careers in journalism, business, international relations, law, medicine, and human rights, as well as academia. Russian is still the lingua franca over the vast territory of the former Soviet Union, and a good command of this language offers a gateway to Eurasia's diverse cultures, ethnicities, economies, and religions.

Stanford students of Russian, East European and Eurasian Studies benefit from unmatched faculty resources. Green Library and the Hoover Institution libraries and archives hold world-renowned Russian and East European collections, which undergraduates and graduate students use in their research. Department students master a difficult language and a rich and challenging literature, and are rewarded by gaining entry into a unique, powerful, and diverse civilization that defined major trends in the past century and plays an increasingly significant role in the world today.

## Mission of the Undergraduate Program in Slavic Languages and Literatures

The mission of the undergraduate program in Slavic Language and Literatures is to expose students to a variety of perspectives on Russian

language, history, culture, literature, and philosophical thought. The program offers three tracks. Courses in the Russian Language and Literature track focus on the linguistic and philological study of literature, as well as the history of Russian literature. The Russian Language, Culture, and History track guides students through a comprehensive interdisciplinary study of Russian literature and culture in historic context. The Russian and Philosophy track provides students with a background in the Russian language and literary tradition with emphasis on philosophical thought.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

- oral proficiency in Russian or another Slavic language beyond the interpersonal level with presentational language abilities.
- writing proficiency in Russian or another Slavic language beyond the interpersonal level with presentational language abilities.
- close reading skills of authentic texts in Russian or another Slavic language.
- the ability to develop effective and nuanced lines of interpretation.

## Slavic Theme House

Slavianskii Dom, at 650 Mayfield Avenue, is an undergraduate residence that offers opportunities for students to expand their knowledge, understanding, and appreciation of Russia, Eastern Europe, and Eurasia. Assignment is made through the regular undergraduate housing draw.

## Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Slavic Languages and Literatures and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Slavic Languages and Literatures. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Slavic Languages and Literatures and to interpret and present the results of their research.

## Bachelor of Arts in Slavic Languages and Literatures

The major tracks in Russian Language and Literature and Russian Studies are declared on Axess and appear on the transcript but not on the diploma. The degree option in Russian and Philosophy is not declared on Axess and does not appear on the transcript or the diploma.

## Writing in the Major

Undergraduates are required by the University to pass at least one writing-intensive course in their field of concentration in order to graduate. Majors in any Slavic track may satisfy the writing requirement in 2017-18 by taking and passing SLAVIC 146 The Great Russian Novel: Tolstoy and Dostoevsky for 3 units or more.

## Russian Language and Literature

The Russian Language and Literature field of study is designed for those students who wish to gain command of the Russian language and to study the nation's literary tradition. Emphasis is placed on the linguistic and philological study of literature, as well as the history of Russian

literature and related media in the broader context of Russian culture. This major also welcomes students with an interest in Russian and Slavic linguistics.

Majors who concentrate in Russian Language and Literature must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major.

## Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

## Degree Requirements

Candidates for the B.A. degree with a Russian Language and Literature field of study must complete an additional 56 units according to the following distribution:

### Russian Language

A minimum of 12 units from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

### Russian Literature

12 units from the Russian Literature major core classes, defined as follows:

		Units
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky Must be taken for 3 or more units to count towards the WIM	1-5

Take one of the following courses:

SLAVIC 145	Survey of Russian Literature: The Age of Experiment	1-5
SLAVIC 187		2-4

And take one of the following courses:

		Units
SLAVIC 147		2-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5
SLAVIC 188	20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky	1-5

### Electives

Students must take 32 units of electives. These courses are chosen in consultation with the department's chair of undergraduate studies. With department consent, work in related academic fields may be applied toward the degree requirements. Students who have completed a Thinking Matters or PWR course instructed by Slavic faculty, with a grade of 'B' or better may count up to 5 units towards elective courses required

for the major, and students who have completed the SLE sequence may count up to 10 units..

## Capstone

Students must designate a 300-level course taken in their junior or senior year as a capstone course or complete a substantial (20-30 page) independent writing project, advised by a Slavic Faculty member. Before graduation, skills in writing, textual analysis, and discussion is evaluated by the Chair of Undergraduate Studies based on work submitted for the capstone course.

## Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. This is coordinated with the Chair of Undergraduate Studies and the Undergraduate Student Affairs Officer.

## Russian Studies

The Russian Studies major is for students who want to obtain command of the Russian language and to pursue a broad, interdisciplinary study of Russian literature and culture in historical context. Emphasis is on the relation of the Russian literary tradition to other arts, including film, as well as the disciplines that have enriched the historical understanding of Russian literature: history, anthropology, art history, political science, and sociology. Majors in the Russian Studies must earn a GPA of 2.0 (C) or better in order to receive credit toward the major.

## Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

## Degree Requirements

Candidates for the B.A. degree in Russian Studies must complete an additional 56 units according to the following distribution.

### Russian Language

A minimum of 12 units from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

## 19th-Century Russian Literature and History

A minimum of 8 units chosen from the following or the equivalent; students must choose one course from Slavic and one course from History. To fulfill the WIM take SLAVIC 146 for 3 or more units and a letter grade :

		Units
One of the following:		
SLAVIC 145	Survey of Russian Literature: The Age of Experiment <sup>1</sup>	1-5
or SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	
	A pre-revolutionary Russian history course.	1-5

<sup>1</sup> SLAVIC 146 Must take for 3 or more units to count as WIM.

## 20th-Century Russian Literature and History

A minimum of 8 units chosen from the following or the equivalent; students must choose from Slavic 147 or Slavic 148 and one course from History.

SLAVIC 147		
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5

## Electives

Students must take 32 additional units of course work in Russian language, literature, history, or other fields, chosen in consultation with the Chair of Undergraduate Studies. Students who have completed Thinking Matters or PWR courses instructed by Slavic faculty, with a grade of 'B' or better may count these 5 units towards elective courses required for the major, and students who have completed the SLE sequence may count up to ten units.

## Capstone

Students must designate a 300-level course taken in their junior or senior year as a capstone course or complete a substantial (20-30 page) independent writing. Before graduation, skills in writing, textual analysis, and discussion are evaluated by the Chair of Undergraduate Studies based on work submitted for the capstone course.

## Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. This is coordinated with the Chair of Undergraduate Studies and the undergraduate student services officer.

## Russian and Philosophy

The Russian and Philosophy option offers students the opportunity to gain a command of the Russian language and literary tradition, while gaining a background in philosophical thought, broadly construed. They take courses alongside students in other departments participating in the program in Philosophical and Literary Thought, administered through the DLCL. This option is not declared on Axess, thus it does not appear on the transcript or diploma. Majors who concentrate in Russian and Philosophy must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major.

## Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

## Degree Requirements

Candidates for the B.A. degree with a concentration in Russian and Philosophy must complete an additional 67 units according to the following distribution:

## Russian Language

A minimum of 12 units from:

SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3

SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

## Russian Literature

A minimum of 16 units of Russian literature, including the following. To fulfill the WIM take SLAVIC 146 for 5 units and a letter grade :

SLAVIC 145	Survey of Russian Literature: The Age of Experiment	1-5	Units
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	1-5	
SLAVIC 147		2-5	
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5	

## Electives

At least 12 units of electives in Russian language and literature, chosen in consultation with the Chair of Undergraduate Studies.

## Philosophy and Literature Gateway Course

SLAVIC 181	Philosophy and Literature	5	Units
------------	---------------------------	---	-------

## Philosophy Writing in the Major

PHIL 80	Mind, Matter, and Meaning (prerequisite: introductory philosophy course)	5	Units
---------	--	---	-------

## Philosophy Core

12 units of the following:

A course in the PHIL 170 series (value theory)	4
A course in the PHIL 180 series (theories of the mind, language, action)	4
A course in PHIL 100-139 series (history of philosophy)	4

## Related Course

An upper-division course of special relevance to philosophy and literature. Major may choose from:

ITALIAN 236E	Dante's "Purgatorio" and "Paradiso"	4-5
COMPLIT 223	Literature and Human Experimentation	3-5
PHIL 194W	Capstone Seminar: Literature and the Moral Imagination	4

## Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. This is coordinated with the Chair of Undergraduate Studies and the Undergraduate Student Affairs Officer.

## Capstone Seminar

One capstone seminar must be taken in the student's senior year. This year's capstone seminar is:

COMPLIT 199	Senior Seminar	5	Units
-------------	----------------	---	-------

## Honors Program

Slavic Languages and Literature majors with an overall grade point average (GPA) of 3.3 or above, and who maintain a 3.5 (GPA) in major courses, are eligible to participate in the DLCL's honors program. Prospective honors students must choose a senior thesis adviser from among their home department's regular faculty, in their junior year, preferably by March 1, but no later than May 1. During Spring Quarter of the junior year, a student interested in the honors program should consult with the Chair of Undergraduate Studies of their home department to submit a thesis proposal (2-5 pages), DLCL Honors application and an outline of planned course work for their senior year.

Honors papers vary considerably in length as a function of their topic, historical scope, and methodology. They may make use of previous work developed in seminars and courses, but display an enhanced comparative or theoretical scope. Quality rather than quantity is the key criterion. Honors theses range from 40-90 pages not including bibliography and notes. Please consult the DLCL Honors Handbook for more details on declaring and completing the honors thesis.

Honors students are encouraged to participate in the honors college hosted by Bing Honors College ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/OO\\_honors\\_BingHonors.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/OO_honors_BingHonors.html)) and coordinated by the Division of Literatures, Cultures, and Languages. The honors college is offered at the end of the summer, during the weeks directly preceding the start of the academic year, and is designed to help students develop their honors thesis projects. Applications must be submitted through the Bing program. For more information, view the Bing Honors ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/OO\\_honors\\_BingHonors.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/OO_honors_BingHonors.html)) website.

Enrollment: A minimum of 10 units total, described below, and a completed thesis is required. Honors essays are due to the thesis adviser no later than 5:00 p.m. on May 15th of the terminal year. If an essay is found deserving of a grade of 'A-' or better by the thesis adviser, honors are granted at the time of graduation.

1. Spring Quarter of the junior year (optional) DLCL 189C Honors Thesis Seminar (2-4 units S/NC) under the primary thesis adviser. Drafting or revision of the thesis proposal. The proposal is reviewed by the Chair of Undergraduate Studies and the director of the department and is either approved or returned for submission.
2. Autumn Quarter of the senior year (required) DLCL 189A Honors Thesis Seminar (4 units S/NC) taught by a DLCL appointed faculty member. Course focuses on researching and writing the honors thesis.
3. Winter Quarter of the senior year (required) DLCL 189B Honors Thesis Seminar (2-4 units letter grade) under the primary thesis adviser. Focus is on writing under guidance of primary adviser. The letter grade determines if honors is granted or not.
4. Spring Quarter of the senior year (option; mandatory if not taken during junior year) DLCL 189C Honors Thesis Seminar (2-4 units S/NC) under the primary thesis adviser. Honors essays are due to the thesis adviser and student services officer no later than 5:00 p.m. on May 15 of the terminal year.
5. Spring Quarter of the senior year (required) DLCL 199 Honors Thesis Oral Presentation (1 unit S/NC). Enroll with primary thesis adviser.

## Joint Major Program in Slavic Languages and Literatures and Computer Science

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years beginning in 2014-15, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 31)" section of this bulletin for a description

of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

## Slavic Languages and Literatures Major Requirements in the Joint Major Program

The major tracks in Russian Language and Literature and Russian Language, Culture, and History are declared on Axxess and appear on the transcript but not on the diploma.

1. Senior year, the student enrolls in a 2 unit independent study SLAVIC 199 Individual Work for Undergraduates with a DLCL faculty member. The faculty member advising this project must sign off on this description. In order to have it approved as their capstone Slavic Languages and Literatures and Computer Science project, the student must submit a description of their project to the Chair of Undergraduate Studies in Slavic Languages and Literatures.
2. Students must take the Oral Proficiency Interview (OPI) two quarters prior to degree conferral. Students should contact the undergraduate student affairs officer for the major to begin the process.
3. The remaining units needed to reach 46 units could be completed through elective courses taken in Slavic, or in other departments, as approved by the Chair of Undergraduate Studies.
4. Structured Liberal Education courses.
5. Thinking Matters courses approved by the Chair of Undergraduate Studies may also be counted toward the electives.
6. Subject to approval by the Chair of Undergraduate Studies, courses from other fields may count if they contribute to the student's language skills, the ability to interpret literature and other cultural material, or the capacity to analyze societies.

## Writing in the Major

Undergraduates are required by the University to pass at least one writing intensive course in their field of concentration in order to graduate. Majors in any Slavic track may satisfy the writing requirement in 2017-18 by passing SLAVIC 146 The Great Russian Novel: Tolstoy and Dostoevsky.

## Russian Language and Literature

The Russian Language and Literature field of study is designed for those students who wish to gain command of the Russian language and to study the nation's literary tradition. Emphasis is placed on the linguistic and philological study of literature, as well as the history of Russian literature and related media in the broader context of Russian culture. This major also welcomes students with an interest in Russian and Slavic linguistics.

Majors who concentrate in Russian Language and Literature must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major.

## Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

## Degree Requirements

Candidates for the B.A.S. degree with a Russian Language and Literature field of study must complete an additional 46 units according to the following distribution:

### Russian Language

A minimum of 12 units from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

### Russian Literature

12 units from the Russian Literature major core classes, defined as follows:

		Units
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky (must be taken for 3 or more units to count towards the WIM)	1-5

Take one of the following courses:

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	1-5
SLAVIC 187		2-4

And take one of the following courses:

		Units
SLAVIC 147		2-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5
SLAVIC 188	20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky	1-5

## Electives

Students must take 22 units of electives. These courses are chosen in consultation with the department's chair of undergraduate studies. With department consent, work in related academic fields may be applied toward the degree requirements. Students who have completed a Thinking Matters or PWR course instructed by Slavic Languages and Literatures faculty, with a grade of 'B' or better may count up to 5 units towards elective courses required for the major, and students who have completed the SLE sequence may count up to 10 units.

## Capstone

Students must designate a 300-level course taken in their junior or senior year as a capstone course or complete a substantial (20-30 page) independent writing project, advised by a Slavic Languages and Literatures faculty member. Before graduation, skills in writing, textual analysis, and discussion are evaluated by the Chair of Undergraduate Studies based on work submitted for the capstone course.

## Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. This is coordinated with the Chair of Undergraduate Studies and the undergraduate student services officer.

## Russian Studies

The Russian Studies major is for students who want to obtain command of the Russian language and to pursue a broad, interdisciplinary study of Russian literature and culture in historical context. Emphasis is on the relation of the Russian literary tradition to other arts, including film, as well as the disciplines that have enriched the historical understanding of Russian literature: history, anthropology, art history, political science, and sociology. Majors in the Russian Studies must earn a GPA of 2.0 (C) or better in order to receive credit toward the major.

## Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

## Degree Requirements

Candidates for the B.A.S. degree with a Russian Language, Culture, and History field of study must complete an additional 46 units according to the following distribution.

### Russian Language

A minimum of 12 units from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

### 19th-Century Russian Literature and History

A minimum of 8 units chosen from the following or the equivalent; students must choose one course from Slavic and one course from History.

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	5
or SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	
	A pre-revolutionary Russian history course.	5

### 20th-Century Russian Literature and History

A minimum of 10 units chosen from the following or the equivalent; students must choose one course from Slavic and one course from History.

		Units
SLAVIC 147		2-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5

## Electives

Students must take 22 additional units of course work in Russian language, literature, history, or other fields, chosen in consultation with the Chair of Undergraduate Studies. Students who have completed Thinking Matters or PWR courses instructed by Slavic faculty, with a grade of 'B' or better may count these 5 units towards elective courses required for the major, and students who have completed the SLE sequence may count up to ten units.

## Capstone

Students must designate a 300-level course taken in their junior or senior year as a capstone course or complete a substantial (20-30 page) independent writing. Before graduation, skills in writing, textual analysis, and discussion are evaluated by the Chair of Undergraduate Studies based on work submitted for the capstone course.

## Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. This is coordinated with the Chair of Undergraduate Studies and the undergraduate student affairs officer.

## Honors Program

Students have the option to complete the honors program for Computer Science and Slavic, by completing an honors thesis that is partially or fully integrated with Computer Science; such a thesis would fulfill both the capstone and honors requirements for this degree. Students also have the option to complete the honors program for Slavic only; such a thesis would not fulfill the capstone requirement for this degree.

Slavic Languages and Literature majors with an overall grade point average (GPA) of 3.3 or above, and who maintain a 3.5 (GPA) in major courses, are eligible to participate in the DLCL's honors program. Prospective honors students must choose a senior thesis adviser from among their home department's regular faculty, in their junior year, preferably by March 1, but no later than May 1. During Spring Quarter of the junior year, a student interested in the honors program should consult with the Chair of Undergraduate Studies of their home department to submit a thesis proposal (2-5 pages), DLCL Honors application and an outline of planned course work for their senior year.

Honors papers vary considerably in length as a function of their topic, historical scope, and methodology. They may make use of previous work developed in seminars and courses, but display an enhanced comparative or theoretical scope. Quality rather than quantity is the key criterion. Honors theses range from 40-90 pages not including bibliography and notes. Please consult the DLCL Honors Handbook for more details on declaring and completing the honors thesis.

Honors students are encouraged to participate in the honors college hosted by Bing Honors College ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/OO\\_honors\\_BingHonors.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/OO_honors_BingHonors.html)) and coordinated by the Division of Literatures, Cultures, and Languages. The honors college is offered at the end of the summer, during the weeks directly preceding the start of the academic year, and is designed to help students develop their honors thesis projects. Applications must be submitted through the Bing program. For more information, view the Bing Honors ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/OO\\_honors\\_BingHonors.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/OO_honors_BingHonors.html)) website.

Honors essays are due to the thesis adviser no later than 5:00 p.m. on May 15th of the terminal year. If an essay is found deserving of a grade of 'A-' or better by the thesis adviser, honors are granted at the time of graduation.

## Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) The Major-Minor and Multiple Major Course Approval Form (<https://stanford.box.com/MajMin-MultMaj>) is required for graduation for students with a joint major.

## Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) . Students may also consult the Student Services Center (<http://studentservicescenter.stanford.edu>) with questions concerning dropping the joint major.

## Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

## Minors in Slavic Languages and Literatures

The Department of Slavic Languages and Literatures offers three undergraduate minor options.

The minor is designed for students who, while pursuing a major in another program, seek a comprehensive introduction to Russian culture through Russian language courses, a combination of minimal proficiency in Russian and courses in the history of Russian culture, or a multidisciplinary introduction to Russian, East European, and Eurasian studies. Students who have chosen one of the minor programs in Russian may use 5 units from a Thinking Matters course taught by a Slavic faculty member towards their electives with permission from their adviser. Up to 5 units may count from SLE towards all Slavic Languages and Literatures minors.

## Minor in Russian Language

### Prerequisites

The minor option in Russian Language requires completion of second year Russian, or the equivalent, as determined by the results of the Language Center placement examination.

### Requirements

Candidates for the B.A. degree with a minor option in Russian Language must complete 24 units of Russian language and literature courses according to the following distribution:

12 to 15 units of Russian language:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

The remaining 9-12 units should be chosen from:

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	1-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	1-5
Other courses offered within the Slavic Languages and Literatures department.		
SLAVIC 147		2-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5
SLAVIC 187		
SLAVIC 188	20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky	1-5

**Or, with the approval of the department's Chair of Undergraduate Studies, courses in history, politics, linguistics, or other relevant programs.**

## Minor in Russian Language, Literature, and Culture

### Prerequisites

The minor option in Russian Language, Literature, and Culture requires completion of first year Russian, or the equivalent, as determined by the results of the Language Center placement examination.

### Requirements

Candidates for the B.A. degree with the minor option in Russian Language, Literature, and Culture must complete 28 units according to the following distribution:

A minimum of 12 units of courses on literature and culture including:

#### Option 1:

Two courses from the following:

SLAVIC 145	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	1-5
SLAVIC 147		2-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5

#### Option 2:

One course from the following:

SLAVIC 145	Survey of Russian Literature: The Age of Experiment	1-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	1-5
SLAVIC 147		2-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5

and one course from the following:

SLAVIC 187		
SLAVIC 188	20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky	1-5

## Minor in Russian, East European, and Eurasian Studies

The minor in Russian, East European and Eurasian Studies offers students the opportunity to choose courses offered by the Center for Russian, East European and Eurasian Studies (subject code REES) in various departments for their minor.

### Requirements

Candidates for the B.A. degree with the minor option in Russian, East European, and Eurasian Studies must complete 28 units according to the following distribution:

1. Two core courses: one on Russia and one on Eastern Europe or Eurasia, to be chosen by the student from an annual list of qualifying courses issued by CREEES for their M.A. students.
2. At least four additional REES courses, totaling at least 20 units.
3. The student's core and additional courses must include 9 units of course work in the Slavic Department, either literature courses or Russian language in the third year or above. Courses must be distributed among at least three disciplines, such as Slavic, History, Political Science, Anthropology, Art and Art History, Economics, Religious Studies, and Sociology. The Slavic Chair of Undergraduate Studies determines which courses qualify for the minor.
4. A capstone experience in CREEES, including, but not limited to, one of the following:
  - a. a departmental seminar course for advanced undergraduates.
  - b. directed reading and research with a Stanford faculty member or a CREEES-approved resident or visiting scholar.
  - c. participation in the Stanford Overseas Studies Program in Berlin.

### Foreign Language

The Slavic/REES minor has no language requirement, but students are strongly encouraged to attain working competence in Russian or another relevant language. Courses at the third-year level or above in Russian or another language of Central Asia, the Caucasus, or Eastern Europe may be counted towards the Slavic/REES minor, up to a maximum of 3 units per academic quarter, 9 units total.

### Additional Information

Courses taken at Stanford overseas campuses may count towards the REES minor, with the approval of the Slavic Chair of Undergraduate Studies; at least three courses for the minor must be taken in residence at Stanford.

Students interested in pursuing the Slavic/REES minor should consult the Slavic Chair of Undergraduate Studies.

## Minor in Modern Languages

The Division of Literatures, Cultures, and Languages offers a minor in Modern Languages. This minor draws on literature and language courses offered in this and other literature departments. See the "Literatures, Cultures, and Languages (<http://www.stanford.edu/dept/registrar/bulletin/6009.htm>)" section of this bulletin for further details about this minor and its requirements.

## Coterminal Master's Program in Slavic Languages and Literatures

The department allows a limited number of undergraduates to work for the coterminal M.A. degree in Slavic Languages and Literatures with a concentration in Russian. In addition to University requirements for the B.A. degree, the student must:

1. Submit an application for admission by January 31 of the senior year. Applicants must meet the same general standards as those seeking admission to an M.A. program. Applicants must submit: an application for admission; a written statement of purpose; a transcript; and three letters of recommendation, at least two of which should be from members of the Department of Slavic Languages and Literatures faculty.
2. Meet all requirements for both the B.A. and M.A. degrees. Applicants must complete 15 full-time quarters (or the equivalent), or three full-time quarters after completing 180 units, for a total of 225 units. During the senior year they may, with the consent of the instructors, register for as many as two graduate courses. In the final year of study, they must complete at least three graduate-level courses.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Arts in Slavic Languages and Literatures

The Department of Slavic Languages and Literatures offers a Master of Arts degree only to students concurrently enrolled in other Stanford degree programs.

University requirements for the M.A. degree are discussed in the "Graduate Degrees (p. 50)" section of this bulletin.

### Admission

The requirements for admission to the master's degree program in Russian are:

1. A B.A. (or its equivalent) from an accredited college or university.
2. A command of the Russian language sufficient to permit the student to do satisfactory graduate work.
3. A familiarity with Russian literature sufficient to permit the student to perform adequately in courses at the graduate level.

The applicant's previous academic training in Russian language and literature normally serves as an indication of competence. Accordingly, the department does not ordinarily consider applications from students who have not had at least three years of college Russian and some undergraduate training in Russian literature of the 19th and 20th

centuries. Before registering for the first quarter's work in the department, entering graduate students are required to take placement examinations in Russian. Students who fail to perform satisfactorily on such examinations must register for remedial courses in the areas in which they are deficient. Course work in third-year Russian and below carries no credit toward the M.A. degree.

### Course Requirements

Candidates for the M.A. should plan course work that ensures adequate preparation for the M.A. final examination at the end of the third quarter of work. Course work should be planned in consultation with the graduate adviser, whose approval of the overall course load is required.

Candidates for the M.A. must complete a program of 45 units, of which 36 units must be selected from courses given by the department.

### The Qualifying Paper

The Qualifying paper represents a complete article-length research paper (6,000-9,000 words) that, in both form and substance, qualifies for submission to English-language professional publications in the Slavic field. The Qualifying paper must be submitted to the thesis adviser no later than the eighth week of the final quarter of registration.

### Final Examination

A final examination may substitute for the Qualifying paper requirement. The final examination requires a student to demonstrate in a written examination:

1. command of the phonology, morphology, syntax, and lexicology of contemporary standard Russian sufficient to teach beginning and intermediate courses at the college level
2. an ability to read contemporary Standard Russian sufficiently to assist students studying contemporary Russian poetry or literary prose
3. sufficient familiarity with Russian literature of either the 19th or 20th century to successfully handle survey courses dealing with the chosen period of specialization.

The examination should be taken at the end of the final quarter of required course work.

## Doctor of Philosophy in Slavic Languages and Literatures

University requirements for the Ph.D. are discussed in the "Graduate Degrees (p. 50)" section of this bulletin.

Students enrolled in the Ph.D. program in Slavic Languages and Literatures are expected to fulfill the following requirements while meeting the program's deadlines in the course of their progress toward the degree:

### 1. Course Work, Breadth Requirements, and Overall Scheduling

In consultation with the Chair of Graduate Studies, students are expected to take 10 units of credit each quarter of their first year, 10 units each funded summer, and 10 units each quarter thereafter. They are expected to reach 135 units and attain TGR status in the Spring of their fourth year. All courses counted towards the 135-unit requirement for the Ph.D. must be at the graduate level. Excess course work can be taken at the undergraduate level, but not used towards the Ph.D. requirements. Students should take all courses for letter grades, when the option is available. Entering graduate students must enroll in DLCL 369 Introduction to the Profession of Literary Studies. For the Ph.D. degree, students are free to select course work to suit their individual program of study. However,

candidates must do so in consultation with their adviser (Chair of Graduate Studies or principal dissertation adviser) and are held responsible for all of the areas covered by the general examinations regardless of whether they have registered for the department's offerings in a given field. For this reason, it is strongly recommended that before taking Ph.D. examinations, students complete seminar-level work directly related to the following broad areas:

- a. Russian poetry
- b. the Russian novel
- c. 20th-century Russian literature
- d. 19th-century Russian literature (the Age of Pushkin and after)
- e. 18th-century Russian literature (the early 1700's to the Age of Pushkin)
- f. medieval Russian literature
- g. a monograph course on a major Russian author
- h. theory of literature relevant to the major field

The candidate must have demonstrated commitment to graduate studies by completing a minimum of 21 content courses (not counting Summer Quarter) with a grade point average (GPA) of 3.3 or better in order to complete the requirements of the degree program. These must include 14 seminars in the Slavic Languages and Literatures Department. Unless they have taken such courses elsewhere, students are expected to take the departmental course on medieval literature, 18th-century literature, and Old Church Slavonic. They must also enroll in the 1 unit SLAVIC 300B, a professionalization workshop, during their first quarter of enrollment.

### 1. Minor or Related Fields

During the course of study, students must develop substantial expertise in a field contiguous to the area of specialization. A candidate may elect to present a full minor or, in consultation with the graduate adviser, develop a special program in a related field, preferably no later than the second quarter of enrollment.

- a. *Related Field*—A student is required to complete a sequence of basic courses in a chosen discipline outside the department of Slavic Languages and Literatures. The choice of patterns is one of the following:
  - i a sequence of three courses in another literature, selected in consultation with the adviser, or
  - ii three basic courses in comparative literature chosen in consultation with the Chair of Graduate Studies (CGS), or
  - iii a sequence of three courses in another department selected in consultation with the CGS.
- b. *Minor*—Students electing a minor fulfill the Ph.D. minor requirements established by that department. Students considering minors should consult with their adviser, the CGS, the Chair of Slavic Languages and Literatures, and the Chair of the minor department.

### 2. Admission to Candidacy

Admission to candidacy is an important decision grounded in an overall assessment of a student's ability to successfully complete the Ph.D. program. Per University policy, students are expected to complete department qualifying procedures and apply for candidacy by the end of the second year in residence. In reviewing a student for admission to candidacy, the faculty considers a student's academic progress including but not limited to: advanced language proficiency, course work, performance on the Qualifying paper, and successful completion of teaching and research assistantships. Additionally, a student must have completed at least one class with each of four Slavic Languages and Literatures department faculty members prior to consideration for candidacy. In addition to successful completion of department prerequisites, a student is only admitted to candidacy if the faculty makes the judgment that the student has the potential to successfully complete the requirements of the degree program. Candidacy is determined by faculty vote. Failure

to advance to candidacy results in dismissal of the student from the doctoral program. Candidacy is valid for five years and students are required to maintain active candidacy through conferral of the doctoral degree. All requirements for the degree must be completed before candidacy expires. The Department of Slavic Languages and Literatures conducts regular reviews of each student's academic performance, both prior to and following successful admission to candidacy. Failure to make satisfactory progress to degree may result in dismissal from the doctoral program. Additional information about University candidacy policy is available in the Bulletin (p. 52) and GAP (<http://gap.stanford.edu/4-6.html>).

### 3. Qualifying Paper

The candidate must submit a complete draft of a qualifying paper approved by the thesis adviser. The qualifying paper represents a complete article-length research paper (6,000-9,000 words) that qualifies in both form and substance for submission to an English language professional publication in the Slavic field. The deadline for the qualifying paper approval is the eighth week of the sixth quarter of registration. Failure to meet these requirements results in termination of enrollment from the Ph.D. program. Following such termination, the student who has fulfilled all of the M.A. requirements may be given the opportunity to take the M.A. written examination in the history of Russian literature. If successful, the student is then awarded the terminal M.A. degree. In exceptional cases, the written examination requirement may be waived at the discretion of the Chair of Graduate Studies and the Chair of the department.

### 4. Proficiency Test

Administered to all entering graduate students, this test determines whether the student's knowledge of Russian language and literature falls below the department's standard (Advanced Low on the OPI test). Students who fail are required to complete appropriate courses in the first year of graduate study. Courses required to meet the language proficiency are not counted towards the Course Work requirement of the Ph.D. degree.

### 5. Foreign Languages

A candidate must demonstrate reading knowledge of French or German, plus another language useful for the student's area of concentration, by passing written examinations, or receiving a grade of 'A-' or better in a qualifying class with consent of the CGS. The reading examination in German or French must be passed by the end of the first year of study. The reading examination in the second language of choice must be passed by the end of the second year of study.

### 6. Examinations

A candidate must pass the departmental general qualifying examinations. The comprehensive exam covers the history of Russian literature from the medieval period through the twenty-first century and is divided into six chronological sections. Two of these are taken early in the fourth quarter of enrollment and the remainder are taken in the seventh quarter of enrollment (preferably a day or two before the beginning of academic instruction). One section of the comprehensive exam is taken orally in Russian. The departmental oral qualifying examination follows no later than two weeks after completion of the comprehensive exams. The oral examination committee consists of four faculty members and may include one member representing the student's minor or related field; the rest must be drawn from among the Slavic Languages and Literatures faculty. The student makes a 20-minute presentation, following an academic conference format, and based possibly on the student's qualifying paper. Each examiner questions the student on the presentation and related topics in the history of Russian literature and the minor related field. Following the departmental examinations, a candidate must pass a University oral examination, consisting of a defense of a doctoral dissertation prospectus and covering content relevant to the area of study, rationale for the proposed

investigation, and strategy to be employed in the dissertation research. The prospectus defense is expected to be scheduled no later than the beginning of the tenth quarter of registration. Note: Ph.D. examinations are scheduled by the graduate student in consultation with the CGS.

## 7. Teaching

Students are required to complete five quarters of teaching within the funding period, including three quarters of first-year Russian and at least one quarter as a teaching assistant of literature for a faculty member, usually in the survey courses in translation:

SLAVIC 145	Survey of Russian Literature: The Age of Experiment	1-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	1-5
SLAVIC 147		1-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin	1-5

b. Students are required to take in preparation for teaching: DLCL 301: The Learning and Teaching of Second Languages.

## 8. Yearly Review

The faculty must provide students with timely and constructive feedback on their progress toward the Ph.D. In order to evaluate students' progress and to identify potential problem areas, the department's faculty reviews the academic progress of each student at the end of the academic year. The yearly reviews are primarily intended to identify developing problems that could impede progress. In most cases, students are simply given constructive feedback, but if more serious concerns warrant, a student may be placed on probation with specific guidelines for addressing the problems detected. Possible outcomes of the yearly review include:

- a. continuation of the student in good standing
- b. placing the student on probation, with specific guidelines for the period on probation and the steps to be taken in order to be returned to good standing.
  - i. For students on probation at this point (or at any other subsequent points), possible outcomes of a review include:
    1. restoration to good standing
    2. continued probation, again with guidelines for necessary remedial steps
    3. termination from the program. Students leaving the program at the end of the first or second year are usually allowed to complete the requirements to receive an M.A. degree, if this does not involve additional residency or financial support.

## 9. Continuation

Continuation in the Ph.D. program is contingent on fulfilling the following criteria: for first-year students, a high quality of performance in course work (decided by department evaluation); for second-year students, satisfactory academic progress and approval of the Qualifying paper as described above. The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the University, department, and program requirements for the degree, and fulfillment of minimum progress requirements. Failure to meet these requirements results in corrective measures, which may include a written warning, academic probation, and/or release from the program.

## Ph.D. Minor in Slavic Languages and Literatures

The department offers a Ph.D. Minor in Slavic Languages and Literatures. The requirement for the Ph.D. minor is completion of 25 units of graduate course work in Slavic Literature and Culture classes. Interested students should consult the Chair of Graduate Studies.

## Faculty in Slavic Languages and Literatures

*Emeriti:* Gregory Freidin, Richard D. Schupbach

*Director:* Gabriella Safran

*Chair of Graduate Studies:* Lazar Fleishman

*Chair of Undergraduate Studies:* Nariman Skakov

*Professors:* Lazar Fleishman, Gabriella Safran

*Associate Professor:* Monika Greenleaf

*Assistant Professor:* Nariman Skakov, Yuliya Ilchuk

## Overseas Studies Courses in Slavic Languages and Literatures

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

# SOCIOLOGY

Courses offered by the Department of Sociology are listed under the subject code SOC on the Stanford Bulletin's ExploreCourses web site.

Sociology seeks to understand all aspects of human social behavior, including the behavior of individuals as well as the social dynamics of small groups, large organizations, communities, institutions, and entire societies. Sociologists are typically motivated both by the desire to better understand the principles of social life and by the conviction that understanding these principles may aid in the formulation of enlightened and effective social policy. Sociology provides an intellectual background for students considering careers in the professions or business. Students may pursue degrees in sociology at the bachelor's, master's, or doctoral levels. The department organizes its courses by areas of study to assist students in tailoring their education and research to their academic interests and career goals.

## Mission of the Undergraduate Program in Sociology

The mission of the undergraduate program in Sociology is to provide students with the skills necessary to understand and address social problems and inequalities in global, institutional, and interpersonal social relations. At its core, the curriculum in the major is rooted in social theory and the scientific method. Sociology majors are given opportunities to develop a broad understanding of core sociological theories and the methodological skills used to evaluate human behavior and social organizations. Sociology provides an intellectual background for students considering careers in business, social services, public policy, government service, international nongovernmental organizations, foundations, or academia.

The Sociology major consists of a core curriculum plus elective courses intended to provide breadth of exposure to the variety of areas encompassed by sociology.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of sociology.
2. the ability to communicate ideas clearly and persuasively in writing.
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. the ability to evaluate theory and critique research within the discipline of sociology.

## Graduate Programs in Sociology

The Department of Sociology offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Arts in Sociology which is restricted to currently enrolled Stanford undergraduates
- the Master of Arts in Sociology which is available to Stanford students who are currently enrolled in other advanced degree programs.

The department does not have a terminal M.A. program for external applicants.

## Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Sociology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Sociology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Sociology and to interpret and present the results of such research.

## Areas of Study

The Department of Sociology specializes in four general areas of study, allowing students to tailor their education and research to their academic interests and career goals. The five areas of study supported by the department are:

### Organizations, Business, and the Economy

Focus is on the arrangements which societies construct for the provision of material goods or services. A formal organization which provides goods or services for profit and sells them through a market is called a business, and the economic system is capitalism. Social needs are also met through government and not-for-profit organizations, such as garden clubs, hospitals, prisons, and the Red Cross; some private and social needs are met outside of organizations, such as health care provided by family members and exchange of favors among friends. Courses stress the factors that determine whether needs that people define are met through markets or non-market allocation, through organizations, or by other means. They also investigate the environmental and technical factors that shape organization structure, the determinants of how efficiently organizations operate, and the interpersonal processes that shape individual behavior within organizations. Careers related to this field include management and administration in business or public settings, management consulting and analysis, and legal studies related to corporations, organizations, and business.

### Social Movements, Comparative Politics, and Social Change

Focus is on the emergence, reproduction, and change of political systems and institutions, especially on why and how different political systems and social movements appear in different times and places, and how differences in political regimes and economic systems influence attempts to change these systems. The origins and significance of national and transnational social movements, transition to democracy, including revolution, nationalism, and other forms of collective action, in creating and sustaining these changes analyzed across countries and over time. Careers that are relevant to this field include law, public policy, government service, nonprofit and international nongovernmental organizations, business organizations (especially those with international interests), consulting, and managerial jobs.

### Social Psychology and Interpersonal Processes

Focus is on the social organization of individual identity, beliefs, and behavior, and upon social structures and processes which emerge in and define interpersonal interactions. Processes studied include social acceptance and competition for prestige and status, the generation of power differences, the development of intimacy bonds, the formation of expectation states which govern performance in task oriented groups, and social pressures to constrain deviance. Foundation courses emphasize the effect of social processes on individual behavior and the analysis of group processes. This field provides training for careers with a significant interpersonal component, including advertising and marketing, business, education, law, management, medicine and health, or social work.

## Social Inequality

Focus is on forms of social inequality, including fields such as: the shape and nature of social inequalities; competition for power; allocation of privilege; production and reproduction of social cleavages; and consequences of class, race, and gender for outcomes such as attitudes, political behavior, and life styles. Many courses emphasize changes in the structure of social inequalities over time, and the processes which produce similarities or differences in stratification across nations. Topics include educational inequality, employment history, gender differences, income distributions, poverty, race, and ethnic relations, social mobility, and status attainment. Careers related to this field include administration, advertising, education, foreign service, journalism, industrial relations, law, management consulting, market research, public policy, and social service.

## Race, Gender, Immigration, Identity and Policy

Focus is on population diversity, primarily in the United States, and on how identity is formed and maintained. Classes in this subject area address segregation, integration, and assimilation. What does it mean to cross from one group to another? How has the law treated racial minorities, sexual minorities, and immigrants differently over time? Careers related to this field include social work, teaching, research, law, management, and population studies which can be applied to any industry.

## Joint Programs in Sociology with the School of Law

The School of Law and Department of Sociology conduct joint programs leading to either a combined J.D. degree with an M.A. degree in Sociology or to a combined J.D. degree with a Ph.D. in Sociology.

Law students interested in pursuing an M.A. in Sociology apply for admission to the Department of Sociology during the first year of Law school. Once admitted to the Department of Sociology, the student must complete standard departmental master's degree requirements as specified in this bulletin. Applications for the joint J.D./M.A. degree program must be approved by both the department and the Law school. Faculty advisers from each program participate in the planning and supervising of the student's academic program.

The J.D./Ph.D. degree program is designed for students who wish to prepare themselves for research or teaching careers in areas relating to both legal and sociological concerns. Students interested in the joint degree program must be admitted to both the School of Law and the Department of Sociology. Interest in the joint degree program must be noted on each of the student's applications. Alternatively, an enrolled student in either the Law School or the Sociology department may apply to the other program, preferably during their first year of study. Students participating in the joint degree program are not eligible to transfer and receive credit for a masters, or other degree, towards the Sociology Ph.D..

Upon admission, students are assigned a joint program faculty adviser who assists the student in planning an appropriate program and ensuring that all requirements for both degrees are satisfied. The faculty adviser serves in this capacity during the student's course of study regardless of whether the student is enrolled in the School of Law or the Sociology department.

J.D./Ph.D. students may elect to begin their course of study in either the School of Law or the Department of Sociology. Students must be enrolled full-time in the Law school for the first year of Law school, and must enroll full time in the graduate school for the first year of the Sociology program. After that time, enrollment may be in the graduate school or the Law school, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees. Up to 54 quarter units of approved course work may be counted towards both degrees, but no more than

31 quarter units of courses that originate outside the Law school may count towards the Law degree. The Law degree may be conferred upon completion of applicable Law school requirements; it is not necessary to have both degrees conferred simultaneously. Students participating in the joint degree program are not eligible to transfer and receive credit for a master's or other degree towards the Ph.D. Students must complete the equivalent of 183 quarter units to complete both degrees. Tuition and financial aid arrangements normally are through the school in which the student is currently enrolled.

The Law degree may be conferred upon completion of applicable Law school requirements; it is not necessary to have both degrees conferred simultaneously.

For more information, see the Sociology (<https://sociology.stanford.edu/academics/phd-programs/jdphd>) web site, and the Law School web site on the J.D./Ph.D. (<https://www.law.stanford.edu/degrees/joint-degrees/law-and-sociology>)

## Bachelor of Arts in Sociology

There are two pathways to a Sociology B.A. degree:

- the Sociology Bachelor's degree, or
- the Sociology Bachelor's degree with the Data Science, Markets, and Management subplan.

The following requirements are for the Sociology bachelor's degree. Students interested in the Sociology Bachelor's degree with the Data Science, Markets, and Management subplan should see that tab (p. 746).

## Declaring the Major in Sociology

To declare a major in Sociology, students should declare the B.A. in Axxess, then download the major declaration form from the department web site. Complete the top portion of the form, sign, and email the Director of the Undergraduate Program in Sociology to set up an entrance advising meeting.

## Major Requirements

A 3.0 GPA is required to enter the Sociology major. The B.A. in Sociology requires 60 units of course work. Units applied to the major must be taken for a letter grade (except for independent study or directed reading), and all earned grades must be 'C' or better (except where permission has been granted by the Sociology Director of Undergraduate Studies.)

Unit values for courses can vary from year to year. If you have any questions, contact the undergraduate student services specialist in Sociology.

Students are encouraged to complete some course work at the 200-level. Sociology majors are encouraged to participate in directed research or undertake independent research with Sociology faculty. See the department web site for additional information.

## Requirements

Units required for the Sociology B.A. are:

	Units
Sociology Core Courses (4 courses)	16
Sociology Foundation Courses (3 courses)	12
Social Science Electives (Units sufficient to bring the total # of units to 60—usually 4-6 courses)	27
Methodology, Quantitative or Qualitative (1 course)	5
<b>Total Units</b>	<b>60</b>

## Core Courses Required for the Major

The following core courses are required of all Sociology majors.

SOC 1	Introduction to Sociology at Stanford	
or SOC 170	Classics of Modern Social Theory	
SOC 180A	Foundations of Social Research	4
SOC 180B	Introduction to Data Analysis	4
SOC 200	Junior/Senior Seminar for Majors	4-5
or SOC 202	Junior Seminar: Preparation for Research	
or SOC 204	Junior/Senior Seminar for Majors	
Total Units		17-18

- Students considering honors are encouraged to enroll in SOC 202 Junior Seminar: Preparation for Research in their junior year, in order to have a research plan in place in the Summer before senior year.

## Foundation Courses Required for the Major

Sociology majors must complete 3 foundation courses; one course in three different areas for a total of three courses. For further information about Sociology areas of study, see the department web site.

Foundation courses, classified by area of study, are as follows:

### Organizations, Business, and the Economy

SOC 114	Economic Sociology	4
SOC 160	Formal Organizations	4
SOC 162	The Social Regulation of Markets	4

### Social Movements, Comparative Politics, and Social Change

SOC 118	Social Movements and Collective Action	4
SOC 119	Understanding Large-Scale Societal Change: The Case of the 1960s	5
SOC 130	Education and Society	4-5

### Social Psychology and Interpersonal Processes

SOC 2	Self and Society: Introduction to Social Psychology	4
SOC 120	Interpersonal Relations	4
SOC 121	The Individual in Social Structure: Foundations in Sociological Social Psychology	5
SOC 127	Bargaining, Power, and Influence in Social Interaction	5

### Social Inequality

SOC 135	Poverty, Inequality, and Social Policy in the United States	3
SOC 140	Introduction to Social Stratification	3
SOC 141	Controversies about Inequality	5
SOC 144	Inequality and the Workplace	5
SOC 149	The Urban Underclass	4

### Race, Gender, Immigration, Identity, and Policy

SOC 142	Sociology of Gender	3
SOC 145	Race and Ethnic Relations in the USA	4
SOC 150	Race and Political Sociology	3

SOC 155	The Changing American Family	4
---------	------------------------------	---

## Social Science Elective Courses

**Units** Social Science electives are required for the major, sufficient to bring the total number of units in the Sociology major to 60. You may take all elective courses in Sociology if you wish. Students may choose their elective courses according to personal interest. Non-Sociology courses must be approved by the Director of Undergraduate Studies. A maximum of 10 units taken in other Social Science departments (Anthropology, Communication, Economics, Political Science, Psychology) may be counted towards the 60 units required for the Sociology B.A.

## Methods Requirement

Sociology majors are required to take at least one methodology course, either quantitative or qualitative, to supplement the core and foundation courses within Sociology. Quantitative classes in data analysis, programming, computer science, statistics, mathematics, are all suitable for this requirement, as are qualitative methods classes such as field research methods.

## Bachelor of Arts in Sociology with Data Science, Markets, and Management Subplan

There are two pathways to a Sociology B.A. degree:

- the Sociology Bachelor's degree, or
- the Sociology Bachelor's degree with the Data Science, Markets, and Management subplan.

The following requirements are for the Sociology bachelor's degree with the Data Science, Markets, and Management subplan. Students interested in the Sociology Bachelor's degree should see that tab (p. 745).

## Declaring the Major in Sociology with Data Science, Markets, and Management Subplan

To declare a major in Sociology, students should declare the B.A. in Axess, then download the major declaration form from the department web site. Complete the top portion of the form, sign, and email the Director of the Undergraduate Program in Sociology to set up an entrance advising meeting. Then, students declare the Data Science, Markets, and Management subplan in Axess.

The subplan prints on the diploma and transcript.

## Major Requirements

A 3.0 GPA is required to enter the Sociology major. The B.A. in Sociology requires 60 units of course work. Units applied to the major must be taken for a letter grade (except for independent study or directed reading), and all earned grades must be 'C' or better.

Unit values for courses can vary from year to year. If you have any questions, contact the undergraduate student services specialist in Sociology.

Students are encouraged to complete some course work at the 200-level. Sociology majors are encouraged to participate in directed research or undertake independent research with Sociology faculty. See the department website for additional information.

## Requirements

Students in the Data Science, Markets, and Management subplan must take the following courses; substitutions may be made only with consent of the Director of Undergraduate Studies.

## Core Requirements

The core requirements include one class in each of: experimental methods, computer programming, analysis of big data, data analysis and regression, network analysis, and Writing in the Major class, as follows:

		Units
SOC 2	Self and Society: Introduction to Social Psychology	4
or SOC 120	Interpersonal Relations	
CS 105	Introduction to Computers (all CS requirements can be substituted for by higher level CS or programming classes)	3-5
or CS 106A	Programming Methodology	
or CS 106B	Programming Abstractions	
or CS 106X	Programming Abstractions (Accelerated)	
MS&E 231	Introduction to Computational Social Science	3
or SOC 278	Introduction to Computational Social Science	
SOC 180B	Introduction to Data Analysis	4
SOC 126	Introduction to Social Networks	2-5
or SOC 224B	Relational Sociology	
or CS 224W	Analysis of Networks	
or ECON 291	Social and Economic Networks	
or MS&E 135	Networks	
SOC 204	Junior/Senior Seminar for Majors	4-5
or SOC 200	Junior/Senior Seminar for Majors	
or SOC 202	Junior Seminar: Preparation for Research	

## Foundation Sociology Courses on Economics, Organizations, Business, Labor Markets, and the Economy.

Choose any two of the following courses:

		Units
SOC 114	Economic Sociology	4
SOC 130	Education and Society	4-5
SOC 160	Formal Organizations	4
SOC 162	The Social Regulation of Markets	3
SOC 271	Organizational Analysis	4
THINK 46	Why So Few? Gender Diversity and Leadership	4

## Electives

In addition to the Core classes and the Foundation classes, the Data Science, Markets and Management subplan requires 7 additional courses, as follows:

	Units
Four additional Sociology (SOC) courses	16
Two additional Computer Science, Math, Statistics, or Quantitative Social Science Courses	8
One additional Sociology or Social Science elective	4

## Honors Program

Sociology majors who wish to complete an independent scholarly project under the direction of a faculty member are encouraged to apply for admission to the department's honors program. Admission to the program requires a grade point average (GPA) of 3.5 or higher in courses taken within the major, and an overall GPA of 3.3 (B+) or higher in all undergraduate course work. Applicants are required to identify a Sociology faculty member to advise on the research and writing of the essay. With the approval of the Director of Undergraduate Studies, students may work with faculty advisers in other departments.

Students are encouraged to begin planning their honors thesis in their junior year; at this time they should enroll in SOC 202 Junior Seminar: Preparation for Research, SOC 200 Junior/Senior Seminar for Majors or SOC 204 Junior/Senior Seminar for Majors. Students begin designing their honors project in connection with this seminar and in consultation with the seminar leader. To apply for the honors program, students should complete the honors application, obtain an adviser's approval and signature, and submit the application with a brief description of the proposed project, and a copy of the student's unofficial undergraduate transcript, to the Director of Undergraduate Studies. Prospective candidates are asked to submit an honors application as soon as possible in their junior or senior year, ideally no later than the end of the fourth quarter prior to graduation (typically Spring Quarter of the junior year). Honors students may earn up to 12 independent study units for work leading to completion of the required honors thesis, excluding units associated with the Junior/Senior Seminar.

If the student is admitted to the program, students will be directed to declare the B.A.H. in Axxess and drop the general B.A. Completion of honors in Sociology requires:

1. Application and acceptance into the Sociology honors program
2. Completion of all requirements of the Sociology major or Sociology major with subplan
3. Completion of an honors thesis with a grade of A- or higher
4. Participation in the Sociology Honors Colloquium in the Spring Quarter prior to graduation.

If honors program requirements are not met, students must drop the B.A.H. degree program in Axxess and declare the B.A. before applying to graduate.

## Minor in Sociology

Students must complete a minimum of 35 units in Sociology for the minor. Courses must be taken for a letter grade, and a minimum grade point average (GPA) of 2.0 (C) must be achieved. Students who wish to declare a minor in Sociology must do so no later than the deadline for their application to graduate. Related course work from other departments may fulfill a minor requirement. All course substitutions must be pre-approved by the Sociology student services office and the Undergraduate Program Director; a student may not exceed 5 substitution units for the minor.

Course requirements for a minor in Sociology are as follows:

	Units	
SOC 1	Introduction to Sociology at Stanford	5
or SOC 170	Classics of Modern Social Theory	
SOC 2	Self and Society: Introduction to Social Psychology	4
or SOC 180A	Foundations of Social Research	
or SOC 180B	Introduction to Data Analysis	
Two foundation courses: see foundation courses required for the major above		10
Additional course work in the department (100- or 200-level courses)		17
Total Units		36

## Coterminal Master of Arts in Sociology

Stanford undergraduates, regardless of undergraduate major, who wish to pursue an M.A. in Sociology may apply for the coterminal master's program. The coterminal M.A. in Sociology is a flexible, self-designed program. Most students complete a Sociology M.A. during their fifth year at Stanford; occasionally students are able to complete their B.A. and coterminal M.A. in the fourth year.

## Application and admission

Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to their B.A. conferral. A cumulative GPA of at least 3.5 in previous undergraduate work is required for admission; GRE test scores are required. It is highly recommended that applicants have completed at least one Sociology course at the 100 level with a grade of 'B' or better.

The department accepts applications once a year; the application deadline is February 2, 2018 for Spring Quarter enrollment. There are no exceptions to this deadline.

All application materials are submitted online. The department does not fund coterminal M.A. students.

To apply for admission to the Sociology coterminal M.A. program, students must submit the following:

1. The Application for Admission to Coterminal Master's Program (<https://applyweb.com/stanterm>) available online in mid-September;
2. Statement of purpose: should be 2-5 pages double-spaced. Applicants should outline reasons for pursuing the M.A. in Sociology, including career aspirations and/or future plans for additional advanced degrees;
3. Preliminary program proposal: this is a form in the application packet. At least 45 units of course work relevant to the degree program must be specified;
4. Undergraduate Coterm Application Approval form (<https://stanford.app.box.com/v/ug-coterm-application-approval>): downloaded from the Registrar's Office web site and uploaded to the online application;
5. Current unofficial undergraduate transcript;
6. Two letters of recommendation from Stanford faculty familiar with the student's academic work; additional letters from teaching assistants, employers, or other individuals are accepted as supplemental materials but are not required;
7. GRE scores.

## University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Program requirements

Coterminal M.A. students are required to take 45 units of course work during their graduate career. All units for the coterminal M.A. must be taken at or above the 100 level; advanced-level course work is encouraged and a minimum of 20 units must be taken at the 200 level. Students who wish to take courses outside the department must seek approval in advance from the Sociology student services office; coterminal master's students are limited to 5 units from outside of the department and outside courses must be taken in other Social Science departments.

Students may transfer a maximum of 10 units from their undergraduate career; to be eligible for transfer, courses must have been taken in the three quarters preceding the student's first graduate quarter. Courses cannot be transferred after a student's bachelor's degree has been conferred. See the Registrar's Office (<https://registrar.stanford.edu/students/coterminal-degree-programs/coterm-course-transfer>) for additional information on course transfer policies.

All units applied to the coterminal master's degree must be taken for a letter grade, and an overall grade point average (GPA) of 3.0 (B) or better is required for the degree.

Coterminal students are strongly encouraged to take SOC 180A Foundations of Social Research, and SOC 180B Introduction to Data Analysis, in sequence when possible. These methods courses provide skills for research opportunities within the department and in academic or professional careers. They are also an important component of graduate training in the social sciences. Coterminal M.A. students should meet with their assigned faculty adviser upon acceptance to the program to discuss their program proposal. Program proposals, which outline the courses to be completed for the master's degree, must be submitted before the end of the student's first graduate quarter.

Students are responsible for knowing and adhering to University and Departmental policies, standards, and requirements for coterminal students. For University coterminal degree program rules and University application forms, see the Coterminal Degrees (p. 46) section of this bulletin. For additional information regarding the Sociology coterminal M.A. and how to apply, see the Department of Sociology (<http://www.stanford.edu/dept/soc/coterminal>) web site.

## Master of Arts in Sociology for Current Stanford Graduate Students

The M.A. degree in Sociology is available to current Ph.D. candidates in Sociology and to students in advanced degree programs (Ph.D., J.D., M.D.) from other Stanford departments and schools.

For the M.A. degree, students must complete a minimum of 45 units of Sociology course work with a grade point average (GPA) of 3.0 (B) or better. Of these units, 30 units must be taken in courses taught by faculty appointed in the Sociology department. Students may petition to use the remaining 15 units as flex units for courses not offered by faculty appointed in Sociology, but that are highly relevant to the discipline. 5 of these flex units can be taken as an independent study or directed reading with a member of the faculty appointed in Sociology. All flex units applied to courses not taught by faculty appointed in Sociology must be approved by the Director of Graduate Studies. All courses must be taken for a letter grade if possible. Workshops and colloquia do not count towards the M.A.

University regulations pertaining to the M.A. are listed in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study.

No thesis is required.

While formal application to the M.A. program is not required, applicants from outside of the Sociology department must submit:

1. Graduate Authorization Petition form, available electronically through ACESS (<https://access.stanford.edu>);
2. Program Proposal for an M.A. form available for download from the registrar's office website, submitted to Sociology graduate student services manager;
3. Short statement of purpose; 1 page double-spaced, submitted to Sociology graduate student services manager.

Sociology Ph.D.s may receive their M.A. in their second or third year of graduate study. Interested students from other degree programs should visit the department's (<https://sociology.stanford.edu/academics/coterminal-masters-program/master-arts-sociology-current-stanford-graduate-students>) web site.

## Doctor of Philosophy in Sociology

The Ph.D. curriculum and degree requirements are designed to provide students with the knowledge and skills to become proficient scholars and teachers. Doctoral students in the department taking a substantive sociology course are expected to take "letter grade" whenever possible and are expected to earn a grade of 'B+' or better in each course. Any grade of 'B' or below is considered to be less than satisfactory. Grades of 'B' or below are reviewed by faculty and the following actions may take place: the grade stands and the student's academic performance is monitored to ensure that satisfactory progress is being made; the grade stands and the student is required to revise and resubmit the work associated with that course; or the student may be required to retake the course.

The following program requirements apply to students who entered the Ph.D program in 2010-11 or later; students admitted prior to 2010 should consult the department or the Bulletin from their year of admission ([http://www.stanford.edu/dept/registrar/bulletin\\_past](http://www.stanford.edu/dept/registrar/bulletin_past)) for requirements specific to their cohort.

Students must complete the following department requirements for the Ph.D. degree in Sociology:

1. Students must enroll in SOC 305 Graduate Proseminar in Autumn Quarter of the first year. The course provides an introduction and orientation to the field of sociology, and to the department and faculty. One unit of credit is given for this course; grading is on a satisfactory/no credit basis.
2. Students must enroll in SOC 396 Sociology Colloquium in Autumn, Winter and Spring quarters of their first and second years. The Sociology Colloquium is a semimonthly seminar held throughout the academic year, in which distinguished scholars lecture about their cutting-edge research findings. Students must enroll for credit and it is required for all first and second year Sociology students.
3. Students are required to complete 45 units of course work in Sociology in the first academic year, then 15 units of Sociology course work in the second academic year. Course work excludes workshop, independent study, and directed reading units.
4. *Theory*: Students are required to take at least two courses in sociological theory. One course should be in either macro-sociological theory (SOC 370A Sociological Theory: Social Structure, Inequality, and Conflict), or micro-sociological theory (SOC 370B Social Interaction and Group Process), in the first year of the program. A second course, in research design, should be taken during the first year in the program SOC 372 Theoretical Analysis and Research Design).
5. *Methodology*: Students are required to complete a series of courses in methodology as well as one methods elective. Students with little

background in statistics are encouraged to take an undergraduate statistics course in their first quarter of the program. The required methods sequence, to be taken in order, is listed below.

6. *Survey Courses*: Students must complete four broad survey courses to demonstrate command of a range of sociological literature. Each year the department specifies which courses meet this requirement. A list of courses that generally fulfill this requirement is listed below. Students should consult with their adviser to ensure that the combination of courses selected to meet this requirement exhibits sufficient breadth. This requirement is normally completed by the end of the second year of residency and must be met by the end of the third year of residency. The most current list of approved survey courses is available on the department website.
7. *Workshops*: Beginning in year two, doctoral students are required to enroll in at least one workshop each quarter. First year students may attend workshops but are not required to enroll. Sociology workshops are offered for 1-2 units on a credit/non-credit basis only and attendance is required to receive course credit. The Director of Graduate Studies may approve a student's petition to attend a workshop when enrollment is prohibited by unit constraints; such attendance is not noted on the transcript. A list of approved workshops that fulfill this requirement is listed in the requirements section below and also on the department website.
8. *Qualifying Exam #1*: The first comprehensive examination is designed to ensure that students enter their second year with a firm reading knowledge of two substantive subfields. Students write two essays in response to questions provided by the examining committee. The questions are due exactly one week later. Students choose one of two questions to write on for each subfield. Examinations are offered in the subject areas below, based on comprehensive readings lists that are available at the beginning of each academic year. Each subject area has one faculty point person or group leader. Group leaders are responsible for assembling essay questions and agree to meet with students as requested.

Exam subject areas for 2017 -18 are:

- Economic Sociology
- Gender
- Historical and Comparative Sociology
- Organizations
- Political Sociology
- Population, Family, Demography, and Marriage
- Race, Ethnicity, and Immigration
- Social Inequality
- Social Movements
- Social Psychology

Students may work together to read and discuss the materials on the comprehensive reading lists (and in fact they are encouraged to do so). They may consult with faculty members as they study for the exams. However, once the examination questions are released, all such collaboration and consultation should stop, and students should work independently on their essays.

9. *Qualifying Exam #2*: The second qualifying examination provides students with a more focused engagement in a specialized subfield or research area, and tests the student's ability to work and think independently. Exam #2 is due by June 1 of the second year in residence. A two-person committee that includes the primary adviser evaluates the paper. Although the committee is usually comprised of two regular faculty members in the department, emeritus and other faculty outside the department may serve as a committee member with prior approval. Committees and a brief proposal are recorded on the second year qualifying paper form, which the student should complete and submit to the graduate student services manager by December 1 of the second year. Second year students are required to enroll in SOC 385A Research Practicum I and SOC 385B Research Practicum II (both workshops assist in developing the front end of

the research paper). Exams are read and graded by both committee members. The grades are an important component of the decision to advance a student to candidacy. Students must submit a one-page proposal to the reading committee and receive its approval by December 1 of the second year. The proposal includes a brief statement of the problem; a preliminary research design; a data source and proof of reasonable access to it; and a short reading list. Students submit the proposal along with second year qualifying paper form to the graduate student services manager. Students should produce a paper that makes an original contribution to sociological knowledge and that is ultimately publishable. That generally means writing a paper that includes data analysis; a full and focused analytic discussion of relevant theory and research; and frame the findings as a contribution to the literature. Students may also produce a paper with a primarily theoretical contribution so long as the prospects for eventual publication are clear to the committee. The paper should contain no more than 8,000 words of text. This paper may not also be employed to meet the Third Year Paper requirement, even in revised form.

10. *Third Year Paper:* In preparation for a career of writing scholarly papers, each student must complete a research paper in the third year of residency. This third-year paper may be on any sociological topic, and may address theoretical, empirical, or methodological issues. The paper is expected to reflect original work and be of publishable quality. Students select a committee of at least two Sociology faculty members to serve as third year paper readers. To ensure that students are making adequate progress on their paper, students are required to provide a first draft of the paper to readers by April 1. The final deadline for paper submission is June 1. The committee provides a review that speaks to (1) whether the paper is publishable and whether the student should therefore invest in attempting to publish it, and (2) what types of revisions, insofar as the paper is publishable, that the student should be pursuing to ready the paper for publication. These comments are shared with the Director of Graduate Studies, and copies of the paper and faculty comments will go in the student file.
11. *TA requirement:* Students must complete three quarters of teaching apprenticeship in departmental courses, or in other courses by approval. Students working as either a teaching assistant (TA) under the supervision of a faculty member or as a teaching fellow (TF) fulfills this requirement. Students are required to take SOC 300, Workshop: Teaching Development, in Spring Quarter of the first year. In addition, students are encouraged to take advantage of department and University teacher training programs. Students for whom English is a second language are expected to acquire sufficient facility in English to be an effective teacher. It is recommended that students complete their research requirements early in their graduate program; the requirement must be completed by the end of the fourth year of residency.
12. *RA requirement:* As partial preparation for becoming an accomplished researcher, each student must complete three quarters of research experience, working under the supervision of one or more faculty members, including regular, emeritus, and affiliated faculty. The experience may involve paid (or unpaid) work as a Research Assistant (RA). With the approval of the Director of Graduate Studies, research experience may be acquired by involvement in research projects outside the department. It is recommended that students complete their research requirements early in their graduate program; the requirement must be completed by the end of the fourth year of residency.
13. Students are required to present at least two papers at a major professional meeting (e.g., ASA) in their first five years of graduate study
14. *Dissertation Prospectus and Prospectus Defense:* In order to demonstrate the ability to conduct independent scholarly work, each student must prepare and defend dissertation prospectus by the end

of May during the fourth year in residence. Students should have their dissertation committee selected by the end of their third year in the program.

15. *Doctoral Dissertation and Defense:* Each student must complete and defend a doctoral dissertation. At the choice of the student (and in consultation with his/her adviser), the dissertation requirement may be met either by (1) submitting a book-length document, or (2) submitting three independent papers. The papers may address the same topic, but should be written as stand-alone, single-authored papers in standard journal format (i.e., AJS or ASR). None of these papers may overlap substantially with one another, and none of them may be co-authored. (The main criterion in judging substantial overlap is whether any standard journal, such as AJS, would regard the papers as too similar to publish both.) The dissertation must be submitted to all committee members at least 30 days in advance of the defense date. The dissertation defense serves as the Oral Examination required by the University. Assessment of satisfactory completion is determined by the student's doctoral committee members. All students are invited to present their dissertation findings at an informal department colloquium.

The faculty are responsible for providing students with timely and constructive feedback on their progress towards the Ph.D. In order to evaluate student progress and to identify potential problem areas, the department's faculty reviews the academic progress of each first-year student at the beginning of Winter and Spring quarters and again at the end of the academic year. The first two reviews are primarily intended to identify developing problems that could impede progress. In most cases, students are simply given constructive feedback, but if there are more serious concerns, a student may be placed on probation with specific guidelines for addressing the problems detected. The review at the end of the academic year is more thorough; each student's performance during the first year is reviewed and discussed. Possible outcomes of the spring review include: (1) continuation of the student in good standing, or (2) placing the student on probation, with specific guidelines for the period of probation and the steps to be taken in order to be returned to good standing. For students on probation at this point (or at any other subsequent points), possible outcomes of a review include: (1) restoration to good standing; (2) continued probation, again with guidelines for necessary remedial steps; or (3) termination from the program. Students leaving the program at the end of the first year are usually allowed to complete the requirements to receive an M.A. degree, if this does not involve additional residence or financial support. All students are given feedback from their advisers at the end of their first year of graduate work, helping them to identify areas of strengths and potential weakness.

At the end of the second year of residency, students who are performing well are advanced to candidacy. This step implies that the student has demonstrated the relevant qualities required for successful completion of the Ph.D. Future evaluations are based on the satisfactory completion of specific remaining department and University requirements. Students who are not advanced to candidacy will normally be terminated from the program and awarded an M.A. degree. In some cases, the department may require that a student complete outstanding work or complete unmet requirements before admission to candidacy. The University requires that all students must be admitted to candidacy by the beginning of the third year in residence in order to continue in the Ph.D. program. Therefore all requirements stipulated by the department must be met before registration for the fall quarter of the student's third year.

At any point during the degree program, evidence that a student is performing at a less than satisfactory level may be cause for a formal academic review of that student.

## Degree Requirements

### Survey Courses

Students must complete four courses from an approved list. This list is updated and circulated to students at the start of each academic year. *Note:* class offerings rotate; not all approved survey courses are offered every year. The following courses typically fulfill the survey course requirement:

		Units
SOC 308	Social Demography	4-5
SOC 310	Political Sociology	4-5
SOC 314	Economic Sociology	4-5
SOC 316	Historical and Comparative Sociology	4-5
SOC 318	Social Movements and Collective Action	4-5
SOC 320	Foundations of Social Psychology	4-5
SOC 323	Sociology of the Family	4-5
SOC 339	Gender Meanings and Processes	5
SOC 340	Social Stratification	4-5
SOC 342B	Gender and Social Structure	5
SOC 350	Sociology of Race	4-5
SOC 357	Immigration and Assimilation	3-5
SOC 358	Sociology of Immigration	1-5
SOC 362	Organization and Environment	3
SOC 363A	Seminar on Organizational Theory	5
SOC 366A	Organizational Ecology	3
SOC 376	Perspectives on Organization and Environment: Social Movement Organizations and Environments	3

### Research Methods

Required methodology courses are listed below.

		Units
SOC 381	Sociological Methodology I: Introduction	5
SOC 382	Sociological Methodology II: Principles of Regression Analysis	4-5
SOC 383	Sociological Methodology III: Models for Discrete Outcomes	5

### Theory

SOC 370A	Sociological Theory: Social Structure, Inequality, and Conflict	5
or SOC 370B	Social Interaction and Group Process	
SOC 372	Theoretical Analysis and Research Design	3-5

### Workshops

SOC 311A	Workshop: Comparative Studies of Educational and Political Systems	1-5
SOC 315W	Workshop: Economic Sociology and Organizations	1-2
SOC 317W	Workshop: Networks, Histories, and Theories of Action	1-2
SOC 321W	Workshop: Social Psychology and Gender	1-2
SOC 325W	Workshop: Graduate Family	1-2
SOC 338W	Workshop: Sociology of Law	1-5
SOC 341W	Workshop: Inequality	1-2
SOC 350W	Workshop: Migration, Ethnicity, Race and Nation	1-3
SOC 368W	Workshop: China Social Science	1

SOC 375W	Workshop: Morality and Hierarchy	1-2
----------	----------------------------------	-----

## Ph.D. Minor in Sociology

Sociology offers a minor for currently enrolled doctoral students in other Stanford departments and schools. Students must complete a minimum of 30 graduate-level units with a grade point average (GPA) of 3.0 (B) or better. All 30 units for the minor must be in courses taught by faculty appointed in the Sociology department. Students must enroll in the SOC course offerings (not cross-listed sections). There are two exceptions: five (5) of these units may be taken as an independent study or directed reading with a member of the sociology faculty; another five (5) units may be taken in a statistics or methods course taught in another department. All units must be taken for a letter grade. Workshops and colloquium do not count towards the Ph.D. minor. The program must be approved by a Sociology adviser and filed with the Sociology student services office. While there is not a formal application process, candidates must submit a short statement of purpose (2 pages), and a completed Application for Ph.D. Minor form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app\\_phd\\_minor.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app_phd_minor.pdf)) to the Sociology student services office. The Application for Ph.D. Minor form must have all Sociology or other courses to be applied to the minor listed, including course number, units, and final grades.

*Emeriti: (Professors)* Joseph Berger, Michael T. Hannan, , James G. March, John W. Meyer, Susan Olzak, Richard Scott, Nancy B. Tuma, Morris Zelditch Jr.

*Chair:* Xueguang Zhou

*Professors:* Karen Cook, Shelley Correll, Jeremy Freese, Mark Granovetter, David Grusky, Douglas McAdam, Cecilia Ridgeway, Michael Rosenfeld, Gi-Wook Shin, C. Matthew Snipp, Florencia Torche, Andrew Walder, Robb Willer, Xueguang Zhou

*Associate Professors:* Tomás Jiménez, Aliya Saperstein

*Units Assistant Professors:* Jackelyn Hwang, Michelle Jackson, David Pedulla, Cristobal Young

*Adjunct Professors:* Glenn Carroll, Raj Chetty, Michele Landis Dauber, Larry Diamond, Daniel McFarland, Walter Powell, Francisco Ramirez, Hayagreeva Rao, Sean Reardon, Jesper Sorensen, Sarah Soule

*Adjunct Associate Professors:* Amir Goldberg, Mitchell Stevens, Christine Min Wotipka

*Units Adjunct Assistant Professors:* Patricia Bromley, Angèle Christin, Sharad Goel, Jennifer Pan

*Lecturers:* Patricia Young

*Adjunct Associate Professor:* Ruth Cronkite

## Overseas Studies Courses in Sociology

*Units* The Bing Overseas Studies Program (<http://bossp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bossp.stanford.edu>).

		<b>Units</b>
OSPBER 66	Theory from the Bleachers: Reading German Sports and Culture	3
OSPFLOR 23	Italian Emigration, Immigration, and the Making of Nation	3
OSPFLOR 46	Images of Evil in Criminal Justice	5
OSPMADRD 61	Society and Cultural Change: The Case of Spain	4
OSPOXFRD 117W	Gender and Social Change in Modern Britain	4-5

# STATISTICS

Courses offered by the Department of Statistics are listed under the subject code STATS on the Stanford Bulletin's ExploreCourses web site.

The department's goals are to acquaint students with the role played in science and technology by probabilistic and statistical ideas and methods, to provide instruction in the theory and application of techniques that have been found to be commonly useful, and to train research workers in probability and statistics. There are courses for general students as well as those who plan careers in statistics in business, government, industry, and teaching.

The department has long recognized the relation of statistical theory to applications. It has fostered this by encouraging a liaison with other departments in the form of joint and courtesy faculty appointments, as well as membership in various interdisciplinary programs: Biomedical Data Science, Bio-X, Center for Computational, Evolutionary and Human Genomics, Computer Science, Economics, Education, Electrical Engineering, Environmental Earth System Science, Genetics, Mathematics, Mathematical and Computational Finance, and Medicine. The research activities of the department reflect an interest in applied and theoretical statistics and probability. There are workshops in biology/medicine and in environmental factors in health.

In addition to courses for Statistics students, the department offers a number of service courses designed for students in other departments. These tend to emphasize the application of statistical techniques rather than their theoretical development.

The department has always drawn visitors from other countries and universities, and as a result there are a wide range of seminars offered by both the visitors and the department's own faculty.

## Undergraduate Programs in Statistics

The department offers a minor in Statistics and in Data Science (<https://statistics.stanford.edu/academics/undergraduate-programs>). Program details can be found under the Minor section.

### Undergraduates Interested in Statistics

Students wishing to build a concentration in probability and statistics are encouraged to consider declaring a major in Mathematical and Computational Science (<https://mcs.stanford.edu>). This interdisciplinary program is administered in the Department of Statistics and provides core training in computing, mathematics, operations research, and statistics, with opportunities for further elective work and specialization. See the "Mathematical and Computational Science" section of this bulletin.

## Graduate Programs in Statistics

University requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 50)" section of this bulletin.

### Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Statistics and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Statistics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students

to make original contributions to the knowledge of Statistics and to interpret and present the results of such research.

The Department of Statistics offers two minor programs for undergraduates, a minor in Data Science and a minor in Statistics.

## Minor in Data Science

The undergraduate Data Science minor has been designed for majors in the humanities and social sciences who want to gain practical knowledge of statistical data analytic methods as it relates to their field of interest. The minor:

- provides students with the knowledge of exploratory and confirmatory data analyses of diverse data types such as text, numbers, images, graphs, trees, and binary input)
- strengthens social research by teaching students how to correctly apply data analysis tools and the techniques of data visualization to convey their conclusions.

No previous programming or statistical background is assumed.

### Learning Outcomes

Students are expected to:

1. be able to connect data to underlying phenomena and to think critically about conclusions drawn from data analysis.
2. be knowledgeable about programming abstractions so that they can later design their own computational inferential procedures

All courses for the minor must be taken for a letter grade, with the exception of the Data Mining requirement.

Seven courses are required, 22 units minimum. An overall 2.75 grade point average (GPA) is required for courses fulfilling the minor.

### Requirements

#### Linear Algebra

		Units
<b>One of the following:</b>		
MATH 51	Linear Algebra and Differential Calculus of Several Variables	5
CME 100	Vector Calculus for Engineers	5

#### Programming

		Units
CS 106A	Programming Methodology	3-5

#### Programming in R

		Units
<b>One of the following:</b>		
STATS 32	Introduction to R for Undergraduates	1
STATS 48N	Riding the Data Wave	3
THINK 3	Breaking Codes, Finding Patterns	4

Or other course that teaches proficiency in R programming.

#### Data Science

		Units
STATS 101	Data Science 101	5

#### Statistics

		Units
<b>One of the following:</b>		
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	5

PHIL 166	Probability: Ten Great Ideas About Chance	4
STATS 141	Biostatistics	3-5
STATS 191	Introduction to Applied Statistics	3-4
STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
STATS 216	Introduction to Statistical Learning	3

### Data Mining and Analysis

STATS 202	Data Mining and Analysis (may be taken CR/NC)	3
-----------	---	---

### Elective Course

**One course fulfilling Data Science methodology from cognate field of interest. Suggested courses:**

CS 224W	Analysis of Networks	3-4
ECON 291	Social and Economic Networks	2-5
ENGLISH 184E	Literary Text Mining	5
LINGUIST 275	Probability and Statistics for linguists	2-4
MS&E 135	Networks	3
PHIL 50S	Truth, Proof and Probability: An Introduction To Philosophical and Logical Reasoning	3
PHIL 166	Probability: Ten Great Ideas About Chance	4
POLISCI 150B	Machine Learning for Social Scientists	5
POLISCI 155	Political Data Science	5
POLISCI 450A	Political Methodology I: Regression	5
PSYCH 109		4
PSYCH 196A		3
PUBLPOL 105	Empirical Methods in Public Policy	4-5
SOC 126	Introduction to Social Networks	4
SOC 180A	Foundations of Social Research	4
or SOC 180B	Introduction to Data Analysis	

## Minor in Statistics

The undergraduate minor in Statistics is designed to complement major degree programs primarily in the social and natural sciences. Students with an undergraduate Statistics minor should find broadened possibilities for employment. The Statistics minor provides valuable preparation for professional degree studies in postgraduate academic programs.

The minor consists of a minimum of six courses with a total of at least 20 units. There are two required courses (8 units) and four qualifying or elective courses (12 or more units). All courses for the minor must be taken for a letter grade. An overall 2.75 grade point average (GPA) is required for courses fulfilling the minor.

### Required Courses

#### Both:

STATS 116	Theory of Probability	3-5
STATS 200	Introduction to Statistical Inference	3

### Qualifying Courses

At most, one of these two courses may be counted toward the six course requirement for the minor:

#### Choose one from the following:

MATH 52	Integral Calculus of Several Variables	5
STATS 191	Introduction to Applied Statistics	3-4

### Elective Courses

At least one of the elective courses should be a STATS 200-level course. The remaining two elective courses may also be 200-level courses. Alternatively, one or two elective courses may be approved courses in other departments. Special topics courses and seminars for undergraduates are offered from time to time by the department, and these may be counted toward the course requirement. Students may not count any Statistics courses below the 100 level toward the minor.

### Examples of elective course sequences are:

		Units
<b>Data Analysis and Applied Statistics</b>		
STATS 202	Data Mining and Analysis	3
STATS 203	Introduction to Regression Models and Analysis of Variance	3
<b>Statistical Methodology</b>		
STATS 205	Introduction to Nonparametric Statistics	3
STATS 206	Applied Multivariate Analysis	3
STATS 207	Introduction to Time Series Analysis	3
<b>Economic Optimization</b>		
STATS 206	Applied Multivariate Analysis	3
ECON 160	Game Theory and Economic Applications	5
<b>Psychology Modeling and Experiments</b>		
STATS 206	Applied Multivariate Analysis	3
<b>Signal Processing</b>		
STATS 207	Introduction to Time Series Analysis	3
EE 264	Digital Signal Processing	3
EE 279	Introduction to Digital Communication	3
<b>Genetic and Ecologic Modeling</b>		
STATS 217	Introduction to Stochastic Processes I	3
BIO 283	Theoretical Population Genetics	3
<b>Probability and Applications</b>		
STATS 217	Introduction to Stochastic Processes I	3
STATS 218	Introduction to Stochastic Processes II	3
<b>Mathematical Finances</b>		
STATS 240	Statistical Methods in Finance	3-4
STATS 243	Risk Analytics and Management in Finance and Insurance	3
STATS 250	Mathematical Finance	3

## Master of Science in Statistics

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees" (p. 50) section of this bulletin. The following are specific departmental requirements.

The M.S. in Statistics and the M.S. in Statistics, Data Science track, are intended as terminal degree programs and do not lead to the Ph.D. program in Statistics. Students interested in pursuing doctoral study in Statistics should apply directly to the Ph.D. program.

### Admission

Prospective applicants should consult the Graduate Admissions (<https://gradadmissions.stanford.edu>) and the Statistics Department admissions web pages (<https://statistics.stanford.edu/academics/admissions>) for complete information on admission requirements and deadlines.

Recommended preparatory courses include advanced undergraduate level courses in linear algebra, statistics/probability and proficiency in programming.

## Coterminal Master's Program

Stanford undergraduates who want to apply for the coterminal master's degree must submit a complete application to the department by the deadline published on Statistics Department admissions web page. (<https://statistics.stanford.edu/academics/ms-coterm-apply>)

Applications are accepted twice a year in autumn and winter quarter for the internal/coterminal master's degree program in Statistics.

The department does not accept coterminal or internal applications for the Data Science track.

Students pursuing the Statistics coterminal master's degree must follow the same curriculum requirements stated in the Requirements for the Master of Science in Statistics section.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Statistics

### Curriculum and Degree Requirements

The department requires that a master's student take 45 units of work from offerings in the Department of Statistics (<http://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=STATS&collapse=>) or from authorized courses in other departments. With the advice of the master's program advisers, each student selects his or her own set of electives.

All requirements for the Statistics master's degree, including the coterminal master's degree, must be completed within three years of the first quarter of graduate standing. Ordinarily, four or five quarters are needed to complete all requirements. Honors Cooperative students must finish within five years.

Units for a given course may not be counted to meet the requirements of more than one degree, with the exception that up to 45 units of a Stanford M.A. or M.S. degree may be applied to the residency requirement for the Ph.D., D.M.A. or Engineer degrees. See the "Residency Policy for Graduate Students (p. 57)" section of this Bulletin for University rules.

As defined in the general graduate student requirements, students must maintain a grade point average (GPA) of 3.0 or better and classes must be taken at the 200 level or higher. No thesis is required.

For further information about the Statistics master's degree program requirements, see the department web site (<https://statistics.stanford.edu/academics/ms-statistics>). (<https://statistics.stanford.edu/masters-program-proposal-form>)

### 1. Statistics Core Courses (must complete all four courses):

		Units
<b>Probability</b>		
STATS 116	Theory of Probability	3-5
<b>Applied Statistics</b>		
STATS 191	Introduction to Applied Statistics	3-4
<b>Theoretical Statistics</b>		
STATS 200	Introduction to Statistical Inference	3
<b>Stochastic Processes</b>		
STATS 217	Introduction to Stochastic Processes I	2-3

Students with prior background may replace each course with a more advanced course from the same area. Courses previously taken may be waived by the adviser, in which case they must be replaced by other graduate courses offered by the department. All must be taken for a letter grade.

### 2. Additional Statistics courses:

At least four additional Statistics courses must be taken from graduate offerings in the department (STATS 202 through 390). All must be taken for a letter grade, with the exception of courses offered satisfactory/no credit only.

		Units
Students cannot count more than a total 6 units of the following toward the master's degree requirements:		
STATS 260A	Workshop in Biostatistics	1-2
STATS 260B	Workshop in Biostatistics	1-2
STATS 260C	Workshop in Biostatistics	1-2
STATS 298	Industrial Research for Statisticians	1
STATS 299	Independent Study	1-10
STATS 390	Consulting Workshop	1-3

### 3. Linear Algebra Mathematics Requirement:

		Units
Select one of the following:		
MATH 104	Applied Matrix Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
MATH 115	Functions of a Real Variable	3
MATH 171	Fundamental Concepts of Analysis	3

Substitution of other courses in Mathematics may be made with consent of the adviser. All must be taken for a letter grade, with the exception of courses offered satisfactory/no credit only.

### 4. Programming Requirement:

		Units
Select one of the following:		
CS 106A	Programming Methodology	3
CS 106B	Programming Abstractions	3
CS 106X	Programming Abstractions (Accelerated)	3
CS 107	Computer Organization and Systems	3-5
CME 108	Introduction to Scientific Computing	3

Substitution of other courses in Computer Science may be made with consent of the adviser. All must be taken for a letter grade, with the exception of courses offered satisfactory/no credit only.

### 5. Elective Courses:

Additional elective units to complete the requirements may be chosen from the list available from the department web site (<https://statistics.stanford.edu/academics/ms-statistics-elective-courses>). Other graduate courses (200 or above) may be authorized by the adviser if they provide skills relevant to degree requirements or deal primarily with an application of statistics or probability and do not overlap courses in the student's program.

There is sufficient flexibility to accommodate students with interests in applications to business, computing, economics, engineering, health, operations research, and biological and social sciences.

#### Courses below 200 level are not acceptable, with the following exceptions:

STATS 116	Theory of Probability	3-5
STATS 191	Introduction to Applied Statistics	3-4
MATH 104	Applied Matrix Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
MATH 115	Functions of a Real Variable	3
MATH 171	Fundamental Concepts of Analysis	3
CS 106A	Programming Methodology	3-5
CS 106B	Programming Abstractions	3-5
CS 106X	Programming Abstractions (Accelerated)	3-5
CS 140	Operating Systems and Systems Programming	3-4
CS 142	Web Applications	3
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 161	Design and Analysis of Algorithms	3-5
CS 170	Stanford Laptop Orchestra: Composition, Coding, and Performance	1-5
CS 181	Computers, Ethics, and Public Policy	4

At most, one of these courses may be counted:

MATH 104	Applied Matrix Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
STATS 116	Theory of Probability	3-5
MATH 151	Introduction to Probability Theory	3

### Master's Degree Program Proposal

The Statistics Master's Degree Program Proposal form (<https://statistics.stanford.edu/masters-program-proposal-form>), signed and approved by the student's program adviser, must be submitted by the student to the department's student services administrator prior to the end of the first quarter of enrollment in the program. A revised program proposal must be submitted if degree plans change.

There is no thesis requirement.

Students with a strong mathematical background who are interested in pursuing a Ph.D. in Statistics should consider applying to the Ph.D. program.

## Master of Science in Statistics, Data Science Track

The Data Science track develops strong mathematical, statistical, and computational and programming skills through the general master's core and programming requirements. In addition, it provides a fundamental data science education through general and focused electives requirement from courses in data sciences and related areas. Course choices are limited to predefined courses from the data sciences and related courses group. Programming requirement (requirement 4) is extended to 6 units and includes course work in advanced scientific programming and high performance computing. The final requirement is a practical component (requirement 5) for 6 units to be completed through capstone project, data science clinic, or other courses that have strong hands-on or practical component, such as statistical consulting.

Units

### Admission

Prospective applicants should consult the Graduate Admissions (<https://studentaffairs.stanford.edu/gradadmissions>) and the Statistics Department admissions webpages (<https://statistics.stanford.edu/academics/admissions>) for complete information on admission requirements and deadlines.

Applicants apply to the Master of Science degree in Statistics and declare preference for the Data Science subplan (track) within the application ("Department Specialization" option).

### Prerequisites

Fundamental courses in mathematics and computing may be needed as prerequisites for other courses in the program. Check the prerequisites of each required course. Recommended preparatory courses include advanced undergraduate level courses in linear algebra, probability, and introductory courses in PDEs, stochastics, numerical methods and proficiency in programming.

### Curriculum and Degree Requirements

As defined in the general graduate student requirements, students must maintain a grade point average (GPA) of 3.0 or better and classes must be taken at the 200 level or higher. Students must complete 45 units of required coursework in Data Science.

A Master's Degree Program Proposal (<https://statistics.stanford.edu/academics/ms-statistics-data-science>), signed and approved by the student's program adviser, is to be submitted by the student to the department's student services administrator prior to the end of the first quarter of enrollment in the program. A revised program proposal must be submitted if degree plans change.

No thesis is required.

The Data Science subplan (track) is printed on the transcript and diploma.

### Requirement 1: Foundational (12 units)

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades.

		Units
CME 302	Numerical Linear Algebra	3
CME 305	Discrete Mathematics and Algorithms	3
CME 307	Optimization	3
CME 308	Stochastic Methods in Engineering	3

or

CME 309	Randomized Algorithms and Probabilistic Analysis
---------	--

**Requirement 2: Programming (6 units)**

To ensure that students have a strong foundation in programming, 3 units of advanced scientific programming for letter grade at the level of CME 212 and three units of parallel computing. Courses in this area must be taken for letter grades.

Programming proficiency at the level of CME 211 is a hard prerequisite for CME 212 (students may only place out of 211 with prior written approval). CME 211 can be applied towards elective requirement.

**Advanced Scientific Programming: (3 units)**

CME 212	Advanced Software Development for Scientists and Engineers	3
---------	--	---

**Parallel Computing/HCP courses: (3 units)**

CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 323	Distributed Algorithms and Optimization	3
CME 342	Parallel Methods in Numerical Analysis	3
CS 149	Parallel Computing	3-4
CS 315A	Parallel Computer Architecture and Programming	3
CS 316	Advanced Multi-Core Systems	3

Units

**Requirement 3: Data Science Electives (12 units)**

Data Science electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined. Courses outside this list are subject to approval. Courses in this area must be taken for letter grades.

STATS 200	Introduction to Statistical Inference	3
STATS 203	Introduction to Regression Models and Analysis of Variance	3
or STATS 305A	Introduction to Statistical Modeling	
STATS 315A	Modern Applied Statistics: Learning	2-3
STATS 315B	Modern Applied Statistics: Data Mining	2-3

Units

or equivalent courses as approved by the adviser.

**Requirement 4: Specialized Electives (9 units)**

Choose three courses in specialized areas from the following list. Courses outside this list are subject to approval.

BIOE 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOS 221/ STATS 366	Modern Statistics for Modern Biology	3
CS 224W	Analysis of Networks	3-4
CS 229	Machine Learning	3-4
CS 231N	Convolutional Neural Networks for Visual Recognition	3
CS 246	Mining Massive Data Sets	3-4
CS 448	Topics in Computer Graphics	3-4
ENERGY 240	Data science for geoscience	3
OIT 367	Business Intelligence from Big Data	3
PSYCH 204A	Human Neuroimaging Methods	3
STATS 290	Computing for Data Science	3

Units

**Requirement 5: Practical Component (6 units)**

Students are required to take 6 units of practical component that may include any combination of:

- Master’s research: STATS 299 Independent Study. A capstone project, supervised by a faculty member and approved by the student’s adviser. The capstone project should be computational in nature. Students should submit a one-page proposal, supported by the faculty member and sent to the student’s Data Science adviser for approval (at least one quarter prior to start of project). Should be taken for a letter grade.
- Project labs offered by Stanford Data Lab: ENGR 250 Data Challenge Lab , and ENGR 350 Data Impact Lab . (Limited enrollment; application required.)
- Other courses that have a strong hands-on and practical component, such as STATS 390 Consulting Workshop .

**Doctor of Philosophy in Statistics**

The department looks for students who wish to prepare for research careers in statistics or probability, either applied or theoretical. Advanced undergraduate or master’s level work in mathematics and statistics provides a good background for the doctoral program. Quantitatively oriented students with degrees in other scientific fields are also encouraged to apply for admission. The program normally takes five years to complete.

**Program Summary**

**First-year core program**

		Units
STATS 300	Advanced Topics in Statistics (offered Summer Quarter)	2-3
STATS 300A	Theory of Statistics I	2-3
STATS 300B	Theory of Statistics II	2-4
STATS 300C	Theory of Statistics III	2-4
STATS 305A	Introduction to Statistical Modeling	3
STATS 305B	Methods for Applied Statistics I: Exponential Families in Theory and Practice	3
STATS 305C	Methods for Applied Statistics II: Applied Multivariate Statistics	2-3
STATS 310A	Theory of Probability I	2-4
STATS 310B	Theory of Probability II	2-3
STATS 310C	Theory of Probability III	2-4

- Pass two of three parts of the qualifying examinations (end of first year); breadth requirement (second, third and fourth year); successfully complete the dissertation proposal meeting (before end of third year); pass the University oral examination (fourth or fifth year); dissertation (fifth year).
- In addition, students are required to take nine units of advanced topics courses offered by the department. Recommended courses include the following:

		Units
STATS 314A	Advanced Statistical Theory	3
STATS 315A	Modern Applied Statistics: Learning	2-3
STATS 315B	Modern Applied Statistics: Data Mining	2-3
STATS 317	Stochastic Processes	3
STATS 318	Modern Markov Chains	3
STATS 330	An Introduction to Compressed Sensing	3
STATS 370	A Course in Bayesian Statistics	3
STATS 376A	Information Theory	3

STATS 376B	Network Information Theory	3
EE 364A	Convex Optimization I	3

- Complete a minimum of three units of STATS 390 Consulting Workshop, taking it at least twice.
- Take STATS 319 Literature of Statistics once per year after passing the Qualifying Exam until the year after passing the dissertation proposal meeting.

## First-Year Core Courses

- STATS 300A Theory of Statistics I, STATS 300B Theory of Statistics II and STATS 300C Theory of Statistics III systematically survey the ideas of estimation and of hypothesis testing for parametric and nonparametric models involving small and large samples.
- STATS 305A Introduction to Statistical Modeling is concerned with linear regression and the analysis of variance.
- STATS 305B Methods for Applied Statistics I: Exponential Families in Theory and Practice and STATS 305C Methods for Applied Statistics II: Applied Multivariate Statistics survey a large number of modeling techniques, related to but going beyond the linear models of STATS 305A Introduction to Statistical Modeling.
- STATS 310A Theory of Probability I, STATS 310B Theory of Probability II, and STATS 310C Theory of Probability III are measure-theoretic courses in probability theory, beginning with basic concepts of the law of large numbers and martingale theory.

Students who do not have enough mathematics background can take STATS 310A,B,C after their first year but need to have their first-year program approved by the Director of Graduate Studies.

## Qualifying Examinations

These are intended to test the student's level of knowledge when the first-year program, common to all students, has been completed. There are separate examinations in the three core subjects of statistical theory and methods, applied statistics, and probability theory, and all are typically taken during the summer between the student's first and second years. Students are expected to show acceptable performance in two examinations. Letter grades are not given. After passing the qualifying exams students file for Ph.D. candidacy, a University milestone.

## Breadth Requirement

Students are required to take 15 units of coursework outside of the department and are advised to choose an area of concentration in a specific scientific field of statistical applications approved by their Ph.D. program adviser.

Popular areas include: Computational Biology and Statistical Genomics, Machine Learning, Applied Probability, Earth Science Statistics, and Social and Behavioral Sciences.

## Dissertation Reading Committee, Dissertation Proposal Meeting and University Oral Examinations

The dissertation reading committee consists of the student's adviser plus two faculty readers, all of whom are responsible for reading and approving the full dissertation.

The dissertation proposal meeting is intended to demonstrate students' depth in some areas of statistics, and to examine the general plan for their research. It also confirms that students have chosen a Ph.D. faculty adviser and have started to work with that adviser on a research topic. In the meeting, the student will give a 50-minute presentation and discuss their ideas for completing a Ph.D. thesis, with a committee typically consisting of the members of the dissertation reading committee. The meeting must be successfully completed before the end of the third year. "Successful completion" means that the general research plan is sound and has a reasonable chance of success. If the student does not pass,

the meeting must be repeated. Repeated failure by the end of Year 3 can lead to a loss of financial support.

The oral examination/dissertation defense is scheduled when the student has finished their dissertation and is in the process of completing their final draft. The oral exam consists of a 50-minute presentation on the dissertation topic, followed by a question and answer period attended only by members of the examining committee. The questions relate both to the student's presentation and also explore the student's familiarity with broader statistical topics related to the thesis research. The oral examination is normally completed within the last few months of the student's Ph.D. period. The examining committee usually consists of at least five members: four examiners including the three members of the Dissertation Reading Committee, plus an outside chair who serves as an impartial representative of the academic standards of the University. Four out of five passing votes are required and no grades are given. Nearly all students can expect to pass this examination, although it is common for specific recommendations to be made regarding completion of the written dissertation.

For further information on University oral examinations and committees, see the Graduate Academic Policies and Procedures (GAP) Handbook, section 4.7 (<http://gap.stanford.edu/4-7.html>) or the "University Oral Examination (p. 52)" section of this bulletin.

## Doctoral and Research Advisers

From the student's arrival until the selection of a research adviser, the student's academic progress is monitored by the department's Director of Graduate Studies. Each student should meet at least once a quarter with the Doctoral Adviser to discuss their academic plans and their progress towards choosing a dissertation adviser.

## Financial Support

Students accepted to the Ph.D. program are offered financial support. All tuition expenses are paid and there is a fixed monthly stipend determined to be sufficient to pay living expenses. Financial support can be continued for five years, department resources permitting, for students in good standing. The resources for student financial support derive from funds made available for student teaching and research assistantships. Students receive both a teaching and research assignment each quarter which, together, do not exceed 20 hours. Students are encouraged to apply for outside scholarships, fellowships, and other forms of financial support.

## Ph.D. Minor in Statistics

Students must complete 30 total units for the Ph.D. minor. 20 units must be from Statistics courses numbered 300 and above and taken for a letter grade (minimum grade of B for each course). The remaining 10 units can be from Statistics courses numbered 200 and above, and may be taken for credit. Students may not include more than three units of Stats 390, Consulting Workshop, towards the 30 units. The selection of courses must be approved by the Director of Graduate Studies. The Application for the Ph.D. Minor form must be approved by both the student's Ph.D. department and the Statistics department.

For further information about the Statistics Ph.D. degree program requirements, see the department web site (<https://statistics.stanford.edu/academics/doctoral-program>).

## Faculty

*Emeriti:* (Professors) Jerome H. Friedman, Paul Switzer

*Chair:* Emmanuel Candès

*Professors:* Emmanuel Candès, Sourav Chatterjee, Amir Dembo, Persi Diaconis, David L. Donoho, Bradley Efron, Trevor J. Hastie, Susan P. Holmes, Iain M. Johnstone, Tze L. Lai, Andrea Montanari, Art Owen,

Joseph P. Romano, Chiara Sabatti, David O. Siegmund, Jonathan Taylor,  
Robert J. Tibshirani, Guenther Walther, Wing H. Wong

*Assistant Professors:* John Duchi, Julia Palacios

*Courtesy Professors:* John Ioannidis, Hua Tang

*Courtesy Associate Professors:* David Rogosa, Lu Tian

*Courtesy Assistant Professors:* Mike Baiocchi, Percy Shuo Liang, Stefan  
Wager

*Stein Fellows:* James Johndrow, Lucy Xia, Yumeng Zhang, Xiang Zhu

# SYMBOLIC SYSTEMS

Courses offered by the Symbolic Systems Program are listed under the subject code SYMSYS on the Stanford Bulletin's ExploreCourses web site.

The observation that both human beings and computers can manipulate symbols lies at the heart of Symbolic Systems, an interdisciplinary program focusing on the relationship between natural and artificial systems that represent, process, and act on information. Computer programs, natural languages, the human mind, and the Internet embody concepts whose study forms the core of the Symbolic Systems curriculum, such as computation, representation, communication, and intelligence. A body of knowledge and theory has developed around these notions, from disciplines such as philosophy, computer science, linguistics, psychology, statistics, neurobiology, and communication. Since the invention of computers, researchers have been working across these disciplines to study questions such as: in what ways are computers and computer languages like human beings and their languages; how can the interaction between people and computers be made easier and more beneficial?

The core requirements of the Symbolic Systems Program (SSP) include courses in symbolic logic, the philosophy of mind, formal linguistics, cognitive psychology, programming, the mathematics of computation, statistical theory, artificial intelligence, and interdisciplinary approaches to cognitive science. These courses prepare students with the vocabulary, theoretical background, and technical skills needed for study and research at the advanced undergraduate and graduate levels. Most of the courses in SSP are drawn from affiliated departments. Courses designed specifically for the program are aimed at integrating and supplementing topics covered by the department-based offerings. The curriculum includes humanistic approaches to questions about language and intelligence, as well as training in science and engineering.

SSP offers B.S. and M.S. degree programs. Both programs require students to master a common core of required courses and to choose an area of specialization.

## Mission of the Undergraduate Program in Symbolic Systems

The undergraduate program in Symbolic Systems is an interdisciplinary program focusing on the relationships between natural and artificial systems that use symbols to communicate and to represent information. The mission of the program is to prepare majors with the vocabulary, theoretical background, and technical skills necessary to research questions about language, information, and intelligence, both human and machine. The curriculum offers a combination of traditional humanistic approaches to these questions as well as a training and familiarity with contemporary developments in the science and technology of computation. Students in the major take courses in cognitive science, computer programming, logic and computational theory, probability, cognitive psychology, philosophy of mind, linguistics, and artificial intelligence. The program prepares students for a variety of careers in the private and public sectors, especially those involving the human-facing sides of information systems/technology, as well as for further study and research in the cognitive and/or information sciences.

## Learning Outcomes (Undergraduate)

The program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Symbolic Systems Program. Students are expected to demonstrate:

1. ability to apply formal, philosophical, and/or computational analysis to experimental designs and data and vice versa.
2. ability to understand multiple formal, philosophical, and/or computational frameworks and how they are related to each other.
3. ability to map real world problems or observed phenomena onto formal, philosophical and/or computational frameworks and vice versa.

## Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Symbolic Systems and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses representing each of the core disciplines of Symbolic Systems as well as an individualized course program in support of the completion of a Master's thesis.

## Bachelor of Science in Symbolic Systems

The program leading to a B.S. in Symbolic Systems provides students with a core of concepts and techniques, drawing on faculty and courses from various departments. The curriculum prepares students for advanced training in the interdisciplinary study of language and information, or for postgraduate study in any of the main contributing disciplines. It is also excellent preparation for employment immediately after graduation.

Symbolic Systems majors must complete a core of required courses plus a field of study consisting of five additional courses. All major courses are to be taken for letter grades unless an approved course is offered satisfactory/no credit only. All core courses must be passed with a grade of 'C-' or better. Students who receive a grade lower than this in a core course must alert the program of this fact so that a decision can be made about whether the student should continue in the major.

### Core Requirements

In order to graduate with a B.S. in Symbolic Systems, a student must complete the following requirements. Some of these courses have other courses as prerequisites; students are responsible for completing each course's prerequisites before they take it. With the exception of the advanced small seminar requirement, courses cannot be used towards more than one area of the core requirements. For additional information, see the Symbolic Systems web site ([http://symsys.stanford.edu/undergraduate\\_programs](http://symsys.stanford.edu/undergraduate_programs)). *Note:* Students matriculating in the Class of 2018 or later must take SYMSYS 1 Minds and Machines (formerly SYMSYS 100) before their declaration of the Symbolic Systems undergraduate major can be approved.

#### 1. Introductory Core Course

Students matriculating in the Class of 2018 or later must take SYMSYS 1 Minds and Machines (formerly SYMSYS 100) before their declaration of the Symbolic Systems undergraduate major can be approved.

SYMSYS 1	Minds and Machines (formerly SYMSYS 100)	Units 4
----------	--	------------

#### 2. Continuous Fundamentals Level 1—Single Variable Calculus

Select one of the following Series:

<b>Series A</b>		
10 units of Advanced Placement Calculus credit		10
<b>Series B</b>		
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	10
<b>Series C</b>		

Equivalent preparation in Single Variable Calculus, as judged by student

### 3. Continuous Fundamentals Level 2—Multivariable Calculus

Select one of the following:<sup>1</sup>

CME 100	Vector Calculus for Engineers	5
CME 100A	Vector Calculus for Engineers, ACE	6
MATH 51	Linear Algebra and Differential Calculus of Several Variables	5
MATH 51A	Linear Algebra and Differential Calculus of Several Variables, ACE	6

<sup>1</sup> MATH 52 Integral Calculus of Several Variables and/or MATH 53 Ordinary Differential Equations with Linear Algebra, or CME 102 Ordinary Differential Equations for Engineers and/or CME 104 Linear Algebra and Partial Differential Equations for Engineers, are recommended and may be required for some optional higher level courses.

### 4. Continuous Fundamentals Level 3—Probability and Statistics

Select one of the following:

CS 109	Introduction to Probability for Computer Scientists	3-5
STATS 110	Statistical Methods in Engineering and the Physical Sciences	4-5
STATS 116	Theory of Probability	3-5
EE 178	Probabilistic Systems Analysis	4
MATH 151	Introduction to Probability Theory	3
MS&E 120	Probabilistic Analysis	5
CME 106/ ENGR 155C	Introduction to Probability and Statistics for Engineers	4

### 5. Discrete Fundamentals

#### a. Computing Level 1

CS 106A	Programming Methodology	3-5
---------	-------------------------	-----

Or equivalent preparation, as judged by student

#### b. Computing Level 2

Select one of the following:		
CS 106B	Programming Abstractions	3-5
CS 106X	Programming Abstractions (Accelerated)	3-5

#### c. Logic and Computational Theory

Select one of the following:		
CS 103	Mathematical Foundations of Computing	3-5
PHIL 150	Mathematical Logic	4
PHIL 150E	Logic in Action: A New Introduction to Logic	4

### 6. Technical Depth

Two courses chosen from the list below (from either the same or different areas), appropriate to a student's concentration. Students concentrating in HCI, AI, or Computer Music must take CS 107 Computer Organization and Systems. Other concentrations may also restrict the particular courses that can be taken to fulfill this requirement. See concentration lists at <http://symsys.stanford.edu/viewing/htmldocument/16190>

#### Area A. Computer Programming

CS 107	Computer Organization and Systems (required for HCI, AI, or Computer Music)	3-5
CS 107E	Computer Systems from the Ground Up	3-5

#### Area B. Computational Theory<sup>1</sup>

CS 154	Introduction to Automata and Complexity Theory	3-4
CS 161	Design and Analysis of Algorithms	3-5
PHIL 151A	Recursion Theory	4

Units

#### Area C. Logic

CS 157	Logic and Automated Reasoning	3
PHIL 151	Metalogic	4
PHIL 152	Computability and Logic	4
PHIL 154	Modal Logic	4

#### Area D. Decision Theory/Game Theory

CS 238	Decision Making under Uncertainty	3-4
POLISCI 152	Introduction to Game Theoretic Methods in Political Science	3-5

ECON 160	Game Theory and Economic Applications	5
----------	---------------------------------------	---

ECON 180	Honors Game Theory	5
----------	--------------------	---

MS&E 252	Decision Analysis I: Foundations of Decision Analysis	3-4
----------	---	-----

#### Area E. Probability and Statistics

STATS 200	Introduction to Statistical Inference	3
-----------	---------------------------------------	---

STATS 217	Introduction to Stochastic Processes I	2-3
-----------	--	-----

CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
--------	---	-----

CS 246	Mining Massive Data Sets	3-4
--------	--------------------------	-----

MS&E 221	Stochastic Modeling	3
----------	---------------------	---

<sup>1</sup> CS 156 is not offered in 2016-17 but may be used to fulfill this requirement.

### 7. Philosophical Foundations Level 1

#### Introductory Philosophy

Select one of the following:

PHIL 1	Introduction to Philosophy	5
PHIL 2	Introduction to Moral Philosophy	5
PHIL 60	Introduction to Philosophy of Science	5
PHIL 102	Modern Philosophy, Descartes to Kant	4
PHIL 135	Existentialism	4
THINK 24	Evil	4
ESF 7	Education as Self-Fashioning: The Transformation of the Self	7

All 3 of the following (must complete entire sequence):

SLE 91	Structured Liberal Education
& SLE 92	and Structured Liberal Education
& SLE 93	and Structured Liberal Education

Other introductory courses taught in the Philosophy Department, if approved by the Program Director or Associate Director

### 8. Philosophical Foundations Level 2

PHIL 80	Mind, Matter, and Meaning	5
---------	---------------------------	---

### 9. Philosophical Foundations Level 3

Select one of the following advanced undergraduate course in metaphysics/epistemology (post-PHIL 80):

PHIL 107B	Plato's Later Metaphysics and Epistemology	4
PHIL 173B	Metaethics	4
PHIL 175	Philosophy of Law	4
PHIL 180	Metaphysics	4
PHIL 180A	Realism, Anti-Realism, Irrealism, Quasi-Realism	4
PHIL 181	Philosophy of Language	4

PHIL 182	Advanced Philosophy of Language	4
PHIL 184	Epistemology	4
PHIL 186	Philosophy of Mind	4
PHIL 187	Philosophy of Action	4

Note: Symbolic Systems majors must take PHIL 182 for 3 or more units.

## 10. Cognition and Neuroscience

### Introductory Cognition and Neuroscience

PSYCH 45	Introduction to Learning and Memory	3
PSYCH 50	Introduction to Cognitive Neuroscience	4

### An additional undergraduate course in cognition and/or neurosciences

Select one of the following:

BIO 150	Human Behavioral Biology	5
HUMBIO 3B	Behavior, Health, and Development	5
PSYCH 30	Introduction to Perception	3
PSYCH 45	Introduction to Learning and Memory	3
PSYCH 50	Introduction to Cognitive Neuroscience	4
PSYCH 60	Introduction to Developmental Psychology	3
PSYCH 70	Self and Society: Introduction to Social Psychology	4
PSYCH 131		
PSYCH 141	Cognitive Development	3
PSYCH 154	Judgment and Decision-Making	3

## 11. Natural Language

### Language and Mind

Select one of the following:

LINGUIST 1	Introduction to Linguistics	4
LINGUIST 106	Introduction to Speech Perception	4
LINGUIST 140	Learning to Speak: An introduction to child language acquisition	4

PSYCH 131

### Linguistic Theory

Select one of the following:

LINGUIST 105	Phonetics	4
LINGUIST 110	Introduction to Phonology	4
LINGUIST 120	Introduction to Syntax	4
LINGUIST 121A	The Syntax of English	4
LINGUIST 121B	Crosslinguistic Syntax	4
LINGUIST 130A/230A	Introduction to Semantics and Pragmatics	4
LINGUIST 130B	Introduction to Lexical Semantics	3-4
LINGUIST 184	Syntactic Theory and Implementation	4
LINGUIST 281	Computational Models of Linguistic Formalism	1-4

## 12. Computation and Cognition

A course applying core technical skills to cognition

Select one of the following:

CS 131	Computer Vision: Foundations and Applications	3-4
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
APPPHYS 293	Theoretical Neuroscience	3

LINGUIST 180/CS 124	From Languages to Information	3-4
LINGUIST 182	Computational Theories of Syntax	3-4
NENS 220	Computational Neuroscience	4
PSYCH 204	Computation and cognition: the probabilistic approach	3
PSYCH 209	Neural Network Models of Cognition: Principles and Applications	4

Units

### Advanced Small Seminar Requirement

An upper-division, limited-enrollment seminar drawing on material from other courses in the core. Courses listed under Symbolic Systems Program offerings with numbers from SYMSYS 200 through SYMSYS 209 are acceptable, as are other courses as listed in the Advanced Small Seminar section of the Symbolic Systems website. Total enrollment must not exceed 20 students for a course to be approved as fulfilling the Advanced Small Seminar Requirement. A course taken to fulfill this requirement can also be counted toward another requirement, as part of either the core or a student's concentration, but not both.

### Fields of Study

In addition to the core requirements listed above, the Symbolic Systems major requires each student to complete a field of study consisting of five courses that are thematically related to each other. Students select concentrations from the list below or design others in consultation with their advisers. The field of study is declared on Axxess; it appears on the transcript but not on the diploma.

- Applied Logic
- Artificial Intelligence
- Cognitive Science
- Computer Music
- Decision Making and Rationality
- Human-Computer Interaction
- Learning
- Natural Language
- Neurosciences
- Philosophical Foundations

Note: A course may not count toward both a core and a concentration requirement, unless it is applied to the Advanced Small Seminar area within the core. A course that is applied to the Advanced Small Seminar requirement may also be counted toward a student's concentration or toward another core requirement, if appropriate, but not to both.

### Individually Designed Concentrations (IDCs)

Individually Designed Concentrations (IDCs) consist of five courses in a coherent subject area related to symbolic systems. This relationship may be established through inclusion in an IDC of two or more courses that connect the proposed concentration to the core, i.e. courses that (a) directly apply disciplines included in the core and (b) are related by topic or methodology to the other courses in the proposed concentration.

Course selection is to be made in consultation with the student's adviser and is subject to approval by the adviser, the Associate Director, and the Director. For examples of IDCs completed by past SSP students, consult the list of alumni and apply the filter "Individually Designed Concentration".

Units

Approval of an IDC must take place no less than two full quarters before a student plans to graduate, e.g. prior to the first day of Winter Quarter of the senior year if a student intends to graduate in June of that year. Failure to obtain approval by the required date will necessitate either completing the requirements for one of the suggested concentrations,

or delaying graduation to the end of the second full quarter following approval of an IDC.

To get a proposed IDC approved, send an email message to [symsys-directors@lists.stanford.edu](mailto:symsys-directors@lists.stanford.edu), cc'd to your prospective concentration adviser, stating that the adviser has approved your proposal, and giving a title, one-paragraph description, and course plan for your proposed concentration.

## Undergraduate Research

The program encourages all SSP majors to gain experience in directed research by participating in faculty research projects or by pursuing independent study. In addition to the Symbolic Systems Honors Program (see below), the following avenues are offered.

*Summer Internships:* students work on SSP-related faculty research projects. Application procedures are announced in the Winter Quarter for SSP majors.

*Research Assistantships:* other opportunities to work on faculty research projects are typically announced to SSP majors as they arise during the academic year.

*Independent Study:* under faculty supervision. For course credit, students should enroll in SYMSYS 196 Independent Study.

Contact SSP for more information on any of these possibilities, or see the Symbolic Systems (<http://symsys.stanford.edu>) web site. In addition, see the Undergraduate Advising and Research (<https://undergrad.stanford.edu/opportunities/research.html>) web site for information on UAR grants and scholarships supporting student research projects at all levels.

## Honors Program

Seniors in SSP may apply for admission to the Symbolic Systems honors program prior to the beginning of their final year of study. Students who are accepted into the honors program can graduate with honors by completing an honors thesis under the supervision of a faculty member. Course credit for the honors project may be obtained by registering for SYMSYS 190 Senior Honors Tutorial any quarter while a student is working on an honors project. SYMSYS 191 Senior Honors Seminar, is recommended for honors students during the senior year. Contact SSP or visit the program's web site for more information on the honors program, including deadlines and policies.

## Minor in Symbolic Systems

Students may minor in Symbolic Systems by completing either Option 1 or Option 2. For additional information see the Symbolic Systems minors web site (<http://symsys.stanford.edu/viewing/htmldocument/13635>).

### Option 1

One course in each of the following core areas (please note that several of these courses have prerequisites):

#### a. Cognition

Select one of the following:

SYMSYS 1	Minds and Machines (formerly SYMSYS 100)	4
PSYCH 45	Introduction to Learning and Memory	3
PSYCH 50	Introduction to Cognitive Neuroscience	4

#### b. Logic and Computation

Select one of the following:

PHIL 150	Mathematical Logic	4
PHIL 150E	Logic in Action: A New Introduction to Logic	4
PHIL 151	Metalogic	4

CS 103	Mathematical Foundations of Computing	3-5
--------	---------------------------------------	-----

#### c. Computer Programming

Select one of the following:

CS 106B	Programming Abstractions	3-5
CS 106X	Programming Abstractions (Accelerated)	3-5
CS 107	Computer Organization and Systems	3-5

#### d. Philosophical Foundations

Select one of the following:

SYMSYS 1	Minds and Machines (formerly SYMSYS 100)	4
PHIL 80	Mind, Matter, and Meaning	5

#### e. Linguistic Theory

Select one of the following:

LINGUIST 105	Phonetics	4
LINGUIST 110	Introduction to Phonology	4
LINGUIST 120	Introduction to Syntax	4
LINGUIST 121A	The Syntax of English	4
LINGUIST 121B	Crosslinguistic Syntax	4
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 130B	Introduction to Lexical Semantics	3-4
LINGUIST 184	Syntactic Theory and Implementation	4

#### f. Computation and Cognition

Select one of the following:

CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
LINGUIST 180	From Languages to Information	3-4
LINGUIST 182	Computational Theories of Syntax	3-4
PSYCH 204	Computation and cognition: the probabilistic approach	3
PSYCH 209	Neural Network Models of Cognition: Principles and Applications	4
PSYCH 239	Formal and Computational Approaches in Psychology and Cognitive Science	3

<sup>1</sup> SYMSYS 1 Minds and Machines (formerly SYMSYS 100) may not be counted for both areas 'a' and 'd'.

### Option 2

SYMSYS 1 Minds and Machines (formerly SYMSYS 100), plus an interdisciplinary SSP concentration listed on the SSP (<http://symsys.stanford.edu/viewing/htmldocument/16190>) web site. To qualify, the selection of courses used for the minor must be interdisciplinary; it must either include courses from at least three departments, or include more than one course from each of two departments.

## Coterminal Master's Degrees in Symbolic Systems

Many SSP majors also complete coterminal M.S. or M.A. degrees in affiliated departments. In addition to the Symbolic Systems M.S. program, the Department of Philosophy offers a Special Program in Symbolic Systems track for interdisciplinary graduate level work leading to the Master of Arts in Philosophy (<http://www.stanford.edu/dept/registrar/bulletin/6567.htm>).

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements

for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Symbolic Systems

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 50)" section of this bulletin.

The M.S. degree in Symbolic Systems is designed to be completed in the equivalent of one academic year by coterminal students or returning students who already have a B.S. degree in Symbolic Systems, and in two years or less by other students depending upon level of preparation. Admission is competitive, providing a limited number of students with the opportunity to pursue course and project work in consultation with a faculty adviser who is affiliated with the Symbolic Systems Program. The faculty adviser may impose requirements beyond those described here.

Admission to the program as a coterminal student is subject to the policies and deadlines described in the "Coterminal Bachelor's and Master's Degrees (p. 46)" section of this bulletin. Applicants to the M.S. program are reviewed each Winter Quarter. Information on deadlines, procedures for applying, and degree requirements are available from the program's student services coordinator in the Linguistics Department office (460-127E) and at the Symbolic Systems (<http://symsys.stanford.edu/viewing/htmldocument/13623>) web site.

### Degree Requirements

A candidate for the M.S. degree in Symbolic Systems must complete a program of 45 units. At least 36 of these must be graded units, passed with an average grade of 3.0 (B) or better, and any course taken as part of the 45 unit program must be taken for a letter grade unless the course is offered S/NC only. None of the 45 units to be counted toward the M.S. degree may include units counted toward an undergraduate degree at Stanford or elsewhere. Course requirements are waived only if evidence is provided that similar or more advanced courses have been taken, either at Stanford or another institution. Courses that are waived rather than taken may not be counted toward the M.S. degree. For additional information, see the Symbolic Systems web site ([http://symsys.stanford.edu/graduate\\_programs](http://symsys.stanford.edu/graduate_programs)).

Each candidate for the M.S. degree must fulfill the following requirements:

1. Submission to the Symbolic Systems Program office and approval of the following pre-project research documents:
  - a. Project Area Statement, endorsed with a commitment from a student's prospective project adviser no later than May 1 of the academic year prior to the expected graduation year; and

- b. Qualifying Research Paper due no later than the end of the Summer Quarter prior to the expected graduation year.

2. Completion of a coherent plan of study, to be approved by the Graduate Studies Director in consultation with the student's adviser and designed to support a student's project. An initial plan of study should be delineated on the Program Proposal Form (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/progpropma.pdf>) prior to the end of the student's first quarter of study, as required by the University, to be modified at the time of the Project Area Statement with the approval of a student's adviser and the Graduate Studies Director. The final version of the Program Proposal, which should specify all the courses the student has taken and proposes as fulfillment of the unit requirements for the degree, is due by the end of Finals Week in the quarter prior to the student's expected graduation quarter (i.e. end of Winter Quarter for a student graduating in the Spring). The plan of study must include courses taken for 3 units or more each that are more advanced than the Symbolic Systems undergraduate core in four main skill areas: formal, empirical, computational, and philosophical; and in at least three of the following departments: Computer Science, Linguistics, Philosophy, and Psychology. More advanced courses in each of the skill areas are defined as follows:

a) formal: a course in logic and computational theory beyond the level of PHIL 151 Metalogic. The courses below have been approved. Other courses may be approved if appropriate.

- PHIL 252 Computability and Logic
- PHIL 254 Modal Logic
- PHIL 350A Model Theory
- PHIL 355
- CS 154 Introduction to Automata and Complexity Theory
- CS 157 Logic and Automated Reasoning
- CS 161 Design and Analysis of Algorithms

b) empirical: a course drawing on experimental or observational data or methods, beyond the level of PSYCH 55, LINGUIST 121A, 121B or 130A. The courses below are examples of those that have been approved. Other courses may be approved if appropriate.

- COMM 268. Experimental Research in Advanced User Interfaces (same as COMM 168, COMM 368, ME 468)
- COMM 269. Computers and Interfaces: Psychological and Social Issues (same as COMM 169)
- CS 224N Natural Language Processing with Deep Learning
- CS 376 Human-Computer Interaction Research
- LINGUIST 230B Semantics and Pragmatics I
- LINGUIST 241 Language Acquisition II
- LINGUIST 274C Linguistic Field Methods: Syntax
- NBIO 206 The Nervous System
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- PSYCH 204 Computation and cognition: the probabilistic approach
- PSYCH 204A Human Neuroimaging Methods
- PSYCH 209 Neural Network and Deep Learning Models for Cognition and Cognitive Science
- PSYCH 252 Statistical Methods for Behavioral and Social Sciences
- PSYCH 254 Affective Neuroscience
- STATS 200 Introduction to Statistical Inference
- SYMSYS 245. Cognition in Interaction Design

c) computational: a course involving programming beyond the level of CS 107. The courses below have been approved. Other courses may be approved if appropriate.

- CS 108 Object-Oriented Systems Design
- CS 110 Principles of Computer Systems
- CS 124 From Languages to Information
- CS 142 Web Applications
- CS 143 Compilers
- CS 148 Introduction to Computer Graphics and Imaging
- CS 221 Artificial Intelligence: Principles and Techniques
- CS 224N Natural Language Processing with Deep Learning
- CS 224W Analysis of Networks

d) philosophical: a course in the area of Philosophy of Mind/Language/Science/Epistemology or Metaphysics at the 200 level or above, certified by the instructor as worthy of graduate credit. The courses below are examples of those that have been approved. Other courses may be approved if appropriate.

- PHIL 264 Central Topics in the Philosophy of Science: Theory and Evidence
- PHIL 267B Philosophy, Biology, and Behavior
- PHIL 281 Philosophy of Language
- PHIL 285B Philosophy of Perception
- PHIL 286 Philosophy of Mind
- PHIL 287 Philosophy of Action
- PHIL 383B What's an Inference?
- SYMSYS 206A Philosophy of Neuroscience

3. Completion of three quarters of SYMSYS 291 Master's Program Seminar.

4. Completion of a substantial project appropriate to the program plan, represented by the M.S. Thesis, the last of the the M.S research documents (<http://symsys.stanford.edu/viewing/htmldocument/13678>). The project normally takes three quarters, and work on the project may account for up to 15 units of a student's program. The thesis must be read and approved for the master's degree in Symbolic Systems by two qualified readers approved by the program, at least one of whom must be a member of the academic council. A copy of the thesis must be submitted (in both print and electronic forms) to the Associate Director of Symbolic Systems, with the print version including the signatures of each reader indicating approval of the thesis for the degree of Master of Science, no later than 12 noon on the day of the University Dissertation/Thesis Submission Deadline (<https://studentaffairs.stanford.edu/registrar/students/dissertation-thesis>) for the quarter of a student's graduation.

## Faculty

*Director:* Kenneth A. Taylor

*Director of Graduate Studies:* Kenneth A. Taylor

*Associate Director:* Todd Davies

*Program Committee:* Jeremy Bailenson, Michael Bernstein, Rachael Briggs, Todd Davies, Judith Degen, Michael C. Frank, Noah Goodman, Thomas Icard, Daniel Jurafsky, Daniel Lassiter, Krista Lawlor, Christopher Manning, James McClelland, Stanley Peters, Christopher Potts, Mehran Sahami, Kenneth A. Taylor, Johan van Benthem, Thomas A. Wasow

*Program Faculty:*

*Aeronautics and Astronautics:* Mykel Kochenderfer (Assistant Professor)

*Biology:* Deborah Gordon (Professor)

*Classics:* Reviel Netz (Professor)

*Communication:* Jeremy Bailenson (Professor), Jeff Hancock (Professor), Byron Reeves (Professor), Frederick Turner (Professor)

*Computer Science:* Maneesh Agrawala (Professor), Michael Bernstein (Assistant Professor), David Dill (Professor, emeritus), Michael Genesereth (Associate Professor), Oussama Khatib (Professor), Daphne Koller (Adjunct Professor), James Landay (Professor), Jean-Claude Latombe (Professor, emeritus), Marc Levoy (Professor, emeritus), Christopher Manning (Professor), Andrew Ng (Adjunct Professor), Nils Nilsson (Professor, emeritus), Vaughan Pratt (Professor, emeritus), Eric Roberts (Professor, emeritus), Tim Roughgarden (Associate Professor), Mehran Sahami (Professor, Teaching), Yoav Shoham (Professor, emeritus), Sebastian Thrun (Adjunct Professor), Terry Winograd (Professor, emeritus)

*Economics:* Muriel Niederle (Professor)

*Education:* Raymond P. McDermott (Professor), Roy Pea (Professor), Daniel Schwartz (Professor)

*Electrical Engineering:* Krishna Shenoy (Professor)

*French and Italian:* Jean-Pierre Dupuy (Professor)

*Genetics:* Russ B. Altman (Professor)

*Graduate School of Business:* Baba Shiv (Professor)

*History:* Jessica G. Riskin (Professor)

*Linguistics:* Arto Anttila (Associate Professor), Joan Bresnan (Professor, emerita), Eve Clark (Professor, emerita), Cleo Condoravdi (Professor Research), Judith Degen (Assistant Professor), Penelope Eckert (Professor), Daniel Jurafsky (Professor), Ronald Kaplan (Adjunct Professor), Lauri Karttunen (Adjunct Professor), Martin Kay (Professor), Daniel Lassiter (Assistant Professor), Beth Levin (Professor), Christopher Manning (Professor), Stanley Peters (Professor, emeritus), Christopher Potts (Professor), Meghan Sumner (Associate Professor), Thomas A. Wasow (Professor, emeritus), Annie Zaenen (Adjunct Professor)

*Management Science and Engineering:* Pamela Hinds (Professor)

*Mathematics:* Persi Diaconis (Professor), Solomon Feferman (Professor, emeritus)

*Mechanical Engineering:* Sean Follmer (Assistant Professor)

*Medicine:* Russ B. Altman (Professor), Mark Musen (Professor)

*Music:* Jonathan Berger (Professor), Christopher Chafe (Professor), Eleanor Selfridge-Field (Adjunct Professor), Ge Wang (Associate Professor)

*Neurobiology:* Ben Barres (Professor), William T. Newsome (Professor), Jennifer Raymond (Professor)

*Philosophy:* Michael Bratman (Professor), Rachael Briggs (Professor), Mark Crimmins (Associate Professor), John Etchemendy (Professor), Dagfinn Føllesdal (Professor, emeritus), Thomas Icard III (Assistant Professor), Krista Lawlor (Professor), Anna-Sara Malmgren (Assistant Professor), John Perry (Professor, emeritus), Brian Skyrms (Professor), Kenneth Taylor (Professor), Johan van Benthem (Professor), Thomas A. Wasow (Professor, emeritus)

*Psychiatry and Behavioral Sciences:* Vinod Menon (Professor)

*Psychology:* Herbert H. Clark (Professor, emeritus), Anne Fernald (Associate Professor), Michael C. Frank (Associate Professor), Justin Gardner (Assistant Professor), Noah Goodman (Associate Professor), Kalanit Grill-Spector (Professor), Hyowon Gweon (Assistant Professor), Brian Knutson (Professor), Ellen Markman (Professor), James McClelland

(Professor), Russell Poldrack (Professor), Barbara Tversky (Professor, emerita), Anthony Wagner (Professor), Brian Wandell (Professor), Daniel Yamins (Assistant Professor), Jamil Zaki (Assistant Professor)

*Statistics:* Persi Diaconis (Professor), Susan P. Holmes (Professor)

*Symbolic Systems:* Todd Davies (Associate Director), Damon Horowitz (Adjunct Professor), Jeff Shrager (Adjunct Professor), Paul Skokowski (Adjunct Professor)

*Other Affiliates:* David Barker-Plummer (CSLI Engineering Research Associate), Keith Devlin H-STAR Operation Senior Researcher), Daniel Flickinger (CSLI Research and Development Engineer)

## Cognate Courses for the Bachelor's Degree

The following is a list of cognate courses that may be applied to the B.S. in Symbolic Systems. Click on the course or see ExploreCourses for course descriptions and General Education Requirements (GER) information. Courses taken for a Symbolic Systems degree or Minor must be taken for 3 units (or more). See Degree Requirements for details.

### Core

		Units
APPPHYS 293	Theoretical Neuroscience	3
BIO 150	Human Behavioral Biology	5
CME 100	Vector Calculus for Engineers	5
CME 100A	Vector Calculus for Engineers, ACE	6
CME 106	Introduction to Probability and Statistics for Engineers	4
CS 103	Mathematical Foundations of Computing	3-5
CS 106A	Programming Methodology	3-5
CS 106B	Programming Abstractions	3-5
CS 106X	Programming Abstractions (Accelerated)	3-5
CS 107	Computer Organization and Systems	3-5
CS 107E	Computer Systems from the Ground Up	3-5
CS 109	Introduction to Probability for Computer Scientists	3-5
CS 124	From Languages to Information	3-4
CS 131	Computer Vision: Foundations and Applications	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 157	Logic and Automated Reasoning	3
CS 161	Design and Analysis of Algorithms	3-5
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 238	Decision Making under Uncertainty	3-4
CS 246	Mining Massive Data Sets	3-4
ECON 160	Game Theory and Economic Applications	5
ECON 180	Honors Game Theory	5
EE 178	Probabilistic Systems Analysis	4
ENGR 155C	Introduction to Probability and Statistics for Engineers	4
ESF 7	Education as Self-Fashioning: The Transformation of the Self	7
ETHICSOC 20	Introduction to Moral Philosophy	5
HUMBIO 3B	Behavior, Health, and Development	5
LINGUIST 1	Introduction to Linguistics	4
LINGUIST 105	Phonetics	4
LINGUIST 106	Introduction to Speech Perception	4

LINGUIST 110	Introduction to Phonology	4
LINGUIST 120	Introduction to Syntax	4
LINGUIST 121A	The Syntax of English	4
LINGUIST 121B	Crosslinguistic Syntax	4
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 130B	Introduction to Lexical Semantics	3-4
LINGUIST 140	Learning to Speak: An introduction to child language acquisition	4
LINGUIST 180	From Languages to Information	3-4
LINGUIST 182	Computational Theories of Syntax	3-4
LINGUIST 230A	Introduction to Semantics and Pragmatics	4
LINGUIST 281	Computational Models of Linguistic Formalism	1-4
LINGUIST 282	Computational Theories of Syntax	3-4
MATH 19	Calculus	3
MATH 20	Calculus	3
MATH 21	Calculus	4
MATH 51	Linear Algebra and Differential Calculus of Several Variables	5
MATH 51A	Linear Algebra and Differential Calculus of Several Variables, ACE	6
MATH 151	Introduction to Probability Theory	3
MATH 162	Philosophy of Mathematics	4
MS&E 120	Probabilistic Analysis	5
MS&E 220	Probabilistic Analysis	3-4
MS&E 221	Stochastic Modeling	3
MS&E 252	Decision Analysis I: Foundations of Decision Analysis	3-4
NENS 220	Computational Neuroscience	4
PHIL 1	Introduction to Philosophy	5

# THEATER AND PERFORMANCE STUDIES

Courses offered by the Department of Theater and Performance Studies are listed on the Stanford Bulletin's ExploreCourses web site under the subject codes TAPS (<https://explorecourses.stanford.edu/search?q=TAPS&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-TAPS=on>) and DANCE (<https://explorecourses.stanford.edu/search?q=DANCE&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-DANCE=on&filter-catalognumber-DANCE=on>).

## Mission of the Undergraduate Program in Theater and Performance Studies

The mission of the undergraduate program in Theater and Performance Studies is to provide a strong, non-conservatory program that joins the study and practice of performance within the context of a liberal arts curriculum. The department gives students a strong grasp of historical, cultural, and practical contexts in which live performance develops. With close faculty contact, department majors pursue areas of interest that may include acting, directing, writing, dance, devised theater, design, stage management, performance theory, and cultural studies. During the senior year students complete a senior project as part of fulfilling the 60 units required for the major.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to achieve the following learning outcomes:

1. the ability to write analytically about theater and performance
2. the ability to put aesthetic and creative skills into practice
3. the ability to find meaningful ways of integrating theory and practice
4. the ability to research effectively
5. the ability to articulate ideas about theater, dance and live arts.

## Mission of the Graduate Program in Theater and Performance Studies

The mission of the graduate program in Theater and Performance Studies (TAPS) is to educate students who work on the leading edge of both scholarly and performance practice. The Ph.D. program includes the study of critical theory, dramatic literature, performance theory, theater history, and performance making. Graduate students complete a program with a rigorous study of critical theory, textual history, elements of production (directing, acting, choreography, writing, and design) and embodied research.

## Learning Outcomes (Graduate)

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Theater and Performance Studies. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge and production of Theater and Performance Studies, and to interpret and present the results of such research.

## Institute for Diversity in the Arts and Black Performing Arts Division

The Institute for Diversity in the Arts (IDA) is an interdisciplinary program in the humanities that involves students in the study of culture, identity and diversity through artistic expression. The Committee on Black Performing Arts (CBPA) and the Institute for Diversity in the Arts (IDA) merged in Autumn 2005. The mission of IDA/CBPA is to engage artists, students, and the local community collaboratively to create performance and visual art that examines the intersections among race, diversity, and social action through programming that includes artist residencies, classes, workshops, public performances, a lecture series, and symposia.

The division produces annual student productions and is a resource for student organizations promoting artistic expression through the exploration of the impact of ethnic representation in the arts, literature, media, and pop culture. The programs prepare students for work in areas including the arts and community development. Students have gone on to graduate-level critical studies, M.F.A. programs, public service, government and politics, arts administration, and teaching. Students can pursue an IDA concentration through the Comparative Studies in Race and Ethnicity major; students can also emphasize Black performance through the African and African American Studies major.

## Bachelor of Arts in Theater and Performance Studies

The B.A. degree in Theater and Performance Studies provides students with historical, critical, and practical knowledge about theater and performance. Students are encouraged to declare the major in their sophomore year, if not sooner.

## Suggested Preparation for the Major

Prospective majors in the first two years of study at Stanford are encouraged to take part in casting opportunities in department productions.

## Degree Requirement Overview - 60 units total for the Major

The following chart is an outline of the TAPS major degree requirements. All majors must choose a major concentration in either Acting or Theater-Making. Specific requirements for these concentrations can be found in subsequent sections. Students who declared prior to September 2016 should refer to previous guidelines and requirements for the major.

	Units
TAPS 1	4
Introduction to Theater and Performance Studies	4
16 units in Theater and Dance Studies	16
18 units in Practicum	18
8 units in Production	8
10 units of Electives	10
TAPS 200	4
Senior Project	4
<b>Total Units</b>	<b>60</b>

Note: A course may be listed in more than one area; however, each course can only satisfy one major requirement. There is no double credit for a course.

## Concentrations

All TAPS majors are required to select a concentration in Acting or Theater-Making. General guidance on course sequencing is available from the TAPS Director of Undergraduate Studies, Diana Looser; the coordinator of the Acting concentration, Amy Freed; and the coordinator of the Theater-Making concentration, Leslie Hill.

## I. Acting

The Acting concentration develops students' skills in acting for the theater and related performance contexts. In practicum classes, students enhance their creative abilities under the guidance of teaching artists. Students also complete complementary coursework in performance studies and are encouraged to explore playwriting, directing, and/or devising in order to expand their exposure to major ideas and approaches in the field. Students in this concentration are encouraged to take the required course TAPS 120A Acting I: Fundamentals of Acting early in the major as a gateway for their further technique classes.

<b>1. Core</b>		<b>4</b>
TAPS 1	Introduction to Theater and Performance Studies (Must be taken for a letter grade.)	
<b>2. Theater and Dance Studies</b> <sup>1</sup>		<b>16</b>
TAPS 11N	Dramatic Tensions: Theater and the Marketplace	
TAPS 12N	To Die For: Antigone and Political Dissent	
TAPS 20N	Prisons and Performance	
TAPS 21N	The Idea of Virtual Reality	
TAPS 108	Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 150G	Performing Race, Gender, and Sexuality	
TAPS 153M	Mechanics of the Theater: The Technologies of Stagecraft	
TAPS 154G	Black Magic: Ethnicity, Race, and Identity in Performance Cultures	
TAPS 154I		
TAPS 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	
TAPS 156V	Vital Signs: Performance in the 21st Century	
TAPS 157	World Drama and Performance	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 167H	Revolutions in Theater	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
TAPS 201	Theater History	
TAPS 248	Family Drama: American Plays about Families	
TAPS 253T	Virtual Realities: Art, Technology, Performance	
TAPS 258	Black Feminist Theater and Theory	
DANCE 160M	Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture	
DANCE 161D	Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders	
<b>3. Practicum</b>		<b>18</b>
TAPS 120A	Acting I: Fundamentals of Acting (Gateway, Required)	
TAPS 60		
TAPS 103	Beginning Improvising	
TAPS 104	Intermediate Improvisation	
TAPS 115	Musical Theater	
TAPS 120B	Acting II: Advanced Acting	
TAPS 121C	Physical Characterization	
TAPS 121V	Voice for the Actor	
TAPS 122P	Undergrad Performance Project: Life is a Dream	
TAPS 124D	Acting for Non-Majors	
TAPS 125	Acting Shakespeare	
TAPS 125C	Acting Chekhov	
TAPS 125S	Shakespeare Now: An Actor's Lab	

TAPS 127	Movement for the Actor	
TAPS 127S	Acting Through Song	
TAPS 127W	Introduction to Clown	
TAPS 183C	Interpretation of Musical Theater Repertoire	
TAPS 183E	Singing for Musicals	
TAPS 184C	Dramatic Vocal Arts: Songs and Scenes Onstage	
<b>4. Production</b>		<b>8</b>
TAPS 34	Stage Management Techniques (Required)	
TAPS 39	Theater Crew (Required)	
TAPS 134	Stage Management Project (Required)	
<b>5. Electives</b> <sup>2</sup>		<b>10</b>
<b>6. Capstone Project</b> <sup>3</sup>		<b>4</b>
TAPS 200	Senior Project	
<b>Total Units</b>		<b>60</b>

*Note:* TAPS 121C, TAPS 125, and TAPS 127S will not be offered in 2017-18.

- One of the courses completed for this requirement must be a Writing in the Major course. In 2017-18 the Writing in the Major courses are:
  - TAPS 157 World Drama and Performance
  - TAPS 167H Revolutions in Theater
- All courses in TAPS and DANCE qualify as electives. 4 units of ITALIC or SLE can also count as electives.
- All TAPS Majors must complete a Senior Project that represents significant work in any area of theater and/or performance. The project must be an original contribution and can consist of any of the following: devising a performance, choreographing a dance, stage managing a production, designing a large theater work, performing a major role, writing a play, directing a show, or researching and writing a senior essay. Work for this project normally begins in Spring Quarter of the junior year and must be completed by the end of the senior year. Students receive credit for senior projects through TAPS 200. A minimum of 4 units is required, but additional units are available for larger projects. Students pursuing senior projects must submit a two-page proposal to a faculty adviser of their choice, which must be approved by the Director of Undergraduate Studies Diana Looser and the department faculty no later than the end of Spring Quarter of the junior year.

## II. Theater-Making

This concentration develops students' creative skills in theater-making. The theater-making concentration reflects the collaborative interdisciplinary nature of theater practice, with rich partnerships and dialogues between the crafts of directing, playwriting, producing, design and stagecraft. Students learn skills to build original theater productions. The disciplines grouped under this concentration offer a broad cross-section of theater-making skills and approaches. Students in this concentration are encouraged to take the required courses TAPS 30 Introduction to Theatrical Design and TAPS 101P Theater and Performance Making early in the major as a gateway for their further studies.

		<b>Units</b>
<b>1. Core</b>		<b>4</b>
TAPS 1	Introduction to Theater and Performance Studies (Must be taken for a letter grade.)	
<b>2. Theater and Dance Studies</b> <sup>1</sup>		<b>16</b>
TAPS 11N	Dramatic Tensions: Theater and the Marketplace	
TAPS 12N	To Die For: Antigone and Political Dissent	
TAPS 20N	Prisons and Performance	
TAPS 21N	The Idea of Virtual Reality	

TAPS 108	Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 150G	Performing Race, Gender, and Sexuality	
TAPS 153M	Mechanics of the Theater: The Technologies of Stagecraft	
TAPS 154G	Black Magic: Ethnicity, Race, and Identity in Performance Cultures	
TAPS 154I		
TAPS 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	
TAPS 156V	Vital Signs: Performance in the 21st Century	
TAPS 157	World Drama and Performance	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 167H	Revolutions in Theater	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
TAPS 201	Theater History	
TAPS 248	Family Drama: American Plays about Families	
TAPS 253T	Virtual Realities: Art, Technology, Performance	
TAPS 258	Black Feminist Theater and Theory	
DANCE 160M	Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture	
DANCE 161D	Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders	
<b>3. Practicum</b>		<b>18</b>
TAPS 30	Introduction to Theatrical Design (Gateway, Required)	
TAPS 101P	Theater and Performance Making (Gateway, Required)	
TAPS 17N	Acting for Activists	
TAPS 21	StoryCraft	
TAPS 28	Makeup for the Stage	
TAPS 31	Introduction to Lighting and Production	
TAPS 32F	Godiva to Gaga: A Survey of Western Fashion and Societal Implications	
TAPS 33	Introduction to Technical Theater and Production	
TAPS 42	Costume Construction	
TAPS 131	Lighting Design	
TAPS 132	Costume Design	
TAPS 133	Stage Scenery Design	
TAPS 133D	Set Design Practicum	
TAPS 135C	Theory & Craft of the Scenographic Model	
TAPS 135M	Introduction to Media Production	
TAPS 136S	Hidden Gems: Bay Area Theater Architecture post 1906	
TAPS 170A	The Director's Craft	
TAPS 170B	Directing Workshop: The Actor-Director Dialogue	
TAPS 174V		
TAPS 175T	Collaborative Theater-Making	
TAPS 176N	The Inside Story	
TAPS 177C	Creating a Musical	
TAPS 177W	Workshop with Young Jean Lee	
TAPS 178B	Intensive Playwriting	
TAPS 178C	Writing a Full-Length Play	
TAPS 178D	Editing a Full-Length Play	
TAPS 177	Dramatic Writing: The Fundamentals	

Up to 4 units of an acting class may count towards this requirement as well.

With the approval of the Director of Undergraduate Studies, students may be able to count a limited number of the following special research or independent study courses towards the practicum requirement:

TAPS 39	Theater Crew	
TAPS 134	Stage Management Project	
TAPS 140	Introduction to Projects in Theatrical Production	
TAPS 190	Special Research	
TAPS 191	Independent Study	
TAPS 231	Advanced Stage Lighting Design	
TAPS 232	Advanced Costume Design	
TAPS 233	Advanced Scene Design	
<b>4. Production</b>		<b>8</b>
TAPS 34	Stage Management Techniques (Required)	
TAPS 39	Theater Crew (Required)	
TAPS 134	Stage Management Project (Required) <sup>2</sup>	
<b>5. Electives<sup>3</sup></b>		<b>10</b>
<b>6. Capstone Project<sup>4</sup></b>		<b>4</b>
TAPS 200	Senior Project	
<b>Total Units</b>		<b>60</b>

*Note: TAPS 28, TAPS 32F, TAPS, TAPS 136S, TAPS 177, and TAPS 178B will not be offered this year.*

<sup>1</sup> One of the courses completed for this requirement must be a Writing in the Major course. In 2017-18 the Writing in the Major courses are:

- TAPS 157 World Drama and Performance
- TAPS 167H Revolutions in Theater

<sup>2</sup> All courses in TAPS and DANCE qualify as electives.

<sup>3</sup> An alternative to TAPS 134 Stage Management Project is completing a mentored project or assistantship in an advanced production role. Students who participate in this option must enroll in an independent study.

<sup>4</sup> All TAPS Majors must complete a Senior Project that represents significant work in any area of theater and/or performance. The project must be an original contribution and can consist of any of the following: devising a performance, choreographing a dance, stage managing a production, designing a large theater work, performing a major role, writing a play, directing a show, or researching and writing a senior essay. Work for this project normally begins in Spring Quarter of the junior year and must be completed by the end of the senior year. Students receive credit for senior projects through TAPS 200. A minimum of 4 units is required, but additional units are available for larger projects. Students pursuing senior projects must submit a two-page proposal to a faculty adviser of their choice, which must be approved by the Director of Undergraduate Studies Diana Looser and the department faculty no later than the end of Spring Quarter of the junior year.

## Honors Program

For a select number of students, the department confers the degree of Bachelor of Arts with Honors in Theater and Performance Studies. To qualify for departmental honors, students must meet the following requirements in addition to the other requirements of the TAPS major:

1. Applying to the honors program involves a written application, including a project proposal and transcript, which establishes the student's work to date in the department and outlines the area of research that the student wishes to pursue. Students must have at least an overall University GPA of 3.3 and a 3.5 GPA in courses counting towards the major.

- Students must have completed a significant portion of their major coursework before enrolling in honors. It is recommended that students have taken courses that have prepared them for advanced study in the proposed area of research.
- Students enroll in TAPS 202 Honors Thesis, which is worth four units total. Students need to enroll in this course each quarter during the senior year (1 unit in Autumn; 1 unit in Winter; 2 units in Spring). It is graded S/NC (grade determined by the student's advisor).
- The honors thesis (described below) is due on May 15th in the Spring quarter and is double-marked by the primary advisor and one other faculty member.
- Entry into the honors program does not guarantee an honors degree. The final decision to confer an honors degree is made by the student's thesis committee upon evaluating the quality of the thesis.

## Honors Thesis

There are two ways to undertake an honors thesis. The first is to write a 40-50 page essay, presenting research on an important issue or subject of the student's choice. The second option is for a student to use their capstone project as a case study. In this situation, the honors thesis will critically analyze the creative work. Generally, these essays tend to be shorter (about 30 pages) because the creative work constitutes part of the honors project. Students are expected to work consistently throughout the year with their advisor, whom they identify at the time of application. Advisors can be selected from Academic Council faculty or artists-in-residence.

## Minor in Theater and Performance Studies

The TAPS Minor is offered with two distinct concentrations: The Theater and Performance Studies concentration provides students with historical, critical, and practical knowledge about theater and performance. The Dance concentration examines the field of dance.

### Minor Requirements – 30 units total for the minor

All minors must choose a concentration in Theater and Performance Studies or Dance. Specific requirements for these concentrations can be found in subsequent sections. Students who declared prior to September 2016 should refer to previous guidelines and requirements for the major. Each course can only satisfy one minor requirement. A student may petition to the department undergraduate adviser to have additional courses offered by the department count towards the requirements. The minor is declared in Axess.

### I. Degree Requirements for the Minor (Theater and Performance Studies Concentration):

	Units
TAPS 1 Introduction to Theater and Performance Studies (Must be taken for a letter grade. )	4
TAPS 39 Theater Crew	1
or TAPS 39D Small Project Stage Management	
4 units in Theater and Dance Studies <sup>1</sup>	4
7 units in Performance Practice <sup>2</sup>	7
14 units of Electives <sup>3</sup>	14
<b>Total Units</b>	<b>30</b>

<sup>1</sup> In 2017-18 the following courses satisfy the Theater and Dance Studies requirement:

- TAPS 11N Dramatic Tensions: Theater and the Marketplace
- TAPS 12N To Die For: Antigone and Political Dissent
- TAPS 20N Prisons and Performance
- TAPS 21N The Idea of Virtual Reality
- TAPS 108 Introduction to Feminist, Gender, and Sexuality Studies
- TAPS 150G Performing Race, Gender, and Sexuality
- TAPS 153M Mechanics of the Theater: The Technologies of Stagecraft
- TAPS 154G Black Magic: Ethnicity, Race, and Identity in Performance Cultures
- TAPS 154I
- TAPS 156 Performing History: Race, Politics, and Staging the Plays of August Wilson
- TAPS 156V Vital Signs: Performance in the 21st Century
- TAPS 157 World Drama and Performance
- TAPS 165 Introduction to Comparative Studies in Race and Ethnicity
- TAPS 167 Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice
- TAPS 167H Revolutions in Theater
- TAPS 180Q Noam Chomsky: The Drama of Resistance
- TAPS 201 Theater History
- TAPS 248 Family Drama: American Plays about Families
- TAPS 253T Virtual Realities: Art, Technology, Performance
- TAPS 258 Black Feminist Theater and Theory
- DANCE 160M Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture
- DANCE 161D Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders

<sup>2</sup> All theater and dance practice classes (such as those in acting, design, playwriting, directing, and dance practice) may count towards this requirement.

<sup>3</sup> All courses in TAPS and DANCE qualify as electives.

### II. Degree Requirements for the Minor (Dance Concentration):

The Dance concentration offers diverse approaches to dance as a performing art, cultural practice, political act, and embodiment of ideology and beliefs. The minor requirements integrate academic and creative studio work to help students develop a command of dance as an art form and as a subject of critical inquiry. Students study a range of techniques grounded in Western dance practices as well as a variety of global dance forms, and have regular opportunities to perform, choreograph, and collaborate. Guidance on course sequencing is available from the TAPS Director of Undergraduate Studies, Diana Looser and/or from the coordinator of the Dance concentration, Alex Ketley. Students in this concentration are encouraged to take the required course TAPS 160 Performance and History: Rethinking the Ballerina early in the major as a gateway for their further studies.

	Units
<b>1. Core</b>	<b>4</b>
TAPS 1 Introduction to Theater and Performance Studies (Must be taken for a letter grade.)	
<b>2. Theater and Dance Studies</b>	<b>8</b>
DANCE 160 Performance and History: Rethinking the Ballerina (Gateway, Required) <sup>1</sup>	
TAPS 11N Dramatic Tensions: Theater and the Marketplace	
TAPS 12N To Die For: Antigone and Political Dissent	
TAPS 20N Prisons and Performance	
TAPS 21N The Idea of Virtual Reality	
TAPS 108 Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 150G Performing Race, Gender, and Sexuality	
TAPS 153M Mechanics of the Theater: The Technologies of Stagecraft	

TAPS 154G	Black Magic: Ethnicity, Race, and Identity in Performance Cultures	
TAPS 154I		
TAPS 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	
TAPS 156V	Vital Signs: Performance in the 21st Century	
TAPS 157	World Drama and Performance	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 167H	Revolutions in Theater	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
TAPS 201	Theater History	
TAPS 248	Family Drama: American Plays about Families	
TAPS 253T	Virtual Realities: Art, Technology, Performance	
TAPS 258	Black Feminist Theater and Theory	
DANCE 160M	Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture	
DANCE 161D	Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders	
<b>3. Production</b>		<b>1</b>
TAPS 39	Theater Crew	
<b>4. Technique</b>		<b>8</b>
	Minimum of Six Studio Classes <sup>2</sup>	
<b>5. Choreography, Repertory, Performance</b>		<b>9</b>
DANCE 27	Faculty Choreography	
DANCE 25	Studio to Stage: Student Choreography Projects	
DANCE 30	Chocolate Heads Performance Project: Dance & Intercultural Performance Creation	
DANCE 45	Dance Improv StratLab: Freestyle Improvisation from Contemporary to Hip Hop & Beyond	
DANCE 50	Contemporary Choreography	
DANCE 63	Beginning Dance and Dance Making	
DANCE 100	Dance, Movement and Medicine: Immersion in Dance for PD	
DANCE 102	Musical Theater Dance Styles	
DANCE 106	Choreography Project: Dancing, Recollected	
DANCE 106I	Stanford Dance Community: Inter-Style Choreography Workshop	
DANCE 108	Hip Hop Meets Broadway	
DANCE 123	Hot Mess: Deliberate Failure as Practice	
<b>Total Units</b>		<b>30</b>

*Note: DANCE 63 and DANCE 106 will not be offered in 2017-18.*

<sup>1</sup> DANCE 160 Performance and History: Rethinking the Ballerina will not be offered in 2017-18. Students looking to complete this requirement, may substitute TAPS 161D Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders this year only.

<sup>2</sup> Students pursuing the Dance Concentration must complete six studio dance classes for the Technique requirement:

- At least three classes chosen from a specific dance form (e.g. Contemporary, Modern, Jazz, Hip-Hop, Ballet, or Social), and the attainment of intermediate or advanced level.
- At least two classes in a style other than the student's primary chosen dance form.

## Doctor of Philosophy in Theater and Performance Studies

The mission of the graduate program in Theater & Performance Studies (TAPS) is to educate students who work on the leading edge of both scholarly and performance practice. The Ph.D. program includes the study of critical theory, dramatic literature, performance theory, theater history, and performance making. Graduate students complete a program with a rigorous study of critical theory, textual history, elements of production (directing, acting, choreography, writing, and design) and embodied research.

### Admission

Applicants for the Ph.D. program can visit our Theater and Performance Studies (<http://taps.stanford.edu/phd.html>) web site for information. Online graduate applications are available at the Office of Graduate Admissions (<http://gradadmissions.stanford.edu>) web site. All applicants must submit the following as part of their application: Statement of purpose, Three recommendations, Artistic Statement, Summary of Production Experience and Resume/CV, and Two samples of written critical work, not exceeding 25 pages total. An invitation to interview may be extended by the end of January. Graduate students in the Department of Theater and Performance Studies begin study in Autumn Quarter of each academic year; there are no mid-year admissions.

### University Degree Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (<http://stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

### Degree Requirements

#### Units and Course Requirements

Stanford Ph.D. students must complete a minimum of 135 units of graduate courses and seminars in support of the degree. Within the 135 unit minimum, TAPS Ph.D. students must complete the following:

	<b>Units</b>
<b>REQUIRED COURSES</b>	
<b>Core Seminars</b>	<b>16</b>
TAPS 311	Performance and Historiography
TAPS 313	Performance and Performativity
TAPS 314	Performing Identities
TAPS 315	Dramaturgy
<b>TAPS Workshops</b>	<b>16</b>
TAPS 371P	Theater and Performance Making <sup>1</sup>
TAPS 372	Directing Workshop: The Actor-Director Dialogue <sup>2</sup>
TAPS 370A	The Director's Craft <sup>3</sup>
TAPS 376	Projects in Performance <sup>4</sup>
<b>Production Requirement</b>	<b>1</b>
TAPS 335	Introduction to Graduate Production
<b>Elective Seminars</b>	<b>16-20</b>
	Four additional graduate seminars within the Department of Theater and Performance Studies to be worked out with the adviser.
<b>Total Units</b>	<b>49-53</b>

<sup>1</sup> In the first year students take TAPS 371P Theater and Performance Making, which focuses on generating original creative work through a range of techniques.

<sup>2</sup> In the first year, students usually take TAPS 372 Directing Workshop: The Actor-Director Dialogue.

- <sup>3</sup> In the second year, students usually take TAPS 370A The Director's Craft. These classes explore the relationship between acting and directing and actors and directors.
- <sup>4</sup> TAPS 376 Projects in Performance is the production and performance of creative work during the Winter quarter of the 2nd year, a project that is approved by the Graduate Studies Committee (GSC) and supervised by a faculty member.

Note: All substitutions to the required courses must be in the department and approved by the Director of Graduate Studies in response to a written request by the student. Students are allowed to take up to 6 units of TAPS 390 Directed Reading, to count towards the 135 units required for graduation.

### Language Requirement

The student must demonstrate reading knowledge of one foreign language in which there is a major body of dramatic literature. The language requirement must be met before the student can be advanced to candidacy. The language requirement may be fulfilled in any of the following ways:

1. achievement of a sufficiently high score (70th percentile) on the foreign language examination prepared by the Educational Testing Service (ETS). Latin and Greek are not tested by ETS.
2. a reading examination given each quarter by the various language departments, except for Latin and Greek.
3. pass with a grade of 'B' or higher a 100-level or higher foreign language course at Stanford.

### Assistantships

Students must participate in seven quarters of assistantship in Theater and Performance Studies:

*Research Assistantship:* Three quarters of research assistantship with faculty members are required. Generally, this requirement is fulfilled in the third year.

*Teaching Assistantship:* Four quarters of supervised TA-ship at half time are a required part of the Ph.D. program. The requirement is normally met by serving as a TA for three courses during the fourth year and one course during the fifth year.

### Examinations

Students must complete three examinations (comprehensive, qualifying, and department oral) by the end of the first three years of study at Stanford.

*First-Year Comprehensive Exam:* The first year exam is based on a reading list of dramatic works, choreography, and theoretical texts in theater and dance which is sent to students in the summer before the first quarter of study begins. The exam is an open book, take-home exam made up of several essay questions. Students sign up for the 2 unit course TAPS 336 Comprehensive 1st Year Exam to prepare.

*Second-Year Qualifying Exam:* The qualifying examination consists of two 20-25 page essays. Each of these essays should demonstrate knowledge of a historical pre-20th century period. Essay topics are chosen in consultation with a faculty adviser. The reading list for each essay must be approved by the end of the first year. These essays should not duplicate any written work from seminars. The Graduate Studies Committee reads and evaluates these essays. The first essay is due in the autumn quarter. Candidates must choose from the following historical periods: Ancient/Classical, Medieval and Renaissance, and 17th-, 18th-, or early 19th-century. The performance project is completed in the winter quarter of the second year, and supervised by one or more faculty members. Faculty work with the student throughout autumn and winter quarters on the production, and attend a combination of dress rehearsals or final performances as part of the evaluation. After the performance, the student participates in a *viva voce*, or talk-back,

with the supervising faculty. Students register for TAPS 376 Projects in Performance for 4 units while completing their 2<sup>nd</sup>-year project.

*Third-Year Department Oral Exam:* This exam is based on a literature review and annotations for three reading lists created by the student in consultation with the 3 faculty members with whom they will meeting about their readings. The form of the exam is an opening 20 minute overview by the student integrating the readings followed by questions from the committee about the reading lists.

### Admission to Candidacy

At the end of the second year of study, the Graduate Studies Committee makes a decision on whether or not to admit an individual student to candidacy. Based on its evaluation of the student, the Graduate Studies Committee certifies the student's qualifications for candidacy. Candidacy is an important decision grounded in an overall assessment of a student's ability to complete the Ph.D. program at a high level. As detailed in the department's Graduate Handbook, there are prerequisites for admission to candidacy: the completion of specified coursework, the first-year qualifying exam, the second-year qualifying papers and the language requirement. However, fulfillment of these prerequisites and grades in courses constitute only a part of the evidence weighed by faculty in making this judgment. Since the Ph.D. is conferred upon candidates who have demonstrated through their dissertation the ability to conduct substantive, original research that contributes to knowledge in theater and performance studies, the candidacy decision also rests upon indicators of the student's ability to conduct work in the field. Upon favorable action, the student files a formal application for candidacy, as prescribed by the University, by the end of Summer Quarter of the second year. By University policy, candidacy is valid for five years unless terminated by the department. Failure to advance to candidacy results in the dismissal of the student from the program.

### Dissertation Prospectus

The dissertation prospectus must be approved by the candidate's adviser and by the departmental Graduate Studies Committee two quarters after taking the department oral. This should be done in, or before, the autumn quarter of the fourth year. Within 30 days of approval, a student should schedule a prospectus colloquium with the proposed reading committee (the dissertation director and two other faculty members). The prospectus must be prepared in close consultation with the dissertation adviser during the months preceding the colloquium. The prospectus should be 5-8 pages and minimally cover three things: the research question and context, the methodology for research, and a complete chapter by chapter plan.

### University Oral Examination

In Theater and Performance Studies, the University oral examination takes the form of a dissertation defense. A full draft of the dissertation must be submitted at least 75 days before the proposed degree conferral. The examining committee consists of five faculty members: one faculty chair from outside the department who does not share an appointment with the department of any of the examiners, the student's primary adviser, two additional readers who are familiar with the dissertation project, and a fifth faculty member attending the oral examination.

### Dissertation

The dissertation is an original work of scholarship created under the supervision of a primary dissertation advisor. The dissertation is the capstone of the Ph.D. in Theater & Performance Studies.

### Satisfactory Progress and Annual Review

The program and progress of each student must be evaluated by the Graduate Studies Committee at the end of each academic year. At the end of the first year, the Graduate Studies Committee evaluates the work of each student in classes, seminars, examinations, and performance. Production planning in the spring of each year for the following season is contingent upon students making satisfactory progress. Continuation in the program depends upon the recommendation of this faculty group.

At the end of the second year, the committee reviews the student's work in consideration of being admitted to candidacy. By the beginning of the fourth year, students are expected to have developed an approved dissertation prospectus. Funding is contingent upon satisfactory progress. Failure to make satisfactory progress may result in dismissal from the program.

## Ph.D. Minor in Theater and Performance Studies

Students pursuing the Ph.D. minor in Theater and Performance Studies must complete a minimum of 20 units. Within the 20 units, students must complete the following:

	<b>Units</b>
TAPS 313 Performance and Performativity	4
TAPS 371P Theater and Performance Making	4
Any additional TAPS courses at the 200- or 300-level to reach the minimum of 20 units total.	12
<b>Total Units</b>	<b>20</b>

An Application for Ph.D. Minor ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app\\_phd\\_minor.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app_phd_minor.pdf)) outlining a program of study must be approved by the major and minor departments and submitted to the Student Services Center. This form is submitted at the time of admission to candidacy or at the appropriate time thereafter.

*Emeriti: (Professors)* Jean-Marie Apostolides (TAPS; French and Italian), Michael Ramsaur, Alice Rayner; *(Associate Professor)* William S. Eddelman; *(Senior Lecturer)* Patricia Ryan

*Chair:* Branislav Jakovljevic

*Director of Graduate Studies:* Matthew Smith

*Director of Undergraduate Studies:* Diana Looser

*Professors:* Jennifer DeVere Brody (TAPS, Center for Comparative Studies in Race and Ethnicity), Harry J. Elam, Jr. (Vice Provost for Undergraduate Education), Peggy Phelan (TAPS, English, Stanford Arts Institute), Rush Rehm (On leave) (TAPS, Classics), Matthew Smith (TAPS, German Studies)

*Associate Professors:* Jisha Menon, Branislav Jakovljevic

*Assistant Professor:* Diana Looser

*Professor (Teaching):* Janice Ross

*Associate Professors (Teaching):* Helen Paris, Leslie Hill

*Senior Lecturer:* Connie Strayer

*Lecturers:* Kathryn Amarotico-Kostopoulos, Matt Chapman, Diane Frank, Erik Flatmo Gambatese, Aleta Hayes, Stephanie Hunt, Robert Kelley, Alex Ketley, Daniel Klein, Laxmi Kumaran, Anton Pankevich, Richard Powers, Ronnie Reddick, Lisa Rowland, Tony Shayne, Erik Sunderman

*Artist in Residence:* Amy Freed

*Humanities Center Fellow:* Aileen Robinson

*Mellon Post-Doctoral Fellow:* Heather Rastovac Akbarzadeh

*Department Administrator:* Patrice O'Dwyer

*Student Services Officer:* Katie Dooling

*Administrative Associate:* Janet Pineda

## Institute for Diversity in the Arts and Committee on Black Performing Arts

*IDA Faculty Director:* H. Samy Alim (Education and, by courtesy, Anthropology and Linguistics)

*Executive Director:* Jeff Chang

*Associate Director:* A-lan Holt

*Program Coordinator:* Kareem Alston

## Overseas Studies Courses in Theater and Performance Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

# URBAN STUDIES

Courses offered by the Urban Studies Program are listed under the subject code URBANST on the (<https://explorecourses.stanford.edu/search?q=urbanst&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-urbanst=on&filter-catalognumber-urbanst=on>) Stanford Bulletin's ExploreCourses web site.

The Urban Studies program treats urbanism as an interdisciplinary field; it brings together students, faculty, and outside specialists concerned with cities, and the impacts of cities on society and people's lives. The Urban Studies major encourages students to inquire deeply into the nature of cities and the techniques used to modify urban environments. It prepares students to address urbanization, and gives students a knowledge base and theoretical, analytical, and practical skills to understand urban social systems and effect social change.

## Mission of the Undergraduate Program in Urban Studies

Cities are now home to more than half of humanity. The mission of the undergraduate program in Urban Studies is to develop students' understanding of the nature of cities and their impact on the world. The dynamic and complex nature of cities challenges traditional disciplinary boundaries, so the program is interdisciplinary in nature, drawing from fields in the social sciences, history, and education. Courses in the program focus on issues in contemporary urban society, and on the forces and practices that shape urban life. Courses also address how cities have changed over time and how they continue to change today in societies around the world. Through a comprehensive program that includes course work, community engagement, and independent research, a major in Urban Studies prepares students for careers and graduate study in fields including architecture, business, community service, education, environmental planning, law, public policy, real estate development, urban design, and urban planning. It also prepares students to be critical thinkers, engaged citizens, and informed leaders who can help to transform cities for the better.

## Learning Outcomes (Undergraduate)

The program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Program in Urban Studies. Students are expected to demonstrate ability:

1. to formulate a research question and assess its significance in relation to one or more relevant scholarly or professional literatures and, where relevant, to theoretical writings.
2. to collect data to answer the proposed research question.
3. to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. to write clearly and persuasively.

## Coterminal Programs for Urban Studies Majors

Undergraduates in Urban Studies may enter coterminal master's degree programs in a number of departments and schools in the University. In recent years, Urban Studies majors have developed coterminal programs with the departments of Anthropology, Civil and Environmental Engineering, Communication, Earth Systems and Sociology, and with the School of Education. Information and applications for coterminal degree programs are available at Undergraduate Advising and Research. Students should discuss the coterminal program with a program director during their junior year.

University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

## Bachelor of Arts in Urban Studies

The Urban Studies major requires students to complete five types of courses totaling at least 70 units:

1. 23 units in the core
2. 9 units (minimum) of skills courses in at least 3 courses of 3 units each
3. 20 units (minimum) in an area of concentration
4. 3 units (minimum) of an approved service-learning course or internship
5. 10 units in the capstone sequence

If units in these categories total less than 70, the remaining units may be fulfilled by courses in other concentrations or in Urban Studies courses numbered 100 or higher (except URBANST 198 Senior Research in Public Service and URBANST 199 Senior Honors Thesis).

Majors must complete one prerequisite: ECON 1 Principles of Economics; this prerequisite course may be taken S/NC, as the units for this course do not count toward the 70 units required for the major. URBANST 198 Senior Research in Public Service, URBANST 199 Senior Honors Thesis, and prerequisites for required courses and for electives also do not count towards the 70-unit minimum.

Urban Studies students interested in graduate school in business or urban planning are advised to obtain basic quantitative skills by completing MATH 19 Calculus, MATH 20 Calculus, and MATH 21 Calculus, preferably before the junior year.

A course in statistical methods, such as STATS 60 Introduction to Statistical Methods: Precalculus, ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists or SOC 181B Sociological Methods: Statistics, is recommended for students interested in business or urban planning.

Urban Studies students are encouraged to spend at least one quarter studying overseas to learn how cities vary across societies. Some Urban Studies concentration courses, as well as electives, can be satisfied at Stanford overseas campuses. Courses offered overseas vary from year to year, and students should check in advance with Overseas Studies and Urban Studies concerning which courses meet Urban Studies requirements. Students may arrange to fulfill the internship requirement through a placement at one of Stanford's overseas locations.

Courses counted toward the 70-unit graduation requirement for the major must be taken for a letter grade, and a minimum grade of 'C' is required. The only exceptions are Urban Studies courses numbered 100 and higher that are offered only on an S/NC basis, such as URBANST 201A Capstone Internship in Urban Studies. Students may count up to three non-Stanford courses, for a maximum of 15 units, toward the major. These units must first be approved by the Office of Transfer Credit in the Registrar's Office and subsequently approved by the Urban Studies program. Transfer credit is not awarded for internship. Students may not count more than 5 units of URBANST 197 Directed Reading, toward the major without permission of the Director. Qualified students may write a senior honors thesis and graduate with honors; see details in "Honors Program" below. Students interested in declaring Urban Studies as a major are required to meet first with the student services administrator and one of the program's advisers; they then declare the Urban Studies major on Axess.

## Urban Studies Core

Urban Studies majors should complete URBANST 110 Introduction to Urban Studies, before Spring Quarter of the junior year. The following courses, totaling 23 units, are required:

		Units
URBANST 110	Introduction to Urban Studies	4
URBANST 111	Political Power in American Cities	5
URBANST 112	The Urban Underclass	4
URBANST 113	Introduction to Urban Design: Contemporary Urban Design in Theory and Practice	5
URBANST 114 or ANTHRO 42	Urban Culture in Global Perspective Megacities	5

## Skills

A minimum of 9 units in 3 courses of at least 3 units each are required and should be taken before the end of the junior year. The following courses are recommended for most Urban Studies majors.

		Units
SOC 180A	Foundations of Social Research	4
EARTHSYS 144	Fundamentals of Geographic Information Science (GIS)	3-4

ANTHRO 130D Spatial Approaches to Social Science is an approved substitute for EARTHSYS 144.

The additional skills courses vary depending on a student's needs and interests. Student consult with an adviser to determine the best choice. Courses that fulfill the skills requirement are:

		Units
ANTHRO 91	Method and Evidence in Anthropology	5
ANTHRO 93B	Prefield Research Seminar: Non-Majors	5
ANTHRO 102	Urban Ethnography	5
CEE 31	Accessing Architecture Through Drawing	5
CEE 31Q	Accessing Architecture Through Drawing	5
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	5
CEE 133F	Principles of Freehand Drawing	3
CEE 139	Design Portfolio Methods	4
EARTHSYS 142	Remote Sensing of Land	4
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	5
ECON 121	Social Science Field Research Methods and Applications	5
ENGR 150	Data Challenge Lab	3-5
HUMBIO 82A	Qualitative Research Methodology	3
HUMBIO 82B	Advanced Data Analysis in Qualitative Research	3
MED 147	Methods in Community Assessment, Evaluation, and Research	3
MS&E 125	Introduction to Applied Statistics	4
PEDS 202C	Qualitative Research Methods and Study Design	3
POLISCI 155	Political Data Science	5
SOC 180B	Introduction to Data Analysis	4
STATS 60	Introduction to Statistical Methods: Precalculus	5
STATS 101	Data Science 101	5
URBANST 123B	Approaching Research in the Community: Design and Methods	3

## Concentrations

Students must complete at least 20 units in one of the following concentrations:

- Cities in Comparative and Historical Perspective,
- Urban Education,
- Urban Society and Social Change
- Urban Sustainability
- Self-Designed

Courses may not be double-counted within the major.

Students should consult an adviser to develop a program that meets their intellectual goals; relevant courses not listed here, may be counted toward the concentration with the prior consent of an adviser.

These concentrations are declared to the department; they are not declared on Axxess, and they do not appear on the transcript or the diploma.

### Cities in Comparative and Historical Perspective

Focus is on how cities have evolved over time, and how they are continuing to change today in societies around the world. Drawing on disciplinary approaches including anthropology, archaeology, art history, geography, and history, students place urban issues in perspective to improve their comprehension of the present as well as the past.

Students in this concentration are encouraged to study off campus, and preferably overseas, for at least one quarter. Many courses offered through the Overseas Studies Program can be counted toward the concentration. Similarly, internships offered at many of Stanford's overseas locations can be used to fulfill the Urban Studies internship requirement.

DLCL 100 CAPITALS: How Cities Shape Cultures, States, and People or URBANST 119, Ancient Urbanism (offered alternate years) is required for the cities in comparative and historical perspectives concentration:

The following courses may be counted toward the Cities in Comparative and Historical Perspective concentration:

		Units
ANTHRO 39	Sense of Place	3
ANTHRO 42	Megacities	5
ANTHRO 112	Public Archaeology: Market Street Chinatown Archaeology Project	4
ANTHRO 149	South Asia: History, People, Politics	5
ARTHIST 3	Introduction to World Architecture	5
ARTHIST 142	Architecture Since 1900	4
ARTHIST 143A	American Architecture	4
CEE 32G	Architecture Since 1900	4
CEE 32Q	Place: Making Space Now	3
CEE 32R	American Architecture	4
CEE 32T	Making and Remaking the Architect: Edward Durrell Stone and Stanford	4
CHINA 159	Beijing and Shanghai: Twin Cities in Chinese History	3-5
CLASSICS 83	The Greeks	4-5
CLASSICS 84	The Romans	3-5
CLASSICS 156	Design of Cities	3-5
COMPLIT 144A		3-5
DLCL 100	CAPITALS: How Cities Shape Cultures, States, and People	3-5
EARTHSYS 112	Human Society and Environmental Change	4

HISTORY 92S		
HISTORY 106A	Global Human Geography: Asia and Africa	5
HISTORY 106B	Global Human Geography: Europe and Americas	5
HISTORY 150C	The United States in the Twentieth Century	5
HISTORY 260	California's Minority-Majority Cities	4-5
ME 120	History and Philosophy of Design	3
ITALIAN 41N		
OSPBER 30	Berlin vor Ort: A Field Trip Module	1
OSPBER 60	Cityscape as History: Architecture and Urban Design in Berlin	5
OSPCPTWN 16	Sites of Memory	3
OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 24B		
OSPCPTWN 43	Public and Community Health in Sub-Saharan Africa	3
OSPCPTWN 79	Creative Cityness in the Global South	3
OSPFLOR 58	Space as History: Social Vision and Urban Change	4
OSPFLOR 71	A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence	4
OSPFLOR 115Y	Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization	4
OSPMADRD 60	Integration into Spanish Society: Service Learning and Professional Opportunities	4
OSPPARIS 92	Building Paris: Its History, Architecture, and Urban Design	4
OSPSANTG 71	Santiago: Urban Planning, Public Policy, and the Built Environment	4-5
OSPPARIS 97	Le Grand Paris: Paris of the 21st Century	4
POLISCI 110C	America and the World Economy	5
REES 204	Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean	3-5
SINY 114	Writing in the City	4
SINY 116	Off the iPhone and Into the City: Creating a Photography Project	4
SLAVIC 165		
URBANST 25Q	The Origins of the Modern American City, 1865-1920	3
URBANST 27Q	Sophomore Seminar: Three Detectives, Three Cities	3
URBANST 105	The Hipster and the City: Race, Ethnicity, Hip-Hop, and Gentrification in Oakland	4
URBANST 145	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development	4-5
URBANST 150	From Gold Rush to Google Bus: History of San Francisco	4
URBANST 161	U.S. Urban History since 1920	5
URBANST 169	California's Minority-Majority Cities	4-5
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	1

### Urban Education

The purpose of this concentration is to prepare students for a career in educational policy and practice in diverse settings. This concentration is a useful basis for graduate study in educational policy, law, or business, and for students who have been admitted by the School of Education to pursue a coterminal master's degree in the Stanford Teacher Education Program (STEP) or the Policy, Organization, and Leadership Studies

Program (POLs). Stanford undergraduates can apply to the Stanford Teacher Education Program (STEP) in their Junior or Senior year.

Coterminal students applying to STEP are encouraged to take EDUC 101 Introduction to Teaching and Learning before applying to the program. Additionally, students interested in STEP Secondary (Single Subject) must demonstrate subject matter competency in their intended teaching area. Transcripts should reflect coursework in the intended teaching subject even if it was not a student's undergraduate major.

For additional information please contact the STEP Admissions Officer at 723-2110, or consult the STEP web site (<http://suse-step.stanford.edu>).

The following course is required for the urban education concentration:

		Units
EDUC 112	Urban Education	3-5

The following courses may be counted toward the urban education concentration:

		Units
EDUC 103A	Tutoring: Seeing a Child through Literacy	3-4
AFRICAST 111	Education for All? The Global and Local in Public Policy Making in Africa	3-5
EDUC 101	Introduction to Teaching and Learning	4
EDUC 103A	Tutoring: Seeing a Child through Literacy	3-4
EDUC 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5
EDUC 107	Education and Inequality: Big Data for Large-Scale Problems	3-5
EDUC 149	Theory and Issues in the Study of Bilingualism	3-5
EDUC 201	History of Education in the United States	3-5
EDUC 202	Introduction to Comparative and International Education	4
EDUC 204	Introduction to Philosophy of Education	3
EDUC 216	Education, Race, and Inequality in African American History, 1880-1990	3-5
EDUC 220C	Education and Society	4-5
EDUC 220D	History of School Reform: Origins, Policies, Outcomes, and Explanations	3-5
EDUC 221A	Policy Analysis in Education	4-5
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4
EDUC 283	Child Development In and Beyond Schools	2
HISTORY 11W	Service-Learning Workshop on Issues of Education Equity	1
EDUC 233A	Counseling Theories and Interventions from a Multicultural Perspective	3-5
HUMBIO 142	Adolescent Development	3-4
or PSYCH 60	Introduction to Developmental Psychology	

### Urban Society and Social Change

Focus is on issues in contemporary urban society and the tools and concepts that planners, policy makers, and citizens use to address those issues. Topics include environmental challenges, racial and class inequality, and the provision of adequate urban infrastructure. Students learn how community action, urban planning and design, and organizations in nonprofit, for-profit, and government sectors address urban social and environmental problems. This concentration prepares students to enter graduate programs concerned with urban affairs, community service, and public policy, and to work with local governmental agencies and for-profit and nonprofit organizations engaged in community service and development.

The following course is required for the urban society and social change concentration:

POLISCI 133 Ethics and Politics of Public Service 5

The following courses may be counted toward the urban society and social change concentration:

AFRICAST 111 Education for All? The Global and Local in Public Policy Making in Africa 3-5

ASNAMST 123 Asian Americans and Environmental Justice 3-5

ASNAMST 146S

CEE 32A Psychology of Architecture 3

CEE 32B Design Theory 4

CEE 131A Professional Practice: Mixed-Use Design in an Urban Setting 4

CEE 141A Infrastructure Project Development 3

CEE 141B Infrastructure Project Delivery 3

CEE 246 Entrepreneurship in Civil & Environmental Engineering 3-4

CSRE 100 Grassroots Community Organizing: Building Power for Collective Liberation 3-5

CSRE 157P Solidarity and Racial Justice 4-5

CSRE 196C Introduction to Comparative Studies in Race and Ethnicity 5

EARTHSYS 105 Food and Community: Food Security, Resilience and Equity 2-3

ECON 150 Economic Policy Analysis 4-5

ECON 155 Environmental Economics and Policy 5

EDUC 107 Education and Inequality: Big Data for Large-Scale Problems 3-5

EDUC 216 Education, Race, and Inequality in African American History, 1880-1990 3-5

URBANST 174 Defining Smart Cities: Visions of Urbanism for the 21st Century 1

URBANST 183 Team Urban Design Studio 5

URBANST 187 Housing Justice Research Lab 1-3

### Urban Sustainability

The Urban Sustainability concentration provides the basis for a holistic understanding of cities through the lens of environmental and social sustainability. By combining coursework in urban studies, history, sociology, and design with the STEM fields (science, technology, engineering and mathematics), students in the Urban Sustainability concentration are exposed to the environmental and infrastructural aspects of cities, as well as to issues of human development, public policy, and social equity.

Students in the concentration acquire a foundation in sustainability concepts and skills for research and professional practices. The Urban Sustainability concentration helps prepare students to serve as social change agents in future roles as scholars, urban planners, designers, entrepreneurs, public servants, and advocates, to address the most pressing issues of urban development and its human impacts in cities around the world.

The following course is required for the urban sustainability concentration:

EARTHSYS 112	Human Society and Environmental Change	Units 4
--------------	--	------------

The following courses may be counted toward the Urban Sustainability Concentration. Students must select at least one course from each of the following categories:

1. environmental sustainability
2. social sustainability
3. project-based courses.

### Environmental Sustainability

Environmental sustainability refers to the biosphere, environmental planning and policy, natural resource planning and development, sustainable building design, and urban infrastructure systems.

		Units
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	3
CEE 100	Managing Sustainable Building Projects	4
CEE 107A	Understanding Energy	3-5
CEE 165C	Water Resources Management	3
CEE 177X	Current Topics in Sustainable Engineering	1-3
CEE 224S	Sustainable Urban Systems Seminar	1
CEE 171	Environmental Planning Methods	3
CEE 172	Air Quality Management	3
CEE 176A	Energy Efficient Buildings	3-4
CHEMENG 35N	Renewable Energy for a Sustainable World	3
CHEMENG 60Q	Environmental Regulation and Policy	3
EARTHSYS 10	Introduction to Earth Systems	4
EARTHSYS 41N	The Global Warming Paradox	3
EARTHSYS 101	Energy and the Environment	3
EARTHSYS 104	The Water Course	3
EARTHSYS 175		
EARTHSYS 188	Social and Environmental Tradeoffs in Climate Decision-Making	1-2
ECON 17N	Energy, the Environment, and the Economy	3
ECON 155	Environmental Economics and Policy	5
ENGR 90	Environmental Science and Technology	3
OSPSANTG 29	Sustainable Cities: Comparative Transportation Systems in Latin America	4-5
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	1-2

### Social Sustainability

Social sustainability refers to land use planning and its human impacts, distribution of public goods, human-centered design, human and community development, citizen participation, and social equity.

		Units
ANTHRO 183B	Human Mobility and Adaptability	5
ASNAMST 123	Asian Americans and Environmental Justice	3-5

CSRE 125E	Shades of Green: Redesigning and Rethinking the Environmental Justice Movements	3-5
EARTHSYS 37N	Climate Change: Science & Society	3
EARTHSYS 105	Food and Community: Food Security, Resilience and Equity	2-3
POLISCI 19N	Politics of Energy Efficiency	5
POLISCI 31Q	Justice and the City	3
SINY 122	The Agile City	4
SOC 135	Poverty, Inequality, and Social Policy in the United States	4
URBANST 104	Civic Dreams, Human Spaces: Designing Cities for People	3
URBANST 107	Introduction to Urban and Regional Planning	3
URBANST 163	Land Use Control	4
URBANST 165	Sustainable Urban and Regional Transportation Planning	4-5
URBANST 167	Green Mobilities for the Suburbs of the Future	3
URBANST 168	Housing & Community Development—Policy and Practice	3
URBANST 169	California's Minority-Majority Cities	4-5
URBANST 170	Place-Making Policies	5
URBANST 171	Urban Design Studio	5
URBANST 173	The Urban Economy	4
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	1-2
URBANST 183	Team Urban Design Studio	5
URBANST 187	Housing Justice Research Lab	1-3

### Project-Based Courses

Project-based courses enable students to work on a real-life urban sustainability issue in collaboration with local and international community partners. Students grapple with sustainability concepts while practicing community engagement and capacity building, fluency in crosscultural collaboration, human-centered design thinking, and developing a sense of one's place in relation to global society and the praxis of urban sustainability.

		Units
CEE 124	Sustainable Development Studio	1-5
CEE 177X	Current Topics in Sustainable Engineering	1-3
CEE 224X	Disasters, Decisions, Development in Sustainable Urban Systems (CEE)	1-5
CEE 224Y	Sustainable Urban Systems Project	1-5
CEE 224Z	Sustainable Urban Systems Project	1-5
URBANST 145	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development	4-5
URBANST 164	Sustainable Cities	4-5
URBANST 171	Urban Design Studio	5
URBANST 181	Urban Agriculture in the Developing World	3-4

Students interested in pursuing the concentration in urban sustainability should meet with an Urban Studies adviser to determine an appropriate course of study. Consult the Urban Studies website or see an adviser for sample course plans in this concentration.

### Self-Designed Concentration

Students who wish to concentrate in an area of urban studies other than one of the above concentrations must complete the Urban Studies core, skills, and capstone requirement, and design additional units to bring the total to at least 70 units. The self-designed portion of the major should concentrate on a particular area of urban study, such as urban health care or urban technologies. Additional units must be approved by both the Director of Urban Studies and an academic adviser who is a

member of the Academic Council and has expertise in the particular area of interest to the student. A proposal for a self-designed concentration should include a list of courses and a description of how each course meets the student's educational objectives. A proposal for a self-designed concentration must be accompanied by a letter to the Director of Urban Studies indicating that the academic adviser has examined and approved the student's plan.

Students pursuing a self-designed concentration must submit proposals for approval by the Director of Urban Studies by the beginning of the third quarter of the student's sophomore year. Applications received after that deadline are not considered. Students interested in designing their own concentration are strongly encouraged to meet with the Director of Urban Studies before the end of fall quarter of their sophomore year.

## Service Learning

Urban Studies students are required to engage in a service learning experience as part of their course of study. Students can fulfill their service learning requirement in two ways:

1. enroll in an approved course such as URBANST 164, URBANST 145, SINY 101, or ANTHRO 112; or
2. complete an independent internship in an office of a government agency or non-profit/community organization relevant to the major, while enrolled in URBANST 201A Capstone Internship in Urban Studies before Autumn Quarter of the senior year.

Students planning to carry out an internship should consult with the Program Manager for Service Learning no later than Winter Quarter of junior year and complete the internship before Autumn Quarter of senior year, or three quarters before graduation. Students who intern for a private sector organization may receive credit for URBANST 194, but cannot use URBANST 201A credits to meet the capstone requirement. Urban Studies majors who wish to receive academic credit for additional internship work may enroll in URBANST 194. Students may not count more than 7 units of internship credit, including URBANST 194 Internship in Urban Studies and URBANST 201A Capstone Internship in Urban Studies, toward their major. Students can consult the Haas Center for Public Service for other courses with internship placements at community organizations.

## Capstone

All majors are required to complete a sequence of two seminars, totaling 10 units, in which students design a senior project, and write the results of their project. The capstone seminars can be used to satisfy the Writing in the Major requirement and to complete some work on an honors thesis. URBANST 202 Junior Seminar: Preparation for Research, should be taken in the junior year, and URBANST 203 SENIOR SEMINAR in the senior year. Students who plan to be away during Winter Quarter of their junior year are advised to take URBANST 202 Junior Seminar: Preparation for Research in the Winter Quarter of their sophomore year.

		Units
URBANST 202	Junior Seminar: Preparation for Research	5
URBANST 203	SENIOR SEMINAR	5

## Honors Program

The honors program offers qualified students an opportunity to conduct independent research and to write a thesis summarizing the results. Before being accepted to the honors program in Urban Studies, a student must:

1. declare a major in Urban Studies and complete at least 30 of the 70 required units including all prerequisites and core classes
2. complete URBANST 202 Junior Seminar: Preparation for Research (offered Winter Quarter)
3. have an overall GPA of 3.3 and a GPA of at least 3.5 in Urban Studies

4. submit an application, including a one-page abstract and the signatures of an adviser and, if applicable, a second reader. If the adviser is not a member of Stanford's Academic Council, the student must have a second reader who is an Academic Council member. The application must be submitted to the program office no later than April 30 of the junior year, and it must then be approved by the Director of the Urban Studies honors program.

Honors students are expected to complete a portion of their honors work in URBANST 203 SENIOR SEMINAR, in Autumn Quarter. Additionally, they must register for 5-10 units total in URBANST 199 Senior Honors Thesis, over the course of their senior year. The units of URBANST 199 Senior Honors Thesis are in addition to the 70-units required for the major. Honors students are required to present their theses at the Senior Colloquium in Spring Quarter of senior year.

To graduate with honors, students must receive a grade of at least 'A-' in the honors work and have a GPA of at least 3.5 in courses for the Urban Studies major at the time of graduation.

## Minor in Urban Studies

The minor in Urban Studies is designed to introduce students to several disciplinary approaches to the study of cities, and provides the opportunity to explore one of four specialized options:

- Cities in comparative and historical perspective
- Urban education
- Urban society and social change
- Urban sustainability

The minor in Urban Studies requires completion of seven courses for a letter grade, including the five core courses, the required course in the student's chosen concentration area, and one additional course in that option as listed in the "Bachelor of Arts in Urban Studies (p. 780)" section of this bulletin.

*Co-Director:* Zephyr Frank (History)

*Co-Director:* Michael Kahan (Senior Lecturer, Sociology)

*Executive Committee:* Thomas Hansen (Anthropology), Michael Rosenfeld (Sociology), Barbara Voss (Anthropology), Jeff Wachtel (Knight-Hennessy Scholars Program)

*Affiliated Faculty:* Michelle Anderson (Law), Arnetha Ball (Education), Eric Bettinger (Education), Scott Bukatman (Art and Art History), Albert Camarillo (History, Emeritus), Samuel Chiu (Management Science and Engineering), Rebecca Diamond (Business), Paulla Ebron (Anthropology), Paula Findlen (History), James Fishkin (Communication), Shelley Fisher Fishkin (English), Charlotte Fonrobert (Religious Studies), Richard Ford (Law), Zephyr Frank (History), Angela Garcia (Anthropology), Sharad Goel (Management Science and Engineering), Leah Gordon (Education), David Grusky (Sociology), Thomas Hansen (Anthropology), Allyson Hobbs (History), Ian Hodder (Anthropology), Miyako Inoue (Anthropology), Rishee Jain (Civil and Environmental Engineering), Sarah Jain (Anthropology), Tomás Jiménez (Sociology), David Labaree (Education), Kincho Law (Civil and Environmental Engineering), Raymond Levitt (Civil and Environmental Engineering), Tanya Luhrmann (Anthropology), Pamela Matson (Earth, Energy, and Environmental Sciences), Doug McAdam (Sociology), Raymond McDermott (Education), Daniel McFarland (Education), William McLennan (Business), Ian Morris (Classics), Clayton Nall (Political Science), Josiah Ober (Classics, Political Science), Leonard Ortolano (Civil and Environmental Engineering), Grant Parker (Classics), Peggy Phelan (Theater and Performance Studies), Sean Reardon (Education), Rob Reich (Political Science), Jonathan Rodden (Political Science), Michael Rosenfeld (Sociology), Walter Scheidel (Classics), Gary Segura (Political Science), Michael Shanks (Classics), Jennifer Trimble (Classics), Nancy Brandon Tuma (Sociology, Emerita),

Fred Turner (Communication), Guadalupe Valdes (Education), Barbara Voss (Anthropology), Ali Yaycioglu (History), Cristobal Young (Sociology), Steve Zipperstein (History)

*Lecturers:* Cecil Brown, Deland Chan, Melanie Edwards, Dennis Gale, Dehan Glanz, Radford Hall, Kevin Hsu, Clayton Hurd, Michael Kahan, Patricia Karlin-Neumann, Michael Kieschnick, Joseph Kott, Lawrence Litvak, Carol McKibben, Judith Ned, Marisa Raya, Laura Scher, Frederic Stout, Mark Wolfe

## Overseas Studies Courses in Urban Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		<b>Units</b>
OSPBBER 30	Berlin vor Ort: A Field Trip Module	1
OSPBBER 60	Cityscape as History: Architecture and Urban Design in Berlin	5
OSPCPTWN 16	Sites of Memory	3
OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 43	Public and Community Health in Sub-Saharan Africa	3
OSPFLOR 58	Space as History: Social Vision and Urban Change	4
OSPFLOR 71	A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence	4
OSPFLOR 115Y	Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization	4
OSPMADRD 8A	Cities and Creativity: Cultural and Architectural Interpretations of Madrid	4
OSPMADRD 60	Integration into Spanish Society: Service Learning and Professional Opportunities	4
OSPPARIS 92	Building Paris: Its History, Architecture, and Urban Design	4
OSPPARIS 97	Le Grand Paris: Paris of the 21st Century	4
OSPSANTG 29	Sustainable Cities: Comparative Transportation Systems in Latin America	4-5
OSPSANTG 71	Santiago: Urban Planning, Public Policy, and the Built Environment	4-5
OSPBBER 30	Berlin vor Ort: A Field Trip Module	1
OSPBBER 60	Cityscape as History: Architecture and Urban Design in Berlin	5
OSPBEIJ 82		
OSPCPTWN 79	Creative Cityness in the Global South	3
OSPSANTG 29	Sustainable Cities: Comparative Transportation Systems in Latin America	4-5
OSPPARIS 97	Le Grand Paris: Paris of the 21st Century	4
OSPSANTG 71	Santiago: Urban Planning, Public Policy, and the Built Environment	4-5

# STANFORD IN WASHINGTON

---

*Director:* Adrienne Jamieson

*On Campus Coordinator:* Jill Vizas

The Bing Stanford in Washington program provides highly-qualified undergraduates with an opportunity to work and study in the nation's capital. In addition to providing students with an understanding of public policy making, the program offers an opportunity to take advantage of the city's unique cultural resources.

Central in the student's educational experience is a full-time internship. Students serve as interns at such institutions and agencies as the Senate, the House of Representatives, the Office of Management and Budget, the White House, the National Institutes of Health, the Smithsonian Institution, CNN, World Bank, the departments of State, Justice, Treasury, Education, and Health and Human Services.

In addition to the internship, students also complete an academic course of study consisting of small courses taught by policy experts, and weekly seminars taught by Stanford faculty members. Seminars are generally 3-5 units. Past topics have included congressional oversight and the press; economic growth and development patterns, policies, and prospects; critical health issues in the U.S. and abroad; policy making in the Washington community; and criminal justice policy. Speakers from the Washington policy community frequently join students and faculty for discussions. Students often write a major paper related to their internship for 3-5 units of credit. Course and seminar topics vary according to student and faculty interest.

The Bing Stanford in Washington program offers stretch quarters in the Autumn and Spring (early September to mid-December, and late March to the end of June) and a regular quarter in Winter, which focuses on environmental policy, health policy and the arts. The program is designed for students in their junior year or during the first or second quarter of their senior year. Applications must be completed two quarters in advance, and three quarters in advance if a student is overseas or otherwise not on campus during the qualifying quarter.

Students interested in the program should contact the campus office of the Bing Stanford in Washington program; see contact information above.

## SCHOOL OF LAW

Courses offered by the School of Law are listed on the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site under the subject codes LAW and LAWGEN.

The School of Law, established in 1893, provides a legal education for students who are fitted by their maturity and academic training to pursue professional study under University methods of instruction. The curriculum leading to the first professional degree in law, the Doctor of Jurisprudence (J.D.), constitutes an adequate preparation for the practice of law in any English-speaking jurisdiction. Graduate work leading to the degrees of Master of Laws (L.L.M.), Master of the Science of Law (J.S.M.), and Doctor of the Science of Law (J.S.D.), and a non-professional degree, Master of Legal Studies (M.L.S.), is also offered. For the full curriculum, see the Course Schedule & Description on the Law School (<http://www.law.stanford.edu/courses>) web site. Stanford Law School offers joint or dual degree options in combination with other Stanford graduate departments and universities across the country; see the "Joint and Dual Degrees in Law" below.

The school is on a three-term academic calendar. For a complete list of academic dates see the Academic Calendar on the Law School (<https://law.stanford.edu/education/courses/calendar-deadlines>) web site.

For further information about admission, programs, curriculum, and faculty, see the Law School (<https://law.stanford.edu>) web site.

### Joint and Dual Degrees in Law

Formal admission to both the Law School and to the other cooperating school or department in accordance with the established admission standards of each school or department is required. In addition to the established joint degree programs offered, the school considers requests for a dual program on an individually designed basis. For additional information on Law School joint or dual degree programs, see the Law School (<https://law.stanford.edu/education/degrees/joint-degrees-within-stanford-university/#slnav-established-joint-degrees>) web site. See relevant web sites or department sections of this bulletin for degree requirements.

### Graduate School of Business

- See the GSB's M.B.A. web site (<http://www.gsb.stanford.edu/programs/mba>)
- J.D./M.B.A. Master of Business Administration
- J.D./Ph.D. Business Administration

### School of Earth Sciences

- J.D./M.S. Interdisciplinary Program in Environment and Resources (E-IPER)
- J.D./Ph.D. Interdisciplinary Program in Environment and Resources (E-IPER)

### School of Education

J.D./M.A. Education

### School of Engineering

- J.D./M.S. Bioengineering
- J.D./Ph.D. Bioengineering
- J.D./M.S. Computer Science
- J.D./M.S. Electrical Engineering
- J.D./M.S. Management Science and Engineering (MS&E)
- J.D./Ph.D. Management Science and Engineering (MS&E)

### School of Humanities and Sciences

- J.D./Ph.D. Communication
- J.D./M.A. Economics
- J.D./Ph.D. Economics
- J.D./M.A. History
- J.D./Ph.D. History
- J.D./M.A. in degree granting programs in Stanford Global Studies (SGS):
  - African Studies
  - East Asian Studies
  - Latin American Studies
  - Russian, East European and Eurasian Studies
- J.D./M.A. International Policy Studies
- J.D./Ph.D. Modern Thought and Literature
- J.D./Ph.D. Philosophy
- J.D./Ph.D. Political Science
- J.D./Ph.D. Psychology
- J.D./M.P.P. Public Policy
- J.D./Ph.D. Sociology

### School of Medicine

- J.D./M.S. Health Research and Policy (HRP)
- J.D./M.D. Medicine
- J.D./Ph.D. Neurosciences

### Cooperative Programs with Other Universities

Stanford J.D. students have also pursued degrees at other universities such as the Harvard Kennedy School, Johns Hopkins School of Advanced International Studies, and Princeton Woodrow Wilson School. The approval process for such a cooperative program begins after the student has been admitted, independently, to both programs. Students may enroll in either a joint degree among schools at Stanford or in a degree from an external university, but a student may not enroll in both a Stanford JDP and a cooperative program with another university.

### Courses in Law

Some Law courses have special enrollment instructions and restrictions, but many Law courses are open to qualified graduate students in other departments of Stanford University with instructor consent. Non-Law students may not enroll in courses that are part of the required first-year J.D. curriculum. Stanford non-Law students intending to enroll in any course with a LAW subject code must consult the Office of the Law School Registrar in the Stanford Law School Administration Building, room 100, or see the Stanford Law School, Office of the Registrar (<http://www.law.stanford.edu/organizations/offices/office-of-the-registrar>) web site.

*Emeriti: (Professors):* Janet Cooper Alexander, Barbara Allen Babcock, Wayne G. Barnett, Paul Brest, Gerhard Casper, Joshua Cohen, Richard Craswell, Lance E. Dickson, Marc A. Franklin, Jack H. Friedenthal, Ronald J. Gilson, Robert A. Girard, William B. Gould IV, Thomas C. Grey, Thomas C. Heller, Margaret Jane Radin, Byron D. Sher, William H. Simon, Michael S. Wald

*Dean:* M. Elizabeth Magill

*Vice Dean:* Mark G. Kelman

*Associate Dean of Clinical Education:* Juliet M. Brodie

*Associate Dean for Curriculum:* Nora Freeman Engstrom

*Associate Dean for Global Programs:* Robert M. Daines

*Associate Dean for Graduate Studies:* Deborah R. Hensler

*Associate Dean for Strategic Planning:* George Triantis

*Senior Associate Dean for Administration and Chief Financial Officer:* Frank Brucato

*Senior Associate Dean for External Relations:* Julia Erwin-Weiner

*Associate Deans:* Diane Chin, Faye Deal, Sabrina Johnson, Susan Robinson, Jory Steele

*Professors:* Michelle Wilde Anderson, Joseph Bankman, R. Richard Banks (on leave), G. Marcus Cole, Robert M. Daines, Michele Landis Dauber, John J. Donohue III, David Freeman Engstrom (on leave spring), Nora Freeman Engstrom, George Fisher, Richard T. Ford, Barbara H. Fried, Lawrence M. Friedman, Paul Goldstein (on leave spring), Robert W. Gordon, Henry T. Greely, Joseph A. Grundfest, Deborah R. Hensler (on leave autumn), Daniel E. Ho (on leave winter), Pamela S. Karlan, Mark G. Kelman, Amalia D. Kessler, Daniel P. Kessler, Michael Klausner (on leave winter/spring), Mark A. Lemley, Robert MacCoun, M. Elizabeth Magill, Lawrence C. Marshall, Jenny S. Martinez, Michael W. McConnell, Michelle Mello, Bernadette Meyler (on leave autumn), Curtis Milhaupt, Alison D. Morantz, Nathaniel Persily, Joan Petersilia, A. Mitchell Polinsky, Robert L. Rabin (on leave autumn), Deborah L. Rhode (on leave winter), Jane Schacter, David A. Sklansky, Norman W. Spaulding, James F. Strnad II, David Studdert, Alan O. Sykes, Barton H. Thompson, Jr., George Triantis (on leave autumn), Barbara van Schewick, Robert Weisberg

*Associate Professors:* Lisa Larrimore Ouellette, Shirin Sinnar

*Assistant Professors:* Gregory Ablavsky, Rabia Belt, Jacob Goldin, Colleen Honigsberg

*Professors (Teaching):* Juliet M. Brodie, James Cavallaro, Jeffrey L. Fisher, William S. Koski, Phillip R. Malone, Jay A. Mitchell, Deborah A. Sivas (on leave autumn), Jayashri Srikantiah

*Associate Professors (Teaching):* James Sonne, Ronald C. Tyler

*Senior Lecturers:* Janet Martinez, Allen S. Weiner, Beth Williams

*Professors of the Practice of Law:* Lucas Guttentag, Erik G. Jensen, A. Douglas Melamed, David W. Mills, Dan Reicher

*Courtesy Professors:* Jennifer Eberhardt, David Larcker, Jack Rakove

*Courtesy Associate Professor:* Michael Genesereth

*Courtesy Assistant Professor:* Keith Winstein

*Visiting Professors:* Michael Asimow, William Baude, Binyamin Blum, Mariano-Florentino (Tino) Cuéllar, Siegfried Fina, Laurie Hodrick, Joshua Kleinfeld, Burt Neuborne, Rogelio Perez-Perdomo, Jedediah Purdy, Zahr Said

*Thomas C. Grey Legal Research and Writing Instructors:* Sarah Duranske, Mugambi Jouet, Ji Seon Song, Andrea Wang, Justin Weinstein-Tull

*Lecturers:* Adam Abelkop, Fred Alvarez, Marilyn Bautista, Jeanine Becker, Brian Blalock, Lauren Brady, Viola Canales, Lanhee Chen, Isaac Cheng, Ronald Chen, Diane Chin, Cristina Dos Santos, Lisa Douglass, Jason Du Mont, Randee G. Fenner, Jay Finkelstein, Tara Ford, David Forst, Simon Frankel, Laurence Franklin, Michelle Galloway, Albert Gidari, Ben Ginsberg, David Goldberg, Jonathan Greenberg, Margaret Hagen, Timothy H. Hallahan, Adam Halper, David Hayes, Todd Hinnen, Zeba Huq, David Johnson, Danielle Jones, Megan Karsh, Zachary Kaufman, Julie Matlof Kennedy, Sallie Kim, David Kleiman, Matthew Kline, Ken Kuwayti, Robin

John Lee, Stuart Lipton, Goodwin Liu, Suzanne Luban, Grande Lum, Anna-Rose Mathieson, Diego Gil McCawley, Jason Meek, Jeanne Merino, Marion Miller, Dinsha Mistree, Nader Mousavi, Kimi Narita, William Neukom, Jessica Notini, Jef Pearlman, B. Howard Pearson, Lisa M. Pearson, Sara Peters, Brenna Powell, John G. Quigley, Kirupa Pushparaj, Stephan Ray, Mark Reinstra, Susan Robinson, Michael Romano, Betty Rowe, Tom Rubin, Richard Salgado, Ticien Sassoubre, Alicia Seiger, Geoff Sigalet, Rachelle Silverberg, Stephanie Smith, Lance Sorensen, Michelle Sonu, Shanin Specter, Sergio Stone, Kimberly Summe, Laura Tam, Dan, Tan, Alicia Thesing, Valicia Trowbridge, John True, Adine Varah, Claret Vargas, Lisa Weissman Ward, Spencer Williams, Bryan Wilson, Andrew Winden, Joseph Yang, Alex Zhang

*Affiliated Faculty:* Alexandria Boehm (Engineering), Svetlana Bryzgaloval (GSB), Kate Bundorf (Health Research and Policy), Francis "Vic" Stanton (GSB)

# SCHOOL OF MEDICINE

The School of Medicine offers courses of study leading to the M.S., Ph.D., and M.D. degrees.

## Undergraduate Programs in the School of Medicine

Many courses in the School of Medicine are open to any registered Stanford student who has fulfilled the prerequisites, subject to the usual limits of course enrollment and faculty approval. The school also offers courses specifically for undergraduates, as well as graduate-level courses where advanced undergraduates with backgrounds in the life sciences are welcome. Among the undergraduate offerings are numerous Stanford Introductory Seminars for freshmen and sophomores, the Emergency Medical Technician program, Stanford Immersion in Medicine Physician Shadowing, Pre-Vet Advisory, and courses in Community Health, including participation in the Stanford Free Clinics. The school also offers several undergraduate courses through the Department of Biology and the Interdisciplinary Program in Human Biology in the School of Humanities and Sciences. See the school's Undergraduate Studies (<http://med.stanford.edu/education/undergrad-studies.html>) web site for additional information.

## M.S. and Ph.D. Programs in the School of Medicine

The School of Medicine is home to graduate programs covering a broad range of disciplines within biomedicine leading to Ph.D. or M.S. degrees. These programs focus on interdisciplinary training with in-depth investigation of an original problem of fundamental importance to the biosciences. Each degree program sets its own curriculum, but many courses are taught by groups of faculty from multiple programs and departments. Flexibility is a priority to ensure that all students obtain the best possible training for pursuing careers in their areas of interest. The school is dedicated to training students from diverse backgrounds, and to the promotion of diversity in graduate education. Admission is through one of about 15 home programs. These home programs enable students to carry out dissertation research and training with School of Medicine faculty, as well as investigators in the departments of Biology and Biophysics in the School of Humanities and Sciences. Detailed information on School of Medicine M.S. and Ph.D. programs, curricula, and research can be found at Stanford's School of Medicine Master's Degree Programs (<http://med.stanford.edu/education/masters-programs.html>) and Ph.D. Programs (<http://med.stanford.edu/education/phd-programs.html>) web site. Application information can be found at Stanford's Office of Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

## M.D. Program in the School of Medicine

The School of Medicine seeks to attract students who are passionate about scholarship and wish to improve the health of the world's people through research, innovation, and leadership. The Stanford M.D. curriculum provides education in biomedical and clinical sciences along with study and independent research through scholarly concentrations. Emphasis is placed on interdisciplinary learning, with streamlined content and melding of basic science and clinical instruction across the curriculum. Blocks of unscheduled time allow for individual or group study, participation in elective courses, research, and reflection. Alternative pathways through the curriculum include an option of a fifth or sixth year of study as well as opportunities for pursuing a second degree, such as an M.P.H., M.B.A., Master's of Science in Epidemiology or Health Services Research, or a Ph.D.

Broad clinical science education occurs throughout the curriculum with exposure to patient care and the practice of medicine beginning on the first day of medical school. Students begin clinical clerkships in June of the second year. A population health course combines classroom and experiential learning to provide understanding of the socioeconomic determinants of the health of patients and communities.

Scholarly concentrations offer opportunities for developing skills that enhance basic science and clinical training in areas such as bioengineering, biomedical ethics and medical humanities, biomedical informatics, clinical research, community health, health services and policy research, and the molecular basis of medicine. Through the scholarly concentration program, these skills may be applied in clinical areas housed within centers at Stanford such as the Comprehensive Cancer Center, the Cardiovascular Institute, the Neuroscience Institute, the Institute of Immunity, Transplantation, and Infection, and Women's Health at Stanford. Study in a scholarly concentration typically includes course work and research activities. Research for scholarly concentrations is supported through the Medical Scholars program, which funds student research projects at Stanford and overseas.

Students with interests in medical research as a career are encouraged to investigate opportunities available through the Medical Scientist Training Program (MSTP). Stanford also collaborates with the University of California, Berkeley, to offer students opportunities for M.D./M.P.H. training. Details about these programs may be found at Stanford's Dual Degree and Multi-Degree Programs (<http://med.stanford.edu/education/dual-degree-programs.html>) web site.

Stanford is committed to representing the diversity of the U.S. and California populations by seeking a diverse body of students who are interested in the intellectual substance of medicine and committed to advancing the field of health care, broadly defined. Provided an applicant to the school has completed basic courses in physics, chemistry, and biology, the choice of an undergraduate major may reflect other interests, including the arts and humanities. Course work in advanced biology such as biochemistry, molecular biology, or genetics and the behavioral sciences is recommended because of their importance in understanding health care. Breadth of interests and depth of experiences play an important role in the selection of students from among those applicants having superior academic records.

The M.D. degree requires 12 quarters of registration at full Med-MD tuition; the joint M.D./Ph.D. degree requires 15 quarters. Completion of the M.D. degree must be achieved within six years, unless a petition is granted to extend this time frame. For further details on the M.D. degree, including admission requirements, see the Medical Education at Stanford (<http://med.stanford.edu/md>) web site.

## Multiple-Degree Programs in the School of Medicine

### M.D./Ph.D.

Many M.D. students undertake a Ph.D. while they are at Stanford. Popular choices are School of Medicine programs in Bioengineering, Biomedical Informatics, or one of the 13 Biosciences home departments. At the School of Engineering, the Biomechanical Engineering M.D./Ph.D. program also makes a special effort to work with M.D. students.

### Medical Scientist Training Program

The Medical Scientist Training Program (MSTP) provides medical students with an opportunity to pursue an individualized program of research and course work leading to both the M.D. and Ph.D. degrees. It is designed to equip students for careers in academic investigative medicine, and emphasizes flexibility of curricular and research programs for each trainee. Training for a combined M.D.-Ph.D. includes the same content encountered by students who pursue each degree separately, but the total training time is less than the sum of the time normally required

for each degree. The flexible curriculum at Stanford's School of Medicine allows each student, in consultation with a preceptor and other advisers, to pursue a plan of study that satisfies the requirements for the M.D. and allows performance of doctoral-level research leading to the Ph.D. Students interested in joining the MSTP are considered for admission at the time of their application to the School of Medicine M.D. program and are asked to provide supplemental information relevant to their research background. Current Stanford M.D. students may also apply for admission to the MSTP.

### **M.D./M.B.A.**

M.D. students interested in combining their medical training with training in business can take advantage of a dual degree M.D./M.B.A. program that allows students to obtain both degrees after completion of a 5-year curriculum. Students must apply to and be admitted by the Stanford Graduate School of Business, at the time of their admission to the medical school or after beginning their M.D. studies.

### **M.D./M.P.H.**

A unique collaboration with UC Berkeley allows M.D. students to pursue and obtain a Master of Public Health degree while still at the Stanford School of Medicine. This dual degree M.D./M.P.H. program is open to M.D. students who participate in the Scholarly Concentration in Community Health. Students must apply to and be admitted by the UC Berkeley program; course work is undertaken at the UC Berkeley campus.

### **Ph.D./M.S.M.**

The Master of Science in Medicine (<http://msm.stanford.edu>) program admits current Stanford Ph.D. students who have a commitment to translational research, but are not interested in becoming clinicians. The goal of the program is to train researchers in human biology and disease to be better equipped to translate new scientific discoveries into useful medical advances. Students offered admission into any Ph.D. program at Stanford may apply for admission to the master's program. During their first five quarters, students take basic biomedical science courses with Stanford M.D. students. The School of Medicine M.D. curriculum is presented in a succinct format that allows time for students to concurrently complete their Ph.D. course requirements and lab rotations. By early in their second year, students choose a lab for their Ph.D. thesis research and complete their medical course work. They also elect a clinical co-mentor to discuss translational research needs and help to arrange a short clinical experience. Upon completion of the Program., participating students receive an M.S. in Medicine.

### **M.D./M.S. Degrees**

**Health Policy:** the master's degree program in Health Policy seeks to train students in the quantitative analysis of issues in health and medical care. The program is based upon an individual development plan, and includes both course work and completion of a master's project under the direction of a program core faculty member. The typical student in the program is a physician who has completed residency training and is preparing for a research career; the program also admits Stanford medical students and others with a strong background in health policy analysis. The core faculty interests include outcomes research, health economics, health care organization, health care access, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

**Epidemiology:** The Graduate Interdisciplinary Program in Epidemiology is a research oriented program that offers instruction and research opportunities leading to the M.S. degree in Epidemiology, the study of the distribution and determinants of diseases in populations.

**Biomedical Informatics:** An option for anyone who wishes to either perform research in Biomedical Informatics as clinical faculty at a school of medicine or for those who wish to continue into the health care industry or government. There is high need for trained individuals who

understand the practice of medicine and who are able to develop and implement applications in biomedical informatics.

**Biomechanical Engineering:** Bioengineering is a fusion of engineering and the life sciences that promotes scientific discovery and the invention of new technologies and therapies through research and education. It encompasses both the use of biology as a new engineering paradigm and the application of engineering principles to medical problems and biological systems. The discipline embraces biology as a new science base for engineering.

### **M.D./M.P.P. Degree**

Matriculated M.D. students from Stanford's School of Medicine may apply for admission to the joint M.P.P./M.D. degree program (<http://med.stanford.edu/education/dual-degree-programs.html>). Applications are accepted anytime after a student has completed one year in the M.D. program. Students must obtain the permission of the School of Medicine to participate in the joint degree program. Students are required to devote two continuous years of full-time study to the completion of the first two years of the core M.D. curriculum. Students then devote one continuous academic year of study to the completion of the M.P.P. core curriculum. At other times, the student may be enrolled in either unit and may take courses from either unit to satisfy the joint degree requirements.

### **Departmental Dual Degrees**

**Education:** The Individually designed M.A. in Education is designed for Stanford doctoral students enrolled outside of the School of Education. Individuals enrolled at the doctoral level at Stanford can be considered for this program.

**E-IPER:** Stanford's Emmett Interdisciplinary Program in Environment and Resources (E-IPER) gives students a focused science, engineering, and technology background, allowing them to integrate science with law and business to address critical environmental and sustainability issues.

**Public Policy:** Stanford University offers two master's programs in Public Policy. A Master's of Public Policy (M.P.P.) is a two-year professional degree and the Masters of Arts in Public Policy (M.A.) is a one-year non-professional degree. Students currently enrolled in other Stanford graduate programs, and applicants to those programs, may apply for either of the Public Policy master's programs. M.D. students are eligible to apply for a dual M.A. degree program. See above for the joint M.D./M.P.P. program.

*Dean:* Lloyd Minor

*Senior Associate Dean for Graduate Education and Postdoctoral Affairs:* William Talbot

*Senior Associate Dean for Medical Education:* Charles Prober

# BIOCHEMISTRY

Courses offered by the Department of Biochemistry are listed under the subject code BIOC on the Stanford Bulletin's ExploreCourses web site.

Biochemistry is a department within the School of Medicine, with offices and labs located in the Beckman Center for Molecular and Genetic Medicine at the Stanford Medical Center. Courses offered by the department may be taken by undergraduates as well as graduate and medical school students.

Advanced courses offered in more specialized areas emphasize recent developments in biochemistry, cell biology, and molecular biology. These courses include the physical and chemical principles of biochemistry, enzyme reaction mechanisms, membrane trafficking and biochemistry, molecular motors and the cytoskeleton, mechanisms and regulation of nucleic acid replication and recombination, the biochemistry of bacterial and animal viruses, the molecular basis of morphogenesis, the molecular and cell biology of yeast, and the structure and function of both eukaryotic and prokaryotic chromosomes.

Opportunities exist for directed reading and research in biochemistry and molecular biology, using the most advanced research facilities, including those for light and electron microscopy, chromatography and electrophoresis, protein and nucleic acid purification, rapid kinetic analysis, synthesis and analysis, single molecule analyses using laser light traps, microarray generation and analysis, and computer graphic workstation facilities for protein and nucleic acid structural analysis. Ongoing research uses a variety of organisms from bacteria to animal cells.

## Doctor of Philosophy in Biochemistry

Requirements for the M.S. and Ph.D. degrees are described in the "Graduate Degrees (p. 50)" section of this bulletin. The department does not offer undergraduate degrees.

The Department of Biochemistry offers a Ph.D. program which begins in the Autumn Quarter of each year. The program of study is designed to prepare students for productive careers in biochemistry; its emphasis is training in research, and each student works closely with members of the faculty. In addition to the requirement for a Ph.D. dissertation based on original research, students are required to complete six advanced courses in biochemistry and related areas among the 135 total units required for the Ph.D. Selection of these courses is tailored to fit the background and interests of each student. A second requirement involves the submission of two research proposals which are presented by the student to a small committee of departmental faculty members who are also responsible for monitoring the progress of student curricular and research programs, and a journal club presentation. All Ph.D. students are expected to participate actively in the department's seminar program, and students are encouraged to attend and to present papers at regional and national meetings in cellular biochemistry and molecular biology. Teaching experience is an integral part of the Ph.D. curriculum and is required for the degree.

The Department of Biochemistry offers an M.S. degree only to students already enrolled in the Ph.D. program. Students should contact the Graduate Studies adviser for more details.

Those applying for graduate study should have at least a baccalaureate degree and should have completed work in cell and developmental biology, basic biochemistry and molecular biology, and genetics. Also required are: at least one year of university physics; differential and integral calculus; and organic, inorganic, and physical chemistry. The department is especially interested in those applicants who have research experience in biology or chemistry. Students must submit an

application, including transcripts and letters of recommendation, by December for admission in the following Autumn Quarter.

Applications should be submitted at the Office of Graduate Admissions (<http://gradadmissions.stanford.edu>) web site. Applicants are notified by March 31 of decisions on their applications. Stanford University requires scores from the Graduate Record Examination (GRE) (verbal, quantitative, and analytical), and applicants are encouraged to submit scores from the GRE Subject Test in biochemistry, biology, or chemistry. Applicants should take the October GRE exam.

All applicants are urged to compete for non-Stanford fellowships or scholarships, and U.S. citizens should complete an application for a National Science Foundation Predoctoral Traineeship. Students are provided with financial support to cover normal living expenses; Stanford tuition costs are paid. Applicants for admission to the department are considered without regard to race, color, creed, religion, sex, age, national origin, or marital status.

Postdoctoral research training is available to graduates who hold a Ph.D. or an M.D. degree. Qualified individuals may write to individual faculty members for further information.

At present, the primary research interests of the department are the structure and function of proteins and nucleic acids, the biochemistry and control of development processes, molecular motors and the cytoskeleton, the trafficking of proteins between membrane-bound organelles, the control and regulation of gene expression, bioinformatics/protein structure design, and the application of microarrays to problems in human health and disease.

# BIOMEDICAL ETHICS

The Stanford University Center for Biomedical Ethics (SCBE) is dedicated to interdisciplinary research and education, and provides clinical and research ethics consultation. SCBE serves as a scholarly resource on emerging ethical issues raised by medicine and biomedical research.

SCBE offers a scholarly concentration in Biomedical Ethics and Medical Humanities (BEMH) to medical students. This program allows medical students to study in depth the moral, social, and humanistic dimensions of medicine and biomedical science. Using cross-disciplinary methods such as those from philosophy, social science, film, literature, art, and law, students examine the meaning and implications of medicine and medical research.

## Degree Requirements

Students who pursue Biomedical Ethics and Medical Humanities in conjunction with an application area, such as Immunology, are required to complete 6 units including:

		Units
INDE 212	Medical Humanities and the Arts	2
PEDS 251A	Medical Ethics I	2

Students may select the other two core BEMH units from a wide variety of University, Medical School, and Law School courses. Students interested in completing all 12 units in the BEMH scholarly area may do the same. Students are encouraged to go through the various offerings and devise a course plan to present to the director, David Magnus, and Audrey Shafer.

Additional information on requirements for the scholarly concentration, is available at the BEMH (<http://bioethics.stanford.edu/education/bemh>) web site.

*Director:* David C. Magnus

*Director Emeritus:* Thomas A. Raffin

*Associate Director:* Mildred K. Cho

*Participating Faculty and Staff:* Danton S. Char, Julie A. Collier, Steven Goodman, Maren Grainger-Monsen, Henry Greely, Alvan A. Ikoku, Katrina A. Karkazis, Sandra S. Lee, Jose R. Maldonado, Michelle M. Mello, Kelly E. Ormond, Laura W. Roberts, Christopher T. Scott, Audrey Shafer, Abraham C. Vergheze

# BIOMEDICAL INFORMATICS

Courses offered by the Program in Biomedical Informatics are listed under the subject code BIOMEDIN on the Stanford Bulletin's ExploreCourses web site.

The program in Biomedical Informatics emphasizes research to develop novel computational methods that can advance biomedicine. Students receive training in the investigation of new approaches to conceptual modeling and to development of new algorithms that address challenging problems in the biological sciences and clinical medicine. Students with a primary interest in developing new informatics methods and knowledge are best suited for this program. Students with a primary interest in the biological or medical application of existing informatics techniques may be better suited for training in the application areas themselves.

## Graduate Programs in Biomedical Informatics

The Biomedical Informatics Program is interdepartmental and offers instruction and research opportunities leading to M.S. and Ph.D. degrees in Biomedical Informatics. All students are required to complete the core curriculum requirements, and also to complete additional course work to fulfill degree requirements and pursue their technical interests and goals as specified for each degree program.

The program can provide flexibility and can complement other opportunities in applied medical research at Stanford. Special arrangements may be made for those with unusual needs or those simultaneously enrolled in other degree programs within the University. Similarly, students with prior relevant training may have the curriculum adjusted to eliminate requirements met as part of prior training.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

## Master of Science in Biomedical Informatics (Academic)

This degree is designed for individuals who wish to undertake in-depth study of biomedical informatics with research on a full-time basis. Normally, a student spends two years in the program and implements and documents a substantial project by the end of the second year. The first year involves acquiring the fundamental concepts and tools through course work and research project involvement. Academic M.S. students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics. This degree requires a written research paper to be approved by two faculty members.

## Master of Science in Biomedical Informatics (Professional/Honors Cooperative Program)

This degree is designed primarily for the working professional who already has advanced training in one discipline and wishes to acquire interdisciplinary skills. Although many classes necessary for the degree are available online, some requirements may be fulfilled through implementation of an alternative plan to be approved by the program. The professional M.S. is offered in conjunction with Stanford Center for Professional Development (SCPD), which establishes the rates of tuition and fees. The program uses the honors cooperative program (HCP) model, which assumes that the student is working in a corporate setting and is enrolled in the M.S. on a part-time basis. The student has up to five years to complete the program. Research projects are optional; if interested, the student must make arrangements with program faculty.

Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

## Master of Science in Biomedical Informatics (Coterminal)

The coterminal degree program allows Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. See the "Coterminal Degrees (p. 46)" section of this bulletin for additional information. For University coterminal degree program rules and University application forms, see the Registrar's web site (<https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm>).

The coterminal Master of Science program follows the same program requirements as the Master of Science (Professional), except for the requirement to be employed in a corporate setting. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Research projects are optional; if interested, the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

## Application to the Coterminal Program

For complete information, see the program's Coterminal Master's Degree (<http://bmi.stanford.edu/prospective-students/masters-degree-coterminal-biomedical-informatics.html>) page.

1. Submit the University Coterminal Online Application (<https://applyweb.com/stanterm>).
2. Submit the program's Coterminal Supplemental Application Form (<http://bmi.stanford.edu/prospective-students/FilesProspectiveStudents/CotermSupplementApp.doc>).
3. Submit your academic resume or curriculum vitae.
4. Submit a one-page Statement of Purpose describing how and why the BMI program is well matched to your interests.

Applicants to the coterminal M.S. programs are not required to submit GRE scores. GRE scores are recommended, especially if you have relatively little prior course work in quantitative and computational areas. The TOEFL is not required.

## Advising

Upon acceptance into the program, students are assigned a BMI academic adviser. The student revises the program proposal at this time. Students should contact the BMI program office for advice about coterminal status between acceptance and the first appointment with the BMI academic adviser.

## University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to

the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Core Curriculum and Program Requirements in Biomedical Informatics

### Core Curriculum in Biomedical Informatics (31 units)

Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium. Regardless of whether they are enrolled, they should attend all meetings throughout their graduate training, and attend a research colloquium appropriate to their interests. All students are expected to fulfill the following requirements:

#### • Core Biomedical Informatics (9 or more units)

Students are expected to complete the core offerings in biomedical informatics. These courses should be taken for a grade.

- BIOMEDIN 212 Introduction to Biomedical Informatics Research Methodology
- and two of the courses listed below. Additional core course requirements are listed under the M.S. degree program.

BIOMEDIN 210	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

#### • Computer Science, Statistics, Mathematics & Engineering (18 units)

Students are expected to create a program of study with graduate-level courses in computer science, statistics and other technical informatics-related disciplines to achieve in-depth mastery. The program of study may focus on aspects of these disciplines including machine learning, statistical modeling, artificial intelligence, data mining, image analysis, human-computer interaction and data visualization. A complete list of courses accepted for this requirement is on the BMI website. The following are required:

- CS 161 Design and Analysis of Algorithms
- STATS 200 Introduction to Statistical Inference
- STATS 315A Modern Applied Statistics: Learning is strongly recommended.
- No more than 9 units in courses numbered 100-199, and the rest should be 200 or above.
- CS 106A Programming Methodology and CS 106B Programming Abstractions cannot be counted for this requirement.
- All courses should be formal classroom-based courses, not research units.
- Up to 6 units of this portion of the core curriculum may be taken on a Satisfactory/No credit basis.

#### • Social and Ethical Issues (4 units)

Students are expected to be familiar with issues regarding responsible conduct of research, reproducibility of research, and

ethical, legal, social, organizational and behavioral aspects of the impact of biomedical informatics technologies on society. Courses that fulfill this requirement can be found by entering "bmi::ethics" in the Explore Courses search box. PhD students and Academic M.S. students should take MED 255 The Responsible Conduct of Research in their first year. These courses may be taken on a Satisfactory/No credit basis.

		Units
BIOE 122	Biosecurity and Bioterrorism Response	4-5
BIOE 131	Ethics in Bioengineering	3
BIOE 450	Advances in Biotechnology	3
BIOMEDIN 254	Quality & Safety in U.S. Healthcare	3
BIOMEDIN 256	Economics of Health and Medical Care	5
BIOMEDIN 432	Analysis of Costs, Risks, and Benefits of Health Care	4
BIOS 224	Big Topics in Stem Cell Ethics	2
BIOS 258	Ethics, Science, and Society	1
CS 181	Computers, Ethics, and Public Policy	4
CS 181W	Computers, Ethics, and Public Policy	4
CSB 272	Research Ethics	1
EMED 122	Biosecurity and Bioterrorism Response	4-5
EMED 222	Biosecurity and Bioterrorism Response	4-5
GENE 210	Genomics and Personalized Medicine	3
HRP 209	Health Law: The FDA	2-3
HRP 210	Health Law and Policy	3
HRP 211	Law and the Biosciences: Neuroscience	3
UHRP 221	Law and the Biosciences: Genetics	3
HRP 254	Quality & Safety in U.S. Healthcare	3
HRP 256	Economics of Health and Medical Care	5
HRP 273	Essentials of Clinical Research at Stanford	1
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
HUMBIO 174	Foundations of Bioethics	3
INDE 212	Medical Humanities and the Arts	2
ME 208	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
MED 242	Physicians and Human Rights	1
MED 255	The Responsible Conduct of Research	1
MED 255C	The Responsible Conduct of Research for Clinical and Community Researchers	1
MS&E 256	Technology Assessment and Regulation of Medical Devices	3
MS&E 278	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
NBIO 101	Social and Ethical Issues in the Neurosciences	2-4
PEDS 251A	Medical Ethics I	2
PEDS 251B	Medical Ethics II	2
PUBLPOL 122	Biosecurity and Bioterrorism Response	4-5
PUBLPOL 222	Biosecurity and Bioterrorism Response	4-5
SURG 255	Quality & Safety in U.S. Healthcare	3

## Program Requirements for the Academic M.S., HCP Professional M.S., and Coterminal M.S. Degrees

Students enrolled in any of the M.S. degrees must complete the program requirements in order to graduate.

- The core curriculum generally entails a minimum of 31 units of course work, but can require more or less depending upon the courses chosen and the previous training of the student.
- M.S. candidates should complete additional course work and program requirements as outlined below. No one is required to take courses in an area in which he or she has already been adequately trained; under such circumstances, students are permitted to skip courses or substitute more advanced work using a formal annual process administered by the BMI executive committee. Students design appropriate programs for their interests with the assistance and approval of their Biomedical Informatics academic adviser.
- At least 21 units of formal letter-graded coursework are expected for all MS and PhD candidates.

Programs of at least 45 Stanford units that meet the following guidelines are normally approved:

1. Completion of the core curriculum with overall GPA of 3.0.
2. Two additional BMI core offerings from among BIOMEDIN 210 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving, BIOMEDIN 214 Representations and Algorithms for Computational Molecular Biology, BIOMEDIN 215 Data Driven Medicine, BIOMEDIN 217 Translational Bioinformatics and BIOMEDIN 260 Computational Methods for Biomedical Image Analysis and Interpretation (6-7 units) that were not taken to satisfy the core curriculum. These courses should be taken for a grade.
3. Unrestricted Electives needed to complete 45 units. Students may fulfill this requirement with any Stanford graduate courses, including courses taken to satisfy program prerequisites.
4. At least 23 units of courses must be at the level 200 or above.
5. A cumulative GPA of 3.0 or greater to remain in good academic standing.
6. Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium. HCP professional masters students who are able to attend classes on campus should participate regularly.
7. Academic M.S. students who are funded by the program are required to be a teaching assistant for one course; those students may register for 1-3 units of BIOMEDIN 290 Biomedical Informatics Teaching Methods .
8. HCP professional masters students who are local are encouraged to participate in on-campus coursework and seminars.
9. Masters students should sign up for BIOMEDIN 801 TGR Master's Project for their project units after completing their 45-unit residency requirement.

## Doctor of Philosophy in Biomedical Informatics

Individuals wishing to prepare themselves for careers as independent researchers in biomedical informatics, with applications experience in bioinformatics, clinical informatics, or imaging informatics, should apply for admission to the doctoral program. The University's basic requirements for the doctorate (residence, dissertation, examination, and so on) are discussed in the "Graduate Degrees (<http://exploreddegrees.stanford.edu/graduatedegrees>)" section of this bulletin.

The Core Curriculum in Biomedical Informatics (31 units) is outlined below. The Ph.D. program requires an additional 21 units of coursework, to complete a total of 52 units.

### Core Curriculum in Biomedical Informatics (31 units)

Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium. Regardless of whether they are enrolled, they should attend all meetings throughout their graduate training, and attend a research colloquium appropriate to their interests. All students are expected to fulfill the following requirements:

#### • Core Biomedical Informatics Courses (9 or more units)

Students are expected to complete the core offerings in biomedical informatics. These courses should be taken for a grade.

- a. BIOMEDIN 212 Introduction to Biomedical Informatics Research Methodology
- b. and two of the courses listed below.

Course	Description	Units
BIOMEDIN 210	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

#### • Computer Science, Statistics, Mathematics & Engineering (18 units)

Ph.D. students are expected to create a program of study with graduate-level courses in computer science, statistics and other technical informatics-related disciplines to achieve in-depth mastery. The program of study may focus on aspects of these disciplines including machine learning, statistical modeling, artificial intelligence, data mining, image analysis, human-computer interaction and data visualization. A complete list of courses accepted for this requirement is on the BMI website. The following are required:

- a. CS 161 Design and Analysis of Algorithms
- b. STATS 200 Introduction to Statistical Inference
- c. STATS 315A Modern Applied Statistics: Learning is strongly recommended.
- d. No more than 9 units in courses numbered 100-199, and the rest should be 200 or above.
- e. CS 106A Programming Methodology and CS 106B Programming Abstractions cannot be counted for this requirement.
- f. All courses should be formal classroom-based courses, not research units.
- g. Up to 6 units of this portion of the core curriculum may be taken on a Satisfactory/No credit basis.

#### • Social and Ethical Issues (4 units)

Students are expected to be familiar with issues regarding responsible conduct of research, reproducibility of research, and ethical, legal, social, organizational and behavioral aspects of the impact of biomedical informatics technologies on society. Courses that fulfill this requirement can be found by entering "bmi::ethics" in the Explore Courses search box. PhD students should take MED 255 The Responsible Conduct of Research in their first year. These courses may be taken on a Satisfactory/No credit basis.

Course	Description	Units

PUBLPOL 222	Biosecurity and Bioterrorism Response	4-5
SURG 255	Quality & Safety in U.S. Healthcare	3

## Program Requirements for the Biomedical Informatics PhD:

1. Completion of the Core Curriculum (31 or more units) described above.
2. Additional technical electives (6 units) drawn from the courses in Computer Science, Mathematics, Statistics, and Engineering as specified for the Core Curriculum above.
3. Domain biology or medicine (6 units). Students should take classes relevant to their application area interests.
4. The above three requirements should be completed by the end of the second year of graduate study.
5. Unrestricted electives (9 units). Students may fulfill this requirement with any Stanford graduate courses, including courses taken to satisfy program prerequisites.
6. A cumulative GPA of 3.0 or greater to remain in good academic standing.
7. In the first year, at least two research rotations are required.
8. Each student is required to be a teaching assistant for two courses as assigned by the Biomedical Informatics Executive Committee; one should be completed in the first two years of study. Students may

register for up to 3 units of BIOMEDIN 290 Biomedical Informatics Teaching Methods to obtain credit for teaching assistantships.

9. Doctoral students are generally advanced to Ph.D. candidacy after passing the qualifying exam, which takes place by the end of the second year of training. A student's academic adviser has primary responsibility for the adequacy of the program, which is regularly reviewed by the Biomedical Informatics Executive Committee. The student must fulfill these requirements and apply for admission to candidacy for the Ph.D. by the beginning of the third year.
10. During the third year of training, each doctoral student is required to give a thesis pre-proposal seminar that describes evolving research plans.
11. The most important requirement for the Ph.D. degree is the dissertation. Each student must secure the agreement of a member of the BMI advising faculty to act as the doctoral dissertation adviser or co-adviser.
12. After application for Terminal Graduate Registration (TGR) status and completion of 135 units, the Ph.D. candidate should register each quarter for BIOMEDIN 802 TGR PhD Dissertation so that their research effort may be counted toward the degree.
13. Before the end of the fourth year, each student must orally present a written thesis proposal for the written dissertation and must orally defend the thesis proposal before a University oral examination committee that includes at least one member of the BMI Advising Faculty. The committee determines whether the student's general knowledge of the field and the details of the planned thesis are sufficient to justify proceeding with the dissertation.
14. At the completion of training, while still matriculated and shortly prior to deposit of the dissertation, the student gives a final talk describing his or her final research results. No official additional oral examination is required upon completion of the written dissertation; the oral defense of the dissertation proposal satisfies the University oral examination requirement.
15. The student is expected to demonstrate an ability to present scholarly material and research in a lecture at a formal seminar.
16. The student is expected to demonstrate an ability to present scholarly material in concise written form. Each student is required to write a paper suitable for publication, usually discussing his or her doctoral research project. This paper must be approved by the student's adviser as suitable for submission to a refereed journal before the doctoral degree is conferred.
17. The dissertation must be accepted by a doctoral dissertation reading committee composed of the principal dissertation adviser and two other readers. A fourth reader may be added at the discretion of the student and the principal adviser.

## Ph.D. Minor in Biomedical Informatics

For a Ph.D. minor in Biomedical Informatics (BMI), a candidate must complete a minimum of 20 unduplicated units of biomedical informatics course work, including 12 units in BMI core courses from:

		Units
BIOMEDIN 210	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

The candidate must complete the one-unit MED 255 The Responsible Conduct of Research or an approved substitute.

The remaining units must be courses that would count towards the BMI master's degree, taken from these areas:

- Computer Science, Probability, Statistics, Machine Learning, Mathematics, Engineering
- Biomedicine
- Other BMI courses from the list above

Students are expected to participate regularly in BIOMEDIN 201 (p. 794) Biomedical Informatics Student Seminar.

Courses used for the BMI Ph.D. minor may not be double-counted to meet the requirements of a master's or Ph.D. degree.

All courses used for the BMI Ph.D. minor, except MED 255, must be taken for a letter grade and passed with an overall GPA of 3.0 or better.

This degree offering became effective in Autumn Quarter 2010-11. Courses taken at Stanford prior to that date may be counted towards the BMI Ph.D. minor degree.

## Application Process

Stanford Ph.D. students apply using the Application for Ph.D. Minor (<https://stanford.app.box.com/v/app-phd-minor>) form and must provide an unofficial Stanford transcript as well as a statement of purpose for adding the Ph.D. minor degree. Submit the form and accompanying materials to the Biomedical Informatics program.

## Advising

A minor program adviser is assigned from the Biomedical Informatics Executive Committee or advising faculty upon admission to the program.

*Committee:* Russ B. Altman (Chair and Program Director), Mark A. Musen (Co-Director), Steven C. Bagley (Executive Director), Manisha Desai, Teri Klein, Daniel L. Rubin, Nigam Shah, Dennis P. Wall

### *Participating Faculty and Staff by Department\**

*Biochemistry:* Douglas Brutlag (Professor Emeritus), Rhiju Das (Associate Professor), Ronald Davis (Professor), James Ferrell (Professor), Julia Salzman (Assistant Professor), Julie Theriot (Professor)

*Bioengineering:* Russ B. Altman (Professor), Kwabena Boahen (Professor), Markus Covert (Associate Professor), Scott Delp (Professor), Ingmar Riedel-Kruse (Assistant Professor)

*Biology:* Hunter Fraser (Associate Professor), Dmitri Petrov (Professor), Jonathan Pritchard (Professor)

*Biomedical Data Science:* Russ B. Altman (Professor), Euan Ashley (Associate Professor), Serafim Batzoglou (Professor), Carlos Bustamante (Professor), Manisha Desai (Professor), Bradley Efron (Professor), Andrew Gentles (Assistant Professor), Olivier Gevaert (Assistant Professor), Trevor Hastie (Professor), Tina Hernandez-Boussard (Associate Professor), Iain Johnstone (Professor), Purvesh Khatri (Assistant Professor), Teri Klein (Professor), Philip Lavori (Professor), Ying Lu (Professor), Mark A. Musen (Professor), Richard Olshen (Professor Emeritus), Sylvia Plevritis (Professor), Daniel L. Rubin (Associate Professor), Chiara Sabatti (Professor), Julia Salzman (Assistant Professor), Nigam Shah (Associate Professor), Lu Tian (Associate Professor), Robert Tibshirani (Professor), Dennis P. Wall (Associate Professor), Wing H Wong (Professor), James Zou (Assistant Professor)

Richard Olshen (Professor), Chiara Sabatti (Associate Professor), Robert Tibshirani (Professor), Dennis P. Wall (Associate Professor)

*Chemical and Systems Biology:* Joshua Elias (Assistant Professor), James Ferrell (Professor)

*Chemistry:* Vijay Pande (Professor)

*Computer Science:* Serafim Batzoglou (Professor), Gill Bejerano (Associate Professor), David Dill (Professor), Ronald Dror (Associate Professor), Leonidas Guibas (Professor), Anshul Kundaje (Assistant Professor), Terry Winograd (Professor Emeritus)

*Dermatology:* Paul Khavari (Professor)

*Developmental Biology:* Gill Bejerano (Associate Professor)

*Electrical Engineering:* Kwabena Boahen (Professor)

*Energy Resources Engineering:* Margot Gerritsen (Associate Professor)

*Genetics:* Russ B. Altman (Professor), Euan Ashley (Associate Professor), Steven C. Bagley (Senior Research Engineer), Michael Bassik (Assistant Professor), Ami Bhatt (Assistant Professor), Carlos Bustamante (Professor), J. Michael Cherry (Professor, Research), Stanley N. Cohen (Professor), Christina Curtis (Assistant Professor), Ronald Davis (Professor), William Greenleaf (Assistant Professor), Karla Kirkegaard (Professor), Teri E. Klein (Senior Research Scientist), Anshul Kundaje (Assistant Professor), Jin Billy Li (Assistant Professor), Stephen B. Montgomery (Assistant Professor), Jonathan Pritchard (Professor), Gavin Sherlock (Professor), Arend Sidow (Professor), Michael P. Snyder (Professor), Hua Tang (Professor)

*Health Research and Policy:* Trevor Hastie (Professor), Mark Hlatky (Professor)

*Management Science and Engineering:* Margaret Brandeau (Professor), Ross D. Shachter (Associate Professor)

*Medicine:* Russ B. Altman (Professor), Euan Ashley (Associate Professor), Ami Bhatt (Assistant Professor), Jayanta Bhattacharya (Professor), Catherine Blish (Assistant Professor), Carol Cain (Adjunct Assistant Professor), Stanley Cohen (Professor), Christina Curtis (Assistant Professor), Manisha Desai (Professor), Michel Dumontier (Associate Professor), Andrew Gentles (Assistant Professor), Olivier Gevaert (Assistant Professor), Mary Goldstein (Professor), Summer Han (Assistant Professor), Tina Hernandez-Boussard (Associate Professor), Michael Higgins (Adjunct Associate Professor), Mark Hlatky (Professor), Hanlee P. Ji (Associate Professor), Purvesh Khatri (Assistant Professor), Teri Klein (Professor), Lianne Kurina (Associate Professor, Teaching), Curtis Langlotz (Professor), Henry Lowe (Associate Professor), Mark A. Musen (Professor), Douglas K. Owens (Professor), Natalie Pageler (Clinical Associate Professor), David Relman (Professor), Daniel L. Rubin (Associate Professor), Robert W. Shafer (Professor, Research), Nigam Shah (Associate Professor), Samson Tu (Senior Research Engineer), P.J. Utz (Professor)

*Mechanical Engineering:* Scott Delp (Professor)

*Microbiology and Immunology:* Karla Kirkegaard (Professor), Garry Nolan (Professor), David Relman (Professor), Julie Theriot (Professor)

*Neurosurgery:* Summer Han (Assistant Professor)

*Operations, Information and Technology:* Mohsen Bayati (Associate Professor)

*Pathology:* Stephen B. Montgomery (Assistant Professor), Arend Sidow (Professor)

*Pediatrics:* Gill Bejerano (Associate Professor), Natalie Pageler (Clinical Associate Professor), Jonathan Palma (Clinical Assistant Professor), Dennis P. Wall (Associate Professor)

*Psychiatry and Behavioral Sciences:* Vinod Menon (Professor, Research)

*Psychology:* Russell Poldrack (Professor)

*Radiation Oncology:* Lei Xing (Professor)

*Radiology:* Sam (Sanjiv) Gambhir (Professor), Curtis Langlotz (Professor), Parag Mallick (Assistant Professor, Research), Sandy A. Napel (Professor), David Paik (Adjunct Assistant Professor), Sylvia Plevritis (Professor), Daniel L. Rubin (Associate Professor)

*Statistics:* Bradley Efron (Professor), Trevor J. Hastie (Professor), Susan Holmes (Professor), Iain Johnstone (Professor), Art Owen (Professor), Chiara Sabatti (Professor), Robert Tibshirani (Professor), Wing H Wong (Professor)

*Structural Biology:* Michael Levitt (Professor)

*Surgery:* Tina Hernandez-Boussard (Associate Professor), Thomas Krumel (Professor)

\* Research opportunities are not limited to faculty and departments listed.

# CANCER BIOLOGY

Courses offered by the Cancer Biology Program are listed under the subject code CBIO on the Stanford Bulletin's ExploreCourses web site.

The Cancer Biology Program at Stanford University is an interdisciplinary program leading to the Ph.D. degree. During the past three decades, understanding of cancer has increased with the discovery of oncogenes, tumor suppressor genes, pathways of DNA damage and repair, chromatin remodeling, cell cycle regulation, angiogenesis, and responses to hypoxia, and recent glimpses into the molecular basis of metastasis and cancer stem cell biology. In addition, methods of parallel analysis, including genomics and proteomics approaches, have begun to refine and redefine the taxonomy of cancer diagnosis. This explosion of basic and clinical science has resulted in the first successful cancer chemotherapies and immunotherapies based on the knowledge of specific molecular targets. Stanford presents a unique environment to pursue interdisciplinary cancer research because the schools of Medicine, Humanities and Sciences, and Engineering are located on a single campus.

The goal of the Cancer Biology Ph.D. program is to provide students with education and training that enables them to make significant contributions to this field. Course work during the first year is designed to provide a broad understanding of the molecular, genetic, cell biological, and pathobiological aspects of cancer. Students also learn about the current state of the epidemiology, clinical diagnosis, treatment, and prevention of human cancers. Equally important during the first year is a series of three rotations in research laboratories chosen by each student. By the end of first year, each student chooses a research adviser and begins work on the dissertation project. A qualifying examination must be completed by the end of the second year. An annual Cancer Biology conference provides students with an opportunity to present their research to one another and to faculty. The expected time to degree is four to five years.

Students are not limited to a single department in choosing their research adviser. The Cancer Biology Ph.D. program currently has approximately 65 graduate students located in basic science and clinical departments throughout the School of Medicine and the School of Humanities and Sciences.

## Doctor of Philosophy in Cancer Biology

University requirements for the Ph.D. are described under the "Graduate Degrees (p. 50)" section of this bulletin.

A small number of applicants are admitted to the program each year. Applicants should have completed an undergraduate major in the biological sciences; applicants with undergraduate majors in physics, chemistry, or mathematics may be admitted if they complete background training in biology during the first two years of study. During the first year, each student is required to complete a minimum of three, one quarter laboratory rotations. Students must choose a dissertation adviser prior to the end of Summer Quarter, first year, but not before the end of Spring Quarter.

The requirements for the Ph.D. degree are as follows:

1. Training in biology equivalent to that of an undergraduate biology major at Stanford.
2. Completion of the following courses:

### REQUIRED

BIOS 200	Foundations in Experimental Biology (for students entering in 2012 or later. Students who entered in 2011 or earlier took GENE 203, Advanced Genetics.)	5
CBIO 240	Molecular and Genetic Basis of Cancer	4
CBIO 242	Cellular and Clinical Aspects of Cancer	4
CBIO 280	Cancer Biology Journal Club (required for first- and second-year graduate students in Autumn, Winter, and Spring quarters, totaling 6 units)	1
CBIO 245	Lecture Seminar Series in Cancer Biology Program (required for first- and second-year graduate student in Autumn, Winter, and Spring quarters, totaling to 6 units)	1
MED 255	The Responsible Conduct of Research	1

### ELECTIVES (TOTAL OF 10 UNITS)

#### Computational/Systems Cancer Biology Track

##### Core Knowledge

STATS 60	Introduction to Statistical Methods: Precalculus	5
GENE 218	Computational Analysis of Biological Information: Introduction to Python for Biologists	2
BIOS 205	Introduction to R for Data Analysis	1
NENS 230	Analysis Techniques for the Biosciences Using MATLAB	2
CS 106A	Programming Methodology	3-5
GENE 211	Genomics	3
CBIO 243	Principles of Cancer Systems Biology	3
BIOS 201	Next Generation Sequencing and Applications	2

##### Additional Courses

CS 106B	Programming Abstractions	3-5
STATS 116	Theory of Probability	3-5
STATS 202	Data Mining and Analysis	3
STATS 216	Introduction to Statistical Learning	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
CS 161	Design and Analysis of Algorithms	3-5
GENE 245	Statistical and Machine Learning Methods for Genomics	3

##### Other Cancer Biology Related Graduate-Level

BIO 214	Advanced Cell Biology	4
S BIO 241	Biological Macromolecules	3-5
CSB 210	Cell Signaling	4
IMMUNOL 201	Advanced Immunology I	3
DBIO 201	Cells and Signaling in Regenerative Medicine.	2
MI 215	Principles of Biological Technologies	3
CBIO 275	Tumor Immunology	2

3. Other elective course is determined in consultation with the student's adviser and/or the Program Director.
4. Presentation of research results at the annual Cancer Biology Conference and Pizza Talks.
5. Completion of a qualifying examination in Cancer Biology is required for admission to Ph.D. candidacy. The exam consists of an F31

**Units** NRSA-style written grant proposal not to exceed seven pages (excluding references) and an oral examination. The examining committee consists of three faculty members from the Cancer Biology Program and does not include the student's dissertation adviser. The composition of this committee is chosen by the student and dissertation adviser and must be submitted to and approved

by the program director prior to the end of Autumn Quarter, second year. The qualifying examination must be taken prior to the end of Spring Quarter, second year. If necessary, one retake is permitted prior to the end of Summer Quarter, second year. After the qualifying examination has been completed, the student is required to form a dissertation reading committee that includes the student's adviser and three other members of the Academic Council with appropriate expertise. Each student is required to arrange annual meetings (more frequently, if necessary) of the dissertation reading committee, at which time progress during the past year and a plan of study for the coming year are presented orally and discussed. Completion of each annual committee meeting must be communicated in writing to the program director by the adviser by the end of Spring Quarter each year.

The major accomplishment of each successful Ph.D. student is the presentation of a written dissertation resulting from independent investigation that contributes to knowledge in the area of cancer biology. An oral examination is also required for the Ph.D. degree. In the Cancer Biology Program, a public seminar (one hour) is presented by the Ph.D. candidate, followed by a closed-door oral examination. The oral examination committee consists of at least four examiners (the members of the doctoral dissertation reading committee) and a chair. The oral examination chair must be from outside the Cancer Biology Program faculty and may not have a full or joint appointment in the adviser's or student's home department. However, a courtesy appointment does not affect eligibility. The oral examination chair may be from the same department as any other member(s) of the examination committee. All members of the oral examination committee are normally members of the Academic Council, as the oral examination chair must be. With the prior approval of the program director or school dean, one of the examiners may be a person who is not a member of the Academic Council if that individual contributes expertise not otherwise available. Official responsibility for selecting the oral examination chair rests with the program. Cancer Biology delegates this to the student and dissertation adviser.

*Program Co-Directors:* Laura Attardi (Radiation Oncology and Genetics) and Julien Sage (Pediatrics and Genetics)

*Executive Committee on Cancer Biology:* Laura Attardi (Radiation Oncology and Genetics), Edward Graves (Radiation Oncology), Peter Jackson (Microbiology and Immunology; Pathology), Julien Sage (Pediatrics and Genetics), Monte Winslow (Genetics)

*Admissions Committee on Cancer Biology:* Steven Artandi (Medicine, Hematology), Laura Attardi (Radiation Oncology and Genetics), Howard Chang (Dermatology), Katrin Chua (Medicine, Endocrinology), Michael Cleary (Pathology), Max Diehn (Radiation Oncology), Michelle Monje (Neurology), Sylvia Plevritis (Radiology), Erinn Rankin (Radiation Oncology and Obstetrics and Gynecology), Julien Sage (Pediatrics and Genetics)

## Participating Departments and Faculty

*Biochemistry:* Philip Beachy (Professor), Mark Krasnow (Professor), Julia Salzman (Assistant Professor)

*Bioengineering:* Jennifer Cochran (Associate Professor)

*Biology (School of Humanities and Sciences):* Scott J. Dixon (Assistant Professor), Judith Frydman (Professor), Or Gozani (Professor), Ashby Morrison (Assistant Professor), Jan M. Skotheim (Associate Professor), Tim Stearns (Professor)

*Biomedical Data Science:* Aaron Newman (Assistant Professor)

*Chemical And Systems Biology:* James K. Chen (Professor), Karlene Cimprich (Professor), Mary Teruel (Assistant Professor)

*Dermatology:* Howard Y. Chang (Professor), Paul A. Khavari (Professor), Carolyn Lee (Assistant Professor), Anthony Oro (Professor), Kevin Wang (Assistant Professor)

*Developmental Biology:* Margaret Fuller (Professor), Roeland Nusse (Professor)

*Genetics:* Michael Bassik (Assistant Professor), Anne Brunet (Professor), Christina Curtis (Assistant Professor), Monte Winslow (Assistant Professor)

*Medicine/Endocrinology/Gerontology/Metabolism:* Katrin Chua (Associate Professor)

*Medicine/Gastroenterology and Hepatology:* Anson Lowe (Associate Professor)

*Medicine/Hematology:* Steven Artandi (Professor), Calvin Kuo (Professor), Ravindra Majeti (Associate Professor)

*Medicine/Oncology:* Ash Alizadeh (Assistant Professor), Gilbert Chu (Professor), Michael Clarke (Professor), Dean Felsher (Professor), Hanlee Ji (Associate Professor), Ronald Levy (Professor), Beverly S. Mitchell (Professor; Director, Stanford Cancer Institute)

*Microbiology and Immunology:* Helen M. Blau (Professor), Peter Jackson (Professor), Garry Nolan (Professor)

*Neurology and Neurosurgery:* Michelle Monje (Assistant Professor)

*Neurosurgery:* Albert J. Wong (Professor)

*Orthopaedic Surgery:* Nidhi Bhutani (Assistant Professor)

*Otolaryngology:* John Sunwoo (Associate Professor)

*Pathology:* Jeff Axelrod (Professor), Sean Bendall (Assistant Professor), Matthew Bogoy (Professor), Michael Cleary (Professor), Gerald Crabtree (Professor), Edgar Engleman (Professor), Andrew Fire (Professor), Joseph Lipsick (Professor), Bingwei Lu (Professor), Jonathan Pollack (Professor), Irving Weissman (Professor; Virginia & D.K. Ludwig Professor for Clinical Investigation in Cancer Research, Professor of Developmental Biology)

*Pediatrics/Cancer Biology:* Julien Sage (Professor; Co-Director of Stanford Cancer Biology Program)

*Pediatrics/Human Gene Therapy:* Mark Kay (Professor)

*Pediatrics/Hematology/Oncology:* Matthew Porteus (Associate Professor), Kathleen Sakamoto (Professor)

*Radiation Oncology/Radiation Biology:* Laura Attardi (Professor; Co-Director of Stanford Cancer Biology Program), Amato Giaccia (Professor), Sharon Pitteri (Assistant Professor)

*Radiation Oncology/Radiation Physics:* Edward Graves (Associate Professor)

*Radiation Oncology/Radiation Therapy:* Max Diehn (Assistant Professor), Susan Knox (Associate Professor), Quynh-Thu Le (Professor)

*Radiology/Diagnostic Radiology:* Parag Mallick (Assistant Professor, Research), Sylvia Plevritis (Professor)

# CHEMICAL AND SYSTEMS BIOLOGY

Courses offered by the Department of Chemical and Systems Biology are listed under the subject code CSB on the (<https://explorecourses.stanford.edu/search?q=CSB&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-CSB=on&filter-catalognumber-CSB=on>) Stanford Bulletin's ExploreCourses web site.

The department emphasizes individualized training at the interface of physical science and biomedical science. The program encourages students to draw upon a variety of modern scientific techniques, ranging from recent advances in molecular biology and protein biochemistry to synthetic organic chemistry and single cell imaging. Graduate students in the department take courses in signal transduction networks, chemical biology, and other areas of importance to their research goals.

## Master of Science in Chemical and Systems Biology

Students in the Ph.D. program may apply for an M.S. degree after having satisfactorily completed the course and laboratory requirements of the first two years. The degree also requires a written thesis based on literature or laboratory research. Postdoctoral research training is available to graduates having the Ph.D. or M.D. degree.

## Doctor of Philosophy in Chemical and Systems Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (<http://exploreddegrees.stanford.edu/schoolofmedicine/chemicalandsystemsbiology/%20/graduatedegrees>)" section of this bulletin.

The Department of Chemical and Systems Biology offers interdisciplinary training to prepare students for independent careers in biomedical science. The main focus of the program is cell signaling, chemical biology, and systems biology.

The program leading to the Ph.D. degree includes formal and informal study in chemical biology, systems biology, drug discovery, biochemistry, and other areas of relevance to the interests of particular students. First-year students spend one quarter in each of three different laboratories, working closely with other graduate students, a professor, and postdoctoral fellows on various research projects. During the fourth quarter, the student chooses a faculty mentor with whom to undertake thesis research, based on available positions and the student's interest. During or before the eighth quarter of study, students must pass a qualifying exam which consists of an oral exam on general knowledge and a defense of a research proposal. Course requirements are fulfilled during the first two years of study; the later years of the four- to six-year program are devoted to full-time dissertation research. Close tutorial contact between students and faculty is stressed throughout the program.

Research opportunities also exist for medical students and undergraduates. The limited size of the labs in the department allows for close tutorial contact between students, postdoctoral fellows, and faculty.

The department participates in the four quarter Health and Human Disease and Practice of Medicine sequence which provides medical

students with a comprehensive, systems-based education in physiology, pathology, microbiology, and pharmacology.

*Emeriti: (Professors)* Robert H. Dreisbach, Avram Goldstein, Dora B. Goldstein, Stuart Kim, Tag E. Mansour, Oleg Jardetzky, Richard A. Roth, James P. Whitlock

*Chair:* James K. Chen

*Professors:* James K. Chen, Karlene A. Cimprich, James E. Ferrell, Jr., Tobias Meyer, Daria Mochly-Rosen, Thomas J. Wandless, Joanna K. Wysocka

*Associate Professor (Teaching):* Kevin Grimes

*Assistant Professors:* Joshua Elias, Daniel F. Jarosz, Lei Stanley Qi, Mary Teruel

*Courtesy Professors:* Carolyn Bertozzi, Matthew Bogoy, Brian Kobilka, Beverly S. Mitchell, Paul A. Wender

*Courtesy Associate Professors:* Markus W. Covert, Justin Du Bois, Michael Z. Lin, Jan M. Skotheim, Aaron F. Straight, Marius Wernig

# COMMUNITY HEALTH & PREVENTION RESEARCH

Courses offered by the Stanford Prevention Research Center within the Department of Medicine are listed under the subject code CHPR (<https://explorecourses.stanford.edu/search?q=CHPR&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-catalognumber-CHPR=on&filter-departmentcode-CHPR=on&filter-coursestatus-Active=on&filter-catalognumber-CHPR=on>) on the Stanford Bulletin's ExploreCourses website.

The Master of Science (M.S.) in Community Health and Prevention Research (CHPR) covers the study and treatment of leading risk behaviors (e.g., poor diet, physical inactivity, tobacco use, stress, distress) to prevent the prevailing causes of morbidity and mortality (e.g., cardiovascular disease, cancer, diabetes, lung disease, mental illness) with a focus on engaging and advancing health in diverse communities.

Community health and prevention research are complementary fields increasingly integrated to promote health and prevent chronic diseases in individuals, families, local communities, states, and countries, globally. Community health refers to the scientific discipline of safeguarding and enhancing the wellbeing of diverse communities and populations through education, the promotion of healthy lifestyle habits, and the extensive study of disease and disease determinants. Prevention research is a multidisciplinary scientific field that aims to enhance the health of populations through the study of genetic, behavioral, lifestyle, environmental, and policy factors that lead to disease or vitality.

The M.S. in CHPR is designed for students pursuing health-related careers focusing on chronic disease prevention, health and wellness promotion, and the pursuit of health equity. We anticipate the M.S. in CHPR will be attractive to Stanford's current (coterminal) undergraduates and graduate students, students in the health professions (e.g., medical students), health care providers seeking a second degree, and individuals who will later seek advanced degrees in medicine, nursing, or health/science-related doctoral programs.

The M.S. in CHPR is available to:

1. Current Stanford undergraduates (who must complete the M.S. as a coterminal master's program)
2. Current Stanford graduate students (i.e., master's, doctoral, and medical students)
3. External applicants.

All students in the program must complete the M.S.'s core curriculum and program requirements.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

## Master of Science in Community Health and Prevention Research

The Stanford Prevention Research Center within the Department of Medicine offers a Master of Science (M.S.) in Community Health and Prevention Research (CHPR). The M.S. in CHPR is available to external applicants, to current undergraduates via the coterminal master's program, and to graduate students at Stanford.

The purpose of the M.S. in CHPR is to:

- engage students from a range of backgrounds in didactic and experiential learning opportunities with the goal of gaining an in-depth understanding of community health and prevention research applications in diverse practice settings
- prepare future public health professionals to responsibly and effectively address health challenges faced by diverse communities across the life course.

In the M.S. in CHPR, students:

- study patterns of chronic diseases in diverse communities and settings and examine how prevention can optimize health and promote health equity at the individual, family, community, and population level
- critically interpret and evaluate research on community health and prevention
- become involved in research teams that encourage health equity promotion and social responsibility
- gain and hone methodological skills including research study design, study implementation, and data analysis related to community health and prevention research
- utilize course work and implementation science in a community-based research internship with the expectation that they design, implement, and assess health and wellness solutions addressing preventable community health challenges
- complete a master's thesis.

## Admission for External Applicants

The application deadline for Autumn 2018-19 entry into the M.S. program is January 16, 2018 at 11:59 p.m. Pacific Standard Time (PST).

### • Knight-Hennessy Scholars

- The Knight-Hennessy Scholars program (<https://knight-hennessy.stanford.edu>) awards up to 100 high-achieving students every year with full funding to pursue a graduate education at Stanford, including the M.S. in CHPR. To be considered, you must apply to Knight-Hennessy Scholars by September 27, 2017, and separately apply to the CHPR program by November 6, 2017 at 11:59 p.m. Pacific Standard Time (PST).

All applicants (not including coterminal applicants) must submit the following required application materials as part of their application. Instructions on how to submit these application materials can be found on Stanford's Graduate Admissions web site (<https://gradadmissions.stanford.edu/applying>).

- 3 letters of recommendation
  - At least one letter of recommendation should be from a faculty member at the last school you attended as a full-time student (unless you have been out of school for more than five years).
- GRE scores (valid MCAT or DAT scores may be submitted in lieu of GRE scores)
- TOEFL scores (if necessary)
- Resume or curriculum vitae (CV)
- Statement of purpose
  - The statement of purpose should describe succinctly your reasons for applying to the proposed program at Stanford, your preparation for this field of study, research interests, future career plans, and other aspects of your background and interests which may aid the admissions committee in evaluating your aptitude and motivation for graduate study.
- Official transcript(s) from all postsecondary institutions you have attended as a full-time student for one year (i.e., three quarters or two semesters) or longer.

- You must upload one scanned version of your official transcript(s) in the online application and mail one official copy to the Stanford Prevention Research Center within the Department of Medicine.
- \$125 application fee
  - This application fee is assessed regardless of admission decision.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

### Coterminal Admission

The application deadline for Autumn 2018-19 entry into the M.S. program is January 16, 2018 at 11:59 p.m. Pacific Standard Time (PST).

Stanford undergraduates may apply to the M.S. program once the following conditions have been met:

- Applicants must have earned 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. This includes allowable Advanced Placement (AP) and transfer credit.
- Applicants must have a major(s) declared.
- Applicants must have completed six non-Summer quarters at Stanford (or two non-Summer quarters at Stanford for transfer students).

As part of their program application, applicants must submit the following required application materials. Instructions on how to submit these application materials can be found on the Current Stanford Students (<https://gradadmissions.stanford.edu/applying/current-stanford-students>) page of the Graduate Admissions web site.

- Application for admission to coterminal master's program
- Statement of purpose
  - The statement of purpose should describe succinctly your reasons for applying to the proposed program at Stanford, your preparation for this field of study, research interests, future career plans, and other aspects of your background and interests which may aid the admissions committee in evaluating your aptitude and motivation for graduate study.
- Resume or curriculum vitae (CV)
- Preliminary program proposal

- Two letters of recommendation from Stanford professors
- 1 copy of your Stanford transcript (unofficial transcripts are acceptable)
- \$125 application fee (this fee is assessed by the Registrar's Office to those accepted and matriculated into the program).

### Admission for Current Stanford Graduate Students

- Current Stanford graduate students include master's, doctoral, and medical students who are currently enrolled in a graduate degree program at Stanford. Current Stanford postdoctoral scholars must apply as external applicants.
- The application deadline for Autumn 2018-19 entry into the M.S. program is January 16, 2018 at 11:59 p.m. Pacific Standard Time (PST).
- On a case-by-case basis, current Stanford graduate students may be allowed to apply to the program after the application deadline.

*Required Application Materials:* Instructions on how to submit these application materials can be found on the CHPR program web site (<http://CHPR.stanford.edu>). (<http://prevention.stanford.edu/education/chpr.html>)

- Completed Current Graduate Student Online Application Form ([https://stanfordmedicine.qualtrics.com/SE/?SID=SV\\_ellAYRZnPUqkPGJ](https://stanfordmedicine.qualtrics.com/SE/?SID=SV_ellAYRZnPUqkPGJ))
- Resume/CV
- Transcript (unofficial transcripts are acceptable)
- Valid GRE, MCAT, or GMAT scores (i.e., the test scores students submitted to their original graduate program at Stanford)
- Statement of Purpose
  - The Statement of Purpose should describe succinctly the reasons for applying to the proposed program at Stanford, preparation for this field of study, research interests, future career plans, and other aspects of the applicant's background and interests which may aid the admissions committee in evaluating aptitude and motivation for graduate study.
- 2 letters of recommendation from Stanford professors
- \$125 application fee

### Core Curriculum and Program Requirements (45 units)

To complete the M.S. in CHPR, students must complete a minimum of 45 units, conduct a two-quarter community-based research internship, and write a master's thesis. All students in the M.S. in CHPR must also fulfill the course requirements below. Students are advised to check the prerequisites for all CHPR courses, especially the Biostatistics and Research Methods courses.

Units

#### CHPR Foundation Core

Take 5-6 courses, 13-14 total units

Students are only required to take CHPR 201 if they have not taken CHPR 226/HUMBIO 126 or equivalent.

CHPR 201	Introduction to Science of Healthy Living (Autumn)	1
CHPR 225	The Role of Causal Inference, Study Design, & Outcomes in Community Research (Autumn)	3
CHPR 228	Theoretical Foundations and Design of Behavioral Intervention Trials (Autumn)	3
CHPR 240	Prevention Research: the Science of Healthy Living (Autumn)	3
CHPR 255	The Responsible Conduct of Research for Clinical and Community Researchers (Autumn, Winter, Spring)	1
CHPR 260	Prevention Across Medical Disciplines: Evidence-based Guidelines (Winter)	3

**Biostatistics and Research Methods**

Take 3 of the 6 courses or other approved Biostatistics and Research Methods courses, minimum 9 total units

CHPR 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis (Winter)	3
CHPR 247	Methods in Community Assessment, Evaluation, and Research (Spring)	3
CHPR 290	Advanced Statistical Methods for Observational Studies (CHPR students must take course for 3 units) (Spring)	2-3
HRP 234	Engineering Better Health Systems: modeling for public health (formerly CHPR 254)	4
HRP 258	Introduction to Probability and Statistics for Clinical Research (Spring)	3
HRP 259	Introduction to Probability and Statistics for Epidemiology (Autumn)	3-4

**Community-Based Research Internship**

Take course for 2 consecutive non-summer quarters, 6 total units

CHPR 299	Community-based Research Internship (Autumn, Winter, Spring)	1-6
----------	--	-----

**Master's Thesis**

Take course for 1 or more quarters, minimum 3 total units

CHPR 399	Community Health and Prevention Research Master's Thesis Writing (Autumn, Winter, Spring, Summer)	1-3
----------	---	-----

**Community-Based Research Internship**

Students must complete a consecutive two-quarter long community-based research internship under the supervision of an SPRC mentor. Students will receive 6 total units for their internships, which are all unpaid positions. The primary learning goal of these internships is for students to apply their coursework and implementation science in a community or lab setting by engaging community members and faculty to create innovative, research-based, chronic disease prevention solutions addressing community health challenges.

- CHPR students (not including coterminal students) must enroll in CHPR 299 Community-Based Research Internship during the Winter and Spring quarters.
- Coterminal students must fulfill the following requirements in order to enroll in CHPR 299 Community-Based Research Internship:
  - Complete or be enrolled in one of the following courses:
    - CHPR 225 The Role of Causal Inference, Study Design, & Outcomes in Community Research
    - CHPR 228 Theoretical Foundations and Design of Behavioral Intervention Trials
  - Complete or be enrolled in at least 1 approved Biostatistics and Research Methods course.
- For the 2018-19 academic year, the earliest that incoming students may begin their community-based research internships is in the Winter Quarter.
- For incoming coterminal students who plan to begin their community-based research internships in the Winter Quarter 2018, it is highly recommended that they follow the below sequence:
  - Autumn Quarter:
    - Take both of the following courses:
      - CHPR 225 The Role of Causal Inference, Study Design, & Outcomes in Community Research
      - CHPR 228 Theoretical Foundations and Design of Behavioral Intervention Trials
    - Take the following Biostatistics and Research Methods course:

- HRP 234 Engineering Better Health Systems: modeling for public health

## b. Winter Quarter:

- If a Biostatistics and Research Methods course was not taken in the Autumn quarter, students must take the following Winter Quarter course:
  - CHPR 206 Meta-research: Appraising Research Findings, Bias, and Meta-analysis.

**Master's Thesis**

Students are required to complete and present a master's thesis. The master's thesis allows students to demonstrate knowledge, application, and thoughtful scholarly communication of theoretical principles central to community health interventions, study design, research and analytic methods, as well as depth in a substantive area of community health and prevention research. The thesis is intended to be 30 pages in length (i.e., article-length), double-spaced, including supporting tables, figures, and references. The thesis can take one of the following forms:

- Analysis of original data collected via a student's internship
- Comprehensive literature review with meta-analysis of data or critical reanalysis of data
- Evaluation of a methodological problem using data
- Comprehensive literature review with a grant proposal (NIH-style format) for a new study to bridge a gap in existing knowledge
- Organizational health improvement and evaluation plan written for a student's internship organization
- CHPR mentor approved, independently designed thesis.

The program encourages students to use extant data sets for their projects. Students are not limited to quantitative data sets; many SPRC faculty possess qualitative data sets that may be analyzed for an M.S. thesis project. Students also have the option of collecting original data, for example, through the use of surveys. Students are encouraged to develop their thesis into a manuscript for publication or a credible research grant application, and mentorship is provided to do so.

*Director of the Stanford Prevention Research Center:* John Ioannidis

**Core Faculty and Academic Staff**

*Professors:* John Ioannidis, Randall Stafford, Marcia Stefanick

*Associate Professor:* Judith J. Prochaska (Program Faculty Director)

*Assistant Professors:* Mike Baiocchi, Sanjay Basu

*Senior Research Scientists:* Wes Alles, Michaela Kiernan

*Instructor:* Lisa Goldman Rosas

# COMPARATIVE MEDICINE

Courses offered by the Department of Comparative Medicine are listed under the subject code COMPMED on the Stanford Bulletin's ExploreCourses web site.

The Department of Comparative Medicine at Stanford is an academic, basic science department, the department is comprised of thirteen faculty, ten of whom are veterinarians. All of our faculty members are immersed in laboratory animal science and translational research.

They teach at the undergraduate, graduate, professional and post-graduate levels. Our clinical and basic science faculty welcome, review and accept student candidates for participation in research projects. The Department of Comparative Medicine was established at Stanford in 1990.

The Department's faculty are also engaged in collaborative and comparative research, with animal model expertise and programs in veterinary pathology, pain and anesthesia, rodent reproductive biology, infectious disease, cancer, bioengineering, animal welfare and neuroscience. In addition, the veterinary faculty in the Department of Comparative Medicine have oversight responsibility for the campus-wide animal research program and provide clinical service in the Veterinary Service Center. Our mission is to advance human and animal health through outstanding research, veterinary care and training.

## Master of Science in Laboratory Animal Science

This degree is designed for individuals who wish to undertake in-depth study of biomedical research focusing on animal modeling and bi-methodology, laboratory animal science, organizational management and facility design, regulation and compliance, and animal welfare.

The first year involves acquiring concepts and tools through course work and research project involvement. All first- and second-year students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. This degree requires a master's thesis project to be approved by two faculty members.

### Admissions Requirements

Applicants must have a bachelor's degree from an accredited U.S. college or university or an equivalent international institution. Applicants should have completed courses in at least two of the following areas:

- Genetics
- Molecular Biology
- Chemistry
- Physiology

Official transcripts from all postsecondary institutions where courses were attempted or completed are also required. Applicants must submit GRE scores obtained within the last five years and three letters of reference must be provided with at least one from a science professor.

### Degree Requirements:

1. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
2. At least 3 quarters of graduate research.
3. COMPMED 200 One Health Journal Club.

4. Students must complete a master's thesis, which may take the following form:
  - a. Original analysis of original data
  - b. A comprehensive literature review with a meta-analysis of data or a critical reanalysis of data.
  - c. Evaluation of a methodological problem using real data
  - d. A comprehensive literature review with a grant proposal (NIH style format) for a new study to bridge a gap in the existing knowledge.

## Master of Science in Laboratory Animal Science (Coterminal)

The coterminal degree program allows Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. See the "Coterminal Degrees (p. 46)" section of this bulletin for additional information.

The coterminal Master of Science program follows the same program requirements as the Master of Science. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Their added year focuses on biostatistics, the research laboratory experience, and animal modeling. The specific curriculum is tailored to the students' needs. This degree requires a written research paper to be approved by two faculty members.

Programs of at least 45 Stanford units that meet the following guidelines are normally approved:

1. Completion of the core requirements with overall GPA of 3.0.
2. Students are expected to participate regularly in Comparative Medicine journal club, and attendance at the Laboratory Animal Medicine seminar series.
3. *Electives*: additional courses to bring the total to 45 or more units taken at Stanford to fulfill the University's residency requirement.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree

Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

*Chair:* Sherril Green

*Professors:* Donna M. Bouley, Paul Buckmaster, Sherril Green, Shaul Hestrin

# DEVELOPMENTAL BIOLOGY

Courses offered by the Department of Development Biology are listed under the subject code DBIO on the Stanford Bulletin's ExploreCourses web site.

A fundamental problem in biology is how the complex set of multicellular structures that characterize an adult animal is generated from the fertilized egg. Recent advances at the molecular level, particularly with respect to the genetic control of development, have been explosive. These advances represent the beginning of a major movement in the biological sciences toward the understanding of the molecular mechanisms underlying developmental decisions and the resulting morphogenetic processes. This new thrust in developmental biology derives from the extraordinary methodological advances of the past decade in molecular genetics, immunology, and biochemistry. However, it also derives from groundwork laid by the classical developmental studies, the rapid advances in cell biology and animal virology, and from models borrowed from prokaryotic systems. Increasingly, the work is directly related to human diseases, including oncogene function and inherited genetic disease.

The Department of Developmental Biology includes a critical mass of scientists who are leading the thrust in developmental biology and who can train new leaders in the attack on the fundamental problems of development. Department labs work on a wide variety of organisms from microbes to worms, flies, and mice. The dramatic evolutionary conservation of genes that regulate development makes the comparative approach of the research particularly effective. Scientists in the department labs have a very high level of interaction and collaboration. The discipline of developmental biology draws on biochemistry, cell biology, genetics, molecular biology, and genomics. People in the department have a major interest in regenerative medicine and stem cell biology.

The department is located in the Beckman Center for Molecular and Genetic Medicine within the Stanford University Medical Center.

## Master of Science in Developmental Biology

University requirements for the M.S. are described in the "Graduate Degrees (p. 50)" section of this bulletin.

Students in the Ph.D. program in Developmental Biology may apply for an M.S. degree, assuming completion of their course requirements and preparation of a written proposal. The master's degree awarded by the Department of Developmental Biology does not include the possibility of minors for graduate students enrolled in other departments or programs.

Students are required to take, and satisfactorily complete, at least three lecture courses offered by the department, including DBIO 210 Developmental Biology. In addition, students are required to take three courses outside the department. Students are also expected to attend Developmental Biology seminars and journal clubs. In addition, the candidate must complete a research paper proposing a specific experimental approach and background in an area of science relative to developmental biology.

## Doctor of Philosophy in Developmental Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The graduate program in Developmental Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists

Training Program (MSTP (<http://mstp.stanford.edu>)) in which individuals are candidates for both the M.D. and Ph.D. degrees.

### Units

Students are required to complete at least five courses, including:

DBIO 210	Developmental Biology	4
DBIO 215	Frontiers in Biological Research (1 unit per quarter; students are required to take at least two quarters)	2
An advanced graduate course in genetics or genomics;		
An advanced graduate course in cell biology of biochemistry;		
A course in quantitative or computational biology.		

Students are expected to attend Developmental Biology seminars and journal clubs.

Completion of a qualifying examination is required for admission to Ph.D. candidacy. The examination consists of an off-topic proposal on a subject different from the dissertation research. The final requirements of the program include presentation of a PhD dissertation as the result of independent investigation and constituting a contribution to knowledge in the area of developmental biology. The student must pass the University oral examination, taken only after the student has substantially completed research. The examination is preceded by a public seminar in which the research is presented by the candidate. The oral examination is conducted by a dissertation reading committee.

*Emeriti: (Professors)* David S. Hogness, A. Dale Kaiser, Stuart Kim, Harley McAdams, Ellen Porzig

*Chair:* Roeland Nusse

*Associate Chair:* David Kingsley

*Professors:* Ben Barres, Philip Beachy, Gerald Crabtree, James Chen, Margaret Fuller, Seung Kim, David Kingsley, Roeland Nusse, Lucy Shapiro, William Talbot, Anne Villeneuve, Irving Weissman, Joanna Wysocka

*Associate Professors:* Gill Bejerano

*Assistant Professors:* Maria Barna, Alistair Boettiger, Daniel Jarosz

# GENETICS

Courses offered by the Department of Genetics are listed under the subject code GENE on the Stanford Bulletin's ExploreCourses web site.

An underlying theme in the department is that genetics is not merely a set of tools but a coherent and fruitful way of thinking about biology and medicine. To this end, the department emphasizes a spectrum of approaches based on molecules, organisms, populations, and genomes. It provides training through laboratory rotations, dissertation research, seminar series, didactic and interactive course work, and an annual three-day retreat of nearly 200 students, faculty, postdoctoral fellows, and research staff.

The mission of the department includes education and teaching as well as research; graduates from our program pursue careers in many different venues including research in academic or industrial settings, health care, health policy, and education. The department is especially committed to increasing diversity within the program, and to the training of individuals from traditionally underrepresented minority groups.

## Master of Science in Human Genetics

The University requirements for the M.S. are described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

The Department of Genetics offers an M.S. in Human Genetics, which is accredited by the American Board of Genetic Counseling. This program prepares students to practice in the healthcare profession of genetic counseling. The program is a full time two-year program, and accepts students to begin the program only in Autumn Quarter. Students must be admitted directly into this program, and cannot automatically transfer from the Ph.D. programs within the department, or vice versa. While courses are oriented primarily towards genetic counseling students, they may also be taken by medical students, other graduate students, residents or post-doctoral fellows, and (with permission) undergraduates.

The degree requires the completion of clinical rotations and an approved research project.

Students must also complete:

		Units
GENE 271	Human Molecular Genetics	3
GENE 272	Introduction to Medical Genetics	2-3
GENE 273	Introduction to Clinical Genetics Testing	2
GENE 274A	A Case Based Approach to Clinical Genetics	2
GENE 274B	A Case Based Approach to Clinical Genetics	2
GENE 275	Role Play and Genetic Counseling Observations	2
GENE 276	Genetic Counseling Clinical Rotations	4-7
GENE 278	Prenatal Genetic Counseling	1
GENE 279	Pediatric and Adult Genetic Counseling	1
GENE 280	Metabolic Genetic Counseling	1
GENE 281	Cancer Genetic Counseling	1
GENE 282A	Genetic Counseling Research Seminar	1
GENE 282B	Genetic Counseling Research Seminar	1
GENE 283	Genetic Counseling Research	1-8
GENE 284	Medical Genetics Seminar	1
GENE 285A	Genetic Counseling Seminar	3
GENE 285B	Genetics Counseling Seminar	3
GENE 285C	Genetic Counseling Seminar	3
GENE 286	Advanced Genetic Counseling Seminar	2

- required course work:
- several additional required courses (bioethics, research ethics and developmental biology),
- and are encouraged to take 2-4 elective courses of their choice, including a research methods elective.

Faculty members include members of the Stanford faculty from Genetics, Pediatrics, Obstetrics, Pathology, Developmental Biology, Biomedical Ethics, Law, and Psychology, and practicing genetic counselors and clinical geneticists in various medical centers across the Bay Area.

Applications are due in December (see web site) for admission in the following Autumn Quarter. Applicants should demonstrate a combination of academic preparation, exposure to genetic counseling, and counseling and/or laboratory experiences. Exposure to persons with disabilities or chronic illness is also helpful. Additional information about the program is available at Stanford's Master's Program in Human Genetics (<http://www.med.stanford.edu/genetic-counseling>) web site.

## Doctor of Philosophy in Genetics

University requirements for the Ph.D. degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The Ph.D. program in the Department of Genetics offers graduate students the opportunity to pursue a discipline that encompasses both a set of tools and a coherent way of thinking about biology and medicine. All major areas of genetics and genomics are represented in the department, including human genetics (molecular identification of Mendelian traits and the pathophysiology of genetic disease, gene therapy, genetic epidemiology, analysis of complex traits, genome functional analysis and human evolution), and application of model organisms such as bacteria, yeast, flies, worms, and mice to basic and translational areas of biomedical research. The department is especially strong in genomic and bioinformatic approaches to genome biology and evolution, and includes several genome-scale databases and Centers such as the Center for Genomics and Personalized Medicine (SCGPM), Saccharomyces Genome Database (SGD), the Stanford Microarray Database (SMD), and the Pharmacogenetics and Pharmacogenomics Knowledge Base (PharmGKB), the ENCODE project and the Stanford Genome Technology Center (SGTC).

Exposure to the intellectual scope of the department is provided by laboratory rotations, dissertation research, advanced courses in genetics and other areas of biomedical science, seminar series, journal clubs, and an annual three-day retreat of faculty, students, postdoctoral fellows, and staff scientists. Emphasis is placed on interactions and collaborations among students, postdoctoral students, and faculty within the department and throughout the campus.

During their first year, graduate students in the department take graduate courses and sample areas of research by carrying out rotations in three or four laboratories. At the end of the first three quarters, students may select a laboratory in which to do their dissertation research. While the dissertation research is generally performed in one laboratory, collaborative projects with more than one faculty member are encouraged. In addition to interacting with their faculty adviser, graduate students receive advice regularly from other faculty members who serve as members of their dissertation committee. Study for the Ph.D. generally requires between four and five years of graduate work, most of which is focused on dissertation research.

Students are generally enrolled in the program to receive the Ph.D. degree, although a limited number of M.D. candidates can combine research training in genetics with their medical studies. Ph.D. candidates who have passed the qualifying exam in the second year can opt to receive the M.S. as a terminal degree.

There are opportunities for graduate students to teach in graduate-level and professional-school courses. In addition, students have the opportunity to participate in educational outreach activities coordinated by the department, which include opportunities to interact with secondary school students and teachers, lay groups, and local science museums.

Students who have recently received a bachelor's, master's, M.D., or Ph.D. degree in related fields may apply for graduate study. Prospective students must have a background in biology, mathematics, physics, and chemistry. Decisions for admission are based on comparison of the relative merits of all the candidates' academic abilities and potential for research and the department's interest in promoting a diverse learning environment. Interviews take place in late February or early March and successful applicants are offered admission by early spring. Students who wish to pursue a combined M.D./Ph.D. degree are considered for admission into the graduate program in the department after they have been admitted to the M.D. program in the School of Medicine.

Students begin graduate studies in Autumn Quarter. Prospective students are encouraged to start the application process early to ensure that they are able to submit a complete application by the December deadline. All students accepted into the Ph.D. program in the Department of Genetics are provided with full tuition and a stipend. Two training grants from the National Institutes of Health provide major support for the graduate training program in the department. Other student support is provided by departmental funds and from research grants, both federal and private, of the faculty. In addition, a number of graduate students are funded by fellowships, including those from the National Science Foundation and the Stanford Graduate Fellows program.

*Emeritus:* (Professor) Greg Barsh, Uta Francke

*Chair:* Michael Snyder

*Professors:* Russ Altman, Anne Brunet, Carlos Bustamante, Michele Calos, Stanley Cohen, Ronald Davis, Andrew Fire, James Ford, Judith Frydman, Margaret Fuller, Aaron Gitler, Mark Kay, Stuart Kim, Karla Kirkegaard, Joseph Lipsick, Hiromitsu Nakauchi, Jonathan Pritchard, John Pringle, Julien Sage, Matthew Scott, Arend Sidow, Tim Stearns, Lars Steinmetz, Hua Tang, Alice Ting, Alex Urban, Anne Villeneuve

*Professor (Research):* Leonore Herzenberg, J. Michael Cherry

*Professors (Teaching):* Kelly Ormond

*Associate Professors:* Euan Ashley, Laura Attardi, Julie Baker, William Greenleaf, Gavin Sherlock, Zijie Sun, Douglas Vollrath

*Associate Professor (Clinical):* Mary Ann Campion

*Assistant Professors:* Maria Barna, Michael Bassik, Ami Bhatt, Christina Curtis, Polly Fordyce, , Anshul Kundaje, Jin Billy Li, Stephen Montgomery, Monte Winslow

*Assistant Professor (Clinical):* Andrea Hanon-Kahn

# HEALTH AND HUMAN PERFORMANCE

Health and Human Performance (HHP) is organizationally housed within the Department of Athletics, Physical Education, and Recreation and more specifically within Recreation and Wellness. The program offers experiences for academic credit as well as non-credit opportunities. Its academic pursuits are offered in partnership with the Department of Medicine. The academic units housed within HHP include Kinesiology, Outdoor Education, Physical Education, Wellness Education, and Lifeworks.

## Purpose Statement

Through integrating theory, research, and experiential practice we create innovative, transformative learning environments focusing on holistic student development.

## Values

Inspiring a healthier Stanford by inviting students into an intentional process grounded in the following values:

*Actualization:* Supporting self-efficacy through empowerment, learning experiences, and realization of the human potential.

*Balance:* Creating opportunities for individuals to recognize and utilize the essential elements of well-being.

*Community:* Providing inclusive opportunities for healthy social engagement and relationship building.

*Leadership:* Developing change agents who can apply learned knowledge and skills towards active citizenship.

*Innovation:* Designing effective ways of learning and promoting human flourishing in a hyper-complex, ever-accelerating culture experience.

## Kinesiology

Focuses on the anatomy, physiology, and mechanics of human movement and their applications to exercise and lifetime physical activities. Offers 1-3 unit courses using the seminar, laboratory, and workshop as the primary component types.

## Leadership Innovations

Fosters transformational leaders of character who through the facilitation of critical collaborative environments are prepared to be agents of positive change. Offers 1-3 unit courses using the lecture, seminar, discussion, and workshop as the primary component types.

## Lifeworks

Fosters transformational student leaders and future citizens of character who through the facilitation of creative expression, mindfulness, and collaborative environments are prepared to be agents of positive change. Offers 1-3 unit courses using the lecture, seminar, discussion, and workshop as the primary component types.

## Outdoor Education

Develops outdoor leaders who use risk, challenge, and experience as educational tools with a variety of applications. Offers 1-3 unit courses using the lecture, seminar, and workshop as the primary component types.

## Physical Education

Provides physical activity courses where knowledge associated with the proper performance of an activity is presented and discussed. Offers 1-2 unit courses using activity as the primary component type.

## Wellness Education

Inspires a healthier, more vibrant university through teaching effective wellness theories and practices that promote flourishing and empower students to positively transform their lives and communities. Offers 1-3 unit courses using the lecture, seminar, discussion, and workshop as the primary component types.

*Director:* Christopher Pelchat (Outdoor Education)

*Associate Director:* Aneel Chima (Wellness Education)

*Associate Director:* Tia Lillie (Kinesiology)

*Associate Director:* New Hire (Lifeworks)

*Lecturers:* Diane Boxill (Wellness Education), Russ Carpenter (Writing and Rhetoric), Logan Chapman (Outdoor Education), Orgyen Chowang (Wellness Education), Robert Cusick (Wellness Education), Dustin DiPerna (Wellness Education), Sue Lowley (Outdoor Education), Fred Luskin (Wellness Education), Emily McCune (Outdoor Education), Stephen Murphy-Shigematsu (Wellness Education), Katherine Nobles (Wellness Education), Pamela Pasma (Wellness Education), Carole Pertofsky (Wellness Education), John Rettger (Wellness Education), Tia Rich (Wellness Education), Jennifer Robinson (Wellness Education), Mikey Siegel (Wellness Education), Antja Thompson (Emergency Medicine), Andrew Toddhunter (Biology), Meag-gan Walters (Wellness Education), Peter Wright, (Outdoor Education), Donovan Yisrael (Wellness Education)

*Instructors:* Gong Chen (Physical Education), Maithill Gavankar (Physical Education), Austin Lee (Physical Education), Ying Mitchell (Physical Education), Erick Schlimmer (Physical Education), Tom Sarsfield (Physical Education), Matt Thornton (Physical Education), Todd Vas Dias (Physical Education), Nick Wooters (Physical Education)

# HEALTH RESEARCH AND POLICY

Courses offered by the Department of Health Research and Policy are listed under the subject code HRP on the Stanford Bulletin's ExploreCourses web site.

The Department of Health Research and Policy has two principal areas of scholarly interest:

1. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. Epidemiology training provides analytic tools for clinical and translational research, including studies of disease etiology, prevention, and therapy.
2. Health Policy/Health Services Research is concerned with many aspects of health policy analysis in the public and private sectors.

## Graduate Programs in Health Research and Policy

The Program in Epidemiology and the Program in Health Policy are housed in the Department of Health Research and Policy. These programs offer master's degrees and doctoral degrees in Epidemiology and Clinical Research and in Health Policy.

For additional information, send email to [hrpadmissions@stanford.edu](mailto:hrpadmissions@stanford.edu).

The department offers a Master of Science in Health Policy and a Master of Science in Epidemiology & Clinical Research.

## Master of Science in Health Policy

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The master's degree program in Health Policy seeks to train students in the quantitative analysis of issues in health and medical care. The program is based upon an individual development plan, and includes both course work and completion of a master's project under the direction of a program core faculty member. The typical student in the program is a physician who has completed residency training and is preparing for a research career; the program also admits Stanford medical students and others with a strong background in health policy analysis. The core faculty interests include outcomes research, health economics, health care organization, health care access, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

To receive the degree, students are expected to demonstrate knowledge of issues in health policy and the quantitative skills necessary for research in this area. Students must take at least 45 units of course work and write a University thesis. The course work requirements are:

### Required Courses:

		Units
HRP 261	Intermediate Biostatistics: Analysis of Discrete Data	3
HRP 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3
HRP 391	Health Law: Finance and Insurance	3
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
Required for students funded by NIH training grants:		
MED 255	The Responsible Conduct of Research	1

OR		
MED 255C	The Responsible Conduct of Research for Clinical and Community Researchers	1

### Concentration Requirements:

		Units
Choose 1 of the following Concentration Courses:		
HRP 218	Methods for Health Care Delivery Innovation, Implementation and Evaluation	2
HRP 252	Outcomes Analysis	4
HRP 256	Economics of Health and Medical Care	5
HRP 263	Advanced Decision Science Methods and Modeling in Health	3

### Thesis Units:

		Units
At least 12 units of thesis units:		
HRP 399	Graduate Research	1-18

### Pre-approved electives include:

Additional approved elective courses to complete the program total of at least 45 units. Other electives, consistent with the student's individual development plan, may be approved by the student's faculty adviser and the program director.

		Units
HRP 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
HRP 219	Evaluating Technologies for Diagnosis, Prediction and Screening	3
HRP 223	Introduction to Data Management and Analysis in SAS	2
HRP 229	Spectrum Scholars Seminar	1
HRP 234	Engineering Better Health Systems: modeling for public health	4
HRP 249	Topics in Health Economics I	2-5
HRP 254	Quality & Safety in U.S. Healthcare	3
HRP 251	Design and Conduct of Clinical Trials	3
HRP 258	Introduction to Probability and Statistics for Clinical Research	3
HRP 259	Introduction to Probability and Statistics for Epidemiology	3-4
HRP 264	Foundations of Statistical and Scientific Inference	1
GSBGEN 551	Innovation and Management in Health Care	2
MED 236	Economics of Infectious Disease and Global Health	3
MED 273	Biodesign for Mobile Health	3
STATS 216	Introduction to Statistical Learning	3
STATS 266	Advanced Statistical Methods for Observational Studies	2-3

For additional information on course requirements and admissions process, please see our department website ([http://med.stanford.edu/hsr/grad\\_programs/mshsr.html](http://med.stanford.edu/hsr/grad_programs/mshsr.html)).

Please address inquiries to the HRP Education Program Manager at 650-723-5456 or [hrpadmissions@stanford.edu](mailto:hrpadmissions@stanford.edu).

## Master of Science in Epidemiology and Clinical Research

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The Graduate Program in Epidemiology offers instruction and interdisciplinary research opportunities leading to the M.S. degree in Epidemiology and Clinical Research. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. Epidemiologic methods are used by clinical investigators and by other scientists who conduct observational and experimental research on the identification, prevention, and treatment of human disorders.

Core and affiliated faculty come from the Department of Health Research and Policy and other Stanford University departments. The program has particular strengths in cancer epidemiology, cardiovascular disease epidemiology, epidemiologic methods, genetic epidemiology, global health, infectious disease epidemiology, musculoskeletal disease epidemiology, neuroepidemiology, and reproductive epidemiology and women's health. Students can select an optional concentration in global health or infectious diseases.

The mission of the Stanford University School of Medicine is to be a premier research-intensive medical school that improves health through leadership, diversity, and collaborative discoveries and innovation in patient care, education and research. The Graduate Program in Epidemiology fosters this mission through the training of physician investigators in techniques of clinical research. The department also welcomes students from other disciplines who would benefit from formal training in epidemiologic methods. The master's degree in Epidemiology and Clinical Research provides students with the skills essential to patient-oriented clinical research, including epidemiologic methods and statistical analysis.

For undergraduates at Stanford University, the program offers a coterminal M.S. in Epidemiology and Clinical Research. Coterminal students have the opportunity to pursue epidemiological research at the intersection of public health, disease treatment, and disease prevention. Additional information on our coterminal M.S. can be found on our department website (<http://med.stanford.edu/epidemiology/coterm.html>).

To receive the M.S. degree, students are expected to obtain a grounding in epidemiologic methods and applied biostatistics and to demonstrate research skills through the completion of a thesis. The master's degree program is typically completed in two years (four to six quarters).

Students must complete at least 45 units of approved course work as well as a master's thesis which is usually based on original research related to clinical epidemiology.

### Epidemiologic methods:

		Units
HRP 225	Design and Conduct of Clinical and Epidemiologic Studies	3-4
HRP 226	Intermediate Epidemiologic and Clinical Research Methods	3
HRP 251	Design and Conduct of Clinical Trials	3
HRP 267	Life Course Epidemiology	2

### Biostatistics:

		Units
HRP 239	Statistical Methods for Group Comparisons and Causal Inference	3

HRP 259	Introduction to Probability and Statistics for Epidemiology	3-4
HRP 261	Intermediate Biostatistics: Analysis of Discrete Data	3
HRP 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3

### Research seminar:

		Units
HRP 236	Epidemiology Research Seminar (at least 3 units)	1

### Research:

		Units
HRP 399	Graduate Research (at least 12 units)	1-18

### Research conduct:

		Units
MED 255	The Responsible Conduct of Research	1

Note that HRP 267 and HRP 239 are not required courses; HRP 251 is recommended but not required for coterminal students and students in designated tracks.

Other approved selective and elective courses to complete the program total of at least 45 units.

Students in Global Health and Infectious Diseases concentrations have other requirements; HRP 251 is not required for students in these concentrations.

Students are assigned a methodology mentor from the Division of Epidemiology and they also select a research mentor, who may be from another department. For physicians, the research mentor is often a faculty member from the department of the student's clinical specialty.

See the Division of Epidemiology web site ([http://med.stanford.edu/epidemiology/grad\\_programs/MS-overview](http://med.stanford.edu/epidemiology/grad_programs/MS-overview)) for additional information regarding our program and admissions process.

Address inquiries to the HRP Education Program Manager at 650-723-5456 or [hrpadmissions@stanford.edu](mailto:hrpadmissions@stanford.edu).

## Coterminal Master of Science in Epidemiology and Clinical Research

The coterminal master's degree is available only to current Stanford undergraduates. The MS entails a minimum of 45 units of course work but can require more depending upon the courses chosen and the previous training of the student; a minimum of 12 units must be applied towards the master's thesis.

The coterminal Master of Science program follows the same program requirements as the Master of Science (academic), except that the student is not required to take the course in Clinical Trials. Students who desire to concentrate in a specific area can participate in one of the track areas (Infectious Diseases, Global Health), although this is not required. To pursue a research project, the student must make arrangements with program faculty. Coterminal students are enrolled full-time and courses are taken on campus. Graduates of this program are prepared to contribute creatively to basic or applied projects in epidemiology and clinical research. The department anticipates that many go on to Ph.D. programs, M.D. degrees, or to pursue careers in public health, pharma or biotech.

Coterminal students must have at least one quarter of overlap in the undergraduate and graduate career prior to conferring their

undergraduate degree. See the "Coterminal Degrees (p. 46)" section of this bulletin for additional details. See also the Registrar's coterminal degrees (<https://registrar.stanford.edu/students/coterminal-degree-programs>) pages.

## Funding Sources

Access to financial aid and other options for coterminal students depends on the number of units and quarters as a registered student at Stanford. Coterminal students have full access to undergraduate sources of financial aid until their twelfth quarter or four years of study. Coterminal students who have completed 180 units are eligible for University fellowships and assistantships. However, many federal and private fellowships and assistantships are awarded only to students who have received the bachelor's degree. Even after the conferral of the bachelor's degree, there is no guarantee that a coterminal student be awarded financial support via a RA-ship, TA-ship, or fellowship.

Coterminals may choose to obtain their bachelor's degree early after completion of requirements. However, all classes after conferral of the degree may only be counted towards the graduate degree. Part of the strategy that allows coterminals maximal flexibility in their course of study is their dual status as both undergraduate and graduate student.

For additional information on the application process, see the department's coterminal page (<http://med.stanford.edu/epidemiology/co-term.html>). Address inquiries to the HRP Education Program Manager at 650-723-5456 or [hrp.admissions@stanford.edu](mailto:hrp.admissions@stanford.edu).

## Ph.D. in Epidemiology and Clinical Research Overview

The field of epidemiology is poised to undergo major changes, and this Ph.D. program offers a cutting-edge curriculum that reflects this shift. Driven by technological advancements, the availability of very large datasets, and the omics revolution, epidemiology is moving toward what some have called Big Epidemiology, where epidemiologists partner with other scientists to study vast amounts of data. Thus, this program will train epidemiologists and clinical researchers to be savvy in technology, computing, data mining, bioinformatics, and genomics. The curriculum capitalizes on Stanford's unique strengths in these disciplines.

After matriculating, students will meet with their academic advisers to plan out an individually tailored curriculum. Students who matriculate with prior training in epidemiology and statistics may replace introductory core courses with more advanced courses, subject to approval. Beyond core course requirements, students select electives that delve deeper into a particular area of specialization of their choosing. Innovative online learning approaches will help meet the needs of physician-students, who will also be busy with clinical duties.

Students will take core courses in epidemiology and biostatistics. In addition to these core courses, Ph.D. students must additionally take 3 "big epidemiology" elective courses in three key areas:

1. an advanced quantitative course (encompassing statistics, computer science, or economics)
2. a big data course
3. a genetics/genomics/bioinformatics course

## Degree Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (<http://stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

Ph.D. students must complete a minimum of 135 units (as per University requirements), including 45 course units exclusive of HRP 236

Epidemiology Research Seminar, HRP 299 Directed Reading in Health Research and Policy, and HRP 399 Graduate Research .

Units

### Epidemiologic methods sequence

HRP 225	Design and Conduct of Clinical and Epidemiologic Studies	3-4
HRP 226	Intermediate Epidemiologic and Clinical Research Methods	3-4
HRP 251	Design and Conduct of Clinical Trials (Required of students in the clinical research concentration; other doctoral students may opt to replace HRP251 with an alternate epidemiology course.)	3

### Biostatistics sequence

HRP 259	Introduction to Probability and Statistics for Epidemiology	3-4
HRP/STATS 261	Intermediate Biostatistics: Analysis of Discrete Data	3
HRP 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3

### "Big Epidemiology" elective course

Take one of the following advanced quantitative courses		3-4
Any 200-level STATS course (other than STATS 260)		
STATS 116	Theory of Probability	
HRP 216	Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research	
HRP 252	Outcomes Analysis	
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	
HRP/MED 206/STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	
CHPR 290	Advanced Statistical Methods for Observational Studies	

### Big data course

Take one of the following big data courses		3-4
BIOMEDIN 215	Data Driven Medicine	
CS 246	Mining Massive Data Sets	
STATS 202	Data Mining and Analysis	
CS 229	Machine Learning	
COMM 382	Research in Computational Social Science	

### Genetics/genomics/bioinformatics course

Take one of the following genetics/genomics/bioinformatics courses		3-4
BIOMEDIN 217/CS 275	Translational Bioinformatics	
GENE 244	Introduction to Statistical Genetics	
HUMBIO 151R	Biology, Health and Big Data	
GENE 224	Principles of Pharmacogenomics	
BIOMEDIN/DBIO/CS 273A	The Human Genome Source Code	
GENE 210/DBIO 220	Genomics and Personalized Medicine	
STATS 345	Statistical and Machine Learning Methods for Genomics	
or GENE 245	Statistical and Machine Learning Methods for Genomics	

### Other core courses/requirements

MED 255	The Responsible Conduct of Research	1
---------	-------------------------------------	---

### Electives

Take electives chosen in consultation with the academic adviser to total 135 units. 64-71

**Total Units Required** 135

### Additional Requirements

- Attendance at one meeting of the Human Subjects Panel (Institutional Review Board).
- Attendance at one meeting of the GCRC Protocol Review Committee.
- R Proficiency: students must show proficiency in the computing language R or must take an approved course in R.
- Attendance at the twice monthly Epidemiology and Clinical Research PhD workshops.
- Doctoral students fulfill the remaining University unit requirements through doctoral dissertation work.

See the department's website ([http://med.stanford.edu/epidemiology/grad\\_programs/phd-ecr.html](http://med.stanford.edu/epidemiology/grad_programs/phd-ecr.html)) for additional information on degree requirements and admissions process. Address inquiries to the HRP Education Program Manager at 650-723-5456 or [hrradmissions@stanford.edu](mailto:hrradmissions@stanford.edu).

## Ph.D. in Health Policy

Stanford Health Policy, through the Department of Health Research and Policy at the Stanford University School of Medicine, offers a Ph.D. program which promises to educate students to be scholarly leaders in the field of health policy, and to be highly knowledgeable about the theoretical and empirical approaches that can be applied in the development of improvements in health policy and the health care system. The curriculum offers courses across a wide range of health policy areas including health economics, health insurance and government program operation, health financing, international health policy and economic development, cost-effectiveness analysis and the evaluation of new technologies, relevant statistical and methodological approaches, and health policy issues related to public health concerns such as obesity and chronic disease.

In addition to taking a set of core courses, students are expected to complete course work in one of two tracks:

- Health Economics*: including the economic behavior of individuals, providers, insurers, and governments and how their actions affect health and medical care.
- Decision Sciences*: with quantitative techniques to assess the effectiveness and value of medical treatments and for decision making about medical care at the individual and/or collective level.

## Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 50)" section of this bulletin.

Additional requirements:

### First Year

- Completion of first-year course work with minimum grades of 'B-' and an overall/average GPA of a B (3.0).
- Individual development plan (IDP) meeting with primary adviser within the first quarter.
- Meeting with adviser(s) on a regular basis, to be determined with adviser(s).
- Completion of course work in the responsible conduct of research.

### Second Year

- Completion of second-year course work with minimum grades of 'B-' and an overall/average GPA of a B (3.0).
- Final course work (for both first and second year) must total at least 75 units for both core and track specific courses.
- Individual development plan (IDP) meeting with primary adviser before the end of Autumn Quarter.
- Meeting with adviser(s) on a regular basis, to be determined with adviser(s).
- Completion of second-year paper and funding proposal as part of the second-year tutorial.
- Taking and passing the written qualifying exam.

### Third and Fourth Years

- Advancement to Ph.D. Candidacy (see below).
- Taking and passing the department Ph.D. oral exam (see below).
- Individual development plan (IDP) meeting with primary adviser before the end of Autumn Quarter.
- Meeting with adviser(s) on a regular basis, to be determined with adviser(s).

### Course Work

Complete course work in one of the following two tracks.

#### Health Economics Track

##### Statistical Data Analysis, Econometrics, and Causal Inference

		Units
Required - one year sequence in econometrics:		
ECON 270	Intermediate Econometrics I	2-5
ECON 271	Intermediate Econometrics II	2-5
ECON 272	Intermediate Econometrics III	2-5
OR		
MGTECON 603	Econometric Methods I	4
MGTECON 604	Econometric Methods II	3
MGTECON 605	Econometric Methods III	3

##### Micro-Economics

Required - one year sequence in microeconomics:		
ECON 202	Microeconomics I	2-5
ECON 203	Microeconomics II	2-5
ECON 204	Microeconomics III	2-5

Or equivalent: GSBGEN 675 or MGTECON 600 can be substituted for ECON 202 and/or MGTECON 601 can be substituted for ECON 203.

##### Discipline-Specific Courses

Required:		
HRP 249	Topics in Health Economics I	2-5

Choose 4 courses in the following 4 fields in economics:

Development Economics		
Public Finance		
Labor Economics		
Industrial Organization		

##### Health Policy

Required:		
HRP 252	Outcomes Analysis	4
HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4

Choose 3 additional health-related courses such as:

HRP 391	Health Law: Finance and Insurance	3
LAW 3002	Health Law: Quality and Safety of Care	3

**Practice of Research**

Required:

First-year core tutorial (HRP 201A, HRP 201B, and HRP 201C)

Second-year core tutorial (HRP 800)

Health Economics Seminar

Research in Progress Seminar

**Decision Science Track****Statistical Data Analysis, Econometrics, and Casual Inference**

Required: at least two quarters of one of the two following sequences:

ECON 270 Intermediate Econometrics I 2-5

ECON 271 Intermediate Econometrics II 2-5

ECON 272 Intermediate Econometrics III 2-5

Or

MGTECON 603 Econometric Methods I 4

MGTECON 604 Econometric Methods II 3

MGTECON 605 Econometric Methods III 3

**Micro-Economics**

Required, at least one quarter:

GSBGEN 675 Microeconomic Theory 3

Or

MGTECON 600 Microeconomic Analysis I 4

MGTECON 601 Microeconomic Analysis II 3

Or

ECON 202N Microeconomics I For Non-Economics PhDs 2-5

ECON 203N Microeconomics II For Non-Economics PhDs 2-5

Or

ECON 202 Microeconomics I 2-5

ECON 203 Microeconomics II 2-5

**Discipline-Specific Courses**

Required:

HRP 263 Advanced Decision Science Methods and Modeling in Health 3

HRP 206 Meta-research: Appraising Research Findings, Bias, and Meta-analysis 3

Choose 4 methods courses such as:

MS&amp;E 201 Dynamic Systems 3-4

MS&amp;E 211 Introduction to Optimization 3-4

MS&amp;E 223 Simulation 3

MS&amp;E 252 Decision Analysis I: Foundations of Decision Analysis 3-4

MS&amp;E 263 Healthcare Operations Management 3

**Health Policy**

Required:

HRP 252 Outcomes Analysis 4

HRP 256 Economics of Health and Medical Care 5

HRP 392 Analysis of Costs, Risks, and Benefits of Health Care 4

Choose 3 additional health-related courses such as:

HRP 391 Health Law: Finance and Insurance 3

LAW 3002 Health Law: Quality and Safety of Care 3

**Practice of Research**

Required:

First-year core tutorial (HRP 201A, HRP 201B, HRP 201C)

Second-year core tutorial (HRP 800)

## Research in Progress Seminar

**GPA/Grade Requirement**

Failure to meet grade/GPA requirements (i.e., minimum grade of 'B-' in all courses and an overall minimum GPA of 3.0, equivalent to a grade of 'B') means the student is out of compliance with program requirements. In this case, the executive committee may ask the candidate to leave the program or may require other corrective courses of action, including, but not limited to, retaking a course. If progress remains unsatisfactory, the committee may ask the candidate to leave the program.

Units

**Ph.D. Candidacy Requirements**

- Approval by adviser(s).
- Satisfactory completion of course work in first two years (maintaining GPA of 'B' (3.0) or better and course grades 'B-' or better). Final course work must total at least 75 units for both core and track specific courses.
- Satisfactory completion of program requirements (such as individual development plans, responsible conduct of research course work).
- Submission, and approval by adviser, of the second-year paper by the second-year student.
- Passing of the written qualifying exam.
- Submission of PhD Candidacy form (<https://registrar.stanford.edu/resources-and-help/student-forms/graduate-student-forms>). Candidacy is valid for five calendar years (through the end of the quarter in which candidacy expires), unless terminated by the department for unsatisfactory progress. An extension of candidacy may be obtained for a maximum of one additional year.
- It is the responsibility of the student to initiate the required paperwork and committee meetings required by Stanford University.

**Written Qualifying Exam**

As part of their advancement to Ph.D. candidacy (as listed above), students must take and pass a written qualifying exam. This is offered approximately two weeks after the end of Spring Quarter in the students' second year.

Material covers broader health policy concepts such as ones covered in the first-year tutorial) as well as track specific topics in Economics and Decision Sciences.

**Oral Exam**

- In accordance with the Stanford University Graduate Academic Policies and Procedures (GAP) (<https://gap.stanford.edu/handbooks/gap-handbook/chapter-4/subchapter-7/page-4-7-1>) manual, students must take and pass an oral examination as part of the Ph.D. degree requirements.
- The oral examination (colloquially known as the "proposal defense") will be focused mainly on the student's dissertation proposal. As well as examining feasibility and understanding of the dissertation proposal, it tests the candidate's command of the field of study.
- Students are required to take the oral exam after passing their written qualifying exam, and when the adviser believes that the student is ready.
- The oral exam must be taken and passed no later than the end of Spring Quarter of the student's third year.
- The student's oral exam committee is chaired by an out-of-department chairperson. The other members of the oral exam committee are the student's primary adviser and at least three core faculty members. All committee members are normally on the Stanford University Academic Council, and the chair must be a member. Emeritus faculty are also eligible to serve as examiners or chair of the committee.

- The University Oral Examination form should be submitted to the education program manager/student services officer at least two weeks prior to the examination date.
- Students provide committee members with a written abstract & summary of their dissertation proposal three weeks ahead of their oral exam date; exact length to be agreed upon with the student's primary adviser (estimate: 2000-5000 words in length).
- In general, the primary adviser should read and approve the proposal document before it is sent to the committee. This is to ensure that the student and the adviser have a clear and shared understanding of the proposed work plan, and that it has been captured by the student in the written proposal document.

## Ph.D. Dissertation

- Must present a Ph.D. dissertation that is the result of independent investigation and that constitutes a contribution to knowledge in health services research and health policy.
- Must select a primary dissertation adviser and at least two additional faculty members to serve on the dissertation committee.
- Presentation of a prospectus outlining the proposed research to the committee.
- Receipt of written approval from the dissertation committee chair.
- Submission of a final draft of the work signed by all members of the dissertation committee.

## Advising

All matriculating students are assigned a faculty adviser from the group of core faculty to help them design their academic program. Students remain with this adviser until the time that they have developed other arrangements for advising (with the approval of both the old and new advisers).

Students are expected to identify a group of normally three thesis advisers before or, at the latest, shortly after the time that they advance to candidacy for the degree. This group consists of one primary and two secondary advisers, who may or may not be the same as the initially assigned faculty adviser. The primary adviser must be from the group of core faculty, unless specific approval of the executive committee is obtained. Such approval would not be routinely granted. However, in rare cases, it may be optimal for a student's progress to implement a co-primary mentor arrangement in which a core faculty member from health policy and another faculty member from outside the core faculty jointly serve as primary mentors. This arrangement might occur in rare circumstances with students seeking to integrate areas of science into their policy training that are outside the expertise of the core faculty.

Secondary advisers are normally expected to come from the core faculty, but could include faculty from outside the core group upon approval of the executive committee. Students are encouraged to seek advisers with complementary expertise as needed, and the Director of Graduate Studies and executive committee monitor advising arrangements to ensure that students receive adequate supervision.

See the department's website ([http://med.stanford.edu/epidemiology/grad\\_programs/phd-ecr.html](http://med.stanford.edu/epidemiology/grad_programs/phd-ecr.html)) for additional information on degree requirements and admissions process. Address inquiries to the HRP Education Program Manager at 650-723-5456 or [hrpadmissions@stanford.edu](mailto:hrpadmissions@stanford.edu).

## Health Research and Policy

Chair: Laurence Baker

Professors: Laurence Baker, Mark Cullen, Steven Goodman, Victor W. Henderson, Mark Hlatky, Abby C. King, Michelle Mello, Julie Parsonnet, Alice S. Whittemore

Associate Professor: Kate Bundorf, Allison Kurian, Lorene M. Nelson, Kristin Sainani

Associate Professor (Clinical): Rita Popat

Assistant Professors: Maria Polyakova, Maya Rossin-Slater, Julia Simard

Emeriti: (Professors) Dan Bloch, Jennifer Kelsey

Courtesy Professors: Jay Bhattacharya, Manisha Desai, Robert Haile, Bonnie Halpern-Felsher, Paul Heidenreich, Mary Leonard, Ying Lu, Stephen Luby, Alex Macario, Gary Shaw

Courtesy Associate Professors: Jeremy Goldhaber-Fiebert, Angelle LaBeaud, Jennifer Lee, Grant Miller, Minang Turakhia

Courtesy Assistant Professor: Jason Andrews, Michael Baiocchi, Sanjay Basu, David Rehkopf, Eric Sun

Senior Lecturer: Irene Corso

Lecturers: Corinna Haberland

Adjunct Professor: Paul-Andre Genest, Eugene Lewit, Henrik Sorensen

## Health Services Research

Director: Kate Bundorf (Associate Professor, Health Research and Policy)

Core Faculty and Academic Teaching Staff: Laurence Baker (Professor, Health Research and Policy), Kate Bundorf (Associate Professor, Health Research and Policy), Irene Corso (Sr Lecturer, Health Research and Policy), Corinna Haberland (Lecturer, Health Research and Policy), Mark Hlatky (Professor, Health Research and Policy, and Medicine), Michelle Mello (Professor, Law, and Health Research and Policy), Maria Polyakova (Assistant Professor, Health Research and Policy), Maya Rossin-Slater (Assistant Professor, Health Research and Policy)

Affiliated Faculty and Staff by Department:

Anesthesiology, Perioperative, and Pain Medicine: Alex Macario (Professor), Eric Sun (Assistant Professor)

Law: Michelle Mello (Professor)

Medicine: Jay Bhattacharya (Professor), Jeremy Goldhaber-Fiebert (Associate Professor), Paul Heidenreich (Professor), Mark Hlatky (Professor), Grant Miller (Associate Professor)

## Epidemiology

Director: Steven Goodman (Professor, Medicine, and Health Research and Policy)

Core Faculty and Academic Teaching Staff: Mark Cullen (Professor, Medicine, Health Research and Policy, and Biomedical Data Science), Steven Goodman (Professor, Medicine, and Health Research and Policy), Victor W. Henderson (Professor, Health Research and Policy, and Neurology), Abby C. King (Professor, Health Research and Policy, and Medicine), Allison Kurian (Associate Professor, Medicine, and Health Research and Policy), Lorene M. Nelson (Associate Professor, Health Research and Policy), Julie Parsonnet (Professor, Medicine, and Health Research and Policy), Rita A. Popat (Clinical Associate Professor, Health Research and Policy), Kristin L. Sainani (Associate Professor, Health Research and Policy), Julia Simard (Assistant Professor, Health Research and Policy), Alice S. Whittemore (Professor, Health Research and Policy, and Biomedical Data Science)

Affiliated Faculty and Staff by Department:  
Biomedical Data Science: Ying Lu (Professor)

Medicine: Jason Andrews (Assistant Professor), Michael Baiocchi (Assistant Professor), Sanjay Basu (Assistant Professor), Ann Hsing (Professor), Robert Haile (Professor), Jennifer Lee (Associate Professor), Mary Leonard (Professor), Stephen Luby (Professor), David Rehkopf (Assistant Professor)

Pediatrics: Bonnie Halpern-Felsher (Professor), Angelle LaBeaud (Associate Professor), Gary Shaw (Professor)

# IMMUNOLOGY

Courses offered by the Immunology Program are listed under the subject code IMMUNOL on the Stanford Bulletin's ExploreCourses web site.

Stanford Immunology is home to faculty, students, postdocs, and staff who work together to produce internationally recognized research in many areas of immunology. The long tradition of collaboration among the immunology laboratories at Stanford fosters productive interdisciplinary research, with an emphasis on the application of current approaches to problems in cellular, molecular and clinical immunology. Faculty research interests include both bench-to-bedside and basic science research. Graduate students and postdoctoral scholars receive outstanding training through their participation in research, teaching, seminars, journal clubs, and the annual Stanford Immunology Scientific Conference.

## Mission of the Ph.D. Program in Immunology

The Immunology doctoral program offers instruction and research opportunities leading to a Ph.D. in Immunology. Two tracks are offered:

1. Track 1: Molecular, Cellular, and Translational Immunology
2. Track 2: Computational and Systems Immunology

The goal of the Ph.D. Program in Immunology is to develop investigators who have a strong foundation in Immunology and related sciences in order to carry out innovative research. The program features a flexible choice of courses and seminars combined with extensive research training in the laboratories of participating Immunology faculty. Specifically, immunology graduate students:

1. acquire a fundamental, broad, and comprehensive body of knowledge and skills through an extensive curriculum.
2. identify important scientific questions, design, and conduct experiments using the most appropriate methods.
3. read and critically analyze current literature in immunology and other relevant fields.
4. present research findings and communicate ideas effectively to a variety of audiences.
5. prepare manuscripts that will be published in leading journals.
6. learn to teach effectively.

## Master of Science in Immunology

Students in the Ph.D. program in Immunology may apply for an M.S. degree in Immunology only under special circumstances, assuming completion of appropriate requirements. Students must complete:

1. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
2. 3 quarters of graduate research (IMMUNOL 399 Graduate Research), consisting of rotations in the labs of three faculty members.
3. Participation in the Immunology journal club (IMMUNOL 305 Immunology Journal Club), and attendance at the Immunology seminar series and at the annual Stanford Immunology Scientific Conference.
4. First Year Rotations Presentations and General Advising Sessions, June. Students present on one of three lab rotations.
5. Students must submit a master's thesis paper on one of their rotations. This requirement may be waived under special circumstances.

Course work in Immunology as follows:

## Track: Molecular, Cellular and Translational Immunology

		Units
BIOS 200	Foundations in Experimental Biology	5
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 203	Advanced Immunology III	3
IMMUNOL 311	Seminar in Immunology	1
IMMUNOL 305	Immunology Journal Club	1
IMMUNOL 399	Graduate Research	1-15
BIO 141	Biostatistics	3-5
MED 255	The Responsible Conduct of Research	1
Take one of the following courses:		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
BIO 214	Advanced Cell Biology	4
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2

## Track: Computational and Systems Immunology

		Units
BIOS 200	Foundations in Experimental Biology	5
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
IMMUNOL 310	Seminars in Computational and Systems Immunology	1
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
IMMUNOL 399	Graduate Research	1-15
MED 255	The Responsible Conduct of Research	1

## Doctor of Philosophy in Immunology

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 50)" section of this bulletin.

## Admissions

Students seeking admissions to the Immunology Ph.D. Program typically have an undergraduate major in biological sciences, but majors from other areas are acceptable if the applicants have sufficient coursework in biology, chemistry, general physics, and mathematics (through calculus). Applications are evaluated by the Immunology Graduate Program committee based upon: GRE scores; grades; evidence of research experience; letters of recommendation, including letters from research sponsor(s); and commitment to a career in biomedical research. The GRE Subject test is not required. Applicants should plan on taking the GRE at least one month prior to the application deadline of Friday, December 1, 2017 to ensure that official scores are available when applications are evaluated. Candidates who are selected to visit Stanford and interview are notified in January. The selected applicants are invited to the Biosciences interview session, February 28-March 4, 2018 (Wednesday-Sunday). This is the program's only interview session.

Interested Stanford medical students are welcome to apply to the program and should also submit a formal application by Friday, December 1, 2017.

Prospective graduate students must apply via Stanford's online graduate application.

## Financial Aid

Students admitted to the program are offered financial support for tuition, a living stipend, insurance coverage, and for first-year graduate students, a small allowance for books/travel. Applicants are urged to apply for independent fellowships such as from the National Science Foundation or National Defense Science and Engineering Graduate Fellowships. NSF Fellowship applications are due in November of the year prior to matriculation in the graduate program, and only one more NSF application is permitted in the first or second year. Immunology graduate students may continue to apply for outside fellowships after matriculation. Admitted students are typically offered financial support in the form of Stanford Graduate Fellowships, NIH traineeships, or research assistantships.

## General Requirements

### Immunology Startup and the First-Year Advising Process

Since students enter with differing backgrounds, each student is assisted by the first-year adviser in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. In addition, the Immunology Startup, a five-day introduction to immunology in early September, exposes incoming Immunology Ph.D. students to a variety of techniques and concepts. Students learn basic laboratory techniques in immunology and participate in in-depth discussions with faculty.

All students must be enrolled in exactly 10 units during Autumn, Winter, Spring, and Summer quarters until reaching Terminal Graduate Residence (TGR) status in the spring or summer quarter of their fourth year.

Students are required to pass all courses in which they are enrolled; required and elective courses must be taken for a letter grade. Students must earn a grade of 'B-' or better in all courses applicable to the degree that are taken for a letter grade. Satisfactory completion of each year's general and track specific requirements listed below is required. During the first year, degree progress is monitored closely by the first-year adviser in quarterly meetings and by the Stanford Graduate Program Committee in a final advising session in June.

First-year students are required to complete three rotations in at least two immunology labs. In the spring quarter, two mini-rotations of six weeks each may be arranged.

A specific program of study for each student is developed individually with the first-year adviser.

### Core Courses:

All students in the two tracks, Molecular, Cellular, and Translational Immunology (MCTI) and Computational and Systems Immunology (CSI) are required to enroll in the following core courses:

		Units
BIOS 200	Foundations in Experimental Biology	5
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 305	Immunology Journal Club	1
IMMUNOL 311	Seminar in Immunology	1
BIO 141	Biostatistics	3-5
IMMUNOL 399	Graduate Research	1-15
IMMUNOL 290	Teaching in Immunology	1-15
MED 255	The Responsible Conduct of Research	1

Immediately after the final examination period in Spring Quarter of the first year, first-year immunology graduate students are required to give a presentation on one of their three rotations to the Immunology graduate program committee (qualifying examination process, part I).

After the rotation presentation, the first-year student will meet with the Stanford graduate program committee in a one-on-one advising session to review degree progress and choice of a Ph.D. thesis lab. The general oral examination and the Ph.D. thesis dissertation proposal constitute Part II of the qualifying examination process. The student is required to pass the oral examination and write a thesis dissertation proposal which is presented to and evaluated by a qualifying examination committee composed of three faculty members, two of whom may be from the Immunology program faculty and the third faculty member from a department outside the program. The Ph.D. adviser need not be present for Part II, but is required to submit an evaluation and grade for the Ph.D. thesis dissertation proposal. Upon successful completion of Part II, the student files a petition for Ph.D. candidacy.

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members. Students in the MCTI track are expected to complete all their core course requirements by the end of their second year; students in the CSI track should complete their course work by the end of the third year.

The dissertation reading committee (generally known as the Ph.D. thesis committee) must be comprised of at least four faculty members who guide the student in the Ph.D. research, and read and approve the final dissertation. Typically three of the four dissertation reading committee members are from the Immunology program faculty.

The student must meet with the dissertation reading committee at least once a year. In the first through third years, the student must meet with the dissertation committee at least once a year. In the fourth and fifth years, the student is expected to meet twice a year with the Ph.D. thesis committee. In addition, a secondary adviser is assigned who can provide additional advice on issues such as career path choices and other non-academic issues.

*Individual Development Plan:* Graduate students are required to meet with their faculty mentors once a year to discuss an individual development plan" (IDP). The IDP is intended to help the students take ownership of their training and professional development. The goals of the IDP are to: 1) pause, reflect and intentionally think on short-, mid- and long-term goals; 2) identify resources that help to achieve these goals; and 3) have open and direct dialogue with the Ph.D. thesis adviser and establish clear expectations and steps.

## Track Specific Requirements

In addition to the general requirements listed above, students must also complete requirements within their track. Written petitions for exemptions to core curriculum and lab rotation requirements are considered only in the first year by the advising committee and the chair of the Graduate Program committee. Approval is contingent upon special circumstances and is not routinely granted.

### Molecular, Cellular, and Translational Immunology

MCTI first-year students are required to take the following courses in their first year for a letter grade:

		Units
IMMUNOL 203	Advanced Immunology III	3
Take one of the following courses:		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
BIO 214	Advanced Cell Biology	4
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2

**Electives:**

One elective (see elective list below)

		Units
IMMUNOL 275	Tumor Immunology	3
CSB 210	Cell Signaling	4
SBIO 241	Biological Macromolecules	3-5
DBIO 210	Developmental Biology	4
CBIO 240	Molecular and Genetic Basis of Cancer	4

**Computational and Systems Immunology**

The CSI curriculum trains students to be computational and experimental scientists, who are expected to identify important problems in immunology and to devise integrated computational/ experimental plans for addressing them.

**CSI Core (Required):**

Students in the CSI track are required to take the following core courses in their first and second years, unless demonstrated by proficiency or coursework. Petitions to exempt from the courses CS 106A, CS 109, and CS 161 must be approved by the Chair of the CSI track.

		Units
CS 106A	Programming Methodology	3-5
CS 109	Introduction to Probability for Computer Scientists	3-5
CS 161	Design and Analysis of Algorithms	3-5
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
IMMUNOL 310	Seminars in Computational and Systems Immunology	1
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4

**CSI Electives:**

Two electives (see elective list below):

		Units
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3-5
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4
CME 206	Introduction to Numerical Methods for Engineering	3
CME 263	Introduction to Linear Dynamical Systems	3
CME 309	Randomized Algorithms and Probabilistic Analysis	3
CME 334	Advanced Methods in Numerical Optimization	3
CME 364A	Convex Optimization I	3
CME 372	Applied Fourier Analysis and Elements of Modern Signal Processing	3
EE 376A	Information Theory	3
EE 278	Introduction to Statistical Signal Processing	3
EE 378A	Statistical Signal Processing	3
STATS 116	Theory of Probability	3-5
STATS 201	Design and Analysis of Experiments	3-5
STATS 202	Data Mining and Analysis	3
STATS 216	Introduction to Statistical Learning	3
STATS 217	Introduction to Stochastic Processes I	2-3
Other		

**Journal Clubs**

Both MCTI and CSI students are required to attend the IMMUNOL 305 Immunology Journal Club for their first through third years. Attendance is optional for fourth year and above graduate students.

**Immunology and CSI Seminar Series**

Graduate seminars are an important means of attaining a broad and comprehensive exposure to all areas in immunology as well as gaining a professional perspective and competence in the field. First-year students are required to attend all immunology seminars (IMMUNOL 311 Seminar in Immunology) IMMUNOL 311A. Students in their second year and above are required to attend 50% of the seminar series each academic year. Students in the CSI track are required to attend the Computational and Systems Immunology Seminar Series (IMMUNOL 310 Seminars in Computational and Systems Immunology) held every Summer Quarter.

**Immunology Scientific Retreat**

The annual Retreat is held at the Asilomar Conference Grounds, Pacific Grove, CA, and is attended by students, staff, postdocs and faculty of the Stanford immunology community. All immunology graduate students are required to attend. In the third through fifth years, students will present a poster and give a talk on their graduate research.

**Teaching Assistantships**

Teaching experience and training are part of the graduate curriculum. Each student assists in teaching two courses in the immunology core or electives. A TA match process is held in summer quarter in order to match the graduate student's research and teaching preferences to the appropriate courses. Before beginning their assigned teaching assistantships, students are required to attend a TA orientation workshop held by VPTL once a year in late September.

**First Author Paper Submission**

By the fourth or fifth year, graduate students are expected to submit a first author paper for publication. This milestone should be completed before defending a Ph.D. thesis.

**Doctoral Dissertation**

Before embarking on the dissertation defense process, the graduate student must submit a Petition to Defend to the Director of the Immunology Graduate Program. Important milestones and degree requirements must be met before proceeding to the oral examination. A substantial draft of the dissertation must be turned in to the student's oral examination committee at least one month before the oral exam is scheduled to take place. At the time of the Ph.D. orals defense, an orals chair is chosen to lead the orals committee, which is a distinct committee, but the basic membership is identical to that of the dissertation reading committee. The minimum number of faculty committee members for the orals committee is five. The final written dissertation must be approved by the student's reading committee and submitted to the Registrar's Office. Upon completion of this final requirement, a student is eligible for conferral of the Ph.D. degree.

**Faculty**

*Director, Executive Committee for the Immunology Program:* Patricia Jones (Professor, Biology)

*Director, Immunology Graduate Program:* Olivia Martinez (Professor, Research, Surgery, Transplantation)

**Participating Departments and Faculty (Molecular, Cellular, Translational Immunology Track)**

*Biochemistry:* Peter Kim (Professor), Lingyin Li (Assistant Professor)

*Bioengineering:* Stephen Quake (Professor, and Applied Physics and Physics)

*Biology:* Patricia P. Jones (Professor)

*Chemistry:* Carolyn Bertozzi (Professor, of Radiology and of Chemical and Systems Biology)

*Genetics:* Leonore A. Herzenberg (Professor, Research), Karla Kirkegaard (Professor, and of Microbiology & Immunology), Michael Snyder (Professor)

*Medicine/Biomedical Informatics Research:* Andrew Gentles (Assistant Professor, Research), Purvesh Khatri (Assistant Professor, Research)

*Medicine/Blood and Bone Marrow Transplantation Program:* Everett Meyer (Assistant Professor), David Miklos (Associate Professor), Robert Negrin (Professor), Judith Shizuru (Professor)

*Medicine/Cardiovascular Medicine:* Joseph Wu (Professor, and Radiology)

*Medicine/Endocrinology:* Joy Wu (Assistant Professor)

*Medicine/Gastroenterology and Hepatology:* Aida Habtezion (Associate Professor)

*Medicine/Hematology:* Ravi Majeti (Associate Professor)

*Medicine/Immunology and Rheumatology:* C. Garrison Fathman (Professor), Jorg Goronzy (Professor), William Robinson (Associate Professor), Samuel Strober (Professor), Paul J. Utz (Professor), Cornelia Weyand (Professor)

*Medicine/Infectious Diseases:* Catherine Blish (Assistant Professor), Paul Bollyky (Assistant Professor), Prasanna Jagannathan (Assistant Professor), Taia T. Wang (Assistant Professor)

*Medicine/Oncology:* Ash Alizadeh (Associate Professor), Gilbert Chu (Professor, and Biochemistry), Dean Felsher (Professor, and Pathology), Ronald Levy (Professor), Shoshana Levy (Professor, Research)

*Medicine/Nephrology:* Jonathan Maltzman (Associate Professor)

*Medicine/Pulmonary and Critical Care Medicine:* Mark Nicolls (Professor)

*Microbiology and Immunology:* John Boothroyd (Professor), Yueh-Hsiu Chien (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Juliana Idoyaga (Assistant Professor), Holden Maecker (Associate Professor, Research), Hugh McDavitt (Professor, Emeritus), Denise Monack (Professor), Garry P. Nolan (Professor), David Schneider (Professor)

*Molecular and Cellular Physiology:* K. Christopher Garcia (Professor, and Structural Biology), Richard S. Lewis (Professor)

*Neurology and Neurological Sciences:* May Han (Assistant Professor), Lawrence Steinman (Professor, and Pediatrics), Tony Wyss-Coray (Professor)

*Neurosurgery:* Theo Palmer (Associate Professor)

*Otolaryngology/Head and Neck Surgery (ENT):* Jayakar Nayak (Assistant Professor), John B. Sunwoo (Associate Professor)

*Pathology:* Robert Michael Angelo (Assistant Professor), Sean Bendall (Assistant Professor), Scott Boyd (Associate Professor), Eugene C. Butcher (Professor), Michael Cleary (Professor), Gerald R. Crabtree (Professor, and Developmental Biology), Edgar G. Engleman (Professor, and Medicine/Immunology and Rheumatology), Andrew Fire (Professor, and Genetics), Stephen Galli (Professor), Sara Michie (Professor), Bali Pulendran (Professor), Raymond A. Sobel (Professor), Irving Weissman

(Professor, and Director, Stem Cell and Regenerative Medicine Institute, and of Developmental Biology, Biology)

*Pediatrics:* David B. Lewis (Professor, Immunology and Allergy), Crystal Mackall (Professor, Hematology/Oncology, and of Medicine), Maria Grazia Roncarolo (Professor, Stem Cell Transplantation, and of Medicine/ Blood and Marrow Transplantation), Elizabeth Mellins (Professor, Human Gene Therapy), Kari Nadeau (Professor, Allergy and Clinical Immunology, of Otolaryngology, Head & Neck Surgery)

*Psychiatry and Behavioral Sciences:* Emmanuel Mignot (Professor, Sleep Medicine)

*Radiology:* Parag Mallick (Assistant Professor, Research, and of Diagnostic Radiology)

*Structural Biology:* Peter Parham (Professor, and Microbiology and Immunology), Theodore Jardetzky (Professor)

*Surgery/Multi-Organ Transplantation:* Sheri Krams (Associate Professor, Research), Olivia Martinez (Professor, Research)

## Participating Departments and Faculty (Computational and Systems Immunology)

*Bioengineering:* Stephen Quake (Professor, and Applied Physics and Physics)

*Genetics:* Michael Snyder (Professor), Karla Kirkegaard (Professor, and of Microbiology & Immunology)

*Med/Biomedical Informatics Research:* Purvesh Khatri (Assistant Professor, Research)

*Med/Immunology and Rheumatology:* Paul J. Utz (Professor)

*Med/Oncology:* Ash Alizadeh (Assistant Professor)

*Microbiology and Immunology:* John Boothroyd (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Holden Maecker (Associate Professor, Research), Garry Nolan (Professor)

*Pathology:* Sean Bendall (Assistant Professor), Scott Boyd (Associate Professor), Andrew Fire (Professor, and of Genetics)

*Radiology:* Parag Mallick (Assistant Professor, Research, and of Diagnostic Radiology)

## Affiliate Members:

*Biochemistry:* Ron Davis (Professor, and of Genetics)

*Bioengineering:* Russ Altman (Professor, and of Genetics and Computer Science)

*Health and Research Policy - Biostatistics:* Robert Tibshirani (Professor, and Statistics)

# MICROBIOLOGY AND IMMUNOLOGY

Courses offered by the Department of Microbiology and Immunology are listed under the subject code MI on the Stanford Bulletin's ExploreCourses web site.

## Graduate Programs in Microbiology and Immunology

The Department of Microbiology and Immunology offers a program of training leading to the Ph.D. degree, as well as research training, courses, and seminars for medical students and postdoctoral fellows. Research interests focus on two broad areas: host/parasite interactions, and the function of the immune system. Laboratories investigate mechanisms of pathogenesis and the physiology of viruses, bacteria, and protozoan parasites, as well as the lymphocyte function in antigen recognition, immune response, and autoimmunity.

## Master of Science

A regular M.S. program is not offered, although this degree is awarded under special circumstances. Candidates for master's degrees are expected to have completed the preliminary requirements for the B.S. degree, or the equivalent. In addition, the candidate is expected to complete 45 quarter units of work related to microbiology; at least 25 of these units should concern research devoted to a thesis. The thesis must be approved by the student's committee.

## Doctor of Philosophy in Microbiology and Immunology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 50)" section of this bulletin.

## Application, Admission, and Financial Aid

Prospective Ph.D. candidates should have completed a bachelor's degree in a discipline of biology or chemistry, including course work in biochemistry, chemistry, genetics, immunology, microbiology, and molecular biology.

Applicants must file a report of scores on the general subject tests of the Graduate Record Examination (GRE). It is strongly recommended that the GRE be taken before October so that scores are available when applications are evaluated.

In the absence of independent fellowship support, entering predoctoral students are fully supported with a stipend and tuition award. Highly qualified applicants may be honored by a nomination for a Stanford Graduate Fellowship. Successful applicants have been competitive for predoctoral fellowships such as those from the National Science Foundation.

## Program for Graduate Study

The Ph.D. degree requires course work and independent research demonstrating an individual's creative, scholastic, and intellectual abilities. On entering the department, students meet an advisory faculty member; together they design a timetable for completion of the degree requirements. Typically, this consists of first identifying gaps in the student's undergraduate education and determining courses that should be taken. Then, a tentative plan is made for two to four lab rotations (one rotation per quarter). During the first year of graduate study in the department, each student also takes seven upper-level (200-series) courses.

## Course requirements:

		Units
BIOS 200	Foundations in Experimental Biology	5
BIO 214	Advanced Cell Biology	4
MED 255	The Responsible Conduct of Research	1
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
MI 215	Principles of Biological Technologies	3
MI 250	Frontiers in Microbiology and Immunology (Taken once in the first year and once in the second year for a total of 2 units.)	1
MI 214	Immunology: Homeostasis and Disease	3

## Recommended course:

		Units
BIO 230	Molecular and Cellular Immunology	4

## One elective from the following:

		Units
DBIO 210	Developmental Biology	4
CSB 210	Cell Signaling	4
CSB 220	Chemistry of Biological Processes	3
GENE 205	Advanced Genetics	3
IMMUNOL 202	Advanced Immunology II	3
MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	4
MI 221	Gut Microbiota in Health and Disease	2-3
MI 245	Computational Modeling of Microbial Communities	4
S BIO 241	Biological Macromolecules	3-5
STATS 141	Biostatistics	3-5

Prior approval from the student's adviser and department graduate program director is required for courses not from the elective list.

In Autumn Quarter of the second year, each student defends orally a formal research proposal on a topic outside the intended thesis project. This qualifying examination proposal is due to the graduate program steering committee by September 1. In Spring Quarter of the second year, a research proposal based on the student's own thesis topic is defended to the thesis committee. The written thesis proposal is due May 1 and the oral defense is presented and completed by the end of the Spring Quarter. Based on successful performance on these proposals, the student is admitted to candidacy. Teaching experience and training are also part of the graduate curriculum. Graduate students are required to act as teaching assistants for one course. In addition, first- and second-year graduate students are required to participate in a bi-weekly journal club. Additional information on program requirements can be found on the Microbiology and Immunology (<http://med.stanford.edu/microimmuno.html>) web site.

*Emeriti: (Professors)* Stanley Falkow, Hugh O. McDevitt, Edward S. Mocarski

*Chair:* David Schneider

*Associate Chair:* Peter Sarnow

*Professors:* Ann Arvin, Helen Blau, Matthew Bogyo, John C. Boothroyd, Yueh-Hsiu Chien, Wah Chiu, Mark M. Davis, Stephen J. Galli, Harry B. Greenberg, Peter Jackson, Karla Kirkegaard, A. C. Matin, Denise Monack, Garry Nolan, Peter Parham, Phillip Pizzo, Charles Prober, David Relman, Peter Sarnow, David Schneider, Gary K. Schoolnik, Julie Theriot, Lucy S. Tompkins

*Professor (Teaching):* Robert D. Siegel

*Associate Professors:* Manuel Amieva, Jeffrey Glenn, K.C. Huang, Upinder Singh, Justin Sonnenburg

*Assistant Professors:* Paul Bollyky, Jan Carette, Elizabeth Egan, Shirit Einav, Juliana Idoyaga, Ellen Yeh

*Institute for Immunity, Transplantation and Infection*

*Director, Human Immune Monitoring Center and Professor (Research):*  
Holden Maecker

# MOLECULAR AND CELLULAR PHYSIOLOGY

Courses offered by the Department of Molecular and Cellular Physiology are listed under the subject code MCP on the Stanford Bulletin's ExploreCourses web site.

The Department of Molecular and Cellular Physiology is located in the Beckman Center for Molecular and Genetic Medicine.

A central goal of physiology in the post-genomic era is to understand how thousands of encoded proteins serve to bring about the highly coordinated behavior of cells and tissues. Research in the department approaches this goal at many levels of organization, ranging from single molecules and individual cells to multicellular systems and the whole organism. The faculty share common interests in the molecular mechanisms of cell signaling and behavior, with a special focus on structure/function analysis of ion channels and G-protein coupled receptors, and their roles at the cellular, organ, and whole-organism levels; the molecular basis of sensory transduction, synaptic transmission, plasticity and memory; the role of ion channels and calcium in controlling gene expression in neural and immune cells; and the regulation of vesicle trafficking and targeting, cell polarity, and cell-cell interactions in the nervous system and in epithelia. Research programs employ a wide range of approaches, including molecular and cell biology, biochemistry, genetics, biophysics, x-ray crystallography and solution NMR, electrophysiology, and in vitro and in vivo imaging with confocal and multi-photon microscopy.

## Graduate Programs in Molecular and Cellular Physiology

The department offers required and elective courses for students in the School of Medicine and is also open to other qualified students with the consent of the instructor. Training of medical, graduate, and postdoctoral students is available. The program offers a course of study leading to the Ph.D. degree. No B.S. is offered, and an M.S. is offered only in the unusual circumstance where a student completes the course work, rotation, and the written section of the qualifying exam, but is unable to complete the requirements for the Ph.D.

## Application and Admission

Applications are made through the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

Applicants are assessed based on their undergraduate transcripts, test scores, research experience, statement of purpose and letters of recommendation that document exceptional potential, ability, or achievements.

Students admitted to the program are offered financial support covering tuition, a living stipend, and insurance coverage. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but MCP graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program.

Upon matriculation, each student is assisted in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee is composed to include the dissertation adviser and two additional MCP/Non-MCP faculty, to guide the student during their dissertation research. The student must meet with the dissertation committee at least once a year.

## Doctor of Philosophy in Molecular and Cellular Physiology

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research.

Study toward the Ph.D. is expected to occupy five years, including summers. The MCP course requirements for the program are as follows:

- MCP 221 Advanced Cell Biology
- MCP 207 MCP Bootcamp
- MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
- BIOS 200 Foundations in Experimental Biology
- MED 255 The Responsible Conduct of Research, if funded on NSF or NIH training grants
- Advanced graduate courses or mini-courses for a minimum of 6 units total. These courses do not need to be MCP courses but must be in relevant scientific topic and approved by the Director of Graduate Studies.
- Two of the following courses:
  - BIOC 241 Biological Macromolecules
  - GENE 205 Advanced Genetics
  - NBIO 206 The Nervous System
  - BIO 230 Molecular and Cellular Immunology

Students are also required to participate in the Molecular and Cellular Physiology Seminar Series and attend the department scientific meeting.

Courses taken to meet program requirements must be taken for a letter grade and students must earn a minimum grade of at least a 'B' in every individual required course. Students must also maintain a minimum GPA of 3.0 by University policy. Failure to maintain the required grades and grade point average is taken as evidence of unsatisfactory progress in the program.

Students should complete their required courses within the first two years of study. Exceptions may be made in cases where it was impossible to schedule courses because they were not offered within a student's first two years. Students may petition the MCP graduate committee for variances in the specific courses required, and such petitions may be granted in special circumstances, in cases where a student's progress is otherwise exemplary.

## Qualifying Examination

All students in the program must pass a qualifying examination to advance to candidacy for the Ph.D. It is expected that students take the qualifying examination by the end of the Autumn Quarter in the second year of study. Failure to take the qualifying exam by the end of Autumn Quarter of the second year of study is taken as evidence of unsatisfactory progress in the program. In any case where a student thinks they need additional time to schedule and take their exam, a request must be submitted in writing to the Director of Graduate Studies (DGS) by November 15 of Autumn Quarter. The DGS may opt to grant additional time in compelling circumstances that do not indicate poor progress, or may refer the matter to the graduate committee for further action.

Students are given two chances to unconditionally pass the qualifying examination. Failure to achieve an unconditional pass of the qualifying

examination by the end of the Spring Quarter of the second year is grounds for dismissal from the program.

Students form a qualifying examination committee consisting of at least 3 faculty members (members of the academic council, including the dissertation advisor), at least one of whom must be a member of MCP. This committee should be formed by the end of Spring Quarter of the first year of study. The composition of this committee should be approved by the Director of Graduate Studies. Students should also check with the department's student services office to make sure to file all required paperwork by the end of Spring Quarter. The University maintains certain deadlines for filing for candidacy, and it is the student's responsibility to be aware of these deadlines.

### **Dissertation and University Oral Examination**

The results of independent, original work by the students are presented in a dissertation. The oral examination is largely a defense of the dissertation.

### **Advisers and Advisory Committees**

A graduate advisory committee, currently professors Feng, Kobilka, Maduke and Madison, advises students during the period before the formation of their qualifying committees.

### **Financial Aid**

Students may be funded by their advisers' research grants, by training grants, by department funds, or by extramural funds. Students are encouraged to obtain funding from outside sources such as NIH and NSF.

*Chair:* Miriam B. Goodman

*Professors:* Axel T. Brunger, K. Christopher Garcia, Miriam B. Goodman, Brian K. Kobilka, Richard S. Lewis, Georgios Skiniotis, Thomas C. Sudhof

*Associate Professors:* V. Daniel Madison, Merritt C. Maduke

*Assistant Professors:* Liang Feng, Lucy E. O'Brien

*Joint Professors:* Steve Chu, W. James Nelson, William Weis

*Courtesy Professors:* John Huguenard, Beth Pruitt, Anthony J. Ricci, Ron Dror

*Courtesy Assistant Professor:* Gregory Scherrer

*Emeritus Faculty:* Stephen J. Smith, Richard W. Tsien

# NEUROBIOLOGY

---

Courses offered by the Department of Neurobiology are listed under the subject code NBIO on the Stanford Bulletin's ExploreCourses web site.

## Graduate Program in Neurobiology

Graduate students in the Department of Neurobiology obtain the Ph.D. degree through the interdepartmental Neurosciences Ph.D. program (p. 828). Accepted students receive funding for tuition and a living stipend. Applicants should familiarize themselves with the research interests of the faculty and, when possible, indicate their preference on the application form which is submitted directly to the Neurosciences Program.

Medical students also are encouraged to enroll in the Ph.D. program. The requirements of the Ph.D. program are fitted to the interests and time schedules of the student. Postdoctoral training is available to graduates holding Ph.D. or M.D. degrees, and further information is obtained directly from the faculty member concerned.

Research interests of the department include information processing in vertebrate retina; structure, function, and development of auditory and visual systems; development and regeneration in the central and peripheral nervous system; neural mechanisms mediating higher nervous system functions, including perception, learning, attention and decision making.

## Faculty

*Emeritus:* Denis Baylor, Uel J. McMahan, Eric Shooter, Lubert Stryer

*Chair:* Ben Barres

*Professors:* Eric I. Knudsen, Thomas Clandinin, Tirin Moore, William T. Newsome

*Associate Professors:* Stephen Baccus, Jennifer Raymond

*Assistant Professor:* Lisa Giocomo, Michael Z. Lin

# NEUROSCIENCES

Courses offered by the Neurosciences Program are listed under the subject code NEPR on the Stanford Bulletin's ExploreCourses web site.

## Master of Science in Neurosciences

The Neurosciences IDP does not offer a terminal M.S. degree. An M.S. degree may only be pursued in combination with a doctoral degree from another department within the University or with an advanced degree from one of the University's professional schools.

Students interested in pursuing the M.S. must meet with the Neurosciences IDP Program Director and provide an unofficial Stanford transcript as well as a Statement of Purpose for adding the M.S. degree.

The Neurosciences IDP does not offer a coterminal master's degree.

### Requirements

- Courses used for the Neurosciences M.S. may not be double-counted to meet the requirements of a Ph.D. degree.
- All courses used for the Neurosciences M.S. must be taken for a letter grade and passed with a 3.0 (B) or better.
- Course requirements must be completed before the student applies for Terminal Graduate registration (TGR) Status

Students from other Stanford Ph.D. or professional degree programs may elect to take the M.S. degree in Neurosciences when they have met the following requirements:

1. Completion of a minimum of 45 unduplicated units of neurosciences course work, including the following Neuroscience courses or approved substitutes:

NEPR 202	Neurosciences Development Core	2
NEPR 203	Neuroscience Systems Core	2
NEPR 204	Neuroscience Molecular Core	2
NEPR 205	Neurosciences Anatomy Core	2
NEPR 207	Neurosciences Cognitive Core	2
NEPR 208	Neuroscience Computational Core	2
NEPR 213	Neurogenetics Core	2
NEPR/ COMP MED 201	Neuro-Cellular Core	2
NEPR 214/ NENS 207	Neuroscience Core Curriculum: Translational Neuroscience	2
NEPR 212	Responsible Conduct of Neuroscience Research	1

2. At least 3 quarters of MCP 300: Neuroscience Journal Club and Professional Development Series
3. A minimum of four (4) upper-level neuroscience courses that may be selected based on the interests and needs of the student with prior approval of the Program Director
4. A Stanford statistics course such as STATS 216: Introduction to Statistical Learning, or petition to receive credit for a different Stanford course
5. In addition to required coursework, students pursuing the M.S. in Neurosciences must sit for a Qualifying Exam that includes a written proposal for a thesis project and oral examination.
6. Students must also complete the proposed thesis project.

## Doctor of Philosophy in Neurosciences

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The interdepartmental Neurosciences Program offers instruction and research opportunities leading to a Ph.D. in Neurosciences. The requirements for a Ph.D. degree follow those of the University and in addition are tailored to fit the background and interests of the student. Qualified applicants should, where possible, apply for the predoctoral fellowships in open competition, especially those from the National Science Foundation.

### Admissions

Applications are made through the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site and are due in early December each year. Applicants should familiarize themselves with the research interests of the faculty and indicate their preferences clearly on the application form. Admitted students are notified from early March through mid-April. Accepted students receive an award covering tuition, a basic health plan, and a living stipend.

### Course Requirements

Since students enter with differing backgrounds, and the labs in which they may elect to work cover several different disciplines, the specific program for each student is developed individually with an advisory committee. Students rotate through at least three labs during the first year while taking core modules. Passing of a comprehensive oral qualifying examination given by the student's advisory committee must be taken by the end of the second year, and is required for admission to Ph.D. candidacy. The student is required to present a Ph.D. dissertation, which is the result of independent investigation contributing to knowledge in an area of neuroscience, and to defend his or her dissertation in a University oral examination, which includes a public seminar. Students must also publish a first-author paper in a major scientific journal and submit a written dissertation prior to completing the Ph.D. degree.

Medical students may participate in this program provided they meet the prerequisites and satisfy all the requirements of the graduate program as listed above. The timing of the program may be adjusted to fit their special circumstances.

- Stanford Intensive Neuroscience (SIN) Boot Camp
- Nine (9) Neuroscience Core Modules:
  - a. NEPR 202 Neurosciences Development Core
  - b. NEPR 203 Neuroscience Systems Core
  - c. NEPR 204 Neuroscience Molecular Core
  - d. NEPR 205 Neurosciences Anatomy Core
  - e. NEPR 207 Neurosciences Cognitive Core
  - f. NEPR 208 Neuroscience Computational Core (Prerequisite: NBIO 228: Math Tools for Neuroscientists)
  - g. NEPR 213 Neurogenetics Core
  - h. COMP MED 201 Neuro-Cellular Core (same as NEPR 201 Neuro-Cellular Core)
  - i. NEPR 214 Neuroscience Core Curriculum: Translational Neuroscience (same as NENS 207 Neuroscience Core Curriculum: Translational Neuroscience)
- NEPR 212 Responsible Conduct of Neuroscience Research
- Nine (9) quarters of NEPR 280 Neuroscience Journal Club and Professional Development Series
- Statistics Course (STATS 216 Introduction to Statistical Learning or similar)
- Four (4) advanced level courses.

### Students Enrolled Starting Autumn 2014 and Earlier

- Introduction to Neurobiology (NBIO 206 The Nervous System or equivalent).
- Nine (9) quarters of NBIO 300/MCP 300

- Five (5) advanced level courses within - and at least one course in each of - the following three areas:

1. Systems, Computational, Cognitive and Behavioral Neuroscience. Courses at this level focus on the computations performed by neural circuits and the role such computations play in behavior, perceptions, and plasticity. Students can expect to learn how neurons: Organize circuits into larger functional units; Represent and transform information; Produce myriad movement; and Subserve higher-level processing related to perception, reasoning and learning. Predominant methods in this area include modeling single cells and circuits, design of behavioral paradigms, and statistical analysis of behavioral and electrophysiological data.

Courses offered this academic year that can fulfill this include:

- COMPMED 207 Comparative Brain Evolution
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- NENS 220 Computational Neuroscience
- PSYCH 202 Cognitive Neuroscience
- PSYCH 204A Human Neuroimaging Methods
- PSYCH 232 Brain and Decision Making
- PSYCH 251 Lab in Experimental Methods
- PSYCH 266 Current Debates in Learning and Memory

Courses offered in previous years that fulfilled this requirement include:

- NBIO 218 Neural Basis of Behavior
- NBIO 220 Central Mechanisms in Vision-based Cognition
- NENS 205 Neurobiology of Disease Seminar

2. Cellular, Molecular and Developmental Neuroscience. Courses in this area address fundamental mechanisms that enable cells of the nervous system to develop, function in adulthood, change during learning and memory, and/or malfunction in disease states. Students can expect to learn core concepts in: Cell-cell communication; Intracellular signal transduction; Transcriptional and translational control; mRNA and protein trafficking; Membrane biophysics; and Cell motility. Dominant methods include molecular biology, genetics, cell biology, electrophysiology, and subcellular or multicellular imaging.

Courses offered this academic year that can fulfill this include:

- BIO 214 Advanced Cell Biology/BIOC 224 Advanced Cell Biology/MCP 221 Advanced Cell Biology
- BIO 254 Molecular and Cellular Neurobiology
- BIOS 200 Foundations in Experimental Biology
- GENE 221 Current Issues in Aging
- NBIO 254 Molecular and Cellular Neurobiology
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- PSYCH 204B Computational Neuroimaging: Methods & Analyses

Courses offered in previous years that fulfilled this requirement include:

- MCP 216 Genetic Analysis of Behavior (NBIO 216)
- NBIO 216 Genetic Analysis of Behavior (MCP 216)
- BIO 217
- COMPMED 215 Synaptic Properties and Neuronal Circuits

- MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology/MCP 156 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
- NBIO 218 Neural Basis of Behavior
- NBIO 220 Central Mechanisms in Vision-based Cognition

3. Translational Neuroscience. Courses in this area address fundamental concepts in studying disorders of the human brain and the peripheral nervous system and their treatment. Students can expect to learn about basic themes in: Pathophysiological mechanisms; Modeling of human diseases; Approaches to designing diagnoses and treatments; Implementing diagnoses and treatments. The courses highlight studies of human diseases that use genetics, molecular biology, psychological testing, and functional imaging.

Courses offered this academic year that can fulfill this include:

- BIO 267 Molecular Mechanisms of Neurodegenerative Disease / NENS 267 Molecular Mechanisms of Neurodegenerative Disease
- GENE 210 Genomics and Personalized Medicine / DBIO 220 Genomics and Personalized Medicine

Courses offered in previous years that fulfilled this requirement include:

- CSB 278 Systems Biology
- IMMUNOL 285 Brain and the Immune System
- NENS 205 Neurobiology of Disease Seminar

The previously-approved courses from outside the Neuroscience core listed below can satisfy the remaining elective requirements:

- BIO 217
- BIO 222 Exploring Neural Circuits
- BIO 230 Molecular and Cellular Immunology
- BIO 245 Ecology and Evolution of Animal Behavior
- BIO 258 Developmental Neurobiology
- BIOC 224 Advanced Cell Biology/BIO 214 Advanced Cell Biology/MCP 221 Advanced Cell Biology
- BIOE 291 Principles and Practice of Optogenetics for Optical Control of Biological Tissues
- BIOE 332
- BIOS 200 Foundations in Experimental Biology
- BIOS 210 Axonal Transport and Neurodegenerative Diseases
- BIOS 241 Dissecting algorithms for RNA Sequencing
- COMPMED 207 Comparative Brain Evolution
- COMPMED 215 Synaptic Properties and Neuronal Circuits
- CS 221 Artificial Intelligence: Principles and Techniques
- CS 229 Machine Learning
- CSB 210 Cell Signaling
- DBIO 201 Cells and Signaling in Regenerative Medicine.
- DBIO 210 Developmental Biology
- EE 263 Introduction to Linear Dynamical Systems/CME 263 Introduction to Linear Dynamical Systems
- MCP 221 Advanced Cell Biology/BIO 214 Advanced Cell Biology/BIOC 224 Advanced Cell Biology
- MCP 222 Imaging: Biological Light Microscopy

- NENS 267 Molecular Mechanisms of Neurodegenerative Disease/BIO 267 Molecular Mechanisms of Neurodegenerative Disease
- PSYCH 204 Computation and cognition: the probabilistic approach
- RAD 227 Functional MRI Methods/BIOPHYS 227 Functional MRI Methods

The previously-approved courses from outside the Neuroscience core listed below satisfied the remaining elective requirements:

- BIO 222 Exploring Neural Circuits
- CS 379 Interdisciplinary Topics
- IMMUNOL 285 Brain and the Immune System
- MUSIC 257 Neuroplasticity and Musical Gaming
- NENS 204 Stroke Seminar

Other courses not listed here can satisfy program requirements with prior approval of the Program Director.

The School of Law and the Neurosciences IDP offer a joint program leading to a J.D. degree combined with a Ph.D. in Neurosciences. The joint degree program provides an opportunity for students to develop expertise in both fields, and, in some cases, to prepare themselves intensively for careers in areas relating to both neuroscience and law.

Students interested in the joint degree program must apply and gain entrance separately to the School of Law and the Neurosciences IDP and, as an additional step, must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or the Neurosciences IDP may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Neurosciences IDP. Faculty advisers from each academic unit will participate in the planning and supervising of the student's joint program. Students must be enrolled full time in the Law School for the first year of law school and must be enrolled full time in the Neurosciences IDP for the first two years of that program, or until the student has passed the Qualifying Exam. At all other times, enrollment may be in the School of Medicine or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees as specified in the *Stanford Bulletin* or elsewhere.

The Law School shall approve courses from the Neurosciences IDP that may count toward the J.D. degree, and the Neurosciences IDP shall approve courses from the Law School that may count toward the Ph.D. degree in Neurosciences. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program. The total minimum number of university residency units required for both degrees is 190. No more than 54 units of approved courses may be counted toward both degrees.

Director: Anthony J. Ricci (Edward C. and Amy H. Sewall Professor in the School of Medicine and, Professor, by courtesy, of Molecular and Cellular Physiology)

Anesthesia: Bruce MacIver, Gregory Scherrer

Applied Physics: Surya Ganguli

Biochemistry: Suzanne Pfeffer

Bioengineering: Kwabena Boahen, Karl Deisseroth

Biology: Xiaoke Chen, Russ Fernald, H. Craig Heller, Liqun Luo, Susan McConnell, Mark Schnitzer, Carla Shatz, Kang Shen, Marc Tessier-Lavigne

Chemical and Systems Biology: Joanna Wysocka

Comparative Medicine: Paul Buckmaster, Shaul Hestrin

Developmental Biology: Seung Kim

Education: Candace Thille

Electrical Engineering: Krishna Shenoy

Genetics: Michael Bassik, Anne Brunet, Aaron Gitler

Medicine-Hematology: Steven Artandi

Molecular and Cellular Physiology: Axel Brunger, Miriam Goodman, Richard Lewis, Daniel Madison, Merritt Maduke, Thomas Sudhof

Neurobiology: Stephen Baccus, Ben Barres, Thomas Clandinin, Shaul Druckmann, Lisa Giocomo, Keren Haroush, Michael Lin, Tirin Moore, William Newsome, Jennifer Raymond

Neurology and Neurological Sciences: Katrin Andreasson, Marion Buckwalter, Michael Greicius, Ting-Ting Huang, John Huguenard, Michelle Monje-Deisseroth, Josef Parvizi, David Prince, Thomas Rando, Richard Reimer, Tony Wyss-Coray, Yanmin Yang

Neurosurgery: E.J. Chichilnisky, Jun Ding, Julia Kaltschmidt, Paul Nuyujukian, Theo Palmer, Giles Plant, Ivan Soltesz, Gary Steinberg, Suzanne Tharin, Xinnan Wang, Bradley Zuchero

Ophthalmology: Jeffrey Goldberg, Yang Hu, Y. Joyce Liao, Sui Wang

Otolaryngology: Alan Cheng, Nicolas Grillet, Lloyd Minor, Anthony Ricci

Pathology: Isabella Graef, Bingwei Lu, Marius Wernig

Pediatrics (Systems Medicine): Dennis Wall

Psychiatry: Nirao Shah

Psychiatry and Behavioral Sciences: Lu Chen, Luis de Lecea, Amit Etkin, Robert Malenka, Vinod Menon, Karen Parker, Sergiu Pasca, Allan Reiss, Lea Williams

Psychology: Justin Gardner, Ian Gotlib, Kalanit Grill-Spector, Brian Knutson, James McClelland, Anthony Norcia, Russell Poldrack, Anthony Wagner, Brian Wandell, Daniel Yamins

Radiology: Raag Airan, Jennifer McNab

# OBSTETRICS AND GYNECOLOGY

Courses offered by the Department of Obstetrics and Gynecology are listed under the subject code OBGYN on the Stanford Bulletin's ExploreCourses web site.

The Department of Obstetrics and Gynecology does not offer degrees; however, qualified medical, graduate, or undergraduate students with an interest in basic research in reproductive biology may apply to arrange individual projects under the supervision of the faculty. The focus for the Division of Reproductive, Stem Cell and Perinatal Biology is the study of the molecular and cellular biology of male and female reproductive organs.

*Chair:* Leslee L. Subak, M.D., Professor

*Vice Chair:* Maurice L. Druzin, M.D., Professor

## Division of Gynecology

Paul Blumenthal, M.D., M.P.H., Professor – Director

Paula Hillard, M.D., Professor, Associate Chair of Pediatric Gynecology

Deirdre Lum, M.D., Clinical Assistant Professor

Kate Shaw, M.D., Clinical Assistant Professor

Linh Tran-Ito, M.D., Clinical Assistant Professor

Navdeesh Reiners, M.D., Clinical Assistant Professor

John Wachtel, M.D., Clinical Instructor

Michelle Solone, M.D., Clinical Instructor

Leah Millheiser, M.D., Clinical Assistant Professor

## Division of Family Planning

Paul Blumenthal, M.D., M.P.H., Professor, Director

Kate Shaw, M.D., Clinical Associate Professor - Assistant Director of Family Planning and Director of Ryan Residency

Fred Hopkins, M.D., M.P.H., Clinical Associate Professor

Michele Hugin, M.D., Clinical Associate Professor

Amy Voedisch, M.D., Clinical Assistant Professor

Jennifer Conti, M.D., Clinical Associate Professor

Lisa Goldthwaite, M.D., Clinical Assistant Professor, Director of Ryan Residency Training Program in Family Planning

Wing Kay Fok, M.D., Clinical Instructor

Erica Cahill, M.D., Clinical Instructor

## Division of Gynecologic Oncology

Oliver Dorigo, M.D., Ph.D., Associate Professor; Director

Amer Karam, M.D. Clinical Associate Professor, Associate Director, Director of Outreach

Jonathan Berek, M.D., M.M.S., Professor

Nelson N.H. Teng, M.D., Ph.D., Associate Professor

Trung Nguyen, M.D., Clinical Assistant Professor

Valerie Sugiyama, M.D., Clinical Assistant Professor

Diana English, M.D., Clinical Assistant Professor

Erin Rankin, Ph.D., Assistant Professor

Wendy Fantl, Ph.D., Assistant Professor

## Division of Reproductive Endocrinology and Infertility

Valerie Baker, M.D., Professor; Director

Barry Behr, Ph.D., H.C.L.D., Professor (non-clinical)

Amin Milki, M.D., Professor

Lynn Westphal, M.D., Professor, Director, REI Fellowship

Ruth Lathi, M.D., Associate Professor, Director, Clinical Operations

Steven Nakajima, M.D., Clinical Professor

## Division of Female Pelvic Medicine & Reconstructive Surgery/Urogynecology

Bertha Chen, M.D., Professor; Chief

Eric Sokol, M.D., Associate Professor; Co-Director of FPMRS Fellowship

Lisa Rogo-Gupta, M.D., Clinical Assistant Professor, Director of Ambulatory Gyn, Director of Visiting Clerkship

## Division of Maternal-Fetal Medicine

Yasser El-Sayed, M.D., Professor; Director

Maurice Druzin, M.D., Professor

Deirdre Lyell, M.D., Professor

Yair Blumenfeld, M.D., Associate Professor

Jane Chueh, M.D., Clinical Professor

Mark Boddy, M.D., Clinical Associate Professor

Martha Rode, M.D., Clinical Associate Professor

Amen Ness, M.D., Clinical Professor

Natali Aziz, M.D., Clinical Associate Professor

Katherine Bianco, M.D., Clinical Assistant Professor

Ronald Gibbs, M.D., Clinical Professor

## Division of General Obstetrics

Yasser El-Sayed, M.D., Professor; Director

Kay Daniels, M.D., Clinical Professor

Jeffrey Faig, M.D., Clinical Professor

Laura Brodzinsky, M.D., Clinical Associate Professor

Kimberly Harney, M.D., Clinical Associate Professor – (Co-clerkship director)

Caroline Bowker, M.D., Clinical Associate Professor

Susan Crowe, M.D., Clinical Associate Professor

Cynthia DeTata, M.D., Clinical Assistant Professor – (Co-clerkship director)

Sylvie Blumstein, M.D., Clinical Assistant Professor

**Division of Reproductive, Stem Cell and Perinatal Biology (Research)**

Virginia Winn, M.D., Ph.D., Associate Professor; Director

Aaron J. Hsueh, Ph.D., Professor

Vittorio Sebastiano, Ph.D., Assistant Professor

# PATHOLOGY

Courses offered by the Department of Pathology are listed under the subject code PATH on the Stanford Bulletin's ExploreCourses web site.

## Programs of Study in Pathology

The Department of Pathology offers advanced courses in aspects of pathology. The department does not offer advanced degrees in pathology, but qualified graduate students who are admitted to department-based or interdepartmental graduate programs may elect to pursue their thesis requirements in the department's research laboratories. The discipline of pathology has served as a bridge between the preclinical and clinical sciences and is focused on the application of advances in the basic biological sciences, both to the diagnosis of human disease and the elucidation of the mechanisms of normal molecular, cellular, and organ structure and function that manifest themselves in clinical disease. Accordingly, the department's research interests extend from fundamental molecular biology to clinical-pathological correlations, with an emphasis on experimental oncology.

Investigation in the department includes basic studies in areas using molecular biological, biochemical, and genetic cell biological techniques: DNA replication in yeast and cultured eukaryotic cells, cell cycle control in animal cells and yeast, identification and pathogenetic role of chromosomal aberrations in human malignancies and mechanisms of activation of oncogenes in human and animal cells, lymphocyte and neutrophil-interactions with endothelial cells, cell type specification and signal transduction pathways leading to specific gene expression or modulation of cytoskeletal behavior; cytoskeletal architecture, cell-matrix interaction, developmental biology of hematopoietic stem cells and thymus, regulation of the immune system, mechanisms of immune and other responses in the central nervous system, and neuro-degenerative diseases. Various studies focus on the development of novel diagnostic and immunotherapeutic treatment modalities and techniques for solid tumors, lymphomas, HIV, and genetic diseases. Research training in all of these areas is available for qualified medical and graduate students by individual arrangement with the appropriate faculty member.

A summary of the research interests of the department faculty is available at Sanford's School of Medicine (<http://pathology.stanford.edu>) web site.

*Emeriti: (Professor)* Ellen Jo Baron, Susan Galel, Sharon Geaghan, Michael Hendrickson, Richard L. Kempson, Jon Kosek, Roger Warnke

*Chair:* Stephen J. Galli

*Professors:* Daniel Arber, Jeffrey D. Axelrod, Gerald J. Berry, Matt Bogyo, Eugene C. Butcher, Athena Cherry, Michael L. Cleary, Gerald R. Crabtree, Edgar G. Engleman, Dean Felsher, Marcelo Fernandez-Vina, Andrew Fire, Steven Foung, Stephen J. Galli, Lawrence Tim Goodnough, John Higgins, Neeraja Kambham, Christina Kong, Teri Longacre, Joseph S. Lipsick, Bingwei Lu, Sara Michie, Yasodha Natkunam, Donald P. Regula, Robert V. Rouse, Kang Shen, Iris Schrijver, Hua Shan, Richard K. Sibley, Raymond Sobel, Dolly Tyan, Matt van de Rijn, Hannes Vogel, Irving L. Weissman, Eduardo Zambano, James Zehnder

*Associate Professors:* Kim Allison, Jeffrey D. Axelrod, Matt Bogyo, Niaz Banaie, Andrew Connolly, Tina Cowan, Jonathan R. Pollack, Arend Sidow, Marius Wernig, Robert West

*Assistant Professors:* Sean Bendall, Scott Boyd, Ann Folkins, Isabella Graef, Dita Gratzinger, F. Kim Hazard, Kristin Jensen, Chia-Sui Kao, Jinah Kim, Jason Merker, Stephen Montgomery, Robert Ohgami, Benjamin Pinsky, Ed Plowey, Erich Schwartz, Gerlinde Wernig, Monte Winslow, Ellen Yeh

*Courtesy Professors:* Donna Bouley, John Day, Bertil Glader

*Courtesy Associate Professor:* Euan Ashley, Robert Shafer

*Courtesy Assistant Professor:* Michaela Liedtke, Michelle Monje-Deisseroth

*Clinician Educators:* Jennifer Andrews, Raffick Bowen, Susan Atwater, David Bingham, Brittany Holmes, Christian Kunder, Steven Long, Melanie Manning, Roberto Novoa, David Oh, Tho Pham, Kerri Rieger, Matthew Rumery, Darren Salmi, Neil Shah, Run Shi, Carlos Suarez, Brent Tan, Eric Yang

*Instructors:* Mike Angelo, Joseph Hernandez, Marisa Juntilla, Franklin Mullins, Justin Odegaard, Riccardo Sibiliano, Albert Tsai, Kitchener Wilson

*Adjunct Clinical Faculty:* Swaroop Aradhya, Robert Archibald, Jerome S. Burke, Glenn Cockerham, Seth Haber, Maie K. Herrick, Paul W. Herrmann, Michelle Jorden, Charles Lombard, Robert Luo, Gregory Moes, Joseph O'Hara, William Rueh, Matrina Schmidt, Thomas W. Rogers

*Clinical Educators (Affiliated):* Melissa Clark, Dean Fong, Barbara Egbert

# PHYSICIAN ASSISTANT STUDIES

Courses offered by the Master of Science in Physician Assistant Studies program are listed under the subject code PAS (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=PAS&filter-departmentcode-PAS=on&filter-coursestatus-Active=on>) on the Stanford Bulletin's Explore Courses web site.

The Master of Science (M.S.) in Physician Assistant Studies program is a 30-month program (with one summer break) that includes streamlined courses with innovative content delivery, a state-of-the-art simulation lab, and world-class clinical anatomy experiences as well as early exposure to patient care. Students receive mentorship and support in their academic and research focus areas by clinically practicing Stanford PAs. During the didactic work, PA students are located at the School of Medicine and enroll as a cohort in a clinically focused curriculum. A substantial portion of their courses are integrated with medical students, allowing for an invaluable interprofessional education experience. During their clerkship year, students rotate through Stanford-affiliated hospitals and ambulatory practices as well as select sites throughout California. In an innovative approach to PA education that encourages the next generation of PA leaders, students are required to select one area of scholarly concentration and complete a capstone project. The areas of scholarly concentration include:

- Community Health
- Health Services and Policy Research
- Clinical Research
- Medical Education.

Upon completion of this 30-month program, students are prepared to sit for the Physician Assistant National Certification Examination (PANCE).

The Master of Science in Physician Assistant Studies program is open to external as well as internal applicants. Advanced placement and coterminal degrees for Stanford University undergraduates are not available at this time. Individuals who wish to apply to the program should do so via the Central Application Service for Physician Assistants (CASPA) (<https://caspa.liasoncas.com>). The application window typically opens at the end of April and closes on September 1.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

## Master of Science in Physician Assistant Studies

The Master of Science (M.S.) in Physician Assistant (PA) Studies program is for individuals who wish to pursue a career as a PA. The program is available to external and internal candidates. Advanced placement and coterminal degrees for Stanford University undergraduates are not available at this time.

The first five quarters of the 30-month program involve acquiring fundamental medical knowledge through course work in clinical anatomy, the basic sciences, pharmacology, and pathophysiology and disease management, as well as attaining core skills in medical interviewing and the physical examination. The last four quarters of the program are dedicated to experiential learning through clinical rotations in inpatient and outpatient medicine, pediatrics, women's health, emergency medicine, surgery, and behavioral medicine, as well as elective rotations.

## Admission

- Applicants must have received an undergraduate degree from a regionally accredited U.S. college or university by July 15 of the year of matriculation; no specific discipline or major is prescribed.
- Prior healthcare experience (> 500 hours) through either prior employment and/or volunteer work is strongly recommended.
- The Graduate Record Examination (GRE) is required. Note that GRE scores are only valid for five years and must be current at the time of application.
- Candidates are required to submit a personal statement of no more than 5,000 characters and three letters of reference as part of the application process via CASPA (<https://caspa.liasoncas.com>).
- Candidates are also required to answer four questions in CASPA (<https://caspa.liasoncas.com>) specifically designed for the Stanford School of Medicine M.S. in PA Studies program. The questions relate to future PA practice, leadership potential, area of scholarly interest, and contributions to diversity.

It is strongly recommended that students complete the following coursework prior to applying to the program:

- Anatomy
- Physiology
- Chemistry
- General Statistics or Biostatistics
- Psychology
- Three upper-division science courses (e.g., in cell biology, genetics, or microbiology) are recommended before matriculation.

## Degree Requirements

All students in the program must complete the Master of Science in PA Studies program core curriculum (160 units) and additional work in an area of scholarly interest (6 units).

Upon completion of the didactic coursework (5 quarters), students begin 12 months of clinical clerkship within the Stanford Healthcare Community and in other select clinical sites.

Students choose an area of scholarly concentration which include:

- Community Health
- Health Services and Policy Research
- Clinical Research
- Medical Education

All students must complete a capstone project in their area of scholarly interest.

## Leadership

*Associate Dean for PA Education and Program Director:* Susan Fernandes  
*Associate Program Director:* Rhonda Larsen  
*Medical Director:* Andrew Nevins  
*Associate Medical Director:* Ian Nelligan

## Core Faculty

*Director of Pre-Clerkship Education:* Nicole Burwell  
*Director of Clerkship Education:* Andrew Chastain  
*Early Clinical Experience Coordinator:* Lucinda Hirahoka

## Educators for Care PA (E4C-PA) Faculty

Chad Anderson  
 Camille Bloom

Jennifer Hunter  
Courtney Nelson  
Kendra Patton  
Adam Seligman

# RADIATION ONCOLOGY

---

Courses offered by the Department of Radiation Oncology are listed under the subject code RADO on the Stanford Bulletin's ExploreCourses web site.

Radiation Oncology focuses on the use of radiation for cancer therapy and research. The department does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Graduate students in Biophysics and Cancer Biology may perform their thesis research in the department. Undergraduates may arrange individual research projects under supervision of faculty.

At the present time, the major areas of basic research investigation in the department include: DNA repair in mammalian cells after ionizing irradiation; studies of the mechanism of tumor hypoxia in animal tumors; development of new anti-cancer drugs to exploit tumor hypoxia; cytogenetic and molecular methods of predicting the sensitivity of individual tumors to cancer therapy; radiolabeled monoclonal antibodies for cancer detection and treatment; studies of oxygen levels in human tumors using polarographic electrodes; clinical trials of a new hypoxic cytotoxic agent (tirapazamine); studies of the late effects of cancer therapy; and techniques of conformal and intensity modulated radiation therapy.

## Faculty

*Emeriti:* Malcolm A. Bagshaw, Peter Fessenden, Don R. Goffinet, George M. Hahn, Kendric Smith

*Chair:* Richard T. Hoppe

*Professors:* J. Martin Brown, Sarah S. Donaldson, Amato J. Giaccia, Steven L. Hancock, Richard T. Hoppe, Quynh-Thu Le, Daniel S. Kapp, Steven A. Liebel

*Associate Professors:* Iris C. Gibbs, Paul Keall, Christopher R. King, Susan J. Knox, Gary Luxton, Lei Xing

*Assistant Professors:* Laura Attardi, Daniel Chang, Nicholas Denko, Edward Graves, Albert C. Koong

*Consulting Professor:* Robert M. Sutherland

# RADIOLOGY

---

Web Site: <http://www-radiology.stanford.edu>

Courses offered by the Department of Radiology are listed under the subject code RAD on the Stanford Bulletin's ExploreCourses web site.

The Department of Radiology does not offer degrees. However, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Undergraduates may also arrange individual research projects under the supervision of the department's faculty. This discipline focuses on the use of radiation, ultrasound, and magnetic resonance as diagnostic, therapeutic, and research tools. The fundamental and applied research within the department reflects this broad spectrum as it relates to anatomy, pathology, physiology, and interventional procedures. Original research and development of new clinical applications in medical imaging is supported within the Radiological Sciences Laboratory.

## Faculty

*Emeriti: (Professors)* Herbert L. Abrams, Ronald Castellino, Barton Lane, Gerald Friedland, David A. Goodwin, Michael L. Goris, Henry H. Jones, William Marshall, I. Ross McDougall, Robert E. Mindelzun, Matilde Nino-Murcia, William H. Northway, Bruce R. Parker, Lewis Wexler, Leslie M. Zatz

*Chair:* Sanjiv Sam Gambhir

*Professors:* Patgrick Barnes, Richard A. Barth, Christopher F. Beaulieu, Bruce Daniel, Huy M. Do, Michael Federle, Nancy Fischbein, Dominik Fleischmann, Sanjiv Sam Gambhir, Gabriela Gayer, Gary H. Glover, Garry E. Gold, Robert J. Herfkens, Lawrence Hofmann, Dave Hovsepian, Debra M. Ikeda, R. Brooke Jeffrey, Peter Kane, Ralph Lachman, Barton Lane, Ann Leung, Craig Levin, Michael Marks, Tarik Massoud, Michael Moseley, Peter Moskowitz, Sandy Napel, Beverley Newman, Norbert J. Pelc, Allan Reiss, Brian Rutt, George Segall, F. Graham Sommer, Daniel Spielman, Daniel Y. Sze, Volney Van Dalsem, Joseph Wu

*Professor (Research):* R. Kim Butts-Pauly, Sylvia Plevritis

*Associate Professors:* Sandip Biswal, Francis Blankenberg, Frandics P. Chan, Terry Desser, Andrei H. Iagaru, Nishita Kothary, William Kuo, David Larson, John Louie, Eric W. Olcott, Sunita Pal, Andrew Quon, Geoffrey Riley, Erika Rubesova, Kathryn J. Stevens, Shreyas Vasanaawala, Juergen Willmann, Dorcas Yao, Greg Zaharchuk

*Associate Professors (Research):* Roland Bammer, Zhen Cheng, Heike Daldrup-Link, Rebecca Fahrig, Brian Hargreaves, Sylvia Plevritis, Jianghong Rao

*Assistant Professors:* Robert Dodd, Pejman Ghanouni, Howard Harvin, Gloria Hwang, Aya Kamaya, Sirisha Komakula, Jafi Lipson, Amelie Lutz, Payam Massaband, Erik Mittra, Zina Payman, Peter Poulos, Jianghong Rao, Daniel Rubin, Lisa Schmelzel, Rajesh Shah, Lewis Shin, Minal Vasanaawala, David Wang, Joseph Wu, Kristen Yeom, Michael Zeineh, Ashwini, Zenoos

*Assistant Professors (Research):* Frederick T. Chin, Parag Mallick, Jennifer McNab, David Paik, Ramasamy Paulmurugan, Sharon Pitteri

*Clinical Instructors:* Bao Do, H. Henry Guo, Stefan Hura, Linda Morimoto

# STEM CELL BIOLOGY AND REGENERATIVE MEDICINE

Courses offered by the Program in Stem Cell Biology and Regenerative Medicine are listed under the subject code STEMREM on the Stanford Bulletin's Explore Courses web site.

## Graduate Program in Stem Cell Biology and Regenerative Medicine

The Stanford Stem Cell Biology and Regenerative Medicine (SCBRM) program is dedicated to doctoral education that translates basic science to clinical applications, typically referred to as Translational Science, and of intense interest internationally in medical schools and universities. Our doctoral program provides exceptional didactic education and research experience in the basic sciences underlying stem cell biology. In addition, program participants will receive specialized training in the development and clinical application of discoveries in the basic sciences to achieve regenerative therapies. Thus, our graduates will be uniquely positioned to develop successful translational careers in Stem Cell Biology and Regenerative Medicine, and will emerge prepared to deliver on their passion to improve the human condition. The core curriculum is combined with unique research and clinical/professional immersion rotations to provide opportunities for doctoral students to specialize in the broad subject of translational medicine and yet focus specifically on fundamentals of SCBRM. The curriculum combines education in genetics and developmental biology with an introductory laboratory-based stem cell course, an advanced course in stem cell biology and regenerative medicine, and a clinical rotation with alternative opportunities in law, business and/or engineering.

The mission of the SCBRM graduate program is to produce future leaders in translational science through a combination of basic science and clinical/professional immersion. The program aims to be innovative and to change the landscape for graduate education in the biomedical sciences by having the immersion tailored to each student's translational goals. The program accommodates students who wish to focus primarily at the basic science level alongside those who wish to focus specifically on innovation such as a new device to solve a clinical problem. In the former case, the student might seek out a primary mentor affiliated with the basic sciences and take electives that reflect the more basic interest. In the latter case, the student might select an elective with an engineering focus and seek out primary mentorship with a more clinically or engineering focused mentor. In this way, graduates from our doctoral program receive exceptional didactic education and research experience and are well positioned to develop successful translational careers in SCBRM by applying their knowledge and passion to improve human health.

## Master of Science in Stem Cell Biology and Regenerative Medicine

University requirements for the M.S. degree are described in the "Graduate Degree (p. 50)s" section of this bulletin.

Students in the Ph.D. program in SCBRM may apply for an M.S. degree in SCBRM, assuming completion of appropriate requirements. The program does not accept applications for a standalone M.S. degree.

To receive an M.S. in Stem Cell Biology and Regenerative Medicine, Students must complete the following:

1. Four full-tuition quarters of residency as a graduate student at Stanford.

2. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 16 units of which must be at or above the 200 level.
3. Four quarters of graduate research, consisting of rotations in the labs of at least three SCBRM faculty members.
4. Course work in Stem Cell Biology and Regenerative Medicine as well as other core requirements:
  - a. STEMREM 200 Stem Cell Intensive hands-on immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.
  - b. BIOS 200 Foundations in Experimental Biology focuses on the broad themes of Evolution, Energy and Information.
  - c. STEMREM 201A Stem Cells and Human Development: From Embryo to Cell Lineage Determination and STEMREM 201B Stem Cells and Human Development Laboratory develop a fundamental understanding of introductory stem cell principles in human development, aging, and disease accompanied by a laboratory-based module with immersion in stem cell-based methods (embryology, embryonic stem cells, reprogramming, adult stem cells).
  - d. STEMREM 202 Stem Cells and Translational Medicine, advanced topics related to individual organ systems, cancer stem cells, translational principles of medicine and immunology as related to regenerative medicine, as well as bioengineering and bioinformatics as related to stem cell biology.
  - e. STEMREM 203 Stem Cells Immersion: Applications in Medicine, Business and Law, students specialize and choose a clinical immersion, rotation in a biotechnology company or venture firm, or further delve into cutting edge technologies, bioinformatics, materials and/or engineering approaches for stem cell applications in industry, diagnostics and medicine.
  - f. STEMREM 250 Regenerative Medicine Seminar Series, a forum for researchers to meet and discuss Stem Cell Biology and Regenerative Medicine and to spark collaborations. 6 units of this course is required.
  - g. STEMREM 280 Stem Cell Biology and Regenerative Medicine Journal Club, review and discussion of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine.

STEMREM 200	Stem Cell Intensive	1
BIOS 200	Foundations in Experimental Biology	6
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	1-2
STEMREM 201B	Stem Cells and Human Development Laboratory	3
STEMREM 202	Stem Cells and Translational Medicine	3-5
STEMREM 203	Stem Cells Immersion: Applications in Medicine, Business and Law	3
STEMREM 250	Regenerative Medicine Seminar Series	1
STEMREM 280	Stem Cell Biology and Regenerative Medicine Journal Club	2
BIOC 224/ BIO 214/ MCP 221	Advanced Cell Biology	4
GENE 205	Advanced Genetics	3
MED 255	The Responsible Conduct of Research	1
DBIO 210	Developmental Biology	4
STEMREM 399	Graduate Research	1-18
Total Units		33-53

Units

- h. Students are also required to take 2 electives, totaling a minimum of 6 units.
  - i. Biochemistry proficiency is required by the end of the second year, as well as a total of 80 units and completed qualifying examinations. Students who do not pass the qualifying examination may retake a full qualifying exam, be retested in a few areas, or be asked to redo their presentation.
5. Participation and attendance at the annual SCBRM Retreat.
  6. The qualifying examination process in SCBRM before admission to Ph.D. candidacy has two parts:
    - Part I: a comprehensive written exam in the form of a 5-page NIH grant proposal
    - Part II: a 15-minute oral presentation of the proposal to the thesis committee followed by open questions from the qualifying exam committee on the proposal or encompassing areas of research/academic scholarship that are deemed relevant to the proposal.

Students who do not pass the qualifying exam may retake the full qualifying exam, be retested in a sub-area, or be asked to redo their presentation. Those students who fail the qualifying exam twice may be awarded a master's degree based on completion of course work and rotations. In addition, students who choose to voluntarily leave the program are also awarded a master's degree based on completion of the qualifying exam.

## Doctor of Philosophy in Stem Cell Biology and Regenerative Medicine

University requirements for the Ph.D. are discussed in the "Graduate Degrees (p. 50)" section of this bulletin.

The Stem Cell Biology and Regenerative Medicine curriculum, combined with the research and rotation opportunities, provides a flexible educational opportunity for doctoral students to specialize in the broad subject of translational medicine while being focused more specifically on the fundamentals of Stem Cell Biology and Regenerative Medicine while training in the laboratories of participating SCBRM faculty. The goal of the SCBRM program is to provide an avenue for graduate education to translate the best of basic research into a clinical setting.

### Application and Admission

Applications are made through the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

Applicants will be assessed based on their undergraduate transcripts, test scores, research experience, statement of purpose and letters of recommendation that document exceptional potential, ability, or achievements.

Students admitted to the program are offered financial support covering tuition, a living stipend, and insurance coverage. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but SCBRM graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program. Upon matriculation, each student is assisted in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee is composed to include the dissertation adviser and two additional SCBRM faculty, to guide the student during their dissertation research. The student must meet with the dissertation committee at least once a year.

## Degree Requirements

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research.

Requirements for the Ph.D. degree in SCBRM include:

1. Completion of at least 3 research rotations in the labs of SCBRM faculty members.
2. Completion of the following courses:
  - a. STEMREM 200 Stem Cell Intensive hands-on immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.
  - b. BIOS 200 Foundations in Experimental Biology focuses on the broad themes of Evolution, Energy and Information.
  - c. STEMREM 201A Stem Cells and Human Development: From Embryo to Cell Lineage Determination and STEMREM 201B Stem Cells and Human Development Laboratory develop a fundamental understanding of introductory stem cell principles in human development, aging, and disease accompanied by a laboratory-based module with immersion in stem cell-based methods (embryology, embryonic stem cells, reprogramming, adult stem cells).
  - d. STEMREM 202 Stem Cells and Translational Medicine advanced topics related to individual organ systems, cancer stem cells, translational principles of medicine and immunology as related to regenerative medicine, as well as bioengineering and bioinformatics as related to stem cell biology.
  - e. STEMREM 203 Stem Cells Immersion: Applications in Medicine, Business and Law students specialize and choose a clinical immersion, rotation in a biotechnology company or venture firm, or further delve into cutting edge technologies, bioinformatics, materials and/or engineering approaches for stem cell applications in industry, diagnostics and medicine.
  - f. STEMREM 250 Regenerative Medicine Seminar Series a forum for researchers to meet and discuss Stem Cell Biology and Regenerative Medicine and to spark collaborations. 6 units of this course is required.
  - g. STEMREM 280 Stem Cell Biology and Regenerative Medicine Journal Club review and discussion of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine.
3. Students have the option to select from the following courses in the first year:

		Units
STEMREM 200	Stem Cell Intensive	1
BIOS 200	Foundations in Experimental Biology (Offered in Autumn and Spring)	6
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	1-2
STEMREM 201B	Stem Cells and Human Development Laboratory	3
STEMREM 202	Stem Cells and Translational Medicine	3-5
STEMREM 203	Stem Cells Immersion: Applications in Medicine, Business and Law	3
STEMREM 250	Regenerative Medicine Seminar Series	1
STEMREM 280	Stem Cell Biology and Regenerative Medicine Journal Club	2
BIOC 224/ BIO 214/ MCP 221	Advanced Cell Biology	4
GENE 205	Advanced Genetics	3
MED 255	The Responsible Conduct of Research	1

DBIO 210	Developmental Biology	4
STEMREM 399	Graduate Research	1-18
Total Units		33-53

4. Students are also required to take 2 electives, totaling a minimum of 6 units.
5. Biochemistry proficiency is required by the end of the second year, as well as a total of 80 units and completed qualifying examinations. Students who do not pass the qualifying examination may retake a full qualifying exam, be retested in a few areas, or be asked to redo their presentation.
6. STEMREM 802 TGR Dissertation.

Students unable to meet Ph.D. milestones after remediation are offered a M.S. degree if they have completed all requirements.

*Program Director:* Theo D. Palmer

*Program Co-Director:* Vittorio Sebastiano

*Teaching Faculty:*

- Arash A. Alizadeh (Assistant Professor, Medicine/Oncology and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Philip A. Beachy (Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Biochemistry and Developmental Biology and Member of Bio-X and Stanford Cancer Institute)
- Samuel Cheshier (Assistant Professor, Neurosurgery and (by courtesy) Neurology & Neurological Sciences and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Michael F. Clarke (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Medicine/Oncology and Member of Bio-X and Stanford Cancer Institute)
- Tushar Desai (Assistant Professor, Medicine/Pulmonary & Critical Care Medicine and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Maximilian Diehn (Assistant Professor, Radiation Oncology/Radiation Therapy and Member of Bio-X and Stanford Cancer Institute)
- Margaret T. Fuller (Professor, Developmental Biology, Genetics and Obstetrics & Gynecology/Reproductive Biology and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Sarah C. Heilshorn (Associate Professor, Materials Science and Engineering and (by courtesy) Chemical Engineering and Member of Bio-X, Child Health Research Institute and Stanford Neurosciences Institute)
- Stefan Heller (Professor, Otolaryngology/Head and Neck Surgery and Member of Bio-X, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Michael T. Longaker (Professor, Surgery/Plastic and Reconstructive Surgery, and (by courtesy) Bioengineering and Materials Science and Engineering and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Ravindra Majeti (Associate Professor, Medicine/Hematology and Member of Bio-X and Stanford Cancer Institute)
- Michelle Monje-Deisseroth (Assistant Professor, Neurology & Neurological Sciences and Member of Bio-X, Child Health Research Institute, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Hiromitsu Nakauchi (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Genetics and Member of Bio-X)
- Roeland Nusse (Professor, Developmental Biology and Member of Bio-X and Stanford Cancer Institute)
- Anthony Oro (Professor, Dermatology and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Theo D. Palmer (Associate Professor, Neurosurgery and Member of Bio-X, Child Health Research Institute, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Sergiu Pasca (Assistant Professor, Psychiatry & Behavioral Sciences/Stanford Center for Sleep Sciences & Medicine and Member of Bio-X, Child Health Research Institute and Stanford Neurosciences Institute)
- Matthew Porteus (Associate Professor, Pediatrics/Stem Cell Transplantation and Member of Bio-X, Cardiovascular Institute, Child Health Research Institute and Stanford Cancer Institute)
- Maria Grazia Roncarolo (Professor, Pediatrics/Stem Cell Transplantation and Medicine/Blood & Marrow Transplantation and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Vittorio Sebastiano (Assistant Professor, Obstetrics & Gynecology/Reproductive Biology and Member of Bio-X and Child Health Research Institute)
- Judith Shizuru (Professor, Medicine/Blood & Marrow Transplantation and Member Stanford Cancer Institute)
- Irving L. Weissman (Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Pathology and Developmental Biology and (by courtesy) Department of Biology and Member of Bio-X and Stanford Cancer Institute)
- Marius Wernig (Associate Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Pathology and (by courtesy) Chemical & Systems Biology and Member of Bio-X, Child Health Research Institute, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Joseph C. Wu (Professor, Medicine/Cardiovascular Medicine and Radiology and Director, Cardiovascular Institute and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Sean M. Wu (Associate Professor, Medicine/Cardiovascular Medicine and (by courtesy) Pediatrics and Member of Bio-X, Cardiovascular Institute and Child Health Research Institute)
- Joanna Wysocka (Professor, Chemical & Systems Biology and Developmental Biology and Member Bio-X and Stanford Cancer Institute)

# STRUCTURAL BIOLOGY

Courses offered by the Department of Structural Biology are listed under the subject code SBIO on the Stanford Bulletin's ExploreCourses web site.

The department offers course work and opportunities for research in structural biology.

The emphasis of research in the department is on understanding fundamental cellular processes in terms of the structure and function of biological macromolecules and their assemblies. Techniques used include standard methods of biochemistry, cell culture, single-molecule fluorescence spectroscopy, genetic engineering, and three dimensional structure determination by x-ray diffraction, nuclear magnetic resonance spectroscopy and electron microscopy, coupled with the development of computational methods.

## Doctor of Philosophy in Structural Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The graduate program in Structural Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP) in which individuals are candidates for both Ph.D. and M.D. degrees.

The graduate program is intended to prepare students for careers as independent investigators in cell and molecular biology. The principal requirement of a Ph.D. degree is the completion of research constituting an original and significant contribution to the advancement of knowledge.

**The requirements and recommendations for applying to the Ph.D. program in the Department of Structural Biology include:**

		Units
CHEM 131	Organic Polyfunctional Compounds	3
CHEM 171	Physical Chemistry I	4
CHEM 173	Physical Chemistry II	3
CHEM 175	Physical Chemistry III	3
BIOC 200	Applied Biochemistry	2

**Ph.D. students in the Department of Structural Biology are required to complete all the following requirements:**

		Units
BIOS 200	Foundations in Experimental Biology	5
SBIO 241	Biological Macromolecules	3-5
or BIOE 300A	Molecular and Cellular Bioengineering	
SBIO 242	Methods in Molecular Biophysics (offered every other year)	3
BIOPHYS 250	Seminar in Biophysics	1
MED 255	The Responsible Conduct of Research	1

AND, at least 3 additional graduate level courses in physical or biological science, with

at least 1 course in physical science

at least 1 course in literature-based biological science

1. Training in a major with connections to biophysics (e.g., physics, chemistry, or biology, with a quantitative background equivalent to that of an undergraduate physics or chemistry major at Stanford).
2. Opportunities for teaching are available during the first nine quarters at the discretion of the advising committee.

3. The student must prepare a dissertation proposal defining the research to be undertaken including methods of procedure. This proposal should be submitted by the end of summer quarter of the second year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Department of Structural Biology. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.
4. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of structural biology.
5. The student must pass the University oral examination, taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the research is presented by the candidate.

Applicants to the program should have a bachelor's degree and should have completed at least a year of course work in biology, mathematics, organic chemistry, physical chemistry, and physics. Application forms must be received by the department before December 15 for notification by April 15. Application to the National Science Foundation for fellowship support is also encouraged. Remission of fees and a personal stipend are available to graduate students in the department. Prospective applicants should contact the Department of Structural Biology for further information.

Current topics of research in the department lie in the areas of gene expression; theoretical, crystallographic, and genetic analysis of protein structure; and cell-cell interaction. See Stanford's School of Medicine (<http://www.med.stanford.edu/school/structuralbio>) web site for further information.

## OTHER OFFICES

---

These pages list various offices, centers, laboratories, and institutes of direct relevance to study at Stanford. The listings are not all-inclusive.

- A comprehensive list of Stanford offices is available on the University's A to Z Index page (<http://www.stanford.edu/atoz>).
- A comprehensive list of Independent Labs, Institutes and Centers (<http://doresearch.stanford.edu/research-scholarship/interdisciplinary-laboratories-centers-and-institutes>)

# ATHLETICS

## Contacts

Office: Arrillaga Family Sports Center  
 Mail Code: 94305-6150  
 Phone: (650) 723-4591  
 Web Site: <http://gostanford.com>

## Our Mission

From its founding in 1891, Stanford University's leaders have believed that physical activity is valuable for its own sake and that vigorous exercise is complementary to the educational purposes of the university. Within this context for human development, it is the mission of Stanford Athletics to offer a wide range of high quality programs which will encourage and facilitate all participants to realize opportunities for championship athletic participation, physical fitness, health and well being.

## Principles That Guide Us

### We Will Teach

- By encouraging our student-athletes to capture all the joy, power and extraordinary personal growth that comes to those who compete and support athletic excellence.
- By hiring and retaining the best coaches and staff members available and arming them with the tools to achieve at the highest level.
- By fostering and nurturing a coaching, physical education and recreation staff that is committed to teaching with integrity and ambition and that performs in a manner which is consistent with the academic priorities of Stanford University.
- By recognizing the need to work as a team while valuing each individual's unique characteristics and abilities.
- By committing ourselves to the personal development and well being of our student-athletes and staff. Those who participate at all levels will learn the benefits of teamwork, discipline, goal setting, physical fitness, healthy lifestyles, character development, self confidence, sportsmanship, and an appreciation for lifelong learning.

### We Will Lead

- By being the model of success, of universal opportunity, and of unwavering commitment to the ideal of the scholar-athlete.
- By operating with integrity as we follow the spirit and the letter of each rule. Integrity will be displayed in our policies, performances and programs.
- By continuing our long history of conference and national prominence through a commitment to cutting edge involvement in athletic issues.

### We Will Win

- By maximizing our effort in every competition, on every team and in every setting where skill, determination and hard work combine to achieve singularly successful results.
- By having an uncompromising commitment to Conference and National championships and by providing each student-athlete with the tools necessary to be successful at the highest levels of both academic and athletic performance.
- By creating a commitment to a university-wide wellness culture that will allow Stanford students, faculty and staff to maximize their health and fitness opportunities throughout their lives.

## We Will Serve

- By respecting, honoring and responding to the needs of our student-athletes, coaches, colleagues, advocates and members of our larger community.
- By encouraging innovation and creativity. We will harness technology to extend our reach and to interface with our various internal and external constituencies.
- Through fiscal responsibility in all elements of departmental operations.
- By advancing outreach as a fundamental component of the department, we will strive to enhance the overall mission of the University through competitive excellence, effective outreach and an on-going commitment to customer service.
- By utilizing the department resources and physical facilities to serve the campus community, our alumni and our supporters throughout the world.
- By valuing our heritage, and in doing so we commit ourselves to championship caliber athletic achievement and the on-going enhancement of the traditions of Stanford Athletics, including leadership, individual and team achievement and intense pride and loyalty.

## Courses

Courses offered for intercollegiate and club sport athletes are listed under the subject code ATHLETIC (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=ATHLETIC&filter-departmentcode-ATHLETIC=on&filter-coursestatus-Active=on>) on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/browse>) web site. Courses are activity classes (ACT) and carry 1-2 units of credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other University activity classes) may be applied toward undergraduate graduation requirements. See the "Credit (p. 35)" tab of the "Undergraduate Degrees (p. 29)" section of this bulletin for complete information. Course fees, as applicable, are posted to the student's University account.

## Men's Intercollegiate Teams

Below are links to the website of each Men's Team with information about rosters, coaches, schedules, statistics, news, history, tickets, promotions, and additional information.

- Baseball (<http://www.gostanford.com/index.aspx?path=bsb>)
- Basketball (<http://www.gostanford.com/index.aspx?path=mbsb>)
- Cross Country (<http://www.gostanford.com/index.aspx?path=xc>)
- Fencing (<http://www.gostanford.com/index.aspx?path=fenc>)
- Football (<http://www.gostanford.com/index.aspx?path=football>)
- Golf (<http://www.gostanford.com/index.aspx?path=mgolf>)
- Gymnastics (<http://www.gostanford.com/index.aspx?path=mgym>)
- Rowing (<http://www.gostanford.com/index.aspx?path=mrow>)
- Sailing (<http://www.gostanford.com/index.aspx?path=sail>)
- Soccer (<http://www.gostanford.com/index.aspx?path=msoc>)
- Swimming and Diving (<http://www.gostanford.com/index.aspx?path=mswim>)
- Tennis (<http://www.gostanford.com/index.aspx?path=mten>)

- Track and Field (<http://www.gostanford.com/index.aspx?path=track>)
- Volleyball (<http://www.gostanford.com/index.aspx?path=mvball>)
- Water Polo (<http://www.gostanford.com/index.aspx?path=mwpolo>)
- Wrestling (<http://www.gostanford.com/index.aspx?path=wrestling>)

## Women's Intercollegiate Teams

Below are links to the website of each Women's Team with information about rosters, coaches, schedules, statistics, news, history, tickets, promotions, and additional information.

- Basketball (<http://www.gostanford.com/index.aspx?path=wbball>)
- Beach Volleyball (<http://www.gostanford.com/index.aspx?path=bvball>)
- Cross Country (<http://www.gostanford.com/index.aspx?path=xc>)
- Fencing (<http://www.gostanford.com/index.aspx?path=fenc>)
- Field Hockey (<http://www.gostanford.com/index.aspx?path=fhockey>)
- Golf (<http://www.gostanford.com/index.aspx?path=wgolf>)
- Gymnastics (<http://www.gostanford.com/index.aspx?path=wgym>)
- Lacrosse (<http://www.gostanford.com/index.aspx?path=wlox>)
- Rowing (<http://www.gostanford.com/index.aspx?path=wrow>)
- Lightweight Rowing ([http://www.gostanford.com/index.aspx?path=row\\_lt](http://www.gostanford.com/index.aspx?path=row_lt))
- Sailing (<http://www.gostanford.com/index.aspx?path=sail>)
- Soccer (<http://www.gostanford.com/index.aspx?path=wsoc>)
- Softball (<http://www.gostanford.com/index.aspx?path=softball>)
- Squash (<http://www.gostanford.com/index.aspx?path=wsquash>)
- Swimming and Diving (<http://www.gostanford.com/index.aspx?path=wswim>)
- Synchronized Swimming (<http://www.gostanford.com/index.aspx?path=syncswim>)
- Tennis (<http://www.gostanford.com/index.aspx?path=wten>)
- Track and Field (<http://www.gostanford.com/index.aspx?path=track>)
- Volleyball (<http://www.gostanford.com/index.aspx?path=wvball>)
- Water Polo (<http://www.gostanford.com/index.aspx?path=wwpolo>)

## Academic Services

Undergraduate Advising and Research (UAR) (<https://undergrad.stanford.edu>) provides academic advising, programming, and support for students as they shape their Stanford education. In guiding students to engage with faculty and in supporting students' personal and intellectual development, UAR encourages students to explore the full breadth and depth of their intellectual opportunities, to find their intellectual homes, and to discover a sense of belonging at Stanford. Academic advisers for student-athletes are housed in the Athletic Academic Resource Center (AARC) and are the primary undergraduate advising contact for varsity student-athletes. AARC advisers are full-time, professional staff within Undergraduate Advising and Research who partner closely with colleagues across campus to

provide a comprehensive network of support that promotes a student's academic success and furthers his or her intellectual goals.

## Sports Performance

Stanford's Sports Medicine Program is dedicated to providing the best possible medical care for the student athlete's injuries and illnesses. The program is unique in its team approach to health care, as the Team Physicians (<http://ortho.stanford.edu/lacob/physicians.html>), Athletic Trainers ([http://www.stanfordmedicine.com/?page\\_id=53](http://www.stanfordmedicine.com/?page_id=53)), Physical Therapists (<http://www.stanfordmedicine.com/physical-therapy>), and Sports Scientists (<http://ortho.stanford.edu/humanperformance/personnel.html>) all collaborate on the care provided to each athlete. The team physicians provide diagnosis, treatment, arrange for consultations, order lab tests, x-rays and MRIs, and make decisions on the participation status. Athletic trainers work under the supervision of our team physicians to provide prevention, evaluation, and treatment of athletic injuries. Physical therapists design specific programs for rehabilitation and communicate directly with the athletic trainer, physician, and sports performance coaches. Sport Scientists work with coaches and athletes to test and analyze athletes using state-of-the-art motion capture, biomechanics and physiology equipment.

## Sports Psychology Services

The mission of Stanford Athletics Sport Psychology Services is to provide psychological services to Stanford University student-athletes that foster mental health and well-being, promote excellence in educational and athletic goals, and contribute to a safe, welcoming, and multiculturally aware athletic department and campus community.

Stanford Athletics has had an ongoing and collaborative relationship with the Department of Psychiatry and Behavioral Sciences to provide integrated behavioral health services to Stanford student-athletes, including a full-service sport psychology program.

- *Dr. Kelli Moran-Miller* (<http://www.gostanford.com/staff.aspx?staff=208>), Director of Sport Psychology for Stanford Athletics, is a licensed psychologist, a certified consultant with the Association of Applied Sport Psychology, and a member of the USOC registry. She uses a strengths-based, solution-focused, and student-centered approach to assist student-athletes in the achievement of personal, educational, and sport goals. Her office is in the Sports Medicine Center.
- *Dr. Lisa Post*, Director of Sports Medicine in Psychiatry, is a licensed psychologist who specializes in working with collegiate and professional athletes and coordinates referrals and care within the Department of Psychiatry and Behavioral Sciences. Her office is on campus at 401 Quarry.

## Services

Sport Psychology Services offers confidential personal counseling, performance psychology consulting, psychological rehabilitation from injury, career counseling, medication evaluation and management, and specialized care referrals. Team-centered workshops for varsity teams, crisis intervention, and consultation with coaches and athletic department staff also are available.

*Individual sessions* provide a unique opportunity to explore issues that may be preventing you from reaching your potential athletically, academically, or personally.

*Team-centered workshops* are designed to address the unique goals of the participating team and to provide memorable active learning experiences to build team unity, reinforce team mission and vision, clarify team goals, roles, and responsibilities or teach mental skills.

*Athletic Director:* Bernard Muir

*Deputy Athletics Director: Patrick Dunkley*

*Deputy Athletics Director: Ray Purpur*

*Senior Associate Athletic Director - CFO: Brian Talbott*

*Senior Associate Athletic Director - Development: Heather Owen*

*Senior Associate Athletic Director - Intercollegiate Sports: Earl Koberlein*

*Senior Associate Athletic Director - Senior Woman Administrator: Beth Goode*

*Senior Associate Athletic Director - Facilities, Operations, and Events: Jamie Breslin*

*Senior Associate Athletic Director - Recreation and Wellness: Eric Stein*

*Associate Athletics Director - Compliance Services: Lorne Robertson*

*Associate Athletics Director - External Relations: Tommy Gray*

# CENTERS, LABORATORIES, INSTITUTES

Independent research laboratories, centers, and institutes perform multidisciplinary research that extends beyond the scope of any one of the University's organized schools. The listings are not all-inclusive. A comprehensive list of Stanford offices is available on the University's A to Z Index page (<http://www.stanford.edu/atoz>).

The following tabs contain information on programs for undergraduates:

- Arts Institute (p. 404)
  - Interdisciplinary Honors in the Arts Program
  - Arts Immersion
  - Creative Cities
- Center for Spatial and Textual Analysis (CESTA) (<https://cesta.stanford.edu>)
  - Graduate Certificate of Digital Humanities
- Center for the Study of Poverty and Inequality (CPI) (p. 847)
  - Certificate Program on Poverty and Inequality
- Freeman Spogli Institute for International Studies (FSI) (p. 849)
  - Interschool Honors Program in Democracy, Development, and the Rule of Law
  - Interschool Honors Program in International Security Studies

## Office of Vice Provost and Dean of Research

*Vice Provost and Dean of Research:* Ann M. Arvin

Office: 450 Serra Mall, Main Quadrangle, Building 60  
 Mail Code: 94305-2064  
 Phone: 650-723-8789 / Fax 650-723-0662  
 Web Site: <http://stanford.edu/dept/DoR>  
 Office Fax: 650-723-0662

The following independent Laboratories, Centers, and Institutes report to the Vice Provost and Dean of Research:

### Biological and Life Sciences

- Bio-X, the interdisciplinary program related to bioengineering, biomedicine, and biosciences, <http://biox.stanford.edu>
- Spectrum (formerly the Stanford Center for Clinical and Translational Education and Research), <http://spectrum.stanford.edu>

### Environmental Sciences

- Precourt Institute for Energy, <http://pie.stanford.edu/>
  - Precourt Energy Efficiency Center, <http://peec.stanford.edu>
  - Global Climate and Energy Project (G-CEP), <http://gcep.stanford.edu>
- Woods Institute for the Environment, <http://woods.stanford.edu>

### Humanities and Social Sciences

- Center for Advanced Study in the Behavioral Sciences (CASBS), <http://www.casbs.org>
- Center for the Study of Language And Information (CSLI), <http://www-csli.stanford.edu>
- Freeman Spogli Institute for International Studies (FSI), <http://fsi.stanford.edu>
  - Center on Democracy, Development, and the Rule of Law (CDDRL), <http://cddrl.stanford.edu>

- Stanford Health Policy (Center for Health Policy/Center for Primary Care and Outcomes Research), <http://healthpolicy.stanford.edu>
- Center for International Security and Cooperation (CISAC) <http://cisac.stanford.edu>
- Walter H. Shorenstein Asia-Pacific Research Center (Shorenstein APARC), <http://aparc.stanford.edu>
- The Europe Center, <http://tec.stanford.edu>
- Program on Food Security and the Environment, <http://fse.stanford.edu>
- Inter-University Center for Japanese Language Studies (IUC), <http://www.stanford.edu/dept/IUC>
- Program on Energy and Sustainable Development (PESD), <http://pesd.stanford.edu>
- Stanford Program on International and Cross-Cultural Education (SPICE), <http://spice.stanford.edu>
- Human-Sciences and Technologies Advance Research Institute (H-STAR), <http://hstar.stanford.edu>
  - Media-X, <http://mediax.stanford.edu>
  - Stanford Center for Innovations in Learning (SCIL), <http://scil.stanford.edu>
- Stanford Center on Longevity (SCL), <http://longevity.stanford.edu>
- Stanford Humanities Center, <http://shc.stanford.edu>
- Stanford Institute for Economic Policy Research (SIEPR), <http://siepr.stanford.edu>

### Physical Sciences

- Edward L. Ginzton Laboratory, <http://stanford.edu/group/ginzton>
- Geballe Laboratory for Advanced Materials (GLAM), <http://stanford.edu/group/glam>
- Kavli Institute for Particle Astrophysics and Cosmology (KIPAC), <http://www-group.slac.stanford.edu/kipac>, operated jointly with SLAC National Accelerator Laboratory
- Photon Ultrafast Laser Science and Engineering (PULSE), <http://pulse.slac.stanford.edu>, operated jointly with SLAC National Accelerator Laboratory
- Stanford Institute for Materials and Energy Sciences (SIMES), <http://simes.slac.stanford.edu>, operated jointly with SLAC National Accelerator Laboratory
- W. W. Hansen Experimental Physics Laboratory (HEPL), <http://hepl.stanford.edu>

## Centers Reporting to the Dean of Humanities and Sciences

- Center for Space Science and Astrophysics (<http://www.stanford.edu/group/CSSA>)
- Center for Spatial and Textual Analysis (CESTA) (<https://cesta.stanford.edu>)
  - CESTA offers a graduate Certificate of Digital Humanities program
- Institute for Research in the Social Sciences (<http://iriss.stanford.edu>) (IRiSS)
  - Stanford Center for Population Research (<http://iriss.stanford.edu/scpr>) (SCPR)
  - Stanford Center for the Study of Poverty and Inequality (<http://iriss.stanford.edu/CPI>) (CPI)
  - Stanford Center for American Democracy (<https://iriss.stanford.edu/ANES>) (SCAD)
  - Stanford Center on Philanthropy and Civil Society (<http://pacscenter.stanford.edu>) (PACS)

- Center for Computational Social Science (<https://css-center.stanford.edu>)
- Immigration and Integration Policy Lab (<http://immigrationlab.stanford.edu>)
- Center for the Advancement of Research through Online Learning (CAROL)
- Michelle R. Clayman Institute for Gender Research (<http://gender.stanford.edu>)
- Morrison Institute for Population and Resource Studies (<http://www.stanford.edu/group/morrinst>)
- Stanford Arts Institute (<http://arts.stanford.edu/arts-institute>)

Arts Institute information can now be found under the School of Humanities and Sciences (p. 404) in the menu on the left.

## Stanford Center on Poverty and Inequality Certificate Program on Poverty and Inequality

The Stanford Center on Poverty and Inequality (CPI) monitors and publicizes trends in poverty and inequality, publishes the country's leading magazine on poverty and inequality (*Pathways Magazine*), supports research on the causes of poverty and inequality, and examines the effects of public policy on poverty and inequality. The center carries out these activities with ten research groups addressing the following topics:

- poverty measurement and trends
- educational access and achievement
- income inequality
- social mobility
- safety net use
- recession and recovery effects
- spatial segregation
- racial and ethnic inequality
- discrimination, poverty, and the labor market
- Hispanic poverty, inequality, and mobility.

The Certificate in Poverty and Inequality recognizes undergraduates who have developed expertise in one or more of these research areas. The certificate is conferred as soon as the coursework and research requirements listed below are completed. Although the certificate does not appear on an official University transcript, it provides formal recognition of a rigorous program of study in the field of poverty and inequality.

### Admission

Applications to the CPI certificate program are available on the CPI web site (<http://www.stanford.edu/group/scspi>) and may be filed at any time. Admitted students are assigned an adviser who assists in planning coursework and providing research opportunities within CPI. Contact CPI ([inequality@stanford.edu](mailto:inequality@stanford.edu)) with any questions.

### Requirements

The student's course and research plan, which is submitted with the application, should meet the four requirements listed below.

1. **Core Foundation Course:** (SOC 140 Introduction to Social Stratification. This required introductory course examines the causes and consequences of poverty, inequality, and mobility. It is available as both a regular and online course.
2. **Elective Foundation Course:** The second foundation course is selected from among the normative, empirical, and policy courses listed below. These courses examine the principles by which certain types of living conditions may be deemed unjust or impoverished (i.e., normative analysis), the social processes and forces by which

poverty and inequality are generated and maintained (i.e., empirical analysis), and the types of policies and interventions that might reduce or increase poverty and inequality (i.e., policy analysis).

### Elective Foundation Courses

Normative Foundation		
ETHICSOC 136R	Introduction to Global Justice	4
ETHICSOC 171	Justice	4-5
INTNLREL 136R	Introduction to Global Justice	4
PHIL 76	Introduction to Global Justice	4
PHIL 171	Justice	4-5
POLISCI 136R	Introduction to Global Justice	4
PUBLPOL 103C	Justice	4-5
Empirical Foundation		
SOC 141	Controversies about Inequality	5
SOC 144	Inequality and the Workplace	5
Policy Foundation		
ECON 11N	Understanding the Welfare System	3
SOC 135	Poverty, Inequality, and Social Policy in the United States	4

3. **Research Project:** Students must complete a research paper on poverty or inequality. Students are invited to join one of the ten CPI research groups and become involved in an ongoing CPI research project that might become the basis for their research paper. Alternatively, students write an independent research paper rather than joining a CPI Research Group. The research paper may either take the form of a research proposal or an empirical research project based on quantitative or qualitative methods. This paper should be completed while the student is enrolled in Independent Study with a CPI faculty affiliate (<http://www.stanford.edu/group/scspi>).
4. **Additional Elective:** Students must take an elective course with a poverty or inequality focus. This requirement may be satisfied by taking an additional foundation course from the list provided above or by taking any of the preapproved elective courses listed below. Additionally, other unlisted courses addressing issues of poverty and inequality may also satisfy this requirement, although such courses require CPI approval (which is requested by submitting the Course Approval Form (<http://www.stanford.edu/group/scspi>)). It is recommended that approval be secured in advance of taking an unlisted course. If a new applicant to the certificate program wishes to count a completed course toward the requirements, that should be indicated on the application form and, if necessary, the Course Approval Form (<http://www.stanford.edu/group/scspi>) should be filled out).

### Preapproved Elective Courses

Poverty		
EARTHSYS 106	World Food Economy	5
ECON 11N	Understanding the Welfare System	3
ECON 106	World Food Economy	5
SOC 135	Poverty, Inequality, and Social Policy in the United States	4

## Graduate Certificate in Digital Humanities Overview

The Center for Spatial and Textual Analysis (CESTA) offers a Graduate Certificate in Digital Humanities (GCDH) to meet a growing need among the humanities for training in digital methods by leveraging existing resources at Stanford University. The Graduate Certificate in Digital Humanities allows graduate students to acquire and deepen their technical and conceptual skills as well as to strengthen their position

in the competitive job market within and beyond the academy. The certificate program has been established as a pilot program from 2014-17.

Completion of the program results in a Certificate, signed by the CESTA director and the chair of the doctoral student's home department.

The Graduate Certificate in Digital Humanities is issued by the Center for Spatial and Textual Analysis (CESTA) and will not appear on any University record, including the student's transcript.

### Contact

Office: Wallenberg Hall, 450 Serra Mall, Building 160  
Mail Code: 94305-2084

Phone: (650) 721-1385. Fax: (650) 725-5916

Email: mattbryant.stanford@gmail.com

Web Site: <http://cesta.stanford.edu>

### Staff

*Core Faculty:* Mark Algee-Hewitt, Franco Moretti, Richard White, Dan Edelstein, Paula Findlen, Giovanna Ceserani, Walter Scheidel, Elaine Treharne, Amir Eschel, Zephyr Frank

*Affiliated CESTA Faculty:* Allyson Hobbs, Edith Scheffer, Caroline Winterer, Mark McGurl, Ana Minian, Mikael Wolfe.

*CESTA Staff, Affiliates, and others:* Celena Allen (GIS), Erik Steiner (visualization design and cartography), Ryan Heuser (programming), Nicole Coleman (information design and visualization), Jason Heppler (digital history), Elijah Meeks (information design), Karl Grossner (information design and cartography).

### Admission

Admission to the program is on a rolling basis, and students may apply at any time. Submit a letter of interest and any supporting information to CESTA Lab Manager Matt Bryant ([mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com)) at [mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com). For more information about the new GDCH program or CESTA in general, see the program's web site (<http://cesta.stanford.edu/gcdh>) or contact Matt Bryant ([mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com)) at [mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com).

### Course work

Students wishing to take part in the first cohort starting in 2014-15 and thereafter are expected to complete one GCDH-approved graduate core course for a letter grade, and one additional approved elective course. The approved core courses for the first year of the program are:

- HISTORY 401A
- ENGLISH 303C
- DLCL 396 Humanities+Design: Visualizing the Grand Tour (same as CLASSICS 396, HISTORY 336E)

Students who have completed any of the core courses, or equivalent courses taught by members of the program, in past years are eligible to move to the next step in the GCDH program.

Following or concurrent with the completion of the required core course, students must complete the following two certificate components:

1. Additional course work (1 or more classes, may be taken credit/no credit, and must be approved in advance by the committee in charge) in computer science, information design, statistics, network analysis, linguistics, or other fields approved by the student's supervisor and the CESTA committee in charge. A list of course recommendations is forthcoming.
2. One of the following:
  - a. Independent research project and portfolio including a finished project which is evaluated and approved by an Academic Council

supervisor and accepted as an affiliated project in one of CESTA's labs. The duration of such projects must be a minimum of one academic quarter. Students may take up to 5 units of credit of directed reading for the purpose of completing the independent research project. Final projects are included in the student's ePortfolio and published on the CESTA web site.

- b. Supervised collaborative research in a CESTA lab with the expectation that the student's participation culminates in a digital humanities product substantially of the authorship of the student; this must be a minimum of two quarters in duration. The student's portion of the research is included in the ePortfolio and published on the CESTA web site.

## Freeman Spogli Institute for International Studies (FSI)

### Contacts

Office: Encina Hall Center, First Floor, 616 Serra Street  
Mail Code: 94305-6055  
Phone: 650-723-4581 / Fax 650-725-2592  
Web Site: <http://fsi.stanford.edu/>

The Freeman Spogli Institute for International Studies (FSI) provides opportunities for undergraduate research through the CDDRL Undergraduate Honors Program and the CISAC Interschool Honors Program in International Security Studies.

## Interschool Honors Program in Democracy, Development, and the Rule of Law

*Director:* Stephen J. Stedman

The Center on Democracy, Development, and the Rule of Law (CDDRL) Undergraduate Senior Honors Program provides students majoring in any Stanford academic department the opportunity to conduct an independent honors thesis focused on the fields of democracy, development, and the rule of law. Students are required to complete a three quarter long honors research seminar that begins Spring Quarter of the junior year. They will spend the last quarter of the senior year working independently with their faculty adviser to complete and submit their honors thesis ahead of their formal defense in mid-May. Upon fulfilling individual department course requirements and completing the honors program, students graduate with a certificate in Honors in Democracy, Development, and the Rule of Law.

Students interested in the program consult with their prospective honors advisers in their junior year to determine the tentative thesis topic, which should have some degree of policy relevance. Prerequisites for the program include; a 3.5 grade-point average at the time they apply; a strong overall academic record; sufficient depth and breadth in the fields of democracy, economic and social development, rule of law, and human rights course work; and demonstrated skills in writing and conducting independent research.

Students are required to attend honors college in Washington, D.C. in September before Autumn Quarter classes begin. Applicants are discouraged from studying abroad during the duration of the CDDRL Undergraduate Honors program.

### Required Course Work

Two courses that explore the areas of democracy, development, and the rule of law to be approved by the faculty director. CDDRL's flagship undergraduate lecture course taught during Autumn Quarter, which ideally should be completed before the student enters the honors

program. DDRL Honors Research Methods Seminars meet on a weekly basis to present their project theses and receive feedback.

### Typical Schedule for CDDRL Honors Program

Junior	Units		
	Autumn	Winter	Spring
Select one of the following:		5	
Democracy, Development, and the Rule of Law (INTNLREL 114D)			
Democracy, Development, and the Rule of Law (POLISCI 114D)			
DDRL 189 Honors Research Methods			3
Year Total:		5	3
<hr/>			
Senior	Units		
	Autumn	Winter	Spring
DDRL 190 Honors Research Workshop		3	
DDRL 190 Honors Research Workshop			3
DDRL 191 Independent Study (Optional) <sup>1</sup>			
Year Total:		3	3
<hr/>			
Total Units in Sequence:			14

<sup>1</sup> Optional any quarter during senior year for 1-5 units, repeatable once for credit.

Admitted students must be able to fulfill all course requirements in their individual majors by the time they graduate, in addition to the units required for the honors program. For more information, contact Alice Kada, CDDRL Administrative Manager at [akada@stanford.edu](mailto:akada@stanford.edu) or go to <http://cddrl.stanford.edu/>.

## Interschool Honors Program in International Security Studies

*Co-Directors:* Coit D. Blacker, Amy Zegart

The Center for International Security and Cooperation (CISAC) coordinates a University-wide Interschool Honors Program in International Security Studies. Students chosen for the honors program intern with a security-related organization, attend the program's honors college in Washington, D.C., in September, participate in a year-long core seminar, and under the direction of a faculty advisor produce an honors thesis relevant to international security policy. Upon fulfilling individual department course requirements and completing the honors program, students graduate in their major with the award of Honors in International Security Studies. To be considered for the program, students must demonstrate sufficient depth and breadth of international security course work.

			Units
Successful applicants to the program are expected to have taken:			
MS&E 193	Technology and National Security		3
POLISCI 114S	International Security in a Changing World		5
and at least one related course such as			4-5
ECON 106	World Food Economy		5
HISTORY 103F	The Changing Face of War: Introduction to Military History		5
HISTORY 204E			4-5
HUMBIO 129S	Global Public Health		4
INTNLREL 114D	Democracy, Development, and the Rule of Law		5
INTNLREL 140A	International Law and International Relations		5
LAW 5013	International Law (formerly LAW 479)		4
MS&E 93Q	Nuclear Weapons, Energy, Proliferation, and Terrorism		3

MS&E 190	Methods and Models for Policy and Strategy Analysis	3
MS&E 295	Energy Policy Analysis	3
POLISCI 42Q	The Rwandan Genocide	5
POLISCI 110D	War and Peace in American Foreign Policy	5
POLISCI 116	The International History of Nuclear Weapons	5
PUBLPOL 101/ POLISCI 102	Politics and Public Policy	4-5
PUBLPOL 102		
SOC 160	Formal Organizations	4

Students in the program enroll in IIS 199 Interschool Honors Program in International Security Studies, in Autumn, Winter, and Spring quarters for 3-5 credits for quarter (9-12 total credits). Information about and applications to this program may be obtained from the Center for International Security and Cooperation, C206-10, Encina Hall Central, telephone (650) 725-5365 or [http://cisac.stanford.edu/docs/undergraduate\\_honors\\_program](http://cisac.stanford.edu/docs/undergraduate_honors_program).

## Center for Space Science and Astrophysics

*Emeriti:* (Professors) Robert Cannon, (Professors, Research) Donald L. Carpenter, Aldo V. daRosa, Daniel B. DeBra, W.Gary Ernst, Von R. Eshleman, Antony Fraser-Smith, Robert A. Helliwell, Bruce B. Lusignan, Ronald J. P. Lyon, Laurence A. Manning, Bradford W. Parkinson, J. David Powell, Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner

*Director:* Roger W. Romani

*Associate Directors:* Umran S. Inan, Philip H. Scherrer

*Professors:* Roger Blandford (Physics, SLAC), Elliot Bloom (SLAC), Lambertus Hesselink (Electrical Engineering), Umran S. Inan (Electrical Engineering), Steven Kahn (Physics, SLAC), Tune Kame (SLAC), Peter F. Michelson (Physics), Vahé Petrosian (Physics), Roger W. Romani (Physics), Norman H. Sleep (Geophysics), Guenther Walther (Statistics), Howard Zebker (Electrical Engineering, Geophysics)

*Associate Professors:* Tom Abel (Physics, SLAC), Steve Allen (Physics, SLAC), Sarah Church (Physics),

*Assistant Professors:* Stefan Funk (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Risa Wechsler (Physics, SLAC)

*Professors (Research):* C-W. Francis Everitt (HEPL), Philip H. Scherrer (Physics)

*SLAC Staff Physicist:* Grzegorz Madejski

Center Offices: Varian, Room 340

Mail Code: 94305-4060

Phone: (650) 723-1439

Email: [danav@stanford.edu](mailto:danav@stanford.edu)

Web Site: <http://www.stanford.edu/dept/astro>

The Center for Space Science and Astrophysics is an interdepartmental organization coordinating research in space science and astrophysics. Its members are drawn from the Department of Geological and Environmental Sciences in the School of Earth Sciences; the departments of Aeronautics and Astronautics, Electrical Engineering, and Mechanical Engineering in the School of Engineering; the departments of Applied Physics, Physics, and Statistics in the School of Humanities and Sciences; the W. W. Hansen Experimental Physics Laboratory; and the SLAC National Accelerator Laboratory. Its membership also

includes all faculty and appropriate staff at the Kavli Institute for Particle Astrophysics and Cosmology, located at SLAC and the Physics department.

The facilities of the center are available to any interested and qualified student, who must be admitted by and registered in a department. The departments of Aeronautics and Astronautics, Applied Physics, Electrical Engineering, Mechanical Engineering, and Physics offer opportunities leading to an M.S. or Ph.D. degree for work in space science or astrophysics. The center also offers opportunities to undergraduates who may, for instance, participate in research projects in their junior or senior years, on a part-time basis during the school year or on a full-time basis during the summer. The Astronomy Course Program operates a small student observatory where students may gain practical experience in astronomical observing.

### Other Academic Programs and Centers, and Independent Research Laboratories, Centers, and Institutes

- SLAC National Accelerator Laboratory (SLAC), <http://www.slac.stanford.edu>
- Stanford Synchrotron Radiation Laboratory (SSRL), <http://ssrl.slac.stanford.edu>

## CONTINUING STUDIES

The Continuing Studies Program provides adults from the surrounding communities the opportunity to take courses for the purpose of intellectual enrichment. Courses and events are offered in all four academic quarters, with over 400 courses planned throughout the year. The Continuing Studies Program, except for the MLA program, is a non-degree granting program.

The instructors are largely drawn from the ranks of the University's professoriate and academic staff. The program presents a wide variety of courses, with a central concentration in the liberal arts, including literature, history, art and architecture, and music.

Tuition discounts are available to University employees, Stanford students and faculty, Stanford Alumni Association members, educators, and those over age 65.

For a list of offered courses, see the Courses tab the Continuing Studies web site (<http://continuingstudies.stanford.edu>).

## Master of Liberal Arts Program

*Associate Dean and Director:* Linda Paulson

*Participating Faculty:* Jonathan Berger (Music), Russell Berman (Comparative Literature, German Studies), Jay Bhattacharya (Medicine), George Brown (English, emeritus), Eamonn Callan (Education), William Chace (English, emeritus), James Daughton (History), Gerald Dorfman (Hoover Institution, Political Science), William Durham (Anthropology), Michele Elam (English), Paula Findlen (History), Larry Friedlander (English), Kenneth Fields (English), Hester Gelber (Religious Studies), Albert Gelpi (English, emeritus), Barbara Gelpi (English, emerita), Denise Gigante (English), Robert Gregg (Religious Studies, emeritus), Tom Grey (Music), Hans Ulrich Gumbrecht (French and Italian), Van Harvey (Religious Studies, emeritus), Allyson Hobbs (History), Gavin Jones (English), Charles Junkerman (Continuing Studies Program), Nancy Kollmann (History), Herbert Lindenberger (English, emeritus), Marsh McCall (Classics, emeritus), Mark Mancall (History, emeritus), Scotty McLennan (Religious Life), Thomas Mullaney (History), Alexander Nemerov (Arts), David Palumbo-Liu (Comparative Literature), Linda Paulson (English), Grant Parker (Classics), Arnold Rampersad (Humanities, emeritus), Rush Rehm (Drama, Classics), John Rick (Anthropology), John Rickford (Linguistics), David Riggs (English, Emeritus), Eric Roberts (Engineering), Paul Robinson (History, emeritus), Jeremy Sabol (SLE), Ramón Saldivar (English), Paul Seaver (History, emeritus), Thomas Sheehan (Religious Studies), Robert Siegel (Microbiology and Immunology), Peter Stansky (History, emeritus), Stephen Stedman (Freeman Spogli Institute for International Studies), Barton Thompson (Law), Peter Vitousek (Biology), Caroline Winterer (History), Yvonne Yarbro-Bejarano (Latin American Cultures), Ernlé Young (Medicine, emeritus), Steven Zipperstein (Jewish Culture and History)

Program Offices: 365 Lasuen Street, Littlefield Center, Level G  
Mail Code: 2078  
Phone: (650) 725-0061 Fax: (650) 725-4248  
Email: [mlaprogram@stanford.edu](mailto:mlaprogram@stanford.edu)  
Web Site: <http://mla.stanford.edu>

Courses offered by the Master of Liberal Arts Program are listed under the subject code MLA on the Stanford Bulletin's ExploreCourses web site.

## Program Description

The Master of Liberal Arts (MLA) program aims to provide a flexible, interdisciplinary program for returning adult students who seek a broad education in the liberal arts. The underlying premise of the MLA program is that knowledge gained through an interdisciplinary course of study leads to intellectual independence and satisfaction not always found in

discipline-based programs of study. The goals of the MLA program are to develop advanced critical thinking, to foster intellectual range and flexibility, and to cultivate an individual's ability to find the connections among different areas of human thought: art, history, literature, music, philosophy, political science, science, and theology.

The program is designed with part-time students in mind: seminars meet in the evening, and students complete the degree in 4-5 years. All master's seminars are taught by members of the Stanford faculty. Seminar size is limited to 20 students.

## Learning Outcomes (Graduate)

The purpose of the Master of Liberal Arts Program is to address subjects that cross disciplinary boundaries; to develop an understanding of the strength and the shortcomings of disciplinary evaluation; to help students to refine their skills in writing, research, critical thinking, collaborative work, and collegial discussion. While students are not being groomed for academic careers, graduates of the program have used their experience to gain acceptance into Ph.D. programs at Stanford and elsewhere. Students who complete the MLA program are well positioned to advance in careers that require the careful analytical and rhetorical training they receive. This training is achieved through the completion of four foundations courses, which together emphasize the program's goals as stated above; seven seminars that offer a more specific engagement with interdisciplinary subject matter; and a master's thesis, accomplished under the direction of a Stanford faculty member who is expert in the subject of the thesis.

## Degree Requirements

Candidates for the MLA degree must complete a minimum of 50 units of course work with at least a grade point average of 3.3 (B+). These units must include a three-quarter foundation course (equal to 12 units total), one 4-unit core introductory seminar for second-year students, at least seven 4-unit MLA seminars, and a 6-unit master's thesis. Students must also fulfill distribution requirements in each of the following areas: humanities; social science or social policy; and science, engineering, or medicine.

## Foundation Course

During the Autumn, Winter, and Spring quarters following admission to the program, a three quarter foundation course is required of all students. The purpose of this course is to lay the groundwork for the interdisciplinary, intercultural studies the student will shortly undertake. The foundation course introduces students to the broad framework of history, literature, philosophy, political science, and art.

## Core Seminar

During the first quarter of the second year, students take the core introductory seminar, MLA 102 An Introduction to Interdisciplinary Graduate Study. This seminar prepares students for interdisciplinary graduate work at Stanford. Students concentrate on writing a critical graduate paper, conducting library research, presenting the results of their research, and productively participating in a collaborative seminar.

## MLA Seminars

Students are required to take at least seven MLA seminars of 4 units each. Each year, at least nine seminars are offered in the MLA program. Each MLA course requires a substantial seminar paper. Students are encouraged to use these papers as a way to investigate new fields of interest, as well as a way to develop different perspectives on issues in which they have an ongoing interest.

## Master's Thesis

The MLA program culminates in the master's thesis. Students approaching the end of the program write a thesis, approximately 75-100 pages in length, that evolves out of work they have pursued during their

MLA studies. The thesis is undertaken with the prior approval of the MLA program, and under the supervision of a Stanford faculty member. During the process of writing the thesis, students are members of a work-in-progress group, which meets regularly to provide peer critiques, motivation, and advice. Each student presents the penultimate draft of the thesis to a colloquium of MLA faculty and students, in preparation for revising and submitting the final draft to the adviser and to the MLA program.

## Enrollment Requirements

MLA students must enroll for each academic year from the time of original matriculation until conferral of the degree. To remain active, students must either:

1. complete a minimum of two courses (eight units) in one academic year, defined as from the beginning of Autumn Quarter through the end of the following Summer Quarter; or,
2. be actively working on their thesis and regularly attend a minimum of three quarters of the work-in-progress meetings from the time the student enrolls in work-in-progress through graduation.

## Timeline for Completion

All requirements for the Master of Liberal Arts degree must be completed within five years after the student's first term of enrollment in the program. If extraordinary circumstances prevent completion within five years, a student may submit a written petition for a maximum one-year extension to the Associate Dean and Director. This petition is reviewed by a committee which makes a recommendation to the Director; the final decision is at the discretion of the Director. To be considered, the petition must be submitted on or before May 1 of the student's fifth year in the program.

## Registration

Master of Liberal Arts students enroll in courses through Stanford's Axess (<http://axess.stanford.edu>) system.

## Summer Session

*Associate Dean & Director of Stanford Summer Session:* Larry Lagerstrom

## Contact

Program Offices: 365 Lasuen Street and 220 Panama Street  
 Mail Code: 94305-6079  
 Phone: (650) 723-3109 (Summer Session); (650) 725-7250 (High School Summer College); Fax: (650) 725-6080  
 Email: [summersession@stanford.edu](mailto:summersession@stanford.edu) (Summer Session);  
[summercollege@stanford.edu](mailto:summercollege@stanford.edu) (<http://exploreddegrees.stanford.edu/>  
[continuingstudies/summercollege@stanford.edu](http://continuingstudies/summercollege@stanford.edu)) (High School Summer College)  
 Web Site: [summer.stanford.edu](http://summer.stanford.edu) (<http://summer.stanford.edu>)

Students attending Stanford Summer Session are either matriculated Stanford students, visiting undergraduate or graduate students, or enrolled in the High School Summer College.

Degree-seeking Stanford students should indicate on Axess during Spring Quarter that they intend to register for Summer Quarter. Separate application is not required.

Visiting undergraduate or graduate students are not presently candidates for a Stanford degree. These are students and adults who have taken at least one course at another college or university. These students must complete a short application, available at [summer.stanford.edu](http://summer.stanford.edu) (<http://summer.stanford.edu>). Qualified high school students who are at least sixteen years old may apply to the High School Summer College (<http://summer.stanford.edu/programs>) program.

Students in Stanford Summer Session, in general, enjoy the privileges of students in the regular degree programs, except that work completed cannot be applied toward a Stanford degree or credential unless and until the student has been admitted to regular Stanford student standing. Admission as a visiting student does not imply later admission to matriculated status. However, should the visiting student matriculate at a later date through normal admission procedures, the summer work may be applied toward the requirements for a Stanford degree or credential at the discretion of the University or academic department.

Visiting undergraduate and graduate students and students in the High School Summer College are not matriculated Stanford University students, and not all University student policies apply to such students. The University reserves the right, at its discretion, to withhold registration from or require withdrawal from Stanford Summer Session for these students or applicants.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program's policies or practices, not through the Office of Community Standards.

For more information, contact Summer Session by email, mail, phone, or fax using the listings above. Information is updated annually in January and may also be found online at <http://summer.stanford.edu>. Information is updated annually in January and may also be found online at [summer.stanford.edu](http://summer.stanford.edu) (<http://summer.stanford.edu>).

## Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford's Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this web site: <https://www2.ed.gov/about/offices/list/ocr/complaintintro.html>

*Dean and Associate Provost:* Charles Junkerman

*Associate Dean and Director:* Dan Colman

# LIBRARIES AND COMPUTING

## Stanford University Libraries and Academic Information Resources

*University Librarian and Director of Academic Information Resources:*

Michael A. Keller

*Web Site:* <http://library.stanford.edu>

Stanford University Libraries and Academic Information Resources (SULAIR) includes more than 30 libraries and programs supporting research, teaching, and learning at Stanford University. SULAIR acquires and delivers library collections in all formats, establishes policies and standards to guide the use of academic information resources, develops training and support programs for academic uses of computers, and maintains a broad array of electronic information resources, including the online library catalog and several hundred article and indexing databases and electronic journal subscriptions.

In each library unit, knowledgeable professional staff provide assistance in locating and using print and online information resources. Subject specialists and reference librarians are available for individual consultation, group classes, demonstrations, and special workshops by request.

Libraries throughout campus provide group and individual study spaces, public computers, personal laptop connections, photocopy machines, and digital scanners for use by Stanford faculty, staff, and students.

For information about library hours, see the Library Hours (<http://libraryhours.stanford.edu>) web site.

In support of the University's academic mission, Academic Computing Services provides technology expertise, resources and services to students and faculty. Academic Computing Services supports the use of technology in teaching, learning, research, and community; operates and manages technology-enabled teaching and learning environments including classrooms and public study spaces, the Multimedia Studio in Meyer Library, the Digital Language Lab, and computer clusters in Green Library, Tresidder Union, and the student residences; provides technology education, consulting support, and multimedia services at Meyer and in the residences; provides faculty-specific computing resources through the Academic Technology Specialist Program and Academic Technology Lab; and provides technology support to Stanford University Libraries' services.

Information about the library collections, facilities, services, and policies is available at the Libraries & Academic Information Resources (<http://library.stanford.edu>) web site.

Further information about library services and resources is available from the Information Center staff in Cecil H. Green Library (<http://infocenter.stanford.edu>) and from reference staff in all University libraries.

### Central Campus Libraries

The Cecil H. Green Library (East and Bing Wings) maintains research collections in the humanities, social sciences, area studies, and interdisciplinary areas. These collections number approximately 2.8 million volumes. Major services in Green Library include: the Information Center, the Media Microtext Center, the Jonsson Reading Room, the Lane Reading Room, the Bender Room, Loan Desk and Privileges, Interlibrary Services, course reserves, the Department of Special Collections, and the University Archives.

The J. Henry Meyer Memorial Library houses the East Asia Library as well as the Academic Computing Services group of SULAIR and provides

study, multimedia, consulting, and instructional support services. In addition, Meyer Library houses the University's Digital Language Lab, technology enabled study spaces and classrooms, the Academic Technology Lab, and the central offices of Student Computing and Academic Computing Services.

### Branch Libraries

Humanities and Social Sciences Branch Libraries include the Art and Architecture Library, Cubberley Education Library, East Asia Library, Music Library, and Archive of Recorded Sound.

Science Branch Libraries include the Branner Earth Sciences Library, Engineering Library, Falconer Biology Library, Mathematical and Computer Sciences Library, Harold A. Miller Library at the Hopkins Marine Station, Physics Library, and Swain Library of Chemistry and Chemical Engineering.

For a complete list of campus libraries, see the Libraries and Collections (<http://libraries.stanford.edu>) web site.

### Coordinate Libraries

**J. Hugh Jackson Library** (<http://www.gsb.stanford.edu/jacksonlibrary>), **Graduate School of Business**

*Director:* Kathy Long

**Lane Medical Library** (<http://lane.stanford.edu>)

*Director:* Debra Ketchell

**Crown Law Library** (<http://www.law.stanford.edu/library>)

*Director:* Paul Lomio

**SLAC Research Library** (<http://www-group.slac.stanford.edu/library>)

*Director of Technical Information Services:* Patricia Kreitz

### Hoover Institution Library and Archives

*Director:* John Raisian

*Web Site:* <http://www.hoover.org/library-and-archives>

Since its founding by Herbert Hoover in 1919 as a special collection dealing with the causes and consequences of World War I, the Hoover Institution has become an international center for documentation, research, and publication on political, economic, social, and educational change in the 20th and 21st centuries.

The Hoover Library and Archives include one of the largest private archives in the world and contain outstanding area collections on Africa, East Asia, Eastern Europe, Russia and the former Soviet Union, Latin America, the Middle East, North America, and Western Europe.

Holdings include government documents, files of newspapers and serials, manuscripts, memoirs, diaries, and personal papers of men and women who have played significant roles in the events of these centuries, the publications of societies and of resistance and underground movements, the publications and records of national and international bodies, both official and unofficial, and books and pamphlets, many of them rare and irreplaceable. The materials are open to all Stanford students, faculty, and staff, to scholars from outside the University, and to the public at large.

### Information Technology Services (IT Services)

*Web Site:* <http://itservices.stanford.edu>

IT Services manages the University's central information technology infrastructure and provides hundreds of services and applications for use in academic and business activities. Support is provided in four layers:

- Participation and client-focused leadership in institutional IT planning, including strategies for data center expansion, centrally managed storage and backup, and business continuity and disaster recovery.
- Applications and services for departments and end-users including email, calendaring, wireless connectivity, web authentication, and Windows and Linux server hosting. These services are supported by a help desk, contract-support consultants, online self-help, and training.
- Applications and services that support other campus service providers, including the help desk, change management, and network registration systems.
- A communications and collaboration infrastructure robust enough to support advanced network, voice, and web-based services.

To learn about the variety of information technology resources available at Stanford, see the Information Technology Services (<http://computing.stanford.edu>) web site. For assistance with technology services at Stanford, contact the Stanford IT Help Desk at (650) 725-HELP (5-4357) or submit a request through the HelpSU (<http://helpsu.stanford.edu>) web site.

# RECREATION

Stanford Recreation is organizationally housed within The Department of Athletics, Physical Education, and Recreation and more specifically within Recreation and Wellness. Recreation offers sports, fitness, health and well-being programs to meet the diverse needs of the Stanford community. Through collaborative team efforts, Recreation takes pride in presenting high quality and fun programs focusing on providing excellent service. A wide-breadth of programs and services are offered by Recreation in aquatics, club sports, fitness facilities, group exercise and personal training, intramural sports, membership and recreation services, recreation classes, and youth programs.

## Purpose

Stanford Recreation is committed to provide diverse recreational opportunities that inspire health and well-being for our community.

## Values

Inspiring a healthier Stanford by:

- Providing inclusive programs and facilities that welcome the entire Stanford community.
- Creating a collaborative growth-oriented team.
- Offering industry leading and highest quality programs and instruction.
- Maximizing fun and enjoyment through friendly and positive interactions in health, well-being and sports.

## AOERC

285 Santa Teresa St

The Arrillaga Outdoor Education and Recreation Center (AOERC) includes a 14,000 square foot fitness center which offers the latest in cardio and strength training equipment, enclosed indoor cycling studio, 50m pool, three basketball courts, the largest indoor collegiate climbing wall in the United States and more.

## ACSR

341 Galvez St.

The Arrillaga Center for Sports and Recreation (ACSR) includes an 11,000 square foot fitness center with our Olympic Lifting platforms and several pieces of adaptive equipment. The ACSR also has three basketball courts, a mat room, and seven squash courts.

## Outdoor Center

Located in the AOERC, the Outdoor Center is home to a full-service rental and retail facility, a lounge, an outdoor resource library and a multimedia classroom. The lounge serves as a central meeting space for Stanford community members who are interested in outdoor adventures. For current hours please visit [outdoorcenter.stanford.edu](http://outdoorcenter.stanford.edu) as hours can change during the quarter.

## Climbing Walls

The AOERC Climbing Wall and the ACSR Bouldering Wall are open to all Stanford community members regardless of experience. A valid SUID is required in order to access the facilities. Belay classes are available for free and climbing shoes are available to rent for \$2.00. For current hours please visit [climbing.stanford.edu](http://climbing.stanford.edu) as hours change quarter to quarter.

## Recreation Services

Desk Staff are your first point of contact at the entrances and also in the Fitness Centers of the ACSR & AOERC. We provide services and access for Stanford community members including Daily Recreation Facility Pass sales, equipment checkout and locker rentals. Please let us serve you if you have any questions or needs.

## ID Card Policy

All recreational facilities require a SUID Card or approved facility access card for access. Guest passes can be purchased by Stanford affiliates. All guest pass users must carry a government issued photo ID at all times while using the facilities. For more ID Card Information, please see the Member Services section of [recreation.stanford.edu](http://recreation.stanford.edu).

## Lockers

Recreational-use lockers and showers are available at the Ford Center and the Arrillaga Outdoor Education and Recreation Center (AOERC). There are no lockers at the Arrillaga Center for Sports and Recreation (ACSR). The following are our locker rental fees:

\$20/quarter or \$50/year for Students

\$30/quarter or \$70/year for Faculty/Staff

\*Payable by credit card or check. All lockers are available for rental at both the ACSR and AOERC Front Desks.

Day-use lockers are available at the AOERC, the ACSR and the Avery Aquatic Center. These lockers use keypad locks and do not require you to bring your own lock. Day-use lockers are free of charge and please note they will be cleared out each night at the close of business and any left behind contents will be added to the lost and found.

## Aquatics

We offer recreational swimming at two outdoor campus locations. The Avery Aquatic Center (AAC) is located in the center of the Stanford Athletics' facilities and is home to the Men's and Women's Swimming, Diving and Water Polo Teams, as well as the Synchronized Swimming team. In addition to hosting Rec Swim, the AAC has hosted the Intramural Swim Meet and Inner-tube Water Polo Tournament. The Avery Recreation Pool, located at the Arrillaga Outdoor Education and Recreation Center (AOERC) is a 50 meter pool set up in short course yards, used for recreational swimming and instructional classes. Stanford Recreation provides aquatic activities including Masters Swimming, Lifeguard Classes, Club Water Polo and several P.E. swim classes. Recreation instructional and fitness swimming classes are offered at the Avery Recreation Pool and include a BeWell rate for eligible staff.

For employment opportunities, contact information, and further details, please visit [recreation.stanford.edu/aquatics](http://recreation.stanford.edu/aquatics).

## Adventure Pursuits

The Stanford Adventure Program (SAP) is the organization that advises adventure experiences for Recreation & Wellness, Student Activities & Leadership (SAL), Stanford School of Medicine, Residential Education, the Haas Center and other formal SAP campus partners. SAP's student leadership model follows the Voluntary Student Organization structure established by SAL.

- *Outdoor Trips*: provides students the opportunity to participate in peer led adventure activities such as day trips and weekend experiences in a multitude of mediums including backpacking, rock climbing, surfing, kayaking, skiing, etc.

- *Outdoor House*: a new community within Suites founded with the intentions of creating a place for people to explore, educate and connect via their interests in adventures and the outdoors.
- *Stanford Outdoor Outreach Program (SOOP)*: enhances interpersonal relationships, fosters community, and instills personal confidence in San Francisco Bay Area youth through facilitated outdoor experiences.
- *Stanford Pre-Orientation Trips (SPOT)*: immersive experiences that take place the week before New Student Orientation and are designed to ease the transition of students to life at Stanford as well as foster Stanford Identity, community, and personal growth.

Visit [adventure.stanford.edu](http://adventure.stanford.edu) for more information.

## Club Sports

We brings together 27 diverse sports and more than 1,200 athletes with the common goal of creating an environment that fosters student development and leadership through sports. Teams compete in intercollegiate competitions at the highest level, while offering opportunities for participants of all skill levels, from beginners to experienced players.

Teams include the following: Archery, Badminton, Baseball, Basketball, Climbing, Cheer, Cycling, Equestrian, Golf, Hockey, Hurling, Judo, Lacrosse, Polo, Rugby, Running, Ski & Snowboard, Soccer, Squash, Swimming, Table Tennis, Taekwondo, Tennis, Triathlon, Ultimate, Volleyball, & Water Polo.

Visit [clubsports \(http://exploreddegrees.stanford.edu/recreation/clubsports.stanford.edu\)](http://clubsports.stanford.edu) for more information.

## Martial Arts

The Stanford Martial Arts Program (SMAP) is an umbrella organization that supports the various member martial art groups on campus. The main goals are to educate the Stanford community through outreach programming about the variety of martial arts instruction on campus, serve as a centralized communications network between the different groups and preserve the martial arts as a vital and distinctive component of Stanford life. SMAP has 12 distinct martial art offerings covering a wide variety of technical, physical and cultural skills.

Here are the following teams and clubs that are affiliated with the Stanford Martial Arts Programs: Aikido, Capoeira, Eskrima, Judo, Jujitsu, Kendo, Muay Thai Kickboxing, JKA Shotokan Karate, Taekwondo, Wing Chun Kung Fu, & Wushu.

Visit [smap.stanford.edu \(http://exploreddegrees.stanford.edu/recreation/smap.stanford.edu\)](http://smap.stanford.edu) for more information.

## Group Fitness Classes

Pay a single fee for one of two pass options and drop-in to any of our select classes, such as F45, Cardio Dance and more, throughout the quarter.

## Personal Training

Work with one of our experienced and certified trainers to tailor a fitness program for you.

## Fitness Assessments

Measure your health status and learn how you can achieve your fitness and wellness goals.

## Olympic Lifting Classes

Learn proper lifting etiquette from our experienced staff and receive an annual Olympic Lifting sticker to use our platforms

## Intramural Sports

IM's at Stanford include formal competition in a variety of team and individual sports using league, single elimination tournament, one day special event tournament, and ladder play structure. Registration occurs during the second week of classes during the Autumn, and during finals for the Winter and Spring. Mandatory Captains meetings can be completed during the registration period.

Our IM Sports leagues include the following: Flag Football (fall), Indoor Volleyball (winter), Basketball (winter), Outdoor Soccer (spring) and more.

For Intramural leagues information and further details, please visit [recreation.stanford.edu/intramurals](http://recreation.stanford.edu/intramurals).

*Senior Associate Athletic Director - Recreation and Wellness*: Eric Stein

*Director of Recreation*: Rick Craig

*Senior Associate Director of Competitive Sports*: Christian Obando

*Assistant Director of Competitive Sports*: New Hire

*Associate Director of Recreation*: Daralisa Kelley

*Assistant Director of Aquatics*: Alisha Garcia

*Assistant Director of Fitness*: Zach Trahan

*Assistant Director of Youth Programs*: New Hire

*Associate Director of Recreation Services*: Robin Embry

*Assistant Director of Recreation Facilities*: Ebone Cobb

*Director of Wellness*: Jen Sexton

*Assistant Director of BeWell*: Syrous Parsay

*Assistant Director of BeWell*: New Hire

*Senior Associate Director of Adventure Programs*: Sue Lowley

*Assistant Director of Outdoor Programs*: Emily McCune

*Assistant Director of Indoor Climbing*: Phil Sandlin

*Assistant Director of Leadership Engagement*: Andrew De Torres

*Senior Associate Director of Business Operations*: Dennis Phan

## Recreation Classes

Our classes provide participants with professional instruction in a safe and fun workout environment. Our Recreation Class offerings are non-credit classes. Stanford students, Faculty/Staff and Stanford community members are eligible to participate in Recreation Classes. Recreation classes that are offered throughout the academic year are the following:

- *Ashtanga Yoga*: taught in the Mysore style (a guided self practice), by Russell Case, authorized Level II Instructor by Pattabhi Jois and the Ashtanga Yoga Research Institute in Mysore India.
- *Golf*: covering all basic rules and etiquette of the sport including the fundamentals of grip, stance, alignment, posture and putting.
- *Gymnastics*: introducing participants to all gymnastics apparatus including floor exercise, vault, high bar, uneven bars, trampoline, rings, tumble track, pommel horse, balance beam and parallel bars.

- *Olympic Weightlifting*: develop the skills and strength necessary to perform the Olympic Lift (snatch, clean and jerk).
- *Squash*: learn the rules, tactics and techniques of this fast-paced game that will help to boost your skills on the courts.
- *Tennis*: helping to improve your forehand, backhand, serve and net play while simulating real game situations and explaining the rules of the game.

In addition, we often release occasional courses that will be offered throughout the academic year. Occasional courses that could be offered include our Pre- & Post-Natal Fitness Program, the Private Pilates Training Program and our Train to Run Program. Visit [recreationclasses.stanford.edu](http://recreationclasses.stanford.edu) (<http://exploreddegrees.stanford.edu/recreation/recreationclasses.stanford.edu>) for more information on all class offerings and registration details.

# SERVICES AND PROGRAMS

## Bookstore

Web Site: <http://stanfordbookstore.com>

Organized in 1897, Stanford Bookstore, (650) 329-1217, located at 519 Lasuen Mall (White Plaza), provides a diverse selection of books, course materials, and supplies to the students, faculty, staff, and community in and surrounding Stanford. The bookstore carries over 130,000 titles, including a wide selection of medical books and books written by Stanford authors, making it one of the largest bookstores in the nation. The bookstore also carries medical instruments, Stanford logo apparel, gifts and souvenirs, periodicals, and features a café that provides an enhanced shopping experience. The Computer Store, in the main branch, sells academically priced computer hardware and software. Other services include shipping of purchases, gift cards, book buyback, fax service, postage stamp sales, an ATM, and Enterprise Rent-A-Car hotline.

There are four branches in addition to the Stanford Bookstore that also serve the community: the Stanford Athletics Shop (formerly the Track House Sports Shop), (650) 327-8870, underneath the Cobb Track and Angell Field bleachers, is the headquarters for Stanford Athletic Gear; Tresidder Express convenience store, (650) 723-9224 in Tresidder Union; the Stanford Shop, (650) 614-0295, at the Stanford Shopping Center, provides Stanford apparel; and the Bookshop, (650) 725-2775, at the Cantor Center for the Arts, carries books on the arts, fine gifts, apparel, and jewelry.

## Stanford Conference Services

Phone: (650) 723-3126

Email: [conferenceinquiries@stanford.edu](mailto:conferenceinquiries@stanford.edu)

Web Site: <http://conference.stanford.edu>

A conference is defined as any student, youth, or adult group that convenes for part of a day (including a luncheon), overnight, or for several days, outside the regular or summer academic sessions for registered students. Policies concerning conferences are the responsibility of the offices of the President and the Provost.

To make arrangements for hosting a new, academically sponsored residential summer conference during the mid-June through late-August time frame, contact Stanford Conference Services by phone or email as listed above. Stanford Conference Services also offers meeting planning services on a year-round basis for academically sponsored conference groups seeking assistance with planning and managing residential and non-residential conferences. In addition, conference organizers seeking to conduct conferences outside of the late August to early June time frame can also contact the non-academic facilities scheduling in the Office of the University Registrar, (650) 723-6755 or [reg-events@stanford.edu](mailto:reg-events@stanford.edu), or contact Stanford Events, (650) 723-2551 or [stanfordevents@stanford.edu](mailto:stanfordevents@stanford.edu).

Academic sponsorship by a Stanford dean or department head is required for first time conferences hosted by University departments or by conferences hosted by external organizations interested in meeting at Stanford. Conferences initiated by University departments or external organizations must demonstrate consistency with the University's academic mission. For summer conferences, the sponsoring department submits its proposal to the Director of Stanford Conference Services for review in terms of available facilities and for the approval of the President's Office. At least half of the participants in any summer conference at Stanford hosted by an external organization must be housed in Stanford's campus residences and participate in daily meal plans provided by Stanford Dining. On-campus residential housing

and dining services are normally available from the Sunday following Commencement through late August.

Summer conference groups should contact Stanford Conference Services concerning arrangements for tables, chairs, audio-visual aids, signage, janitorial services, trash pick-up and removal, sprinkler shutoffs, and other conference-related products/services. During the academic year, housing arrangements for University-sponsored visitors can be made through the Stanford Guest House (<http://guesthouse.stanford.edu>) web site or call (650) 926-2800.

## Ombuds

Interim Stanford University Ombuds: Rosan Gomperts

Phone: (650) 723-3682

Fax: (650) 725-7288

Mail Code: 94305-8200

Email: [rosang@stanford.edu](mailto:rosang@stanford.edu)

Web Site: <http://stanford.edu/dept/ombuds>

School of Medicine Ombuds: James Laflin

Office: Medical School Office Building, 1265 Welch Road, Suite X301, MC: 5404

Phone: (650) 498-5744

Fax: (650) 498-5865

Mail Code: 94305-5404

Email: [jlafin@stanford.edu](mailto:jlafin@stanford.edu)

Web Site: <http://med.stanford.edu/ombuds>

The charge to the Ombuds office at Stanford is: "The Ombudsperson's task is to protect the interests and rights of members of the Stanford community from injustices or abuses of discretion, from gross inefficiency, from unnecessary delay and complication in the administration of University rules and regulations, and from inconsistency, unfairness, unresponsiveness, and prejudice in the individual's experience with University activities. The Ombudsperson's office exists to receive, examine, and channel the complaints and grievances of members of the Stanford community, and to secure expeditious and impartial redress."

Any troublesome matter in the University community may be discussed in confidence with the University Ombuds. Services of the office are available to students, staff, and faculty. Although possessing no decision making authority, the Ombuds has wide powers of inquiry. The Ombuds refers matters to the proper person or office expeditiously and also provides conflict resolution services. For the role of the office of the Ombuds in cases of sexual harassment, see the "Non-Academic Regulations (p. 79)" section of this bulletin.

## Police Services

Department Office: Corner of Campus Drive and Serra Street

Phone: (650) 723-9633

Web Site: <http://police.stanford.edu>

The Stanford Department of Public Safety is a full service police department that operates 24 hours a day, 7 days a week. For police, fire, or ambulance response, dial 9-1-1, or 9-9-1-1 from a University phone. Emergency assistance can also be obtained by using one of the nearly 100 Blue Emergency Phone Towers strategically placed around campus.

The department is composed of the following divisions:

The Field Services Division consists of sworn and non-sworn officers who patrol the campus and respond to calls for service. Sworn officers receive their police powers through the Santa Clara County Sheriff's Office. Sworn officers have the legal authority to stop vehicles, make arrests, and enforce all laws. Non-sworn officers assist the sworn officers

with security patrols, evidence collection, crime prevention presentations, and other assigned tasks.

Community Service Division: Community Service Officers (CSOs) enforce the parking rules and regulations on campus, and provide traffic control at special events, construction zones, and accident scenes. CSOs also provide building security during emergency or critical incidents.

The Support Services Division provides logistical, technical, and accounting support to the department. Special events are handled through this division as well. Special Events Personnel (SEPs) provide security at campus events including athletic events, concerts, student-sponsored events, and dignitary visits. SEPs are available for hire by groups needing security at their University events. Contact the special events office at (650) 723-4924, or email [event\\_security@stanford.edu](mailto:event_security@stanford.edu), for more information.

The Administrative Support Division supports the department through training, recruiting, payroll, human resources, and other business functions.

For additional safety information or to view the yearly crime statistics, see the Stanford Safety and Security Almanac, available free from the Public Safety (<http://police.stanford.edu>) web site.

## Office for Religious Life

Office: Memorial Church  
Phone: (650) 723-1762  
Web Site: <http://religiouslife.stanford.edu>

The mission of the Office for Religious Life (ORL) is to guide and enhance spiritual, religious, and ethical life within the Stanford University community. Multifaith exploration and dialogue, central in Stanford's history from its founding, is a vital part of both its ethos and education.

The ORL is committed to welcoming students of all genders and sexual identities, all religious and non-religious traditions, and all cultural backgrounds, striving to ensure that students, faculty, and staff have access to supportive contexts in which to pursue their spiritual journeys on the Stanford campus.

The ORL oversees and provides support for Stanford Associated Religions (SAR), more than thirty religious organizations that offer their spiritual services to the campus, as well as the Center for Inter-Religious Community, Learning, and Experiences (the CIRCLE). Located on the third floor of the remodeled Old Union, the CIRCLE offers an interfaith sanctuary, a seminar room, a common room, a student lounge, a non-lending library, and offices housing many SAR member groups.

## Stanford Alumni Association

Web Site: <http://stanfordalumni.org>  
Phone: (800) 786-2586 or (650) 723-2021

The Stanford Alumni Association (SAA) seeks to serve all Stanford alumni and students by offering programs and services such as reunions, regional events, Stanford Magazine, online services, volunteer and learning opportunities, and the alumni directory.

The Stanford Alumni Association's alumni and student class outreach department (ASCO) provides undergraduates and graduate students with networking opportunities, celebratory and social events, and programs that enhance their Stanford experience and help connect them to the 200,000 alumni worldwide who make up the Stanford alumni community. ASCO programs bring students and alumni together through Reunion Homecoming Weekend each autumn and Commencement weekend in the spring, along with alumni networking events throughout the year.

For students, SAA sponsors events such as student tailgates, alumni panels, Senior Send-off, Senior Dinner on the Quad, and Class Day. The Alumni Association gives out the J.E. Wallace Sterling Award and the Stanford Award of Excellence annually to honor graduating seniors for exemplary service to the University. For more information on student programs at the Stanford Alumni Association (<http://police.stanford.edu>) web site.

## Office of Special Events & Protocol and the Stanford Ticket Office

The Office of Special Events & Protocol (OSEP) (<https://osep.stanford.edu>) and Stanford Ticket Office (STO) (<http://tickets.stanford.edu>) are divisions of the Office of Public Affairs (<http://publicaffairs.stanford.edu>). OSEP manages the University's public ceremonies such as Commencement, Baccalaureate, New Student Orientation Convocation, and the Founders' Celebration. The organization also designs and produces other high-profile university events hosted by the President and Provost, such as the Roundtable at Stanford, international symposia and visits to campus by foreign delegations and heads of state.

OSEP also serves in an advisory capacity and/or can provide direct planning expertise to campus schools, departments, and student groups. The department has final approval authority of Stanford facility and open space use for non-academic events on campus. For information or event planning assistance, information about policies, procedures, and University facilities, see the OSEP (<https://osep.stanford.edu>) web site, or call (650) 724-1387.

The STO is the University's official full-service box office that provides online, in-person and by phone ticketing services, as well as day-of-event staffing support to hundreds of events throughout the year. Important arts organizations and venues it serves include Stanford Live, Stanford Jazz and Music Departments, the Bing Concert Hall, Frost Amphitheater, and Memorial Auditorium. The Stanford Ticket Office also provides professional ticketing and registration services to all academic departments, institutes, and student groups for lectures, festivals, concerts, and various high profile public events. For more information, see the Stanford Ticket Office (<http://tickets.stanford.edu>) web site, or call (650) 725-ARTS (2787).

## Diversity and Access Office

*Director of the Diversity and Access Office:* Rosa Gonzalez  
Office: 419 Lagunita Drive, Suite 130  
Mail Code: 94305-8550  
Phone: (650) 723-0755; TTY: (650) 723-1216  
Email: [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu), [disability.access@stanford.edu](mailto:disability.access@stanford.edu)  
Web Site: <https://diversityandaccess.stanford.edu/>

The Diversity and Access Office ensures compliance with Titles VI and VII of the Civil Rights Act, the Equal Pay Act, the Americans with Disabilities Act (ADA) and Sections 503 and 504 of the Rehabilitation Act, the Age Discrimination in Employment Act, and Executive Order 11246, the California Fair Employment and Housing Act (FEHA), and the Unruh Civil Rights Act, among other laws.

The Diversity and Access Office was created to advance Stanford University's equal opportunity and affirmative action goals and commitment to diversity. The office also ensures University compliance with federal, state and local regulations concerning nondiscrimination and disability access. The Director of the Diversity and Access Office is responsible for administering the ADA/Section 504 Grievance Procedure (Student) and the Student Non-Academic Grievance Procedure. Finally, the office also provides an array of services and resources designed to ensure equal opportunity and address bias and discrimination prohibited by law or official University policy, as well as assists individuals with

disabilities who have requests for accommodations in the workplace and access to Stanford facilities, programs, and activities.

## Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford's Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this web site: <https://www2.ed.gov/about/offices/list/ocr/complaintintro.html>

## Awards and Honors

### Faculty and Staff Awards

#### Kenneth M. Cuthbertson Award

The Kenneth M. Cuthbertson Award was established in 1981 to recognize exceptional service to Stanford University. It was established by members of the faculty who wish to remain anonymous. All members of the Stanford community are eligible for the award; the sole criterion is the quality of the contribution that the recipients have made to the University. The award provides a way of honoring members of the staff and faculty for their efforts on behalf of the University.

Ordinarily, one award is made each year. The award was first presented in 1981 to the person for whom it is named. Kenneth M. Cuthbertson was one of the early architects of Stanford's long-term financial planning and fundraising program. His service to Stanford set an enduring standard for those who will come after him. The award is made annually at the University Commencement Ceremony.

#### Lloyd W. Dinkelspiel Awards

The Lloyd W. Dinkelspiel Awards recognize distinctive and exceptional contributions to undergraduate education at Stanford University. The two principal awards are made to the faculty or staff members adjudged to have made the most distinctive contribution to the development and enrichment of undergraduate education in its broadest sense. Two awards are also made to graduating seniors who combine academic achievement with effective contributions to undergraduate student life. Preference is given to service in the School of Humanities and Sciences in the area of liberal education. The awards are made from an endowment fund established in memory of Lloyd W. Dinkelspiel, a Stanford alumnus and trustee. The awards are made annually at the University Commencement Ceremony.

#### Walter J. Gores Awards

The Walter J. Gores Faculty Achievement Awards for excellence in teaching were established by bequest of Walter J. Gores, Stanford Alumnus of the Class of 1917 and a professor at the University of

Michigan for 30 years. Teaching is understood in its broadest sense and includes, in particular, lecturing, leading discussions, tutoring, and advising at the undergraduate or graduate levels. Any member of the teaching staff of the University is eligible for an award, including all faculty of professorial rank, instructors, lecturers, teaching fellows, and teaching and course assistants. Ordinarily, awards are made to a senior faculty member (associate or full professor) or senior lecturer; a junior faculty member or member of the teaching staff; and a teaching assistant (graduate or undergraduate student). The awards are made annually at the University Commencement Ceremony.

#### Allan Cox Medal For Faculty Excellence Fostering Undergraduate Research

The Allan Cox Medal for Faculty Excellence Fostering Undergraduate Research is awarded annually to a faculty member who has established a record of excellence directing undergraduate research over a number of years. It may also go to a faculty member who has done an especially outstanding job with just one or two undergraduates who have demonstrated superior work. The medal was established in memory of the former professor of Geophysics and Dean of the School of Earth Sciences, a strong supporter of faculty-student research collaboration.

#### Herbert Hoover Medal For Distinguished Service

David Starr Jordan's belief that every academic degree should represent work actually done in or under the direction of the institution granting it has meant that, since its founding, Stanford has awarded no honorary degrees. As a means of recognizing extraordinary individuals who deserve special acknowledgment, the Stanford Alumni Association in 1962 voted to establish the Herbert Hoover Medal for Distinguished Service. The name pays tribute to the former President's example of service to his University, to his country, and to the cause of world humanitarianism. Indeed, Mr. Hoover was the first award recipient. The gold medal is presented following selection by an anonymous committee appointed by the Chair of the Board of Directors of the Alumni Association.

### Student Awards

#### Boothe Prize for Excellence in Writing

Awarded during the freshman year, the Boothe Prize recognizes excellence in writing. Students are selected for this honor on the basis of essays written for courses fulfilling the Introduction to the Humanities or Writing and Rhetoric requirements. The prize is named for Mr. and Mrs. D. Power Boothe, Jr., whose gifts to the University reflect their interest in the humanities.

#### Deans' Award for Academic Achievement

The Deans of Earth Sciences, Engineering, and Humanities and Sciences recognize from five to ten undergraduate students each year for their academic endeavors. Honorees are cited for noteworthy accomplishments which represent more than a high grade point average or success in course work. Faculty nominate students who have exceptional tangible achievements in classes or independent research, national academic competitions, a presentation or publication for a regional or national audience, or exceptional performance in the creative arts.

#### Firestone Medal for Excellence in Research

The Firestone Medal is awarded to seniors in recognition of excellence in undergraduate research. Departments in the School of Humanities and Sciences nominate students who have completed outstanding honors projects in the social, physical, and natural sciences.

#### Robert M. Golden Medal for Excellence in the Humanities and Creative Arts

The Golden Medal recognizes outstanding achievement in the humanities and the creative arts. Seniors receive these medals upon nomination by their major department.

### Hoefler Prize for Excellence in Undergraduate Writing

The Hoefler Prize recognizes students and faculty for their work in courses that meet the University Writing Requirement for writing in the major. Prizes are awarded in each of the five areas of the undergraduate curriculum: humanities, social sciences, natural sciences, engineering, and earth sciences.

### Frederick Emmons Terman Engineering Scholastic Award

The School of Engineering annually presents the Terman Award to seniors for outstanding academic achievement. The awardees share their award with a high school teacher of their nomination.

### Phi Beta Kappa

Phi Beta Kappa is a nationwide society honoring students for the excellence and breadth of their undergraduate scholarly accomplishments. Membership in the Stanford Chapter (Beta of California) is open to undergraduates of all majors. To be elected to Phi Beta Kappa at Stanford, a student must achieve academic distinction in the major as well as in courses across a broad range of fields.

Approximately a tenth of the members of a graduating class are elected to Phi Beta Kappa. Of this number, about one fifth are chosen in their junior year, the remainder in their senior year.

The chapter's election guidelines define breadth of study as excellence beyond the major field. To be considered for election, a student must have taken at least three courses of 3 units or more at Stanford by the time elections are held early in the Spring Quarter with a letter grade of 'B-' or better in each of the following three major domains of knowledge: humanities; science, engineering, and math; and social sciences. Students who transfer in their junior year must have taken at least two courses at Stanford in two of the major domains and at least one course in the third domain, and must have completed a minimum of 75 units of academic work at Stanford by the end of Winter Quarter. Students who transfer in their sophomore year must have taken at least two courses at Stanford in each of the major domains.

There is no direct correlation between Stanford University General Education Requirements (GERs) and Phi Beta Kappa breadth requirements. The elections committee analyzes the content of individual courses to determine which major domain requirement they may satisfy. IHUM, PWR, and first-year language courses do not satisfy the PBK breadth criterion.

A grade of '+' or 'CR' is not considered a sign of distinction. Minimally satisfying the breadth criterion is not considered a sign of distinction.

The academic records of eligible students are automatically reviewed, so no special action is required for students wishing to be considered for membership. Anonymity in the election process is ensured by removal of the students' names from their academic records before consideration. Students who desire that their records not be made available for consideration by the Stanford chapter of Phi Beta Kappa should inform the Registrar, 630 Serra Street, Suite 120, Stanford, CA 94305-6032.

## Exchange Programs and Cross-enrollment Agreements

Stanford has exchange programs and cross-enrollment agreements with a number of other colleges and universities. The purpose of these programs and agreements is to offer Stanford students courses and training that are not available in the Stanford curriculum.

### Undergraduate

Stanford has exchange programs with four colleges and universities that allow students to exchange schools for a quarter/semester or for a year, depending on the school. These programs are best suited to students in their junior year, when the major area of study has been determined.

Stanford students register for zero units at Stanford during the quarter(s) in which they are attending another college or university and pay the regular Stanford tuition. Courses taken at the other institution are treated as transfer credit back to Stanford. Students should contact the External Credit Evaluation section of the Office of the University Registrar to determine whether the courses taken through an exchange program may qualify for credit toward a Stanford degree. Only the number of units accepted in transfer, not the course titles or the grades received, are recorded on the Stanford transcript.

Exchange programs are currently available at three historically black institutions: Howard University in Washington D.C.; and Morehouse College and Spelman College in Atlanta, Georgia. The exchange program at Dartmouth College in Hanover, New Hampshire, focuses on Native American Studies. Further information is available at the Undergraduate Advising and Research Center.

### Graduate

The Exchange Scholar Program is open to doctoral students in programs other than the Graduate School of Business or Stanford Law School who have completed one full year of study at one of the participating institutions. These students may apply to study at Stanford, and Stanford students may apply to one of these other institutions, for a maximum of one academic year (Autumn, Winter, and Spring quarters) to take advantage of particular educational opportunities not available on the home campus. The participating institutions are Brown University, University of Chicago, Columbia University, Cornell University, Harvard University, Massachusetts Institute of Technology, Princeton University, Stanford University, University of Pennsylvania, and Yale University. Further information on the program may be obtained from the Office of the University Registrar, or the graduate dean's office at participating institutions. Some institutions may place restrictions on specific departments.

Stanford also has separate exchange programs with the University of California, Berkeley, the University of California, San Francisco, and the University of California, Santa Cruz for students in marine sciences. Further information may be obtained at the Office of the University Registrar.

## Cross-Enrollment

See the "ROTC section (p. 130)" of this bulletin for information on ROTC cross-enrollment programs.

## Office of Special Events & Protocol Office of Special Events & Protocol and the Stanford Ticket Office

The Office of Special Events & Protocol (OSEP) (<https://osep.stanford.edu>) and Stanford Ticket Office (STO) (<http://tickets.stanford.edu>) are divisions of the Office of Public Affairs (<http://publicaffairs.stanford.edu>). OSEP manages the University's public ceremonies such as Commencement, Baccalaureate, New Student Orientation Convocation, and the Founders' Celebration. The organization also designs and produces other high-profile University events hosted by the President and Provost, such as the Roundtable at Stanford, international symposia, and visits to campus by foreign delegations and heads of state.

OSEP also serves in an advisory capacity and/or can provide direct planning expertise to campus schools, departments, and student groups.

The department has final approval authority of Stanford facility and open space use for non-academic events on campus. For information or event planning assistance, information about policies, procedures, and

University facilities, see the OSEP (<https://osep.stanford.edu>) web site, or call (650) 724-1387.

The STO is the University's official full-service box office that provides online, in-person and by phone ticketing services, as well as day-of-event staffing support to hundreds of events throughout the year. Important arts organizations and venues it serves include Stanford Live, Stanford Jazz and Music Departments, the Bing Concert Hall, Frost Amphitheater, and Memorial Auditorium. The Stanford Ticket Office also provides professional ticketing and registration services to all academic departments, institutes, and student groups for lectures, festivals, concerts, and various high profile public events. For more information, see the Stanford Ticket Office (<http://tickets.stanford.edu>) web site, or call (650) 725-ARTS (2787).

# STUDENT AFFAIRS

Web Site: <http://studentaffairs.stanford.edu/>

Student Affairs is led by the Vice Provost for Student Affairs. There are six main units in Student Affairs:

1. BEAM, Stanford Career Education
2. Community Engagement and Diversity
3. Dean of Students
4. Office of Residential Education
5. Student and Academic Services, and University Registrar
6. Vaden Health Center

The division encompasses a broad range of programs and services for undergraduates and graduate students, which are administered by the following offices and centers:

- Asian American Activities Center
- BEAM, Stanford Career Education
- Bechtel International Center
- Black Community Services Center
- Dean of Students
- Diversity and First-Gen Office
- El Centro Chicano y Latino
- Graduate Life Office
- Haas Center for Public Service
- LGBT Community Resources Center
- The Markaz: Resource Center
- Native American Cultural Center
- Office for Military-Affiliated Communities
- Office of Accessible Education
- Office of Alcohol Policy and Education
- Office of Community Standards
- Office of Residential Education
- Office of Student Activities and Leadership
- Student Services Center
- Student Financial Services
- University Registrar
- Vaden Health Center
- Women's Community Center

The Vice Provost for Student Affairs reports directly to the Provost and is responsible for providing leadership, policy direction, and administrative support for budget, personnel, facilities, and development, as well as oversight of the efficiency and effectiveness of each of the division's units. The Vice Provost interacts with the President, the Provost, the Vice Provosts, faculty, schools, department representatives, students, and parents. The Vice Provost is a member of the Stanford University Cabinet, and ex officio member of the Stanford Alumni Association Board of Directors, Stanford Athletic Board, and Haas Center for Public Service National Advisory Board. The Vice Provost also attends the Senate meetings of the Academic Council.

## Bechtel International Center

Office: 584 Capistrano Way

Web Site: <https://bechtel.stanford.edu>

The Bechtel International Center (I-Center) is a meeting place for students and senior research scholars at Stanford from throughout the world and for internationally oriented U.S. students, faculty, and short-term visitors on the campus. Through a variety of social, cultural, and educational

programs, I-Center facilities are used to acquaint students and scholars with the life of the university and the community, and to bring them together in activities of mutual interest.

The Center believes that international educational exchange nurtures a lifelong global perspective, and plays a key role in supporting Stanford's standing as a truly international university in the following ways:

- Provides information about and assistance with obtaining and maintaining legal status in the U.S. to foreign students, scholars, and Stanford departments.
- Advises U.S. students who are pursuing scholarships for study and research abroad.
- Enables foreign students, scholars, and their family members at Stanford to receive maximum academic, cultural, and personal benefit from their stays in the U.S.
- Contributes to international activities at Stanford by helping to create a welcoming and supportive environment that is responsive to the needs of the international community.
- Facilitates professional meetings between visiting international delegations and their Stanford counterparts.
- Provides opportunities for Stanford students, faculty, staff, and members of the local community to broaden their horizons by interacting with people from different cultures through programs to increase international awareness and understanding.

## BEAM, Stanford Career Education

Offices: 563 Salvatierra Walk

Web Site: <https://beam.stanford.edu/>

BEAM (Bridging Education, Ambition and Meaningful Work), Stanford Career Education empowers students to cultivate personalized networks that shape their professional journey through customized support for students based on their interests, academic majors and degrees. BEAM offers many opportunities to engage with employers and alumni via events, mentorships, experiential learning, and much more. Tools and digital resources are also made available through meetups, labs, or individual appointments to help students transform their ambitions into meaningful work.

Support is available to undergraduate and graduate students, and all students are encouraged to login to Handshake, our online platform that connects students and employers, to stay up to date on events and opportunities. Events and appointments are free to students and limited services are available to first-year alumni and student spouses/domestic partners.

The following suggestions may assist students in getting the most out of their journey toward meaningful work:

- Begin building your personalized network early in your Stanford career.
- Register with Handshake to access career events, internships, part-time and full-time jobs, and interview opportunities.
- Discover yourself and gain clarity of your interests and skills through meetups, assessments, and taking advantage of individual career coaching appointments that can be made via Handshake.
- Make exploration a priority by connecting with alumni mentors, planning informational interviews, signing up for a career trek, and meet with an industry consultant.
- Make a plan to pursue opportunities by attending labs, familiarizing yourself with resources, and utilize your connections.

*Visit Career Communities for career coaching in academic departments and student communities:*

Monday–Friday, 9 a.m. to noon, 1 p.m. to 5 p.m.; (650) 725-1789

Visit *Career Ventures* for customized industry connections and employer engagement opportunities:

Monday–Friday, 8:15 a.m. to 4:30 p.m.; (650) 723-9014

## Community Centers

There are seven ethnic and community centers that support students who seek services associated with a particular group or community. Each center has its own site and professional staff who advise and counsel students. In addition, the centers sponsor programs throughout the year that foster intellectual, personal, and cultural growth. Detailed information is available on the following web sites:

- Asian American Activities Center (<https://a3c.stanford.edu>)
- Black Community Services Center (<https://bcsc.stanford.edu>)
- El Centro Chicano y Latino (<https://elcentro.stanford.edu>)
- LGBT Community Resources Center (<https://lgbt.stanford.edu>)
- The Markaz: Resource Center for Engagement with the Cultures and Peoples of the Muslim World (<https://markaz.stanford.edu>)
- Native American Cultural Center (<https://nacc.stanford.edu>)
- Women's Community Center (<https://wcc.stanford.edu>)

The programs offered through the centers are open to all Stanford students.

## Dean of Students

Dean of Student Life: Chris Griffith

Office: Old Union

Phone: (650) 723-2733

Web Site: <https://studentaffairs.stanford.edu/who-we-are/dean-students>

The Dean of Students has responsibility for overseeing the Graduate Life Office, Office of Community Standards, and the Office of Alcohol Policy and Education, as well as responsibility for the Acts of Intolerance Protocol. The Dean reports to the Vice Provost for Student Affairs and is a member of his executive committee.

## Diversity and First-Gen Office

Office: Old Union, 520 Lasuen Mall, Suite 206

Phone: (650) 723-2733

Email: [jrolen@stanford.edu](mailto:jrolen@stanford.edu) (<http://exploreddegrees.stanford.edu/studentaffairs/jrolen@stanford.edu>)

Web Site: <https://diversityandfirstgen.stanford.edu/>

Established in 2010 to serve first-generation and low-income students and help them be successful, the Diversity and First-Gen Office provides:

- a Thrive Guide to publicize the abundance of support available
- contact information for student groups, staff, faculty, and alumni for networking and mentoring
- signature programs and special events to build community
- administrative support and advocacy for diversity programs, especially those highlighting socioeconomic issue

## Graduate Life Office (GLO)

Graduate Life Office: Escondido Village Office, 859 Comstock Circle  
Graduate Life Office, Graduate Community Center: 750 Escondido Road  
Phone: (650) 736-7078

Email: [graduatelife@stanford.edu](mailto:graduatelife@stanford.edu)

Web Site: <https://glo.stanford.edu>

The Graduate Life Office (GLO) works with students on and off campus and with student groups, including Community Associates (student residence staff), the Graduate Student Programming Board, and the Graduate Student Council, to create an inclusive environment through

programs in the residences and campus-wide. The Graduate Community Center (GCC) serves as a focal point for meetings and activities in the graduate community.

The GLO staff also works with individual students who need information and support or who may be experiencing personal difficulties. Staff members are knowledgeable about and have access to support and resources available throughout the university. Staff work closely with student services administrators in academic departments to provide consultation and services to students in need.

## Graduate Student Residence Program

The university's philosophy of graduate student housing is based on the premise that supporting high quality graduate scholarship and research is central to the mission of the university. By providing affordable housing in proximity to academic resources, the university creates an environment conducive to research and intellectual dialogue among students, their peers, and faculty members. The Community Associate (CA) program in the residences serves as a supportive resource for residents and to connect student neighbors through social events and activities to build a sense of community in the residences.

## Haas Center for Public Service

Center Office: 562 Salvatierra Walk

Mail Code: 8620

Phone: (650) 723-0992

Web Site: <https://haas.stanford.edu>

- The Haas Center for Public Service engages Stanford students in local and global public service across diverse pathways: direct service, community engaged learning and research, activism, philanthropy, public policy, and social entrepreneurship. The Haas Center offers:
  - Walk-in advising on public service opportunities and careers.
  - Community engaged learning and research across disciplines.
  - Supported full-time, quarter-long service opportunities in the U.S. and abroad.
  - Tutoring and mentoring programs rooted in enduring partnerships and cutting-edge education research.
  - Leadership training, service trips, and support for more than 125 service-related student organizations.

The Haas Center is the hub for Cardinal Service, a university-wide initiative to elevate service at Stanford in four areas:

- Cardinal Quarter: Students can select from more than 350 supported opportunities to participate full-time in service for a quarter or more. In the next five years, this will grow to 500 local, national and global opportunities.
- Cardinal Courses: Students can participate in more than 70 courses across 25 academic disciplines that integrate a community experience, examine a public issue, and explore civic identities.
- Cardinal Commitments: Students participate in and sustain a significant service experience to explore particular social issues or concerns.
- Cardinal Careers: Students explore multiple public service career options and learn about ways to integrate service into any career.

## Office for Military-Affiliated Communities (OMAC)

Office: Tresidder Memorial Union, 2nd floor

Phone: (650) 721-1563

Web Site: <https://military.stanford.edu>

The Office for Military-Affiliated Communities (OMAC) focuses on the administration and management of VA financial benefits, coordinates and supports educational opportunities for military-affiliated communities, and conducts outreach to faculty regarding engagement and support for faculty grants or other funding specifically identified for military and veteran communities.

## Office of Accessible Education (OAE)

Offices: 563 Salvatierra Walk  
Phone: (650) 723-1066; TDD (650) 723-1067  
Web Site: <https://oae.stanford.edu/>

The Office of Accessible Education (OAE) is the campus office designated to work with students, faculty, and staff to put in place appropriate accommodations for all Stanford students with disabilities, at both the undergraduate and graduate levels (including the professional schools). The OAE provides a wide array of support services, accommodations, and programs to remove barriers to full participation in the life of the university.

In reaching its determinations about appropriate accommodations, the OAE considers factors such as the documentation from professionals specializing in the area of the student's diagnosed disability, the student's functional limitations, and the student's input and accommodation history in regard to particular needs and limitations. The OAE then works with the student and relevant faculty and staff through an interactive process designed to achieve an accommodation that meets the needs of all parties.

## Office of Alcohol Policy and Education (OAPE)

Offices: Rogers House, 581 Capistrano Way  
Phone: (650) 723-5947  
Web Site: <http://studentaffairs.stanford.edu/alcohol>  
<https://alcohol.stanford.edu/>

The Office of Alcohol Policy and Education (OAPE) empowers students to make healthy decisions about drinking behaviors that not only affect them as individuals, but ultimately impact the campus community as a whole. OAPE is focused on reducing the harm of high-risk behaviors while increasing safe, legal, responsible actions. Services offered include individual consultation, educational workshops and seminars, and academic coursework. OAPE also sponsors Cardinal Nights, a program of weekly events that allow students to socialize in an environment free of alcohol.

## Office of Community Standards

Office: Tresidder Memorial Union, 2nd floor  
Mailing Address: 459 Lagunita Drive, Suite 9  
Mail Code: 94305-3010  
Phone: (650) 725-2485  
Fax: (650) 736-0247  
Web Site: <https://communitystandards.stanford.edu/>  
Email: [community\\_standards@stanford.edu](mailto:community_standards@stanford.edu)  
([judicial.affairs@stanford.edu](mailto:judicial.affairs@stanford.edu))

The primary codes of conduct for students are the Fundamental Standard and Honor Code. Cases of alleged violations of the university's Honor Code, Fundamental Standard, and other student conduct or University policies proceed through an established student conduct process (<https://communitystandards.stanford.edu/student-conduct-process>) outlined in the Student Judicial Charter of 1997, which can be found in its entirety at the Office of Community Standards (<https://communitystandards.stanford.edu>) web site. The web site also contains the policies, rules, and interpretations, as well as the university's Student Conduct Penalty Code, applicable to those students found responsible for

violating the Honor Code, the Fundamental Standard, or other university policy or rule.

Allegations of sexual misconduct, sexual harassment, stalking, or dating violence proceed through the Dean's Alternate Misconduct Review Process (<http://studentaffairs.stanford.edu/judicialaffairs/process/alternate-review>).

When a violation of the Fundamental Standard, Honor Code, or other university policy or rule governing student conduct is alleged, or whenever a member of the university community believes such a violation has occurred, he or she should contact the Office of Community Standards.

## Fundamental Standard

Students at Stanford are expected to know, understand, and abide by the Fundamental Standard, which is the university's basic statement on behavioral expectations articulated in 1896 by Stanford's first President, David Starr Jordan, as follows:

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

The Fundamental Standard is an aspirational statement of Stanford's ideal of civic and moral community. Although the spirit of the Fundamental Standard remains unchanged since 1896, these aspirational learning goals for all Stanford students elaborate its basic values today:

- i. Students are expected to respect and uphold the rights and dignity of others regardless of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or socioeconomic status.
- ii. Students are expected to uphold the integrity of the university as a community of scholars in which free speech is available to all and intellectual honesty is demanded of all.
- iii. Students are expected to respect university policies as well as state and federal law.
- iv. For the purposes of clarity, students should be aware that they may be subject to discipline at Stanford University for acts of misconduct including:

- Violation of university policy
- Violation of a specific university directive
- Violation of an applicable law
- Physical assault
- Sexual misconduct, sexual assault, sexual harassment, stalking
- Theft of property or services
- Threats
- Hazing
- Hate crimes
- Alcohol- and drug-related violations, including driving under the influence
- Intentional or reckless property damage
- Seeking a university benefit to which a student is not entitled
- Falsifying a document
- Impersonating another
- Computer violations
- Knowingly or recklessly exposing others to significant danger

There is no standard penalty that applies to violations of the Fundamental Standard. Infractions have led to penalties ranging from

formal warning and community service to expulsion. In each case, the nature and seriousness of the offense, the motivation underlying the offense, and precedent in similar cases are considered.

## Honor Code

The Honor Code is the University's statement on academic integrity. It is essentially the application of the Fundamental Standard to academic matters. Provisions of the Honor Code date from 1921, when the honor system was established by the Academic Council of the University Faculty at the request of the student body and with the approval of the President. The Honor Code reads:

"1. The Honor Code is an undertaking of the students, individually and collectively:

- a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
- b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.

3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work."

Examples of conduct that has been found to be in violation of the Honor Code include:

- Copying from another's examination paper or allowing another to copy from one's own paper
- Unpermitted collaboration
- Plagiarism
- Revising and resubmitting a quiz or exam for regrading without the instructor's knowledge and consent
- Representing as one's own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

For more information, see the Student Conduct Process (<https://communitystandards.stanford.edu/student-conduct-process>) pages at the Community Standards (<http://communitystandards.stanford.edu>) web site. The standard sanction for a first violation is a one quarter suspension from the University and 40 hours of community service. In addition, many faculty members issue a 'No Pass' for the course in which the violation occurred. Information for teachers is available on the Teaching Commons web site (<https://teachingcommons.stanford.edu/resources/teaching-resources/how-evaluate-students/academic-honesty-and-dishonesty>).

## Office of Residential Education

Office: Tresidder Memorial Union  
Phone: (650) 725-2800  
Web Site: <https://resed.stanford.edu/>

The Office of Residential Education is responsible for developing the policies, programs, and staffing which support the intellectual, educational, and community-building activities in student residences.

The conviction behind the Stanford residence program is that formal teaching, informal learning, and personal support in residences play an important role in a Stanford education.

## Residential Education Program

The Residential Education program provides Stanford undergraduates with a small community experience within a large research university. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students' preparation for a life of leadership, intellectual engagement, citizenship, and service. An extensive network of staff, including many who live in the residence halls, supports students during their undergraduate careers.

## Residence Deans

Residence Deans provide assistance to on- and off-campus undergraduate students. They can advise students about personal matters, occasionally intervene directly in behavioral problems or mental health concerns, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of students, and administrative matters. Residence Deans work closely with the Dean of Student Life and other University offices. They are assigned to specific residences and to off-campus students. For further information, undergraduates should call Residential Education at (650) 725-2800. For assistance, graduate students can consult assistant deans in the Graduate Life Office at (650) 736-7078.

## Office of Student Activities and Leadership (SAL)

Office: Old Union, 520 Lasuen Mall, Suite 206  
Web Site: <https://sal.stanford.edu/>

The Office of Student Activities and Leadership (SAL), located in Old Union, supports student activities, over 600 student organizations and the ASSU through publications, workshops, one-on-one consultation, advising and major event planning support.

## Voluntary Student Organizations

There are over 600 different Voluntary Student Organizations (VSOs) at Stanford. VSOs are organizations

1. in which membership is not mandatory and is nondiscriminatory,
2. in which membership is both open and limited to current Stanford students registered in a degree-granting program,
3. in which students make all organizational decisions, and
4. whose purposes and procedures are consistent with the goals and standards of the University. In order to use University facilities, the Stanford name, or to receive ASSU funding, all voluntary student organizations must register with the University through the Office of Student Activities, Old Union, room 206.

As a condition of registration, each voluntary student organization must file and have approved each of the following:

1. A statement of purpose and organizational constitution.
2. A statement about membership eligibility.
3. Clear procedures for officer elections.
4. Identification of the authorized representatives of the group, who must be a currently registered student, and at least five active members in the organization who are currently registered students.

Each voluntary student organization must renew its registration with the University annually, early in Autumn Quarter, by submitting new registration materials.

If a voluntary student organization that is registered with the University seeks to use University facilities for meetings open to more than its own members and to specifically invited guests, such meetings shall be subject to the policies of the Committee on Public Events. All organization events held in University facilities must receive event approval from the Student Activities and Leadership and Stanford Events.

A voluntary student religious organization may hold open meetings in University facilities only with the approval of the Office of the Dean for Religious Life (as the delegatee of Student Activities and Leadership).

A registered voluntary student organization may advocate publicly a position on a public issue, provided the organization clearly identifies itself, and provided such an organization in any public statement makes clear it does not represent or speak for the University or the Associated Students.

No student group or individual student(s) may use University space or facilities or receive other University support for purposes of supporting candidates for public office. Groups may use White Plaza for tables, speeches, and similar activities and may request to reserve auditoriums and similar space for public events including speeches by political candidates as long as all University guidelines are followed.

## Student Financial Services

Office: Tresidder Memorial Union, 2nd floor  
Phone: (866) 993-7772 (toll-free)  
Web Site: <https://sfs.stanford.edu>

Student Financial Services is responsible for managing billing, payment, and collections of student accounts receivable; and managing student loan receivables and collections. Student Financial Services also manages the refunding of aid to students in collaboration with the financial aid offices and in compliance with Title IV regulations. Furthermore, Student Financial Services provides resources and guidance to University departments to ensure accurate receipting and depositing of monies.

## Student Services Center

Office: Tresidder Memorial Union, 2nd floor  
Contact via HelpSU: <https://remedyweb.stanford.edu/helpsu/helpsu?pcat=StuAcct&dtag=10772> (http)  
Phone: (650) 723-7772 or (866) 993-7772 (toll-free)  
Web Site: <https://studentservicescenter.stanford.edu>

The Student Services Center (SSC) is committed to providing a single point of friendly, professional service for answers to questions concerning administrative and financial issues. The center strives to resolve 90 percent of students' issues upon first contact. The SSC represents Student Financial Services, the Office of the University Registrar, the University Cashier's Office, the Financial Aid Office, and Stanford ID Card Services, and is able to assist students with questions including those related to University billing, financial aid disbursements, refunds, payroll deductions, payment plan, enrollment, Stanford degree policies and procedures, Stanford ID card, and forms pickup and submission.

## Vaden Health Center

Center Office: 866 Campus Drive  
Web Site: <https://vaden.stanford.edu>

The Allene G. Vaden Health Center strictly protects the confidentiality of information obtained in medical care and counseling.

## Medical Services

Medical Services (650-498-2336, ext. 1) is the first stop for diagnosis and treatment of illness, injury, and ongoing conditions, as well as preventive

counseling and education. Services available without additional charge for students who have paid the Campus Health Service fee include:

- Medical appointments in general medicine and sports medicine.
- Medical advice for routine concerns throughout the day. When Medical Services is closed, advice for urgent conditions is available from the on-call physician.
- Referral to specialists, primarily at Stanford Hospital and Clinics and Menlo Medical Clinic.

### Additional services (fees apply):

- Allergy injections, immunizations, travel services, physical exams for employment and scholarships, HIV testing, laboratory, X-rays, drug screening (academic year only).
- Pharmacy (650-498-2336, ext. 3) and physical therapy (650-723-3195) are available on site.

## Counseling and Psychological Services (CAPS)

CAPS (650-723-3785) helps students who experience a wide variety of personal, academic, and relationship concerns. Services available without additional charge for students who have paid the Campus Health Service Fee include:

- Evaluation and brief counseling, including personal, couples and group therapy. Students requesting or requiring longer, ongoing therapy incur fees.
- Workshops and groups that focus on students' social, personal and academic effectiveness.
- Crisis counseling for urgent situations 24 hours a day.
- Consultation and outreach to faculty, staff, and student organizations.

## Confidential Support Team (CST)

Office: Mariposa House, 585 Capistrano Way, 2nd Floor, Rooms 208 and 209  
Phone: 650-736-6933  
Web Site: <http://vaden.stanford.edu/sexual-assault>

The Confidential Support Team (CST) offers emotional support, consultation, and short-term individual counseling to Stanford students impacted by sexual assault and relationship/domestic violence as well as intimate partner abuse, stalking, and sexual harassment. CST is staffed by clinical psychologists and a clinical social worker. At CST, students can receive information and guidance about their rights and reporting options. Confidentiality is strictly maintained. There is no charge for Stanford students.

### Additional Services

- Consultation to faculty, staff and student organizations
- Assistance connecting to other on- and off-campus support resources

### Hours of Service

- To access CST services, call the hotline at 650-725-9955 or stop by the main office at Rogers House (<https://campus-map.stanford.edu/?id=&lat=37.4234371992&lng=-122.171889161&zoom=15&srch=Rogers%20House>) on Monday, Tuesday, Thursday, and Friday from noon-5 pm and Wednesday from 10 am-3:30 pm. Counseling sessions are held at Stanford University Medical Center.
- At all other times, call the hotline at 650-725-9955, which is directed to a CAPS on-call clinician.
- To contact the CST Office when not seeking to access confidential support services, call the general business line at 650-736-6933.

## Health Promotion Services

Health Promotion Services (650-723-0821) educates and supports students to help them make informed, healthy decisions about their lifestyle. Services include:

- Individual preventive counseling and resource referral concerning nutrition, weight management, eating and body image, alcohol, tobacco and other drug use, sexual assault and harassment, relationships, intimacy and gender issues, and sexual health.
- Health education speakers, programs, and events and workshops at student residences, community centers, student organizations, and for new students (such as Real World: Stanford).
- Academic courses and internships.
- Student groups and volunteer opportunities including Peer Health Educators, HIV Peer Anonymous Counseling and Testing (HIV\*PACT), Sexual Health Peer Resource Center (SHPRC), and CPR/First Aid classes.

## Health Insurance

All registered students are required to have health insurance. Call (650) 723-2135 for more information. Cardinal Care (<http://vaden.stanford.edu/insurance>), the University-sponsored plan for students, fulfills this requirement. Insured by Aetna Student Health (medical), and ValueOptions (mental health), Cardinal Care features comprehensive, worldwide coverage, services by referral at Stanford University Medical Center and Menlo Medical Clinic, and lowest costs when one initiates care at Vaden Health Center. Stanford does not sponsor a health insurance plan for dependents; for available options, see the Dependent Health Insurance (<http://vaden.stanford.edu/insurance/dependent-coverage>) web site. Options for voluntary dental insurance are also offered.

Under certain circumstances, students with their own health insurance may waive Cardinal Care coverage. Domestic students who choose not to participate in Cardinal Care only have to waive once each academic year and must waive coverage before the first quarter in which they are enrolled for that academic year. At that time, and that time only, they will be able to waive Cardinal Care for the rest of the year by documenting equivalent health insurance in Axxess (<http://axess.stanford.edu>) by the applicable deadline listed on Vaden's web site ([http://vaden.stanford.edu/insurance/using\\_your\\_own.html#wave](http://vaden.stanford.edu/insurance/using_your_own.html#wave)). International students must have coverage that meets or exceeds minimum standards established by the University in order to opt out of Cardinal Care; for more information see Vaden's web site ([http://vaden.stanford.edu/insurance/using\\_your\\_own.html#international](http://vaden.stanford.edu/insurance/using_your_own.html#international)).

*Vice Provost for Student Affairs:* Susie Brubaker-Cole

*Associate Vice Provost and University Registrar, Student and Academic Services:* Johanna Metzgar (effective May 21, 2018)

*Associate Vice Provost and Dean of Career Education:* Farouk Dey

*Associate Vice Provost and Director of Vaden Health Center:* Jim Jacobs

*Associate Vice Provost and Dean of Students:* Chris Griffith

*Associate Vice Provost and Dean of Residential Education:* Deborah Golder

*Associate Vice Provost for Administration:* Margaret Dyer-Chamberlain

# Accounting (ACCT)

## **ACCT 210. Financial Accounting. 4 Units.**

Financial accounting is the measurement of economic activity for decision-making. Financial statements are a key product of this measurement process and an important component of firms' financial reporting activities. The objective of this course is not to train you to become an accountant but rather to help you develop into an informed user of financial statement information. While financial statement users face a wide variety of decisions, they are often interested in understanding the implications of financial statement information for the future cash flows and earnings potential of a firm. We will focus on understanding the mapping between underlying economic events and financial statements, and on understanding how this mapping affects inferences about future profitability and liquidity. The following learning objectives will be emphasized: (1) familiarity with the transactions businesses engage in, (2) fluency in accounting terminology, (3) understanding the structure that maps transactions into accounting numbers, (4) understanding the rationale for various accounting methods, and (5) awareness of the judgment involved and the discretion allowed in choosing accounting methods, making estimates, and disclosing information in financial statements.

## **ACCT 212. Managerial Accounting: Base. 2 Units.**

This course provides an introduction to the concepts and tools of managerial accounting. The first part of the course covers alternative costing methods and illustrates how the resulting cost information can be used to analyze the profitability of individual products and customers. The second part of the course will examine the role of internal accounting systems in evaluating the performance of individual business segments and divisions of the firm. Included in this part are topics related to the choice of internal pricing methods for transferring goods and services across divisions of the firm and the use of financial metrics for assessing the profitability of these divisions.

## **ACCT 213. Financial Accounting - Accelerated. 4 Units.**

This course develops students' ability to read, understand, and use corporate financial statements. The course is oriented toward the user of financial accounting data (rather than the preparer) and emphasizes the reconstruction and interpretation of economic events from published accounting reports. The course is geared toward students with some familiarity in dealing with financial statement information and allows for deeper coverage and discussion in class.

## **ACCT 219. MSx: Accounting. 3 Units.**

A characteristic of business is the extensive use of accounting data. The financial accounting course has the general objective of developing students' understanding of the nature, scope, and limitations of accounting information. To achieve this objective the course attempts to: (1) develop students' understanding of the conceptual accounting framework, including the objectives of financial reporting, and (2) develop students' ability to understand and critically evaluate the financial disclosures made by corporations. An issue of particular interest will be the managerial incentive aspects of accounting information and disclosures.

## **ACCT 311. Global Financial Reporting. 4 Units.**

This course is designed to enhance students' understanding of current financial reporting issues through a detailed analysis and comparison of U.S. and International Financial Reporting Standards. The course will cover the development of accounting standards, implementation of these standards, and how to interpret output from these standards. The course highlights intermediate and advanced financial reporting topics including fair value accounting, asset securitization, consolidation including special purpose entities, foreign currency translation, derivatives and hedging, leases, revenue recognition, pensions, and equity compensation. The course also focuses on evaluating emerging financial reporting issues such as proposed financial reporting standards put forth by U.S. or international standard setting bodies. This course should help students better understand the environment governing global financial reporting and how firms develop financial statement information within this environment.

## **ACCT 313. Accounting-Based Valuation. 3 Units.**

This course is designed to develop students' ability to interpret and use financial accounting information in an equity valuation context. The perspective taken is that of an outsider relying on publicly available financial information for investment purposes. The course relies heavily upon financial statement analysis tools and the residual income framework for equity valuation. Through lectures, in-depth case studies, and real-time exercises, the first half of the course covers traditional financial statement analysis-based tools for critically analyzing and assessing a firm's current financial performance and economic condition, including ratio analysis, accounting quality analysis and financial distress / bankruptcy prediction models. The second half of the course introduces the accounting-based valuation framework and develops the link between financial statement analysis, forecasting and equity valuation. The capstone to the course is the completion of a comprehensive, real-time valuation of a publicly traded firm (or registered IPO candidate). The course is structured for students to gain a deeper understanding of the economic pressures behind the valuation creation and valuation process, and will be useful to those students who anticipate making investment or credit decisions at least partially based on historical and prospective financial statement information.

## **ACCT 317. Managerial Accounting: Performance Measurement, Compensation, and Governance. 3 Units.**

The course will examine the academic and professional controversies surrounding corporate governance and executive compensation. A basic framework will be developed to integrate the many important dimensions of corporate governance in the U.S. and international settings. The institutional features of corporate governance and executive compensation will be documented using the professional business and legal literatures. In addition, the scientific research in accounting, economics, finance, and organizational behavior will be used to provide insights into the measurement and consequences of observed corporate governance and executive compensation choices. After successfully finishing the course, a student should be able to (i) understand the debates about appropriate choices for corporate governance and executive compensation and (ii) critically evaluate the implications of academic and professional research studies on these controversial issues.

**ACCT 332. Mergers and Acquisitions. 3 Units.**

This course provides a comprehensive overview of strategic, economic, accounting and financial issues related to mergers and acquisitions. Specifically, we review the market for corporate control, discuss strategic and governance issues related to firms' decision to acquire or be acquired, and examine the M&A regulatory environment. We analyze various pricing and deal structure considerations, identify strategies that underlay a successful negotiation, and review the financial reporting and income tax implications of M&A deals. Covering these and other related issues, we will discuss both the theory and practice of mergers and acquisitions. To provide some specific context we will analyze several M&A deals (e.g., Google/Motorola, HP/Compaq, UpJohn/Pharmacia, AOL/Time Warner, Oracle/PeopleSoft, and many more). In discussing these cases, we will examine the situation faced by the company, the issues surrounding the transaction, including the financial reporting implications, and focus on the managerial incentives and the judgment applied. We will also review some of the related literature in accounting, economic, and finance, to gain broader perspectives and insights into the financial issues associated with M&A transactions. Class time comprises mini lectures that introduce some of the more technical concepts, case discussions, and guest speakers who will offer additional perspectives on the subject matters. The course is co-taught by Ron Kasznik (GSB) and Safra Catz (Oracle Corporation). Ms. Catz is the CEO of Oracle Corporation and a member of its Board of Directors. She has led Oracle through more than 100 acquisitions in recent years (including PeopleSoft, Siebel, BEA, Sun Microsystems, and many more). Prior to joining Oracle in 1999, Ms. Catz was Managing Director at Donaldson, Lufkin & Jenrette, a global investment bank (now part of CSFB). Ms. Catz also serves on the board of directors for HSBC Holdings plc.

**ACCT 333. Taxes and Business Strategy. 3 Units.**

Traditional business courses analyze an array of factors affecting business decisions but provide little systematic consideration of the role of taxes. By contrast, tax accounting courses traditionally concentrate on technical legal and administrative issues while ignoring the environment in which taxes enter an individual's or firm's decision. This case-based course intends to bridge this gap by providing a framework for recognizing how taxes affect strategic personal and business decisions and gaining experience analyzing a wide range of tax-related issues. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, retirement planning, cash and equity compensation, organizational form, tax planning for multiple jurisdictions, and M&A. The goal of this course is to provide an approach to thinking about taxes that will be valuable across jurisdictions even as laws change.

**ACCT 340. Alphanomics: Informational Arbitrage in Equity Markets. 4 Units.**

This is an advanced elective course on the economics of active investing in public equity markets. We will cover a set of foundational skills needed to select, and manage, a portfolio of public stocks. Specifically, the course material is designed to improve student skills in: (1) assessing the relative attractiveness of individual companies, (2) building stock screens to filter and rank firms based on user-specified parameters, (3) buying and shorting individual equity positions, and (4) monitoring and managing portfolio risk. This is a hands-on course with an emphasis on experiential learning. Students will make extensive use of the analytical tools. Some of the classes will be held in the "Real-time Analytics and Investment Lab" (R.A.I.L.) facility in the Bass Center. There is no final exam. However, there will be a number of individual cases and a final group project. 25% of the grade will be based on class participation, and 75% will be based on cases and projects. Because it is an advanced elective, students taking this class are expected to be well versed in core economic, accounting, and finance skills. Material covered in a second Financial Modeling course, as well as in Accounting 312 (Evaluating Financial Statement Information) and Accounting 313 (Accounting-based Valuation) will come in handy. However, none of these courses are required.

**ACCT 354. Analysis and Valuation for Event-Driven Investing. 3 Units.**

This Bass seminar is designed to develop students' ability to interpret and use financial accounting information in credit and equity valuation contexts. The course will focus on valuing the securities of companies undergoing significant changes as a result of litigation, restructuring, regulatory changes, mergers, spin-offs or significant industry shifts. Throughout the course, students will (1) enrich their understanding of how alternative economic, legal, political and regulatory outcomes affect the value of various components of a company's capital structure and (2) develop their ability to apply financial statement analysis to assess the likelihood and valuation implications of the events of interest. Event-driven investing follows the life cycle of companies as they revamp their corporate structures in response to economic and regulatory environments. For example, in rising economic periods companies may undertake acquisitions or spin off divisions to enhance shareholder value. During adverse environments, bankruptcy and reorganizations often reshape the capital structure by offering opportunities to create value through the restructuring process. During economic transitions, debt and equity investors may make significantly different assessments of the quality of a company's earnings, its assets, and its likelihood to meet its debt obligations. To assess the probability of corporate events, investors must make judgments about the quality of a company's earnings and assets and understand how accounting policies may influence management's representations. Investors must also interpret how accounting policies function at various points in a firm's life cycle, influencing the quality of earnings for firms differently in different economic environments. In the first half of the course, we will develop the course framework, and apply it to illustrative cases. Companies featured in past years include Tyco, AIG, CIT, Fannie Mae, Tesla, Pharmasset and Gilead and Commerzbank. Students will interpret information from companies' public financial disclosures to assess the likelihood of different events or outcomes. The course will also feature readings on current accounting standards, articles from the popular press, publicly available financial statement information, and guest speakers with in-depth knowledge of investing strategies vis a vis the case companies. The latter part of the course will be devoted to project work, with students working in teams to develop an event-driven investing strategy. The aim is to allow students to conduct independent research on a company, industry, economic context, or financial reporting environment of particular interest. Students will develop their investment idea, articulate their sense of the possible outcomes for the components of the firm's capital structure, and explain how they have assessed the likelihood and valuation consequences of those outcomes. At the conclusion of the course, students will present their strategies to the class and a panel of expert judges.

**ACCT 516. Analysis and Valuation of Emerging Market Firms. 2 Units.**

This course examines the unique institutional, governance and transparency issues affecting corporate valuations in emerging markets. Through lectures, case discussions and the students' real-time analysis of an emerging market firm, this condensed course is structured for students to gain a deeper understanding of the economic pressures behind the value creation, value destruction and valuation process in emerging economies. The course focuses on critically interpreting financial and non-financial information for purposes of assessing firm fundamentals and corporate governance risk in the presence of weak legal systems, strong political forces, limited investor protections, limited market development, strong macro-economic forces, opacity and resultant business arrangements. The course is beneficial for entrepreneurs, consultants, investors and managers operating in or considering expansion to developing markets.

**ACCT 523. Board Governance. 2 Units.**

This course is focused on helping students understand the role boards and board members play in corporate governance and the lives of businesses large and small. This case-driven course is designed to help students who plan to serve on boards as private-equity or venture investors, entrepreneurs who will need to assemble and manage boards, and executives who realize they will need to interact with and answer to boards. The course is designed to help students understand the issues boards face - both routine and non-routine - through the eyes of the board member. By understanding the roles and responsibilities of board members and the mechanisms through which they exercise these duties, students will come away with an understanding of how boards function effectively (and in too many cases fail to function effectively). The course will include examining boards in a variety of contexts with a focus on three types of situations: public for-profit companies, early-stage private companies, and not-for-profit companies of different sizes.

**ACCT 524. Individual Taxes and Financial Planning. 2 Units.**

The goal of this course is to provide a fundamental understanding of the principles of taxation and tax planning as they relate to personal income taxes and considering an individual's financial position. Traditional business courses analyze an array of factors affecting business decisions but provide little systematic consideration of the role of taxes in individual financial planning decisions. By contrast, tax accounting courses traditionally concentrate on technical legal and administrative issues while ignoring the environment in which taxes enter an individual's decision-making. This case-based course intends to bridge this gap by discussing how taxes affect a variety of personal financial planning decisions.

**ACCT 542. Corporate Taxes and Business Strategy. 2 Units.**

The goal of this course is to provide a fundamental understanding of the principles of business taxation and tax planning, which will be relevant and valuable even as tax laws change - over time, across borders, and by taxpayer type. The role that taxes may play in business decisions are presented within an "all taxes, all parties, all costs" framework, from the tax issues at start-up (e.g., the choice of organizational form for a new venture), multistate and multinational operations, financial accounting implications, and mergers and acquisitions. We will use cases to gain hands' on experience analyzing business tax strategies and refer to financial statement disclosures as appropriate so that you can learn how taxes affect the financial reporting for transactions. A recurring theme will be linking the tax strategies that we learn with concepts from corporate finance, financial accounting, business law, and economics.

**ACCT 609. Financial Reporting and Management Control. 3 Units.**

This course is aimed at doctoral students in accounting and neighboring fields including economics, finance, political economics and operations management. The course seeks to provide an introduction to the role of accounting information in (i) measuring firm performance, (ii) projecting profitability and firm value for external constituents, (iii) and motivating and controlling the firm's management. The main topics covered in this course include: 1. Profitability Measurement and Accrual Accounting. 2. Performance Evaluation and Managerial Incentives. 3. Accounting-based Equity Valuation. 4. The Informational Role of Accounting Numbers 5. Earnings Quality Constructs and Measures. The primary objective of the course is to introduce students to current research paradigms on these topics and to identify promising avenues for future research. The course readings include recent theoretical and empirical papers.

**ACCT 610. Seminar in Empirical Accounting Research. 3 Units.**

Empirical Research on Financial Reporting: This doctoral-level course covers research on the role of accounting information in capital markets. The focus is on introducing students to key themes in empirical accounting and capital markets research, and to key research designs applied to examine information-related questions. Course topics include the informational role of financial reports, accounting measurement attributes, earnings management, earnings quality, and the role of key actors in the financial reporting environment, including management, investors, auditors, analysts and regulators. The course is interdisciplinary in nature. The readings focus on research design, and key theories, themes and approaches from the accounting, finance, economics and psychology literature. Our overall goal is develop your understanding of existing research and its strengths and limitations, and to identify new research opportunities.

**ACCT 611. Applications of Information Economics in Management and Accounting. 3 Units.**

This course develops tools from information economics to study the strategic interactions between agents inside a firm and between firm insiders and market participants. Common to these studies is that agents acquire private information that is valuable to other parties. The range of applications includes: the structure of managerial performance measures, buyer-supplier contracting arrangements, earnings management, voluntary and mandatory disclosure and financial analysts.

**ACCT 612. Financial Reporting Seminar. 3 Units.**

The purpose of this PhD seminar is to facilitate your conception and execution of substantive individual research in financial reporting. It provides a vehicle for supplementing and integrating your knowledge of basic research tools and methods, as well as an exposure to the dimensions of contemporary research in the field of financial reporting. The focus of the research we will discuss in this seminar is on global financial reporting. Such research encompasses studies dealing with contemporary financial reporting issues as well as research addressing issues relating to the globalization of financial reporting. Because these issues are also of concern to financial reporting standard setters, we will discuss whether and how the research we study informs standard setting debates. Prerequisite: Consent of the instructor.

**ACCT 615. Selected Topics in Empirical Accounting Research. 3 Units.**

This course examines selected topics in accounting research. The course features three faculty who will each give a focused look at a given area, introduce students to important questions in that area, key papers in the related literature, and critical aspects of the research designs applied in the area. The aim is to increase student's familiarity with empirical accounting research, their ability to critically evaluate research and research designs, and to prepare students to conduct independent research.

**ACCT 617. Applications of Contract Theory in Accounting Research. 2 Units.**

This course develops tools from information economics to study the strategic interactions between different agents inside a firm. Common to these studies is that agents acquire private information that is valuable to other parties. The range of applications includes: the structure of managerial performance measures, capital budgeting, intra-company pricing, discretionary bonus pools, the role of non-financial performance indicators and earnings management.

**ACCT 618. Market Efficiency and Informational Arbitrage. 3 Units.**

The informational efficiency of stock markets has been a central theme in financial economic research in the past 50 years. Over this period, the focus of academic research has gradually shifted from the general to the more specific. While earlier studies tend to view the matter as a yes/no debate, most recent studies acknowledge the impossibility of fully efficient markets, and focus instead on analyses of factors that materially affect the timely incorporation of information into prices. At the same time, increasing attention is being paid to regulatory and market design issues that either impede or enhance market pricing efficiency. In this course, we will cover recent research on the role of informational arbitrage in asset pricing. Our starting point is the observation that, with costly information, equilibrium prices will invariably reflect some mispricing. The existence of mispricing introduces a role for informational arbitrage, whereby some traders will invest resources to become informed about the mispricing, with hopes of profiting from it. We review recent academic evidence on this process, and reflect on its implications for future market-related research. We will also discuss how academic research might help lower information/arbitrage costs. This is a doctoral level course. Our goal is not only to review existing research, but also to stimulate new work in the area. As such, I expect it will be of primary interest to Ph.D. students majoring in accounting, finance, and economics. Given our focus on returns prediction and the role of information in arbitrage strategies, this course should be of particular interest to those interested exploring the relation between information flows and market pricing dynamics. The course content is interdisciplinary in nature, spanning finance, economics, and accounting. Most of the readings in the earlier readings derive from finance and economics (market efficiency, limits to arbitrage, and behavioral finance); most of the later readings derive from financial accounting (equity valuation, fundamental analysis, earnings management, and analyst behavior).

**ACCT 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

**ACCT 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

**ACCT 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**ACCT 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**ACCT 802. TGR Dissertation. 0 Units.**

Same as: FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

## Aeronautics & Astronautics (AA)

**AA 100. Introduction to Aeronautics and Astronautics. 3 Units.**

This class introduces the basics of aeronautics and astronautics through applied physics, hands-on activities, and real world examples. The principles of fluid flow, flight, and propulsion for aircraft will be illustrated, including the creation of lift and drag, aerodynamic performance including takeoff, climb, range, and landing. The principles of orbits, maneuvers, space environment, and propulsion for spacecraft will be illustrated. Students will be exposed to the history and challenges of aeronautics and astronautics.

**AA 108N. Surviving Space. 3 Units.**

Space is dangerous. Anything we put into orbit has to survive the intense forces experienced during launch, extreme temperature changes, impacts by cosmic rays and energetic protons and electrons, as well as hits by human-made orbital debris and meteoroids. If we venture beyond Earth's sphere of influence, we must also then endure the extreme plasma environment without the protection of our magnetic field. With all of these potential hazards, it is remarkable that our space program has experienced so few catastrophic failures. In this seminar, students will learn how engineers design and test spacecraft to ensure survivability in this harsh space environment. We will explore three different space environment scenarios, including a small satellite that must survive in Low Earth Orbit (LEO), a large spacecraft headed to rendezvous with an asteroid, and a human spaceflight mission to Mars.

**AA 109Q. Aerodynamics of Race Cars. 3 Units.**

Almost as soon as cars had been invented, races of various kinds were organized. In all its forms (open-wheel, touring car, sports car, production-car, one-make, stock car, etc.), car racing is today a very popular sport with a huge media coverage and significant commercial sponsorships. More importantly, it is a proving ground for new technologies and a battlefield for the giants of the automotive industry. While race car performance depends on elements such as engine power, chassis design, tire adhesion and of course, the driver, aerodynamics probably plays the most vital role in determining the performance and efficiency of a race car. Front and/or rear wings are visible on many of them. During this seminar, you will learn about many other critical components of a race car including diffusers and add-ons such as vortex generators and spoilers. You will also discover that due to the competitive nature of this sport and its associated short design cycles, engineering decisions about a race car must rely on combined information from track, wind tunnel, and numerical computations. It is clear that airplanes fly on wings. However, when you have completed this seminar, you will be able to understand that cars fly on their tires. You will also be able to appreciate that aerodynamics is important not only for drag reduction, but also for increasing cornering speeds and lateral stability. You will be able to correlate between a race car shape and the aerodynamics effects intended for influencing performance. And if you have been a fan of the Ferrari 458 Italia, you will be able to figure out what that black moustache in the front of the car was for.

**AA 115N. The Global Positioning System: Where on Earth are We, and What Time is It?. 3 Units.**

Preference to freshmen. Why people want to know where they are: answers include cross-Pacific trips of Polynesians, missile guidance, and distraught callers. How people determine where they are: navigation technology from dead-reckoning, sextants, and satellite navigation (GPS). Hands-on experience. How GPS works; when it does not work; possibilities for improving performance.

**AA 116Q. Electric Automobiles and Aircraft. 3 Units.**

Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues reconsider how we move, finding sustainable transportation solutions. An introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.

**AA 118N. How to Design a Space Mission: from Concept to Execution. 3 Units.**

Space exploration is truly fascinating. From the space race led by governments as an outgrowth of the Cold War to the new era of space commercialization led by private companies and startups, more than 50 years have passed, characterized by great leaps forward and discoveries. We will learn how space missions are designed, from concept to execution, based on the professional experience of the lecturer and numerous examples of spacecraft, including unique hardware demonstrations by startups of the Silicon Valley. We will study the essentials of systems engineering as applicable to a variety of mission types, for communication, navigation, science, commercial, and military applications. We will explore the various elements of a space mission, including the spacecraft, ground, and launch segments with their functionalities. Special emphasis will be given to the design cycle, to understand how spacecraft are born, from the stakeholders' needs, through analysis, synthesis, all the way to their integration and validation. We will compare the current designs with those employed in the early days of the space age, and show the importance of economics in the development of spacecraft. Finally, we will brainstorm startup ideas and apply the concepts learned to a notional space mission design as a team.

**AA 119N. 3D Printed Aerospace Structures. 3 Units.**

The demand for rapid prototyping of lightweight, complex, and low-cost structures has led the aerospace industry to leverage three-dimensional (3D) printing as a manufacturing technology. For example, the manufacture of aircraft engine components, unmanned aerial vehicle (UAV) wings, CubeSat parts, and satellite sub-systems have recently been realized with 3D printing and other additive manufacturing techniques. In this freshman seminar, a survey of state-of-the-art 3D printing processes will be reviewed and the process-dependent properties of 3D-printed materials and structures will be analyzed in detail. In addition, the advantages and disadvantages of this manufacturing approach will be debated during class! To give students exposure to 3D printing systems in action, tours of actual 3D printing facilities on campus (Stanford's Product Realization Laboratory), as well as in Silicon Valley (e.g., Made in Space) will be conducted.

**AA 120Q. Building Trust in Autonomy. 3 Units.**

Major advances in both hardware and software have accelerated the development of autonomous systems that have the potential to bring significant benefits to society. Google, Tesla, and a host of other companies are building autonomous vehicles that can improve safety and provide flexible mobility options for those who cannot drive themselves. On the aviation side, the past few years have seen the proliferation of unmanned aircraft that have the potential to deliver medicine and monitor agricultural crops autonomously. In the financial domain, a significant portion of stock trades are performed using automated trading algorithms at a frequency not possible by human traders. How do we build these systems that drive our cars, fly our planes, and invest our money? How do we develop trust in these systems? What is the societal impact on increased levels of autonomy?

**AA 121Q. It IS Rocket Science!. 3 Units.**

It's an exciting time for space exploration. Companies like SpaceX and Blue Origin are launching rockets into space and bringing them back for reuse. NASA is developing the world's most powerful rocket. Startups are deploying constellations of hundreds of cubesats for communications, navigation, and earth monitoring. The human race has recently gotten a close look at Pluto, soft landed on a comet, and orbited two asteroids. The upcoming launch of the James Webb Space Telescope will allow astronomers to look closer to the beginning of time than ever before. The workings of space systems remain mysterious to most people, but in this seminar we'll pull back the curtain for a look at the basics of "rocket science." How does a SpaceX rocket get into space? How do Skybox satellites capture images for Google Earth? How did the New Horizons probe find its way to Pluto? How do we communicate with spacecraft that are so distant? We'll explore these topics and a range of others during the quarter. We'll cover just enough physics and math to determine where to look in the sky for a spacecraft, planet, or star. Then we'll check our math by going outside for an evening pizza party observing these objects in the night sky. We'll also visit a spacecraft production facility or Mission Operations Center to see theory put into practice.

**AA 122N. Dawn of the Drones: How Will Unmanned Aerial Systems Change Our World?. 3 Units.**

Unmanned aerial systems (UASs) have exploded on the scene in recent years, igniting a national debate about how to use them, how to regulate them, and how to make them safe. This seminar will dive into the many engineering challenges behind the headlines: in the future, how will we engineer UASs ranging in size from simple RC toys to highly-sophisticated autonomous scientific and military data gathering systems? This seminar will examine the key elements required to conceive, implement, deploy, and operate state-of-the-art of drone systems: What variety of problems can they help us solve? How autonomous are they and how autonomous do they need to be? What are the key technical bottlenecks preventing widespread deployment? How are they different from commercial aircraft? What kinds of companies will serve the market for UAV-related products and services? What business models will be successful and why? We will emphasize aspects of design, autonomy, reliability, navigation, sensing, and perception, as well as coordination/collaboration through a series of case studies drawn from our recent experience. Examples include imaging efforts to map the changing coral reefs in the South Pacific, using and controlling swarms of unmanned systems to perform search and rescue missions over large areas, and package delivery systems over large metropolitan areas. Hands-on experience with Stanford-developed UASs will be part of the seminar.

**AA 190. Directed Research and Writing in Aero/Astro. 3-5 Units.**

For undergraduates. Experimental or theoretical work under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of student services manager and instructor.

**AA 199. Independent Study in Aero/Astro. 1-5 Unit.**

Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor.

**AA 200. Applied Aerodynamics. 3 Units.**

Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on airfoil theory, finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, laminar-to-turbulent transition, compressibility effects, and similarity rules. Biweekly assignments require MATLAB or a suitable programming language. Prerequisite: undergraduate courses in basic fluid mechanics and applied aerodynamics, AA 210A.

**AA 201A. Fundamentals of Acoustics. 3 Units.**

Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multipole analysis of sound radiation; Kirchoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.

**AA 201B. Topics in Aeroacoustics. 3 Units.**

Acoustic equations for moving medium, simple sources, Kirchoff formula, and multipole representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curl, Ffowcs Williams, and Hawkings; application of acoustic theories to the noise from propulsive jets, and airframe and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.

**AA 203. Introduction to Optimal Control and Dynamic Optimization. 3 Units.**

Basic solution techniques for optimal control and dynamic optimization problems. Dynamic programming, calculus of variations, and numerical techniques for trajectory optimization. Special cases (chiefly LQR and robotic motion planning); modern solution approaches (such as MPC and MILP); and introduction to stochastic optimal control. Examples in MATLAB and CVX.

**AA 206. Bio-Aerodynamics. 3 Units.**

Topics: flapping flight, low Reynolds number aerodynamics, wing design, flocks, swarms, and dynamic soaring. Readings from current and historical literature dealing with theoretical and observational studies. Applications in aircraft design, and simulation-based problem sets. Prerequisite: course in aerodynamics such as 100, 200A, or 241A.

**AA 208. Aerodynamics of Aircraft Dynamic Response and Stability. 3 Units.**

Companion to 200A for those interested in control and guidance. Typical vehicles and the technical tradeoffs affecting their design. Equations of motion, stressing applications to dynamic performance, stability, and forced response. Forms and sources for the required aerodynamic data. Response to small disturbances and stability derivatives. Static stability and trim. Review of aerodynamic fundamentals, leading to airload predictions for wings, bodies, and complete aircraft. Paneling and other methods for derivative estimation. Natural motions of the aircraft, and the influence on them of various configuration parameters. Vehicle behavior in maneuvers of small and large amplitudes. Prerequisites: 200A, 210A, or equivalents (may be taken concurrently).

**AA 210A. Fundamentals of Compressible Flow. 3 Units.**

Topics: development of the three-dimensional, non-steady, field equations for describing the motion of a viscous, compressible fluid; differential and integral forms of the equations; constitutive equations for a compressible fluid; the entropy equation; compressible boundary layers; area-averaged equations for one-dimensional steady flow; shock waves; channel flow with heat addition and friction; flow in nozzles and inlets; oblique shock waves; Prandtl-Meyer expansion; unsteady one-dimensional flow; the shock tube; small disturbance theory; acoustics in one-dimension; steady flow in two-dimensions; potential flow; linearized potential flow; lift and drag of thin airfoils. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

**AA 210B. Fundamentals of Compressible Flow. 3 Units.**

Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in nonsteady flow. Nonlinear solutions for nonsteady constant area flow and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonisentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.

**AA 212. Advanced Feedback Control Design. 3 Units.**

Analysis and design techniques for multivariable feedback systems. State-space concepts, observability, controllability, eigenvalues, eigenvectors, stability, and canonical representations. Approaches for robust feedback control design, chiefly H<sub>2</sub>, H-infinity, and mu-synthesis. System identification and adaptive control design. Use of computer-aided design with MATLAB. Prerequisite: ENGR 105, ENGR 205. Recommended: Linear algebra (EE 263 or equivalent).

**AA 214A. Numerical Methods in Engineering and Applied Sciences. 3 Units.**

Scientific computing and numerical analysis for physical sciences and engineering. Advanced version of CME206 that, apart from CME206 material, includes nonlinear PDEs, multidimensional interpolation and integration and an extended discussion of stability for initial boundary value problems. Recommended for students who have some prior numerical analysis experience. Topics include: 1D and multi-D interpolation, numerical integration in 1D and multi-D including adaptive quadrature, numerical solutions of ordinary differential equations (ODEs) including stability, numerical solutions of 1D and multi-D linear and nonlinear partial differential equations (PDEs) including concepts of stability and accuracy. Prerequisites: linear algebra, introductory numerical analysis (CME 108 or equivalent). Same as: CME 207, GEOPHYS 217

**AA 214B. Numerical Methods for Compressible Flows. 3 Units.**

For M.S.-level graduate students. Covers the hierarchy of mathematical models for compressible flows. Introduction to finite difference, finite volume, and finite element methods for their computation. Ideal potential flow; transonic potential flow; Euler equations; Navier-Stokes equations; representative model problems; shocks, expansions, and contact discontinuities; treatment of boundary conditions; time and pseudo-time integration schemes. Prerequisites: basic knowledge of linear algebra and ODEs (CME 206 or equivalent).

**AA 214C. Numerical Computation of Viscous Flow. 3 Units.**

Numerical methods for solving parabolic sets of partial differential equations. Numerical approximation of the equations describing compressible viscous flow with adiabatic, isothermal, slip, and no-slip wall boundary conditions. Applications to the Navier-Stokes equations in two and three dimensions at high Reynolds number. Computational problems are assigned. Prerequisite: 214B.

**AA 215A. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent. Same as: CME 215A

**AA 215B. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: CME 215B

**AA 218. Introduction to Symmetry Analysis. 3 Units.**

Methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-space analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, exact solutions of nonlinear PDEs generated from groups. Mathematica-based software developed by the instructor is used for finding invariant groups of ODEs and PDEs.

**AA 222. Engineering Design Optimization. 3-4 Units.**

Design of engineering systems within a formal optimization framework. This course covers the mathematical and algorithmic fundamentals of optimization, including derivative and derivative-free approaches for both linear and non-linear problems, with an emphasis on multidisciplinary design optimization. Topics will also include quantitative methodologies for addressing various challenges, such as accommodating multiple objectives, automating differentiation, handling uncertainty in evaluations, selecting design points for experimentation, and principled methods for optimization when evaluations are expensive. Applications range from the design of aircraft to automated vehicles. Prerequisites: some familiarity with probability, programming, and multivariable calculus.

Same as: CS 361

**AA 228. Decision Making under Uncertainty. 3-4 Units.**

This course is designed to increase awareness and appreciation for why uncertainty matters, particularly for aerospace applications. Introduces decision making under uncertainty from a computational perspective and provides an overview of the necessary tools for building autonomous and decision-support systems. Following an introduction to probabilistic models and decision theory, the course will cover computational methods for solving decision problems with stochastic dynamics, model uncertainty, and imperfect state information. Topics include: Bayesian networks, influence diagrams, dynamic programming, reinforcement learning, and partially observable Markov decision processes. Applications cover: air traffic control, aviation surveillance systems, autonomous vehicles, and robotic planetary exploration. Prerequisites: basic probability and fluency in a high-level programming language.

Same as: CS 238

**AA 229. Advanced Topics in Sequential Decision Making. 3-4 Units.**

Survey of recent research advances in intelligent decision making for dynamic environments from a computational perspective. Efficient algorithms for single and multiagent planning in situations where a model of the environment may or may not be known. Partially observable Markov decision processes, approximate dynamic programming, and reinforcement learning. New approaches for overcoming challenges in generalization from experience, exploration of the environment, and model representation so that these methods can scale to real problems in a variety of domains including aerospace, air traffic control, and robotics. Students are expected to produce an original research paper on a relevant topic. Prerequisites: AA 228/CS 238 or CS 221.

Same as: CS 239

**AA 236A. Spacecraft Design. 3-5 Units.**

The design of unmanned spacecraft and spacecraft subsystems emphasizing identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal subsystem design, attitude control, electric power, command and telemetry, and design integration and operations.

**AA 236B. Spacecraft Design Laboratory. 3-5 Units.**

Continuation of 236A. Emphasis is on practical application of systems engineering to the life cycle program of spacecraft design, testing, launching, and operations. Prerequisite: 236A or consent of instructor.

**AA 236C. Spacecraft Design Laboratory. 3-5 Units.****AA 240A. Analysis of Structures. 3 Units.**

Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semimonocoque structures. Prerequisite: ENGR 14 or equivalent.

**AA 240B. Analysis of Structures. 3 Units.**

Thin plate analysis. Structural stability. Material behavior: plasticity and fracture. Introduction of finite element analysis; truss, frame, and plate structures. Prerequisite: 240A or consent of instructor.

**AA 241A. Introduction to Aircraft Design, Synthesis, and Analysis. 3 Units.**

New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

**AA 241B. Introduction to Aircraft Design, Synthesis, and Analysis. 3 Units.**

New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

**AA 241X. Autonomous Aircraft: Design/Build/Fly. 3 Units.**

Students grouped according to their expertise to carry out the multidisciplinary design of a solar-powered autonomous aircraft that must meet a clearly stated set of design requirements. Design and construction of the airframe, integration with existing guidance, navigation, and control systems, and development and operation of the resulting design. Design reviews and reports. Prerequisites: expertise in any of the following disciplines by having satisfied the specified courses or equivalent work elsewhere: conceptual design (241A,B); applied aerodynamics (200A,B); structures (240A); composite manufacturing experience; guidance and control (208/271, ENGR 205).

**AA 242A. Classical Dynamics. 3 Units.**

Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

**AA 242B. Mechanical Vibrations. 3 Units.**

For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed.

Same as: ME 242B

**AA 244A. Introduction to Plasma Physics and Engineering. 3 Units.**

Physics and engineering of plasmas, including space and laboratory plasmas. Debye length and distribution functions. Single-particle motion and drifts. Plasmas as fluids and fluid drifts. Waves in plasmas, including electrostatic and electromagnetic. Diffusion and resistivity. Magnetohydrodynamics.

**AA 244B. Advanced Plasma Physics and Engineering. 3 Units.**

Equilibrium and instability. Turbulent flow in plasmas. Kinetic theory and the Vlasov equation. Nonlinear effects and solutions. Radiation in a plasma. Plasma diagnostics in ground- and space-based experiments.

**AA 248E. Aerial Robot Design. 4 Units.**

(Graduate students only enroll in ME 271e or AA 248e) A result-focused introduction to the design of winged aerial robots capable of vertical takeoff and landing for a wide range of applications. Students will learn how to ideate specific aerial robot applications and make an appropriate design from scratch that meets mission requirements. Design skill outcomes include: robot need identification based on mission requirements; system ideation and sizing; making design performance tradeoffs; aerodynamic wing design; CAD assembly; communicating the design and its application. The hands-on lab experience includes prototyping the aerial robot mission, to inform system design, by building and flying quadcopters. Prerequisites: intro level undergraduate fluid mechanics or aerodynamics (e.g. ME 70 or AA 100) or equivalent; Intro level undergraduate electronics or Arduino experience; MATLAB experience.

Same as: ME 171E, ME 271E

**AA 250. Nanomaterials for Aerospace. 3 Units.**

Properties of nanomaterials and current approaches for engineering spacecraft, aircraft, and subsystems with nanotechnology. Manufacturing of nanomaterials; nano-fiber reinforced composites; structural mechanics of nanomaterials; structure-property relationships; and application of nanotechnology for lightweight structures, thermal protection, nanopropellants, and nanoelectronics.

**AA 251. Introduction to the Space Environment. 3 Units.**

The environment through which space probes and vehicles travel and orbit. Survey of physical phenomena in the sun, solar wind, magnetospheres, ionospheres, and upper atmospheres of objects in the solar system. Introduction to the physical processes governing space plasmas, solar-terrestrial interactions, and ionized and neutral media surrounding the Earth and other solar system bodies. Prerequisite: AA 244A.

**AA 252. Techniques of Failure Analysis. 3 Units.**

Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigation, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.

**AA 256. Mechanics of Composites. 3 Units.**

Fiber reinforced composites. Stress, strain, and strength of composite laminates and honeycomb structures. Failure modes and failure criteria. Environmental effects. Manufacturing processes. Design of composite structures. Individual design project required of each student, resulting in a usable computer software. Prerequisite: ENGR 14 or equivalent.

**AA 257. Design of Multifunctional Composite Structures. 3 Units.**

Hands-on design, analysis, and manufacturing of high-performance composite structures with multifunctional capabilities: structural health monitoring, state sensing and awareness, electrical energy storage, and built-in intelligence. Advanced composite structures will be fabricated and integrated with sensors, actuators, electronic circuits, and batteries to create multifunctional structures and devices for various applications: design of fly-by-wire UAVs and drones, self-powered electrical car frames, maintenance-free self-diagnostic structures, and intelligent structures for various engineering applications. The class will be divided into working teams (design, analysis, software, manufacturing, and testing) to design and build an intelligent structure or multifunctional device to be determined at the beginning of the course. Prerequisite: 256 or consent of instructor.

**AA 260. Sustainable Aviation. 3 Units.**

Quantitative assessment of the impact of aviation on the environment including noise, local, and global emissions, and models used to predict it. Current and future technologies that may allow the air transportation system to meet anticipated growth while reducing or minimizing environmental problems. Atmospheric effects of NO<sub>x</sub>, CO<sub>2</sub>, particulates, unburned hydrocarbons, and water vapor deposition at high altitudes and metrics for assessing global climate effects. Noise sources, measurement, and mitigation strategies. Fundamentals of aircraft and engine performance needed to assess current and future concepts. Major national and international policy implications of existing and future technology choices. Recommended: AA 241B.

**AA 271A. Dynamics and Control of Spacecraft and Aircraft. 3 Units.**

The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: AA242A, ENGR 105.

**AA 272C. Global Positioning Systems. 3 Units.**

The principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: familiarity with matrix algebra and MatLab (or another mathematical programming language).

**AA 272D. Integrated Navigation Systems. 3 Units.**

Navigation satellites (GPS, GLONASS), GPS receivers, principles of inertial navigation for ships, aircraft, and spacecraft. Kalman Filters to integrate GPS and inertial sensors. Radio navigation aids (VOR, DME, LORAN, ILS). Doppler navigation systems. Prerequisites: 272C; ENGR 15, 105. Recommended: ENGR 205.

**AA 273. State Estimation and Filtering for Aerospace Systems. 3 Units.**

Kalman filtering, recursive Bayesian filtering, and nonlinear filter architectures including the extended Kalman filter, particle filter, and unscented Kalman filter. Observer-based state estimation for linear and non-linear systems. Examples from aerospace, including state estimation for fixed-wing aircraft, rotorcraft, spacecraft, and planetary rovers, with applications to control, navigation, and autonomy.

**AA 274. Principles of Robotic Autonomy. 3 Units.**

Basic principles for endowing mobile autonomous robots with perception, planning, and decision-making capabilities. Algorithmic approaches for robot perception, localization, and simultaneous localization and mapping; control of non-linear systems, learning-based control, and robot motion planning; introduction to methodologies for reasoning under uncertainty, e.g., (partially observable) Markov decision processes. Extensive use of the Robot Operating System (ROS) for demonstrations and hands-on activities. Prerequisite: CS 106A or equivalent.

**AA 277. Multi-robot Control, Communication, and Sensing. 3 Units.**

Survey of current research topics in multi-robot systems including multi-agent consensus, formation control, coverage control and sensor deployment, collision avoidance, cooperative mapping, and distributed Bayesian filtering. Students will develop skills in evaluating and critiquing research papers, and will conduct a final research project.

**AA 279A. Space Mechanics. 3 Units.**

Orbits of near-earth satellites and interplanetary probes; relative motion in orbit; transfer and rendezvous; orbit determination; influence of earth's oblateness; sun and moon effects on earth satellites; decay of satellite orbits; invited lectures from industry. Prerequisite: ENGR 15 and familiarity with MatLab.

**AA 279B. Advanced Space Mechanics. 3 Units.**

Restricted 3-body problem. Relative motion, Hill's and Clohessy-Wiltshire equations. Lambert's problem. Satellite constellations and optimization. Communications and link budgets. Space debris. High fidelity simulation. Interplanetary mission planning, launch windows and gravity assists. Basic trajectory optimization. Several guest lectures from practitioners in the field. Individual final project chosen in consultation with instructor. Prerequisites: 279A or equivalent with permission of instructor. Fluency with MATLAB (or another mathematical programming language with 2D and 3D plotting capabilities).

**AA 279C. Spacecraft Attitude Determination and Control. 3 Units.**

Attitude representation and parametrization; unperturbed and perturbed attitude dynamics and stability; attitude sensors and actuators; linear and nonlinear attitude control; optimal attitude maneuvers; dynamics of flexible spacecraft and space tethers; invited lectures from industry. Prerequisites: AA 242A, ENGR 105, AA 279A, and familiarity with MatLab.

**AA 279D. Spacecraft Formation-Flying and Rendezvous. 3 Units.**

Keplerian orbital mechanics and orbital perturbations; the general relative motion problem; linear formation flying dynamics and control; impulsive station-keeping and reconfiguration; high order relative motion equations; formulation of relative motion using orbital elements; perturbation-invariant formations; nonlinear formation control; low-thrust propulsion for formation flying; relative navigation using GNSS and optical navigation; applications: sparse-aperture imaging, remote sensing, on-orbit servicing, rendezvous, and docking. Prerequisite: AA 242A, ENGR 105, AA 279A, and familiarity with MatLab.

**AA 280. Smart Structures. 3 Units.**

Mechanics of smart materials and current approaches for engineering smart structures to monitor health, self heal, and adapt to environment. Definition of smart structures; constitutive models for smart materials; piezoelectric ceramics; electro-active polymers; shape memory alloys; bio-inspired materials and structures; self-healing materials; sensors and sensor networks; structural health monitoring; and energy harvesting. Prerequisite: AA 240A or consent of instructor.

**AA 283. Aircraft and Rocket Propulsion. 3 Units.**

Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance; gas dynamics of nozzles and inlets; cycle analysis of ramjets, turbojets, turbofans, and turboprops; component matching and the compressor map; introduction to liquid and solid propellant rockets; multistage rockets; hybrid rockets; thermodynamics of reacting gases. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

**AA 284A. Advanced Rocket Propulsion. 3 Units.**

The principles of rocket propulsion system design and analysis. Fundamental aspects of the physics and chemistry of rocket propulsion. Focus is on the design and analysis of chemical propulsion systems including liquids, solids, and hybrids. Nonchemical propulsion concepts such as electric and nuclear rockets. Launch vehicle design and optimization issues including trajectory calculations. Limited enrollment. Prerequisites: 283 or consent of instructor.

**AA 284B. Propulsion System Design Laboratory. 3 Units.**

Propulsion systems engineering through the design and operation of a sounding rocket. Students work in small teams through a full project cycle including requirements definition, performance analysis, system design, fabrication, ground and flight testing, and evaluation. Prerequisite: 284A and consent of instructor.

**AA 284C. Propulsion System Design Laboratory. 3 Units.**

Continuation of 284A,B. Prerequisite: 284B, and consent of instructor.

**AA 289. Robotics and Autonomous Systems Seminar. 1 Unit.**

Seminar talks by researchers and industry professionals on topics related to modern robotics and autonomous systems. Broadly, talks will cover robotic design, perception and navigation, planning and control, and learning for complex robotic systems. May be repeated for credit.

**AA 290. Problems in Aero/Astro. 1-15 Unit.**

(Undergraduates register for 190 or 199.) Experimental, theoretical, or computational investigation. Students may work in any field of special interest. This course is designed to develop students' understanding of what a research problem is and the skills needed to successfully approach and conduct research. Register for section belonging to your research supervisor. May be repeated for credit.

**AA 291. Practical Training. 1-3 Unit.**

Educational opportunities in high-technology research and development labs in aerospace and related industries. Internship integrated into a student's academic program. Research report outlining work activity, problems investigated, key results, and any follow-on projects. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own employment and should see department student services manager before enrolling. May be repeated for credit.

**AA 294. Case Studies in Aircraft Design. 1 Unit.**

Presentations by researchers and industry professionals. Registration for credit optional. May be repeated for credit.

**AA 295. Aerospace Structures and Materials. 1 Unit.**

Presentations by researchers and industry professionals in aerospace structures and materials. May be repeated for credit.

**AA 297. Seminar in Guidance, Navigation, and Control. 1 Unit.**

For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional. May be repeated for credit.

**AA 300. Engineer Thesis. 1-15 Unit.**

Thesis for degree of Engineer. Students register for section belonging to their thesis adviser.

**AA 301. Ph.D. Dissertation. 1-15 Unit.**

Prerequisite: completion of Ph.D. qualifying exams. Students register for section belonging to their thesis adviser. (Staff).

**AA 47SI. Why Go To Space?. 1 Unit.**

Why do we spend billions of dollars exploring space? What can modern policymakers, entrepreneurs, and industrialists do to help us achieve our goals beyond planet Earth? Whether it is the object of exploration, science, civilization, or conquest, few domains have captured the imagination of a species like space. This course is an introduction to space policy issues, with an emphasis on the modern United States. We will present a historical overview of space programs from all around the world, and then spend the last five weeks discussing present policy issues, through lectures and guest speakers from NASA, the Department of Defense, new and legacy space industry companies, and more. Students will present on one issue that piques their interest, selecting from various domains including commercial concerns, military questions, and geopolitical considerations.

**AA 801. TGR Engineer Thesis. 0 Units.**

Engineer's thesis or non-doctoral work for a TGR student.

**AA 802. TGR Ph.D. Dissertation. 0 Units.**

Doctoral dissertation for a TGR student in PhD program.

**AA 93. Building Trust in Autonomy. 1 Unit.**

Preparatory course for Bing Overseas Studies summer course in Edinburgh. Prerequisite: Requires instructor consent.

## African Studies (AFRICAST)

**AFRICAST 109. Running While Others Walk: African Perspectives on Development. 5 Units.**

Throughout the history of modern Africa, Africans have specified their desired future development, understood broadly, and identified the major obstacles in achieving it. Debates about development have intensified in the post-colonial period, especially as African countries have replaced the leaders installed at independence. Amidst the general critique of the imposition of external values and rules, Africans have differed, sometimes sharply, on priorities, process, and programs. While for some the challenge is to catch up with development elsewhere, for others it is essential to leap ahead, to set the pace, to initiate a radical social, economic, and political transformation. To ground and extend the common approaches to studying development that emphasize economics and that rely largely on external commentators, we will explore African perspectives. Our major task will be a broad overview, sampling the analyses of Africa's intellectuals in several domains. Course participants will review, compare, and analyze major contributions, developing an understanding of contemporary intellectual currents.

Same as: AFRICAST 209

**AFRICAST 111. Education for All? The Global and Local in Public Policy Making in Africa. 3-5 Units.**

Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.

Same as: AFRICAAM 211, AFRICAST 211

**AFRICAST 112. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.**

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem.

Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?

Same as: AFRICAAM 111, AFRICAST 212

**AFRICAST 113V. Freedom in Chains: Black Slavery in the Atlantic, 1400s-1800s. 5 Units.**

This course will focus on the history of slavery in the British, French, Spanish, Portuguese and Dutch Atlantic world(s), from the late 1400s to the 1800s. Its main focus will be on the experiences of enslaved Africans and their descendants. Between the sixteenth and nineteenth centuries, the Europeans forcibly embarked over 10 million Africans to the Americas. Drawing on methodologies used by historians, archaeologists and anthropologists, the course will reconstruct the daily lives and the socio-economic, cultural and political histories of these captives. We will seek to hear their voices by investigating a variety of historical testimonies and recent scholarship. The course will examine slavery in the context of broader trends in Atlantic World studies, a field that has grown considerably in recent years, providing new ways of understanding historical developments across national boundaries. We will seek to identify commonalities and differences across time periods and regions and the reasons for those differences. Covered topics will include slave ship voyages, labor, agency, the creation of new identities (creolization), religion, race, gender, resistance, legacies, and memory.

Same as: AFRICAAM 113V, CSRE 113V, HISTORY 205D

**AFRICAST 114N. Desert Biogeography of Namibia Prefield Seminar. 3 Units.**

Desert environments make up a third of the land areas on Earth, ranging from the hottest to the coldest environments. Aridity leads to the development of unique adaptations among the organisms that inhabit them. Climate change and other processes of desertification as well as increasing human demand for habitable and cultivatable areas have resulting in increasing need to better understand these systems. Namibia is a model system for studying these processes and includes the Sossuvlei (Sand Sea) World Heritable Site. This seminar will prepare students for their overseas field experience in Namibia. The seminar will provide an introduction to desert biogeography and culture, using Namibia as a case study. During the seminar, students will each give two presentations on aspects of desert biogeography and ecology, specific organisms and their adaptations to arid environments, cultural adaptations of indigenous peoples and immigrants, ecological threats and conservation efforts, and/or national and international policy towards deserts. Additional assignments include a comprehensive dossier and a final exam. Students will also carry out background research for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be limited. In addition, we will cover logistics, health and safety, cultural sensitivity, geography, and politics. We will deal with post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus.

Same as: EARTHSYS 115N

**AFRICAST 119. Novel Perspectives on South Africa. 2-3 Units.**

21st-century South Africa continues its literary effervescence. In this class we'll sample some recent novels and related writings to tease out the issues shaping the country (and to some degree the continent) at present. Is 'South African literature' a meaningful category today? What are the most significant features we can identify in new writings and how do they relate to contemporary social dynamics? The course will appeal to anyone interested in present-day Cape Town or Johannesburg, including students who have spent a term in BOSP-Cape Town or plan to do so in future. Both undergraduate and graduate students are welcome. 2-3 units. Course may be repeated for credit. All students will write short analyses from the prescribed texts. Students taking the course for three units will write an extended essay on a topic agreed with the instructor.

Same as: AFRICAAM 119, AFRICAAM 219, AFRICAST 219, CSRE 119

**AFRICAST 122F. Histories of Race in Science and Medicine at Home and Abroad. 4 Units.**

This course has as its primary objective, the historical study of the intersection of race, science and medicine in the US and abroad with an emphasis on Africa and its Diasporas in the US. By drawing on literature from history, science and technology studies, sociology and other related disciplines, the course will consider the sociological and cultural concept of race and its usefulness as an analytical category. The course will explore how the study of race became its own science in the late-Enlightenment era, the history of eugenics—a science of race aimed at the ostensible betterment of the overall population through the systematic killing or "letting die" of humanity's "undesirable" parts, discuss how the ideology of pseudo-scientific racism underpinned the health policies of the French and British Empires in Africa, explore the fraught relationship between race and medicine in the US, discuss how biological notions of race have quietly slipped back into scientific projects in the 21st century and explore how various social justice advocates and scholars have resisted the scientific racisms of the present and future and/or proposed new paths towards a more equitable and accessible science.

Same as: AFRICAAM 122F, CSRE 122F, HISTORY 248D

**AFRICAST 132. Literature and Society in Africa and the Caribbean. 4 Units.**

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Special guest: LEILA SLIMANI (Goncourt Prize 2016). Required readings include: Leila Slimani, *Sexe et Mensonges au Maroc*; Albert Memmi, "La Statue de Sel," Kaouthar Adimi, "L'Envers des autres", Maryse Condé, "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", *Les Baies d'Alger*. Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: AFRICAAM 133, FRENCH 133, JEWISHST 143

**AFRICAST 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.**

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: ANTHRO 133B, CSRE 133B

**AFRICAST 135. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 235, EDUC 135, EDUC 335, HRP 235, HUMBIO 26, MED 235

**AFRICAST 138. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice—structured around international military intervention and criminal trials based on international criminal courts—will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 238, ANTHRO 138A, ANTHRO 238A

**AFRICAST 141A. Science, Technology, and Medicine in Africa. 4 Units.**

Africa is often depicted as a place simply in need of science, technology, and medicine. This class will introduce students to the culture and politics of science in sub-Saharan Africa: to the diverse and rich traditions, histories and contemporary predicaments of knowledge practices on the continent. We will consider the role of science in the colonial period, covering the expansion of European empires in Africa and the forms of technical knowledge that colonial governments encountered, especially as they relate to health and the environment. We will examine the role of science at African independence and in international development work. Finally, we will discuss the technopolitics of medical training and research, resource extraction, and the internet in contemporary Africa. This course will provide some important background for those with an applied interest in Africa as well as provide an introduction to a growing area of scholarship. Course materials include historical and ethnographic works, as well as primary sources and films emphasizing scientific practice in the context of geopolitical relations of power and inequality.

Same as: ANTHRO 141A

**AFRICAST 142. Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice. 3-5 Units.**

This seminar is part of a broader program on Social Entrepreneurship at CDDRL in partnership with the Haas Center for Public Service. It will use practice to better inform theory. Working with three visiting social entrepreneurs from developing and developed country contexts students will use case studies of successful and failed social change strategies to explore relationships between social entrepreneurship, gender, democracy, development and justice. It interrogates current definitions of democracy and development and explores how they can become more inclusive of marginalized populations. This is a service learning class in which students will learn by working on projects that support the social entrepreneurs' efforts to promote social change. Students should register for either 3 OR 5 units only. Students enrolled in the full 5 units will have a service-learning component along with the course. Students enrolled for 3 units will not complete the service-learning component. Limited enrollment. Attendance at the first class is mandatory in order to participate in service learning.

Same as: AFRICAST 242, INTNLREL 142

**AFRICAST 145B. The African Atlantic. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during early and modern periods of globalization across the Atlantic, including the middle passage, exploration and colonialism, black internationalism, decolonization, immigration, and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of self-making or new citizenship, to evoke histories of racial unity or examine psychic and social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Conrad, Condé, Olinto), epic and prose poetry (Césaire, Walcott), theoretical reflection (Gilroy, Glissant, Mudimbe, Benitez-Rojo), and literary autobiography (Barack Obama, Saidiya Hartman). Note: To be eligible for WAYS credit, you must take COMPLIT 145B for a minimum of 3 Units and a Letter Grade.

Same as: AFRICAAM 148, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

**AFRICAST 151. AIDS in Africa. 3 Units.**

Medical, social, and political aspects of the HIV epidemic in sub-Saharan Africa including: biology, transmission, diagnosis, and treatment of HIV; mother-to-child transmission and breastfeeding; vaccines; community and activist responses to the HIV epidemic; economics of HIV treatment; governance and health; ethics in research and program implementation.

**AFRICAST 181. Media Representations of Africa. 3-5 Units.**

How has Africa been dominantly represented in the media? How are these representations challenged, complexified and reproduced in the postcolonial context? What is the role of African media in these processes? This class is an introduction to the variety of roles played by the media in representing Africa, with a particular focus on the postcolonial context. The topic is particularly relevant to contemporary Africa as the emerging middle-class, economic and cultural globalization, and the uptake for communication technologies are shaping contested images of the continent. You will: develop a theoretical and empirical understanding of the media as instruments of domination but also of resistance; learn how to critically deconstruct media representations in everyday life; understand the challenges of intercultural communication in an unequal world. Key concepts such as: representation, stereotyping, cultural appropriation, afropessimism, afrocentrism, afro optimism, afropolitanism. Readings drawn from media and cultural studies, anthropology, postcolonial theory and literature. In class-analysis of photographs, news articles and broadcasts, PR campaigns, social media, films and documentaries.

Same as: AFRICAAM 81, AFRICAST 81

**AFRICAST 195. Shifting Frames. 1-2 Unit.**

This is a student driven, dialogue based, and intellectual community focused course. We will explore and challenge the taken-for-granted framing of key African issues and debates. Engagement with discussion leaders drawing on their own research and case studies from across the African continent will guide us across shifting terrain. This course centers the scholarship and voices of African students. Topics include: Afropolitanism, Brain Drain/ Gain, Education, Leadership, Global Health, AI Application in Africa, Economic Development, Industrial Policy, LGBTQI Rights, Gender and Sexuality.

**AFRICAST 199. Independent Study or Directed Reading. 1-5 Unit.**

May be repeated for credit.

**AFRICAST 209. Running While Others Walk: African Perspectives on Development. 5 Units.**

Throughout the history of modern Africa, Africans have specified their desired future development, understood broadly, and identified the major obstacles in achieving it. Debates about development have intensified in the post-colonial period, especially as African countries have replaced the leaders installed at independence. Amidst the general critique of the imposition of external values and rules, Africans have differed, sometimes sharply, on priorities, process, and programs. While for some the challenge is to catch up with development elsewhere, for others it is essential to leap ahead, to set the pace, to initiate a radical social, economic, and political transformation. To ground and extend the common approaches to studying development that emphasize economics and that rely largely on external commentators, we will explore African perspectives. Our major task will be a broad overview, sampling the analyses of Africa's intellectuals in several domains. Course participants will review, compare, and analyze major contributions, developing an understanding of contemporary intellectual currents.

Same as: AFRICAST 109

**AFRICAST 211. Education for All? The Global and Local in Public Policy Making in Africa. 3-5 Units.**

Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.

Same as: AFRICAAM 211, AFRICAST 111

**AFRICAST 212. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.**

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem. Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?

Same as: AFRICAAM 111, AFRICAST 112

**AFRICAST 219. Novel Perspectives on South Africa. 2-3 Units.**

21st-century South Africa continues its literary effervescence. In this class we'll sample some recent novels and related writings to tease out the issues shaping the country (and to some degree the continent) at present. Is 'South African literature' a meaningful category today? What are the most significant features we can identify in new writings and how do they relate to contemporary social dynamics? The course will appeal to anyone interested in present-day Cape Town or Johannesburg, including students who have spent a term in BOSP-Cape Town or plan to do so in future. Both undergraduate and graduate students are welcome. 2-3 units. Course may be repeated for credit. All students will write short analyses from the prescribed texts. Students taking the course for three units will write an extended essay on a topic agreed with the instructor.

Same as: AFRICAAM 119, AFRICAAM 219, AFRICAST 119, CSRE 119

**AFRICAST 224. Memory and Heritage In South Africa Syllabus. 1 Unit.**

The focus of this course is to provide a forum in which students examine the role of memory and heritage in South Africa. The course will include visiting speakers, discussion and other activities. The complex relationship between memory and heritage in South Africa will provide the basis for a series of broad conversations about citizenship, national reconciliation, memorialization, justice, modernity and heritage ethics.

**AFRICAST 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

Same as: AFRICAAM 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

**AFRICAST 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Same as: AFRICAST 142, INTNLREL 142

**AFRICAST 246L. Studies in Ethnomusicology: Musics of Africa and the African Diaspora. 3-5 Units.**

An introduction to musics of Africa and the African Diaspora. Topics include: music and nationalism, religion, embodiment, diaspora, migration, resistance, gender, globalization, and race. Musical regions and nations may include: Zimbabwe, South Africa, West Africa, Central Africa, Somalia, Ethiopia, the Caribbean, and the United States. This is a seminar-based course in which students will write short reflective papers and a final, research-based paper. Pre- or co-requisite for WIM credit: Music 22. WIM at 4 or 5 letter-graded units only.

Same as: AFRICAAM 146L, MUSIC 146L, MUSIC 246L

**AFRICAST 249. Bodies, Technologies, and Natures in Africa. 4-5 Units.**

This interdisciplinary course explores how modern African histories, bodies, and natures have been entangled with technological activities. Viewing Africans as experts and innovators, we consider how technologies have mediated, represented, or performed power in African societies. Topics include infrastructure, extraction, medicine, weapons, communications, sanitation, and more. Themes woven through the course include citizenship, mobility, labor, bricolage, in/formal economies, and technopolitical geographies, among others. Readings draw from history, anthropology, geography, and social/cultural theory.

Same as: ANTHRO 348B, HISTORY 349

**AFRICAST 299. Independent Study or Directed Reading. 1-10 Unit.****AFRICAST 300. Contemporary Issues in African Studies. 1 Unit.**

Guest scholars present analyses of major African themes and topics. Brief response papers required. May be repeated for credit.

**AFRICAST 301A. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: HISTORY 246, HISTORY 346, POLISCI 246P, POLISCI 346P

**AFRICAST 302. Research Workshop. 1 Unit.**

Required for African Studies master's students. Student presentations.

**AFRICAST 801. TGR Project. 0 Units.****AFRICAST 81. Media Representations of Africa. 3-5 Units.**

How has Africa been dominantly represented in the media? How are these representations challenged, complexified and reproduced in the postcolonial context? What is the role of African media in these processes? This class is an introduction to the variety of roles played by the media in representing Africa, with a particular focus on the postcolonial context. ## Anesthesia (ANES)

**ANES 199. Undergraduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**ANES 202. Anesthesiology and Pathophysiologic Implications for the Perioperative Patient. 1 Unit.**

Provides participants a patient-care-related review of organ physiology and an in-depth discussion of the pathophysiologic mechanisms at work in the perioperative period that influence outcome in the surgical patient and their management. Organ systems addressed include cardiovascular, respiratory, renal, hematologic, and cerebral. Subject matter including airway management, ventilatory support, transfusion practices and the acute management of shock provides useful information for all students currently or in the future involved in acute care of the critically ill patient. Additional topics specific to anesthesia, including anesthetic pharmacology. Lecturers are Stanford anesthesia faculty and visiting guest faculty. Prerequisite: completion of first year curriculum is strongly encouraged.

**ANES 204. Medical Education in the New Millennium: Innovation and Digital Disruption. 1-2 Unit.**

Focus is on the unique learning preferences and needs of today's Millennial medical learners (medical students, residents, fellows, practicing physicians, nurses, pharmacists, allied medical professionals) and the role thoughtful learning design and use of technology can play in meeting their unique needs. Grounded in learning theory, colloquium course will provide accessible information for learners at all levels to understand learning design and use of educational technologies in the new Millennium. Features speakers from wide range of medical education-related fields, including experts in instructional design, learning theory and medical education technologies. Students enrolling for 2 units prepare a final paper.

**ANES 205. Engage and Empower Me: Myths and Truths of Designing for Patient Behavior. 2-3 Units.**

Focus is on patient stories and real-life experiences of patient engagement, the neuroscience of behavior change and the principles of patient engagement. Together with patients, students participate in design sessions at Stanford's simulation center to create and test ways to modify behavior through design. Topics include the neuroscience behind motivating individuals into healthy behaviors, including patients in the care design process, how health educators, designers, techies and investors can improve success. Students enrolling for 3 units complete a class project.

**ANES 206. 3D Printing and Biofabrication. 1-2 Unit.**

Focus is on medical possibilities of 3D printing. Additive manufacturing, often termed 3D printing, uses automated techniques to produce physical objects using layer-by-layer construction methods. Biofabrication applies these same techniques to print physical objects from biological cells. Such techniques hold great promise to transform health and medicine to deliver more personalized care solutions for patients. This colloquium course explores the future of 3D printing and its impact on health and medicine. See <http://medicinex.stanford.edu/anes206/>. Students enrolling for 2 units prepare a final paper.

**ANES 207. Medical Acupuncture. 2 Units.**

Acupuncture is part of a comprehensive system of traditional Chinese Medicine developed over the past two millennia. This course reviews the history and theoretical basis of acupuncture for the treatment of various diseases as well as for the alleviation of pain. Issues related to the incorporation of acupuncture into the current health care system and the efficacy of acupuncture in treating various diseases are addressed. Includes practical, hands-on sections.

**ANES 208A. Data Science for Digital Health and Precision Medicine. 1-2 Unit.**

How will digital health, low-cost patient-generated and genomic data enable precision medicine to transform health care? This Everyone Included course from Stanford Medicine X and SHC Clinical Inference will provide an overview of data science principles and showcase real world solutions being created to advance precision medicine through implementation of digital health tools, machine learning and artificial intelligence approaches. This class will feature thought leaders and luminaries who are patients, technologists, providers, researchers and leading innovators from academia and industry. This course is open to undergraduate and graduate students. Lunch will be provided.

**ANES 211SI. Themes in the History of Science and Medicine. 1 Unit.**

What exactly is a diagnosis, and what is the history of that term? Why do Institutional Review Boards exist, and what atrocities in human medical experimentation occurred to prompt their creation? What is the role of narrative, social construction, and storytelling in medicine? This course will shed light on the ways physicians and scholars grapple with these and other important questions through a series of lectures from historians and philosophers of science, as well as bioethicists and scholars of narrative medicine. These perspectives on how scientific knowledge emerges and changes over time offer invaluable insights and frameworks for anyone aspiring to practice medicine or contribute to the collective body of scientific knowledge.

**ANES 212. Machine Learning for Healthcare Quality: Precision Medicine AI Design Lab. 3 Units.**

This course provides a hands-on introduction to building machine learning systems for healthcare quality analysis and improvement. We explore several unconditional topics, including data representation, data manipulation, data analysis and data visualization. Students will be introduced to these topics during lectures. The course also provides students with a significant opportunity to investigate the application of these ideas to real-world clinical quality improvement challenges. Working with clinical mentors from the Stanford University School of Medicine students will be expected to supplement machine learning theory with a quarter-long project targeting representative clinical quality improvement challenges. Students will be encouraged to think creatively about traditionally hard quality problems and requires to perform group research exposing them to designing practical machine learning systems for healthcare.

**ANES 215. Journal Club for Neuroscience, Behavior and Cognition Scholarly Concentration. 1 Unit.**

Review of current literature in both basic and clinical neuroscience in a seminar format consisting of both faculty and student presentations.

**ANES 280. Early Clinical Experience in Anesthesia. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**ANES 299. Directed Reading in Anesthesiology. 1-18 Unit.**

Prerequisite: consent of instructor.

**ANES 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**ANES 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Problems related to metabolism, toxicity, and mechanisms of anesthesia; pharmacologic studies involving pain management; the genetic and molecular basis of hemodynamic insufficiency. Animal studies may be included. Interested students should contact Drs. Trudell, MacIver, Clark, Giffard, Patterson, Angelotti, Drover, Chu, or Angst.

**ANES 70Q. Critical Illness: Patients, Physicians, and Society. 3 Units.**

Examines the various factors involved in shaping the critical care illness experience for three groups of people: the clinicians, the patients, and patients' families. Medical issues, economic forces and cost concerns, cultural biases, and communication errors can all influence one's perception. Helps students understand the arc of critical illness, and how various factors contribute to the interactions between those various groups. Includes an immersion experience (students are expected to round with clinicians in the ICU and to attend Schwartz rounds, a debriefing meeting about difficult emotional situation) and a mentoring experience (with critical care fellows), in addition to routine class work.

**ANES 72Q. The Art of Medical Diagnosis. 3 Units.**

The Art of Medical Diagnosis: Enhancing Observational Skills through the Study of Art is an interactive, multidisciplinary undergraduate course that explores various ways in which studying art increases critical observational skills vital for aspiring health care providers. Students will be introduced to the concept of "Visual Thinking Strategies" through classroom, art creation, and museum based activities. Students will apply these skills to both works of art and medical cases. Significant focus will be on engaging in group discussions where they will collaboratively use visual evidence to generate and defend hypothesis. Drawing and sketching from life will play a critical role in honing observational skills through weekly assignments, workshops, and a final project. The interactive nature of this course pivots students away from a typical lecture based course to a self-directed learning experience.

## Anthropology (ANTHRO)

**ANTHRO 1. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 201

**ANTHRO 100A. India's Forgotten Empire: The Rise and Fall of Indus Civilization. 3 Units.**

How and why cities with public baths, long-distance trade, sophisticated technologies, and writing emerged, maintained themselves, and collapsed in the deserts of present-day Pakistan and India from 2500 to 1900 B.C.

**ANTHRO 100B. Lifeways of the Ancient Maya. 5 Units.**

This course engages with the world of the pre- and post-contact Maya people through scholarship that explores the material culture of daily life. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, and how interpretations of daily life in the ancient Maya world are formulated. We consider how perceptions of the ancient Maya are marshaled in contemporary politics and policies. The course is designed to provide a broad overview of sites and materials in the Maya area, focusing on the dynamic interplay between the material and the social. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 200B

**ANTHRO 100D. Chavin de Huanter Research |Seminar. 3-5 Units.**

Archaeological analytical techniques appropriate for data recovered during archaeological fieldwork in Chavin de Huanter, Peru. Open to all interested students; fieldwork participants are expected to take the course. Students work on data from the previous field season to produce synthetic written reports, focusing on specific methodological issues.

Same as: ARCHLGY 100D

**ANTHRO 101. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology. 3-5 Units.**

The prehispanic cultures of Mesoamerica through archaeology and ethnohistory, from the archaic period to the Spanish conquest in the 16th century.

**ANTHRO 101A. Archaeology as a Profession. 5 Units.**

Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.

Same as: ARCHLGY 107A

**ANTHRO 101B. Archaeology of Technology. 5 Units.**

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 201B, ARCHLGY 100, ARCHLGY 200

**ANTHRO 101S. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 1S

**ANTHRO 102. Urban Ethnography. 5 Units.**

Ethnographic research and writing focuses on the ways our lives are shaped by interacting forces such as history, political economy, and creative cultural practices. In the last fifty years, more and more cultural anthropology has been carried out in urban contexts, due to both urbanization around the world and changes in anthropology as a field. This seminar focuses on careful reading and analysis of book-length ethnographies about urban cultures, people and dynamics to consider what the theory and methodological tools of anthropology have to offer us as we seek to better understand the city. Readings include a variety of approaches to ethnographic research in and/or about cities, with a mix from different eras and about different cities around the world. Same as: URBANST 140

**ANTHRO 102A. Ancient Civilizations: Complexity and Collapse. 3-5 Units.**

How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B).

Same as: ANTHRO 202A

**ANTHRO 102B. Aztec Language and Culture. 3 Units.**

Introduction to Nahuatl, the language of the Aztecs. Also known as Mexicano, Nahuatl was once used as a lingua franca throughout Mesoamerica, and is today spoken by about 1.5 million people. Emphasis on vocabulary, colonial documents, including Central Mexican codices, and archaeology. Attention also given to modern dialects, the place of Nahuatl in the Uto-Aztecan language phylum, and the relationship between Nahuatl and Aztec culture. Appropriate for students interested in linguistics, anthropology, archaeology, and history, and those desiring to better understand the native linguistic heritage of Mesoamerica and its impact on Spanish.

**ANTHRO 103. The Archaeology of Modern Urbanism. 5 Units.**

Seminar. Urbanism as a defining feature of modern life. The perspective of archaeology on the history and development of urban cultures. Case studies are from around the globe; emphasis is on the San Francisco Bay Area megalopolis. Cities as cultural sites where economic, ethnic, and sexual differences are produced and transformed; spatial, material, and consumption practices; and the archaeology of communities and neighborhoods.

**ANTHRO 103A. Human Osteoarchaeology. 5 Units.**

The course will cover the methodological and theoretical backgrounds to human osteoarchaeology, introduce the student to the chemical and physical characteristics of bone, and to the functional morphology of the human skeleton. Classes will consist of a taught component that outlines how osteoarchaeologists reconstruct individual life-histories based on age, sex etc.; this is combined with hands-on identification of different skeletal elements and the markers used to inform the analytical methods. Additional scientific methodologies are also introduced that increasingly form a major component of human osteoarchaeology.

Same as: ANTHRO 203A

**ANTHRO 105. Ancient Cities in the New World. 3-5 Units.**

Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.

Same as: ANTHRO 205

**ANTHRO 105A. Archaeological Fieldwork: Critical Analysis and Practical Application. 2-3 Units.**

This introduction to archaeological fieldwork involves both field and seminar components, each component meeting once per week. During the field sessions, we will investigate an archaeological site on campus using methods of survey, mapping, testing, and excavation (digging, recording units/features, profile illustration). In seminar, we will critically examine archaeological fieldwork through reading, writing, and discussion, exploring topics such as history of archaeological excavation, production of archaeological knowledge, disjunction between theory and practice, reflexive methodologies, ethics, collaboration, and specialization. No experience necessary, but students with fieldwork experience are welcome.

Same as: ANTHRO 205A

**ANTHRO 106. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.**

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 206A, ARCHLGY 102B

**ANTHRO 107A. Finding Home Reclaiming History: Advanced Methods in California Indian Studies. 4 Units.**

How do contemporary California Native Americans claim and tell their own stories? Using archival information, government documents, archaeological evidence, interviews and field projects, this course examines the methods contemporary scholars use to work with Native Americans. We emphasize the role of mythmaking, film and popular culture in shaping public perceptions of California Indians. May be repeat for credit.

**ANTHRO 108A. The Formation of Political State in the Peruvian Andes. 3-5 Units.**

This course provides a panorama of the prehistory and history of the political state developed in Peruvian Andes. The Peruvian Andes is a rich cultural area in South America the first generations of Andean state societies developed. Beginning in Formative times with Chavin Culture we have an important development of different forms of state from theocratic to military, and most importantly, the Inca Empire. This richness and diversity of state societies was a consequence of an interesting relationship between societies of different levels of development, economies, and of course, the related diverse ecologies of the region. In 1532, Spanish conquerors came to the Inca Empire and introduced their new vision of politics and economics, and created corresponding new institutions in the Andes. The ensuing colonial age had an interesting development and brought new tensions to this New World. Native ways of work and thought survive in colonial times, creating a distinctive political and ideological scenario including deep ethnic and economic differences. These political tensions established the foundations for revolutionary movements based in indigenous belief as for example Taky Onkoy (dancing sickness) or Neo-Incanism. Finally, with independence from Spain, a new republic is established from Lima but many problems in the native structures conditioned the development of new liberal politics.

**ANTHRO 108B. Gender in the Arab and Middle Eastern City. 5 Units.**

What are the components of gendered experience in the city, and how are these shaped by history and culture? How do meanings attributed to Islam and the Middle East obscure the specificity of women's and men's lives in Muslim-majority cities? This course explores gender norms and gendered experience in the major cities of Arab-majority countries, Iran and Turkey. Assigned historical and sociological readings contextualize feminism in these countries. Established and recent anthropological publications address modernity, mobility, reproduction, consumption, and social movements within urban contexts. Students will engage with some of the key figures shaping debates about gender, class, and Islam in countries of the region typically referenced as North Africa and the Middle East (MENA). They will also evaluate regional media addressing concerns about gender in light of the historical content of the course and related political concepts.

Same as: FEMGEN 108B, URBANST 108B

**ANTHRO 108E. Catalhoyuk and Neolithic Archaeology. 3 Units.**

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

Same as: ARCHLGY 108E

**ANTHRO 109A. Archaeology of the Modern World. 3-5 Units.**

Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centuries. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the "three Cs": colonization, captivity, and capitalism; and (3) an epistemological priority to recovering the perspectives of "people without history." Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.

Same as: ANTHRO 209A, ARCHLGY 109A

**ANTHRO 10A. The Archaeology of Home. 3-5 Units.**

Homes evoke powerful emotions about place and also highlight the dynamic and complex nature of people, their relationships, and the broader society they live in. Focus on the ways that material traces from the past shed light on the diversity of domestic life, which includes household organization, economic strategies, diet and status, rituals, and identity. Archaeological case studies to see how archaeologists identify reoccurring patterns in material culture found in homes or domestic dwellings to reconstruct household patterns and social relations.

**ANTHRO 10SC. Evolution and Conservation in Galápagos. 2 Units.**

The tiny remote islands of Galápagos have played a large and central role in the study of evolution. Not surprisingly, they have also been central to the study of conservation. The fascinating adaptations of organisms to the unique ecosystems of the archipelago have left them particularly vulnerable to outside introductions. This seminar explores evolution, conservation, and their connection in the Galapagos. Using case-study material on finches, iguanas, tortoises, cacti, *Scalesia* plants, and more, we will explore current theory and debate about adaptation, sexual selection, speciation, adaptive radiation, and other topics in evolution. Similarly, we will explore the special challenges Galápagos poses today for conservation, owing to both its unusual biota and the increasing human impact on the archipelago. The first week is held on-campus, followed by an intensive eleven-day expedition to Galápagos to observe firsthand evolutionary phenomena and conservation issues. A chartered ship will serve as our floating classroom, dormitory, and dining hall as we work our way around the archipelago to visit as many as ten islands. For this portion of the class, undergraduates will be joined by a group of Stanford alumni and friends in a format called a Stanford "Field Seminar." Students are required to complete all course readings over the summer. Students will be asked to lead discussions and carry out literature research on the evolutionary and conservation biology of particular Galápagos species. The final assignment is a seven- to ten-page paper and class presentation as we travel in Galápagos. Travel to Galápagos will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Stanford Alumni Association Travel/Study Program and generous donors. Students will return to campus late afternoon Saturday, September 22.

**ANTHRO 110. Environmental Archaeology. 5 Units.**

This course investigates the field of environmental archaeology. Its goals are twofold: 1) to critically consider the intellectual histories of environmental archaeology, and, 2) to survey the various techniques and methods by which archaeologists assess historical environmental conditions through material proxies. The course will include lab activities.

Same as: ANTHRO 210, ARCHLGY 110

**ANTHRO 110A. Neandertals and Modern Humans: Origin, Evolution, Interactions. 3 Units.**

The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why *Homo sapiens* has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleoanthropology and the most recent methodological advances in the field.

Same as: ANTHRO 210A

**ANTHRO 110B. Examining Ethnographies. 5 Units.**

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

Same as: ANTHRO 210B

**ANTHRO 111A. Archaeology of the Andes of Argentina. 3-5 Units.**

The aim of this course is to provide a panorama of the archaeology of the andean region of Argentina, along some main topics of past and current researches. North andean Argentina has been considered for a long time as subordinated to the major developments in the central Andes and Puna, as if it were in a marginal position that mirrored their history. More than a hundred years of research in the area have produced different insights, which put that affirmation in relative terms. The course will give an overview of major historical contributions and contemporary trends in the archaeological thinking in relation to themes such as time, the space, people, things and nature. An overview of the conceptions and construction of time. Space seen as cultural area; natural environment and built landscape; archaeological areas as national territory. Historical conceptions of people; bodies; social inequality; the past and present others in the archaeological research. Artefacts, classifications and typologies; material archaeological contexts as cultural units; from artefacts to things; past ontologies. Nature and environment; domestication; ecological approaches; agropastoralism; nature/culture. It is expected that by the end of the course students will gain a panorama of the major problems of the archaeology of andean Argentina with historically and theoretically informed perspectives.

Same as: ANTHRO 211A

**ANTHRO 111B. Muwekma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.**

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwekma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwekma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwekma, and the fight for acknowledgement of Muwekma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwekma.

Same as: ARCHLGY 111B, NATIVEAM 111B

**ANTHRO 112. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.**

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 212, ASNAMST 112

**ANTHRO 112A. Archaeology of Human Rights. 5 Units.**

This introductory seminar provides a critical vantage point about human rights discourse from an archaeological perspective. The seminar is organized around four main questions: (1) Is cultural heritage a human right? (2) What are archaeologists learning about how the material and temporal dimensions of power and resistance? (3) How is archaeological evidence being used in investigations of human rights violations? (4) Can research about the past shape the politics of the present? Topics to be discussed include archaeological research on mass internment, colonialism, enslavement and coerced labor, ethnic cleansing, homelessness, gender discrimination, indigenous rights, and environmental justice.

Same as: URBANST 147

**ANTHRO 112B. Advanced Study in Public Archaeology. 2-5 Units.**

This service-learning course is offered only to students who have completed Anthro 112a and wish to deepen their scholarship in public archaeology and heritage practice through continued study. Students enrolled in Anthro 112b complete readings, collections management study, public archaeology events, and community-based research oriented towards their specific interests. Prerequisite: Completion of Anthro 112a AND instructor consent.

**ANTHRO 113. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.**

The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.

Same as: ANTHRO 213

**ANTHRO 113B. Religious Practices in Archaeological Cultures. 5 Units.**

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 213B, ARCHLGY 113B

**ANTHRO 114. Prehistoric Stone Tools: Technology and Analysis. 5 Units.**

Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

Same as: ANTHRO 214, ARCHLGY 114

**ANTHRO 114A. Introduction to South Asian Archaeology. 5 Units.**

This seminar will survey the archaeology of South Asia, beginning with animal and plant domestication in the early Holocene and ending with the late Medieval Period. Given its chronological breadth and spatial scope, the class will interrogate a variety of social and historical contexts that contribute to a broad range of anthropological research concerns, including the intersections of authority, ritual, alterity and landscape, and at the same time critically consider the epistemological bases for their analyses through archaeological remains.

Same as: ANTHRO 214A, ARCHLGY 114A

**ANTHRO 114B. Landscape Archaeology and Global Information Systematics. 3-5 Units.**

This course is meant to lay groundwork for analysis of archaeological landscapes using the methods of GIS. Throughout, we consider the various understandings of landscape, from the biographical to the biological. The course explores the history of various typologies of landscape, incorporating the cultural, the topographical, the ecological, and the topological; reviews different types of landscape data and analysis, including aerial imagery, stratigraphic excavations, and specialized analyses; addresses how to integrate different sorts of data sets and carry out analytical assessment of interrelated "layers" as dynamic constituents of landscape; considers implications of landscape studies in modern policy and management. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 214B

**ANTHRO 115. The Social life of Human Bones. 3-5 Units.**

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 215, ARCHLGY 115

**ANTHRO 115B. Peoples and Cultures of Ancient Mesoamerica. 5 Units.**

This course engages with the world of ancient Mesoamerica, focusing on the Mixtec, Aztec, Maya, Zapotec, Chichimec, Olmec, and Teotihuacan peoples. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, how interpretations of daily life in the ancient Mesoamerican world are formulated, and how these interpretations are marshaled in contemporary politics and policies. We explore different scales of Mesoamerican communities, and compare the diverse material culture and lifeways represented in Mesoamerica at different time periods. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 215B

**ANTHRO 116. Data Analysis for Quantitative Research. 5 Units.**

An introduction to numeric methods in Anthropology and related fields employing the Data Desk statistics package to test hypotheses and to explore data. Examples chosen from the instructor's research and other relevant projects. No statistical background is necessary, but a working knowledge of algebra is important. Topics covered include: Frequency Distributions; Measures of Central Tendency, Dispersion, and Variability; Probability and Probability Distributions; Statistical Inference, Comparisons of Sample Means and Standard Deviations; Analysis of Variance; Contingency Tables, Comparisons of Frequencies; Correlation and Regression; Principal Components Analysis; Discriminant Analysis; and Cluster Analysis. Grading based on take-home problem sets.

Same as: ANTHRO 216

**ANTHRO 116B. Anthropology of the Environment. 5 Units.**

This seminar interrogates the history of anthropology's approach to the environment, beginning with early functionalist, structuralist, and Marxist accounts of human-environment relationships. It builds towards more recent developments in the field, focusing on nonhuman and relational ontologies as well as current projects on the intersections of nature, capital, politics, and landscape histories. At the end of this class, students will be familiar with the intellectual histories of environmental anthropology and contemporary debates and tensions around questions of ethics, agency, environment, and historical causality.

Same as: ANTHRO 216B

**ANTHRO 116C. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.**

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.

Same as: ANTHRO 16, ARCHLGY 16, NATIVEAM 16

**ANTHRO 117. Thinking Through Animals. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of 'animals as social actors' is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognised as a viable mechanism for understanding our cultural and economic past. The module presents an overview covering a broad timespan from the Pleistocene to the modern day. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 217

**ANTHRO 117A. Stuff. 5 Units.**

Never before have humans been engulfed by so much stuff. Stuff is needed to survive giving us the basics of food, clothing, and shelter. But stuff does so much more. Smart phones rule our social interactions. Louis Vuitton handbags display status. Air conditioning masters nature. Picassos inspire beauty. Wedding bands promise eternal love. Crosses connect believers to God. Is stuff really who we are? This seminar explores the science of stuff, past, present and future, investigating deeply-held beliefs about the meaning, value, and purpose of objects. Because our stuff has become such a popular obsession, this course embraces the eclectic intersection of popular and academic knowledge. Students will seek to answer the complex whys of our relationship with objects and understand our future human condition made by the material world.

Same as: ANTHRO 217A, ARCHLGY 117A

**ANTHRO 117B. Monuments and Landscapes: An Archaeological Perspective. 3-5 Units.**

The landscape is a result of the action and interaction of human and natural factors. Communities have altered their landscapes for a variety of reasons, including the subsistence practices; as a consequence of economic growth; to express a social ideology, and as a consequence of political and religious drivers. Accordingly, landscapes enable physical and provide psychological sustenance to people, and the human need to relate to our surroundings is part of the way in which identities are created and disputed. Within the humanities, landscape is being conceptualized as a process, a practice and as performance, and monuments within a given landscape have an equally important role, not to mention history. They are often the most durable and well-known evidence of the ancient civilizations, and should be observed jointly with the landscape. How did the landscape predefine the monument and how did the monument complement, emphasize or devalue the landscape? What philosophy channeled the construction of the monuments within the landscapes? Whether ephemeral or permanent, the human agency left traces in the landscape; thus, both monuments and landscapes are the key indicators for understanding the ideology of a particular culture. Archaeology, through its interdisciplinary nature, provides a unique perspective, as well as tools, for examining the formation processes of all man-made elements, within both natural and cultural landscapes. The course will address the multifaceted issues of the ways that people have consciously and unconsciously shaped the land around them through time. It will look into diverse, geographically and periodically influenced concepts of a monument and landscape. The course will be divided into two parts, with the first one covering the theory and methodological approaches and the second part the conceptual characteristics, modifications and changeability in various archaeological and historical periods and cultural frameworks.

Same as: ANTHRO 217B, ARCHLGY 117B

**ANTHRO 118. Heritage, Environment, and Sovereignty in Hawaii. 4 Units.**

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

Same as: EARTHSYS 118

**ANTHRO 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.**

Interpreting the past is no longer just for people like historians and archaeologists, and it's no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they're putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ASNAMST 118A, CSRE 118A

**ANTHRO 118B. Heritage, Environment, and Sovereignty in Hawaii Seminar. 1-2 Unit.**

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life. Students participate with field base in Hawaii via Skype and through classroom lectures, readings, and media.

**ANTHRO 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.**

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the hands-on component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 219, ARCHLGY 119

**ANTHRO 115C. Conservation and Development Dilemmas in the Amazon. 2 Units.**

This course explores the human dimensions of conservation efforts under way in the Amazon Basin of South America. It has two specific goals: (1) to introduce the human ecology of Amazonia; and (2) to assess the prospects for joint efforts at biodiversity conservation and community development. We will draw on case studies to investigate such topics as the causes and consequences of deforestation, the social impact of parks and protected areas, and the potential for "Integrated Conservation and Development Projects" (ICDPs) such as extractive reserves, natural forest management, biodiversity prospecting, and community-based ecotourism. The course views Amazonia as a microcosm of the challenges facing conservation and development efforts today in the Third World. Part of the course is an intensive 11-day expedition to the Peruvian Amazon, at no extra cost, to observe firsthand the conservation and development dilemmas discussed in class. We will visit ecodges in the rainforest, walking miles of trails to learn about local flora, fauna, and conservation efforts. We will also visit Machu Picchu in the upper reaches of the rainforest. For the travel portion of the class, undergraduates will be joined by a group of Stanford alumni and friends. Student contributions and presentations are emphasized throughout the course. Students are expected to come well-prepared to each session, to lead discussions, and to carry out literature research. The final assignment is a 6 to 8 page paper on a case study of your own choosing or an equivalent piece of a longer collaborative paper that offers a critical assessment of one particular conservation and/or development project in or near the region we will visit. Students will present the main findings of their papers in a joint seminar of undergraduates and alumni as we travel in the Peruvian Amazon. Note: Students will arrive on campus and will be housed at Stanford until we leave for the Amazon. Travel to and from Peru organized by the Travel/Study Program of the Stanford Alumni Association is included; costs are defrayed by the Stanford Field Seminar Fund and generous donors.

Same as: HUMBIO 18SC

**ANTHRO 12. Anthropology and Art. 5 Units.**

Modernity. How the concept of art appears timeless and commonsensical in the West, and with what social consequences. Historicizing the emergence of art. Modernist uses of primitive, child art, asylum, and outsider art.

**ANTHRO 120. The Maya. 4-5 Units.**

Lecture course on the ancient and modern Maya. We explore the archaeology, ecology, culture, and language history of the Maya from the earliest times to the Classic Maya Collapse in the 9th-10th Centuries A.D., and examine also the Post-Classic, the Conquest, and Colonial Periods, and the persistence and impact of the Maya in present-day Mexico, Guatemala, Belize, Honduras, El Salvador, and diasporic Maya in the United States. The course acquaints students with the cultural achievements of the Maya in the context of the anthropology and archaeology of civilization, and considers issues of identity over vast periods of time. It includes discussion of the roles of isolation, contact, and geography in Maya history; principles of archaeological excavation and interpretation as applied to the Maya city-states, especially to their rise and fall; Maya hieroglyphic writing and its decipherment; Maya mythology and the Popol Vuh; Maya art in its Mesoamerican context; ethical issues in the management of Maya archaeological sites; principles of ethnographic analysis as applied in modern Maya communities, and Maya rebellions against colonial and modern states. Anthropology concentration: CS, Arch. No prerequisites.

**ANTHRO 120B. Indian Popular Culture. 5 Units.**

This course will explore key topics in contemporary India through an analysis of its popular culture. Bollywood and Kollywood films, Hindi soap operas and reality shows, vernacular music in Bihar, Tamil pulp fiction, matchboxes from Bangalore, clothing styles of Kerala college students, advertising in Mumbai, and cell phones used in Varanasi will all be brought together to help us shape an image of India as complex, contested, and changing. As an anthropology course, we will focus on the consumption of these media and discuss what they do in the world. Looking at both the source material itself and the way in which it is used, we will explore topics such as: nationalism, gender and sexuality, middle class aspiration, globalization, neoliberal consumerism, and the postcolonial condition.

**ANTHRO 120F. Buying Black: Economic Sovereignty, Race, and Entrepreneurship in the USA. 4-5 Units.**

This seminar examines how communities of color have critiqued and transformed capitalism in America through concepts of economic independence, entrepreneurship, and sovereignty. By tracing concepts such as the double-duty dollar, casino/tribal capitalisms, retail boycotts, and buying black, the course traces ethnic entrepreneurialism in America. Students will also consider the international context of such US-based movements, particularly in relation to American imperialism and global supply-chain capitalism.

Same as: AFRICAAM 120F, CSRE 120F

**ANTHRO 121. Language and Prehistory. 4-5 Units.**

Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III).

Same as: ANTHRO 221

**ANTHRO 121A. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture. Same as: AFRICAAM 121X, AMSTUD 121X, CSRE 121X, EDUC 121, LINGUIST 155

**ANTHRO 122A. Race and Culture in Mexico and Central America. 3-5 Units.**

This course addresses the role of racial ideologies in the historical configuration of multiple hierarchies of inequality that determine the place of everyone in society in Mexico and Central America. Based on readings from the humanities and social sciences, we will discuss the cultural and racial politics of authoritarianism and indigenous insurgency, emphasizing narratives of laziness and vagrancy that have been central to the discipline of labor that shapes local processes of regressive modernization and nation building. We will analyze the hegemony of dictatorship as political necessity, the relationship between local racisms and global Whiteness, and the emergence of new local and transnational contestations to the multiple hierarchies that determine the place of everyone in society.

Same as: ANTHRO 222A

**ANTHRO 122C. Research in Maya Hieroglyphic Writing. 1-2 Unit.**

Workshop. Current issues in the decipherment and analysis of Maya hieroglyphic writing and literacy.

Same as: ANTHRO 222C

**ANTHRO 123A. Debating Repatriation. 5 Units.**

The debates over the return of cultural property have raged for centuries. At stake are key questions about the rights of Indigenous peoples, intellectual freedom, nationalism, globalization, heritage management, the meaning of history, and the purpose of museums in the world.

This seminar examines these vital discussions that intersect law and morality, science and religion, culture and politics. Discussions will be informed by cross-cultural, legal, ethical perspectives, exploring both the philosophical and practical implications of the repatriation debates. This course will provide students with a nuanced historical viewpoint of museum collections, heritage policies, and legal dimensions that underpin contests over cultural property.

Same as: ANTHRO 223A, ARCHLGY 123A

**ANTHRO 124. Maya Mythology and the Popol Vuh. 3-5 Units.**

The mythology and folklore of the ancient Maya, emphasizing the relationship between the 16th-century Quiché Maya mythological epic *Popol Vuh* (Book of the Council) and classic lowland Maya art, architecture, religion, and politics. General Mesoamerican mythology. Anthropological and other theories of mythology. Class participates in the creation of a web project on the *Popol Vuh*.

**ANTHRO 124N. Maya Mythology and the Popol Vuh. 3 Units.**

Shortly after the Spanish conquest of Highland Guatemala, an anonymous Quiché Mayan noble translated a sacred text of his people, Popol Vuh (Council Book), and committed the Mayan to Spanish letters. His book, with its account of creations and destructions of the world by the gods, the descent of the Hero Twins into the Underworld and their ball games with its lords, and a history of the ruling clan of the Quiché state, is a grand apology for the values and world of the Quiché Maya, but it is no drab political treatise. It relates the daily life of the Quiché to their natural world (including the skies) and to the underworld journey that they expected in death, and is a compilation crafted to instruct and entertain at several levels of interpretation, from those of sophisticated scholars to children. In the 1970s, we began to realize that many of the ceramic vessels unearthed from the tombs of the Classic Lowland Maya, originally intended to accompany their owners on their perilous journey through the underworld, actually illustrate scenes described in Popol Vuh. More recently, it has been possible to relate the mythology to texts newly deciphered from Mayan inscriptions as well as vases. The Popol Vuh has thus been shown to be a survival of a much older and more widespread culture. Like most survivals, though, it had been re-crafted in the image of the contemporary Quiché culture. When are mythological similarities sufficient to imply relatedness of the stories through common descent? How can mythical similarities imply universals of mind and culture? How have myths been used as state political instruments? This is an exciting combination of archaeology, linguistics, cultural anthropology, art, and literature. Students will analyze the text critically, examine Mayan art, and help develop a web site. No prerequisites.

**ANTHRO 125. Language and the Environment. 3 Units.**

Lecture course on vocabulary and grammar as keys to peoples' understanding and use of the environment. Ethnobotany, ethnobiology, and ethnosemantics in the analysis of the language of place, plants and animals, the earth, the body, and disease. Terminological gaps and gluts and what they imply. Language as a strategic resource in environmental management. Language contact and conflict in the modern global environment, with particular attention to the vocabularies of capitalism and property. Language extinction and its environmental implications. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 225

**ANTHRO 125A. International Criminal Courts and the Question of Global Justice. 3-5 Units.**

What are the cultural, legal and political implications of the global extrapolation of our understanding of the rule of law, in general, and criminal law, in particular? This course will look at the theory and practice of the new international criminal courts, the criminalization and individualization (or humanization) of international law, and the broader system of cosmopolitan order that it presupposes, with special reference to how it differs from earlier projects for international order (international law, war crimes, human rights, and the UN system). Case studies will follow the historical development of the key institutions, individuals and legal precedents that have been determinative for the new international criminal jurisdiction, including Nuremberg and Tokyo, the ad hoc (Yugoslavia, Rwanda) and hybrid tribunals (Liberia, Sierra Leone, Lebanon, Cambodia) and now the International Criminal Court (DRC, northern Uganda, Sudan, Libya and Kenya).

**ANTHRO 125S. International Criminal Courts and the Question of Global Justice. 3 Units.**

What are the cultural, legal and political implications of the globalization of our understanding of the rule of law, in general, and criminal law, in particular? This course will look at the theory and practice of the new international criminal courts, the criminalization and individualization (or humanization) of international law, and the broader system of cosmopolitan order that it presupposes, with special reference to how it differs from earlier projects for international order (international law, war crimes, human rights, and the UN system). Case studies will follow the historical development of the key institutions, individuals and legal precedents that have been determinative for the new international criminal jurisdiction, including Nuremberg and Tokyo, the ad hoc (Yugoslavia, Rwanda) and hybrid tribunals (Liberia, Sierra Leone, Lebanon, Cambodia) and now the International Criminal Court (DRC, northern Uganda, Sudan, Libya and Kenya).

**ANTHRO 126. Urban Culture in Global Perspective. 5 Units.**

Core course for Urban Studies majors. We will study urban space both historically and cross-culturally. Urban Studies, by definition, is an interdisciplinary field, where the methodological approaches draw upon a diverse set of analytic tools. Disciplines that occupy a prominent place in this class are geography, cultural anthropology, sociology, history, media studies, and literature. In this context, we will discuss the importance of cities around the world to the economic, cultural, and political well-being of modern societies and examine how forces such as industrialization, decentralization, and globalization affect the structure and function of cities.

Same as: URBANST 114

**ANTHRO 126A. Politics of the Past. 5 Units.**

The past is never dead, William Faulkner once wrote. It's not even past. This seminar explores the contested meanings of history in the political present. It particularly focuses on how archaeological work and heritage becomes entangled in larger questions of identity, belonging, belief, economics, and the stories we tell about ourselves. Students will gain an expansive and in-depth perspective on why humans so value what has come before us, and why making meaning from the past is a process suffused with power.

Same as: ANTHRO 226A, ARCHLGY 126A

**ANTHRO 128. Visual Studies. 5 Units.**

Drawing on anthropology, art history, cultural studies, and other fields, this course explores how and why one might want to think critically about the politics of visibility, social imagination, the politics of making and consuming images and things, iconophilia and iconophobia, the classification of people and things into artists and art, and cultural production more generally.

**ANTHRO 128A. The Boundaries of Humanity: Humans, Animals and Machines in the Age of Biotechnology. 3-4 Units.**

Advances in research and technology are blurring the boundaries between humans, animals, and machines, challenging conventional notions of human nature. Seminar explores the question of what it now means to be human and the personal, social, and ethical implications of our advancing technologies through the lens of various disciplines, including anthropology, cognitive psychology, neuroscience, genetics, evolutionary biology, biotechnology, and artificial intelligence. Includes guest speakers from fields and industries where important questions are being raised.

**ANTHRO 130B. Introduction to GIS in Anthropology. 5 Units.**

How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

Same as: ANTHRO 230B

**ANTHRO 130D. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 230D, POLISCI 241S, URBANST 124

**ANTHRO 131. Genes and Identity. 5 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: AFRICAAM 131, CSRE 131

**ANTHRO 132. Religion and Politics in the Muslim World. 5 Units.**

This course provides an ethnographic examination of religion and politics in the Muslim world. What is the role of Islam in the political life of modern Muslim societies? Conversely, how do modern political powers shape and constrain the terms of religious life? This course takes an anthropological perspective on the study of Islam: our investigations will not focus on the origins of scriptures and doctrines but rather on the use of religious texts and signs in social context and on the political significance of ritual and bodily practices. A major aim of the course is provide students with analytical resources for thinking critically about the history and politics of modern Muslim societies, with a particular focus on issues of religious authority, gender and sexuality, and the politics of secularism.

**ANTHRO 132B. Islam Law in Muslim and Non-Muslim Societies. 3-5 Units.**

In this course, students will engage with scholarly material that demonstrates the multiple and varying ways in which Islam is invoked as a legal discourse in Muslim and Non-Muslim societies. In this course, we look at Islam not merely as being in the domain of legislation and adjudication, but as a cultural object; an important signifier in politics, for the state to enforce itself, as well as a technology for people's strategic use. The point of this course is therefore to consider how Islam operates in legal contexts as a 1) discourse of power and of strategy (at personal and political levels) and 2) as a discourse of identity that concerns issues of ethics, rights, gender, kinship, class and nation.

**ANTHRO 133A. Anthropology of the Middle East. 3-5 Units.**

This course examines social, political, and religious dimensions of various Middle Eastern societies. Key topics include the development of the modern nation-state, the Islamic revival, human rights, and discourses of democracy. Course materials include ethnographic studies, novels, and films, which provide a rich contextualization of social life and cultural politics in the region.

Same as: CSRE 133A

**ANTHRO 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.**

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: AFRICAST 133B, CSRE 133B

**ANTHRO 134. Object Lessons. 5 Units.**

Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

Same as: ANTHRO 234

**ANTHRO 134B. Conflict and Change in the Middle East. 5 Units.**

Following the Arab Spring, the hope for political and social change has been widely raised and celebrated in the Middle East. This hope, however, has been shattered alongside the recent cycles of violence and conflict in different parts of the region, from Syria and Iraq to Egypt. This course examines political violence, change, and boundary making in the modern Middle East. By taking a historical and anthropological look at the political conflict and change, this course will explore how particular political, economic, and social narratives, encounters, and contradictions have accompanied the conflict and change in the region. The course will focus on the cases from Turkey, Iraq, Syria, Iran, Egypt, Morocco, and Israel/Palestine.

**ANTHRO 135. Cultural Studies. 5 Units.**

Identity, community, and culture; their interactions and formation.

Same as: ANTHRO 235

**ANTHRO 135C. Moving Worlds: Anthropology of Mobility and Travel. 5 Units.**

This course looks at human mobility from an anthropological perspective. We will read texts that ethnographically explore the experiences of refugees, labor migrants, tourists and seafarers, among others. In particular, we will look at the intersection of physical mobility and social mobility, as people often move in order to improve their life, to increase safety or economic security, or to gain social capital. However, the mobility perspective has also been criticized for depoliticizing and celebrating movement without critical attention to its socio-political and economic context. While mobility as a term points to the ability to move, human migration is at least as often characterized by restrictions and obstacles to movement, such as borders. We will think critically about the deep inequalities that exist in terms of why and how people move, and who are able to mobilize resources to move.

**ANTHRO 135H. Conversations in CSRE: Case Studies in the Stanford Community. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: CSRE 135H

**ANTHRO 135I. CSRE House Seminar: Race and Ethnicity at Stanford. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: CSRE 135I

**ANTHRO 136. The Anthropology of Global Supply Chains. 5 Units.**

This upper-division undergraduate seminar focuses on recent studies by anthropologists and scholars in related disciplines on global supply chains and consumption practices. The goal of the course is to assess concepts and methods for integrating a cultural analysis of transnational production with a cultural analysis of transnational consumption. We will review ethnographic studies of the production and consumption of commodities linked by transnational and global networks. The class will then pursue collaborative research on the global production, distribution, and consumption of a selected commodity. Prerequisite: junior or senior standing and previous coursework in cultural anthropology or permission of instructor.

Same as: ANTHRO 236

**ANTHRO 136B. White Identity Politics. 3-5 Units.**

Pundits proclaim that the 2016 Presidential election marks the rise of white identity politics in the United States. Drawing from the field of whiteness studies and from contemporary writings that push whiteness studies in new directions, this upper-level seminar asks, does white identity politics exist? How is a concept like white identity to be understood in relation to white nationalism, white supremacy, white privilege, and whiteness? We will survey the field of whiteness studies, scholarship on the intersection of race, class, and geography, and writings on whiteness in the United States by contemporary public thinkers, to critically interrogate the terms used to describe whiteness and white identities. Students will consider the perils and possibilities of different political practices, including abolishing whiteness or coming to terms with white identity. What is the future of whiteness? Enrolled students will be contacted regarding the location of the course.

Same as: AFRICAAM 136B, CSRE 136

**ANTHRO 137. The Politics of Humanitarianism. 5 Units.**

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the "cause of humanity." In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid – be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (the Third World), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

Same as: ANTHRO 237

**ANTHRO 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.**

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 238, CSRE 138

**ANTHRO 138A. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice, structured around international military intervention and criminal trials based on international criminal courts, will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, AFRICAST 238, ANTHRO 238A

**ANTHRO 139. Ethnography of Africa. 5 Units.**

The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

Same as: ANTHRO 239

**ANTHRO 139C. Anthropology of Global Health. 5 Units.**

Global health has been the contested realm of theoretical debates and praxis in medical anthropology. Rationalities behind global health projects reflected the predominant mode of envisioning health in specific historical moments. In this course, we will first assess the ways in which memories, materiality and institutions of the colonial past persist in the field of global health in Africa. Secondly, we will explore how early medical anthropologists participated in international health projects in order to facilitate implementation of the Western biomedicine in developing countries by investigating cultural barriers under the post-war regime of international development in the efforts of controlling malaria and HIV/AIDS in Latin America. Thirdly, we will examine achievements and limitations of subsequent critical medical anthropologists' shift of the focus of analysis on global health from culture to structure, larger political economic conditions that produced vast health inequalities around the world, including World Bank policies under the Cold War and neoliberal reforms that increased the prevalence of TB and other diseases in post-socialist contexts. Finally, we will question previous anthropological discourses on global health and propose potential insights by understanding moral imaginations of contemporary global health participants such as WHO or Gates Foundation and humanitarian medicine such as MSF, and continuities and discontinuities of colonial and developmental past in current global health movement.

**ANTHRO 13A. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.**

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography. Same as: ARCHLGY 13, HISTORY 7E, HISTORY 107E

**ANTHRO 13SI. Zombies: Anthropology of the American Undead. 1-2 Unit.**

The zombie apocalypse, affectionately known as the *z*Zombieapocalypse. *z* In this combination class on zombie history, ethnography, biology, and culture, we will explore the origins of zombie legends (or truths?) and how the undead have been represented in American culture for the past 200 years. Classes will include lectures, film clip viewings, literary analysis, medical anthropology components, and disaster survival planning.

**ANTHRO 14. Introduction to Anthropological Genetics. 3 Units.**

For upper division undergraduates. The extent and pattern of variation among human genomes, the origin of these patterns in human evolution, and the social and medical impact of recent discoveries. Topics include: the Human Genome Project; human origins; ancient DNA; genetic, behavioral, linguistic, cultural, and racial diversity; the role of disease in shaping genetic diversity; DNA forensics; genes and reproductive technology.

**ANTHRO 140. Ethnography of Africa. 3 Units.**

This course is an exploration of some central themes and issues in contemporary African society through close readings of a selection of recent ethnographies. It aims to understand Africa as a place where many of the most challenging issues of a modern, globalized world are being thought about in exciting and creative ways, both by ethnographers and by the people about whom they write. Among the key issues that the course seeks to address are: the history and politics of colonial domination; the ways that medicine and government intersect; the increasing use of humanitarian frames of reference in understanding African realities; the changing meanings of HIV/AIDS, sex, and love; and the role of mass media in enabling cultural and imaginative production to take form.

**ANTHRO 140C. Mobilizing Nature. 3 Units.**

From Brazil's Landless Worker's Movement (MST) to Water Wars of Cochabamba to Standing Rock, these moments of protest have turned into movements. This seminar will examine how theoretical framings of movements have shifted from claims about political rights to environmental ones. We will address two overarching questions: How are notions of ethnicity, gender, and class constructed in relation to the environment? And how do people understand these relationships in such a way that motivates them to mobilize? Students will explore what kinds of ecological claims are being made, who is making, how, and who benefits from them. The objective is to ultimately understand how movements not only reflect, but also (re)shape political and social practices around the environment.

**ANTHRO 141A. Science, Technology, and Medicine in Africa. 4 Units.**

Africa is often depicted as a place simply in need of science, technology, and medicine. This class will introduce students to the culture and politics of science in sub-Saharan Africa: to the diverse and rich traditions, histories and contemporary predicaments of knowledge practices on the continent. We will consider the role of science in the colonial period, covering the expansion of European empires in Africa and the forms of technical knowledge that colonial governments encountered, especially as they relate to health and the environment. We will examine the role of science at African independence and in international development work. Finally, we will discuss the politics of medical training and research, resource extraction, and the internet in contemporary Africa. This course will provide some important background for those with an applied interest in Africa as well as provide an introduction to a growing area of scholarship. Course materials include historical and ethnographic works, as well as primary sources and films emphasizing scientific practice in the context of geopolitical relations of power and inequality.

Same as: AFRICAST 141A

**ANTHRO 141B. The Anthropology of Bits and Bytes: Digital Media in the Developing World. 5 Units.**

Recent historical developments, including the widespread adoption of the mobile phone across Africa and Southeast Asia, the *z*Arab Spring, *z* and the rise of technology sectors in cities such as Nairobi, Bangalore, and Accra, have turned digital technology in the *z*global South*z* into a topic of growing popular interest and increasing scholarly concern. This course attempts to make sense of these developments by interrogating diverse theoretical approaches to digital technology and assessing what these approaches reveal and obscure in specific cases of technology adoption in Africa, Asia, and Latin America. Students will be introduced to an overview of scholarly approaches to digital technology from anthropology, science and technology studies (STS), critical theory, geography, and communications studies. We will analyze the relative utility of these explanations through case studies of specific instances of technological production and/or use. These case studies will be drawn from both secondary texts and primary materials such as social media, digital maps, videos, blogs, and news reports. At the same time, we will examine how digital discourses and practices both draw upon and inform broader issues of context-specific political and cultural importance. Major topics to be discussed include *z*development*z* and the State, civil society and the *z*public sphere,*z* youth culture, gender politics, mobility, and globalization. Students will come away from the course with a strong understanding of the major issues at stake in the increasing digitalization of the *z*global South,*z* and the socio-cultural, political, and technical debates that frame them.

**ANTHRO 142A. Youth in the Global South: Beyond Active Subjects and Passive Objects. 5 Units.**

In this course, we will explore the wide variety of ways youth has been culturally constructed (as well as dynamically experienced) across the Global South. Youth is an enduring and powerful concept for understanding competing forms of cultural contestations and political transformations. In the wake of global economic inequality, political instabilities and the emergence of new indigenous movements and social demands, youth is simultaneously associated with discourses over *z*crisis*z* and *z*possibilities.*z*

Same as: CSRE 124A

**ANTHRO 143B. Anthropology and International Development. 3-5 Units.** International development as a set of projects, policies, and controversies has been a major force in shaping the world over the past seventy years. Throughout, the discipline of anthropology has been involved, both as participant and as critical observer. After a brief overview of development theory and history, this course will discuss (1) the ways in which anthropology has contributed to development projects and ideas and (2) how the discipline has critiqued development practice over the past three decades. What has anthropology offered to those who work towards social and economic development, and how has development shaped the discipline itself? Readings will include detailed ethnographic and historical case studies from across the developing world.

**ANTHRO 144A. Practice of Everyday Life in Kazakhstan: From Nomadism to Modernity. 3-5 Units.**

An interdisciplinary introduction to the historically nomadic land of Kazakhstan, its peoples and their lifestyles, and the practice of everyday life. Ranked as the ninth largest country in the world, Kazakhstan is also the world's largest landlocked country; its territory is greater than Western Europe: it stretches from the fringes of Europe to the borders of Mongolia and China. The seminar surveys language and society, traditional economics and customary law, rituals and folk customs, local dwelling, craft and art, the cultural panorama, the historical relationship between sedentary and nomadic peoples as well as new approaches to the study of nomads in modernity. Speaking of the present time, we will follow the changing nomads in a changing world. The instructor is going to base, to the extent possible, on the extremely rich fieldwork data recently discovered in Kazakhstan – the data is yet little known in the West. The seminar will make extensive use of audio-visual materials and films.

Same as: REES 244A

**ANTHRO 144B. The Buddhist Body in East Asia: Charisma, Gender, and the Gift of the Body. 5 Units.**

This course introduces Buddhist practices and texts of embodiment as a subject of the anthropology of the body. We draw on research in social/cultural anthropology, history, and religious studies, and examine a selection of approaches to the Buddhist body: the body of power in Buddhist charisma, the gender of the bodhisattvas and monastic body, the techniques of the body in meditation and martial arts, healing and cultivation, and the gift of the body in bioethics and medical education. We draw on examples in different traditions of Buddhism in a range of societies with a special focus on Chinese Buddhism.

Same as: ANTHRO 244B

**ANTHRO 145. Race and Power. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 245, CSRE 145F

**ANTHRO 145B. Reinventing the Other: Greeks, Romans, Barbarians. 3-5 Units.**

Ancient ethnography was a highly conventionalized tradition stretching from "the father of History," Herodotus, to the last historian of the ancient world, Procopius. We will read selections of these two authors' works as well as of Sallust, Tacitus, and lesser known ones. Within various theoretical frameworks—rhetorical, anthropological, structuralist—we will reconstruct the shifting images of The Other, explore what they tell us about their producers, and reflect on what ancient ethnography contributed to its modern descendant.

**ANTHRO 146B. Global Heritage, World Heritage: History and Intersections in Contemporary Society. 5 Units.**

This Course will provide an overview of global heritage by focusing on the UNESCO World Heritage Program, which is based on an international treaty, the 1972 Convention Concerning the Protection of the World Cultural and Natural Heritage. The first part of the course will provide an historical overview on the development of the international preservation movements, the second part of the course will concentrate on how anthropology can contribute to the study of intergovernmental organizations and cultural bureaucracies, the third part and will discuss specific issues related to heritage by providing case studies from the World Heritage. This course will provide theoretical and empirical interpretations of contemporary issues in heritage and will give students a critical understanding of the complexities related to various uses of past in the present.

Same as: ARCHLGY 146B

**ANTHRO 147. Nature, Culture, Heritage. 5 Units.**

Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

Same as: ANTHRO 247

**ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia. 3-5 Units.**

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch *Manas*. The cultural universe of Central Asian peoples as a symbol of their modern outlook.

Same as: REES 247A

**ANTHRO 147B. World Heritage in Global Conflict. 5 Units.**

Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found its own history increasingly entwined with that of international politics and violence.

Same as: ANTHRO 247B, ARCHLGY 147B

**ANTHRO 148. Health, Politics, and Culture of Modern China. 4-5 Units.**

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

Same as: ANTHRO 248, CHINA 155A, CHINA 255A

**ANTHRO 149. South Asia: History, People, Politics. 5 Units.**

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences.

Same as: ANTHRO 249

**ANTHRO 149A. Cities and Citizens in the Middle East. 4 Units.**

This course will explore historical formation of cities and citizens in the Eastern Mediterranean since the 19th century. We will explore urban development, economy, social classes and local politics with a focus on Egypt and Turkey and in particular two world-historical cities, Cairo and Istanbul. Drawing on history, cultural anthropology, geography and sociology disciplines, we will examine how urban space in Egypt and Turkey have reconfigured through histories of colonialism, nationalism, developmentalism and globalization. Rural to urban immigration, informality, gendered places, consumption, urban regeneration, local politics and branding the city will be the themes of our discussion. We will study these themes in relation to two main questions: How do spatial changes engender new social practices and redefine cultural difference?; How do power struggles at the intersection of local and global interests shape urban change? It will be of interest for urban studies majors and other students at all levels who would like to study urban struggles and change in Turkey, Egypt, the Middle East and the Global South.

Same as: URBANST 144

**ANTHRO 15. Sex and Gender. 3 Units.**

Commonality and diversity of gender roles in crosscultural perspective. Cultural, ecological, and evolutionary explanations for such diversity. Theory of the evolution of sex and gender, changing views about men's and women's roles in human evolution, conditions under which gender roles vary in contemporary societies, and issues surrounding gender equality, power, and politics.

**ANTHRO 150A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.**

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.

Same as: FEMGEN 150A, REES 250A

**ANTHRO 151A. Contemporary Chinese Society Through Independent Documentary Film. 3-5 Units.**

An overview of social issues in contemporary China as seen through its emerging independent documentary film movement. Topics covered include representations of history, political power and accountability in the reform era, human rights, urbanization, the environment, homelessness and inequality, sexualities, addiction, and the role of media in society. Each viewing is accompanied by readings in media theory or the anthropological/sociological study of contemporary China. Can be taken with or without research component. Films include English subtitles.

Same as: ANTHRO 251A

**ANTHRO 152. Ritual, Politics, Power. 5 Units.**

Our everyday lives are made up of multiple routines, some consciously staged and imagined and others unconscious and insidious. Anthropologists call these rituals. Rituals shape every aspect of our lives, creating our symbolic universes and governing the most minute of our practices. For early anthropologists and for those interested in religious and symbolic life, rituals and rites were seen as both one of the most universal features of human existence, and, as that which enables us to reflect upon our human existence. A prominent example are that of the *rites de passage* found in every culture, from puberty initiation rites, weddings or funerals, which socially signal the change from one status to another. While initially for anthropologists, rituals marked the difference between the sacred and the profane, soon scholars began to see the ubiquity of ritual and the symbolic in shaping even the most mundane activity such as the structure of a meal and why one is not meant to eat dessert before the main course. The first half of the class examines these different debates surrounding the meaning and effects of rituals and rites. The second half of the class takes these debates to think about the question of power and politics. We return to the question of how our symbolic universes are staged and imagined by us through ritual forms such as the annual Presidential pardoning the turkey at Thanksgiving. The question of power however pushes us even further to ask why it is that we obey particular kinds of authority, consent to particular actions, and find ourselves doing things we haven't consciously decided to do. Many have argued that these kinds of political questions about how we respond and are shaped by power have something to do with our symbolic worlds and ritual, from the most obvious (the monarchy) to the most subtle (listening in a classroom). Throughout the course, these abstract questions will be grounded in cross-cultural examples and analysis.

Same as: SOC 156

**ANTHRO 153A. Population and social trends in Japan. 3-5 Units.**

Anthropological theories and concepts as applied to Japan. Postwar demographic trends. Delayed marriage. Declining nuclear family. Restructuring of education and workplace. Problems for the seniors. Foreign laborers shaking fundamentals of Japan.

Same as: ANTHRO 253A

**ANTHRO 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.**

This course examines the significant role *drugs* play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 254B, CSRE 154

**ANTHRO 155. Research Methods in Ecological Anthropology. 5 Units.**

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

Same as: ANTHRO 255

**ANTHRO 156. Japanese Anthropology. 5 Units.**

This is an advanced reading seminar in the field of Japanese Anthropology. It will explore the historical development of the field and the contemporary issues and topics taken up by scholars of Japanese anthropology. Prior knowledge of Japanese language, history, and, society is required.

Same as: ANTHRO 256

**ANTHRO 156B. Environment, Nature and Race. 3-5 Units.**

Environment, nature and race: Politics of belonging, exclusion, and embodiment. Scientific and popular understandings of race and ethnicity remain deeply entangled with ideas about "nature" and the "environment". This course will introduce students to some of the many ways that nature, environment, and race have been and remain intertwined, for better or for worse. What does it mean to claim race is "natural"? To what extent is race shaped by environment and vice versa? How are the politics of race linked to the politics of environmentalism? The class will begin with a brief treatment of current critical consensus on the biology of race and the cultural politics of race and nature, and move on to a theoretical discussion of how humans and "nature" interact. From there, the course moves into historical and ethnographic examples of the politics of race and the environment: the racialized and racializing character of particular environments; the ways that racial politics shape natural environments; and the politics of exclusion and belonging in environmental movements. Case studies will be both rural and urban and draw from anthropology, geography, history, and biology. The course will end by considering the recent resurgence of the race concept in biology. Same as: CSRE 156J

**ANTHRO 159C. Ecological Humanities. 3 Units.**

What sort of topics, research questions, approaches, theories and concepts lead to an integration of various kinds of knowledges? Ecological Humanities provides a conceptual platform for a merger of humanities and social sciences with earth and life sciences, soil science and forensic sciences. The course will discuss such selected topics as the Anthropocene, geologic/mineral and exhumed subjects/personae, bio- and geosocial collectives, symbiotic life-forms, non-human agencies, and foreign landscapes as examples of this merger. Same as: ANTHRO 259C, DLCL 259C, REES 259C

**ANTHRO 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.**

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture. Same as: ANTHRO 116C, ARCHLGY 16, NATIVEAM 16

**ANTHRO 160. Social and Environmental Sustainability: The Costa Rican Case. 3-5 Units.**

Seminar focused on issues of tropical sustainability with a particular emphasis on the Osa Peninsula of Costa Rica. Offered in conjunction with the Osa Initiative in the Wood's Institute for the Environment, the course highlights issues of human development in the tropics, through such means as agricultural development, ecotourism, conservation efforts, private and indigenous reserves, and mining. The course will draw from diverse disciplines including anthropology, rural sociology, conservation biology, geosciences, history, political science, and journalism. In addition to weekly discussions, students will develop a research paper throughout the term which will be presented to a panel of selected Wood's Faculty during the final week of the term. Same as: ANTHRO 260

**ANTHRO 160A. Tragedy of the Commons: Human Ecology of Communal Resources. 5 Units.**

The tragedy of the commons is a classic social dilemma a situation in which individual interests conflict with collective ones and key to understanding past, present and future environmental degradation. This course surveys a variety of scientific perspectives on the essence of the tragedy: common property resources will ultimately be destroyed by overexploitation. Major themes include the effects of human population density and social organization on the health and management of commons, self-interest versus collective action, and potential solutions to commons problems. Modern and prehistoric case studies are examined from ecological and evolutionary perspectives. Same as: ANTHRO 260A

**ANTHRO 161A. Human Ecology: Adaptations to Climate and Climate Change. 5 Units.**

Humans face essentially the same adaptive challenges as all organisms but are unique for having successfully adapted to virtually every environment on Earth. The resulting diversity of phenotypes and cultures past and present is key to understanding how interactions with environments shape the economic, social, and cultural lives of hunter-gatherers, pastoralists and agriculturalists. This course surveys the range of human adaptations from an ecological and evolutionary perspective to understand human adaptive capacity and vulnerability to climate change. Same as: ANTHRO 261A

**ANTHRO 162. Indigenous Peoples and Environmental Problems. 3-5 Units.**

The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas. Same as: ANTHRO 262

**ANTHRO 163. Conservation and Evolutionary Ecology. 5 Units.**

Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy. Same as: ANTHRO 263

**ANTHRO 163A. Endangered Languages and Language Revitalization. 3-4 Units.**

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages. Same as: ANTHRO 263A, LINGUIST 163A, LINGUIST 263, NATIVEAM 163

**ANTHRO 164. Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes. 3-5 Units.**

This interdisciplinary course explores natural resource extraction from multiple conceptual perspectives. Logging and non-timber resource harvesting practices are examined through ecological dynamics of species and community life histories, natural and anthropogenic disturbance regimes and resilience and recovery to diverse perturbations through alternative stable states. Using a political ecology lens, we then examine historical and current policies and practices aimed to manage terrestrial resource use and extraction: maximum sustained yield, community-based forest management, certification systems, payment for ecosystem services and Reducing Emissions from Deforestation and Degradation (REDD). Through problem sets and lab/field exercises, we employ quantitative ecological measurements and experiments coupled with quantitative and qualitative methods and analyses used to assess socio-economic drivers and ecological impacts. Diverse benefits/costs imparted throughout the supply chain - from extraction to consumer - are explored across temporal and spatial scales with local to global agents. No Prerequisites: course or foundation in Ecology, Community Ecology, and/or Ecosystem Ecology strongly suggested.

Same as: ANTHRO 264

**ANTHRO 165. Parks and Peoples: The Benefits and Costs of Protected Area Conservation. 5 Units.**

Seminar. Emphasis is on the social impact of parks and reserves. Integrated conservation and development projects (ICDPs) based on protected areas; alternative ways to derive local social benefits from them. Cases include Yellowstone, Manu, Galápagos, Ngorongoro, and Guanacaste.

**ANTHRO 166. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.**

Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?.

Same as: ANTHRO 266

**ANTHRO 167A. A Wilderness Empire: The Political Ecology of California. 5 Units.**

This course traverses the historical and geographic space of California to explore the intersection of nature, economy and politics in the making of the contemporary American West. The course links popular historical accounts of the state to related core theoretical literature from anthropology, preparing students to use the analytic tools of anthropology to pursue questions about the people, processes and landscapes that are part of our taken for granted lived experience in California. The class draws theoretically from cultural anthropology, ecological anthropology, cultural and economic geography, and literature to develop a holistic understanding of the historical and social co-production of nature and economy in California and the American West.

**ANTHRO 167B. Networks in Anthropology. 5 Units.**

¿Social network¿ may now be a household term but network concepts long predate the internet age. In fact, networks are an important part of some of the earliest (and most enduring) theoretical ideas in anthropology and sociology. Starting from the premise that relationships between individuals provide the raw material for the emergence of social structure, this course focuses on how network analysis can be used to examine and explain both system-level patterning and outcomes for individuals. In addition to the theoretical foundations of social network analysis, students will learn basic techniques for collecting, analyzing, and visualizing network data, through workshops in class and hands-on assignments. We will also explore contemporary applications of network analysis in economic anthropology, kinship studies, human evolutionary studies, and epidemiology, among other topics. Prerequisite: None. Students will be expected to learn some mathematical concepts.

**ANTHRO 168. Everest: Extreme Anthropology. 3-5 Units.**

Using Mt. Everest as a touch point, this class will examine the anthropology of nature, specifically focusing on exploration and adventure travel.

**ANTHRO 168A. Risky Environments: The Nature of Disaster. 5 Units.**

This seminar explores topics including environmental movements and countercultures, human agency and geoengineering ecotourism, and indigenous perspectives of changing climates to query how humans view `nature¿ in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.

Same as: ANTHRO 268A

**ANTHRO 169. The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet. 3-5 Units.**

This course is an interdisciplinary approach to understanding human food consumption and nutrition, incorporating biological, evolutionary, ecological and social perspectives. Topics include a broad survey of primate diets and their physiological and behavioral correlates; fossil and archaeological evidence for early human diets; adaptations to dietary shifts since the Neolithic; infant and early child feeding practices and their role in shaping human social arrangements, metabolic syndrome, food security, food taboos; the origins of spices; cultural diversity in the social uses and meanings of food and the sharing of food; gathering, hunting and locavorism as high hipster cuisine. Emphasis is on understanding the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

Same as: ANTHRO 269

**ANTHRO 169A. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: CHILATST 168, CSRE 168, FEMGEN 140H

**ANTHRO 170. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.**

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 270, EARTHSYS 172

**ANTHRO 170A. Multispecies Ethnography: Human, Animal, Plant, Mineral, and Microbe. 5 Units.**

This course explores new modes of writing and researching in anthropology. Multispecies ethnography considers nonhuman life as objects of analysis—animals, plants, fungi, bacteria, and viruses—as having political lives and import. By studying how these nonhuman entities, including metals, interact with and shape human existence, multispecies ethnographers who study "life" from the human down to the microbe, must engage in multiple worlds: from the jungle to the laboratory, from the field to the desk. This course will incorporate readings on "zoe" and "bios", the making of species categories, relationships between the human and nonhuman, current debates on breaking with the species concept and "the rights of mother earth." We will read the conceptual works in conjunction with current multispecies ethnographies to give grounding to the theory.

Same as: ANTHRO 270A

**ANTHRO 171. The Biology and Evolution of Language. 4-5 Units.**

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 271, HUMBIO 145L

**ANTHRO 171A. Linguistic Field Methods. 5 Units.**

Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion, working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews and elicitation; diagnostic vocabulary lists and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.

**ANTHRO 172. Seminar on Cultural Evolution and Coevolution. 3-5 Units.**

Upper division/graduate seminar on recent approaches to the study of cultural evolution and coevolution. Critical evaluation of Darwinian and non-Darwinian theories, with special attention to the interplay of culture, genes, environment and society. Students will undertake projects of their own design to review, test, or improve current theoretical formulations. Prerequisite: a university-level course in evolution, ecology, or human behavioral biology.

Same as: ANTHRO 272

**ANTHRO 172B. Anthropology of Gender/Sexuality: Eco-Feminist Perspectives. 5 Units.**

This course takes an eco-feminist approach to anthropology, investigating the different meanings of "eco" in eco-nomy and eco-logy. The term, "eco", from the Greek, *oikos*, means "household," "house," or "family", laying the foundation for examining women's roles in changing forms of kinship, beyond and within the concept of the human.

Same as: ANTHRO 272B

**ANTHRO 174. Beginnings of Social Complexity. 5 Units.**

Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B).

Same as: ANTHRO 274

**ANTHRO 175. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 275, BIO 174, BIO 274, HUMBIO 180

**ANTHRO 176. Cultures, Minds, and Medicine. 1 Unit.**

This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.

Same as: ANTHRO 276

**ANTHRO 177. Environmental Change and Emerging Infectious Diseases. 4-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 277, EARTHSYS 114, EARTHSYS 214, HUMBIO 114

**ANTHRO 178. Evolution and Conservation in Galapagos. 5 Units.**

The contribution of research in the Galapagos Islands to our current understanding of evolution and conservation. Writings from Darwin to Dawkins, as they reveal patterns and processes of evolution including selection, adaptation, speciation, and coevolution. Current conservation strategies in the archipelago, and urgent measures needed today before unique species and adaptations are lost.

Same as: ANTHRO 278

**ANTHRO 178A. Culture, Narrative, and Medicine. 5 Units.**

This course examines the ways in which medicine is practiced in diverse cultural contexts with narrative skills of recognizing, interpreting and being moved by the stories of illness. It is an examination of the human experience of illness and healing through narratives as presented in literature, film, and storytelling. We explore how cultural resources enable and empower healing and how narrative medicine can guide the practice of culturally competent medical care.

**ANTHRO 179. Cultures of Disease: Cancer and HIV/AIDS. 5 Units.**

History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.

Same as: ENGLISH 179

**ANTHRO 179A. Health, Illness, and Healing in South Asia. 5 Units.**

This course has three related goals pertinent to medicine and healing in South Asia. The first is to understand the experiences of illness, and therapy in ordinary South Asian communities. How do social and economic inequality, religious commitments, available healing traditions, and community and family contexts shape the experience of illness and healing? The second goal is to think about South Asian medical systems using a broad historical perspective. How had biomedicine been used during the colonial period to manage the health of native populations? What is the legacy of this colonial history on current practices? What happens when South Asian medical traditions (such as Ayurveda) become global? Third, we will explore crucial health problems in South Asia from the perspective of medical anthropology. Possible topics for the third portion of the course include: child birth and maternal health, sex-selection technologies, malnutrition, metabolic diseases, the selling of organs, medical tourism, tuberculosis, HIV, suicide, and schizophrenia. Same as: ANTHRO 279A

**ANTHRO 179B. Culture of Disease: The Social History of Vaccines. 5 Units.**

This course will detail the history and develop of vaccines, specifically examining critical issues such as personal choice v. public health, the use of experimental subjects, population-wide medical trials, and the use of animal tissues in vaccine development.

**ANTHRO 18. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.**

Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.

Same as: ARCHLGY 12, EARTHSYS 21, HUMBIO 182

**ANTHRO 180. Science, Technology, and Gender. 3-5 Units.**

Why is engineering often seen as a masculine profession? What have women's experiences been in entering fields of science and technology? How has gender been defined by scientists? Issues: the struggles of women in science to negotiate misogyny and cultural expectation (marriage, children), reproductive issues (surrogate motherhood, visual representations of the fetus, fetal surgery, breast feeding, childbirth practices), how the household became a site of consumerism and technology, and the cultural issues at stake as women join the ranks of scientists.

**ANTHRO 180A. Sex and Power. 5 Units.**

From hook-up culture to pornography and sex work and even Beyoncé's latest album, "Lemonade," our struggles with consent, betrayal, and violence evince collective confusions about the relationship between sex and power in our societies. A quick Google search for news articles on the topic reveals that we must communally brace ourselves, usually through a Public Service Announcement pun, Let's Talk About Sex, and then a warning, Talking about sex can be hard. Cultural and social analyses can help us un-brace ourselves and get closer to meaningfully, and respectfully, talking about how cultural difference and social hierarchies fuel, and our fueled by, ideologies about sex and sexuality. This course examines sex as a nexus of socio-cultural, economic, and political relations of power for individuals and groups across local and global and national and transnational boundaries. And because a lot of the difficulties in talking about sex entail difficulties about seeing sex, this class relies on visual culture and documentary filmmaking alongside ethnographies and theoretical scholarship.

Same as: FEMGEN 180A

**ANTHRO 181A. Gender in the Middle East: Iran, Turkey, and Egypt. 4 Units.**

This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women's status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women's and men's lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.

Same as: FEMGEN 181A

**ANTHRO 182. An Anthropology of Annihilation: Tobacco at the Turn of the Millennium. 3-5 Units.**

The cigarette as the world's greatest weapon of mass destruction: 100 million dead worldwide from cigarettes during the 20th century, one billion expected to die in the 21st century. How to understand this toll, its production, management, politicization, and depoliticization? What can anthropological and allied perspectives disclose? How does the catastrophe challenge key precepts within anthropology and other branches of the academy?.

**ANTHRO 182A. Down and Out: Marginal Lives and Institutional Technologies. 5 Units.**

This course examines the neglect and management of socially marginalized persons including the mentally ill, youth runaways, child wards of the state, drug addicts and prisoners. In this course, we will approach the concept of marginality by investigating the spaces and institutions of decay, neglect and rehabilitation to which unwanted and indigent individuals are relegated. Readings are focused on qualitative research conducted within institutions of health, welfare, and reform. There will be two comparative public mental health sections in this course: one focused on South Asia and the second on Africa. This course is relevant for students interested in medical anthropology, applied anthropology, public health policy, or clinical careers in medicine, psychology, or social work.

Same as: ANTHRO 282A

**ANTHRO 182N. Smoke and Mirrors in Global Health. 3 Units.**

A few years ago, health experts began calling out tobacco as engendering a global health crisis, categorizing the cigarette as the world's greatest weapon of mass destruction. A "global health crisis"? What merits that title if not tobacco use? A hundred million people were killed by tobacco in the 20th century, and ten times that number a billion people are predicted to die prematurely from exposure to cigarette smoke over the next hundred years. How has tobacco come to be labeled a global health crisis over the last decade and what has been the political response? From whence does activism and ongoing complacency regarding tobacco arise? How are they created in different cultural contexts? This course aims to provide students conceptual tools to tackle two specific thought projects: (1) to understand how institutional actors compete to define a situation in the world today as a problem of global health, and (2) to understand the sociocultural means by which something highly dangerous to health such as the cigarette is made both politically contentious and inert. On both fronts, special attention will be given to the ways global health activism and complacency unfold in the U.S. and China.

**ANTHRO 183B. Human Mobility and Adaptability. 5 Units.**

Mobility, whether in the form of seasonal or permanent migration, is an ancient practice necessary for many subsistence strategies, including hunting-and-gathering and pastoralism. Many new forms of mobility have emerged and now it is nearly impossible to consider a patch of human society that is not engaged in or directly impacted by habitual, patterned geographic mobility. Today, almost everywhere in the world, people can get farther, faster; urbanization, environmental degradation, and civil unrest are driving groups of people who do not have a cultural tradition of nomadic migration to adopt a mobile lifestyle; sometimes permanently, sometimes temporarily, in search of new economic or resource opportunities. In this seminar course, we will explore modern patterns of human mobility and migration as adaptive strategies for predictably and unpredictably changing environments. Using a framework of biological and cultural adaptation, we will discuss the major types of current human mobility (e.g. nomadism, immigration, migrant labor, displacement) and how they influence and are influenced by social systems, resource access, and health.

Same as: ANTHRO 283B

**ANTHRO 184. Spirituality and Healing. 3-5 Units.**

The puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have common features around the world? Shamanism, spirit possession, prayer, and the role of placebos in modern biomedicine. Students do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.

**ANTHRO 185. Medical Anthropology of Contemporary Africa. 5 Units.**

In this course we will examine the place of Africa in global health discourses while reading in-depth histories and ethnographies of the varied causes and consequences of some of the most difficult problems facing African countries today. We will study the effects of colonialism and conflict on health, explore the military and humanitarian connections in the fight against HIV/AIDS, weigh the risks and benefits of population genetic studies on African populations, examine biomedical interventions on, and erasures of, local health problems, and query the role of violence, memory, insecurity, and power in daily life on the continent.

Same as: ANTHRO 285

**ANTHRO 185A. Race and Biomedicine. 3-5 Units.**

Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.

Same as: ASNAMST 185A

**ANTHRO 186. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.**

Unusual mental phenomena have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? Optional: The course will be taught in conjunction with an optional two-unit discussion section or engaged learning component.

Same as: ANTHRO 286, HUMBIO 146, PSYC 286

**ANTHRO 186N. The Most Rational People in the World. 4 Units.**

Humans, broadly construed, emerged as bipedal apes in the African mixed savanna-woodlands approximately two million years ago. From humble beginnings, humans have gone on to become the ecologically dominant species in most biomes and grown to a global population in excess of seven billion. This dominance arises from a combination of features of the human organism including its extreme degree of behavioral flexibility and flexible social organization. The prima facie evidence of human evolutionary and ecological success raises a paradox with respect to recent work in economics and psychology which increasingly argues for pervasive irrationality in human decision-making in a wide array of behavioral contexts. How is it possible for an organism with such seemingly flawed software supporting decision-making to become the globally dominant species? We will use this contradiction as the launching point for understanding what rationality means in a broad ecological and cross-cultural context. What do we mean by "rationality"? How do different disciplines conceive of rationality in different ways? Is there such a thing as a rationality that transcends cultural differences or is the very idea of rationality a cultural construction that is used to justify imperialism and other modes of paternalism? Are there systematic factors that promote or impede rational decision-making? The seminar will provide a gentle introduction to the formal approaches of decision theory which we will apply to an unusual array of topics centered on the subsistence and reproductive decisions of hunter-gatherers, horticulturalists, pastoralists, and agrarian peasants, in short, people living in face-to-face, subsistence societies. In addition to doing reading from a broad array of social and natural science disciplines around the topic of rationality, students will regularly engage in exercises to assess their own approaches to decision-making.

**ANTHRO 187. Nuclear Cultures. 5 Units.**

This course examines the new cultural forms that arose out of the use of nuclear technology. Subjects covered will include: The Manhattan Project, nuclear activism, nuclear experimentation in medicine, pre-nuclear history, nuclear energy, and nuclear waste and trade.

**ANTHRO 187A. The Anthropology of Race, Nature, and Animality. 5 Units.**

As recently as the 40s, the S. Africa government labeled indigenous San people part of the animal landscape. Using the San example as a starting point, course examines socially, culturally, and politically constructed ideas about race, animality, and nature in the cultural and geographic settings of N. America, Australia, and Africa. How connections between race and nature have served as terrains of power through which people and governments have claimed territories and justified violence. Classic texts by nature writers and philosophers and current social science works that focus on race and ethnicity. Concepts such as gender, sex, and nature; environmental tourism; natural resource development; and indigeneity and animality. How ideas about race and nature have come together around concepts such as the myth of wilderness and the violence of considering certain people to be less-than-human. Issues of environmental politics and activism.

Same as: CSRE 187A

**ANTHRO 193. Anthropology Capstone: Contemporary Debates in Anthropology. 5 Units.**

Do you know what an anthropological perspective is? Can you describe some of the key assumptions and questions within the discipline? A major in Anthropology is composed of many specialized courses in different tracks, different emphases and seemingly a never-ending multiplication of perspectives and ethnographies. However, Anthropology is also an ongoing intellectual conversation with foundational questions, some of longstanding and some new. These foundational questions have stimulated different responses and answers and thus have also led to constant renewal of the discipline in the midst of profound disagreement. In this Anthropology Capstone course students across tracks and emphases will address some of the critical debates that have been central to the discipline as it has developed. We will feature three debate questions in the class. Preparation for each debate will be through class discussion of critical readings as well as extra-mural reading and preparation with one's debating partners.

**ANTHRO 199. Senior and Master's Paper Writing Workshop. 1-2 Unit.**

Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299.

Same as: ANTHRO 299

**ANTHRO 19Q. Hauntings, Visions, and Prophecy. 1-3 Unit.**

Preference to sophomores. Why do people see ghosts? Why do people believe that stars foretell the future? When do people see demons and angels? Focus is on the conditions under which people experience themselves as having sensory evidence of supernatural phenomena and the role of training and expectation in the process. Intellectual exploration of what is known from the ethnographic, historical, and psychological record. Practical experimental projects involve attempting to induce positive supernatural experience. Prerequisite: consent of instructor.

**ANTHRO 1S. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 101S

**ANTHRO 200B. Lifeways of the Ancient Maya. 5 Units.**

This course engages with the world of the pre- and post-contact Maya people through scholarship that explores the material culture of daily life. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, and how interpretations of daily life in the ancient Maya world are formulated. We consider how perceptions of the ancient Maya are marshaled in contemporary politics and policies. The course is designed to provide a broad overview of sites and materials in the Maya area, focusing on the dynamic interplay between the material and the social. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 100B

**ANTHRO 201. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 1

**ANTHRO 201B. Archaeology of Technology. 5 Units.**

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ARCHLGY 100, ARCHLGY 200

**ANTHRO 202A. Ancient Civilizations: Complexity and Collapse. 3-5 Units.**

How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B).

Same as: ANTHRO 102A

**ANTHRO 203A. Human Osteoarchaeology. 5 Units.**

The course will cover the methodological and theoretical backgrounds to human osteoarchaeology, introduce the student to the chemical and physical characteristics of bone, and to the functional morphology of the human skeleton. Classes will consist of a taught component that outlines how osteoarchaeologists reconstruct individual life-histories based on age, sex etc.; this is combined with hands-on identification of different skeletal elements and the markers used to inform the analytical methods. Additional scientific methodologies are also introduced that increasingly form a major component of human osteoarchaeology.

Same as: ANTHRO 103A

**ANTHRO 204. Language and Culture. 4-5 Units.**

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language).

Same as: ANTHRO 4

**ANTHRO 205. Ancient Cities in the New World. 3-5 Units.**

Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.

Same as: ANTHRO 105

**ANTHRO 205A. Archaeological Fieldwork: Critical Analysis and Practical Application. 2-3 Units.**

This introduction to archaeological fieldwork involves both field and seminar components, each component meeting once per week. During the field sessions, we will investigate an archaeological site on campus using methods of survey, mapping, testing, and excavation (digging, recording units/features, profile illustration). In seminar, we will critically examine archaeological fieldwork through reading, writing, and discussion, exploring topics such as history of archaeological excavation, production of archaeological knowledge, disjunction between theory and practice, reflexive methodologies, ethics, collaboration, and specialization. No experience necessary, but students with fieldwork experience are welcome.

Same as: ANTHRO 105A

**ANTHRO 206. Human Origins. 5 Units.**

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 6, HUMBIO 6

**ANTHRO 206A. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.**

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 106, ARCHLGY 102B

**ANTHRO 209A. Archaeology of the Modern World. 3-5 Units.**

Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centuries. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the  $\zeta$ three Cs $\zeta$ : colonization, captivity, and capitalism  $\zeta$  forces which arguably are constitutive of the modern world; and (3) an epistemological priority to recovering the perspectives of  $\zeta$ people without history. $\zeta$  Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.

Same as: ANTHRO 109A, ARCHLGY 109A

**ANTHRO 210. Environmental Archaeology. 5 Units.**

This course investigates the field of environmental archaeology. Its goals are twofold: 1) to critically consider the intellectual histories of environmental archaeology, and, 2) to survey the various techniques and methods by which archaeologists assess historical environmental conditions through material proxies. The course will include lab activities.

Same as: ANTHRO 110, ARCHLGY 110

**ANTHRO 210A. Neandertals and Modern Humans: Origin, Evolution, Interactions. 3 Units.**

The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why *Homo sapiens* has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleanthropology and the most recent methodological advances in the field.

Same as: ANTHRO 110A

**ANTHRO 210B. Examining Ethnographies. 5 Units.**

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

Same as: ANTHRO 110B

**ANTHRO 211A. Archaeology of the Andes of Argentina. 3-5 Units.**

The aim of this course is to provide a panorama of the archaeology of the andean region of Argentina, along some main topics of past and current researches. North andean Argentina has been considered for a long time as subordinated to the major developments in the central Andes and Puna, as if it were in a marginal position that mirrored their history. More than a hundred years of research in the area have produced different insights, which put that affirmation in relative terms. The course will give an overview of major historical contributions and contemporary trends in the archaeological thinking in relation to themes such as time, the space, people, things and nature. An overview of the conceptions and construction of time. Space seen as cultural area; natural environment and built landscape; archaeological areas as national territory. Historical conceptions of people; bodies; social inequality; the past and present others in the archaeological research. Artefacts, classifications and typologies; material archaeological contexts as cultural units; from artefacts to things; past ontologies. Nature and environment; domestication; ecological approaches; agropastoralism; nature/culture. It is expected that by the end of the course students will gain a panorama of the major problems of the archaeology of andean Argentina with historically and theoretically informed perspectives.

Same as: ANTHRO 111A

**ANTHRO 212. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.**

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 112, ASNAMST 112

**ANTHRO 213. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.**

The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.

Same as: ANTHRO 113

**ANTHRO 213B. Religious Practices in Archaeological Cultures. 5 Units.**

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) "religion is not something people think about, but something people do." Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 113B, ARCHLGY 113B

**ANTHRO 214. Prehistoric Stone Tools: Technology and Analysis. 5 Units.**

Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

Same as: ANTHRO 114, ARCHLGY 114

**ANTHRO 214A. Introduction to South Asian Archaeology. 5 Units.**

This seminar will survey the archaeology of South Asia, beginning with animal and plant domestication in the early Holocene and ending with the late Medieval Period. Given its chronological breadth and spatial scope, the class will interrogate a variety of social and historical contexts that contribute to a broad range of anthropological research concerns, including the intersections of authority, ritual, alterity and landscape, and at the same time critically consider the epistemological bases for their analyses through archaeological remains.

Same as: ANTHRO 114A, ARCHLGY 114A

**ANTHRO 214B. Landscape Archaeology and Global Information Systematics. 3-5 Units.**

This course is meant to lay groundwork for analysis of archaeological landscapes using the methods of GIS. Throughout, we consider the various understandings of landscape, from the biographical to the biological. The course explores the history of various typologies of landscape, incorporating the cultural, the topographical, the ecological, and the topological; reviews different types of landscape data and analysis, including aerial imagery, stratigraphic excavations, and specialized analyses; addresses how to integrate different sorts of data sets and carry out analytical assessment of interrelated "layers" as dynamic constituents of landscape; considers implications of landscape studies in modern policy and management. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 114B

**ANTHRO 215. The Social life of Human Bones. 3-5 Units.**

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with exhumation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 115, ARCHLGY 115

**ANTHRO 215B. Peoples and Cultures of Ancient Mesoamerica. 5 Units.**

This course engages with the world of ancient Mesoamerica, focusing on the Mixtec, Aztec, Maya, Zapotec, Chichimec, Olmec, and Teotihuacan peoples. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, how interpretations of daily life in the ancient Mesoamerican world are formulated, and how these interpretations are marshaled in contemporary politics and policies. We explore different scales of Mesoamerican communities, and compare the diverse material culture and lifeways represented in Mesoamerica at different time periods. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 115B

**ANTHRO 216. Data Analysis for Quantitative Research. 5 Units.**

An introduction to numeric methods in Anthropology and related fields employing the Data Desk statistics package to test hypotheses and to explore data. Examples chosen from the instructor's research and other relevant projects. No statistical background is necessary, but a working knowledge of algebra is important. Topics covered include: Frequency Distributions; Measures of Central Tendency, Dispersion, and Variability; Probability and Probability Distributions; Statistical Inference, Comparisons of Sample Means and Standard Deviations; Analysis of Variance; Contingency Tables, Comparisons of Frequencies; Correlation and Regression; Principal Components Analysis; Discriminant Analysis; and Cluster Analysis. Grading based on take-home problem sets.

Same as: ANTHRO 116

**ANTHRO 216B. Anthropology of the Environment. 5 Units.**

This seminar interrogates the history of anthropology's approach to the environment, beginning with early functionalist, structuralist, and Marxist accounts of human-environment relationships. It builds towards more recent developments in the field, focusing on nonhuman and relational ontologies as well as current projects on the intersections of nature, capital, politics, and landscape histories. At the end of this class, students will be familiar with the intellectual histories of environmental anthropology and contemporary debates and tensions around questions of ethics, agency, environment, and historical causality.

Same as: ANTHRO 116B

**ANTHRO 217. Thinking Through Animals. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of "animals as social actors" is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognised as a viable mechanism for understanding our cultural and economic past. The module presents an overview covering a broad timespan from the Pleistocene to the modern day. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 117

**ANTHRO 217A. Stuff. 5 Units.**

Never before have humans been engulfed by so much stuff. Stuff is needed to survive giving us the basics of food, clothing, and shelter. But stuff does so much more. Smart phones rule our social interactions. Louis Vuitton handbags display status. Air conditioning masters nature. Picassos inspire beauty. Wedding bands promise eternal love. Crosses connect believers to God. Is stuff really who we are? This seminar explores the science of stuff, past, present and future, investigating deeply-held beliefs about the meaning, value, and purpose of objects. Because our stuff has become such a popular obsession, this course embraces the eclectic intersection of popular and academic knowledge. Students will seek to answer the complex whys of our relationship with objects and understand our future human condition made by the material world.

Same as: ANTHRO 117A, ARCHLGY 117A

**ANTHRO 217B. Monuments and Landscapes: An Archaeological Perspective. 3-5 Units.**

The landscape is a result of the action and interaction of human and natural factors. Communities have altered their landscapes for a variety of reasons, including the subsistence practices; as a consequence of economic growth; to express a social ideology, and as a consequence of political and religious drivers. Accordingly, landscapes enable physical and provide psychological sustenance to people, and the human need to relate to our surroundings is part of the way in which identities are created and disputed. Within the humanities, landscape is being conceptualized as a process, a practice and as performance, and monuments within a given landscape have an equally important role, not to mention history. They are often the most durable and well-known evidence of the ancient civilizations, and should be observed jointly with the landscape. How did the landscape predefine the monument and how did the monument complement, emphasize or devalue the landscape? What philosophy channeled the construction of the monuments within the landscapes? Whether ephemeral or permanent, the human agency left traces in the landscape; thus, both monuments and landscapes are the key indicators for understanding the ideology of a particular culture. Archaeology, through its interdisciplinary nature, provides a unique perspective, as well as tools, for examining the formation processes of all man-made elements, within both natural and cultural landscapes. The course will address the multifaceted issues of the ways that people have consciously and unconsciously shaped the land around them through time. It will look into diverse, geographically and periodically influenced concepts of a monument and landscape. The course will be divided into two parts, with the first one covering the theory and methodological approaches and the second part the conceptual characteristics, modifications and changeability in various archaeological and historical periods and cultural frameworks.

Same as: ANTHRO 117B, ARCHLGY 117B

**ANTHRO 219. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.**

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the hands-on component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 119, ARCHLGY 119

**ANTHRO 21N. The Anthropology of Globalization. 4 Units.**

Preference to freshmen. Anthropological approach to how cultural change, economic restructuring, and political mobilization are bound up together in the process of globalization.

**ANTHRO 22. Archaeology of North America. 3-5 Units.**

Why and how people of N. America developed. Issues and processes that dominate or shape developments during particular periods considering the effects of history and interactions with physical and social environment. Topics include the peopling of the New World, explaining subsequent diversity in substance and settlement adaptations, the development of social complexity, and the impact of European contact.

**ANTHRO 221. Language and Prehistory. 4-5 Units.**

Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III).

Same as: ANTHRO 121

**ANTHRO 222A. Race and Culture in Mexico and Central America. 3-5 Units.**

This course addresses the role of racial ideologies in the historical configuration of multiple hierarchies of inequality that determine the place of everyone in society in Mexico and Central America. Based on readings from the humanities and social sciences, we will discuss the cultural and racial politics of authoritarianism and indigenous insurgency, emphasizing narratives of laziness and vagrancy that have been central to the discipline of labor that shapes local processes of regressive modernization and nation building. We will analyze the hegemony of dictatorship as political necessity, the relationship between local racisms and global Whiteness, and the emergence of new local and transnational contestations to the multiple hierarchies that determine the place of everyone in society.

Same as: ANTHRO 122A

**ANTHRO 222C. Research in Maya Hieroglyphic Writing. 1-2 Unit.**

Workshop. Current issues in the decipherment and analysis of Maya hieroglyphic writing and literacy.

Same as: ANTHRO 122C

**ANTHRO 223A. Debating Repatriation. 5 Units.**

The debates over the return of cultural property have raged for centuries. At stake are key questions about the rights of Indigenous peoples, intellectual freedom, nationalism, globalization, heritage management, the meaning of history, and the purpose of museums in the world. This seminar examines these vital discussions that intersect law and morality, science and religion, culture and politics. Discussions will be informed by cross-cultural, legal, ethical perspectives, exploring both the philosophical and practical implications of the repatriation debates. This course will provide students with a nuanced historical viewpoint of museum collections, heritage policies, and legal dimensions that underpin contests over cultural property.

Same as: ANTHRO 123A, ARCHLGY 123A

**ANTHRO 225. Language and the Environment. 3 Units.**

Lecture course on vocabulary and grammar as keys to peoples' understanding and use of the environment. Ethnobotany, ethnobiology, and ethnosemantics in the analysis of the language of place, plants and animals, the earth, the body, and disease. Terminological gaps and gluts and what they imply. Language as a strategic resource in environmental management. Language contact and conflict in the modern global environment, with particular attention to the vocabularies of capitalism and property. Language extinction and its environmental implications. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 125

**ANTHRO 226A. Politics of the Past. 5 Units.**

The past is never dead, William Faulkner once wrote. It's not even past. This seminar explores the contested meanings of history in the political present. It particularly focuses on how archaeological work and heritage becomes entangled in larger questions of identity, belonging, belief, economics, and the stories we tell about ourselves. Students will gain an expansive and in-depth perspective on why humans so value what has come before us, and why making meaning from the past is a process suffused with power.

Same as: ANTHRO 126A, ARCHLGY 126A

**ANTHRO 22N. Ethnographies of North America: An Introduction to Cultural and Social Anthropology. 3-4 Units.**

Preference to freshmen. Ethnographic look at human behavior, including cultural transmission, social organization, sex and gender, culture change, and related topics in N. America. Films.

**ANTHRO 230B. Introduction to GIS in Anthropology. 5 Units.**

How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

Same as: ANTHRO 130B

**ANTHRO 230D. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 130D, POLISCI 241S, URBANST 124

**ANTHRO 234. Object Lessons. 5 Units.**

Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

Same as: ANTHRO 134

**ANTHRO 235. Cultural Studies. 5 Units.**

Identity, community, and culture; their interactions and formation.

Same as: ANTHRO 135

**ANTHRO 236. The Anthropology of Global Supply Chains. 5 Units.**

This upper-division undergraduate seminar focuses on recent studies by anthropologists and scholars in related disciplines on global supply chains and consumption practices. The goal of the course is to assess concepts and methods for integrating a cultural analysis of transnational production with a cultural analysis of transnational consumption. We will review ethnographic studies of the production and consumption of commodities linked by transnational and global networks. The class will then pursue collaborative research on the global production, distribution, and consumption of a selected commodity. Prerequisite: junior or senior standing and previous coursework in cultural anthropology or permission of instructor.

Same as: ANTHRO 136

**ANTHRO 237. The Politics of Humanitarianism. 5 Units.**

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the "cause of humanity". In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid – be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south ("the Third World"), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

Same as: ANTHRO 137

**ANTHRO 238. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.**

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 138, CSRE 138

**ANTHRO 238A. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice structured around international military intervention and criminal trials based on international criminal courts will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, AFRICAST 238, ANTHRO 138A

**ANTHRO 239. Ethnography of Africa. 5 Units.**

The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

Same as: ANTHRO 139

**ANTHRO 244B. The Buddhist Body in East Asia: Charisma, Gender, and the Gift of the Body. 5 Units.**

This course introduces Buddhist practices and texts of embodiment as a subject of the anthropology of the body. We draw on research in social/cultural anthropology, history, and religious studies, and examine a selection of approaches to the Buddhist body: the body of power in Buddhist charisma, the gender of the bodhisattvas and monastic body, the techniques of the body in meditation and martial arts, healing and cultivation, and the gift of the body in bioethics and medical education. We draw on examples in different traditions of Buddhism in a range of societies with a special focus on Chinese Buddhism.

Same as: ANTHRO 144B

**ANTHRO 245. Race and Power. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 145, CSRE 145F

**ANTHRO 247. Nature, Culture, Heritage. 5 Units.**

Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

Same as: ANTHRO 147

**ANTHRO 247B. World Heritage in Global Conflict. 5 Units.**

Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found its own history increasingly entwined with that of international politics and violence.

Same as: ANTHRO 147B, ARCHLGY 147B

**ANTHRO 248. Health, Politics, and Culture of Modern China. 4-5 Units.**

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

Same as: ANTHRO 148, CHINA 155A, CHINA 255A

**ANTHRO 249. South Asia: History, People, Politics. 5 Units.**

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences.

Same as: ANTHRO 149

**ANTHRO 251A. Contemporary Chinese Society Through Independent Documentary Film. 3-5 Units.**

An overview of social issues in contemporary China as seen through its emerging independent documentary film movement. Topics covered include representations of history, political power and accountability in the reform era, human rights, urbanization, the environment, homelessness and inequality, sexualities, addiction, and the role of media in society. Each viewing is accompanied by readings in media theory or the anthropological/sociological study of contemporary China. Can be taken with or without research component. Films include English subtitles.

Same as: ANTHRO 151A

**ANTHRO 253A. Population and social trends in Japan. 3-5 Units.**

Anthropological theories and concepts as applied to Japan. Postwar demographic trends. Delayed marriage. Declining nuclear family. Restructuring of education and workplace. Problems for the seniors. Foreign laborers shaking fundamentals of Japan.

Same as: ANTHRO 153A

**ANTHRO 254B. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.**

This course examines the significant role drugs play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 154, CSRE 154

**ANTHRO 255. Research Methods in Ecological Anthropology. 5 Units.**

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

Same as: ANTHRO 155

**ANTHRO 256. Japanese Anthropology. 5 Units.**

This is an advanced reading seminar in the field of Japanese Anthropology. It will explore the historical development of the field and the contemporary issues and topics taken up by scholars of Japanese anthropology. Prior knowledge of Japanese language, history, and society is required.

Same as: ANTHRO 156

**ANTHRO 259C. Ecological Humanities. 3 Units.**

What sort of topics, research questions, approaches, theories and concepts lead to an integration of various kinds of knowledges? Ecological Humanities provides a conceptual platform for a merger of humanities and social sciences with earth and life sciences, soil science and forensic sciences. The course will discuss such selected topics as the Anthropocene, geologic/mineral and exhumed subjects/personae, bio- and geosocial collectives, symbiotic life-forms, non-human agencies, and forensic landscapes as examples of this merger.  
Same as: ANTHRO 159C, DLCL 259C, REES 259C

**ANTHRO 260. Social and Environmental Sustainability: The Costa Rican Case. 3-5 Units.**

Seminar focused on issues of tropical sustainability with a particular emphasis on the Osa Peninsula of Costa Rica. Offered in conjunction with the Osa Initiative in the Wood¿s Institute for the Environment, the course highlights issues of human development in the tropics, through such means as agricultural development, ecotourism, conservation efforts, private and indigenous reserves, and mining. The course will draw from diverse disciplines including anthropology, rural sociology, conservation biology, geosciences, history, political science, and journalism. In addition to weekly discussions, students will develop a research paper throughout the term which will be presented to a panel of selected Wood¿s Faculty during the final week of the term.  
Same as: ANTHRO 160

**ANTHRO 260A. Tragedy of the Commons: Human Ecology of Communal Resources. 5 Units.**

The ¿tragedy of the commons¿ is a classic social dilemma ¿ a situation in which individual interests conflict with collective ones ¿ and key to understanding past, present and future environmental degradation. This course surveys a variety of scientific perspectives on the essence of the tragedy: common property resources will ultimately be destroyed by overexploitation. Major themes include the effects of human population density and social organization on the health and management of commons, self-interest versus collective action, and potential solutions to commons problems. Modern and prehistoric case studies are examined from ecological and evolutionary perspectives.  
Same as: ANTHRO 160A

**ANTHRO 261A. Human Ecology: Adaptations to Climate and Climate Change. 5 Units.**

Humans face essentially the same adaptive challenges as all organisms but are unique for having successfully adapted to virtually every environment on Earth. The resulting diversity of phenotypes and cultures¿past and present¿is key to understanding how interactions with environments shape the economic, social, and cultural lives of hunter-gatherers, pastoralists and agriculturalists. This course surveys the range of human adaptations from an ecological and evolutionary perspective to understand human adaptive capacity and vulnerability to climate change.  
Same as: ANTHRO 161A

**ANTHRO 262. Indigenous Peoples and Environmental Problems. 3-5 Units.**

The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas.  
Same as: ANTHRO 162

**ANTHRO 263. Conservation and Evolutionary Ecology. 5 Units.**

Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy.  
Same as: ANTHRO 163

**ANTHRO 263A. Endangered Languages and Language Revitalization. 3-4 Units.**

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages.  
Same as: ANTHRO 163A, LINGUIST 163A, LINGUIST 263, NATIVEAM 163

**ANTHRO 264. Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes. 3-5 Units.**

This interdisciplinary course explores natural resource extraction from multiple conceptual perspectives. Logging and non-timber resource harvesting practices are examined through ecological dynamics of species and community life histories, natural and anthropogenic disturbance regimes and resilience and recovery to diverse perturbations through alternative stable states. Using a political ecology lens, we then examine historical and current policies and practices aimed to manage terrestrial resource use and extraction: maximum sustained yield, community-based forest management, certification systems, payment for ecosystem services and Reducing Emissions from Deforestation and Degradation (REDD). Through problem sets and lab/field exercises, we employ quantitative ecological measurements and experiments coupled with quantitative and qualitative methods and analyses used to assess socio-economic drivers and ecological impacts. Diverse benefits/costs imparted throughout the supply chain - from extraction to consumer ¿ are explored across temporal and spatial scales with local to global agents. No Prerequisites: course or foundation in Ecology, Community Ecology, and/or Ecosystem Ecology strongly suggested.  
Same as: ANTHRO 164

**ANTHRO 266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.**

Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?  
Same as: ANTHRO 166

**ANTHRO 268A. Risky Environments: The Nature of Disaster. 5 Units.**

This seminar explores topics including environmental movements and countercultures, human agency and geoenvironmental ecotourism, and indigenous perspectives of changing climates to query how humans view `nature¿ in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.  
Same as: ANTHRO 168A

**ANTHRO 269. The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet. 3-5 Units.**

This course is an interdisciplinary approach to understanding human food consumption and nutrition, incorporating biological, evolutionary, ecological and social perspectives. Topics include a broad survey of primate diets and their physiological and behavioral correlates; fossil and archaeological evidence for early human diets; adaptations to dietary shifts since the Neolithic; infant and early child feeding practices and their role in shaping human social arrangements, metabolic syndrome, food security, food taboos; the origins of spices; cultural diversity in the social uses and meanings of food and the sharing of food; gathering, hunting and locavorism as high hipster cuisine. Emphasis is on understanding the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

Same as: ANTHRO 169

**ANTHRO 26N. God and the Supernatural. 3-5 Units.**

This course explores the conditions under which people have experiences that they identify as "supernatural": experiences of something that is not physically present. We will explore the cultural and psychological dimensions of this very real phenomenon. We will not, however, make ontological judgments about whether something which is experienced as externally present is in fact externally present: in other words, this is a class about culture and psychology, not about metaphysics. We will do experimental work, using our selves and fellow classmates, as subjects, to understand who, when and how people have experiences that they deem "supernatural."

**ANTHRO 270. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.**

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 170, EARTHSYS 172

**ANTHRO 270A. Multispecies Ethnography: Human, Animal, Plant, Mineral, and Microbe. 5 Units.**

This course explores new modes of writing and researching in anthropology. Multispecies ethnography considers nonhuman life as objects of analysis—animals, plants, fungi, bacteria, and viruses—as having political lives and import. By studying how these nonhuman entities, including metals, interact with and shape human existence, multispecies ethnographers who study life from the human down to the microbe, must engage in multiple worlds: from the jungle to the laboratory, from the field to the desk. This course will incorporate readings on zoe and bios, the making of species categories, relationships between the human and nonhuman, current debates on breaking with the species concept and the rights of mother earth. We will read the conceptual works in conjunction with current multispecies ethnographies to give grounding to the theory.

Same as: ANTHRO 170A

**ANTHRO 271. The Biology and Evolution of Language. 4-5 Units.**

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 171, HUMBIO 145L

**ANTHRO 272. Seminar on Cultural Evolution and Coevolution. 3-5 Units.**

Upper division/graduate seminar on recent approaches to the study of cultural evolution and coevolution. Critical evaluation of Darwinian and non-Darwinian theories, with special attention to the interplay of culture, genes, environment and society. Students will undertake projects of their own design to review, test, or improve current theoretical formulations. Prerequisite: a university-level course in evolution, ecology, or human behavioral biology.

Same as: ANTHRO 172

**ANTHRO 272B. Anthropology of Gender/Sexuality: Eco-Feminist Perspectives. 5 Units.**

This course takes an eco-feminist approach to anthropology, investigating the different meanings of eco in eco-nomy and eco-logy. The term, *oikos*, from the Greek, *oikos*, means household, house, or family, laying the foundation for examining women's roles in changing forms of kinship, beyond and within the concept of the human.

Same as: ANTHRO 172B

**ANTHRO 274. Beginnings of Social Complexity. 5 Units.**

Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B).

Same as: ANTHRO 174

**ANTHRO 275. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, BIO 174, BIO 274, HUMBIO 180

**ANTHRO 276. Cultures, Minds, and Medicine. 1 Unit.**

This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.

Same as: ANTHRO 176

**ANTHRO 277. Environmental Change and Emerging Infectious Diseases. 4-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, EARTHSYS 114, EARTHSYS 214, HUMBIO 114

**ANTHRO 278. Evolution and Conservation in Galapagos. 5 Units.**

The contribution of research in the Galapagos Islands to our current understanding of evolution and conservation. Writings from Darwin to Dawkins, as they reveal patterns and processes of evolution including selection, adaptation, speciation, and coevolution. Current conservation strategies in the archipelago, and urgent measures needed today before unique species and adaptations are lost.

Same as: ANTHRO 178

**ANTHRO 279A. Health, Illness, and Healing in South Asia. 5 Units.**

This course has three related goals pertinent to medicine and healing in South Asia. The first is to understand the experiences of illness, and therapy in ordinary South Asian communities. How do social and economic inequality, religious commitments, available healing traditions, and community and family contexts shape the experience of illness and healing? The second goal is to think about South Asian medical systems using a broad historical perspective. How had biomedicine been used during the colonial period to manage the health of native populations? What is the legacy of this colonial history on current practices? What happens when South Asian medical traditions (such as Ayurveda) become global? Third, we will explore crucial health problems in South Asia from the perspective of medical anthropology. Possible topics for the third portion of the course include: child birth and maternal health, sex-selection technologies, malnutrition, metabolic diseases, the selling of organs, medical tourism, tuberculosis, HIV, suicide, and schizophrenia. Same as: ANTHRO 179A

**ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives. 3-5 Units.**

Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic allegiance, and, why struggles over ethnic identity are so frequently violent. Our questions will be both historical ¿ how, why and when did people come to think of themselves as possessing different ethnic identities - and contemporary ¿ how are these identities lived, understood, narrated, and transformed and what is the consequence of such ethnicisation. We follow this through anthropological perspectives which ask persistently how people themselves locally narrate and act upon their experiences and histories. Through this we will approach some of the really big and yet everyday questions that many of us around the world face: how do we relate to ourselves and to those we define as others; and how do we live through and after profound violence? The seminar will take these larger questions through a global perspective focusing on cases from Rwanda and Burundi, India, Sri Lanka, Northern Ireland, Guatemala, and the countries of Former Yugoslavia among others. These cases cover a broad canvas of issues from questions of historicity, racial purity, cultural holism, and relations to the state, to contests over religious community, indigeneity, minority identities, globalization, gender, and generation.

**ANTHRO 282. Medical Anthropology. 4 Units.**

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 82, HUMBIO 176A

**ANTHRO 282A. Down and Out: Marginal Lives and Institutional Technologies. 5 Units.**

This course examines the neglect and management of socially marginalized persons including the mentally ill, youth runaways, child wards of the state, drug addicts and prisoners. In this course, we will approach the concept of marginality by investigating the spaces and institutions of decay, neglect and rehabilitation to which unwanted and indigent individuals are relegated. Readings are focused on qualitative research conducted within institutions of health, welfare, and reform. There will be two comparative public mental health sections in this course: one focused on South Asia and the second on Africa. This course is relevant for students interested in medical anthropology, applied anthropology, public health policy, or clinical careers in medicine, psychology, or social work.

Same as: ANTHRO 182A

**ANTHRO 283. Ecology, Evolution, and Human Health. 3-5 Units.**

Human ecology, human environments, adaptation and plasticity, and their relationship to health and well-being. Comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, migration, infectious disease, risk management, and social inequalities. Particular attention will be paid to small-scale subsistence populations. Small-scale societies demonstrate an enormous range of variation in both environmental challenges faced and adaptations thereto. The process of human adaptation cannot be understood in the absence of a grounding in this range of challenge and adaptation.

**ANTHRO 283B. Human Mobility and Adaptability. 5 Units.**

Mobility, whether in the form of seasonal or permanent migration, is an ancient practice necessary for many subsistence strategies, including hunting-and-gathering and pastoralism. Many new forms of mobility have emerged and now it is nearly impossible to consider a patch of human society that is not engaged in or directly impacted by habitual, patterned geographic mobility. Today, almost everywhere in the world, people can get farther, faster; urbanization, environmental degradation, and civil unrest are driving groups of people who do not have a cultural tradition of nomadic migration to adopt a mobile lifestyle; sometimes permanently, sometimes temporarily; in search of new economic or resource opportunities. In this seminar course, we will explore modern patterns of human mobility and migration as adaptive strategies for predictably and unpredictably changing environments. Using a framework of biological and cultural adaptation, we will discuss the major types of current human mobility (e.g. nomadism, immigration, migrant labor, displacement) and how they influence and are influenced by social systems, resource access, and health.

Same as: ANTHRO 183B

**ANTHRO 285. Medical Anthropology of Contemporary Africa. 5 Units.**

In this course we will examine the place of Africa in global health discourses while reading in-depth histories and ethnographies of the varied causes and consequences of some of the most difficult problems facing African countries today. We will study the effects of colonialism and conflict on health, explore the military and humanitarian connections in the fight against HIV/AIDS, weigh the risks and benefits of population genetic studies on African populations, examine biomedical interventions on, and erasures of, local health problems, and query the role of violence, memory, insecurity, and power in daily life on the continent.

Same as: ANTHRO 185

**ANTHRO 286. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.**

Unusual mental phenomena have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? Optional: The course will be taught in conjunction with an optional two-unit discussion section or engaged learning component.

Same as: ANTHRO 186, HUMBIO 146, PSYC 286

**ANTHRO 28N. Secularism and its Critics. 3-5 Units.**

Secularism is often taken to be a necessary prerequisite for democracy in the modern world. The separation of religion and politics is often written into constitutions as a fundamental priority. Yet around the world, growing numbers of religious movements have sought to dispute the legitimacy of secularism. Social scientists, including anthropologists, are beginning to research the forms of domination and political violence that have been justified in the name of secularism. This course seeks to make sense of this global debate about secularism. It does so by taking up an anthropological perspective: much as anthropologists might study culture, religion, or kinship, we will interrogate secularism as a comparative social artifact, constituted by historically specific repertoires of signs, identities, everyday practices, and institutional powers. The course focuses on case studies in the United States, Western Europe, the Middle East, and South Asia.

**ANTHRO 298B. Digital Methods in Archaeology. 3-5 Units.**

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods. Same as: ANTHRO 98B, ARCHLGY 98B

**ANTHRO 298C. Digital Methods in Anthropology. 3-5 Units.**

The course provides an introduction to a broad range of digital tools and techniques for anthropological research. It is geared towards those interested in exploring such methodologies for their research and wanting to add hands-on experience with state-of-the-art digital tools to their skill set. Students will learn to work with some of the most common tools used to collect and manage digital data, and to perform various types of analysis and visualization. Undergraduate students register for 5 Units, Graduate students can register for 5 or 3 units. Same as: ANTHRO 98C

**ANTHRO 299. Senior and Master's Paper Writing Workshop. 1-2 Unit.**

Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299. Same as: ANTHRO 199

**ANTHRO 3. Introduction to Archaeology. 3-5 Units.**

Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. Same as: ARCHLGY 1

**ANTHRO 300. Reading Theory Through Ethnography. 5 Units.**

Required of and restricted to first-year ANTHRO Ph.D. students. Focus is on contemporary ethnography and related cultural and social theories generated by texts. Topics include agency, resistance, and identity formation, and discourse analysis. Prerequisite: consent of instructor.

**ANTHRO 301. History of Anthropological Theory, Culture and Society. 5 Units.**

Required of Anthropology Ph.D. students. The history of cultural and social anthropology in relation to historical and national contexts and key theoretical and methodological issues as these inform contemporary theory and practices of the discipline. Enrollment limited to 15. Prerequisite: consent of instructor.

**ANTHRO 301A. Foundations of Social Theory. 5 Units.**

The purpose of this course is to introduce key themes in social theory - the social, the modern subject, reason, autonomy, civility, interests, exchange, morality, life, the senses - through a reading of classic texts from Descartes up to psychoanalysis and phenomenology. Each section has original texts, commentaries, and background readings that place these texts in their deeper historical setting. Many of these commentaries trace how practical theories of 'lower' or minor selves - the subject people of the colonies, slaves, and other - were integral to the very development of ideas of the modern, autonomous and reasonable self in the western world. Prerequisite, by instructor consent.

**ANTHRO 302. History of Anthropological Theory, Ecology and Environment. 5 Units.**

Evolutionary and ecological theory from the 19th century to present. Theory and concepts from evolution and ecology, emphasizing anthropological applications. Evolutionary theories of human behavior, culture, and societies. Ecological theory behind carrying capacity, sustainable yield, and population growth. Emphasis is on tools of analysis and formulating research questions in anthropology today. Upper division undergrads require consent of instructor.

**ANTHRO 303. Introduction to Archaeological Theory. 5 Units.**

The history of archaeological thought emphasizing recent debates. Evolutionary theories, behavioral archaeology, processual and cognitive archaeology, and approaches termed feminist and post-processual archaeology in the context of wider debate in adjacent disciplines. The application and integration of theory on archaeological problems and issues. Prerequisite: consent of instructor.

**ANTHRO 304. Data Analysis for Quantitative Research. 5 Units.**

Univariate, multivariate, and graphical methods used for analyzing quantitative data in anthropological research. Archaeological and paleobiological examples. Recommended: algebra. Prerequisite: consent of instructor.

**ANTHRO 305. Research Methods in Ecological Anthropology. 5 Units.**

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

**ANTHRO 306. Anthropological Research Methods. 5 Units.**

Required of ANTHRO Ph.D. students; open to all graduate students. Research methods and modes of evidence building in ethnographic research. Prerequisite: consent of instructor.

**ANTHRO 307. Archaeological Methods. 5 Units.**

Methodological aspects of field and laboratory practice from traditional archaeological methods to the latest interdisciplinary analytical techniques. The nature of archaeological data and inference; interpretive potential of these techniques. Prerequisite: consent of instructor.

**ANTHRO 308. Proposal Writing Seminar in Cultural and Social Anthropology. 5 Units.**

Required of second-year Ph.D. students in the culture and society track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

**ANTHRO 308A. Proposal Writing Seminar in Archaeology. 5 Units.**

Required of second-year Ph.D. students in the archaeology track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

**ANTHRO 308B. Interdisciplinary Research Proposals: Effective Presentation, Skills, and Styles. 5 Units.**

This seminar examines the diverse skills, methods, and styles required for the development and production of interdisciplinary dissertation and grant proposals. Topical focus centers primarily on proposals with both social science and natural science elements. Proposals may include a diverse suite of methods and analyses. Throughout this course, we critique examples, assess writing styles and presentation, evaluate budgets, assess data management plans, examine tables and figures, and discuss reviews and evaluations of research proposals. Students are expected to be either in the early stages of writing their dissertation proposal or preparing applications for grants and fellowships. Prerequisite: consent of instructor.

**ANTHRO 30Q. The Big Shift. 4 Units.**

Is the middle class shrinking? How do people who live at the extremes of American society- the super rich, the working poor and those who live on the margins, imagine and experience "the good life"? How do we understand phenomena such as gang cultures, addiction and the realignment of white consciousness? This class uses the methods and modes of ethnographic study in an examination of American culture. Ethnographic materials range from an examination of the new American wealth boom of the last 20 years (Richistan by Robert Frank) to the extreme and deadly world of the invisible underclass of homeless addicts on the streets of San Francisco (Righteous Dopefiend by Phillippe Bourgois and Jeff Schonberg). The experiences of Hispanic immigrants and the struggle to escape gang life in Los Angeles are highlighted in the story of Homeboy Industries a job creation program initiated by a priest working in LA's most deadly neighborhoods (G-Dog and the Homeboys by Celeste Fremon). Finally in Searching for Whitopia: an improbable journey into the heart of White America, Rich Benjamin explores the creation on ethnic enclaves (whitopias) as fear over immigration and the shrinking white majority redefine race consciousness in the 21st century. Each of these narratives provides a window into the various ways in which Americans approach the subjects of wealth and the good life, poverty and the underclass, and then construction of class, race, and gender in American society. Students will not be required to have any previous knowledge, just curiosity and an open mind. Same as: CSRE 30Q

**ANTHRO 31. Ecology, Evolution, and Human Health. 3-5 Units.**

Ecology, Evolution, and Human Health Human ecology, environments, adaptation and plasticity, and their relationship to health and well-being considered in the broad comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, urbanization, migration, infectious disease, the physiology of stress and the inflammatory response, social capital and social networks, nutrition, nutritional deficiencies, growth, and social inequalities. No prior course work in ecological or medical anthropology required.

**ANTHRO 310C. Intersections. 5 Units.**

Themes of materiality and visibility, aesthetic and other forms of cultural production, and the meanings of creativity and convention. Ethnographic and archaeological material and case studies from worldwide cultural contexts. Prerequisite: consent of instructor.

**ANTHRO 310G. Introduction to Graduate Studies. 2 Units.**

Required graduate seminar. The history of anthropological theory and key theoretical and methodological issues of the discipline. Prerequisite: consent of instructor.

**ANTHRO 311. Ethnographic Writing. 3-5 Units.**

For graduate students writing or planning to write a dissertation using ethnographic methods. The choices made by the authors of ethnographies in constructing an argument, using data and speaking to an audience of readers. Readings include chapters written by class members currently writing dissertations. Prerequisite: consent of instructor.

**ANTHRO 311G. Introduction to Culture and Society Graduate Studies in Anthropology. 2 Units.**

Required graduate seminar for CS track. The history of anthropological theory and key theoretical and methodological issues in cultural anthropology. Prerequisites: this course is open only to Ph.D. students in anthropology or by permission of the instructor.

**ANTHRO 313. Anthropology of Neoliberalism. 5 Units.**

How is the recent worldwide restructuring under the name neoliberalism understood as a social, cultural, and economic phenomenon? Focus is on interrogation of analytic categories, and ethnographic explorations of social and political processes. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 316. Politics of the Mass Subject. 5 Units.**

Harbinger of democracy or arbiter of tyrannous rule? Source of collective agency or threat to political order? Over the past century, notions of the masses, the multitudes, and the people have served as volatile focal points for political theory and for institutions of governance. Drawing on historical, ethnographic, and theoretical readings, this course explores how tensions haunting these concepts continue to animate, as much as beleaguer, contemporary discussions of democratic citizenship and political modernity.

**ANTHRO 317. Colonial Archives and Archaeology: Models and Methods of Analysis. 5 Units.**

This course details the methodological challenges associated with using primary historical documents, ethnographic methods and sources and archaeological data. How do archaeologists deal with multiple sources of data, primary texts (translated and original) and ethnographic materials? This course examines archaeological monographs as models for individual student projects leading to dissertation research and publishing beyond the dissertation. Students will be required to present materials, research questions and primary source materials to the class in order to expand our understanding of the challenges and insights provided by archival and archaeological studies.

**ANTHRO 318. Democracy and Political Authority. 5 Units.**

Democracy is commonly defined in formalist terms as a form of government (involving the consent of the governed) and a procedure of governance (involving the rule of law). In place of a formalist definition, this course examines democracy as a historical and discursive form. In what ways have the rights of citizenship for some been premised on the domination of others (workers, women, the colonized, etc.)? What forms of violence are not only tolerated as practical necessity in the contemporary order of democratic states but sanctioned as morally just? What mechanisms of political authority operate by defining the boundaries between the tolerable and the intolerable, between citizenly belonging and terrorism? In short, between democracy and its others (e.g., an arbitrary despot, a feudal economy, a religious fundamentalism)? These questions require urgent interrogation in the present day: the past thirty years have witnessed a virtual explosion of new constitutions proclaiming democratic sovereignty across the world. What forms of global power and institutional domination are constitutive of the contemporary era of liberty, freedom, and equality? Readings are drawn from a variety of disciplines, including anthropology, political theory, and political philosophy. Prerequisite: consent of instructor.

**ANTHRO 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.**

This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.

Same as: CSRE 32

**ANTHRO 320A. Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations. 3-5 Units.**

Language, as a cultural resource for shaping our identities, is central to the concepts of race and ethnicity. This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. We begin with an examination of the concepts of race and ethnicity and what it means to be "doing race," both as scholarship and as part of our everyday lives. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations (Asian, Black, Latino, Native American, White, etc.) participate in similar, yet different, ways of drawing racial and ethnic distinctions. The seminar will draw heavily on scholarship in (linguistic) anthropology, sociolinguistics and education. We will explore how we talk and don't talk about race, how we both position ourselves and are positioned by others, how the way we talk can have real consequences on the trajectory of our lives, and how, despite this, we all participate in maintaining racial and ethnic hierarchies and inequality more generally, particularly in schools. Same as: CSRE 389A, EDUC 389A, LINGUIST 253

**ANTHRO 321. Reading Marx, Reading Weber. 5 Units.**

This advanced graduate seminar is devoted to a critical reading of selected writings by two nineteenth century social theorists who continue to shape anthropology and social analysis more broadly. Prerequisites: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural or social anthropology, social theory or cultural studies is required. No auditing is permitted. Maximum enrollment 12.

**ANTHRO 321A. Anthropology and Literature: Problems of Representation, Power, and Textuality. 5 Units.**

How are literary and social scientific forms of cultural description, evocation, and interpretation related? The seminar reads classic texts as well as recent experiments, addressing issues of genre, rhetoric, epistemology, translation, authority, and collaboration. The emphasis is on writing as a situated practice—embodied, relational, and historically circumscribed. Authors may include Malinowski, Mead, Benedict, Lévi-Strauss, Geertz, Taussig, Leiris, Conrad, Achebe, Said, Barthes, Kroeber, Le Guin, and selected contemporary ethnographies. Examples from film, visual culture, and performance art may also be included.

**ANTHRO 321B. From Marx TO Piketty: Toward An Anthropology Of Wealth, Inequality and Power. 5 Units.**

This seminar will explore the ways in which theorists and researchers from Karl Marx to Thomas Piketty have conceptualized, studied, and analyzed inequality in capitalist societies. In considering the ways in which Marx, Piketty and other scholars approach profit, accumulation, wealth, inequality, class and power, we will be especially interested in how these are shaped by their ideas and assumptions about kinship, sentiment, gender, and subjectivity. We will work toward developing an anthropological framework and ethnographic research projects that build on our critical understanding of Marx and Piketty. The course is limited to graduate students and anthropology majors who have taken Anthropology 90b.

**ANTHRO 322. From Biopolitics to Necropolitics and Beyond. 5 Units.**

Scholarship produced and informed by Michel Foucault. Focus is on the final period of Foucault's life; how his discussions of biopolitics, subjectification, governmentality, and death have served as touchstones for recent empirical research. Key interventions initially made under these rubrics; how anthropologists and others have applied, challenged, and extended them. Prerequisite: consent of instructor.

**ANTHRO 323. Graduate Seminar in Economic Anthropology. 5 Units.**

Classical and contemporary anthropological perspectives on topics such as money, markets and exchange; capitalist and non-capitalist modes of production; class and socio-economic differentiation; globalization and neoliberalism; and the social and cultural construction of the object, "the economy". Prerequisite: consent of instructor.

**ANTHRO 324. Political Anthropology. 5 Units.**

An anthropological approach to politics through bringing anthropological ways of thinking and modes of analysis to bear on key presuppositions of modern Western political thought. Ideas of rights, the individual, society, liberty, democracy, equality, and solidarity; ethnographic accounts used to identify the limits of conventional analytical approaches and to document the forms of politics that such approaches either ignore or misunderstand. Prerequisite: consent of instructor.

**ANTHRO 326. Postcolonial and Indigenous Archaeologies. 5 Units.**

The role of postcolonial and Indigenous archaeologies as emergent disciplinary activities within contemporary society. Community based archaeologies; the roles of oral history, landscape, and memory; archaeology as political action; and history in archaeological projects. The emergence of Indigenous archaeology within N. America in relation to limitations imposed by processual or new archaeology; and NAGPRA, Kennewick, essentialism, and terminal narratives within this context. Prerequisite: consent of instructor.

**ANTHRO 327. Language and Political Economy. 5 Units.**

Theories of language: Saussure, Jakobson, Hymes, Marx, Foucault, Butler, and Derrida. The theorization of language in its linkages to power, social relations, and history. Prerequisites: Linguistics or Anthropology course work. Prerequisite: consent of instructor.

**ANTHRO 328. Making. 5 Units.**

The politics of visibility, social imagination, and the ethics of visual production and consumption in the current moment. Sources include anthropology, art history, and philosophy. Prerequisite: consent of instructor.

**ANTHRO 331. The Anthropology of Technology. 5 Units.**

Iconic discipline-building works of the last three decades; readings that lay out and intervene in contemporary debates. Prerequisite: consent of instructor.

**ANTHRO 332. Anthropology of Ethics. 5 Units.**

Recent decades have witnessed what some scholars have termed an ethical turn in anthropology. This course explores the emergence of this field of study, asking the following questions: What has motivated a renewed anthropological interest in the subject of ethics? How has a focus on ethics enabled the development of new theoretical currents in the discipline? To what extent have anthropological studies of ethics provided new understandings of traditional topics, concerning social hierarchy, power relations, embodiment, and subject-formation?.

**ANTHRO 332A. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.**

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice. Same as: ARCHLGY 132, ARCHLGY 232, ARCHLGY 332

**ANTHRO 333. Anthropologies of Evidence. 5 Units.**

Drawing on literature in Anthropology and Science and Technology Studies, this course will examine what kinds of artifacts and arguments count as evidence in intellectual and scientific debate.

**ANTHRO 333A. The Cultural Politics of Ambiguity. 5 Units.**

Contemporary conceptual approaches to understanding the politics and production of certainty, ambiguity, and doubt. The seemingly ambiguous nature of the science of industrial pollution and contamination exonerate corporate and government polluters from rising rates of cancer, while the science of liberal economic models seems to create no alternative to massive economic subsidies of the financial sector. How culpability, exoneration, transformative action, institutional stasis, and political rely on the production of certainty, ambiguity, and doubt. Prerequisite: consent of instructor.

**ANTHRO 334. Trauma and Healing. 5 Units.**

This course considers class and recent work on culture and psychiatry with an emphasis on trauma. We consider work on the main diagnostic categories like depression and schizophrenia, but also the work on dissociation, war combat, PTSD, and psychosis.

**ANTHRO 335A. Animism and Alter-Native Modernities. 5 Units.**

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour). Same as: FRENCH 335A, REES 335A

**ANTHRO 337. The Politics of Humanitarianism. 5 Units.**

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issues a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the cause of humanity. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (the Third World), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer. Prerequisite, by instructor consent.

**ANTHRO 337B. Anthropological Approaches to Health Issues in Contemporary Latin America. 5 Units.**

The purpose of this course is to examine the anthropological and ethnographic research on emerging health issues and sufferings in Latin America. In particular, the class explores how anthropologists understand and ponder social, economic, political, environmental, spatial processes that shape patterns of health, suffering and death, and the strategies to address them. By analyzing paradigmatic case studies, we will discuss theoretical concepts and social perspectives, as well as ethnographic dilemmas and methods. Taking a critical perspective, this class will not only explore the standard topics on Latin American health (hunger, infectious disease, mental health, etc.). We will also focus on emerging sufferings (drug use, epidemics, environmental discomforts and sufferings, etc.). Both standard and emerging topics are examined with respect to the changes in political economy, medical institutions and policy approaches, models of care and caregiving, gender violence, circulation and appropriation of expert knowledge, contamination, migration, spatial segregation, violence, marginalization, abandonment, justice and human rights. Interdisciplinary investigation is conducted into most of these health issues, not only in the global health field. They are addressed by the South American Social Medicine and Collective Health approaches. This class will include a description and critical analysis of their theoretical frameworks and core concepts, as well as their relationships to international and local medical anthropological theory and research.

**ANTHRO 338B. History and Memory. 5 Units.**

How are history and memory important in the making of collective and public memory? This seminar draws together an interdisciplinary collection of readings with an aim to provide a foundation for seminar participants' projects, both historical and contemporary projects. We will explore critiques of the practice of gathering material, i.e., archival and oral histories as well as delve into experimental forms that combine improvisational approaches to history and critique in an effort to develop a methodological tool kit that allows for a push beyond established projects.

**ANTHRO 339. Anthropology of Religion. 5 Units.**

This course presents classic and contemporary work on the anthropology of religion: Durkheim *Elementary Forms of the Religious Life*; Levy-Bruhl; *Primitive Mentality*; Douglas *Purity and Danger*; Evans Pritchard *Nuer Religion*; and recent ethnographies/scholarly work by Robbins, Keane, Keller, Boyer, Barrett, and others.

**ANTHRO 339A. Technologies of Extinctions: Ecocides and Genocides. 5 Units.**

This course will explore the relationship between history, ecological evolution and mass killing in the age of humanly caused species extinction. It will explore the universalization of the notion of the Jewish Holocaust, its use to integrate into genocide studies the Native American "spiritual" holocaust, the Japanese nuclear holocaust and the Rwandan genocide, and the ethical dilemmas posed by the ideas of biotic, animal and ecological holocausts. Anthropology and history of genocides and extinctions as well as posthumanist, multispecies theories will provide theoretical frames for the course.

Same as: FRENCH 339A

**ANTHRO 34. Animals and Us. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of "animals as social actors" is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ARCHLGY 34

**ANTHRO 340A. Post-secular Humanities: Religion and Spirituality in the Contemporary World. 5 Units.**

The term "postsecularism" refers to various theories and approaches regarding the revival of religion in the present, as well as current reevaluations of the relationship between faith and reason in knowledge building. When thinking about a postsecular humanities, the course would follow scholars that are usually associated with this trend (like Agamben, Badiou, Derrida, Habermas), on the one hand, and discuss Braidotti's ideas of a new vitalism, Chakrabarty's postcolonial postsecularism, and Harvey's new animism, on the other. The course will examine the way interactions and collisions among various worldviews can provoke the rethinking of key ideas of our times: what it means to be secular, religious, a citizen, a hybrid, an indigenous, a non-human.

Same as: FRENCH 341A, REES 340A

**ANTHRO 341. The Archaeology of Religious Crusading in Medieval Europe. 5 Units.**

This course will present a chronologically framed outline of the three main regions that witnessed the greatest impact of the crusading period. Commencing with the initial capture of Jerusalem and the subsequent establishment of a crusader kingdom in the Middle East in AD1099, till its eventual end in 1291, this will be followed by the "pagan conversions" of the Northern Baltic. Centred on Poland (Prussia) and Latvia (Livonia) from the 13th to 15th c., this example will also be compared with neighbouring Lithuania, which never fell under the political hegemony of the Monastic Orders. Finally, the course covers the Iberian case, where the Reconquista or "reconquest" of lands from Muslim groups concluded with the fall of Granada and the unification of Spain in 1492. Through archaeological and historical evidence, the materials, technologies and ideas of the crusading groups will be compared and contrasted, with a particularly emphasis on bioarchaeological datasets. Ultimately, the course deals with the economic, social and practical mechanisms used by the religious orders to "colonise", once the initial conquest had been achieved.

Prerequisite: graduate standing or consent of instructor.

**ANTHRO 343. Culture as Commodity. 5 Units.**

Focus is on theories of commodification, interests in tourism, national cultures as marketable objects, and how identities are constituted through production and consumption. The formation of global style and taste. Prerequisite: consent of instructor. Co-term students and above may sign up for this course.

**ANTHRO 344. Graphic Medicine. 5 Units.**

In this course students will study medical cultures through visual communication ranging from x-rays and PET scans to graphic novels. Course will also include literature on visual theory.

**ANTHRO 345. New Visions in Medical Anthropology. 5 Units.**

Recent experimental histories of the field. Emphasis is on how, working within anthropology's classic format, the ethnographic monograph, authors have innovatively responded to the challenges of representing amorphous, unspoken, and often violent relationships between the body and social change. The authors' expository techniques, and how they engage and extend theoretical debate. How to assess works within medical anthropology and its allied fields. Prerequisite: consent of instructor.

**ANTHRO 345A. Race and Power: The Making of Human Difference in History, Biology and Capital. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the reality of race as a literally constructed phenomenon, where historical, colonial, bodily, market, penal, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race in systems of capital accumulation.

**ANTHRO 346. The Social Imagination. 5 Units.**

The imagination as such has not been an accustomed object of ethnographic fieldwork or theoretical debate in anthropology. This seminar consists of a cluster of thematic explorations including: the spatial imagination of states; the imagination of race, colonialism, and domination; the social imagination of evil and of the good; and conceptualizations of the creative imagination.

**ANTHRO 346A. Sexuality Studies in Anthropology. 5 Units.**

Current research on sexuality from perspectives including paleoanthropology, archaeology, ethnography, and linguistic anthropology. Readings paired with case studies that explore theoretical and methodological issues. Prerequisite: consent of instructor.

**ANTHRO 347. Religion and Modernity. 5 Units.**

What role has the category of religion played in the development of the modern state, both colonial and national? How have central concepts of liberal political thought, such as freedom, progress, and history, depended on certain normative ideas of religion? Through various genealogical, historical, and ethnographic inquiries, this course examines how the category of religion has both subtended and disturbed formations of colonial and post-colonial modernity.

Same as: RELIGST 332X

**ANTHRO 348. Representing Medicine. 5 Units.**

The seminar will offer the opportunity to discuss the recent work of a series of 9 scholars known for their innovation in writing and research. The seminar will offer professional networking as well as the opportunity to engage authors in questions of writing, approaches to fieldwork, strategies for career advancement, and brainstorming on how to structure relevant arguments. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 348A. Health, Politics, and Culture of Modern China. 5 Units.**

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

**ANTHRO 348B. Bodies, Technologies, and Natures in Africa. 4-5 Units.**

This interdisciplinary course explores how modern African histories, bodies, and natures have been entangled with technological activities. Viewing Africans as experts and innovators, we consider how technologies have mediated, represented, or performed power in African societies. Topics include infrastructure, extraction, medicine, weapons, communications, sanitation, and more. Themes woven through the course include citizenship, mobility, labor, bricolage, in/formal economies, and technopolitical geographies, among others. Readings draw from history, anthropology, geography, and social/cultural theory. Same as: AFRICAST 249, HISTORY 349

**ANTHRO 349. Anthropology of Capitalism. 5 Units.**

This advanced graduate seminar explores capitalism as an historically-situated and culturally-mediated articulation of practices rather than as an economic system or social structure governed by an internal logic. It draws on poststructural theories of culture, society and subjectivity to investigate the processes through which diverse capitalist practices are produced. Prerequisite: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural anthropology, social theory or cultural studies is required. No auditing is permitted. Enrollment limited to 12.

**ANTHRO 349A. Advanced Archaeological Field Methods: A Practical Approach to Working With and Within Communities. 5 Units.**

This is a graduate level course (open to undergraduates with permission) in archaeological field methods at several archaeological and cultural sites in the San Francisco Bay area. This is a practical course designed to help students identify potential archaeological sites (using GIS) historical maps, historical archives and extant site reports. Students will gain hands-on experience with mapping, field survey and strategies and methods of field excavation. Study of local artifact types and lab techniques for artifact cleaning and identification and written analysis. The course emphasizes a community based model of archaeology, working with members of local indigenous cultures. The seminar will begin with readings and classroom instruction and proceed to the field. Students will be required to hike to field sites and conduct experiments using a variety of equipment, recording devices and strategies. Prerequisite, by instructor consent.

**ANTHRO 350. Topics in Linguistic Anthropology. 5 Units.**

Reading seminar; restricted to Anthropology graduate students. The anthropology of language and semiotics. Focus is on the limits of textualism, and alternative semiotic and epistemic bases for theorizing language and representation. No linguistic anthropology course work required. Prerequisite, by instructor consent.

**ANTHRO 351. The Ordinary: The History of a Concept. 5 Units.**

The ordinary has today acquired something like a cultic status in contemporary culture. 'Ordinary' citizens are the touchstone and essence of political democracy; the holy grail of effective marketing, the byword for earthy ethical judgment. In social science, the ordinary has blended in with the 'normal' and the statistical mean. In Anthropology, ordinary life has all but replaced 'cultural practice' as the epistemic gold standard of evidence. But this was not always so, and the ordinary has many, varied and contradictory meanings across the world. This course will (a) trace the historical emergence of the ordinary as a central ideological and metaphysical concept in modern thought and practice; (b) trace how the ordinary and the everyday have acquired unprecedented authority in anthropology; (3) trace the various meanings and connotations of 'the ordinary' in different socio-historical contexts from Asia, Africa and Euro-America. The literature will consist of ethnographies, and works of philosophical and historical scholarship.

**ANTHRO 353. Landscape. 5 Units.**

This seminar offers an interdisciplinary approach to the study of landscape, noting the various processes and projects that have help create them. Readings draw together a broad range of theoretical approaches that are attentive to human-non-human interactions and the overlapping and divergent spatial and temporal questions of the exchanges between landscapes and humans. The readings will also draw attention to representational and non-representational ways that material and symbolic aspects of landscapes help constitute the making of place. The aim of the seminar is to explore the various methodologies for what they offer for the study of place.

**ANTHRO 355. Cities in Global Perspective. 5 Units.**

Interdisciplinary approach to examining global cities. The concept of the global city, and the interdependent processes that help produce urban spaces. Situating the transformation of urban spaces within globalization and its differential effects; current explanatory frameworks that pay attention to multiple scales of spatial and economic articulation. Prerequisite: graduate standing. Prerequisite: consent of instructor.

**ANTHRO 357. Other Minds: Puzzles in Psychiatric and Psychological Anthropology. 5 Units.**

Problems in the way anthropologists explore other minds anthropologically and the ways in which anthropologists seek to understand the models of other minds held by the people observed. Topics include theory of mind, witchcraft, belief, empathy, psychosis, trauma, Freud, Vygotsky, and cognitive dissonance. Prerequisite: consent of instructor. Under grads cannot take this class without permission of the instructor.

**ANTHRO 358. Anthropology and the Limit of Experience. 5 Units.**

In this course, we will examine the concept of the 'limit' in relation to questions of experience. Taking an interdisciplinary perspective, we will explore how the limit (as border, threshold, other, transgression, liminality, etc.) frames and disrupts discourses of experience in ethnography, philosophy and literature.

**ANTHRO 359. Copies, Collections, and Commodities. 5 Units.**

In this class we will grapple with multiple questions that arise with reproduction. On the one hand, reproducibility is good: we want generic drugs to work as well as the originals, we want trial subjects to adequately stand in for the people likely to be having a treatment, and we want a cartographic map to describe the landscape that unfolds before us. On the other hand, the copy threatens the value the object it is meant to imitate or represent, and to take on a life of its own. A series of classic and new ethnographies will be organized around these issues.

**ANTHRO 360. Social Structure and Social Networks. 5 Units.**

In this course, we will explore social network analysis, a set of methods and theories used in the analysis of social structure. The fundamental conceit underlying social network analysis is that social structure emerges from relationships between individuals. We will therefore concentrate in particular on the measurement of relationships, emphasizing especially practical methodology for anthropological fieldwork. This is a somewhat unusual course because of its focus on social network research coming out of anthropological and ethological traditions. While most current practitioners of social network analysis are (probably) sociologists, many of both the methodological antecedents and theoretical justifications for the field can be found in these two traditions. A major goal of this course is to understand how the methods and perspectives of social network analysis can be usefully incorporated into contemporary approaches to ethnography and other anthropological modes of investigation. Prerequisite: graduate standing or consent of instructor.

Same as: ESS 360

**ANTHRO 360A. Archival Research for Social Science: A Practicum. 5 Units.**

Since the 1980s, the necessity of historicizing cultural and social formations has become established as integral to anthropological research. Every ethnography and dissertation has historical sections, derived primarily from secondary sources, commentaries within other ethnographies and published historical work. Most students attempt to conduct archival research in local or national archives alongside ethnographic fieldwork, most often in an ad hoc manner, collecting and analyzing archival material on a trial and error basis. This class is conceived as a practicum that addresses students who need to and want to do archival research as part of their anthropological and sociological fieldwork, but find themselves at a loss for how to think about, begin, and, do archival work. The base layer of the class is methodological and practical: students will be engaged in the practical activities of becoming acquainted with archives, developing archival research questions, learning techniques of recording, coding, and thinking historically. The second layer will be conceptual. Students will be reading and discussing concepts of the archive, reading and analyzing different styles of historical ethnographies, and thinking about how to organize and conceptualize cultural categories historically. Students will be asked to conduct archival research at the archives available at Stanford Libraries and the Hoover Institution archives and write a research paper based on this archival work. We will have weekly meetings divided into two sessions. The first half will discuss set readings and intellectual concern. In the second half, we will discuss methodological concerns, problems encountered in the archives and bounce ideas off each other. We will also have regular guest speakers who will give talks and answer questions, intellectual and methodological about archival research.

**ANTHRO 361. Life and Death in Contemporary Latin America: An Anthropological Inquiry. 5 Units.**

This seminar explores life and death in contemporary Latin America. We will address anthropological understanding of the role of colonialism, migration, violence, urbanization, democratic transition and neoliberalism as they configure the experience of, and threshold between, vital and deadly processes. This is not a standard survey course, covering the region as a whole however. Instead, we will critically engage several recent ethnographies that explore, for example: the politics and practices of memory; border thinking and living; the political economy of death and desire; state violence and social movements; the relationship between the laboring city and body. We will supplement ethnographies with contemporary Latin American critical theory, film, and literary texts. Prerequisite: consent of instructor.

**ANTHRO 362. Human Spatial Dynamics: Seminar in Communicating Contemporary Science. 5 Units.**

This seminar is designed to bring together all students and faculty currently working on issues related to human use of land and spatially defined resources. The focus is to provide a forum for reporting on recent results and question development, providing students with vital skills in designing and communicating the results of research. Under grads by permission of instructor.

**ANTHRO 362A. Introduction to Human Evolution, Ecology, Genetics, and Culture. 5 Units.**

Themes and topics of lasting heuristic value in the anthropological sciences. Combines the lecture content of 2A and 2B with a discussion section for graduate students. Must be taken in the Autumn Quarter of a student's first year in the graduate program.

**ANTHRO 363A. Anthropology of Environmental Conservation. 5 Units.**

Graduate seminar focused on key works by anthropologists on environmental conservation. We will discuss both classics (ie, works by Ostrom, Lansing, Bray) as well recent debates regarding communities, neoliberalism and conservation. Students will present on topics of particular interest or relevance to their research.

**ANTHRO 364. EcoGroup: Current Topics in Ecological, Evolutionary, and Environmental Anthropology. 2-5 Units.**

Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

**ANTHRO 364A. EcoGroup: Problems in Ecological and Evolutionary Anthropology. 2-5 Units.**

Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

**ANTHRO 365. The Theory of the Modern Subject. 5 Units.**

This course traces the emergence of a coherent theory of the modern subject through readings of philosophical works and social theory from 18th century to the 20th century. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 366. Material Semiotics. 5 Units.**

This seminar will focus on the emerging body of literature on the materiality of the production, circulation, and mediation of paperwork as constitutive of modern forms of governance. We will discuss specific genres of paperworks; notes, memos, files, documents, as well as archives and other mnemonic technologies; both as cultural practices and reflexive objects, and examine how they produce modern social epistemologies of accountability, evidence, the fact, and truth in the fields of law, business, and public administration, as well as in civil society generally. Readings will include works by Max Weber, Bruno Latour, Jacques Derrida, Michel Foucault, Cornelia Vismann, Ann Stoler, and others. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 367. The Anthropology of Science: Global Politics and Laboratory Life. 5 Units.**

Science and technology are important cultural products that often dramatically reorganize various aspects of human life. In this course we will explore how recent innovations in the life sciences and biomedicine may reconfigure crucial elements of social institutions, lend new structures to identity politics, and often change the way we interact with and conceive of nature. We will examine these issues in various global settings to explore how everyday politics shape politics of life in different locales.

**ANTHRO 367B. The Intellectual and Political Career of Stuart Hall and British Cultural Studies from 1960 to 2014. 5 Units.**

The seminar traces the trajectory of Stuart Hall and British Cultural Studies, beginning with the first New Left in 1960; then the Birmingham Centre period, Thatcherism and Gramscian analysis; race, gender, and identity politics; global and diasporic approaches; New Times, neo-liberalism, and the problem of historicizing the present conjuncture. Case studies from other parts of the world will put cultural studies tools to the test.

**ANTHRO 368. Dynamics of Coupled Human-Natural Systems. 5 Units.**

This is a graduate research seminar on the interdisciplinary approach to the study of the dynamics of what is known as  $\zeta$ coupled human-natural systems.  $\zeta$  We will take a critical perspective on such systems, asking to what extent the idea of coupling of discrete subsystems is intellectually profitable and what defines a  $\zeta$ human $\zeta$  vs. a  $\zeta$ natural $\zeta$  system? We will explore concepts such as coupling, nonlinearity, threshold behavior, feedback, complexity, resilience, and catastrophes. Case studies will be drawn from the literature on human ecology, population dynamics, disease ecology, and social dynamics. Emphasis will be on developing a working knowledge of mathematical and computational models of coupled systems embedded within a rigorous empirical framework of biosocial data collection.

**ANTHRO 369. Advanced Topics in Human Behavioral. 2-5 Units.**

Course covers a variety of advanced topics which rotate annually, such as: ownership and egalitarianism, the integration of landscape and behavioral ecology, conservation and indigenous subsistence, or fertility and demography. Course may be repeated for credit when topics change.

**ANTHRO 370. Advanced Theory and Method in Historical Archaeology. 5 Units.**

Current debates about theory and method. Prerequisite: consent of instructor.

**ANTHRO 371. Living and Dying in the Contemporary World. 5 Units.**

This seminar explores how biological, political and social conditions transform and conjoin experiences of living and dying in the world today. Engaging contemporary ethnographies and social theory, we will examine how life and death, the natural and the social, the individual and the collective, are braided together in ways that challenge conclusions about what constitutes care, community, health, rights, and violence, among other issues. We will also reflect on whether and how the braiding together of these domains leaves room for the recognition of their singularity. Thus, an abiding question for this seminar is the relation of history to the present. Prerequisite: consent of instructor.

**ANTHRO 371B. New Methodologies in the Humanities and Social Sciences. 3-5 Units.**

The course will discuss how social virtues are converted into methods of research (hope, friendship, sincerity, trust, utopia), and how they affect processes of knowledge building within the humanities and social sciences in terms of revival of futurity. The concepts will be critically examined in their positive as well as negative potential for practicing prefigurative politics the creation of desirable modes of social relationships of conviviality and co-existence in the world. Same as: DLCL 371, REES 371B

**ANTHRO 372. Urban Ecologies. 5 Units.**

At the intersections of urbanism and environmental studies, political ecology, postcolonial theory and the new materialism, new fields are in formation. This seminar explores scholarship that connects cities with countryside rough questions of resources and infrastructures. We will consider questions of inequality access and community as well as unexpected urban ecologies.

**ANTHRO 372A. Materiality. 5 Units.**

The relationships between people and things. The world of objects plays a major role in materialism and the anthropology of material culture. Approaches that break down subject-object opposition. New social and psychological approaches that explore the mutual constitution of people and things, and object and subject. Approaches in which objects are seen to have agency, and people are seen as entangled in object worlds. Authors include Hegel, Marx, Benjamin, Miller, Gell, and Latour. Prerequisite, by instructor consent.

**ANTHRO 373. Things: An Archaeology of the Relationships Between Humans and Things. 5 Units.**

This course examines a variety of approaches that claim to explore the relationships between humans and things. Some of the approaches include Marx and material culture studies; Heidegger; cognitive and phenomenological; Actor Network Theory. But there is a need also to examine behavioral and ecological and Darwinian approaches. Many of these approaches do not adequately deal with the physicality of things as objects and there is a need to seek a way to incorporate such aspects of things into social theory. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 374. Archaeology of Colonialism/Postcolonialisms. 5 Units.**

Advanced graduate seminar focused on the archaeology of colonial and postcolonial contexts, both prehistoric and historic. Emphasis on intersections between archaeological research and and subaltern, postcolonial, and transnational feminist/queer theory. Prerequisite: consent of instructor.

**ANTHRO 376. Archaeology: The Emergence of a Discipline. 5 Units.**

This course explores the key thinkers and practitioners who have founded the discipline of archaeology. Reaching back into the nineteenth century, the course examines in depth the key figures, their preoccupations and projects that shaped the way that archaeology grew through the 20th and into the 21st century. Global in scope, the emphasis will be on field projects and practical problems that stimulated the intellectual development of archaeology as an independent discipline closely tied to geology, history, anthropology, and the natural sciences. Prerequisite: consent of instructor.

**ANTHRO 377. Authority: Anthropological Perspectives. 5 Units.**

Why do people obey others in the absence of explicit coercion? Why do people accept some leaders but not others? What does it mean to say something or someone has authority? Is authority personal or institutional? Why do people believe in the Pope? Why do people believe some objects have power and others not? Is charisma only a perfume? Can institutions wield charismatic power? These are questions that from Max Weber onwards classical and contemporary anthropologists and sociologists continue to ask. In returning to (Weberian) questions of authority and legitimacy this course takes a question posed by Bourdieu  $\zeta$  what is the mystery of ministry? We will apply the question of authority broadly, not just in the explicitly political realm but also to understand, for example, how (culturally specific) charismatic and sacral authority can be fashioned through persons and through objects (eg. relics). The course will thus move between interrelated religious, moral, and political notions to try to generate some critical questions for how a contemporary anthropology that explicitly (rather than implicitly) re-addresses authority might look.

**ANTHRO 378B. Culture, Mind and Emotion : Anthropological and Psychological Approaches. 3-5 Units.**

How does culture shape the experience of thinking and feeling, the way humans relate to the world and to others? This graduate level course, taught by a psychologist who studies emotion (Jeanne Tsai) and an anthropologist who studies mind (Tanya Marie Luhmann), explores the way that living in social worlds deeply shapes what seem to be basic processes. We explore what we know about the cultural variations in emotional experience, and about the effect of different representations of minds. We also what can be learned about the way culture shapes experience through different methods.

**ANTHRO 379. Empathy Lab. 5 Units.**

This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor. Same as: TAPS 284

**ANTHRO 379A. Empathy Lab II: The Potential of Anthropology for the 21st Century. 1-5 Unit.**

This interdisciplinary arts/anthropology lab class will study and practice methods from performing arts to expand our understandings of cultural contact and develop methods of thinking more expansively about the creative elements and possibilities for ethnographic fieldwork and critical cultural studies. Prerequisite, by instructor consent.  
Same as: TAPS 379A

**ANTHRO 379B. Empathy Lab II: The Potential of Anthropology for the 21st Century. 1 Unit.**

This interdisciplinary arts/anthropology lab class will study and practice methods from performing arts to expand our understandings of cultural contact and develop methods of thinking more expansively about the creative elements and possibilities for ethnographic fieldwork and critical cultural studies.

**ANTHRO 380. Practice and Performance: Bourdieu, Butler, Giddens, de Certeau. 5 Units.**

Poststructuralist theories of iteration and mimesis used by social scientists to negotiate the tension between social structure and social practice: Giddens's structuration theory; Bourdieu's practice theory; Butler's theories of gender performativity; and de Certeau's analysis of tactics and strategies. Ethnographic and archaeological case studies that employ methodologies inspired by these approaches. Intersections and contradictions between these theorists' work; their use in anthropological practice. Issues of gender, sexuality, and ethnicity. Prerequisite: consent of instructor.

**ANTHRO 381. Archaeology of Violence. 5 Units.**

This advanced graduate seminar reflects on archaeological research on violence in relation to readings in philosophy, political anthropology, cultural studies, and gender and ethnic studies. While some forensic approaches are discussed, the emphasis is more on structural and collective violence and the role of violence in the formation of the archaeological record.

**ANTHRO 382. Advanced Topics in Medical Anthropology. 5 Units.**

Graduate seminar. The history and theories of medical anthropology. Focus is on medical anthropology's transformations in the 20th century: how medical anthropology has emerged as a field of inquiry, grown in dialogue with other areas of scholarship, and come to offer a unique array of theoretical positions and modes of ethnographic engagement. Emphasis is on debates within interpretive and critical medical anthropology, and how an understanding of these debates may be used to assess contemporary works within the field. Prerequisite: consent of instructor.

**ANTHRO 384. Sacrifice, Ethics and Modern Convictions. 5 Units.**

This course is an investigation of how notions of sacrifice, of ethics and conviction are embedded in both ordinary and extraordinary practices in our contemporary world. The key question is how the modern global condition has transformed the way in which it is possible to hold convictions, and to frame forms of ethical conduct, be they religious or secular. We will ask if convictions based on choice or moral outrage differ from convictions based on inhabiting and reversing stigmatized racial and social identities. Rather than maintaining a categorical distinction between "the religious" and "the secular," we will focus on how groups and individuals have attached themselves passionately to ideas, abstractions, ritual communities or ethical frames. When do certain attachments appear necessary and compelling, almost beyond choice? How does one forge a sense of ethics and ethical conduct through social media rather than face-to-face contact?  
Students will acquire a grounded and guided understanding of philosophical and anthropological theories of ideas of ethics, sacrifice, and political conviction as well as explore these ideas through contemporary ethnographic contexts.  
Readings will be philosophical, historical and ethnographic drawing on original texts and ethnographic accounts from Europe, Asia and Africa.

**ANTHRO 386. Epidemics, Chronics, and Contagion. 5 Units.**

The seminar will take as its focal point the question: how do institutional and personal responses to disease result from judgements about threat level? Through a series of contemporary monographs on obesity, HIV/AIDS, avian flu, vaccination, cancer, and other health issues, this class will examine ways of understanding broader ideologies of health in the United States.

**ANTHRO 387. Strangers and Intimate: Exploring Civility. 5 Units.**

How do we encounter and read each other in public and private spaces? How are these very spaces historically constituted around such distinctions and manners of reading? What do these questions look like in dense heterogeneous cities with differentiated class, caste and ethnic communities? How might we consider the differentiation between private and public in different ethnographic contexts? What kinds of sociality might emerge from these kinds of encounters? This course will explore these questions through social theory and ethnographies. There are two major sets of concepts that will be explored and interrogated. The first is that deriving from the essays of the Georg Simmel such as "The Face" and "The Stranger" which explore the new forms of sociality enabled by seemingly anonymous city life, which in turn have been interpreted very differently by Zygmunt Bauman and James Siegel to understand the place of continually excluded outsiders and the high stakes of reading each other. The other is the strand of work on the emergence of the public sphere such as the work of Jurgen Habermas, Richard Sennet, Michael Warner, Nancy Fraser etc. While much of the social theory on the public, the stranger and civility emerge from studies of Euro-American politics and city spaces, in this course we will move some of these discussion into considering these questions in the global south and the kinds of sociality (including their historicity) that make up the dense fabric of ordinary life. How does this work out in contexts where we take into account intense social differentiation by class, race, and communitarian divisions? This could be asked of the historical and social context addressed in these theories as well as from the postcolonial world. The course will attempt to understand whether such theorizations can indeed be re-rooted and re-imagined or whether ethnographic and historical difference re-route them instead. In doing so we will also bring theories of the private and the intimate to bear on questions of the public and the stranger.

**ANTHRO 388. Anthropology of the Extraordinary: Ontologies and Phenomenologies. 5 Units.**

In the last few years anthropology has taken what has come to be called an "ontological turn" in which the ways an object or experience is felt to be real is explored from different perspectives. Often this involves exploring phenomena (like ghosts, talking trees and humans who become jaguars) which could be called "extraordinary" and which challenge secular, western expectations of what is real. There has also been a "phenomenological turn" in which anthropologists have become interested in classifying and categorizing human experience in particular detail. The class will explore the scholarship in this area. Readings will include an introduction to classic philosophical writing (William James, Karl Jaspers, Martin Heidegger) and more recent work such as David Hufford, *The Terror that Comes in the Night*; Eduardo Kohn *How Forests Think*; Morton Pederson *Not Quite Shamans*; Ann Taves *Religious Experience Reconsidered*; Annemarie Mol, *The Body Multiple*; Roger Lohmann *Dream Travelers*, and others.

**ANTHRO 389. Ethnographic Writing and Beyond. 3-5 Units.**

In this class we analyze anthropological writing that has examined and pushed the bounds of the discipline. We will focus on how writing itself is a practice in anthropology, and how styles of writing impact argument, affect, and ultimately, the discipline itself. Students will also work in different genres of writing to better understand writing as a craft, a discipline, and a means of communication.

**ANTHRO 39. Sense of Place. 3 Units.**

This course examines the life of places as shaped by environmental events and projects aimed towards rural or urban development. Drawing methodological insights from anthropology, cultural geography and environmental studies, we examine the forces that generate place problems for humans and nonhumans. Each encounter with place and displacement sets up a particular issue for us to grapple with: How would we address issues created by natural disasters, the seizure of land through legal means that fall under eminent domain or gentrification projects? Through a critical dialogue with interdisciplinary fields that inform the readings, the seminar aims to bring theoretical and methodological insights to inform our practical suggestions for how to address placeness and displaceness at different scales.

**ANTHRO 390. Psychological Anthropology. 5 Units.**

Introduction to psychological anthropology as a subfield. We read through ethnographies on the anthropology of childhood, of emotion, of human relationship and of cognition, drawing analytic tools not only from anthropology but also from psychoanalysis, developmental psychology, and cognitive science. We will read some earlier classic work but focus on more contemporary theory. Prerequisite, by instructor consent.

**ANTHRO 391. Subjectivity. 5 Units.**

This seminar considers subjectivity as a central category of social, cultural, psychological, historical and political analysis. Through a critical and collaborative examination of ethnographic works and psychoanalytic theory, we will identify the processes by which subjectivities are produced, explore subjectivity as a locus of social change, and examine how emerging subjectivities remake social worlds. Some of the questions this seminar will pose include: what is the relation between subjectivity and subjection? How to account for the effects of the social in terms of subject formation without succumbing to social determinism? What else is the subject other than the outcome of a complex constellation of discursive, material, institutional, and historical factors?

**ANTHRO 398B. Race, Ethnicity, and Language: Writing Race, Ethnicity, and Language in Ethnography. 3-4 Units.**

This methods seminar focuses on developing ethnographic strategies for representing race, ethnicity, and language in writing without reproducing the stereotypes surrounding these categories and practices. In addition to reading various ethnographies, students conduct their own ethnographic research to test out the authors' contrasting approaches to data collection, analysis, and representation. The goal is for students to develop a rich ethnographic toolkit that will allow them to effectively represent the (re)production and (trans)formation of racial, ethnic, and linguistic phenomena.

Same as: EDUC 389B, LINGUIST 254

**ANTHRO 4. Language and Culture. 4-5 Units.**

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language). Same as: ANTHRO 204

**ANTHRO 400. Cultural and Social Dissertation Writers Seminar. 1-3 Unit.**

Required of fifth-year Ph.D. students returning from dissertation field research and in the process of writing dissertations and preparing for professional employment. Prerequisite: consent of instructor.

**ANTHRO 401A. Qualifying Examination: Topic. 2-5 Units.**

Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit.

**ANTHRO 401B. Qualifying Examination: Area. 2-5 Units.**

Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit one time.

**ANTHRO 41. Genes and Identity. 3 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race. Same as: AFRICAAM 41, CSRE 41A

**ANTHRO 42. Megacities. 5 Units.**

In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.

Same as: ARTHIST 242B

**ANTHRO 440. Teaching Assistantship. 3-5 Units.**

Supervised experience as assistant in one undergraduate course.

**ANTHRO 441. Master's Research Thesis. 1-15 Unit.**

Supervised work for terminal and coterminal master's students writing the master's project in the final quarter of the degree program.

**ANTHRO 442. Reading Group. 2-3 Units.**

Graduate student reading group on a thematic topic of interest. Intended for first or second-year cohort PhD students. Sections: Liisa Malkki, Sylvia Yanagisako, Thomas Hansen, Paulla Ebron, and Miyako Inoue.

**ANTHRO 444. Anthropology Colloquium. 1 Unit.**

Department Colloquia Lecture Series. Lectures presented on a variety of anthropological topics. Colloquium is intended for the Department of Anthropology's under graduate majors and graduate students. May be repeated for credit.

**ANTHRO 445. Anthropology Brown Bag Series. 1 Unit.**

Current topics and trends in cultural/social anthropology, archaeology, and environmental and ecological anthropology. Enrollment in this noon-time series is restricted to the Department of Anthropology Master's students and First and Second-year PhD students.

**ANTHRO 450. Research Apprenticeship. 1-15 Unit.**

Supervised work on a research project with an individual faculty member. May be repeated for credit.

**ANTHRO 451. Directed Individual Study. 1-15 Unit.**

Supervised work for a qualifying paper, examination, or project with an individual faculty member.

**ANTHRO 452. Graduate Internship. 3-5 Units.**

Provides graduate students with the opportunity to pursue their area of specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency.

**ANTHRO 49. Violence and Belonging in the Middle East. 5 Units.**

This course examines politics in the Middle East from an anthropological perspective. We will explore the symbolic expression of political identities, the effects of religious revival on political institutions, and the tumultuous culture of protest in the region. Readings discuss the historical development of rights and citizenship, Islamic politics, sectarian tensions, and imaginings of revolution. Course materials are drawn from ethnographic studies and films, which provide a rich contextualization of social life and cultural politics in the region.

**ANTHRO 54A. Central Asia Through Films: A Weekly 3-Hour Seminar. 3-5 Units.**

Through films this course explores major issues of contemporary peoples of Central Asia while learning fundamental concepts in cultural anthropology. In this seminar we will consider a wide range of examples, including first of all the new feature films, which will be used as a window into the modern reality and therefore could be served in a certain sense as anthropological fieldwork data. Films are prearranged by the instructor according to certain thematic subjects for in-class discussions.

Same as: REES 54A

**ANTHRO 6. Human Origins. 5 Units.**

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 206, HUMBIO 6

**ANTHRO 64Q. These languages were here first: A look at the indigenous languages of California. 3 Units.**

Stanford was built on land originally inhabited by the Muwekma Ohlone tribe, and Native American students have always held an important place in the university community from the writer and journalist John Milton Oskison (Cherokee) who graduated in 1894 to current enrolments of over three hundred students who represent over fifty tribes. Two hundred years ago, the Muwekma language was one of a hundred languages that made California one of the most linguistically-diverse places on earth. Today, less than half of these languages survive but many California Indian communities are working hard to maintain and revitalize them. This is a familiar pattern globally: languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. Focusing especially on California, this course seeks to find out how and why languages die; what is lost from a culture when that occurs; and how "sleeping" languages might be revitalized. We will take a field trip to a Native American community in northern California to witness first-hand how one community is bringing back its traditional language, songs, dances, and story-telling. We will learn from visiting indigenous leaders and linguistic experts who will share their life, language, and culture with the class. Through weekly readings and discussion, we will investigate how languages can be maintained and revitalized by methods of community- and identity-building, language documentation and description, the use of innovative technologies, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. Finally, the course will examine ethical modes of fieldwork within endangered-language communities.

Same as: LINGUIST 64Q, NATIVEAM 64Q

**ANTHRO 801. TGR Project. 0 Units.**

.

**ANTHRO 802. TGR Dissertation. 0 Units.**

.

**ANTHRO 82. Medical Anthropology. 4 Units.**

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 282, HUMBIO 176A

**ANTHRO 82P. The Literature of Psychosis. 3-5 Units.**

One of the great gifts of literature is its ability to give us insight into the internal worlds of others. This is particularly true of that state clinicians call "psychosis." But psychosis is a complex concept. It can be terrifying and devastating for patients and families, and yet shares characteristics with other, less pathological states, such as mysticism and creativity. How then can we begin to make sense of it? In this course, we will examine the first-hand experience of psychosis. We will approach it from multiple perspectives, including clinical descriptions, works of art, and texts by writers ranging from Shakespeare, to the science fiction writer Philip K. Dick, to patients attempting to describe their experience. This class is not only for students thinking of careers in medicine, psychology or anthropology, but also readers and writers interested exploring extraordinary texts. There are no prerequisites necessary; all that is needed is a love of language and a curiosity about the secrets of other minds.

Same as: HUMBIO 162L, PSYC 82, PSYC 282

**ANTHRO 90B. Theory of Cultural and Social Anthropology. 5 Units.**

Preference to Anthropology majors. Anthropological interpretations of other societies contain assumptions about Western societies. How underlying assumptions and implicit categories have influenced the presentation of data in major anthropological monographs. Emphasis is on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of non-Western societies.

**ANTHRO 90C. Theory of Ecological and Environmental Anthropology. 5 Units.**

Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America.

Same as: HUMBIO 118

**ANTHRO 91. Method and Evidence in Anthropology. 5 Units.**

This course provides a broad introduction to various ways of designing anthropological questions and associated methods for collecting evidence and supporting arguments. We review the inherent links between how a question is framed, the types of evidence that can address the question, and way that data are collected. Research activities such as interviewing, participant observation, quantitative observation, archival investigation, ecological survey, linguistic methodology, tracking extended cases, and demographic methods are reviewed. Various faculty and specialists will be brought in to discuss how they use different types of evidence and methods for supporting arguments in anthropology.

**ANTHRO 91A. Archaeological Methods. 5 Units.**

Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions.

Same as: ARCHLGY 102

**ANTHRO 92A. Undergraduate Research Proposal Writing Workshop. 2-3 Units.**

Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

**ANTHRO 92B. Undergraduate Research Proposal Writing Workshop. 2-3 Units.**

Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

**ANTHRO 93. Prefield Research Seminar. 5 Units.**

For Anthropology majors only; non-majors register for 93B. Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisites: two ANTHRO courses or consent of instructor.

**ANTHRO 93B. Prefield Research Seminar: Non-Majors. 5 Units.**

Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies for successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Service Learning Course (certified by Haas Center).

**ANTHRO 94. Postfield Research Seminar. 5 Units.**

Goal is to produce an ethnographic report based on original field research gathered during summer fieldwork, emphasizing writing and revising as steps in analysis and composition. Students critique classmates' work and revise their own writing in light of others' comments. Ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts.

**ANTHRO 95. Research in Anthropology. 1-10 Unit.**

Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of a senior paper or an honors project. May be repeated for credit.

**ANTHRO 95B. Directed Study in Honors and Senior Papers. 1-10 Unit.**

Taken in the final quarter before graduation. Independent study and work on senior paper for students admitted to the program. Prerequisite: consent of program adviser and instructor.

**ANTHRO 96. Directed Individual Study. 1-10 Unit.**

Prerequisite: consent of instructor.

**ANTHRO 97. Internship in Anthropology. 1-10 Unit.**

Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit. Service Learning Course (certified by Haas Center).

**ANTHRO 98B. Digital Methods in Archaeology. 3-5 Units.**

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.

Same as: ANTHRO 298B, ARCHLGY 98B

**ANTHRO 98C. Digital Methods in Anthropology. 3-5 Units.**

The course provides an introduction to a broad range of digital tools and techniques for anthropological research. It is geared towards those interested in exploring such methodologies for their research and wanting to add hands-on experience with state-of-the-art digital tools to their skill set. Students will learn to work with some of the most common tools used to collect and manage digital data, and to perform various types of analysis and visualization. Undergraduate students register for 5 Units, Graduate students can register for 5 or 3 units.

Same as: ANTHRO 298C

**ANTHRO 98E. Catalhoyuk and Neolithic Archaeology. 1-3 Unit.**

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

**ANTHRO 98F. Field School Training Workshop. 1-3 Unit.**

Provides students important preparatory orientation to anthropology as well as the methods, ethics, and logistics of the specific field school each student will be attending in the summer.

## Athletics, Phys Ed, Recreation (ATHLETIC)

**ATHLETIC 1. Thriving in Athletics: Health and Wellness Concepts. 2 Units.**

Develops the understanding, self-awareness, confidence, and skills necessary for students to serve as a resource for their peers in the areas of building resilience, promoting wellbeing, and supporting emotional balance. Examines personal values, identity, signature strengths, self-care and stress management practices, signs and symptoms of common mental health concerns, and barriers for care-seeking in the student population. Develops skills for enhancing personal well-being, communication, connecting students with existing resources, and promoting a culture of support, health and wellness.

**ATHLETIC 47. VARSITY - Water Polo. 1-2 Unit.**

Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit. Same as: Men

**ATHLETIC 48. VARSITY - Water Polo. 1-2 Unit.**

Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit. Same as: Women

**ATHLETIC 49. VARSITY - Wrestling. 1-2 Unit.**

Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

**ATHLETIC 60. CLUB - Sport Experience. 1 Unit.**

This course is offered to club sport athletes who participate on credit approved Club Sports teams. Teams who are eligible to receive credit, are required to have a coach and/or administrator to supervise their class. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

**ATHLETIC 61. CLUB - Martial Arts Experience. 1 Unit.**

This course is offered to Martial Arts athletes who participate on credit approved Martial Arts teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of martial arts administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

**ATHLETIC 62. CLUB - Band. 1 Unit.**

This course is offered to club members who participate on credit approved Club Sports teams. All members must complete 30 hours of participation during the quarter. To be eligible for credit, the club must practice 2x a week for a maximum total of 4 hours and participate in 1-3 events in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation. Same as: MUSIC 62

**ATHLETIC 63. CLUB - Climbing. 1 Unit.**

This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

**ATHLETIC 64. CLUB - Equestrian. 1 Unit.**

This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

**ATHLETIC 65. CLUB - Rugby. 1 Unit.**

This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation. Same as: Men

**ATHLETIC 66. CLUB - Rugby. 1 Unit.**

This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation. Same as: Women

**ATHLETIC 67. CLUB - Squash. 1 Unit.**

This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation. Same as: Men

## Bio Hopkins Marine (BIOHOPK)

**BIOHOPK 14. Bio-logging and Bio-telemetry. 3 Units.**

Bio-logging is a rapidly growing discipline that includes diverse fields such as consumer electronics, medicine, and marine biology. The use of animal-attached digital tags is a powerful approach to study the movement and ecology of individuals over a wide range of temporal and spatial scales. This course is an introduction to bio-logging methods and analysis. Using whales as a model system, students will learn how use multi-sensor tags to study behavioral biomechanics.

**BIOHOPK 150H. Ecological Mechanics. 3 Units.**

(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics: fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary. Same as: BIOHOPK 250H

**BIOHOPK 152H. Physiology of Global Change. 2 Units.**

(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.

Same as: BIOHOPK 252H

**BIOHOPK 153H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.**

(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.

Same as: BIOHOPK 253H

**BIOHOPK 154H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.**

Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.

Same as: BIOHOPK 254H

**BIOHOPK 155H. Developmental Biology and Evolution. 4 Units.**

(Graduate students register for 255) This course focusses on how animals form their basic body plans; from the formation of their germ layers; ectoderm, endoderm and mesoderm, to how they are organized along the main developmental axes; the anteroposterior and dorsoventral axes. The course will focus in part on the molecular mechanisms that underlie these developmental decisions from work carried out in established developmental model species. However, we will also explore the current understanding of how these mechanisms evolved from new insights from emerging models representing a broad range of animal phyla. The setting at Hopkins Marine Station will allow us to carry out experiments from animals collected in the field, and the course will involve a substantial lab component to complement concepts and approaches presented in lecture. nPre-requisites : Biocore or by permission of instructor.

Same as: BIOHOPK 255H

**BIOHOPK 156H. Hands-On Neurobiology: Structure, Function and Development. 6 Units.**

This laboratory course will examine neural and neuromuscular systems at a cellular level in selected vertebrate and invertebrate taxa using anatomical, physiological and molecular approaches. Intracellular dye injections and confocal microscopy will be used to visualize neuronal structure. Ca-imaging will permit functional analysis of living neurons. Electrical recording methods will be used to explore principles of excitability, synaptic transmission, sensory pathways and neural integration. Development of neural systems will be studied using molecular visualization methods. Work in the lab will be supplemented with informal lectures and discussions, and results of the labs will be reviewed weekly. Two 4-hour afternoon lab sessions per week.

Same as: BIOHOPK 256H

**BIOHOPK 160H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.**

(Graduate students register for 261H). Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.

Same as: BIOHOPK 260H

**BIOHOPK 161H. Invertebrate Zoology. 5 Units.**

(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors.

Same as: BIOHOPK 261H

**BIOHOPK 162H. Comparative Animal Physiology. 5 Units.**

(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Consent of instructor.

Same as: BIOHOPK 262H

**BIOHOPK 163H. Oceanic Biology. 4 Units.**

(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, or consent of instructor.

Same as: BIOHOPK 263H

**BIOHOPK 165H. The Extreme Life of the Sea. 3 Units.**

(Graduate students register for 265H). Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments.

Same as: BIOHOPK 265H

**BIOHOPK 166H. Molecular Ecology. 5 Units.**

(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.

Same as: BIOHOPK 266H

**BIOHOPK 167H. Nerve, Muscle, and Synapse. 5 Units.**

(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, calculus; or consent of instructor.

Same as: BIOHOPK 267H

**BIOHOPK 168H. Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations. 3 Units.**

(Graduate students register for 268H.) Course will lead participants on a journey through the dynamics of infectious diseases that will start at the smallest level from within-host parasite dynamics and will progressively scale up to parasite evolution, disease ecology, public health policies, disease driven poverty traps and the socio-economic impact of infectious diseases on nations. The course will be organized around case studies, including among the others, schistosomiasis, malaria, cholera and sleeping sickness. Participants will have the opportunity to develop a capstone project.

Same as: BIOHOPK 268H

**BIOHOPK 172H. Marine Ecology: From Organisms to Ecosystems. 5 Units.**

(Graduate students register for 272H.) This course incorporates the approaches of experimental ecology, biomechanics (ecomechanics), and physiology to develop an integrated perspective on the factors that govern the structures of marine ecosystems and how environment change, including anthropogenic influences, affects ecosystems' species composition and health. Focus is on rocky intertidal, kelp forest, estuarine, and midwater ecosystems of Monterey Bay. Experimental projects done in the field offer experience in a variety of ecological techniques and in analysis of ecological data. Students will engage in presentation and debates of current topics in marine ecology and conservation. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: consent of instructor. Fulfills WIM in Biology. Same as: BIOHOPK 272H

**BIOHOPK 173H. Marine Conservation Biology. 4 Units.**

(Graduate students register for 273H.) Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus is on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course. Same as: BIOHOPK 273H

**BIOHOPK 174H. Experimental Design and Probability. 3 Units.**

(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor. Same as: BIOHOPK 274H

**BIOHOPK 177H. Dynamics and Management of Marine Populations. 4 Units.**

(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions. Same as: BIOHOPK 277H

**BIOHOPK 179H. Physiological Ecology of Marine Megafauna. 3 Units.**

(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to student marine megafauna in some of the most logistically challenging habitats on earth. Same as: BIOHOPK 279H

**BIOHOPK 180H. Air and Water. 3 Units.**

(Graduate students register for 280H.) Introduction to environmental physics. The physical properties of life's fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: PHYSICS 21, 23, or 51, 53; calculus; Biology core; or consent of instructor. Same as: BIOHOPK 280H

**BIOHOPK 181H. Physiology of Global Change. 2 Units.**

(Graduate students register for 281H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits. Same as: BIOHOPK 281H

**BIOHOPK 182H. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. Same as: BIOHOPK 323H, EARTHSYS 323, ESS 323

**BIOHOPK 184H. Holistic Biology. 16 Units.**

(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major. Same as: BIOHOPK 284H

**BIOHOPK 185H. Ecology and Conservation of Kelp Forest Communities. 5 Units.**

(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on kelp forest biology. Topics include identification and natural history of resident organisms, ecological processes that maintain biodiversity and community organization, field methods, data analysis, and research diving techniques. Class projects contribute to ongoing studies associated with Hopkins Marine Life Observatory. It is recommended that students complete one of Stanford's Scientific Diver Training sessions, offered during spring break and the week before the course starts, although this is not a requirement. Prerequisites: consent of instructor; advanced scuba certification and scuba equipment. Same as: BIOHOPK 285H

**BIOHOPK 187H. Sensory Ecology. 4 Units.**

(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.

Same as: BIOHOPK 287H

**BIOHOPK 189H. Sustainability and Marine Ecosystems. 3 Units.**

(Graduate students register for 289H.) The health of marine ecosystems is in decline due to overfishing, pollution, habitat damage, invasive species, and climate change. Because human communities are tightly coupled to coastal marine resources, understanding pathways to sustainability require understanding as much about humans as about the ocean. In this course, we explore factors that contribute to the sustainability and resilience of marine ecosystems and the human communities that depend upon them. This course is based on readings in the primary literature, discussions, and student projects.

Same as: BIOHOPK 289H

**BIOHOPK 198H. Directed Instruction or Reading. 1-15 Unit.**

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biology majors and requires department approval. May be repeated for credit. (Staff).

**BIOHOPK 199H. Undergraduate Research. 1-15 Unit.**

Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.

**BIOHOPK 234H. Topics in Comparative and Environmental Physiology. 1 Unit.**

Seminar and discussion focused on current topics and research at the interface of physiology and ecology.

**BIOHOPK 250H. Ecological Mechanics. 3 Units.**

(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics. fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary.

Same as: BIOHOPK 150H

**BIOHOPK 252H. Physiology of Global Change. 2 Units.**

(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.

Same as: BIOHOPK 152H

**BIOHOPK 253H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.**

(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.

Same as: BIOHOPK 153H

**BIOHOPK 254H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.**

Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.

Same as: BIOHOPK 154H

**BIOHOPK 255H. Developmental Biology and Evolution. 4 Units.**

(Graduate students register for 255) This course focusses on how animals form their basic body plans; from the formation of their germ layers; ectoderm, endoderm and mesoderm, to how they are organized along the main developmental axes; the anteroposterior and dorsoventral axes. The course will focus in part on the molecular mechanisms that underlie these developmental decisions from work carried out in established developmental model species. However, we will also explore the current understanding of how these mechanisms evolved from new insights from emerging models representing a broad range of animal phyla. The setting at Hopkins Marine Station will allow us to carry out experiments from animals collected in the field, and the course will involve a substantial lab component to complement concepts and approaches presented in lecture. nPre-requisites : Biocore or by permission of instructor.

Same as: BIOHOPK 155H

**BIOHOPK 256H. Hands-On Neurobiology: Structure, Function and Development. 6 Units.**

This laboratory course will examine neural and neuromuscular systems at a cellular level in selected vertebrate and invertebrate taxa using anatomical, physiological and molecular approaches. Intracellular dye injections and confocal microscopy will be used to visualize neuronal structure. Ca-imaging will permit functional analysis of living neurons. Electrical recording methods will be used to explore principles of excitability, synaptic transmission, sensory pathways and neural integration. Development of neural systems will be studied using molecular visualization methods. Work in the lab will be supplemented with informal lectures and discussions, and results of the labs will be reviewed weekly. Two 4-hour afternoon lab sessions per week.

Same as: BIOHOPK 156H

**BIOHOPK 260H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.**

(Graduate students register for 261H). Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.

Same as: BIOHOPK 160H

**BIOHOPK 261H. Invertebrate Zoology. 5 Units.**

(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors.

Same as: BIOHOPK 161H

**BIOHOPK 262H. Comparative Animal Physiology. 5 Units.**

(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Consent of instructor.

Same as: BIOHOPK 162H

**BIOHOPK 263H. Oceanic Biology. 4 Units.**

(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, or consent of instructor.

Same as: BIOHOPK 163H

**BIOHOPK 264H. POPULATION GENOMICS. 1-2 Unit.**

Introduces students to the analysis of single nucleotide polymorphism data from next generation sequencing projects. Computer analysis, hypothesis testing, and projects based on existing data sets will be pursued.

**BIOHOPK 265H. The Extreme Life of the Sea. 3 Units.**

(Graduate students register for 265H.) Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments.

Same as: BIOHOPK 165H

**BIOHOPK 266H. Molecular Ecology. 5 Units.**

(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.

Same as: BIOHOPK 166H

**BIOHOPK 267H. Nerve, Muscle, and Synapse. 5 Units.**

(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, calculus; or consent of instructor.

Same as: BIOHOPK 167H

**BIOHOPK 268H. Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations. 3 Units.**

(Graduate students register for 268H.) Course will lead participants on a journey through the dynamics of infectious diseases that will start at the smallest level from within-host parasite dynamics and will progressively scale up to parasite evolution, disease ecology, public health policies, disease driven poverty traps and the socio-economic impact of infectious diseases on nations. The course will be organized around case studies, including among the others, schistosomiasis, malaria, cholera and sleeping sickness. Participants will have the opportunity to develop a capstone project.

Same as: BIOHOPK 168H

**BIOHOPK 272H. Marine Ecology: From Organisms to Ecosystems. 5 Units.**

(Graduate students register for 272H.) This course incorporates the approaches of experimental ecology, biomechanics (ecomechanics), and physiology to develop an integrated perspective on the factors that govern the structures of marine ecosystems and how environment change, including anthropogenic influences, affects ecosystems' species composition and health. Focus is on rocky intertidal, kelp forest, estuarine, and midwater ecosystems of Monterey Bay. Experimental projects done in the field offer experience in a variety of ecological techniques and in analysis of ecological data. Students will engage in presentation and debates of current topics in marine ecology and conservation. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: consent of instructor. Fulfills WIM in Biology.

Same as: BIOHOPK 172H

**BIOHOPK 273H. Marine Conservation Biology. 4 Units.**

(Graduate students register for 273H.) Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course.

Same as: BIOHOPK 173H

**BIOHOPK 274. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.

Same as: BIO 274S, CEE 274S, ESS 253S

**BIOHOPK 274H. Experimental Design and Probability. 3 Units.**

(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 174H

**BIOHOPK 275H. Synthesis in Ecology. 2 Units.**

Introduction to frameworks and approaches to synthesizing large data sets, including meta-analysis and permutational multivariate analysis of variance. Hands-on data analysis sessions. May be repeated for credit.

**BIOHOPK 276H. Estimates and Errors: The Theory of Scientific Measurement. 3 Units.**

Measurement plays a fundamental role in science, but many biologists have no formal training in what it means to measure something. Errors are inevitable in any measurement. Which are inherent, and which can be controlled? How do errors propagate? How can you decide which data to reject? When are uncertainties normal? In this course we will work our way into the theory of measurement, covering some topics that overlap with inferential statistics (but from a new and perhaps more intuitive perspective), and extending beyond those basics to include spectral analysis and the dangers of measurement in the digital realm.

**BIOHOPK 277H. Dynamics and Management of Marine Populations. 4 Units.**

(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions.

Same as: BIOHOPK 177H

**BIOHOPK 279H. Physiological Ecology of Marine Megafauna. 3 Units.**

(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to study marine megafauna in some of the most logistically challenging habitats on earth.

Same as: BIOHOPK 179H

**BIOHOPK 280. Short Course on Ocean Policy. 3 Units.**

The course will introduce graduate students in the natural and social sciences to ocean policy and governance in the US at national, regional, state, and local levels. Together with leaders in ocean science and policy, students will examine pressing issues in ocean sustainability from natural science, social science, and legal and policy perspectives, with an emphasis on the role of science in the policy and governance processes. Students will learn and apply practical skills in communication, leadership and interdisciplinary problem-solving through participation in a group project, interactive discussions and simulations, and field trips. Prerequisite: consent of instructor and by application due in winter.

**BIOHOPK 280H. Air and Water. 3 Units.**

(Graduate students register for 280H.) Introduction to environmental physics. The physical properties of life's fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: PHYSICS 21, 23, or 51, 53; calculus; Biology core; or consent of instructor.

Same as: BIOHOPK 180H

**BIOHOPK 281H. Physiology of Global Change. 2 Units.**

(Graduate students register for 281H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.

Same as: BIOHOPK 181H

**BIOHOPK 284H. Holistic Biology. 16 Units.**

(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 184H

**BIOHOPK 285H. Ecology and Conservation of Kelp Forest Communities. 5 Units.**

(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on kelp forest biology. Topics include identification and natural history of resident organisms, ecological processes that maintain biodiversity and community organization, field methods, data analysis, and research diving techniques. Class projects contribute to ongoing studies associated with Hopkins Marine Life Observatory. It is recommended that students complete one of Stanford's Scientific Diver Training sessions, offered during spring break and the week before the course starts, although this is not a requirement. Prerequisites: consent of instructor; advanced scuba certification and scuba equipment.

Same as: BIOHOPK 185H

**BIOHOPK 287H. Sensory Ecology. 4 Units.**

(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.

Same as: BIOHOPK 187H

**BIOHOPK 289H. Sustainability and Marine Ecosystems. 3 Units.**

(Graduate students register for 289H.) The health of marine ecosystems is in decline due to overfishing, pollution, habitat damage, invasive species, and climate change. Because human communities are tightly coupled to coastal marine resources, understanding pathways to sustainability require understanding as much about humans as about the ocean. In this course, we explore factors that contribute to the sustainability and resilience of marine ecosystems and the human communities that depend upon them. This course is based on readings in the primary literature, discussions, and student projects.

Same as: BIOHOPK 189H

**BIOHOPK 290H. Teaching of Biological Science. 1-15 Unit.**

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. Prerequisite: consent of instructor.nn (Staff).

**BIOHOPK 299H. Advanced Topics in Marine Conservation. 2 Units.**

Graduate students only. Topics will change from year to year but will include such topics as sustainable fisheries, protected areas, ocean planning, social-ecological systems, dynamic management, sustainable seafood, and impacts of climate change.

**BIOHOPK 300H. Research. 1-15 Unit.**

Graduate study involving original work undertaken with staff in the fields indicated. B. Block: Comparative Vertebrate Physiology (biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy); L. Crowder: Marine ecology, fisheries, bycatch, integrating science and policy, marine conservation; G. De Leo: Population dynamics and management, wildlife diseases, environmental policies and sustainable development; M. Denny: Biomechanics (the mechanical properties of biological materials and their consequences for animal size, shape, and performance); W. Gilly: Neurobiology (analysis of giant axon systems in marine invertebrates from molecular to behavioral levels); J. Goldbogen: Physiological and Behavioral Ecology (functional morphology and biomechanics of marine organisms); C. Lowe: Evolution of Development (origin of chordates, early evolution of body plans); F. Micheli: Marine Ecology (species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology); S. Palumbi: Molecular Evolution (mechanisms of speciation, genetic differentiations of populations, use of molecular tools in conservation biology, design of marine protected areas); S. Thompson: Neurobiology (neuronal control of behavior and mechanisms of ion permeation, signal transduction, calcium homeostasis, and neurotransmission); J. Watanabe: Marine Ecology (kelp forest ecology and invertebrate zoology).

**BIOHOPK 315H. Career Development for Graduate Students. 2 Units.**

The course will cover multiple skills required to succeed in graduate school and beyond, including fund raising, publishing, selecting career options, job application and negotiation, and teaching, through lectures, group discussions, and practical exercises.

**BIOHOPK 320H. Physical Biology. 3 Units.**

Physics, mathematics, and biology are often studied as separate subjects. In this two-week intensive course we will attempt to bring them together in a dynamic combination of lectures and hands on projects. We will draw on the diverse flora and fauna of Monterey Bay for our experimental organisms, and will take advantage of the facilities at Hopkins Marine Station to explore questions at levels ranging from molecules to ecological communities.

**BIOHOPK 323H. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. Same as: BIOHOPK 182H, EARTHYSYS 323, ESS 323

**BIOHOPK 330H. Scientific Writing. 2 Units.**

This writer's seminar will workshop the elements of good scientific writing by focusing on a paper's Introduction. We will chart the elements of an effective Introduction, designed for different audiences and types of scientific journals. The course will provide participants with the chance to craft an Introduction to a current paper or proposal and have it evaluated in light of the ideal structure we define.

**BIOHOPK 43. Plant Biology, Evolution, and Ecology. 5 Units.**

Introduction to biology in a marine context. Principles of plant biology: physiology, structure, diversity. Principles of evolution: macro and microevolution, population genetics. Ecology: the principles governing the distribution and abundance of organisms; population, community, and ecosystem ecology. Equivalent to BIO 43. Corequisite: BIOHOPK 47.

**BIOHOPK 47. Introduction to Research in Ecology and Ecological Physiology. 5 Units.**

This course is a field-based inquiry into rocky intertidal shores that introduces students to ecology and environmental physiology and the research methods used to study them. Students will learn how to detect patterns quantitatively in nature through appropriate sampling methods & statistical analysis. Following exploration of appropriate background material in class and through exploration of the scientific literature, students will learn how to formulate testable hypotheses regarding the underlying causes of the patterns they discern. A variety of different aspects of ecology and physiology will be investigated cooperatively by the students during the quarter, culminating in development of an individual final paper in the form of a research proposal based on data collected during the course. The course will provide a broad conceptual introduction to the underlying biological principles that influence adaptation to the planet's dynamic habitats, as well as inquiry-based experience in how to explore and understand complex systems in nature. This course fulfills the same laboratory requirement as BIO 47. Satisfies WIM in Biology.

**BIOHOPK 801H. TGR Project. 0 Units.****BIOHOPK 802H. TGR Dissertation. 0 Units.****BIOHOPK 81. Introduction to Ecology. 4 Units.**

The course is designed to provide background on key concepts in ecology, familiarize students with key ecological processes and ecosystems, and the methods used in ecological studies. The course will further build students' skills in critical scientific thinking, reading the literature, and scientific communication. A major goal of the course is to train students to ask questions in ecology, and to design, conduct and report studies addressing these questions. Thus, emphasis is also placed, in addition to general ecological concepts, on field observations, experimental design, and the analysis, interpretation and presentation of ecological data (through computer laboratories, written assignments and presentations). Written assignments, presentations and discussions are designed to provide experience in organizing and presenting information and to expose students to multiple perspectives on ecological processes and their applications. This course fulfills the same requirement as BIO 81.

**BIOHOPK 84. Physiology. 4 Units.**

This course will examine basic physiological systems of vertebrate and invertebrate animals, including nerve and muscle, heart and circulation, kidney and osmoregulation, metabolism, and thermoregulation. This course fulfills the same requirement as BIO 84.

**BIOHOPK 85. Evolution. 4 Units.**

Principles of micro- and macro-evolution from molecular genetics to the development of biological diversity. Adaptation, divergence and natural selection in the past and in contemporary ecological settings. Evolution of humans and human-caused evolution. Emphasis on major body plans in the sea and ocean examples of major evolutionary processes. This course fulfills the same requirements as BIO 85.

## Biology (BIO)

### **BIO 104. Advanced Molecular Biology. 5 Units.**

Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core. Same as: BIO 200

### **BIO 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course. Same as: EARTHSYS 105A

### **BIO 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course. Same as: EARTHSYS 105B

### **BIO 107. Human Physiology Laboratory. 4 Units.**

This laboratory course is active and inquiry based. Aspects of exercise and temperature are explored; however, the specific questions the class tackles differ each quarter. Samples of past questions: Does lactic acid accumulation correlate with exercise fatigue at different exercise and body temperatures? Does palm cooling during exercise mitigate the effect of body temperature on fatigue with or without evaporative cooling? Students participate both as experimenters and as subjects of the experiments in two-person teams. Participants must be in good physical condition, though not necessarily athletes, and must be willing to participate in strenuous exercise routines under adverse environmental conditions. Varsity athletes concurrently participating in a spring sport must consult the instructor before applying. Discussion sessions include student presentations of journal articles, data analyses, and feedback on individual WIM research proposals. By application only, see [sites.stanford.edu/bio107humbio136](https://sites.stanford.edu/bio107humbio136) for the application form. Prerequisite: Bio 42 or HumBio 4A. Satisfies WIM for Biology. Same as: HUMBIO 136

### **BIO 108. Essential Statistics for Human Biology. 4 Units.**

Introduction to statistical concepts and methods that are essential to the study of questions in biology, environment, health and related areas. The course will teach and use the computer language R and Python (you learn both, choose one). Topics include distributions, probabilities, likelihood, linear models; illustrations will be based on recent research. Same as: HUMBIO 85A

### **BIO 109A. The Human Genome and Disease. 3 Units.**

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both. Same as: BIOC 109A, BIOC 209A, HUMBIO 158

### **BIO 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine. 3 Units.**

Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both. Same as: BIOC 109B

### **BIO 10AX. Conservation Photography. 2 Units.**

Account of the genre of conservation photography and strategic use of visual communication in the environmental arena. Introduction to use of digital SLR cameras and digital image processing. Case studies of conservation issues accompanied by multimedia platforms including images, video, and audio. Theory and application of photographic techniques. Lectures, tutorials, demonstrations, and field trips. Individual and group projects.

**BIO 10SC. Natural History, Marine Biology, and Research. 2 Units.**

Monterey Bay is home to the nation's largest marine sanctuary and also home to Stanford's Hopkins Marine Station. This course, based at Hopkins, explores the spectacular biology of Monterey Bay and the artistic and political history of the region. We will conduct investigations across all of these contexts toward an inclusive understanding of place, ultimately to lead us to explore our own lives in relation to the natural world, historical and cultural milieu, and the direction of our individual life path. The location at the entry point to the Big Sur Coast of California provides a unique outdoor laboratory in which to study the biology of the bay and the adjacent coastal lands. It is also an area with a deep cultural, literary and artistic history. We will meet marine biologists, experts in the literary history of Cannery Row and the writings of John Steinbeck, local artists and photographers, experts in the neuroscience of creativity, as well as people who are very much involved in the forces and fluxes that steer modern culture. This rich and immersive approach provides students a rare opportunity to reflect on their relationships to nature, culture, and their own individual goals. The course emphasizes interactions and discussions. We will be together all of the time, either at our base at the Belden House in Pacific Grove, hiking and camping in Big Sur's pristine Big Creek Reserve on the rocky coast, and traveling to the Tassajara Mountain Zen Center in the Ventana wilderness for several days. This is not an ordinary academic experience, instead it is an adventure of a personal, intellectual, spiritual and physical kind. We welcome people with wide interests; artists, poets, writers, engineers, scientists and musicians. Mostly we invite people with an open mind and a sense of adventure. Students are expected to have read the several books provided as introductory material before the course begins, and each is also expected to become our local expert in an area such as plant identification, bird identification, poetry, weather prediction, photography, history, ethnography, etc. The course requires an individual research project of your choice on a topic related to the general theme. Final reports will be presented at the last meeting of the group and may involve any medium, including written, oral, and performance media. Note: This course will be held at the Hopkins Marine Station in the Monterey region, and housing will be provided nearby. Transportation from campus to the housing site will be provided once students arrive to campus on Monday, September 4 (Labor Day). Transportation to campus from the Belden House in Pacific Grove will be provided on Saturday, September 23.

**BIO 110. Chromatin Regulation of the Genome. 3 Units.**

Maintenance of the genome is a prerequisite for life. In eukaryotes, all DNA-templated processes are tightly connected to chromatin structure and function. This course will explore epigenetic and chromatin regulation of cellular processes related to aging, cancer, stem cell pluripotency, metabolic homeostasis, and development. Course material integrates current literature with a foundational review of histone modifications and nucleosome composition in epigenetic inheritance, transcription, replication, cell division and DNA damage responses. Prerequisite: BIO 41 or consent of instructor. Same as: BIO 210

**BIO 112. Human Physiology. 4 Units.**

Human physiology will be examined by organ systems: cardiovascular, respiratory, renal, gastrointestinal and endocrine. Molecular and cell biology and signaling principles that underlie organ development, pathophysiology and opportunities for regenerative medicine are discussed, as well as integrative control mechanisms and fetal development. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor. Same as: HUMBIO 133

**BIO 113. Fundamentals of Molecular Evolution. 4 Units.**

The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor. Same as: BIO 244

**BIO 115. The Hidden Kingdom - Evolution, Ecology and Diversity of Fungi. 4 Units.**

Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will choose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: Bio 43 recommended. Same as: BIO 239

**BIO 116. Ecology of the Hawaiian Islands. 4 Units.**

Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program. Same as: EARTHSYS 116

**BIO 117. Biology and Global Change. 4 Units.**

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. Same as: EARTHSYS 111, ESS 111

**BIO 118. Genetic Analysis of Biological Processes. 4 Units.**

Focus is on using mutations and genetic analysis to study biological and medical questions. The first portion of the course covers how the identification and analysis of mutations can be used in model systems to investigate biological processes such as development and metabolism. In the second portion of the course, we focus on the use of existing genetic variation in humans and other species to identify disease-associated genes as well as to investigate variation in morphological traits such as body size and shape. This course will be offered for a final time in Winter 2017-18 and then discontinued. Students who have taken BIO 82 may not enroll in BIO 118.

**BIO 119. Evolution of Marine Ecosystems. 3-4 Units.**

Life originally evolved in the ocean. When, why, and how did the major transitions occur in the history of marine life? What triggered the rapid evolution and diversification of animals in the Cambrian, after more than 3.5 billion years of Earth's history? What caused Earth's major mass extinction events? How do ancient extinction events compare to current threats to marine ecosystems? How has the evolution of primary producers impacted animals, and how has animal evolution impacted primary producers? In this course, we will review the latest evidence regarding these major questions in the history of marine ecosystems. We will develop familiarity with the most common groups of marine animal fossils. We will also conduct original analyses of paleontological data, developing skills both in the framing and testing of scientific hypotheses and in data analysis and presentation. Same as: EARTHSYS 122, GS 123, GS 223B

**BIO 120. Bacteria in Health and Disease. 3 Units.**

Enrollment limited to junior and senior undergraduates, graduate students and medical students. Introduces students to the bacteria that live in and on humans and, in some cases, can cause disease and sometimes death. Topics include the biology of the interaction of the simple microbe with complex human biology and the factors that determine whether or not we coexist relatively peacefully, suffer from overt disease, or succumb to the bacterial onslaught.

Same as: MI 120

**BIO 124. Topics in Cancer Biology. 3 Units.**

This discussion-based course will explore the scientific tools used to study the molecular and genetic basis of cancer and to develop treatments for this disease. Topics covered may include cancer models, traditional and targeted cancer therapies, and the development of resistance to treatment. Students will develop skills in critical reading of primary research articles and will also complete a final project. Prerequisites: Biology/Human Biology core or equivalent or consent of instructor.

**BIO 125. Ecophysiology and Land Surface Processes. 4 Units.**

Ecological and physical processes of ecosystem function, spanning from the micrometer scale of plant physiological processes to the ecosystem and global scale. Emphasizes interactions between ecological processes and the physical world at the land surface and in the atmosphere.

Same as: ESS 123, ESS 223

**BIO 126. Introduction to Biophysics. 3-4 Units.**

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: APPPHYS 205, BIO 226

**BIO 12N. Sensory Ecology of Marine Animals. 3 Units.**

Animals living in the oceans experience a highly varied range of environmental stimuli. An aquatic lifestyle requires an equally rich range of sensory adaptations, including some that are totally foreign to us. In this course we will examine sensory system in marine animals from both an environmental and behavioral perspective and from the point of view of neuroscience and information systems engineering.

**BIO 131. Complex Systems Lab. 1 Unit.**

Applications of complex systems will be explored in this seminar through lectures, discussions, and a class project. Lecture topics include a discussion of chaos in weather modeling and aircraft turbulence, application of network science to understand Ebola and the ALS ice bucket challenge, and self-organized processes such as crowd dynamics and Wikipedia. The first half of the course will emphasize complex systems applications. Students will apply complex systems analysis techniques to their personal research, a current event, or repeat a classic complex systems experiment. Projects can include topics such as calculating the fractal dimension of a forest, simulating crowd dynamics, studying the degree distribution of social networks, or making a Van der Pol oscillator. Graduate student led seminar. Can be repeated for credit.

**BIO 132. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 232, BIOPHYS 232, GENE 232

**BIO 133. Network analysis for community ecology and conservation research. 2 Units.**

Graduate student led seminar. Plant-pollinator, predator-prey, and parasite-host are all examples of species interactions that can be analyzed using species interaction networks. Network analysis is an incredible tool to understand how ecological communities are impacted by environmental stressors like human development and climate change. In this class, we will review and discuss relevant scientific literature and learn how to manipulate, visualize, and interpret species interaction network data. Students will develop grant-writing skills by producing a culminating research proposal and we will take a field trip to practice species interaction sampling techniques. Prerequisites: BIO 43 or BIO 81 or BIO 85.

**BIO 137. Plant Genetics. 3-4 Units.**

Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Satisfies Central Menu Area 2. Prerequisite: Biology core or consent of instructor. Satisfies WIM in Biology.

**BIO 138. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.**

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests.

Same as: BIO 238, EARTHSYS 139, EARTHSYS 239

**BIO 141. Biostatistics. 3-5 Units.**

Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R.

Same as: STATS 141

**BIO 142. Molecular Geomicrobiology Laboratory. 4 Units.**

In this course, students will be studying the biosynthesis of cyclic lipid biomarkers, molecules that are produced by modern microbes that can be preserved in rocks that are over a billion years old and which geologists use as molecular fossils. Students will be tasked with identifying potential biomarker lipid synthesis genes in environmental genomic databases, expressing those genes in a model bacterial expression system in the lab, and then analyzing the lipid products that are produced. The overall goal is for students to experience the scientific research process including generating hypotheses, testing these hypotheses in laboratory experiments, and communicating their results through a publication style paper. Prerequisites: BIO83 and CHEM35 or permission of the instructor.

Same as: EARTHSYS 143, ESS 143, ESS 243

**BIO 144. Conservation Biology: A Latin American Perspective. 3 Units.**

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class.

Same as: BIO 234, HUMBIO 112

**BIO 145. Ecology and Evolution of Animal Behavior. 3 Units.**

Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core, Biology/ES 30. Recommended: statistics.

Same as: BIO 245

**BIO 146. Population Studies. 1 Unit.**

Series of talks by distinguished speakers introducing approaches to population and resource studies.

**BIO 149. The Neurobiology of Sleep. 4 Units.**

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

Same as: BIO 249, HUMBIO 161

**BIO 150. Human Behavioral Biology. 5 Units.**

Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

Same as: HUMBIO 160

**BIO 151. Mechanisms of Neuron Death. 3 Units.**

For Biology majors with background in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer's), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson's and ALS), triplet repeat diseases (Huntington's), and AIDS-related dementia. Student presentations. Enrollment limited to 15; application required.

**BIO 152. Imaging: Biological Light Microscopy. 3 Units.**

This intensive laboratory and discussion course will provide participants with the theoretical and practical knowledge to utilize emerging imaging technologies based on light microscopy. Topics include microscope optics, resolution limits, Köhler illumination, confocal microscopy, fluorescence, two-photon, TIRF, FRET, photobleaching, super-resolution (SIM, STED, STORM/PALM), and live-cell imaging. Applications include using fluorescent probes to analyze subcellular localization and live cell-translocation dynamics. We will be using a flipped classroom for the course in that students will watch iBiology lectures before class, and class time will be used for engaging in extensive discussion. Lab portion involves extensive in-class use of microscopes in the Stanford Cell Sciences Imaging Facility (CSIF) and Neuroscience Microscopy Core (NMS) microscopy facilities. Monday/Wednesday 1:30-2:50PM, Friday 1:30-4:30PM for 6 weeks (Apr. 2 - May 9), 3 units.

Same as: CSB 222, MCP 222

**BIO 153. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.**

Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology.

Same as: PSYCH 120

**BIO 154. Molecular and Cellular Neurobiology. 4 Units.**

For advanced undergraduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Satisfies Central Menu Areas 2 or 3 for Bio majors. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors.

**BIO 156. Epigenetics. 2 Units.**

Epigenetics is the process by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. Course will cover the molecular mechanisms governing epigenetics, ranging from the discovery of epigenetic phenomena to present-day studies on the role of chromatin, DNA methylation, and RNA in regulating epigenetics processes. Topics include: position effect gene expression, genome regulation, gene silencing & heterochromatin, histone code, DNA methylation & imprinting, epigenetics & disease, and epigenetic-based therapeutics. Prerequisite: BIO41 and BIO42 or consent of instructor, advanced biology course such as Bio104.

Same as: BIO 256

**BIO 157. Biochemistry and Molecular Biology of Plants. 3-4 Units.**

Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor.

Same as: BIO 257

**BIO 158. Developmental Neurobiology. 4 Units.**

For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent.

Same as: BIO 258

**BIO 16. Conservation Storytelling: Pre-course for BOSP South Africa. 1 Unit.**

Limited to students admitted to the BOSP South Africa overseas seminar. Through 4 workshop meetings, students will develop and pitch story ideas, form teams in which a writer and a photographer agree to collaborate on a story, and conduct background research prior to departing for South Africa.

**BIO 160. Developmental Biology. 4 Units.**

This course will cover the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. Topics include the role of cell-cell communication in controlling developmental decisions, the organization and patterning of large groups of cells via morphogen signaling, the specification of individual cell types, and the role of stem cells in development. The course emphasizes the experimental logic and methods of research in developmental biology and includes discussions of research papers.

**BIO 165. Molecular and Cellular Mechanisms of Neurological Disease. 1 Unit.**

Current topics in research and investigative therapies of neurological disorders, including epilepsy, OCD, Alzheimer's disease, stroke and multiple sclerosis. Analysis and discussion of primary research papers as well as sources directed at general public. Emphasis on critical thinking, experimental design, therapeutic approaches. Guest lecturers include Dr. Lawrence Steinman and Dr. Gary Steinberg."

**BIO 167. Insulin and carbohydrate metabolism in health and disease a history of advances 1850 to current. 3 Units.**

The quest to understand how the body uses sugar and the overlapping quest for a diabetes cure have resulted in discoveries in every branch of biology. Topics include insulin production, structure, and evolution; transduction of the insulin signal; transport of sugar into cells; sugar storage and release; how the brain transports and uses sugar; growth control; pancreas development; genetic and environmental causes of diabetes; engineering solutions to diabetes (artificial pancreas, stem cells), glucose homeostasis (modeling insulin action). Prerequisites: BIO 41, 42.

**BIO 168. Explorations in Stem Cell Biology. 3 Units.**

A discussion-based course for advanced undergraduates. The purpose of this course is to introduce students to key topics in stem cell biology and foster the development of strong scientific writing skills. We will review and discuss some landmark and current primary literature in the stem cell field. Topics will include embryonic and adult stem cells, cellular reprogramming and stem cells in disease and regenerative medicine. Students will present a current research paper in their preferred stem cell topic area and compose a novel research proposal. Prerequisites: Biology or Human Biology core. Satisfies WIM in Biology.

**BIO 171. Principles of Cell Cycle Control. 3 Units.**

Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2. Same as: BIO 271, CSB 271

**BIO 173. Chemical Biology. 3 Units.**

Chemical biology is an integrative discipline that seeks to apply chemical tools and approaches to understand biology. This course will introduce students to various methods and approaches used in this field, with an emphasis on the use of natural products and synthetic small molecules as probes of biological function. Specific examples will be used to illustrate the ramifications of chemical biology with molecular, cell and developmental biology. The interaction between disease and drug discovery will be considered in detail. Prerequisites: Completion of BioCore (BIO 41, 42, 43).

**BIO 174. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week. Same as: ANTHRO 175, ANTHRO 275, BIO 274, HUMBIO 180

**BIO 175. Collective Behavior and Distributed Intelligence. 3 Units.**

This course will explore possibilities for student research projects based on presentations of faculty research. We will cover a broad range of topics within the general area of collective behavior, both natural and artificial. Students will build on faculty presentations to develop proposals for future projects. Same as: SYMSYS 275

**BIO 177. Plant Microbe Interaction. 3 Units.**

Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry. Same as: BIO 277

**BIO 178. Microbiology Literature. 3 Units.**

For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as *Salmonella*, *Vibrio*, and/or *Yersinia*. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry. Same as: BIO 278

**BIO 180. Microbial Physiology. 3 Units.**

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry. Same as: EARTHSYS 255, ESS 255, GS 233A

**BIO 182. Modeling Cultural Evolution. 3 Units.**

Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution. Same as: BIO 282

**BIO 183. Theoretical Population Genetics. 3 Units.**

Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor. Same as: BIO 283

**BIO 196A. Biology Senior Reflection. 3 Units.**

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C. Satisfies WIM in Biology.

**BIO 196B. Biology Senior Reflection. 3 Units.**

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.

**BIO 196C. Biology Senior Reflection. 3 Units.**

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.

**BIO 197WA. Senior Writing Project: The Personal Essay in Biology. 3 Units.**

Seminar focused on writing. Compose, workshop and revise scientifically relevant and personal essays in biology directed at a mainstream audience, interweaving research, interview, memoir, and other elements of nonfiction craft. Satisfies WIM in Biology.

**BIO 198. Directed Reading in Biology. 1-15 Unit.**

Individually arranged under the supervision of members of the faculty.

**BIO 198X. Out-of-Department Directed Reading. 1-15 Unit.**

Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biology majors and requires department approval. See <https://biology.stanford.edu/academics/undergraduate-research/directed-reading> for information and petitions. May be repeated for credit.

**BIO 199. Advanced Research Laboratory in Experimental Biology. 1-15 Unit.**

Individual research taken by arrangement with in-department instructors. See <http://biohonors.stanford.edu> for information on research sponsors, units, and credit for summer research. May be repeated for credit.

**BIO 199W. Senior Honors Thesis: How to Effectively Write About Scientific Research. 3 Units.**

Workshop. For seniors pursuing an honors thesis in a biology-focused major or program. Focus on improving scientific writing and synthesizing in the context of students' individual research projects. Complete literature review which will form the basis for the thesis introduction. Develop methods section of the thesis. Small seminar-style discussion sections with research-based discussions, student led PowerPoint presentations, and writing workshops. Co-requisite: Concurrent enrollment in 199 or 199X or equivalent. Satisfies WIM in Biology.

**BIO 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology. 1-15 Unit.**

Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biology majors and requires department approval. See <https://biology.stanford.edu/academics/undergraduate-research/research> for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research. May be repeated for credit.

**BIO 200. Advanced Molecular Biology. 5 Units.**

Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core. Same as: BIO 104

**BIO 202. Ecological Statistics. 3 Units.**

Intended for graduate students (and advanced undergraduates in special circumstances with consent of instructors) in biology and related environmental sciences, this course is an introduction to statistical methods for ecological data analysis, using the programming language R. The course will have lectures, discussions, and independent research projects using the students' own data or simulated or publicly available data.

**BIO 204. Neuroplasticity: From Synapses to Behavior. 3 Units.**

This course will focus on neuroplasticity from a broad perspective, from molecular cellular mechanism to its involvement in behavior and diseases. Emphasis will be on: a) molecular and cellular mechanisms underlying various forms of neuroplasticity; b) the neuroplasticity during brain development; c) the neuroplasticity in adult brain with respect to learning and memory; and d) maladaptive neuroplasticity in neurodegenerative disease and drug addiction. This course is designed for Ph.D. students from both the Biology and Neuroscience programs. Open to advanced undergraduates by consent of instructor.

**BIO 208. Spanish in Science/Science in Spanish. 2 Units.**

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology. Same as: EARTHSYS 207

**BIO 21. The Science of the Extreme Life of the Sea. 3 Units.**

Based on the book *Extreme Life of the Sea*, this course will explore the new science about how marine species thrive in some of the world's most difficult environments. Species that live in the hottest, coldest, deepest and shallowest habitats will be described along with the genetic, biochemical, physiological and behavioral adaptations that allow them to persist. A major outcome is a blending of divergent ways of thinking, the narrative of science, and training about how to craft written narratives that bring science alive to people from all backgrounds. New science demands creativity and expression demands knowledge. This course blends the two ways of thinking by establishing two parallel tracks of lecture material - the science of ocean life, and the tools of the new field of creative non-fiction.

**BIO 210. Chromatin Regulation of the Genome. 3 Units.**

Maintenance of the genome is a prerequisite for life. In eukaryotes, all DNA-templated processes are tightly connected to chromatin structure and function. This course will explore epigenetic and chromatin regulation of cellular processes related to aging, cancer, stem cell pluripotency, metabolic homeostasis, and development. Course material integrates current literature with a foundational review of histone modifications and nucleosome composition in epigenetic inheritance, transcription, replication, cell division and DNA damage responses. Prerequisite: BIO 41 or consent of instructor. Same as: BIO 110

**BIO 214. Advanced Cell Biology. 4 Units.**

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor. Same as: BIOC 224, MCP 221

**BIO 222. Exploring Neural Circuits. 3 Units.**

Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates and graduate students with background in physical science, engineering, and biology may apply to enroll. Enrollment is by application only. Recommended: background in neuroscience.

**BIO 223. Stochastic and Nonlinear Dynamics. 3 Units.**

Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics. Same as: APPPHYS 223, BIOE 213

**BIO 226. Introduction to Biophysics. 3-4 Units.**

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes. Same as: APPPHYS 205, BIO 126

**BIO 227. Foundations of Community Ecology. 2 Units.**

Discussion of classic papers in community ecology (Forbes, Clements, Gleason, Grinnell, Lindeman, Preston, Elton, Hutchinson, May, MacArthur, Odum, Connell, Paine, Tilman, etc.) and contemporary papers on related topics, to develop historical perspectives to understand current issues and identify future directions. Prerequisite for undergraduates: consent of instructor.

**BIO 230. Molecular and Cellular Immunology. 4 Units.**

Components of the immune system and their functions in immune responses in health and disease: development of the immune system; innate and adaptive immunity; structure and function of antibodies; molecular biology and biochemistry of antigen receptors and signaling pathways; cellular basis of immune responses and their regulation; genetic control of immune responses and disease susceptibility. Lectures and discussion in class and in sections. Satisfies Central Menu Areas 1 or 2. For upper class undergraduates and graduate students who have not previously taken an introductory immunology course. Prerequisite for undergraduates: Biology or Human Biology core, or consent of instructor.

**BIO 230A. Molecular and Cellular Immunology Literature Review. 1 Unit.**

Special discussion section for graduate students. Supplement to 230. Corequisite: 230.

**BIO 232. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor. Same as: APPPHYS 232, BIO 132, BIOPHYS 232, GENE 232

**BIO 234. Conservation Biology: A Latin American Perspective. 3 Units.**

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class. Same as: BIO 144, HUMBIO 112

**BIO 238. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.**

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests. Same as: BIO 138, EARTHSYS 139, EARTHSYS 239

**BIO 239. The Hidden Kingdom - Evolution, Ecology and Diversity of Fungi. 4 Units.**

Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will choose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: Bio 43 recommended. Same as: BIO 115

**BIO 244. Fundamentals of Molecular Evolution. 4 Units.**

The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor. Same as: BIO 113

**BIO 245. Ecology and Evolution of Animal Behavior. 3 Units.**

Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core, Biology/ES 30. Recommended: statistics.  
Same as: BIO 145

**BIO 249. The Neurobiology of Sleep. 4 Units.**

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.  
Same as: BIO 149, HUMBIO 161

**BIO 24N. Visions of Paradise: Garden Design. 3 Units.**

Through literature readings and field trips to local gardens learn the principles and esthetics of classic garden designs: Italian Renaissance, botanical teaching, Japanese, English cottage, and others. Design a personal vision of paradise with details of species, visual and scent impact, water features, and hardscape. Open your eyes to a new appreciation of the world of plants and learn some physiology and genetics that explains the specific properties of individual species.

**BIO 254. Molecular and Cellular Neurobiology. 3-5 Units.**

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.  
Same as: NBIO 254

**BIO 256. Epigenetics. 2 Units.**

Epigenetics is the process by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. Course will cover the molecular mechanisms governing epigenetics, ranging from the discovery of epigenetic phenomena to present-day studies on the role of chromatin, DNA methylation, and RNA in regulating epigenetics processes. Topics include: position effect gene expression, genome regulation, gene silencing & heterochromatin, histone code, DNA methylation & imprinting, epigenetics & disease, and epigenetic-based therapeutics. Prerequisite: BIO41 and BIO42 or consent of instructor, advanced biology course such as Bio104.  
Same as: BIO 156

**BIO 257. Biochemistry and Molecular Biology of Plants. 3-4 Units.**

Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor.  
Same as: BIO 157

**BIO 258. Developmental Neurobiology. 4 Units.**

For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent.  
Same as: BIO 158

**BIO 25Q. Cystic fibrosis: from medical conundrum to precision medicine success story. 3 Units.**

Preference to sophomores. The class will explore cystic fibrosis (CF), the most prevalent fatal genetic disease in the US, as a scientific and medical whodunit. Through reading and discussion of medical and scientific literature, we will tackle questions that include: how was life expectancy with CF increased from weeks to decades without understanding the disease mechanism? Why is the disease so prevalent? Is there an advantage to being a carrier? Is CF a single disease or a continuum of physiological variation or what is a disease? How did research into CF lead to discovery of the underlying cause of most other genetic diseases as well? Through critical reading of the scientific and medical literature, class discussion, field trips and meetings with genetic counselors, caregivers, patients, physicians and researchers, we will work to build a deep understanding of this disease, from the biochemical basis to the current controversies over pathogenic mechanisms, treatment strategies and the ethics and economics of genetic testing and astronomical drug costs.

**BIO 263. Neural Systems and Behavior. 4 Units.**

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A.  
Same as: HUMBIO 163

**BIO 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.**

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations. This class is open to both graduate and undergraduate students, but requires sufficient backgrounds in college level genetics, cell biology and biochemistry. Undergraduates who are interested are required to contact the course director first.  
Same as: GENE 267, NENS 267

**BIO 268. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.  
Same as: BIOMEDIN 245, CS 373, GENE 245, STATS 345

**BIO 26S. Maintenance of the Genome. 3 Units.**

The precious blueprint for life is entrusted to genome maintenance proteins found in all living cells. This seminar introduces the remarkable systems that scan cellular DNA for alterations and make repairs to ensure genomic stability. We further explore how deficiencies in these systems can lead to developmental defects, premature aging, and predisposition to cancer. Course includes background reading from primary articles, introductory lectures, student presentations, and a short term paper. Prerequisites: High school Biology. Preference to Stanford students.

**BIO 271. Principles of Cell Cycle Control. 3 Units.**

Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2.

Same as: BIO 171, CSB 271

**BIO 274. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, ANTHRO 275, BIO 174, HUMBIO 180

**BIO 274S. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.

Same as: BIOHOPK 274, CEE 274S, ESS 253S

**BIO 277. Plant Microbe Interaction. 3 Units.**

Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.

Same as: BIO 177

**BIO 278. Microbiology Literature. 3 Units.**

For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as *Salmonella*, *Vibrio*, and/or *Yersinia*. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.

Same as: BIO 178

**BIO 27S. Evolution: From DNA to Dinosaurs. 3 Units.**

This course centers on the fundamental idea of evolution, which impacts fields as disparate as genetics to paleontology. You will learn about the history of evolutionary thought, including Darwin's idea of evolution by natural selection, and explore evolutionary timescales both small and large. Topics include population genetics, genomics, molecular evolution, evolutionary forces, formation of new species, evolutionary divergences in the history of life, and evidence of evolution, including patterns from DNA and the fossil record.

**BIO 282. Modeling Cultural Evolution. 3 Units.**

Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution.

Same as: BIO 182

**BIO 283. Theoretical Population Genetics. 3 Units.**

Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.

Same as: BIO 183

**BIO 286. Natural History of the Vertebrates. 4 Units.**

Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California's distinct biomes. Prerequisite: Biology core.

**BIO 287. Advanced Topics in Mathematical Evolutionary Biology. 3 Units.**

Focused examination of specific topics in mathematical evolutionary biology and population genetics. Course themes may include: mathematical properties of statistics used in human population genetics, mathematics of evolutionary trees, population genetics and biological race, and statistical inference of human migrations.

**BIO 28S. Molecular Genetics and Biotechnology. 3 Units.**

This course covers the fundamentals of molecular genetics, including principles of how genes work, how gene expression is regulated in both prokaryotes and eukaryotes, and how signals are passed from cells to cells that are far away. We will also explore key advances in biotechnology, including cloning, sequencing, and next-generation sequencing, and discuss case studies involving cancer, Huntington's Disease, and more.

**BIO 290. Teaching of Biology. 1-5 Unit.**

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. May be repeated for credit. Prerequisite: consent of instructor.

**BIO 291. Development and Teaching of Core Experimental Laboratories. 1-2 Unit.**

Preparation for teaching the core experimental courses (44X and 44Y). Emphasis is on lab, speaking, and writing skills. Focus is on updating the lab to meet the changing technical needs of the students. Taken prior to teaching either of the above courses. May be repeated for credit. Prerequisite: selection by instructor.

**BIO 292. Curricular Practical Training. 1-3 Unit.**

CPT course required for international students completing degree requirements.

**BIO 294. Cellular Biophysics. 3 Units.**

Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

Same as: APPPHYS 294, BIOPHYS 294

**BIO 296. TA Training in Biology. 1 Unit.**

Workshop to provide teaching assistants in the Department of Biology with basic training, support, and professional development in their teaching roles. Should be taken concurrently with the first TA position.

**BIO 299. Biology PhD Lab Rotation. 1-10 Unit.**

Limited to first year Biology PhD students. Lab rotations with Biosciences faculty.

**BIO 2N. Ecology and Evolution of Infectious Disease in a Changing World. 3 Units.**

This seminar will explore the ways in which anthropogenic change, climate change, habitat destruction, land use change, and species invasions effects the ecology and evolution of infectious diseases. Topics will include infectious diseases of humans, wildlife, livestock, and crops, effects of disease on threatened species, disease spillover, emerging diseases, and the role of disease in natural systems. Course will be taught through a combination of popular and scientific readings, discussion, and lecture. .

**BIO 3. Frontiers in Marine Biology. 1 Unit.**

An introduction to contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

**BIO 30. Ecology for Everyone. 4 Units.**

Everything is connected, but how? Ecology is the science of interactions and the changes they generate. This project-based course links individual behavior, population growth, species interactions, and ecosystem function. Introduction to measurement, observation, experimental design and hypothesis testing in field projects, mostly done in groups. The goal is to learn to think analytically about everyday ecological processes involving bacteria, fungi, plants, animals and humans. The course uses basic statistics to analyze data; there are no math prerequisites except arithmetic. Open to everyone, including those who may be headed for more advanced courses in ecology and environmental science.

**BIO 300. Graduate Research. 1-10 Unit.**

For graduate students only. Individual research by arrangement with in-department instructors.

**BIO 300X. Out-of-Department Graduate Research. 1-10 Unit.**

Individual research by arrangement with out-of-department instructors. Master's students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See <http://biohonors.stanford.edu> for more information. May be repeated for credit.

**BIO 301. Frontiers in Biology. 1-3 Unit.**

Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department's Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.

**BIO 302. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.**

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is nonopen only to Biology PhD students and is not open to auditors."

**BIO 303. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.**

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is nonopen only to Biology PhD students and is not open to auditors."

**BIO 304. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.**

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is nonopen only to Biology PhD students and is not open to auditors.

**BIO 312. Ethical Issues in Ecology and Evolutionary Biology. 1 Unit.**

Focus is on ethical issues addressed in Donald Kennedy's *Academic Duty* and others of importance to academics and scientists in the fields of ecology, behavior, and evolutionary biology. Discussions led by faculty and outside guests. Satisfies ethics course requirement for ecology and evolutionary biology. Prerequisite: PhD student in the ecology and evolutionary biology or marine program, or consent of instructor.

**BIO 327. Research Frontiers in Biodiversity and Ecosystem Services. 3 Units.**

This advanced seminar explores research frontiers in the science of biodiversity and ecosystem services. We will begin with foundational work and then shift to key frontiers now opening up  $\zeta$  including DNA barcoding, food web structure and ecosystem processes; remote sensing and modeling biodiversity change and ecosystem services; relating big data on natural capital and human well-being; and nature experience and human mental health. Students will lead discussions and make research presentations. To apply, please email the instructor ([gdaily@stanford.edu](mailto:gdaily@stanford.edu)).

**BIO 329. Matrix Methods for Dynamic Models and Data Analysis. 1 Unit.**

Types of matrices in dynamic & stochastic models, covariances, rectangular data, networks. Spectral theorem, asymptotics, stability theory, Nonnegative matrices, ergodicity, Markov chains. Hermitian, covariance, SVD. Perturbation theory. Random matrix products, Lyapunov exponents. Open to Ph.D. students in Biology. Prerequisites: Calculus (AP level) required. Some knowledge of linear algebra, R, preferred.

**BIO 32Q. Neuroethology: The Neural Control of Behavior. 3 Units.**

Preference to sophomores. Animal behavior offers insights about evolutionary adaptations and this seminar will discuss the origins of the study of animal behavior and its development to the present. How does the nervous system control behavior and how is it changed by behavior? We will analyze and discuss original research papers about the neural basis of behavior. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat.  
Same as: HUMBIO 91Q

**BIO 330. Stochastic Methods for Simulation, Dynamics and Data Analysis. 1 Unit.**

Markov chains: ergodicity, CLT, passage times, absorption. Simulation: random numbers, chains. Poisson processes: applications and simulation. Time series models. MCMC essentials. Open to Ph.D. students in Biology. Prerequisites: Calculus (AP level) and basic linear algebra required. Facility with linear algebra, R, preferred.

**BIO 332. Evolutionary Genomics. 2 Units.**

We will read classic and modern papers relevant to evolutionary genomics, and discuss. We will cover a broad range of topics, methods, and species.

**BIO 33N. Conservation Science and Practice. 3 Units.**

Preference to freshmen. This course will explore the potential for harmonizing people and nature, for achieving improved outcomes in the well-being of both as a result of conservation investments and interventions. We will consider biophysical, economic, social, and psychological perspectives, examining an array of conservation goals, from protecting endangered species to securing ecosystem services (such as flood control and climate stability) to alleviating poverty and improving mental well-being. We will also study the design and implementation of real conservation and human development efforts worldwide, among the many farmers, ranchers, fishing people, and others managing Earth's lands and waters. Highlights include a field trip to Jasper Ridge Biological Preserve, Stanford's very own nature reserve, and guest visits of some impressive conservation leaders internationally.

**BIO 340. The History of Evolution. 4-5 Units.**

This course examines the history of evolutionary biology from its emergence around the middle of the eighteenth century. We will consider the continual engagement of evolutionary theories of life with a larger, transforming context: philosophical, political, social, economic, institutional, aesthetic, artistic, literary. Our goal will be to achieve a historical rich and nuanced understanding of how evolutionary thinking about life has developed to its current form.

Same as: HISTORY 240, HISTORY 340

**BIO 342. Plant Biology Seminar. 1-3 Unit.**

Topics in plant biology presented at a weekly seminar. Topics announced at the beginning of each quarter. Current literature. May be repeated for credit. See <https://dpb.carnegiescience.edu/events>.

**BIO 346. Advanced Seminar on Prokaryotic Molecular Biology. 1 Unit.**

Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.

Same as: CSB 346, GENE 346

**BIO 34N. Hunger. 3 Units.**

The biology of hunger and satiety, disease states that disrupt normal responses to hunger and satiety, starvation responses and adaptations to starvation in a variety of organisms, food production and distribution mechanisms, historic famines and their causes, the challenges of providing adequate food and energy for the Earth's growing population, local and global efforts to alleviate hunger, and hunger in fiction.

**BIO 35N. Climate change ecology: Is it too late?. 3 Units.**

This Introductory Seminar will explore the consequences of climate change on ecological communities, focusing on two emerging concepts: "disequilibrium," which emphasizes that it can take long time for communities to respond to climate change because of species interactions, and "historical contingency," which proposes that the order in which species invade and disappear as communities re-assemble in response to climate change will determine which species will persist. The seminar will involve lecture, discussion, writing, and visit to Jasper Ridge Biological Preserve.

**BIO 375. Field Ecology & Conservation. 4 Units.**

This course is based on question-driven research in the field, addressing both conceptual frameworks and methodological aspects of evolutionary ecology and conservation biology. It consists of faculty-led research projects and student independent projects. The field part takes place in a tropical rain forest research station in Mexico September 5-15, 2014. The field component is followed by sessions on campus, where the research data are analyzed, discussed and prepared as scientific papers. The training includes presentations of the papers in a mini-symposium organized as a professional meeting.

**BIO 383. Seminar in Population Genetics. 1-3 Unit.**

Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. May be repeated for credit. Prerequisite: consent of instructor.

**BIO 390. Topics in Biology. 1 Unit.**

Seminar. Topics in biology ranging from neurobiology to ecology.

**BIO 3N. Views of a Changing Sea: Literature & Science. 3 Units.**

The state of a changing world ocean, particularly in the eastern Pacific, will be examined through historical and contemporary fiction, non-fiction and scientific publications. Issues will include harvest and mariculture fisheries, land-sea interactions and oceanic climate change in both surface and deep waters.

**BIO 45. Introduction to Laboratory Research in Cell and Molecular Biology. 4 Units.**

Investigate yeast strains that are engineered to express the human tumor suppressor protein, p53, and use modern molecular methods to identify the functional consequences of p53 mutations isolated from tumor cells. Learn about the protein's role as Guardian of the Genome through lectures and by reading and discussing journal articles. Use molecular visualization programs to examine the structure of normal and mutant p53 proteins. Assay the ability of mutant p53 to direct expression of several reporter genes. During guided reflection, investigate further and identify what could be wrong with the p53 mutants you have been studying. Conduct lab experiments to test hypotheses, analyze data, and present your findings through a team oral presentation, as well as a scientific poster. There are no pre-requisites for this course. However, having taken CHEM 31X, or 31A and B, and 33 and being concurrently enrolled or past enrollment in Biology or Human Biology core will help. Note: This class has a \$25 course fee.

**BIO 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIOC 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

**BIO 46. Introduction to Research in Ecology and Evolutionary Biology. 4 Units.**

The goal of this course is to develop an understanding of how to conduct biological research, using a topic in Ecology, Evolutionary Biology, and Plant Biology as a practical example. This includes the complete scientific process: assessing background literature, generating testable hypotheses, learning techniques for field- and lab-based data collection, analyzing data using appropriate statistical methods, and writing and sharing results. To build these skills, this course focuses on the microorganisms associated with lichen epiphytes. Students, working in teams, develop novel research hypotheses and execute the necessary experiments and measurements to test these hypotheses. In addition, students will learn how to manipulate, visualize and analyze data in R. The capstone of the course is an oral defense of students' findings, as well as a research paper in the style of a peer-reviewed journal article. Labs are completed both on campus and at Jasper Ridge. Lab fee. Information about this class is available at <http://bio44.stanford.edu>. Satisfies WIM in Biology.

**BIO 47. Introduction to Research in Ecology and Evolutionary Biology. 4 Units.**

The goal of this course is to develop an understanding of how to conduct biological research, using a topic in Ecology, Evolutionary Biology, and Plant Biology as a practical example. This includes the complete scientific process: assessing background literature, generating testable hypotheses, learning techniques for field- and lab-based data collection, analyzing data using appropriate statistical methods, and finally writing and sharing results. To build these skills, this course will focus on nectar microbes at Stanford's nearby Jasper Ridge Biological Preserve. Students, working in teams, will develop novel research hypotheses and execute the necessary experiments and measurements to test these hypotheses. The capstone of the course will be an oral defense of students' findings, as well as a research paper in the style of a peer-reviewed journal article. Labs will be completed both on campus and at Jasper Ridge. Lab fee. Information about this class is available at <http://bio44.stanford.edu>. Satisfies WIM in Biology.

**BIO 4N. Peopleomics: The science and ethics of personalized genomic medicine. 3 Units.**

Exploration of the new field of personalized genomic medicine. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, and to make more informed medical choices. The science behind these approaches; where they are heading in the future; and the ethical implications such technology presents. Lectures augmented with hands-on experience in exploring and analyzing a real person's genome.

**BIO 50S. Introduction to Cancer Biology. 3 Units.**

Introduction to the molecular basis of cancer. This course will examine the biological processes that are disrupted in cancer, such as DNA repair, cell cycle control and signaling pathways, as well as the science behind some current treatments. Prerequisites: general biology.

**BIO 51S. The Gene: The History and Science of our Genetic Code. 3 Units.**

This discussion-based course will use the novel *The Gene* by Siddhartha Mukherjee and other selected readings to explore the science behind our genetic code. We will cover topics such as regulation of gene expression, inheritance, genetic testing, manipulation of the genome, and the relationship between genetics and identity. Prerequisites: Instructor consent, AP Biology Recommended.

**BIO 52. I, Biologist: Diversity Improves the Science of Biology. 1 Unit.**

Disciplinary priorities, research agendas, and innovations are determined by the diversity of participants and problem-solving is more successful with a broad range of approaches. Using case studies in biological research, we propose to use these insights to help our students learn why a diverse scientific community leads to better discovery and improves the relevance of science to society. Our premise is that a diverse set of perspectives will impact not only how we learn science, but how we do science.

Same as: CSRE 52H

**BIO 53. Conservation Photography. 3 Units.**

Introduction to the field of conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Students will be introduced to basic digital photography, digital image processing, and the theory and application of photographic techniques. Case studies of conservation issues will be examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and optional field trips will culminate in the production of individual and group projects. This course is identical to Bio 7N, so students enrolled in the former should not take this course. Open to undergraduates and graduate students. Students must have access to a DSLR camera and lenses - we can accept up to 20 students who can share 10 course-provided cameras and lenses, by application.

**BIO 5N. Tipping Point for Planet Earth: How Close Are We to the Edge?. 3 Units.**

We will explore why the earth is headed toward a tipping point: a change that is so rapid, so extreme, and so unexpected that humanity may not be able to recover. We will cover synergies between people, stuff, storms, hunger, thirst, toxins, disease and war. Students will read chapters from the instructor's new book, *Tipping Point for Planet Earth*, and will participate in class discussions. Each student will produce their own projects based on one of the course themes.

**BIO 60. Introduction to Problem Solving in Biology. 4 Units.**

Why is Lyme disease spreading? How does HIV become drug resistant? How do other animals affect our disease risk? In BIO 60 students will examine actual case studies to experience how different scientific approaches are used to battle infectious disease. They will evaluate information presented in the popular media and the scientific literature, and will directly participate in the scientific process through hands-on collection, documentation and analyses of authentic scientific data. Students will cultivate their scientific curiosity by discovering the natural world with a Foldscope, the "origami paper microscope" (<https://microcosmos.foldscope.com>). Students will build critical thinking skills by creating hypotheses, and designing experiments that pertain to problems in infectious disease. Students will work in teams to expand their thinking and will practice communicating science to different audiences.

**BIO 61. Science as a Creative Process. 4 Units.**

What is the process of science, and why does creativity matter? We'll delve deeply into the applicability of science in addressing a vast range of real-world problems. This course is designed to teach the scientific method as it's actually practiced by working scientists. It will cover how to ask a well-posed question, how to design a good experiment, how to collect and interpret quantitative data, how to recover from error, and how to communicate findings. Facts matter! Course topics will include experimental design, statistics and statistical significance, formulating appropriate controls, modeling, peer review, and more. The course will incorporate a significant hands-on component featuring device fabrication, testing, and measurement. Among other "Dorm Science" activities, we'll be distributing Arduino microcontroller kits and electronic sensors, then use these items, along with other materials, to complete a variety of group and individual projects outside the classroom. The final course assignment will be to develop and write a scientific grant proposal to test a student-selected myth or scientific controversy. Although helpful, no prior experience with electronics or computer programming is required. Recommended for freshmen.

Same as: APPPHYS 61

**BIO 62. Experimental strategy and the bacterial world. 4 Units.**

Microbiology is a major foundation of all modern biology. Many aspects of experimental strategy, logic, and analysis originated in the fields of bacterial genetics and physiology. In BIO 62, we will use prokaryotic biology to review fundamentals of molecular biology and energetics, and in lab work we will work with experimental design and data interpretation. Research on prokaryotes has greatly expanded through genomic and population analysis, and we will use these approaches to ask questions about the hidden worlds around and inside us: the microbiome. Prerequisites: None. This course is not appropriate for students who received a 4 or 5 in AP biology.

**BIO 7N. Introduction to Conservation Photography. 3 Units.**

Introduction to the field of conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Students will be introduced to basic digital photography, digital image processing, and the theory and application of photographic techniques. Case studies of conservation issues will be examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and optional field trips will culminate in the production of individual and group projects.

**BIO 7S. Introduction to Biology. 3 Units.**

Introduction to several major fields of biology, including biochemistry, cell biology, genetics, evolution, and biodiversity. Introduces the general approaches used by scientists to study life and explores recent advances in each area during weekly discussion section. Not intended for biology majors, but provides the foundation for higher-level biology courses. Prerequisite: high school biology.

**BIO 7SL. Introduction to Biology Lab. 2 Units.**

Optional laboratory to be taken with BIO7S. Introduction to basic biological laboratory techniques, including microscopy, identification of biomolecules, assaying enzyme activity, genetic manipulation of microorganisms, assaying the effects of gene mutation on protein function, and using PCR to genotype organisms.

**BIO 802. TGR Dissertation. 0 Units.****BIO 81. Introduction to Ecology. 4 Units.**

This course will introduce you to the first principles of the science of ecology, the study of interactions between organisms and their environment. Prerequisites: None.

**BIO 82. Genetics. 4 Units.**

The focus of the course is on the basic mechanisms underlying the transmission of genetic information and on the use of genetic analysis to study biological and medical questions. Major topics will include: (1) the use of existing genetic variation in humans and other species to identify genes that play an important role in determining traits and disease-susceptibility, (2) the analysis of mutations in model organisms and their use in the investigation of biological processes and questions and (3) using genetic information for diagnosis and the potential for genetic manipulations to treat disease. Prerequisites: None.

**BIO 83. Biochemistry & Molecular Biology. 4 Units.**

Introduction to the molecular and biochemical basis of life. Lecture topics include the structure and function of proteins, nucleic acids, lipids and carbohydrates, energy metabolism, signal transduction, epigenetics and DNA repair. The course will also consider how defects in these processes cause disease. Prerequisites: None.

**BIO 84. Physiology. 4 Units.**

The fundamental concepts and systems of animal and plant physiology are the subject matter of this course. Prerequisites: None.

**BIO 86. Cell Biology. 4 Units.**

This course will focus on the basic structures inside cells and how they execute cellular functions. Topics include organelles, membrane trafficking, the cytoskeleton, cell division, and signal transduction. Classic and recent primary literature will be incorporated into lectures with an emphasis on state of the art experimental approaches. Prerequisites: None.

**BIO 8N. Human Origins. 3 Units.**

A survey of the anatomical and behavioral evidence for human evolution and of the increasingly important information from molecular genetics. Emphasis on the split between the human and chimpanzee lines 6-7 million years ago, the appearance of the australopiths by 4.1 million years ago, the emergence of the genus *Homo* about 2.5 million years ago, the spread of *Homo* from Africa 1.7-1.6 million years ago, the subsequent divergence of *Homo* into different species on different continents, and the expansion of fully modern humans (*Homo sapiens*) from Africa about 50,000 years ago to replace the Neanderthals and other non-modern Eurasians.

**BIO 8S. Introduction to Human Physiology. 4 Units.**

Normal functioning and pathophysiology of major organ systems: nervous, respiratory, cardiovascular, renal, digestive, and endocrine. Additional topics include integrative physiology, clinical case studies, and applications in genomics-based personalized medicine.

## Cancer Biology (CBIO)

**CBIO 101. Cancer Biology. 4 Units.**

Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor. Same as: PATH 101

**CBIO 240. Molecular and Genetic Basis of Cancer. 4 Units.**

Required for first-year Cancer Biology graduate students. Focus is on fundamental concepts in the molecular biology of cancer, including oncogenes, tumor suppressor genes, and cellular signaling pathways. Emphasis will be given to seminal discoveries and key experiments in the field of cancer molecular biology. Course consists of two 1 hour lectures and one 2 hour discussion per week. Enrollment of undergraduates requires consent of the course director.

**CBIO 242. Cellular and Clinical Aspects of Cancer. 4 Units.**

Required for first-year Cancer Biology graduate students, and for first- and second-year medical students intending to complete the Cancer Biology Scholarly Concentration. Focus is on the cellular biology of cancer, including discussion of basic biology including tumor angiogenesis, metabolism, and immunology, as well as clinical oncology and cancer therapeutics. Emphasis will be given to seminal discoveries and key experiments in the field of cancer biology and oncology. Course consists of two 1 hour lectures and one 2 hour discussion per week. Enrollment of undergraduates requires consent of the course director.

**CBIO 243. Principles of Cancer Systems Biology. 3 Units.**

Focus is on major principles of cancer systems biology research that integrates experimental and computational biology in order to systematically unravel the complexity of cancer. The opportunity to embark on cancer systems biology research has been enabled by the rapid emergence of numerous and increasingly accessible technologies that provide global DNA, RNA and protein expression profiles of cells under a variety of conditions following environmental, drug and genetic perturbations. Course addresses the challenge of how to analyze high-dimensional and highly-multiplexed data in order to synthesize biologically and clinically relevant insights and generate hypotheses for further functional testing. Aims to broaden student exposure to the experimental and computational skills needed to apply the emerging principles of systems biology to the study of cancer.

**CBIO 244. Lecture Series in Cancer Systems Biology. 1 Unit.**

Presents new concepts in the field of cancer systems biology, demonstrating the integration of novel experimental and computational approaches for addressing outstanding critical questions in cancer biology. Invited speakers share insights about state-of-the-art trends and advice on navigating a career in cancer systems biology. Course required for CSBS Fellows.

**CBIO 245. Lecture Seminar Series in Cancer Biology Program. 1 Unit.**

Invited speakers share insights about state-of-the-art trends. Presents new concepts in the field of cancer biology. Science talks presented by students.

**CBIO 246. Clinical Cancer Research Internship Program. 1 Unit.**

Graduate students interested in this course will contact the primary instructor Dr. Majeti and the course director Drs. Attardi and Sage by email. A prerequisite for the course is the successful completion of the online training component for HIPAA certification: [link](#). In addition, the following is required: 1. Documented proof of Measles, Mumps & Rubella immunity in the form of vaccine dates or positive blood tests. 2. Documented proof of Varicella (chicken pox) immunity in the form of vaccine dates or positive blood tests. 3. Annual TB screening (PPD for US born or born in Canada and QFT for foreign born of high risk TB countries). 4. Annual Influenza vaccine (between Nov 1-March 31). In the first component of the course, Dr. Majeti will identify an oncologist (adult or pediatrics) actively working in the clinic that the student can shadow that quarter for a minimum of 4 hours and will put the student in contact with the clinician. Shadowing hours can be at any time of the week or the weekend. The clinician will contact Dr. Majeti to confirm that the student has shadowed him/her for 4 hours. In the second component of the course, Dr. Majeti will inform the student when the oncology clinical tumor board meets. The student must attend at least 3 tumor board sessions in the quarter (1h30 each). In the third component of the course, the student will write a one-page analysis of a clinical paper related to cancer biology.

**CBIO 260. Teaching in Cancer Biology. 1-10 Unit.**

Practical experience in teaching by serving as a teaching assistant in a cancer biology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

**CBIO 275. Tumor Immunology. 3 Units.**

Tumor Immunology focuses on the mechanisms by which tumors can escape from and subvert the immune system and conversely on the ability of innate and adaptive arms of the immune system to recognize and eliminate tumors. Topics include: tumor antigens, tumor immunosurveillance and immunoeediting, tumor immunotherapy (including CAR-T and checkpoint antibodies) and cancer vaccines. Tracks the historical development of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core. Same as: IMMUNOL 275

**CBIO 280. Cancer Biology Journal Club. 1 Unit.**

Required of and limited to first- and second-year graduate students in Cancer Biology. Recent papers in the literature presented by graduate students. When possible, discussion relates to and precedes cancer-related seminars at Stanford. Attendance at the relevant seminar required.

**CBIO 299. Directed Reading in Cancer Biology. 1-18 Unit.**

Prerequisite: consent of instructor.

**CBIO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Cancer Biology Ph.D. students must register as soon as they begin dissertation-related research work.

**CBIO 801. TGR Project. 0 Units.**

.

**CBIO 802. TGR Dissertation. 0 Units.**

.

## Chemical Engineering (CHEMENG)

**CHEMENG 10. The Chemical Engineering Profession. 1 Unit.**

Open to all undergraduates. Overview of and careers in chemical engineering; opportunities to develop networks with working professionals. Panel discussions on career paths and post-graduation opportunities available. Areas include biotechnology, electronics, energy, environment, management consulting, nanotechnology, and graduate school in business, law, medicine, and engineering.

**CHEMENG 100. Chemical Process Modeling, Dynamics, and Control. 3 Units.**

Mathematical methods applied to engineering problems using chemical engineering examples. The development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear first- and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: CHEMENG 20 or ENGR 20; CME 102 or MATH 53.

**CHEMENG 110. Equilibrium Thermodynamics. 3 Units.**

Thermodynamic properties, equations of state, properties of non-ideal systems including mixtures, and phase and chemical equilibria. Prerequisite: CHEM 171 or equivalent.

**CHEMENG 120A. Fluid Mechanics. 4 Units.**

The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar and vector fields, fluid statics, non-Newtonian fluids, shell momentum balances, equations of motion and the Navier-Stokes equations, creeping and potential flow, parallel and nearly parallel flows, time-dependent parallel flows, boundary layer theory and separation, introduction to drag correlations. Prerequisites: junior in Chemical Engineering or consent of instructor; CHEMENG 100 and CME 102 or equivalent.

**CHEMENG 120B. Energy and Mass Transport. 4 Units.**

General diffusive transport, heat transport by conduction, Fourier's law, conduction in composites with analogies to electrical circuits, advection-diffusion equations, forced convection, boundary layer heat transport via forced convection in laminar flow, forced convection correlations, free convection, free convection boundary layers, free convection correlations and application to geophysical flows, melting and heat transfer at interfaces, radiation, diffusive transport of mass for dilute and non-dilute transfer, mass and heat transport analogies, mass transport with bulk chemical reaction, mass transport with interfacial chemical reaction, evaporation. Prerequisite CHEMENG 120A or consent of instructor.

**CHEMENG 12SC. An Exploration of Art Materials: The Intersection of Art and Science. 2 Units.**

There is growing interest in the intersection of art and science, whether from artists adapting technology to suit their visions or from scientists and engineers seeking to explain various visual effects. To take advantage of possible creative sparks at the art/science interface, it is necessary for fuzzies and techies to have some knowledge of the language used by the other side. This interface will be explored through examining approaches used by an artist and an engineer in the context of the materials science of cultural objects. In-class lectures, hands-on studio practice, and field trips will be used to illustrate these different perspectives. At the heart of the scientific approach is the notion that a cultural object, e.g., a painting, is a physical entity comprising materials with different physical properties and different responses to environmental stresses presented by light, heat, and water. In support of this outlook, in-class lectures and discussions will focus on the basic concepts of color, optics, mechanics, composite structures, and response of the object to environmental stress, and we will visit Bay Area museums to see how artists employ such techniques. The hands-on studio experience is designed to increase students' confidence and develop their appreciation of differences in materials. It is not necessary to have any artistic training, only a willingness to experiment. The in-class studio projects will include working with line and shadow; color, binders, and mordants; global sources of pigments; substrates and writing; and material failure. Students will make one technical presentation on a topic in one of the five areas relevant to a painting: color, optics, mechanics, composites, and stress response. In addition, they will prepare one essay on the issues surrounding the intersection of art and science. Finally, they will complete a project related to one of the thematic areas covered in the hands-on studio sessions and make a final oral presentation describing their project.

**CHEMENG 130. Separation Processes. 3 Units.**

Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, flash distillation, electrophoresis, centrifugation, membrane separations, chromatography, and reaction-assisted separation processes. Prerequisite CHEMENG 110 or consent of instructor.

**CHEMENG 140. Micro and Nanoscale Fabrication Engineering. 3 Units.**

(Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55.

Same as: CHEMENG 240

**CHEMENG 142. Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations. 3 Units.**

(Formerly 124/224) Introduction to heterogeneous catalysis, including models of surface reactivity, surface equilibria, kinetics of surface reactions, electronic and geometrical effects in heterogeneous catalysis, trends in reactivity, catalyst structure and composition, electro-catalysis and photo-catalysis. Selected applications and challenges in energy transformations will be discussed. Prerequisites: CHEM 31AB or 31X, CHEM 171, CHEM 175 or CHEMENG 170 or equivalents. Recommended: CHEM 173.

Same as: CHEMENG 242

**CHEMENG 150. Biochemical Engineering. 3 Units.**

Systems-level combination of chemical engineering concepts with biological principles. The production of protein pharmaceuticals as a paradigm to explore quantitative biochemistry and cellular physiology, the elemental stoichiometry of metabolism, recombinant DNA technology, synthetic biology and metabolic engineering, fermentation development and control, product isolation and purification, protein folding and formulation, and biobusiness and regulatory issues. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41 or equivalent.

**CHEMENG 160. Soft Matter in Biomedical Devices, Microelectronics, and Everyday Life. 4 Units.**

The relationships between molecular structure, morphology, and the unique physical, chemical, and mechanical behavior of polymers and other types of soft matter are discussed. Topics include methods for preparing synthetic polymers and examination of how enthalpy and entropy determine conformation, solubility, mechanical behavior, microphase separation, crystallinity, glass transitions, elasticity, and linear viscoelasticity. Case studies covering polymers in biomedical devices and microelectronics will be covered. Recommended: ENGR 50 and Chem 31A or equivalent.

Same as: BIOE 158, MATSCI 158

**CHEMENG 162. Polymers for Clean Energy and Water. 3 Units.**

The first five weeks of this course will be devoted to the fundamental aspects of polymers necessary to understand the applications in energy and the environment. These include: polymer chain configuration, morphology of semi-crystalline and amorphous solids, thermal transition behavior, thermodynamics of polymer blends and block copolymers, and the time/temperature dependence of linear viscoelasticity. The remaining five weeks of class will be devoted to applications, with special emphasis on membrane transport, including ion transport in fuel cell exchange membranes, gas transport in hydrogen enrichment membranes, and water transport in desalination membranes. In addition, completely degradable biocomposites will be discussed. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33, CHEM 171.

Same as: CHEMENG 262

**CHEMENG 170. Kinetics and Reactor Design. 3 Units.**

Chemical kinetics, elementary reactions, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Steady state and unsteady state operation of reactors; conversion and limitations of thermodynamic equilibrium. Enzymes and heterogeneous catalysis and catalytic reaction mechanisms. Prerequisites: 110, 120A, 120B.

**CHEMENG 174. Environmental Microbiology I. 3 Units.**

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents. Same as: CEE 274A, CHEMENG 274

**CHEMENG 180. Chemical Engineering Plant Design. 4 Units.**

Open to seniors in chemical engineering or by consent of instructor. Application of chemical engineering principles to the design of practical plants for the manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.

**CHEMENG 181. Biochemistry I. 4 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 35 and 135 or 171.

Same as: CHEM 181, CHEMENG 281

**CHEMENG 183. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: CHEM 181 or CHEM 143 or CHEMENG 181/281.

Same as: CHEM 183, CHEMENG 283

**CHEMENG 185A. Chemical Engineering Laboratory A. 4 Units.**

First quarter of two-quarter sequence. Experimental aspects of chemical engineering. Experimental research skills will be developed and practiced through guided lab modules. Emphasizes laboratory work, experimental design, and development of communication skills. In addition to lectures, students are required to attend one weekly lab section (5 hours each) where lab work will be conducted in student pairs. Students must enroll in a lab section on Axess. Final project will be a written research proposal prepared by student teams to be carried out in the following quarter in CHEMENG185B. Satisfies the Writing in the Major (WIM) requirement. Prerequisites: CHEMENG 120A, CHEMENG 120B, CHEMENG 181.

**CHEMENG 185B. Chemical Engineering Laboratory B. 4 Units.**

Second quarter of two-quarter sequence. Experimental aspects of chemical engineering. Emphasizes experimental design, project execution, team organization, and communication skills. Lab section times will not be assigned, though students should expect to spend at least 5 hours per week on average in the lab working on their team research projects. Labs will typically be available M-F between 9am-6pm; to be arranged separately. Prerequisite: CHEMENG 185A. Corequisite: CHEMENG 150.

**CHEMENG 190. Undergraduate Research in Chemical Engineering. 1-6 Unit.**

Laboratory or theoretical work for undergraduates under the supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects. Course may be repeated.

**CHEMENG 190H. Undergraduate Honors Research in Chemical Engineering. 1-5 Unit.**

For Chemical Engineering majors pursuing a B.S. with Honors degree who have submitted an approved research proposal to the department. Unofficial transcript must document BSH status and at least 9 units of 190H research for a minimum of 3 quarters. May be repeated for credit.

**CHEMENG 191H. Undergraduate Honors Seminar. 1 Unit.**

For Chemical Engineering majors approved for B.S. with Honors research program. Honors research proposal must be submitted and unofficial transcript document BSH status prior to required concurrent registration in 190H and 191H. May be repeated for credit. Corequisite: 190H.

**CHEMENG 196. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 196, CHEM 296, CHEMENG 296

**CHEMENG 20. Introduction to Chemical Engineering. 4 Units.**

Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31.

Same as: ENGR 20

**CHEMENG 240. Micro and Nanoscale Fabrication Engineering. 3 Units.**

(Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55.

Same as: CHEMENG 140

**CHEMENG 242. Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations. 3 Units.**

(Formerly 124/224) Introduction to heterogeneous catalysis, including models of surface reactivity, surface equilibria, kinetics of surface reactions, electronic and geometrical effects in heterogeneous catalysis, trends in reactivity, catalyst structure and composition, electro-catalysis and photo-catalysis. Selected applications and challenges in energy transformations will be discussed. Prerequisites: CHEM 31AB or 31X, CHEM 171, CHEM 175 or CHEMENG 170 or equivalents. Recommended: CHEM 173.

Same as: CHEMENG 142

**CHEMENG 25B. Biotechnology. 3 Units.**

Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 20 or equivalent course.

Same as: ENGR 25B

**CHEMENG 25E. Energy: Chemical Transformations for Production, Storage, and Use. 3 Units.**

An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells).

Prerequisites: high school chemistry or equivalent.

Same as: ENGR 25E

**CHEMENG 262. Polymers for Clean Energy and Water. 3 Units.**

The first five weeks of this course will be devoted to the fundamental aspects of polymers necessary to understand the applications in energy and the environment. These include: polymer chain configuration, morphology of semi-crystalline and amorphous solids, thermal transition behavior, thermodynamics of polymer blends and block copolymers, and the time/temperature dependence of linear viscoelasticity. The remaining five weeks of class will be devoted to applications, with special emphasis on membrane transport, including ion transport in fuel cell exchange membranes, gas transport in hydrogen enrichment membranes, and water transport in desalination membranes. In addition, completely degradable biocomposites will be discussed. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33, CHEM 171.

Same as: CHEMENG 162

**CHEMENG 274. Environmental Microbiology I. 3 Units.**

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

Same as: CEE 274A, CHEMENG 174

**CHEMENG 281. Biochemistry I. 4 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 35 and 135 or 171.

Same as: CHEM 181, CHEMENG 181

**CHEMENG 283. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: CHEM 181 or CHEM 143 or CHEMENG 181/281.

Same as: CHEM 183, CHEMENG 183

**CHEMENG 296. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 196, CHEM 296, CHEMENG 196

**CHEMENG 300. Applied Mathematics in the Chemical and Biological Sciences. 3 Units.**

Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.

Same as: CME 330

**CHEMENG 310. Microhydrodynamics. 3 Units.**

Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

Same as: ME 451D

**CHEMENG 31N. When Chemistry Meets Engineering. 3 Units.**

Preference to freshmen. Chemistry and engineering are subjects that are ubiquitous around us. But what happens when the two meet? Students will explore this question by diving into experimental problems that scientists and engineers have to face on a daily basis. Many processes that are taken for granted have been developed by understanding science at a very fundamental level and then applying it to large and important industrial processes. In this seminar, students will explore some of the basic concepts that are important to address chemical engineering problems through experimental work. Students will build materials for energy and environmental applications, understand how to separate mixtures into pure compounds, produce fuels, and will learn to look at the chemical properties of molecules that are part of daily life with a different eye.

**CHEMENG 320. Chemical Kinetics and Reaction Engineering. 3 Units.**

Theoretical and experimental tools useful in understanding and manipulating reactions mediated by small-molecules and biological catalysts. Theoretical: first classical chemical kinetics and transition state theory; then RRKM theory and Monte Carlo simulations. Experimental approaches include practical application of modern spectroscopic techniques, stopped-flow measurements, temperature-jump experiments, and single-molecule approaches to chemical and biological systems. Both theory and application are framed with regard to systems of particular interest, including industrially relevant enzymes, organometallic catalysts, heterogeneous catalysis, electron transfer reactions, and chemical kinetics within living cells.

**CHEMENG 340. Molecular Thermodynamics. 3 Units.**

Classical thermodynamics and quantum mechanics. Development of statistical thermodynamics to address the collective behavior of molecules. Establishment of theories for gas, liquid, and solid phases, including phase transitions and critical behavior. Applications include electrolytes, ion channels, surface adsorption, ligand binding to proteins, hydrogen bonding in water, hydrophobicity, polymers, and proteins.

**CHEMENG 345. Fundamentals and Applications of Spectroscopy. 3 Units.**

Development of theoretical approaches to spectroscopy, including spectroscopic transitions, transition probabilities, and selection rules. Application to photon and electron spectroscopies of the gas and solid phases. Topics: rotational spectroscopy; infrared and Raman vibrational spectroscopies; fluorescence spectroscopy; Auger, x-ray and ultraviolet photoelectron spectroscopies. Prerequisite: CHEM 271 or course in quantum mechanics.

Same as: PHOTON 345

**CHEMENG 355. Advanced Biochemical Engineering. 3 Units.**

Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharmaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

Same as: BIOE 355

**CHEMENG 35N. Renewable Energy for a Sustainable World. 3 Units.**

Preference to freshmen. Organized to prepare a renewable energy plan for California. Energy concepts and quantitation approaches are learned, energy needs and natural resources are assessed, and renewable energy technologies are evaluated for economic performance and environmental impact. An investment plan is developed along with implementation and research recommendations. The same concepts are then applied to Mexico as a second model system.

**CHEMENG 399. Graduate Research Rotation in Chemical Engineering. 1 Unit.**

Introduction to graduate level laboratory and theoretical work. Performance in this course comprises part of the mandatory evaluation for pre-candidacy standing and suitability to continue in the chemical engineering Ph.D. program.

**CHEMENG 410. Public Communication of Research. 1 Unit.**

Develop skills for communicating complex science to the public through writing, video, and public speaking. Learn how to work with the media to explain scientific discoveries without overselling the science. Work in small groups and one-on-one with writers and guest speaker; develop a short written piece and video explaining own research; develop skills that will translate to future scientific projects. Open to graduate students in the biosciences, chemistry, and engineering. Enrollment limited to 20.

**CHEMENG 420. Growth and Form. 3 Units.**

Advanced topics course examining the role of physical forces in shaping living cells, tissues, and organs, making use of D'Arcy Thompson's classic text *On Growth and Form*. The course begins with a review of relevant physical principles drawn from statistical physics, polymer theory, rheology and materials science. We then examine current knowledge of cellular mechanotransduction pathways, the roles of physical forces in guiding embryonic development, and the contribution of aberrant cellular response to mechanical cues in heart disease and cancer. The course concludes by examining current frontiers in stem cell biology and tissue engineering.

**CHEMENG 432. Electrochemical Energy Conversion. 3 Units.**

Electrochemistry is playing an increasingly important role in renewable energy. This course aims to cover the fundamentals of electrochemistry, and then build on that knowledge to cover applications of electrochemistry in energy conversion. Topics to be covered include fuel cells, solar water-splitting, CO<sub>2</sub> conversion to fuels and chemicals, batteries, redox flow cells, and supercapacitors. Prerequisites: CHEM 31AB or 31 X, CHEM 33, CHEM 171, CHEM 175 or CHEMENG 170, or equivalents. Recommended: CHEM 173.

**CHEMENG 442. Suspension Mechanics. 3 Units.**

The course will begin with a brief recap of low-Reynolds number hydrodynamics and the analytical foundations for the study of pair-level particle interactions in a Newtonian solvent. Extension to many-body interactions will be covered in detail, with an introductory overview of computational methods. Brownian motion, thermodynamic forces, and other interparticle forces will be discussed, and various approaches for theoretical modeling will be covered, including Fokker-Planck / Smoluchowski analysis and Langevin analysis. Theoretical and computational modeling of material properties via averaging techniques will be studied, in the context of micromechanical and continuum models. Landmark results in the microrheology and rheology of complex fluids will be covered, including sedimentation, non-Newtonian rheology (including shear thinning and thickening; viscoelasticity and memory behaviors; yield-stress behavior; glassy aging; diffusion; normal stress differences).

**CHEMENG 444. Electronic Structure Theory and Applications to Chemical Kinetics. 3 Units.**

Fundamentals of electronic structure theory to describe materials properties and chemical reactivity. nLearning objectives: Understand the basis for modern electronic structure calculations, understand the relationship between electronic structure, materials properties, and chemical kinetics, be able to read the current literature, be able to do own calculations. nImportant components of the lectures: An overview of quantum chemical methods, introduction to methods for periodic systems, density functional theory and current approximations to describe exchange and correlation effects, methods to describe excited states, transition state theory and methods to calculate partition functions. nThe Lab: Learning to do DFT calculations.

**CHEMENG 450. Advances in Biotechnology. 3 Units.**

Overview of cutting edge advances in biotechnology with a focus on therapeutic and health-related topics. Academic and industrial speakers from a range of areas including protein engineering, immuno-oncology, DNA sequencing, the microbiome, pharmacogenomics, industrial enzymes, synthetic biology, and more. Course is designed for students interested in pursuing a career in the biotech industry. Same as: BIOE 450

**CHEMENG 451. Chemical Principles in Drug Discovery and Development. 3 Units.**

Application of physical and organic chemistry to the discovery and subsequent product development of small molecule and macromolecular drugs. Course discusses key physical, chemical, and biological properties of drug candidates and how to measure them, how to engineer them. Discussion of principles of drug formulation and delivery. Graduate-level background in physical and organic chemistry recommended.

**CHEMENG 454. Synthetic Biology and Metabolic Engineering. 3 Units.**

Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent. Same as: BIOE 454

**CHEMENG 456. Microbial Bioenergy Systems. 3 Units.**

Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents.

Same as: CEE 274B

**CHEMENG 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOE 459, BIOE 459, CHEM 459, PSYCH 459

**CHEMENG 462. Complex Fluids and Non-Newtonian Flows. 3 Units.**

Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

Same as: ME 455

**CHEMENG 464. Polymer Chemistry. 3 Units.**

Polymer material design, synthesis, characterization, and application. Topics include organic and kinetic aspects of polymerization, polymer characterization techniques, and structure and properties of bulk polymers for commercial applications and emerging technologies.

**CHEMENG 466. Polymer Physics. 3 Units.**

Concepts and applications in the equilibrium and dynamic behavior of complex fluids. Topics include solution thermodynamics, scaling concepts, semiflexibility, characterization of polymer size (light scattering, osmotic pressure, size-exclusion chromatography, intrinsic viscosity), viscoelasticity, rheological measurements, polyelectrolytes, liquid crystals, biopolymers, and gels.

**CHEMENG 469. Solid Structure and Properties of Polymers. 3 Units.**

Fundamental structure-properties relationships of solid polymers in bulk and thin films. Topics include chain conformations in bulk amorphous polymers, glass transition, crystallization, semi-crystalline morphology, liquid crystalline order, polymer blends, block copolymers, polymer networks/gels, polymers of high current interest, and experimental methods of characterizing polymer structure.

**CHEMENG 470. Complex Fluid Interfaces: Capillarity and Interfacial Dynamics. 3 Units.**

Complex fluid interfaces arise whenever amphiphiles (surfactants, phospholipids, polymers, colloidal particles) collect at liquid-fluid surfaces, imbuing them with nonlinear mechanical responses. Examples in nature include the cell membrane, lung surfactants, and the tear film. Industrial applications include emulsions and foams that require stabilization. The course discusses concepts in capillarity and wetting, interfacial fluid dynamics, thin film stability, the microstructure of self-organized monolayers and bilayers. Experimental microstructural methods (Brewster angle microscopy, fluorescence microscopy, grazing incidence x-ray diffraction) will be described. Prerequisite: 310 or equivalent.

**CHEMENG 482. The Startup Garage: Design. 4 Units.**

(Same as STRAMGT 356) The Startup Garage is an experiential lab course that focuses on the design, testing and launch of a new venture. Multidisciplinary student teams work through an iterative process of understanding user needs, creating a point of view statement, ideating and prototyping new product and services and their business models, and communicating the user need, product, service and business models to end-users, partners, and investors. In the autumn quarter, teams will: identify and validate a compelling user need and develop very preliminary prototypes for a new product or service and business models. Students form teams, conduct field work and iterate on the combination of business model -- product -- market. Teams will present their first prototypes (business model - product - market) at the end of the quarter to a panel of entrepreneurs, venture capitalists, angel investors and faculty.

Same as: SOMGEN 282

**CHEMENG 484. The Startup Garage: Testing and Launch. 4 Units.**

This is the second quarter of the two-quarter series. In this quarter, student teams expand the field work they started in the fall quarter. They get out of the building to talk to potential customers, partners, distributors, and investors to test and refine their business model, product/service and market. This quarter the teams will be expected to develop and test a minimally viable product, iterate, and focus on validated lessons on: the market opportunity, user need and behavior, user interactions with the product or service, business unit economics, sale and distribution models, partnerships, value proposition, and funding strategies. Teams will interact with customers, partners, distributors, investors and mentors with the end goal of developing and delivering a funding pitch to a panel of entrepreneurs, venture capitalists, angel investors and faculty.

Same as: SOMGEN 284

**CHEMENG 500. Special Topics in Protein Biotechnology. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 501. Special Topics in Semiconductor Processing. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 503. Special Topics in Biocatalysis. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 505. Special Topics in Microrheology. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 507. Special Topics in Polymer Physics and Molecular Assemblies. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 510. Special Topics in Transport Mechanics. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 513. Special Topics in Functional Organic Materials for Electronic and Optical Devices. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 514. Special Topics in Biopolymer Physics. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 515. Special Topics in Molecular and Systems Biology. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 516. Special Topics in Energy and Catalysis. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 517. Special Topics in Microbial Physiology and Metabolism. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 518. Special Topics in Advanced Biophysics and Protein Design. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 519. Special Topics in Interface Science and Catalysis. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 520. Special Topics in Biological Chemistry. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 521. Special Topics in Nanostructured Materials for Energy and the Environment. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 522. Special Topics in Soft Matter and Molecular Physics. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 523. Special Topics in Suspension Dynamics. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 600. Graduate Research in Chemical Engineering. 1-12 Unit.**

Laboratory and theoretical work leading to partial fulfillment of requirements for an advanced degree. Course may be repeated for credit.

**CHEMENG 60Q. Environmental Regulation and Policy. 3 Units.**

Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public's right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions.

**CHEMENG 699. Colloquium. 1 Unit.**

Weekly lectures by experts from academia and industry in the field of chemical engineering. Course may be repeated for credit.

**CHEMENG 70Q. Masters of Disaster. 3 Units.**

Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes.

**CHEMENG 801. TGR Project. 0 Units.****CHEMENG 802. TGR Dissertation. 0 Units.****CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials. 3 Units.**

Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking.

**CHEMENG 90Q. Dare to Care: Compassionate Design. 3 Units.**

Imagine yourself with your abundant creativity, intellect, and passion, but your ability to move or speak is diminished. How would you face the world, how would you thrive at Stanford, how would you relay to people your ideas and creations? How would you share yourself and your ideas with the world? There are more than 50 million individuals in America with at least one disability, and in the current world of design, these differences are often overlooked. How do we as designers empower people of diverse physical abilities and provide them with means of self-expression? In Compassionate Design, students from any prospective major are invited to explore the engineering design process by examining the needs of persons with disabilities. Through invited guests, students will have the opportunity to directly engage people with different types of disabilities as a foundation to design products that address problems of motion and mobility, vision, speech and hearing. For example, in class, students will interview people who are deaf, blind, have cerebral palsy, or other disabling conditions. Students will then be asked, using the design tools they have been exposed to as part of the seminar, to create a particular component or device that enhances the quality of life for that user or users with similar limitations. Presentation skills are taught and emphasized as students will convey their designs to the class and instructors. Students will complete this seminar with a compassionate view toward design for the disabled, they will acquire a set of design tools that they can use to empower themselves and others in whatever direction they choose to go, and they will have increased confidence and abilities in presenting in front of an audience.

## Chemistry (CHEM)

**CHEM 1. Introduction to Organic Chemistry. 4 Units.**

First lecture class in summer organic intensive designed for those entering the medical field. Introduction to molecular structure and reactivity of functional groups. Explore chemical reactivity in the context of kinetics and thermodynamics. Prerequisite: College level general chemistry or an AP Chemistry score of 5.

**CHEM 10. Exploring Research and Problem Solving Across the Sciences. 2 Units.**

Development and practice of critical problem solving and study skills using wide variety of scientific examples that illustrate the broad yet integrated nature of current research. Student teams will have the opportunity to explore and present on topics revolving around five central issues: energy, climate change, water resources, medicine, and food & nutrition from a chemical perspective. Course offered in August prior to start of fall quarter.

**CHEM 110. Directed Instruction/Reading. 1-2 Unit.**

Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in 31A,B, 31X, or 33; and consent of instructor.

**CHEM 111. Exploring Chemical Research at Stanford. 1 Unit.**

Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.

**CHEM 130. Organic Chemistry Laboratory. 3 Units.**

Intermediate organic chemistry laboratory, including synthesis and spectroscopy. Nobel prize winning reactions and characterization techniques, such as Diels-Alder and modified Wittig reactions, as well as IR, NMR, and GCMS; Biodiesel synthesis and lipid characterization. Prerequisite: Chem 35 taken in Aut 2014-15 or later, or Chem 35 and 36. Corequisite: 131.

**CHEM 131. Organic Polyfunctional Compounds. 3 Units.**

Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35.

**CHEM 132. Synthesis Laboratory. 3 Units.**

Focus is on longer syntheses with an emphasis upon using metal catalysts. Emphasis will be on complete characterization of final products using chromatographic and spectroscopic methods. Concludes with an individual synthesis project. Prerequisites: 35, 130.

**CHEM 134. Analytical Chemistry Laboratory. 5 Units.**

Classical analysis methods, statistical analyses, chromatography, and spectroscopy will be covered with an emphasis upon quantitative measurements and data analysis. WIM course with full lab reports and oral communication. Concludes with student-developed quantitative project. Prerequisite: Chem 35.

**CHEM 137. Macromolecular and Supramolecular Chemistry. 3 Units.**

The course covers the design and synthesis of polymers and supramolecular complexes. Polymer chemistry is built on our understanding of reactive organic intermediates and catalysis; supramolecular chemistry is based on our understanding of non-covalent interactions. Thus, application of such understandings to the synthesis of covalent and supramolecular polymers is a central theme of this course. Modern developments in polymer chemistry have allowed the synthesis of polymers with controlled molecular weights, architectures, tacticity, and rich functionalities. Such synthetic controls in macromolecular structures lead to diverse and tunable properties and functions of the produced materials. Therefore, this course also covers basic properties and structure-property relationships of macromolecules for rational design of structures and selection of chemistry. Prerequisite CHEM 35 and 131.

**CHEM 141. The Chemical Principles of Life I. 4 Units.**

This is the first course in a two-quarter sequence (Chem 141/143), which will examine biological science through the lens of chemistry. In this sequence students will gain a qualitative and quantitative understanding of the molecular logic of cellular processes, which include expression and transmission of the genetic code, enzyme kinetics, biosynthesis, energy storage and consumption, membrane transport, and signal transduction. Connections to foundational principles of chemistry will be made through structure-function analyses of biological molecules. Integrated lessons in structural, mechanistic, and physical chemistry will underscore how molecular science and molecular innovation have impacted biology and medicine. Prerequisites: CHEM 35, MATH 21 or equivalent.

**CHEM 143. The Chemical Principles of Life II. 4 Units.**

This is the second course in a two-quarter sequence (Chem 141/143), which will continue the discussion of biological science through the lens of chemistry. In this sequence students will gain a qualitative and quantitative understanding of the molecular logic of cellular processes, which include expression and transmission of the genetic code, enzyme kinetics, biosynthesis, energy storage and consumption, membrane transport, and signal transduction. Connections to foundational principles of chemistry will be made through structure-function analyses of biological molecules. Integrated lessons in structural, mechanistic, and physical chemistry will underscore how molecular science and molecular innovation have impacted biology and medicine. Prerequisite: Chem 141.

**CHEM 150. Single-Crystal X-ray Diffraction. 3 Units.**

Practical X-ray crystallography for small molecule compounds, which will emphasize crystal growth, measurement strategies, structure solution and refinement, and report generation. Example structures will include absolute configuration of organic compounds (with the heaviest atom being oxygen), metal containing complexes, disordered small molecules and twinning. Students will learn how to get from a new compound to a single crystal, and then to a cif-file ready for publication submission. They will gain knowledge of the underlying theory and concepts for each step of structure determination.

Same as: CHEM 250

**CHEM 151. Inorganic Chemistry I. 4 Units.**

Theories of electronic structure, stereochemistry, and symmetry properties of inorganic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. An introduction to the Gaussian program will be covered in the discussion sections, used for electronic calculations in the computer and problem set exercises. Prerequisites: 35.

**CHEM 153. Inorganic Chemistry II. 3 Units.**

The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: 151, 173.

**CHEM 155. Advanced Inorganic Chemistry. 3 Units.**

Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry. Same as: CHEM 255

**CHEM 171. Physical Chemistry I. 4 Units.**

Laws of thermodynamics, properties of gases, phase transitions and phase equilibrium, chemical equilibrium, chemical kinetics, reaction rate, thermal motion and energy barriers, kinetic molecular models. The MATLAB programming language with hands-on experiences will be introduced in discussion sections and used for simulations of chemical systems. Prerequisites: CHEM 33; PHYS 41; either CME 100 or MATH 51.

**CHEM 173. Physical Chemistry II. 3 Units.**

Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: CHEM 171; CME 102 and CME 104 or MATH 53 or consent from instructor; PHYSICS 41, 43.

**CHEM 174. Electrochemical Measurements Lab. 3 Units.**

Introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: 134, 171, MATH 51, PHYSICS 44 or equivalent.

Same as: CHEM 274

**CHEM 175. Physical Chemistry III. 3 Units.**

Molecular theory of kinetics and statistical mechanics: transport and reactions in gases and liquids, ensembles and the Boltzmann distribution law, partition functions, molecular simulation, structure and dynamics of liquids. Diffusion and activation limited reactions, potential energy surfaces, collision theory, transition-state theory and Marcus theory of reaction rates. Prerequisites: 171, 173.

**CHEM 176. Spectroscopy Laboratory. 3 Units.**

Use of spectroscopic instrumentation to obtain familiarity with important types of spectrometers and spectroscopic method and to apply them to study molecular properties and physical chemical time-dependent processes. Spectrometers include electronic ultraviolet/visible absorption, fluorescence, Raman, Fourier transform infrared, and nuclear magnetic resonance. Prerequisite: 173.

**CHEM 181. Biochemistry I. 4 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 35 and 135 or 171.

Same as: CHEMENG 181, CHEMENG 281

**CHEM 183. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: CHEM 181 or CHEM 143 or CHEMENG 181/281.

Same as: CHEMENG 183, CHEMENG 283

**CHEM 184. Biological Chemistry Laboratory. 3 Units.**

Modern techniques in biological chemistry including protein purification, characterization of enzyme kinetics, heterologous expression of His-tagged fluorescent proteins, site-directed mutagenesis, and single-molecule fluorescence microscopy. Prerequisite: 181.

**CHEM 185. Biophysical Chemistry. 3 Units.**

Primary literature based seminar/discussion course covering classical and contemporary papers in biophysical chemistry. Topics include: protein structure and stability, folding, single molecule fluorescence and force microscopy, simulations, ion channels, GPCRs, and ribosome structure/function. Course is restricted to undergraduates: required for majors on the Biological Chemistry track, but open to students from the regular track. Prerequisites: Chem 171, 173 and 181.

**CHEM 187B. Natural Product Biosynthesis: Chemical Logic and Enzymatic Machinery. 1 Unit.**

This course provides an overview of the biosynthesis of the five major classes of small molecule natural products, including polyketides, nonribosomal peptides, terpene/isoprenoid scaffolds, alkaloids, and phenylpropanoids. Focus will be on the chemical logic for bond-forming chemical steps in each natural product class and the kinds of enzyme catalysts required to effect complexity-generating molecular scaffolds. This short course runs for the first five weeks of the quarter, from January through the second week of February. Prerequisite: Chem 181 or equivalent.

Same as: CHEM 287B

**CHEM 190. Advanced Undergraduate Research. 1-5 Unit.**

Limited to undergraduates who have completed Chem 35 and/or Chem 134, or by special arrangement with a faculty member. May be repeated 8 times for a max of 27 units. Prerequisite: 35 or 134. Corequisite: 300.

**CHEM 196. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 296, CHEMENG 196, CHEMENG 296

**CHEM 1L. Organic Chemistry Lab 1. 2 Units.**

Hands on exploration of laboratory reactions & phenomena discussed in Chem 1. Learn techniques for separation of compounds: distillation, extraction and chromatography (TLC, GCMS) while investigating the nature and properties of organic compounds such as boiling points, polarity, solubility and chirality. Prerequisite: Chem 33 (or course equivalent) or Chem 1 co-requisite.

**CHEM 2. Organic Chemistry of Carbonyl Containing Molecules. 4 Units.**

Second lecture class in the summer organic intensive series focusing on the synthesis and reactivity of small molecules, with particular emphasis on those that possess the carbonyl functional group. Discuss the importance of the carbonyl functional group to biochemistry. Prerequisite: Chem 33 or Chem 1 or equivalent.

**CHEM 200. Research and Special Advanced Work. 1-15 Unit.**

Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff. For research and special work, students register for 200.

**CHEM 221. Advanced Organic Chemistry. 3 Units.**

Physical organic chemistry: molecular structures, bonding, and non-covalent interactions; thermodynamic and kinetic understanding of reactivity and reaction mechanism. Prerequisite: 175.

**CHEM 223. Advanced Organic Chemistry. 3 Units.**

Continuation of 221. Modern synthetic organic chemistry with an emphasis on structure, reactivity, and stereocontrol. Prerequisite: 221 or consent of instructor.

**CHEM 225. Advanced Organic Chemistry. 3 Units.**

Chemistry is driven by ones understanding of structure and mechanism and ones ability to make molecules. This course is intended to address the universal mechanistic and structural foundations of organic chemistry with an emphasis on new synthetic methods, selectivity analysis, computer-based strategies for the design and synthesis of complex molecules, concepts for innovative problems solving and, importantly, how to put these skills together in the generation of impactful ideas and proposals directed at solving problems in science as required for a career in molecular science. Prerequisite: 223 or consent of instructor.

**CHEM 225T. Advanced Organic Chemistry. 3 Units.**

Organic reactions, new synthetic methods with special attention to catalysis and atom economy, selectivity analysis, and exercises in the syntheses of complex molecules.

**CHEM 226. Synthesis and Analysis at the Chemistry-Biology Interface. 3 Units.**

Focus on the combined use of organic chemistry and molecular biology to make, manipulate and measure biomacromolecules. Synthetic methods for design and construction of peptides, proteins and nucleic acids; methods for bioconjugation and labeling; fluorescence tools; intracellular delivery strategies; combinatorial selection methods. Prerequisite: One year of undergraduate organic chemistry. Completion of a course in molecular biology is helpful but not required.

**CHEM 227. Therapeutic Science at the Chemistry - Biology Interface. 3 Units.**

Explores the design and enablement of new medicines that were born from a convergence of concepts and techniques from chemistry and biology. Topics include fundamental methods for biomolecule synthesis and engineering and application to hybrid chemical/biologic drugs, as well as modern approaches for target discovery and validation. Prerequisite: One year of undergraduate organic chemistry, as well as familiarity with concepts in biochemistry and molecular biology.

**CHEM 229. Organic Chemistry Seminar. 1 Unit.**

Required of graduate students majoring in organic chemistry. Students giving seminars register for 231.

**CHEM 231. Organic Chemistry Seminar Presentation. 1 Unit.**

Required of graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters.

**CHEM 233A. Creativity in Organic Chemistry. 1 Unit.**

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

**CHEM 233B. Creativity in Organic Chemistry. 1 Unit.**

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

**CHEM 233C. Creativity in Organic Chemistry. 1 Unit.**

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

**CHEM 235. Applications of NMR Spectroscopy. 3 Units.**

The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.

**CHEM 250. Single-Crystal X-ray Diffraction. 3 Units.**

Practical X-ray crystallography for small molecule compounds, which will emphasize crystal growth, measurement strategies, structure solution and refinement, and report generation. Example structures will include absolute configuration of organic compounds (with the heaviest atom being oxygen), metal containing complexes, disordered small molecules and twinning. Students will learn how to get from a new compound to a single crystal, and then to a cif-file ready for publication submission. They will gain knowledge of the underlying theory and concepts for each step of structure determination.

Same as: CHEM 150

**CHEM 251. Advanced Inorganic Chemistry. 3 Units.**

Primarily intended for first-year graduate students, as a review of some of the basic concepts in inorganic chemistry. Specific topics covered will include: symmetry, group theory, electronic structure of molecules and solids, and reactivity of coordination complexes. Prerequisite: Advanced undergraduate-level inorganic chemistry.

**CHEM 253. Advanced Inorganic Chemistry. 3 Units.**

Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: 153 or the equivalent.

**CHEM 255. Advanced Inorganic Chemistry. 3 Units.**

Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry. Same as: CHEM 155

**CHEM 258A. Research Progress in Inorganic Chemistry. 1 Unit.**

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

**CHEM 258B. Research Progress in Inorganic Chemistry. 1 Unit.**

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

**CHEM 258C. Research Progress in Inorganic Chemistry. 1 Unit.**

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

**CHEM 259. Inorganic Chemistry Seminar. 1 Unit.**

Required of graduate students majoring in inorganic chemistry.

**CHEM 25N. Science in the News. 3 Units.**

Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.

**CHEM 261. Computational Chemistry. 3 Units.**

Introduction to computational chemistry methods and tools that can be used to interpret and guide experimental research. Project based and hands-on experience with electronic structure calculations, obtaining minimum energy structures and reaction pathways, molecular simulation and modeling. Prerequisite: knowledge of undergraduate level quantum mechanics at the level of Chem 173.

**CHEM 26N. The What, Why, How and Wow's of Nanotechnology. 3 Units.**

Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets.

**CHEM 271. Advanced Physical Chemistry. 3 Units.**

The principles of quantum mechanics. General formulation, mathematical methods, and applications of quantum theory. Different representations of quantum theory, i. e., the Dirac, Schrödinger, matrix, and density matrix methods. Time independent exactly solvable problems and approximate methods including time independent perturbation theory and the variational method. Atomic energy calculations, angular momentum, and introduction to molecular structure methods. Time dependent methods. Time dependent perturbation theory applied to various problems such as absorption and emission of radiation. Time dependent density matrix formalism applied to coherent coupling of radiation fields to molecular systems, e.g., NMR and optical spectroscopy. Prerequisite: 175 or equivalent course.

**CHEM 273. Advanced Physical Chemistry. 3 Units.**

Statistical mechanics is a fundamental bridge that links microscopic world of quantum mechanics to macroscopic thermodynamic properties. We discuss the principles and methods of statistical mechanics from the ensemble point of view. Applications include statistical thermodynamics, quantum systems, heat capacities of gases and solids, chemical equilibrium, pair correlation functions in liquids, and phase transitions. Prerequisite: 271.

**CHEM 274. Electrochemical Measurements Lab. 3 Units.**

Introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: 134, 171, MATH 51, PHYSICS 44 or equivalent.

Same as: CHEM 174

**CHEM 275. Advanced Physical Chemistry. 3 Units.**

Covering angular momentum theory with a special emphasis on scattering dynamics and the interaction of radiation and matter. Recommended: Chem 273 and either Chem 271 or Physics 230.

**CHEM 277. Materials Chemistry and Physics. 3 Units.**

Topics: structures and symmetries and of solid state crystalline materials, chemical applications of group theory in solids, quantum mechanical electronic band structures of solids, phonons in solids, synthesis methods and characterization techniques for solids including nanostructured materials, selected applications of solid state materials and nanostructures. May be repeated for credit.

**CHEM 278A. Research Progress in Physical Chemistry. 1 Unit.**

Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win.

**CHEM 278B. Research Progress in Physical Chemistry. 1 Unit.**

Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win.

**CHEM 279. Physical Chemistry Seminar. 1 Unit.**

Required of graduate students majoring in physical chemistry. May be repeated for credit.

**CHEM 27N. Light and Life. 3 Units.**

Preference given to freshman. Light plays a central role in many biological processes and color affects everything in our world. This includes familiar processes such as photosynthesis and vision, but also proton pumps in the organisms that make the Bay purple, green fluorescent protein (GFP), the light from fireflies, the blue and red light receptors responsible for directing how plants grow, the molecules responsible for fall colors, and repair enzymes such as DNA photolyase. Light is also used to interrogate (e.g. super-resolution microscopy) and manipulate (optogenetics) biological systems. Light causes sunburn, but can also be used in combination with special molecules to treat diseases. We will discuss the nature of light, how it is measured, how it is generated in the laboratory, how molecules are excited, and how one measures the fate of this excitation in simple molecules and complex biological systems. Chem 31X or 31A/B preferred, but not required.

**CHEM 280. Single-Molecule Spectroscopy and Imaging. 3 Units.**

Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy: interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: 271, previous or concurrent enrollment in 273.

**CHEM 285. Biophysical Chemistry. 3 Units.**

Primary literature based seminar/discussion course covering classical and contemporary papers in biophysical chemistry. This is intended to provide an introduction to critical analysis of papers in the literature through intensive discussion and evaluation. Topics include (among others): protein structure and stability, folding, single molecule fluorescence and force microscopy, simulations, ion channels, GPCRs, and ribosome structure/function. Course is limited to 15 students and priority will be given to first year Chemistry graduate students.

**CHEM 287B. Natural Product Biosynthesis: Chemical Logic and Enzymatic Machinery. 1 Unit.**

This course provides an overview of the biosynthesis of the five major classes of small molecule natural products, including polyketides, nonribosomal peptides, terpene/isoprenoid scaffolds, alkaloids, and phenylpropanoids. Focus will be on the chemical logic for bond-forming chemical steps in each natural product class and the kinds of enzyme catalysts required to effect complexity-generating molecular scaffolds. This short course runs for the first five weeks of the quarter, from January through the second week of February. Prerequisite: Chem 181 or equivalent.

Same as: CHEM 187B

**CHEM 28N. Science Innovation and Communication. 3 Units.**

Preference to freshmen. The course will explore evolutionary and revolutionary scientific advances; their consequences to society, biotechnology, and the economy; and mechanisms for communicating science to the public. The course will engage academic and industrial thought leaders and provide an opportunity for students to participate in communicating science to the public. This fusion of journalism and science has led to a new undergraduate organization (faSCI(n)ate), a web site and video presentations. It is an opportunity to share the fun, excitement and importance of science with others.

**CHEM 291. Introduction to Nuclear Magnetic Resonance. 3 Units.**

Introduction to quantum and classical descriptions of NMR; analysis of pulse sequences and nuclear spin coherences via density matrices and the product operator formalism; NMR spectrometer design; Fourier analysis of time-dependent observable magnetization; NMR relaxation in liquids and solids; NMR strategies for biological problem solving. Prerequisite: Chem 173.

**CHEM 296. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 196, CHEMENG 196, CHEMENG 296

**CHEM 297. Bio-Inorganic Chemistry. 3 Units.**

Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.

Same as: BIOPHYS 297

**CHEM 299. Teaching of Chemistry. 1-3 Unit.**

Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.

**CHEM 29N. Chemistry in the Kitchen. 3 Units.**

Preference to Freshmen. This course examines the chemistry relevant to food and drink preparation, both in homes and in restaurants, which makes what we consume more pleasurable. Good cooking is more often considered an art rather than a science, but a small bit of understanding goes a long way to make the preparation and consumption of food and drink more enjoyable. The intention is to have demonstrations and tastings as a part of every class meeting. We will examine some rather familiar items in this course: eggs, dairy products, meats, breads, vegetables, pastries, and carbonated beverages. We shall playfully explore the chemistry that turns food into meals. A high-school chemistry background is assumed; bring to class a good appetite and a healthy curiosity.

**CHEM 2L. Organic Chemistry Lab II. 2 Units.**

Provides hands on experience with modern chemical methods for preparative and analytical chemistry including GCMS, UV-VIS and IR spectroscopy. Learn how chemoselectivity of reactions can be achieved, synthesize bioactive molecules such as pain relievers, and explore how sunscreens can be made more effective. Prerequisite: Chem 1L. Co-requisite: Chem 2.

**CHEM 3. Organic Chemistry of Biomolecules. 4 Units.**

Third lecture class in summer organic intensive focusing on the structure and reactivity of a class of larger molecules, the biomolecules. Topics covered of interest to biochemistry include aromatic compounds, amines and heterocycles, amino acids, proteins, polysaccharides, nucleic acids and polymers. Prerequisite: Chem 35 or Chem 2 or course equivalent.

**CHEM 300. Department Colloquium. 1 Unit.**

Required of graduate students. May be repeated for credit.

**CHEM 301. Research in Chemistry. 2 Units.**

Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Search for adviser name on Axess.

**CHEM 31A. Chemical Principles I. 5 Units.**

For students with moderate or no background in chemistry. Stoichiometry; periodicity; electronic structure and bonding; gases; enthalpy; phase behavior. Emphasis is on skills to address structural and quantitative chemical questions; lab provides practice. Recitation.

**CHEM 31AC. Problem Solving in Science. 1 Unit.**

Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 31A.

**CHEM 31B. Chemical Principles II. 5 Units.**

Chemical equilibrium; acids and bases; oxidation and reduction reactions; chemical thermodynamics; kinetics. Lab. Prerequisite: CHEM 31A.

**CHEM 31BC. Problem Solving in Science. 1 Unit.**

Development and practice of critical problem solving skills using chemical examples. Limited enrollment and with permission of the instructor. Corequisite: 31B.

**CHEM 31X. Chemical Principles Accelerated. 5 Units.**

Accelerated; for students with substantial chemistry background. Chemical equilibria concepts, equilibrium constants, acids and bases, chemical thermodynamics, quantum concepts, models of ionic and covalent bonding, atomic and molecular orbital theory, periodicity, and bonding properties of matter. Recitation. Prerequisites: AP chemistry score of 5 or passing score on chemistry placement test, and AP Calculus AB score of 4 or Math 20. Recommended: high school physics.

**CHEM 33. Structure and Reactivity of Organic Molecules. 5 Units.**

Introduction to organic chemistry. Learn to relate three dimensional structure of organic molecules to their chemical and physical properties. Introduced to a variety of functional groups that exhibit patterns of reactivity and learn how to predict products of a reaction in the context of thermodynamics and kinetics. Two hour weekly lab section accompanies the course to introduce the techniques of separation and identification of organic compounds. Prerequisite: 31A,B, or 31X, or AP Chemistry score of 5.

**CHEM 33C. Problem Solving in Science. 1 Unit.**

Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 33.

**CHEM 35. Organic Chemistry of Bioactive Molecules. 5 Units.**

Focuses on the structure and reactivity of natural and synthetic bioactive molecules. Covers fundamental concepts underlying chemical reactivity and the logic of chemical synthesis for an appreciation of the profound impact of organic chemistry on humankind in fields ranging from medicine to earth and planetary science. A three hour lab section provides hands on experience with modern chemical methods for preparative and analytical chemistry. Prerequisite: Chem 33.

**CHEM 390. Curricular Practical Training for Chemists. 1 Unit.**

For Chemistry majors who need work experience as part of their program of study. Confer with Chem student services office for signup.

**CHEM 3L. Organic Chemistry Lab III. 2 Units.**

Advanced organic lab course that introduces multi-step synthesis, NMR spectroscopy, and polymer chemistry. Learn how to use modern analytical and spectroscopic techniques to determine the structure of organic compounds. Prerequisite: Chem 2L or course equivalent.

**CHEM 4. Biochemistry: Chemistry of Life. 4 Units.**

A four-week intensive biochemistry course from a chemical perspective. The chemical basis of life, including the biomolecular chemistry of amino acids, proteins, carbohydrates, lipids, and nucleic acids, as well as enzyme kinetics and mechanisms, thermodynamics, and core metabolism, control, and regulation. Recitation includes group work on case studies that support the daily lecture material. Prerequisites: CHEM 33, 35, 131 or 1 year of organic chemistry; Math 19, 20, 21 or 41, 42 or 1 year of single variable calculus.

**CHEM 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOG 459, BIOE 459, CHEMENG 459, PSYCH 459

**CHEM 802. TGR Dissertation. 0 Units.**

## Civil & Environ Engineering (CEE)

**CEE 1. Introduction to Environmental Systems Engineering. 1 Unit.**

Field trips visiting environmental systems installations in Northern California, including coastal, freshwater, and urban infrastructure. Requirements: Several campus meetings, and field trips. Enrollment limited; priority given to undergraduates who have declared Environmental Systems Engineering major. Contact [hildemann@stanford.edu](mailto:hildemann@stanford.edu) to request enrollment/permission code.

**CEE 100. Managing Sustainable Building Projects. 4 Units.**

Managing the life cycle of buildings from the owner, designer, and contractor perspectives emphasizing sustainability goals; methods to define, communicate, coordinate, and manage multidisciplinary project objectives including scope, quality, life cycle cost and value, schedule, safety, energy, and social concerns; roles, responsibilities, and risks for project participants; virtual design and construction methods for product, organization, and process modeling; lifecycle assessment methods; individual writing assignment related to a real world project.

**CEE 101A. Mechanics of Materials. 4 Units.**

Introduction to beam and column theory. Normal stress and strain in beams under various loading conditions; shear stress and shear flow; deflections of determinate and indeterminate beams; analysis of column buckling; structural loads in design; strength and serviceability criteria. Lab experiments. Prerequisites: ENGR 14.

**CEE 101B. Mechanics of Fluids. 4 Units.**

Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special case of hydrostatics; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes and open channels; elements of boundary-layer theory. The Tuesday lectures, which are preparation for the labs, will start at 12:30pm. Lab experiments will illustrate conservation principles and flows of real fluids, analysis of errors and modeling of simple fluid systems. Students seeking to take this course without the laboratory will need to enroll in CEE 162A but must get permission first from the instructor. Prerequisites: E14, Physics 41, Math 51, or CME 100.

**CEE 101C. Geotechnical Engineering. 3-4 Units.**

Introduction to the principles of soil mechanics. Soil classification, shear strength and stress-strain behavior of soils, consolidation theory, analysis and design of earth retaining structures, introduction to shallow and deep foundation design, slope stability. Lab projects. Prerequisite: ENGR 14. Recommended: 101A.

**CEE 101D. Computations in Civil and Environmental Engineering. 3 Units.**

Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

Same as: CEE 201D

**CEE 101S. Science & Engineering Problem-Solving with MatLab.. 3 Units.**

Introduction to the application of MATLAB as a powerful tool to solve a variety of science and engineering problems. Exposure to computational and visualization tools available through MATLAB to analyze, solve, and visualize some common problems of interest in science and engineering. Prerequisite: Calculus. Note: students enrolling in CEE 201S must seek the consent of instructor.

Same as: CEE 201S

**CEE 102. Legal Principles in Design, Construction, and Project Delivery. 3 Units.**

Introduction to the key legal principles affecting design, construction and the delivery of infrastructure projects. The course begins with an introduction to the structure of law, including principles of contract, negligence, professional responsibility, intellectual property, land use and environmental law, then draws on these concepts to examine current and developing means of project delivery.

**CEE 107A. Understanding Energy. 3-5 Units.**

Energy is a fundamental driver of human development and opportunity. At the same time, our energy system has significant consequences for our society, political system, economy, and environment. For example, energy production and use is the number one source of greenhouse gas emissions. In taking this course, students will not only understand the fundamentals of each energy resource – including significance and potential, conversion processes and technologies, drivers and barriers, policy and regulation, and social, economic, and environmental impacts – students will also be able to put this in the context of the broader energy system and think critically about how and why society has chosen particular energy resources. Both depletable and renewable energy resources are covered, including oil, natural gas, coal, nuclear, biomass and biofuel, hydroelectric, wind, solar thermal and photovoltaics (PV), geothermal, and ocean energy, with cross-cutting topics including electricity, storage, climate change, sustainability, green buildings, energy efficiency, transportation, and the developing world. The course is 4 units, which includes lecture and in-class discussion, readings and videos, assignments, and two off-site field trips. Enroll for 5 units to also attend the Workshop, an interactive discussion section on cross-cutting topics that meets once per week for 80 minutes (timing TBD based on student schedules). The 3-unit option requires instructor approval - please contact Diana Ginnebaugh. Website: <http://web.stanford.edu/class/cee207a/> Course was formerly called Energy Resources. Prerequisites: Algebra. May not be taken for credit by students who have completed CEE 107S.

Same as: CEE 207A, EARTHSYS 103

**CEE 107R. E3: Extreme Energy Efficiency. 2 Units.**

Be part of a unique and intense six day course about extreme energy efficiency taking place during Spring Break 2018 at Rocky Mountain Institute's Innovation Center in Basalt, Colorado! The course will focus on efficiency techniques' design, performance, choice, evolution, integration, barrier-busting, profitable business-led implementation, and implications for energy supply, competitive success, environment, development, security, etc. Examples will span very diverse sectors, applications, issues, and disciplines, with each day covering a different energy theme: buildings, transportation, industry, and implementation and implications, including renewable energy synergy and integration. Solid technical grounding and acquaintance with basic economics and business concepts will both be helpful. Rocky Mountain Institute (RMI) will design a series of lectures, exercises, and interactive activities synthesizing integrative design principles. Students will be introduced to Factor 10 Engineering, the approach for optimizing the whole system for multiple benefits. Students will work closely and interactively with RMI staff including Amory Lovins, cofounder and Chief Scientist of Rocky Mountain Institute (RMI). Exercises will illuminate challenges RMI has faced and solutions it has created in real-world design. Students will explore clean-sheet solutions that meet end-use demands and optimize whole-system resource efficiency, often with expanding rather than diminishing returns to investments, i.e. making big savings cheaper than small ones. Students will meet as a class once during winter quarter to discuss preparation and spring break logistics. Students must pay for their own travel to and from Basalt, CO (~\$400-\$600). Course will take place Sunday, March 25 - Friday, March 30. Lodging and food will be covered during the course. Must apply - instructor approval required. All backgrounds and disciplines, both undergraduate and graduate, are welcome to apply. Prerequisite - completion of one of the following courses is required: CEE 107A, CEE 207A, Earthsys 103, CEE 107S, CEE 207S, CEE 176A, CEE 176B. Contact Diana Ginnebaugh at [moongdes@stanford.edu](mailto:moongdes@stanford.edu) for an application. Course website: <https://web.stanford.edu/class/cee207r/>.

Same as: CEE 207R

**CEE 107S. Energy Resources: Fuels and Tools. 3 Units.**

Energy is a vital part of our daily lives. This course examines where that energy comes from, and the advantages and disadvantages across different fuels. Contextual analysis of energy decisions for transportation and electricity generation around the world. Energy resources covered include oil, biomass, natural gas, nuclear, hydropower, wind, solar, geothermal, and emerging technologies. Prerequisites: Algebra. Note: may not be taken by students who have completed CEE 173A, CEE 207 or EARTHSYS 103.

Same as: CEE 207S

**CEE 10A. Introduction to Architecture. 2 Units.**

This class introduces students to the discipline of architecture and to the fundamental question: What is an architect and how is architecture distinct from other arts and sciences? To answer this question, the class will focus on concepts important to the practice of architecture including: project conception, drawing, modeling, materials, structure, form, and professionalism. These terms will be investigated through short talks, site visits, historical precedent, in-class exercises, panel discussions and two on-campus case studies. No prior knowledge of architecture is required.

**CEE 10B. Presentation Skills. 0 Units.**

TBD.

**CEE 112A. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Building upon the concept of VDC Scorecard, CEE 112A/212A investigates in the management of Virtual Design and Construction (VDC) programs and projects in the building industry. Interacting with experts and professionals in real estate, architecture, engineering, construction and technology providers, students will learn from the industry applications of Building Information Modeling and its relationship with Integrated Project Delivery, Sustainable Design and Construction. Students will conduct case studies to evaluate the maturity of VDC planning, adoption, technology and performance in practice. Students taking 3 or 4 units will be paired up with independent research or case study projects on the industry applications of VDC. No prerequisite. See CEE112B/212B in the Winter Quarter and CEE 112C/212C in the Spring Quarter.

**CEE 112B. Industry Applications of Virtual Design & Construction. 2-4 Units.**

CEE 112B/212B is a practicum on the Industry Applications on Virtual Design and Construction (VDC). Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC and Building Information Modeling (BIM). Students can choose between one of the two project topics: [1] Industrialized Construction with Virtual Parts (No Prerequisite) or [2] Industry Benchmarking & Applications of the VDC Management Scorecard (Suggested Prerequisite: CEE 112A/212A).  
Same as: CEE 212B

**CEE 112C. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Following the Autumn- and Winter-quarter course series, CEE 112C/212C is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC projects with public owners and private developers, such as GSA Public Buildings Service, the Hong Kong Mass Transit Railway, Optima, Walt Disney Imagineering, Microsoft facilities and/or other CIFE International members. Independently, students will conduct case studies and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE 112A/212A, CEE 112B/212B, CEE 159C/259C, CEE 159D/259D, or Instructor's Approval.  
Same as: CEE 212C

**CEE 112D. Industry Applications of Virtual Design and Construction. 2-4 Units.**

A continuation of the CEE 112/212 series, CEE 112D/212D is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC research or application opportunities with public owners and private developers, professional associations, and/or other member organizations of the Center for Integrated Facility Engineering at Stanford. Independently, students will conduct case studies, research activities, and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE110/210, CEE 112C/212C, CEE 122B/222B, or Instructor's Approval.  
Same as: CEE 212D

**CEE 113. Patterns of Sustainability. 1-4 Unit.**

This seminar examines the interrelated sustainability of the natural, built and social environments of places in which we live. Several BOSP centers and the home Stanford campus will hold this 1-2 unit seminar simultaneously and collaborate with a shared curriculum, assignments, web conference and a Wiki. The goal of the collaborative arrangement is to expose, share, compare and contrast views of sustainability in different parts of the world. We will look at and assess aspects of sustainability of the places we are living from a theoretical perspective from the literature, from observations and interviews in the countries in which we study.

Same as: CEE 213

**CEE 120A. Building Information Modeling Workshop. 2-4 Units.**

The foundational Building Information Modeling course introduces techniques for creating, managing, and applying of building information models in the building design and construction process. The course covers processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components and geometries to produce models used in architectural design, construction planning and documentation, rendering and visualization, simulation and analysis.

Same as: CEE 220A

**CEE 120B. Building Information Modeling Workshop. 2-4 Units.**

This course builds upon the Building Information Model concepts introduced in 120A/220A and illustrates how BIM modeling tools are used to design, analyze, and model building systems including structural, mechanical, electrical, plumbing and fire protection. Course covers the physical principles, design criteria, and design strategies for each system and explores processes and tools for modeling those systems and analyzing their performance. Topics include: building envelopes, access systems, structural systems modeling and analysis, mechanical / HVAC systems, plumbing and fire protection systems, electrical systems, and systems integration/coordination.

Same as: CEE 220B

**CEE 120C. Parametric Design and Optimization. 2-4 Units.**

This course explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. Class sessions will introduce several parametric design modeling platforms and scripting environments that enable rapid generation of 3D models and enable rapid evaluation of parametrically-driven design alternatives. Topics to be featured include: Principles of parametric design vs. direct modeling; Design exploration using parametric modeling platforms (Revit/FormIt, Rhino); Visual scripting languages and environments (Dynamo, Grasshopper, DesignScript); Single- and multi-dimensional optimization techniques and guidance strategies.

Same as: CEE 220C

**CEE 120S. Building Information Modeling Special Study. 2-4 Units.**

Special studies of Building Information Modeling strategies and techniques focused on creating, managing, and applying models in the building design and construction process. Processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components to produce models used in design, construction planning, visualization, and analysis.

Same as: CEE 220S

**CEE 122A. Computer Integrated Architecture/Engineering/Construction. 2 Units.**

Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222A. Apprentices participate in all activities of the AEC team, including the goals, objectives, constraints, tasks, and process of a crossdisciplinary global AEC teamwork in the concept development phase of a comprehensive building project. Prerequisite: consent of instructor.

Same as: A/E/C

**CEE 122B. Computer Integrated A/E/C. 2 Units.**

Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222B. Project activity focuses on modeling, simulation, life-cycle cost, and cost benefit analysis in the project development phase. Prerequisite: CEE 122A.

**CEE 124. Sustainable Development Studio. 1-5 Unit.**

(Graduate students register for 224A.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

**CEE 124X. Disasters, Decisions, Development in Sustainable Urban Systems (CEE). 1-5 Unit.**

CEE 224X of the CEE 224XYZ SUS Project series is joining forces with D3: Disasters, Decisions, Development to offer D3+SUS which will connect principles of sustainable urban systems with the challenge of increasing resilience in the San Francisco Bay Area. The project-based learning course is designed to align with the Resilient By Design | Bay Area Challenge Collaborative Research Phase (<http://resilientbayarea.org>); students will learn the basic concepts of resilience and tools of risk analysis while applying those mindsets and toolsets to a collective research product delivered to the RBD community. Students who take D3+SUS are encouraged to continue on to CE 224Y and CEE 224Z, in which teams will be paired with local partners and will develop interventions to improve the resilience of local communities. For more information, visit <http://sus.stanford.edu/courses>. (Cardinal Course certified by the Haas Center).

Same as: CEE 224X

**CEE 124Y. Sustainable Urban Systems Project. 1-5 Unit.**

Sustainable Urban Systems (SUS) Project is a project-based learning experience being piloted for an upcoming new SUS M.S. Program within CEE. Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered throughout the academic year and may span multiple quarters. Students are expected to interact with professionals and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. To view project descriptions and apply, visit <http://sus.stanford.edu/courses/>.

Same as: CEE 224Y, GEOPHYS 118Y, GEOPHYS 218Y

**CEE 124Z. Sustainable Urban Systems Project. 1-5 Unit.**

**CEE 125. Defining Smart Cities: Visions of Urbanism for the 21st Century. 1-2 Unit.**

In a rapidly urbanizing world, the city paves the way toward sustainability and social well-being. But what does it mean for a city to be smart? Does that also make it sustainable or resilient or livable? This seminar delves into current debates about urbanism through weekly talks by experts on topics such as big data, human-centered design, urban sustainability, and natural capital. The goal of the seminar is to explore how advances in information communication technologies affect the built environment at various scales (e.g., cities, districts, neighborhoods, blocks, buildings) and to understand the role of multiple actors working at the intersection of technology and urbanism. The seminar will provoke vigorous discussion of how urban spaces are shaped, for better or worse, by the complex interaction of technology, human societies, and the natural environment. Students taking the course for 2 units / letter grade will propose an independent research project and present their work at a final symposium.

Same as: CEE 225, URBANST 174

**CEE 126. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.**

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see [internationalurbanization.org](http://internationalurbanization.org) for details. Prerequisites: consent of the instructor(s).

Same as: EARTH SYS 138, IPS 274, URBANST 145

**CEE 126X. Hard Earth: Stanford Graduate-Student Talks Exploring Tough Environmental Dilemmas. 1 Unit.**

Stanford's graduate students are a trove of knowledge – and, just as important, curiosity – about environmental sustainability. This seminar will feature talks by graduate students that explore the biggest, most bedeviling questions about environmental sustainability locally and around the world. The course will be structured as follows: every other week, we will hear hour-long graduate student talks about sustainability questions and their research, and on the off weeks, we will discuss the unanswered, debatable questions that relate to the previous week's talk.

Same as: EARTH 126X

**CEE 126Y. Hard Earth: Stanford Graduate-Student Talks Exploring Tough Environmental Dilemmas. 1 Unit.**

Stanford's graduate students are a trove of knowledge – and, just as important, curiosity – about environmental sustainability. This seminar will feature talks by graduate students that explore the biggest, most bedeviling questions about environmental sustainability locally and around the world. The course will be structured as follows: every other week, we will hear hour-long graduate student talks about sustainability questions and their research, and on the off weeks, we will discuss the unanswered, debatable questions that relate to the previous week's talk.

Same as: EARTH 126Y

**CEE 126Z. Hard Earth: Stanford Graduate-Student Talks Exploring Tough Environmental Dilemmas. 1 Unit.**

Stanford's graduate students are a trove of knowledge – and, just as important, curiosity – about environmental sustainability. This seminar will feature talks by graduate students that explore the biggest, most bedeviling questions about environmental sustainability locally and around the world. The course will be structured as follows: every other week, we will hear hour-long graduate student talks about sustainability questions and their research, and on the off weeks, we will discuss the unanswered, debatable questions that relate to the previous week's talk.

Same as: EARTH 126Z

**CEE 129S. Climate Change Adaptation in the Coastal Built Environment. 1 Unit.**

How will climate change impact coastal ports and harbors around the world? Leading experts discuss the latest science, policy, and engineering research on this important issue, including the necessary response to protect ports and harbors from significant sea-level rise and storm surge. Focus is on the built environment. Guest speakers. CEE 229/129 for research option. See [www.groupspaces.com/seaports2100](http://www.groupspaces.com/seaports2100). Same as: CEE 229S

**CEE 130. Architectural Design: 3-D Modeling, Methodology, and Process. 5 Units.**

Preference to Architectural Design majors; others by consent of instructor. Projects investigate conceptual approaches to the design of key architectural elements, such as wall and roof. Functional and structural considerations. Focus is on constructing 3-D models in a range of materials; 3-D computer modeling. Students keep a graphic account of the evolution of their design process. Final project entails design of a simple structure. Limited enrollment. Pre- or corequisite: CEE 31 or 31Q.

**CEE 131A. Professional Practice: Mixed-Use Design in an Urban Setting. 4 Units.**

The delivery of a successful building design program involves unique collaboration between architect and client. This course will endeavor to teach the skills necessary for a designer to identify, evaluate, conceptualize and fully document a complex mixed-use urban design. Students will complete the course with a detailed knowledge of the consultants, engineers and other professionals needed for a complete program. Course deliverables will include three short assignments and a final project consisting of basic schematic drawings for the selected project. Guest presenters will cover topics of interest. Lectures, discussions, in-class studio-work and an oral presentation. Pre-requisite: CEE 130.

**CEE 131B. Financial Management of Sustainable Urban Systems. 3 Units.**

Focus is on financial management of sustainable urban systems. The course will study different kinds of financial services available, the management of financial resources, and relationships to financial service providers. The course will also study how financial services and relationships to financial service providers can be used to accomplish construction management, energy, and architecture work in sustainable urban systems. The learning outcome is an understanding of how financial services can be used in development of sustainable urban systems. The course work is structured so that there are three modules: 1) general knowledge of financial management, 2) in-depth application in construction management, energy, or architecture, and 3) comparison of similarities and differences in-between the in-depth applications. Students will focus on one of the in-depth applications in a group work, and present the result of this application to students that make other applications. A key learning aspect is the understanding of how finance is used in construction management, energy, and architecture work. Students should be able to show the value, financial viability, and risk management of sustainable urban system development in construction management, energy, and architecture. Students should be able to finance construction management, energy, and architecture work. Readings include applications of finance and management to construction management, energy, or architecture. Guest speakers include developers, financial managers at construction firms, managers at energy firms, construction managers.

**CEE 131C. How Buildings are Made -- Materiality and Construction Methods. 4 Units.**

This course will provide an introduction to the materials and methods used in building construction. A combination of in-class lectures, reading assignments, and building site visits will provide students with an awareness of construction materials and their use within building systems. All relevant building types and construction materials will be explored, including wood, steel, concrete and masonry. Building foundations and basic structural systems will be explained. Building envelope elements will be considered, with an analysis of various glass and glazing materials, cladding types, and roofing systems. Interior Floor, wall and ceiling finishes will be discussed. New and emerging building trends will also be examined, such as prefabricated and modular construction. Guest presenters, drawn from Bay Area consulting firms, will cover several topics of interest. Students will have an opportunity to experience real world material applications at local construction sites, and gain a thorough understanding of the construction process.

**CEE 131D. Urban Design Studio. 5 Units.**

The practical application of urban design theory. Projects focus on designing neighborhood and downtown regions to balance livability, revitalization, population growth, and historic preservation. Same as: URBANST 171

**CEE 132H. Responsive Structures. 3 Units.**

This Design Build seminar investigates the use of metal as a structural, spatial and organizational medium. We will examine the physical properties of post-formable plywood, and develop a structural system and design which respond to site and programmatic conditions. The process includes model building, prototyping, development of joinery, and culminates in the full scale installation of the developed design on campus. This course may be repeated for credit (up to three times). Class meeting days/times are as follows: April 14, 9a-5p; April 28, 10a-5p; May 3, 7-9p; May 19, 10a-6:30p; May 20, 10a-6:30p. Same as: CEE 32H

**CEE 132Q. Office of Metropolitan Architecture: Workshop of the New. 4-5 Units.**

This seminar investigates all aspects of the work of the Office of Metropolitan Architecture (OMA) and its leader Rem Koolhaas. Topics for class research and inquiry include but are not limited to: Koolhaas's early work at the Architectural Association and the founding of OMA, the publications of OMA and their style of presentation and theoretical foundations, the importance of AMO, and the architects who have left OMA and founded their own practices and how these differ from OMA. Each student completes an in-depth research paper and an in-class presentation. Same as: ARTHIST 262

**CEE 133F. Principles of Freehand Drawing. 3 Units.**

Traditional methods of depicting shape, form, and surface are applied to the discipline of architectural drawing. Students develop abilities to observe visual phenomenon analytically and translate subjects onto a two-dimensional surface in a variety of media. Drawing techniques such as modeling form, shading, rendering materials, and articulating landscaping are explored. Linear perspective exercises provide a foundation for the construction of drawings to illustrate cohesive design proposals. Step-by-step constructions, quick freehand sketches from slides, and on-location studies.

**CEE 133G. Architectural History & Drawing in Eastern Europe. 2 Units.**

Students in this seminar will travel to Prague, Czech Republic and Krakow, Poland for a week of historical morning walks and discussions about architectural and urbanism in each city. Afternoon sketching sessions will focus attention on some of the locations visited earlier that day. Buildings, sites and monuments from the Middle Ages to the present will be assessed, questioned, and drawn. Short reading assignments and/or films provide a background for each day's examination of a section of these two cities. Possible day trips may include site visits to Auschwitz and the Wieliczka Salt Mine. Casual late afternoon excursions will complement themes of the course. Upon returning to Stanford, the seminar will meet four times to discuss observations and organize a small exhibition of the sketches made during the trip.

**CEE 134B. Intermediate Arch Studio. 5 Units.**

This studio offers students experience in working with a real site and a real client program to develop a community facility. Students will develop site analysis, review a program for development and ultimately design their own solutions that meet client and community goals. Sustainability, historic preservation, community needs and materials will all play a part in the development of students final project. Students will also gain an understanding of graphic conventions, verbal and presentation techniques. Course may be repeated for credit.

Same as: CEE 234B

**CEE 137B. Advanced Architecture Studio. 6 Units.**

This course will focus on the topic of interdisciplinary collaboration and its role in the development of design concepts. Specifically, the integration of structural with architectural considerations to produce a unified urban, spatial, tectonic and structural proposition will be our field of investigation. This course is an architecture studio course where class time will be spent primarily in individual or group desk critiques and pin-up sessions. May be repeat for credit. Total completions allowed: 3. Additionally, there will be lectures, case study presentations and a field trip. Prerequisites: required: CEE 31 (or 31Q) Drawing, CEE 110 BIM and CEE 130 Design.

Same as: CEE 237B

**CEE 139. Design Portfolio Methods. 4 Units.**

The portfolio is an essential creative tool used to communicate academic work, design philosophies, and professional intent. This course will explore elements of graphic design, presentation, communication, binding, printing, and construction, yielding a final portfolio (physical and digital) for professional, academic or personal purposes. Limited enrollment. Prerequisites: two Art, Design, or Architecture studio courses, or consent of instructor.

Same as: CEE 239

**CEE 141A. Infrastructure Project Development. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works in the U.S. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare project environmental impact statements.

Same as: CEE 241A

**CEE 141B. Infrastructure Project Delivery. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare finance/design/build/operate/maintain project proposals.

Same as: CEE 241B

**CEE 141C. Global Infrastructure Projects Seminar. 1-2 Unit.**

Nine current global infrastructure projects presented by top project executives or company leaders from industry. Water, transportation, energy and communication projects are featured. Course provides comparisons of project development, win and delivery approaches for mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management and construction strategies, and lessons learned. The course also includes field trips to local mega-projects.

Same as: CEE 241C

**CEE 144. Design and Innovation for the Circular Economy. 3 Units.**

The last 150 years of our industrial evolution have been material and energy intensive. The linear model of production and consumption manufactures goods from raw materials, wells and uses them, and then discards the products as waste. Circular economy provides a framework for systems-level redesign. It builds on schools of thought including regenerative design, performance economy industrial ecology, blue economy, biomimicry, and cradle to cradle. This course introduces the concepts of the circular economy and applies them to case studies of consumer products, household goods, and fixed assets. nStudents will conduct independent projects on circular economy. Students may work alone or in small teams under the guidance of the teaching team and various collaborators worldwide. Class is limited to 14 students. All disciplines are welcome. This class fulfills the Writing & Rhetoric 2 requirement. Prerequisite: PWR 1.

**CEE 146S. Engineering Economics and Sustainability. 3 Units.**

Engineering Economics is a subset of the field of economics that draws upon the logic of economics, but adds that analytical power of mathematics and statistics. The concepts developed in this course are broadly applicable to many professional and personal decisions, including making purchasing decisions, deciding between project alternatives, evaluating different processes, and balancing environmental and social costs against economic costs. The concepts taught in this course will be increasingly valuable as students climb the career ladder in private industry, a non-governmental organization, a public agency, or in founding their own startup. Eventually, the ability to make informed decisions that are based in fundamental analysis of alternatives is a part of every career. As such, this course is recommended for engineering and non-engineering students alike. This course is taught exclusively online in every quarter it is offered. (Prerequisites: MATH 19 or 20 or approved equivalent.).

Same as: ENGR 60

**CEE 151. Negotiation. 3 Units.**

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; students should enroll on Axess and complete the application on Canvas before March 18.

Same as: CEE 251, EARTH 251, PUBLPOL 152

**CEE 155. Introduction to Sensing Networks for CEE. 3-4 Units.**

Introduce the design and implementation of sensor networks for monitoring the built and natural environment. Emphasis on the integration of modern sensor and communication technologies, signal processing and statistical models for network data analysis and interpretation to create practical deployments to enable sustainable systems, in areas such as energy, weather, transportation and buildings. Students will be involved in a practical project that may involve deploying a small sensor system, data models and analysis and signal processing. Limited enrollment.

Same as: CEE 255

**CEE 156. Building Systems. 4 Units.**

HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants.

Same as: CEE 256

**CEE 159. Managing Construction Innovation - Practicum. 2-4 Units.**

CEE 159/259 students join Stanford researchers in developing performance metrics and key performance indicators, which inform the assessment and management of productivity policies, industry initiatives, progressive enterprises, global projects or experimental processes in the construction industry. This project-based practicum builds upon a global network of government agencies, professional institutions and member companies collaborating with the Center for Integrated Facility Engineering (CIFE). Through a series of Global Construction Innovation Case Studies, students will develop applied research skills that are essential for academic research, internships or industry practice, while gaining insights into innovative and industrialized construction practice, such as the industry applications of Building Information Modeling (BIM), Integrated Project Delivery (IPD), Lean Methodology, Prefabricated Prefinished Volumetric Construction (PPVC), Smart Cities or Virtual Design and Construction (VDC). Note to students: this course may be taken repeat for credit for up to 9 cumulative units.

Same as: CEE 259

**CEE 161C. Natural Ventilation of Buildings. 3 Units.**

An introduction to natural ventilation design, including an in-depth discussion of the fluid mechanics of natural ventilation, and a review of models and measurements of naturally ventilated buildings. Overview of the design process, from assessing feasibility to commissioning. Discussion of physical processes in natural ventilation, including buoyancy- and wind- driven flow, and important fluid mechanics and heat transfer concepts and equations. Steady flow characteristics of openings, steady and unsteady envelope models. Internal air motion, zonal models and stratification. CFD and its applications, scale modeling and full-scale measurements. Throughout the course the Y2E2 building natural ventilation system and temperature measurements will be used to illustrate the different concepts and methods.

**CEE 161I. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: CEE 261I, EARTHSYS 146A, ESS 246A

**CEE 162A. Mechanics of Fluids. 3 Units.**

Formerly CEE 101X. Course content is the same as CEE 101B but without the Tuesday lecture and lab component. Permission of the instructor is required first to enroll in CEE 162A. Prerequisites: E14, Physics 41 (formerly 63) Math 51.

**CEE 162D. Introduction to Physical Oceanography. 4 Units.**

Formerly CEE 164. The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 262D, EARTHSYS 164, ESS 148

**CEE 162E. Rivers, Streams, and Canals. 3-4 Units.**

Formerly CEE 161A/264A. Introduction to the movement of water through natural and engineered channels, streams, and rivers. Basic equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Application of theory to the design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Limited enrollment in lab section. Prerequisite: CEE 101B or CEE 162A.

Same as: CEE 262E

**CEE 162F. Coastal Engineering. 3 Units.**

Introduction to the relevant processes that shape the coastline, including the hydrodynamical forcing and the resultant coastal morphology. Discussion of the natural response of coastal systems to forcing by the environment (e.g. waves, tides, storms) and how this forcing affects the sediment budget along the coast. Engineering solutions for mitigation of erosion and the associated advantages and disadvantages of such solutions. Prerequisite: CEE 101B or equivalent.

**CEE 162I. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: MATH 51 or CME100; and PHYSICS 41; and CEE 162A or CEE 101B or a graduate class in fluid dynamics or consent of the instructor.

Same as: CEE 262I, EARTHSYS 146B, ESS 246B

**CEE 165C. Water Resources Management. 3 Units.**

Optimal equilibrium between water supply and water demand, under specific local and regional physical, environmental, social and economic constraints. Principles in the context of sustainable development, increasing water scarcity in many parts of the world, and hydrologic uncertainty including that associated with climate change. Operations and water quality in reservoirs, river basins, and groundwater systems; non-conventional water sources; demand management options; and the institutional and legal framework.

Same as: CEE 265C

**CEE 166A. Watersheds and Wetlands. 4 Units.**

Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: CEE 101B or CEE 162A or equivalent. (Freyberg).

Same as: CEE 266A

**CEE 166B. Floods and Droughts, Dams and Aqueducts. 4 Units.**

Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg).

Same as: CEE 266B

**CEE 166D. Water Resources and Water Hazards Field Trips. 2 Units.**

Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.

Same as: CEE 266D

**CEE 169. Environmental and Water Resources Engineering Design. 5 Units.**

Application of fluid mechanics, hydrology, water resources, environmental sciences, and engineering economy fundamentals to the design of a system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Student teams prepare proposals, progress reports, oral presentations, and a final design report. Prerequisite: senior in Civil Engineering or Environmental Engineering; 166B.

**CEE 170S. Environmental Disasters. 2 Units.**

Mining and critical review of scientific literature for environmental impacts, especially chemical contamination caused by natural and anthropogenic disasters. Focus is on the development of research review skills, critical thinking and discussion of findings.

Same as: CEE 270S

**CEE 171. Environmental Planning Methods. 3 Units.**

Intended primarily for juniors and seniors; first year graduate students welcome. Course introduces key environmental policy design and implementation concepts and provides opportunities to work with a range of environmental planning methods. Environmental laws and regulations (e.g., US Clean Water Act and the US National Environmental Policy Act) are examined. Course demonstrates how firms have gone beyond regulatory compliance and introduced environmental sustainability issues into core business strategies. Course uses a simulated negotiation of a financial penalty between a student team representing the US EPA (and other government agencies) and a team representing a firm that is out of compliance with Clean Water Act regulations. Professionals with experience in such negotiations provide coaching for student teams. Prerequisites: MATH 51. Recommended: 70.

**CEE 171F. New Indicators of Well-Being and Sustainability. 3 Units.**

Explore new ways to better measure human development, comprehensive wealth and sustainability beyond standard economic indicators such as income and GDP. Examine how new indicators shape global, national and local policy worldwide. Well-being topics include health, happiness, trust, inequality and governance. Sustainability topics include sustainable development, environmental performance indicators, material flow analysis and decoupling, and inclusive wealth indicators. Students will build their own indicator of well-being and sustainability for a term paper.

Same as: CEE 271F

**CEE 172. Air Quality Management. 3 Units.**

Quantitative introduction to the engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, MATH 51.

**CEE 172A. Indoor Air Quality. 2-3 Units.**

Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Limited enrollment, preference to CEE students. Prerequisites: Math 42 or 21 and CEE 70, or equivalents.

Same as: CEE 278C

**CEE 174A. Providing Safe Water for the Developing and Developed World. 3 Units.**

This course will cover basic hydraulics and the fundamental processes used to provide and control water, and will introduce the basics of engineering design. In addition to understanding the details behind the fundamental processes, students will learn to feel comfortable developing initial design criteria (30% designs) for fundamental processes. Students should also develop a feel for the typical values of water treatment parameters and the equipment involved. The course should enable students to work competently in environmental engineering firms or on non-profit projects in the developing world such as Engineers without Borders. Pre-requisite: Chem31B/X.

**CEE 174B. Wastewater Treatment: From Disposal to Resource Recovery. 3 Units.**

This course builds upon CEE 174A, covering basic hydraulics and the fundamental processes used to treat wastewater. In addition to understanding the details behind the fundamental processes, students will learn to feel comfortable developing initial design criteria (30% designs) for fundamental processes. Students should also develop a feel for the typical values of water treatment parameters and the equipment involved. After covering conventional processes, the class addresses newer processes used to meet emerging treatment objectives, including nutrient removal, composting of biosolids and recycling of wastewater for beneficial uses, including potable reuse. Pre-requisites: CEE 174A.

**CEE 175A. California Coast: Science, Policy, and Law. 3-4 Units.**

This interdisciplinary course integrates the legal, scientific, and policy dimensions of how we characterize and manage resource use and allocation along the California coast. We will use this geographic setting as the vehicle for exploring more generally how agencies, legislatures, and courts resolve resource-use conflicts and the role that scientific information and uncertainty play in the process. Our focus will be on the land-sea interface as we explore contemporary coastal land-use and marine resource decision-making, including coastal pollution, public health, ecosystem management; public access; private development; local community and state infrastructure; natural systems and significant threats; resource extraction; and conservation, mitigation and restoration. Students will learn the fundamental physics, chemistry, and biology of the coastal zone, tools for exploring data collected in the coastal ocean, and the institutional framework that shapes public and private decisions affecting coastal resources. There will be 3 to 4 written assignments addressing policy and science issues during the quarter, as well as a take-home final assignment. Special Instructions: In-class work and discussion is often done in interdisciplinary teams of students from the School of Law, the School of Engineering, the School of Humanities and Sciences, and the School of Earth, Energy, and Environmental Sciences. Students are expected to participate in class discussion and field trips. Elements used in grading: Participation, including class session and field trip attendance, writing and quantitative assignments. Cross-listed with Civil & Environmental Engineering (CEE 175A/275A), Earth Systems (EARTHSYS 175/275), and Law (LAW 2510). Open to graduate students and to advanced undergraduates with instructor consent.

Same as: CEE 275A

**CEE 175P. Persuasive Communication for Environmental Scientists, Practitioners, and Entrepreneurs. 2 Units.**

Achieving environmental goals depends not only on innovative ideas and great science but also persuasive communication. What makes communication persuasive? The ability of the communicator to create value for his or her audience. This course will teach students how to: 1) focus on their audience and 2) create value for their audience using research-proven communication techniques. Students will master these techniques through oral and written exercises so that, after taking this course, they will speak and write more persuasively.

Same as: CEE 275P

**CEE 175Q. Changing Human Behavior: Drivers and Barriers in Environmental Action. 2 Units.**

Beyond the scientific and technological challenges of climate change, there are important psychological factors and barriers to individual attitude and behavior change. Students will analyze and identify barriers to individual action; distinguish between targeting individual behaviors vs. attitudes; understand specific psychological challenges and opportunities that climate change raises; develop strategies to address these factors in contexts where behavior change is sought. Students will propose and develop their own ideas for addressing a specific psychological barrier to individual action in an environmental context.

**CEE 175S. Environmental Entrepreneurship and Innovation. 3 Units.**

Our current infrastructure for provision of critical services—clean water, energy, transportation, environmental protection; requires substantial upgrades. As a complement to the scientific and engineering innovations taking place in the environmental field, this course emphasizes the analysis of economic factors and value propositions that align value chain stakeholder interests.

Same as: CEE 275S

**CEE 176A. Energy Efficient Buildings. 3-4 Units.**

Quantitative evaluation of technologies and techniques for reducing energy demand of residential-scale buildings. Heating and cooling load calculations, financial analysis, passive-solar design techniques, water heating systems, photovoltaic system sizing for net-zero-energy all-electric homes. Offered for 3 or 4 units; the 4-unit option includes a lab.

**CEE 176B. Electric Power: Renewables and Efficiency. 3-4 Units.**

This course introduces analysis, sizing and performance estimations (electrical and financial) of renewable energy systems on both sides of the electric meter with an emphasis on photovoltaics and wind-power systems. Basic electric power generation, transmission and distribution, as well as distributed generation will be introduced. Optional Laboratory section for a 4th unit of credit.

**CEE 176C. Energy Storage Integration - Vehicles, Renewables, and the Grid. 3 Units.**

This course will provide in-depth introduction to existing energy storage solutions being used on the electric grid and in vehicles with a primary focus on batteries and electrochemical storage. We will discuss the operating characteristics, cost and efficiency of these technologies and how tradeoff decisions can be made. Special attention will be given to system-level integration of new storage technologies, including chargers, inverters, battery management systems and controls, into the existing vehicle and grid infrastructure. Further investigations include issues relating to integration of electric vehicle charging with demand-side management, scheduled renewable energy absorption and local grid balancing. Class format involves regular guest lectures, required lab participation, and field trips to relevant sites. Enrollment is limited; if you are interested in taking the course, please fill out a brief questionnaire at <http://goo.gl/forms/i3YH91Qx05n> Please contact [jtaggart@stanford.edu](mailto:jtaggart@stanford.edu) with any questions regarding the application or course information.

Same as: CEE 276C

**CEE 176G. Sustainability Design Thinking. 3 Units.**

Application design thinking to make sustainability compelling, impactful and realizable. Analysis of contextual, functional and human-centered design thinking techniques to promote sustainable design of products and environments by holistically considering space, form, environment, energy, economics, and health. Includes Studio project work in prototyping, modeling, testing, and realizing sustainable design ideas.

Same as: CEE 276G

**CEE 177. Aquatic Chemistry and Biology. 4 Units.**

Introduction to chemical and biological processes in the aqueous environment. Basic aqueous equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31.

**CEE 177L. Smart Cities & Communities. 3 Units.**

A city is comprised of people and a complex system of systems. Data provides the connective tissue between those systems. Smart cities use information technology (IT) to harness that data for operational efficiency, efficacy of government services, and sustainability. Key enablers covered include: IoT, open data, analytics, cloud and cognitive computing, and systems of engagement. System case studies will include: water, energy, transportation, buildings, food production, urban design, and social services. The evolving relationship between a city and its citizens as well as the risks / challenges of smart cities will also be explored.

Same as: CEE 277L

**CEE 177S. Design for a Sustainable World. 1-5 Unit.**

Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See <http://esw.stanford.edu> for application. (Staff).

Same as: CEE 277S

**CEE 177X. Current Topics in Sustainable Engineering. 1-3 Unit.**

This course is the first half of a two quarter, project-based design course that addresses the cultural, political, organizational, technical, and business issues at the heart of implementing sustainable engineering projects in the developing world. Students will be placed into one of three project teams and tackle a real-world design challenge in partnership with social entrepreneurs and NGOs. In CEE 177X/277X, students will gain the background skills and context necessary to effectively design engineering projects in developing nations. (Cardinal Course certified by the Haas Center). Instructor consent required.

Same as: CEE 277X

**CEE 178. Introduction to Human Exposure Analysis. 3 Units.**

(Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. Apply at first class for admission.

Same as: CEE 276

**CEE 179A. Water Chemistry Laboratory. 3 Units.**

(Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.

Same as: CEE 273A

**CEE 179C. Environmental Engineering Design. 5 Units.**

Application of engineering fundamentals including environmental engineering, hydrology, and engineering economy to a design problem. Enrollment limited; preference to seniors in Civil and Environmental Engineering.

**CEE 179F. Frontiers of Anaerobic Treatment. 1 Unit.**

This seminar will present the latest findings on the operation and performance of ground-breaking anaerobic treatment processes for domestic wastewater. Specifically, this seminar will examine the performance of the Staged Anaerobic Fluidized-bed Membrane Bioreactor (SAF-MBR) using results from ongoing operations at the Codiga Resource Recover Center and from previous and parallel research efforts. The seminars will incorporate a description of the fundamentals of anaerobic treatment processes, a discussion of how the SAF-MBR process is different from typical anaerobic processes, and insights from operations along with implications for system design. Course work will include explorations of the costs, benefits, and market potential of this technology.

Same as: CEE 279F

**CEE 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings.

Same as: CEE 279S, EARTHSYS 179S, ESS 179S

**CEE 17SC. Water and Power in the Pacific Northwest: The Columbia River. 2 Units.**

This seminar will explore the nature of and coupling between water and energy resources in the Pacific Northwest, using the Columbia River as our case study. We will explore the hydrologic, meteorologic, and geologic basis of water and energy resources, and the practical, social, environmental, economic, and political issues surrounding their development in the West. The Columbia River and its watershed provide a revealing prototype for examining these issues. A transnational, multi-state river with the largest residual populations of anadromous salmonids in the continental US, it provides a substantial fraction of the electrical energy produced in the Northwest (the Grand Coulee dam powerhouse on the Columbia is the largest-capacity hydropower facility in the US), it is a major bulk commodity transportation link to the interior West via its barge navigation system, it provides the water diversions supporting a large area of irrigated agriculture in Washington and Idaho, and its watershed is home to significant sources of solar and wind energy. We will use the Columbia to study water and energy resources, and especially their coupling, in the context of rapid climate change, ecosystem impacts, economics, and public policy. We will begin with a week of classroom study and discussion on campus, preparing for the field portion of the seminar. We will then travel to the Columbia basin, spending approximately 10 days visiting a number of water and energy facilities across the watershed, e.g., solar, wind, and natural gas power plants; dams and reservoirs with their powerhouses, fish passage facilities, navigation locks, and flood-mitigation systems; an irrigation project; operation centers; and offices of regulatory agencies. We will meet with relevant policy experts and public officials, along with some of the stakeholders in the basin. Over the summer students will be responsible for assigned readings from several sources, including monographs, online materials, and recent news articles. During the trip, students will work in small groups to analyze and assess one aspect of the coupling between water and energy resources in the Northwest. The seminar will culminate in presentations on these analyses. Travel expenses during the seminar will be provided (except incidentals) by the Bill Lane Center for the American West and Sophomore College.

Same as: EARTHSYS 16SC, ENERGY 12SC

**CEE 180. Structural Analysis. 4 Units.**

Analysis of beams, trusses, frames; method of indeterminate analysis by consistent displacement, least work, superposition equations, moment distribution. Introduction to matrix methods and computer methods of structural analysis. Prerequisite: 101A and ENGR 14.

**CEE 181. Design of Steel Structures. 4 Units.**

Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames.

Prerequisite: 180.

**CEE 182. Design of Reinforced Concrete Structures. 3-4 Units.**

Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Prerequisite: 180.

**CEE 183. Integrated Civil Engineering Design Project. 4 Units.**

Studio format. Design concepts for civil engineering facilities from schematic design through construction, taking into account sustainable engineering issues. Design exercises culminating in the design of a civil engineering facility, emphasizing structural systems and materials and integration with architectural, construction and other project requirements. Prerequisites: CEE 180, 181, 182; CEE 120 (or equivalent background in BIM), civil engineering major; architectural design major with instructor consent.

**CEE 195. Fundamentals of Structural Geology. 3 Units.**

Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress; elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB.

Prerequisites: GS 1, MATH 51.

Same as: GS 111

**CEE 196. Engineering Geology and Global Change. 3 Units.**

The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GS 1 or consent of instructor.

Same as: GS 115

**CEE 198. Directed Reading or Special Studies in Civil Engineering. 1-4 Unit.**

Written report or oral presentation required. Students must obtain a faculty sponsor.

**CEE 199. Undergraduate Research in Civil and Environmental Engineering. 1-4 Unit.**

Written report or oral presentation required. Students must obtain a faculty sponsor.

**CEE 199A. Special Projects in Architecture. 1-4 Unit.**

Faculty-directed study or internship. May be repeated for credit. Prerequisite: consent of instructor.

**CEE 199B. Directed Studies in Architecture. 1-4 Unit.**

Projects may include studio-mentoring activities, directed reading and writing on topics in the history and theory of architectural design, or investigations into design methodologies.

**CEE 199E. Outreach and Mentoring Program Development in CEE. 1-2 Unit.**

Open to undergraduates who are declared majors in Civil Engineering, Environmental Engineering, Atmosphere/Energy, and Architectural Design. Will brainstorm and develop an innovative curriculum and engaging activities for CEE 10 (Intro. to the Civil & Environmental Engineering Professions).

**CEE 199H. Undergraduate Honors Thesis. 2-3 Units.**

For students who have declared the Civil Engineering B.S. honors major and have obtained approval of a topic for research under the guidance of a CEE faculty adviser. Letter grade only. Written thesis or oral presentation required. (Staff).

**CEE 199L. Independent Project in Civil and Environmental Engineering. 1-4 Unit.**

Prerequisite: Consent of Instructor.

**CEE 199S. Undergraduate Summer Research in Civil and Environmental Engineering. 1-6 Unit.**

Investigation of a research topic in civil and environmental engineering. For students admitted to the Stanford Summer Session program. Written report or oral presentation required. Students must obtain a faculty or research staff sponsor.

**CEE 1A. Graphics Course. 2 Units.**

This course, intended for students taking a design studio, will focus on presentation theories, skills and design approaches. Through readings and exercises, and ultimately the student's own work, students will develop skill and complexity in their graphic and verbal presentations.

**CEE 200A. Teaching of Civil and Environmental Engineering. 1 Unit.**

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. 200A. Aut, 200B. Win, 200C. Spr.

**CEE 200B. Teaching of Civil and Environmental Engineering. 1 Unit.**

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr.

**CEE 200C. Teaching of Civil and Environmental Engineering. 1 Unit.**

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr.

**CEE 201D. Computations in Civil and Environmental Engineering. 3 Units.**

Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

Same as: CEE 101D

**CEE 201S. Science & Engineering Problem-Solving with MatLab.. 3 Units.**

Introduction to the application of MATLAB as a powerful tool to solve a variety of science and engineering problems. Exposure to computational and visualization tools available through MATLAB to analyze, solve, and visualize some common problems of interest in science and engineering. Prerequisite: Calculus. Note: students enrolling in CEE 201S must seek the consent of instructor.

Same as: CEE 101S

**CEE 202. Construction Law and Claims. 3 Units.**

Concepts include the preparation and analysis of construction claims, cost overrun and schedule delay analysis, general legal principles, contracts, integrated project delivery, public private partnerships and the resolution of construction disputes through ADR and litigation. Requires attendance of the ten weeks of Monday classes and the first five weeks of Wednesday classes.

**CEE 203. Probabilistic Models in Civil Engineering. 3-4 Units.**

Introduction to probability modeling and statistical analysis in civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration. Application of common probability models used in civil engineering including Poisson processes and extreme value distributions. Parameter estimation. Linear regression.

**CEE 204. Structural Reliability. 3-4 Units.**

Procedures for evaluating the safety of structural components and systems. First-and second-order estimates of failure probabilities of engineered systems. Sensitivity of failure probabilities to assumed parameter values. Measures of the relative importance of random variables. Reliability of systems with multiple failure modes. Reliability updating. Simulation methods and variance reduction techniques. Prerequisite: 203 or equivalent.

**CEE 205A. Structural Materials Testing and Simulation. 3-4 Units.**

Hands-on laboratory experience with fabrication, computer simulation, and experimental testing of material and small-scale structural components. Comparison of innovative and traditional structural materials. Behavior and application of high-performance fiber reinforced concrete materials for new design, fiber-reinforced polymeric materials for structural retrofits and introduction to sustainable, bio-based composites. Prerequisites: basic course in reinforced concrete design CEE 182 or equivalent.

**CEE 205B. Advanced Topics in Structural Concrete. 3 Units.**

Concepts and application of strut and tie modeling including deep beams, design for torsion resistance, beam-column joints, bridge components, and post-tensioned anchor zones. Course project integrating computer simulation and physical experimentation of a structural concrete component. Prerequisites: CEE 285A or equivalent.

**CEE 206. Decision Analysis for Civil and Environmental Engineers. 3 Units.**

Current challenges in selecting an appropriate site, alternate design, or retrofit strategy based on environmental, economic, and social factors can be best addressed through applications of decision science. Basics of decision theory, including development of decision trees with discrete and continuous random variables, expected value decision making, utility theory value of information, and elementary multi-attribute decision making will be covered in the class. Examples will cover many areas of civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent.

**CEE 207A. Understanding Energy. 3-5 Units.**

Energy is a fundamental driver of human development and opportunity. At the same time, our energy system has significant consequences for our society, political system, economy, and environment. For example, energy production and use is the number one source of greenhouse gas emissions. In taking this course, students will not only understand the fundamentals of each energy resource – including significance and potential, conversion processes and technologies, drivers and barriers, policy and regulation, and social, economic, and environmental impacts – students will also be able to put this in the context of the broader energy system and think critically about how and why society has chosen particular energy resources. Both depletable and renewable energy resources are covered, including oil, natural gas, coal, nuclear, biomass and biofuel, hydroelectric, wind, solar thermal and photovoltaics (PV), geothermal, and ocean energy, with cross-cutting topics including electricity, storage, climate change, sustainability, green buildings, energy efficiency, transportation, and the developing world. The course is 4 units, which includes lecture and in-class discussion, readings and videos, assignments, and two off-site field trips. Enroll for 5 units to also attend the Workshop, an interactive discussion section on cross-cutting topics that meets once per week for 80 minutes (timing TBD based on student schedules). The 3-unit option requires instructor approval - please contact Diana Ginnebaugh. Website: <http://web.stanford.edu/class/cee207a/> Course was formerly called Energy Resources. Prerequisites: Algebra. May not be taken for credit by students who have completed CEE 107S.

Same as: CEE 107A, EARTHSYS 103

**CEE 207R. E3: Extreme Energy Efficiency. 2 Units.**

Be part of a unique and intense six day course about extreme energy efficiency taking place during Spring Break 2018 at Rocky Mountain Institute's Innovation Center in Basalt, Colorado! The course will focus on efficiency techniques' design, performance, choice, evolution, integration, barrier-busting, profitable business-led implementation, and implications for energy supply, competitive success, environment, development, security, etc. Examples will span very diverse sectors, applications, issues, and disciplines, with each day covering a different energy theme: buildings, transportation, industry, and implementation and implications, including renewable energy synergy and integration. Solid technical grounding and acquaintance with basic economics and business concepts will both be helpful. Rocky Mountain Institute (RMI) will design a series of lectures, exercises, and interactive activities synthesizing integrative design principles. Students will be introduced to Factor 10 Engineering, the approach for optimizing the whole system for multiple benefits. Students will work closely and interactively with RMI staff including Amory Lovins, cofounder and Chief Scientist of Rocky Mountain Institute (RMI). Exercises will illuminate challenges RMI has faced and solutions it has created in real-world design. Students will explore clean-sheet solutions that meet end-use demands and optimize whole-system resource efficiency, often with expanding rather than diminishing returns to investments, i.e. making big savings cheaper than small ones. Students will meet as a class once during winter quarter to discuss preparation and spring break logistics. Students must pay for their own travel to and from Basalt, CO (~\$400-\$600). Course will take place Sunday, March 25 - Friday, March 30. Lodging and food will be covered during the course. Must apply - instructor approval required. All backgrounds and disciplines, both undergraduate and graduate, are welcome to apply. Prerequisite - completion of one of the following courses is required: CEE 107A, CEE 207A, Earthsys 103, CEE 107S, CEE 207S, CEE 176A, CEE 176B. Contact Diana Ginnebaugh at [moongdes@stanford.edu](mailto:moongdes@stanford.edu) for an application. Course website: <https://web.stanford.edu/class/cee207r/>.

Same as: CEE 107R

**CEE 207S. Energy Resources: Fuels and Tools. 3 Units.**

Energy is a vital part of our daily lives. This course examines where that energy comes from, and the advantages and disadvantages across different fuels. Contextual analysis of energy decisions for transportation and electricity generation around the world. Energy resources covered include oil, biomass, natural gas, nuclear, hydropower, wind, solar, geothermal, and emerging technologies. Prerequisites: Algebra. Note: may not be taken by students who have completed CEE 173A, CEE 207 or EARTHSYS 103.

Same as: CEE 107S

**CEE 209B. Disaster Risk and International Development Seminar. 2 Units.**

The human and economic impacts of natural disasters are ever increasing and disproportionately affecting lower-income countries. In fact there is mounting evidence that these ever more frequent shocks threaten to reverse development progress in low-income countries. This seminar course will explore the theory and practice of disaster risk reduction in international development contexts. Weekly readings (and occasional guest lectures) will cover key issues in development theory, a history of "a risk society", participation, human-centered planning, ethics in engineering, and other topics. The seminar will be structured through weekly readings, brief writing responses and group discussion.

**CEE 212A. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Building upon the concept of the VDC Scorecard, CEE 112A/212A investigates in the management of Virtual Design and Construction (VDC) programs and projects in the building industry. Interacting with experts and professionals in real estate, architecture, engineering, construction and technology providers, students will learn from the industry applications of Building Information Modeling and its relationship with Integrated Project Delivery, Sustainable Design and Construction, and Virtual Design and Construction. Students will conduct case studies to evaluate the maturity of VDC planning, adoption, technology and performance in practice. Students taking 3 or 4 units will be paired up with independent research or case study projects on the industry applications of VDC. No prerequisite. See CEE 112B/212B in the Winter Quarter and CEE 112C/212C in the Spring Quarter.

**CEE 212B. Industry Applications of Virtual Design & Construction. 2-4 Units.**

CEE 112B/212B is a practicum on the Industry Applications on Virtual Design and Construction (VDC). Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC and Building Information Modeling (BIM). Students can choose between one of the two project topics: [1] Industrialized Construction with Virtual Parts (No Prerequisite) or [2] Industry Benchmarking & Applications of the VDC Management Scorecard (Suggested Prerequisite: CEE 112A/212A).

Same as: CEE 112B

**CEE 212C. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Following the Autumn- and Winter-quarter course series, CEE 112C/212C is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC projects with public owners and private developers, such as GSA Public Buildings Service, the Hong Kong Mass Transit Railway, Optima, Walt Disney Imagineering, Microsoft facilities and/or other CIFE International members. Independently, students will conduct case studies and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE 112A/212A, CEE 112B/212B, CEE 159C/259C, CEE 159D/259D, or Instructor's Approval. Same as: CEE 112C

**CEE 212D. Industry Applications of Virtual Design and Construction. 2-4 Units.**

A continuation of the CEE 112/212 series, CEE 112D/212D is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC research or application opportunities with public owners and private developers, professional associations, and/or other member organizations of the Center for Integrated Facility Engineering at Stanford. Independently, students will conduct case studies, research activities, and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE110/210, CEE 112C/212C, CEE 122B/222B, or Instructor's Approval. Same as: CEE 112D

**CEE 213. Patterns of Sustainability. 1-4 Unit.**

This seminar examines the interrelated sustainability of the natural, built and social environments of places in which we live. Several BOSP centers and the home Stanford campus will hold this 1-2 unit seminar simultaneously and collaborate with a shared curriculum, assignments, web conference and a Wiki. The goal of the collaborative arrangement is to expose, share, compare and contrast views of sustainability in different parts of the world. We will look at and assess aspects of sustainability of the places we are living from a theoretical perspective from the literature, from observations and interviews in the countries in which we study.

Same as: CEE 113

**CEE 217. Renewable Energy Infrastructure. 2 Units.**

Construction of renewable energy infrastructure: geothermal, solar thermal, solar photovoltaic, wind, biomass. Construction and engineering challenges and related issues and drivers for performance, cost, and environmental impact. Context of renewable energy infrastructure development including comparison of the types of renewable energy, key economic, environmental, and social contextual factors, applicability of a type of renewable energy given a context, related barriers and opportunities. Class project to plan a start-up for developing a type of energy infrastructure based on an engineering innovation.

**CEE 220A. Building Information Modeling Workshop. 2-4 Units.**

The foundational Building Information Modeling course introduces techniques for creating, managing, and applying of building information models in the building design and construction process. The course covers processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components and geometries to produce models used in architectural design, construction planning and documentation, rendering and visualization, simulation and analysis.

Same as: CEE 120A

**CEE 220B. Building Information Modeling Workshop. 2-4 Units.**

This course builds upon the Building Information Model concepts introduced in 120A/220A and illustrates how BIM modeling tools are used to design, analyze, and model building systems including structural, mechanical, electrical, plumbing and fire protection. Course covers the physical principles, design criteria, and design strategies for each system and explores processes and tools for modeling those systems and analyzing their performance. Topics include: building envelopes, access systems, structural systems modeling and analysis, mechanical / HVAC systems, plumbing and fire protection systems, electrical systems, and systems integration/coordination.

Same as: CEE 120B

**CEE 220C. Parametric Design and Optimization. 2-4 Units.**

This course explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. Class sessions will introduce several parametric design modeling platforms and scripting environments that enable rapid generation of 3D models and enable rapid evaluation of parametrically-driven design alternatives. Topics to be featured include: Principles of parametric design vs. direct modeling; Design exploration using parametric modeling platforms (Revit/FormIt, Rhino); Visual scripting languages and environments (Dynamo, Grasshopper, DesignScript); Single- and multi-dimensional optimization techniques and guidance strategies. Same as: CEE 120C

**CEE 220S. Building Information Modeling Special Study. 2-4 Units.**

Special studies of Building Information Modeling strategies and techniques focused on creating, managing, and applying models in the building design and construction process. Processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components to produce models used in design, construction planning, visualization, and analysis.

Same as: CEE 120S

**CEE 221A. Planning Tools and Methods in the Power Sector. 3-4 Units.**

This course covers the planning methods most commonly used in the power sector today. It covers both the fundamental methods used and their applications to electricity generation, transmission and distribution planning, integrated resource planning using both energy efficiency and renewable resources as well as utility finance and ratemaking. The methods covered will include forecasting (time series, regression and the use of markets), resource assessment (including energy efficiency and demand-side management) optimization (in power markets operation and in expansion planning) and the processes used in decision-making.

**CEE 222A. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork. 3 Units.**

AEC students engage in a crossdisciplinary, collaborative, geographically distributed, and multicultural project-based teamwork. AEC teams exercise their domain knowledge and information technologies in a multidisciplinary context focusing on the design and construction concept development phase of a comprehensive building project. Prerequisite: interview with Instructor in Autumn Quarter.

**CEE 222B. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork. 2 Units.**

Global AEC student teams continue their project activity focusing on the most challenging concept developed in 222A and chosen jointly with their client. Comprehensive team project focusing on design and construction, including: project development and documentation; detailing, 3D and 4D modeling, simulation, sustainable concepts, cost benefit analysis, and life-cycle cost analysis; and final project presentation of product and process. Prerequisite: CEE 222A.

**CEE 223. Materials for Sustainable Built Environments. 3 Units.**

In this course, students will learn about new and traditional construction materials for use in sustainable building and infrastructure projects. Materials will include cement-based materials and fiber-reinforced polymer composites for structural and non-structural applications, as well as novel materials for e.g., facades, insulation, and paving. Material properties, their performance over time and their impact on people and the environment will be discussed. Course project as well as some hands-on laboratory work. Pre-requisite: CEE 101A or equivalent.

**CEE 223A. Cement-based Materials, Properties and Durability. 2 Units.**

Students will develop an understanding of the chemical and physical processes of cement and concrete hydration, strength development, mechanical performance and durability. Students will learn how the properties of materials and admixture combine to create a wide range of cement-based materials used in the built environment. The course will address sustainable construction, including the use of alternative cements, admixtures, and aggregates. Students will apply the principles in this course to various aspects of civil and structural engineering, including innovative mix design specification and review, structural investigations and failure analysis, and cementitious materials research.

**CEE 224A. Sustainable Development Studio. 1-5 Unit.**

(Undergraduates, see 124.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

**CEE 224S. Sustainable Urban Systems Seminar. 1 Unit.**

The Sustainable Urban Systems (SUS) Seminar Series will feature speakers from academia, practice, industry, and government who are on the forefront of research and innovation in sustainable urban systems. The SUS Seminar will be open to the public; students will have the option of obtaining 1 unit of course credit based on attendance and completion of writing assignments.

**CEE 224X. Disasters, Decisions, Development in Sustainable Urban Systems (CEE). 1-5 Unit.**

CEE 224X of the CEE 224XYZ SUS Project series is joining forces with D3: Disasters, Decisions, Development to offer D3+SUS which will connect principles of sustainable urban systems with the challenge of increasing resilience in the San Francisco Bay Area. The project-based learning course is designed to align with the Resilient By Design | Bay Area Challenge Collaborative Research Phase (<http://resilientbayarea.org>); students will learn the basic concepts of resilience and tools of risk analysis while applying those mindsets and toolsets to a collective research product delivered to the RBD community. Students who take D3+SUS are encouraged to continue on to CE 224Y and CEE 224Z, in which teams will be paired with local partners and will develop interventions to improve the resilience of local communities. For more information, visit <http://sus.stanford.edu/courses/>. (Cardinal Course certified by the Haas Center). Same as: CEE 124X

**CEE 224Y. Sustainable Urban Systems Project. 1-5 Unit.**

Sustainable Urban Systems (SUS) Project is a project-based learning experience being piloted for an upcoming new SUS M.S. Program within CEE. Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered throughout the academic year and may span multiple quarters. Students are expected to interact with professionals and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. To view project descriptions and apply, visit <http://sus.stanford.edu/courses/>.

Same as: CEE 124Y, GEOPHYS 118Y, GEOPHYS 218Y

**CEE 224Z. Sustainable Urban Systems Project. 1-5 Unit.**

Sustainable Urban Systems (SUS) Project is a project-based learning experience being piloted for an upcoming new SUS M.S. Program within CEE. Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered throughout the academic year and may span multiple quarters. Students are expected to interact with professionals and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. To view project descriptions and apply, visit <http://sus.stanford.edu/courses/>.

Same as: CEE 124Z, GEOPHYS 118Z, GEOPHYS 218Z

**CEE 225. Defining Smart Cities: Visions of Urbanism for the 21st Century. 1-2 Unit.**

In a rapidly urbanizing world, the city paves the way toward sustainability and social well-being. But what does it mean for a city to be smart? Does that also make it sustainable or resilient or livable? This seminar delves into current debates about urbanism through weekly talks by experts on topics such as big data, human-centered design, urban sustainability, and natural capital. The goal of the seminar is to explore how advances in information communication technologies affect the built environment at various scales (e.g., cities, districts, neighborhoods, blocks, buildings) and to understand the role of multiple actors working at the intersection of technology and urbanism. The seminar will provoke vigorous discussion of how urban spaces are shaped, for better or worse, by the complex interaction of technology, human societies, and the natural environment. Students taking the course for 2 units / letter grade will propose an independent research project and present their work at a final symposium.

Same as: CEE 125, URBANST 174

**CEE 226. Life Cycle Assessment for Complex Systems. 3-4 Units.**

Life cycle modeling of products, industrial processes, and infrastructure/building systems; material and energy balances for large interdependent systems; environmental accounting; and life cycle costing. These methods, based on ISO 14000 standards, are used to examine emerging technologies, such as biobased products, building materials, building integrated photovoltaics, and alternative design strategies, such as remanufacturing, dematerialization, LEED, and Design for Environment: DfE. Student teams complete a life cycle assessment of a product or system chosen from industry.

**CEE 226E. Advanced Topics in Integrated, Energy-Efficient Building Design. 2-3 Units.**

This class explores innovative methods for designing, developing, and financing high performance, low energy buildings. Students will learn best practices to reduce building energy buildings. Students will learn best practices to reduce building energy use and integrate solar PV generation in pursuit of commercial Net Zero Energy buildings. Lectures include presentations and panels featuring leading practitioners and researchers in the field. Optional site visits to local Net Zero Energy and LEED buildings provide context to support lectures. CEE 176A and CEE 156/256 or similar courses are recommended prerequisites but not required. All students are expected to participate in a group-based, term project focused on the design and development of a Net Zero Energy building. Students taking the course for two units will not be required to complete in-class assignments for individual homework assignments.

**CEE 227. Global Project Finance. 4 Units.**

Public and private sources of finance for large, complex, capital-intensive projects in developed and developing countries. Benefits and disadvantages, major participants, risk sharing, and challenges of project finance in emerging markets. Financial, economic, political, cultural, and technological elements that affect project structures, processes, and outcomes. Case studies. Limited enrollment.

**CEE 228. Methods in Urban Systems. 3 Units.**

Introduction to quantitative tools and methods for solving problems in urban systems, including geographic information science (GIS), modeling, data analysis, and programming methodologies.

**CEE 229S. Climate Change Adaptation in the Coastal Built Environment. 1 Unit.**

How will climate change impact coastal ports and harbors around the world? Leading experts discuss the latest science, policy, and engineering research on this important issue, including the necessary response to protect ports and harbors from significant sea-level rise and storm surge. Focus is on the built environment. Guest speakers. CEE 229/129 for research option. See [www.groupspaces.com/seaports2100](http://www.groupspaces.com/seaports2100). Same as: CEE 129S

**CEE 230. Urban Development and Governance. 3 Units.**

Introduction to urban planning, policy, politics, and governance by a lecture team from SPUR. Focus on the U.S., California, and the Bay Area.

**CEE 234B. Intermediate Arch Studio. 5 Units.**

This studio offers students experience in working with a real site and a real client program to develop a community facility. Students will develop site analysis, review a program for development and ultimately design their own solutions that meet client and community goals. Sustainability, historic preservation, community needs and materials will all play a part in the development of students final project. Students will also gain an understanding of graphic conventions, verbal and presentation techniques. Course may be repeated for credit. Same as: CEE 134B

**CEE 235. CapaCity Design Studio. 5 Units.**

Silicon Valley's rapid expansion has created explosive urban development in a fragile and under-prepared natural context. Delicate coastal ecology and rapid urbanization (expanding technology headquarters, new residential housing, parking, services, etc.) are competing for space. The same land also serves the regional functions of transport, open space, recreation, water supply, flood protection and wastewater treatment. Compounding the problems between these competing factors are global climate change instabilities increasing the certainty of catastrophic flooding, infrastructure collapse, and other urban resilience challenges. Students will be immersed in a process that allows them to understand and spatially identify these risks, develop a vocabulary and understanding of innovative tools to respond to them, and then work with expert practitioners to create unique design responses. Students will be provided with urban design frameworks (for planning, site development, and conservation) combined with advanced sustainable design concepts (such as resource co-optimization, and adaptable infrastructure platforms, and high performance urban ecology) by working with expert lecturers and in small groups. Students will ultimately develop a series of visual and technical presentations to propose a final thesis for a local intervention that could be replicated in other coastal contexts globally. This course has been designed to develop student learning through a project-based format. Students will be organized into design teams of 3 or 4 and will have the semester to collaborate with partners on an interdisciplinary proposal including policy and design recommendations.

**CEE 237B. Advanced Architecture Studio. 6 Units.**

This course will focus on the topic of interdisciplinary collaboration and its role in the development of design concepts. Specifically, the integration of structural with architectural considerations to produce a unified urban, spatial, tectonic and structural proposition will be our field of investigation. This course is an architecture studio course where class time will be spent primarily in individual or group desk critiques and pin-up sessions. May be repeat for credit. Total completions allowed: 3. Additionally, there will be lectures, case study presentations and a field trip. Prerequisites: required: CEE 31 (or 31Q) Drawing, CEE 110 BIM and CEE 130 Design. Same as: CEE 137B

**CEE 239. Design Portfolio Methods. 4 Units.**

The portfolio is an essential creative tool used to communicate academic work, design philosophies, and professional intent. This course will explore elements of graphic design, presentation, communication, binding, printing, and construction, yielding a final portfolio (physical and digital) for professional, academic or personal purposes. Limited enrollment. Prerequisites: two Art, Design, or Architecture studio courses, or consent of instructor. Same as: CEE 139

**CEE 240. Project Assessment and Budgeting. 3 Units.**

Course objectives: 1) learn the processes of determining the quantities of permanent materials required and the associated construction quantities; 2) learn the capabilities of construction equipment; 3) be introduced to the make-up of construction crews; 4) design concrete form systems; 5) utilize the historic productivity of a crew to estimate the cost of construction; 6) write construction logic to create a critical path project schedule; 7) distribute the cost of construction over schedule activities to generate a cash flow curve and monthly payment schedule for the project. Construction engineering: A construction project that has reached final design must be quantified, a delivery schedule developed, it's final total price determined and the month by month demand for cash payments established. Each student will perform these activities to satisfy a "Course Project" requirement utilizing actual project design drawings obtained from the companies of the Guest Lectures and others. Guest Lecturers from: Disney Construction, Pankow Construction, Granite Construction, Stacy & Witbeck Incorporated.

**CEE 241. Managing Fabrication and Construction. 4 Units.**

Methods to manage the physical production of construction projects; design, analysis, and optimization of the fabricate-assemble process including performance metrics. Project management techniques and production system design including: push versus pull methods; master scheduling and look-ahead scheduling; scope, cost, and schedule control; earned value analysis; critical path method; location-based scheduling; 4D modeling; workflow; trade coordination; methods to understand uncertainty and reduce process variability; and supply chain systems including made-to-stock, engineered-to-order, and made-to-order. Prerequisite: 100 or consent of instructor. Recommended corequisite: 240.

**CEE 241A. Infrastructure Project Development. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works in the U.S. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare project environmental impact statements. Same as: CEE 141A

**CEE 241B. Infrastructure Project Delivery. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare finance/design/build/operate/maintain project proposals. Same as: CEE 141B

**CEE 241C. Global Infrastructure Projects Seminar. 1-2 Unit.**

Nine current global infrastructure projects presented by top project executives or company leaders from industry. Water, transportation, energy and communication projects are featured. Course provides comparisons of project development, win and delivery approaches for mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management and construction strategies, and lessons learned. The course also includes field trips to local mega-projects.

Same as: CEE 141C

**CEE 241P. Integrated Management of Fabrication and Construction. 3-4 Units.**

Application of the fundamental fabrication and construction management concepts covered in CEE 241T to an actual project; integrated software environments; integration of scope, schedule, and cost information for scheduling, estimating, and progress control; scope management with BIM; off-site fabrication vs. on-site construction and supply chain coordination; group project; project permitting, potential for a joint project with CEE 242P. Prerequisites: CEE 210, CEE 241T.

**CEE 242. Organization Design for Projects and Companies. 3-4 Units.**

Introduction to organizational behavior and organizational design for construction projects and companies. Class incorporates readings, individual, small group and large group case study assignments. Students use computer simulation to design real-world project organizations.

**CEE 242P. Designing Project Organizations. 2 Units.**

Sequel to CEE 242T. Course develops information-processing approach for designing project and project-based company organizations to deliver sustainable construction projects; includes design of organizations and work processes for integrated project delivery and public-private partnership concession project delivery. Term project applies computer-based organization simulation to optimize design of project organization for a participating company.

**CEE 242R. Project Risk Analysis. 3 Units.**

Teaches principles and methods for quantitative modeling and mitigation of risks in project planning, design, construction and operation, using new MS Excel capabilities and standardized probability distributions. Several case studies will be covered, including ongoing work with PG&E to roll up operational risks.

**CEE 242T. Organizational Behavior and Design for Construction. 2 Units.**

Introduction to organizational behavior and organizational design for Architecture, Engineering and Construction projects and companies. Class incorporates readings, individual and group case study assignments. Students use computer simulation to analyze project organizations and predict schedule, cost and quality risks. This class is a prerequisite for CEE 242P.

**CEE 243. Intro to Urban Sys Engrg. 3 Units.**

This course is an introduction to the interdisciplinary domain of urban systems engineering. It will provide you with a high-level understanding of the motivation for studying sustainable cities and urban systems, systems-based modeling approaches and the social actor theories embedded in the urban sustainability decision making process. Coursework will be comprised of three group mini-projects corresponding to course modules.

**CEE 244. Accounting, Finance & Valuation for Engineers & Constructors. 2 Units.**

Concepts of financial accounting and economics emphasizing the construction industry. Financial statements, accounting concepts, project accounting methods, and the nature of project costs. Case study of major construction contractor. Ownership structure, working capital, and the sources and uses of funds.

**CEE 246. Entrepreneurship in Civil & Environmental Engineering. 3-4 Units.**

CEE 246 is a team project-based course geared toward developing entrepreneurial businesses related to civil and environmental engineering. With support of industry mentors, students are guided through the process of identifying opportunities, developing business plans, and determining funding sources. The class culminates with presentations to industry experts and venture capitalists (VC) to mimic typical investor pitches. The goal is to provide students with the knowledge and network to realize their business idea. Students must submit the following application before enrolling in this course: <https://goo.gl/forms/jWaTr5ZTG05WBsoE2>.

**CEE 246B. Real Estate Development and Finance. 3 Units.**

Introduction to the Real Estate Development Process from conception, feasibility analysis, due diligence, entitlements, planning, financing, market analysis, contract negotiation, construction, marketing, asset management and disposition. Pro-forma and Financial modeling in Real Estate. Financing options for different types of Real Estate projects and products. Redevelopment projects. Affordable Housing. The class will combine lectures, case studies, field work (Group Project) and guest speakers. Recommended knowledge of spreadsheets. Prerequisites: highly recommended Engineering Economy (CEE 246A or ENGR 60) or any Introduction to Finance class (concepts of Present Worth and IRR). Attendance to the first class is mandatory.

**CEE 246S. Real Estate Finance Seminar or Real Estate Career Development Seminar. 1 Unit.**

Real Estate Development and Finance presented by industry guest speakers. Executives from different Real Estate companies will give an overview of their business and projects. (Residential, Retail, Commercial, Mixed Used, REITs, Redevelopment Projects, Affordable Housing, public and private real estate companies, real estate funds, etc.). Short Real Estate Case Studies will be given as homework. Two optional field trips. Attendance to the first class is mandatory.

**CEE 247A. Network Governance. 3-4 Units.**

This course aims at providing students with insights, concepts and skills needed to understand the dynamics of multi-actor interaction processes in uncertain and often highly politicized contexts and to be able to cope with technological and strategic uncertainties and risks including the unpredictable behavior of actors. They will develop knowledge, skills and competences about how to manage divergent and conflicting interests of different actors including principles of integrative negotiation, communication and mediation.

**CEE 248. Introduction to Real Estate Development. 2 Units.**

This course will offer students an introduction to Real Estate Development. Senior Principals from Sares Regis, a regional commercial and residential real estate development company, will cover topics on all aspects of the development process. Guest speakers from the fields of architecture and engineering, finance and marketing will participate in some of the classes. They will offer the students a window into the world of how houses, apartments, office buildings and public facilities are conceived of, brought through the design and approval process, financed, marketed and then sold and/or rented. There will be nine 1.5-hour lectures (robust class discussion encouraged). Throughout the quarter, the students will work on a group case study assignment about one local project that is currently being built or was recently completed. This assignment will be due in the form of a presentation during the final exam period. No prior knowledge of real estate is required. Classes commence on April 5th and complete on May 31st. Number of students is limited to 30. Undergraduates must apply by submitting a one-page essay explaining their interest in taking the class to [mradyk@srgnc.com](mailto:mradyk@srgnc.com) by March 8, 2018.

**CEE 249. Labor and Industrial Relations: Negotiations, Strikes, and Dispute Resolution. 2 Units.**

Labor/management negotiations, content of a labor agreement, strikes, dispute resolution, contemporary issues affecting labor and management, and union versus open shop competitiveness in the marketplace. Case studies; presentations by union leaders, legal experts, and contractor principals. Simulated negotiation session with union officials and role play in an arbitration hearing.

**CEE 251. Negotiation. 3 Units.**

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; students should enroll on Axess and complete the application on Canvas before March 18.

Same as: CEE 151, EARTH 251, PUBLPOL 152

**CEE 252. Construction Methods for Concrete and Steel Structures. 3 Units.**

Providing technical support for concrete and steel construction operations on buildings or infrastructure projects. Concrete materials, construction properties of fresh concrete. Resources and operations for batching, transporting, placing, finishing, and curing concrete. Design, fabrication, and use of formwork. Special operations and formwork systems. Detailing, fabricating, erecting, and connecting structural steel. Lifting equipment and lift planning. Welding processes, operations, and quality control. Readings, exercises and course projects.

**CEE 252Q. Construction Engineering Fundamentals. 2 Units.**

Construction engineering is a series of technical activities to meet project objectives related to cost and schedule, safety, quality, and sustainability. These activities include: 1) designing temporary works and construction work processes; 2) providing the required temporary and permanent resources; and 3) integrating activities to consider construction during all project phases and between projects. The objectives of CEE 252Q are to learn about the technical fundamentals, resources, and field operations required to complete construction engineering activities and to develop a foundation for continued related learning. The course requires reviewing recorded presentations and other online resources, completing queries, participating in class sessions with guest speakers and in field trips, and completing group exercises and projects. The exercises, completed by all of the student groups, include construction engineering activities for earthwork, concrete construction, and steel erection. Each group will also complete a project to analyze one of the following types of systems or facilities: building electrical systems, lighting systems, HVAC systems, control systems, solar photovoltaic power plant, and wind turbine power plant.

**CEE 255. Introduction to Sensing Networks for CEE. 3-4 Units.**

Introduce the design and implementation of sensor networks for monitoring the built and natural environment. Emphasis on the integration of modern sensor and communication technologies, signal processing and statistical models for network data analysis and interpretation to create practical deployments to enable sustainable systems, in areas such as energy, weather, transportation and buildings. Students will be involved in a practical project that may involve deploying a small sensor system, data models and analysis and signal processing. Limited enrollment.

Same as: CEE 155

**CEE 256. Building Systems. 4 Units.**

HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants.

Same as: CEE 156

**CEE 258. Donald R. Watson Seminar in Construction Engineering and Management. 1 Unit.**

Presentations from construction industry leaders. Discussions with speakers from various segments of industry regarding career options. Student groups interact with industry representatives after class.

**CEE 258B. Donald R. Watson Seminar in Construction Engineering and Management. 1 Unit.**

Weekly seminars and field trips focusing on technical aspects of concrete and steel construction. Submission of abstract and paper required.

**CEE 259. Managing Construction Innovation - Practicum. 2-4 Units.**

CEE 159/259 students join Stanford researchers in developing performance metrics and key performance indicators, which inform the assessment and management of productivity policies, industry initiatives, progressive enterprises, global projects or experimental processes in the construction industry. This project-based practicum builds upon a global network of government agencies, professional institutions and member companies collaborating with the Center for Integrated Facility Engineering (CIFE). Through a series of Global Construction Innovation Case Studies, students will develop applied research skills that are essential for academic research, internships or industry practice, while gaining insights into innovative and industrialized construction practice, such as the industry applications of Building Information Modeling (BIM), Integrated Project Delivery (IPD), Lean Methodology, Prefabricated Prefinished Volumetric Construction (PPVC), Smart Cities or Virtual Design and Construction (VDC). Note to students: this course may be taken repeat for credit for up to 9 cumulative units.

Same as: CEE 159

**CEE 259A. Construction Problems. 1-3 Unit.**

Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

**CEE 259B. Construction Problems. 1-3 Unit.**

Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

**CEE 260A. Physical Hydrogeology. 4 Units.**

(Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

Same as: ESS 220

**CEE 260C. Contaminant Hydrogeology and Reactive Transport. 3 Units.**

Decades of industrial activity have released vast quantities of contaminants to groundwater, threatening water resources, ecosystems and human health. What processes control the fate and transport of contaminants in the subsurface? What remediation strategies are effective and what are the tradeoffs among them? How are these processes represented in models used for regulatory and decision-making purposes? This course will address these and related issues by focusing on the conceptual and quantitative treatment of advective-dispersive transport with reacting solutes, including modern methods of contaminant transport simulation. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology ESS 220 / CEE 260A (Gorelick) or equivalent and college-level course work in chemistry. Same as: ESS 221

**CEE 261A. The Atmospheric Boundary Layer: Fundamental Physics and Modeling. 3 Units.**

An introduction to the Atmospheric Boundary Layer (ABL), including measurements and simulations of ABL flows. Wind and flow, turbulent transport, buoyancy and virtual potential temperature, the diurnal cycle. Derivation of the governing equations, simplifications and assumptions. Turbulence kinetic energy and its budget, ABL stability, the Richardson number and the Obukhov length. Analysis of boundary layer turbulence. Overview of field and wind tunnel measurement techniques, and of computational models from meso- to micro-scale. A discussion of micro-scale applications, including pedestrian wind comfort, pollutant dispersion and wind loading, and an introduction to uncertainty quantification for ABL flows. Prerequisites: Knowledge of fluid mechanics.

**CEE 261B. Physics of Wind Energy. 3 Units.**

Formerly CEE 261. An introduction to the analysis and modeling of wind energy resources and their extraction. Topics include the physical origins of atmospheric winds; vertical profiles of wind speed and turbulence over land and sea; the wind energy spectrum and its modification by natural topography and built environments; theoretical limits on wind energy extraction by wind turbines and wind farms; modeling of wind turbine aerodynamics and wind farm performance. Final project will focus on development of a new wind energy technology concept. Prerequisites: CEE 262A or ME 351A.

Same as: ENERGY 262, ME 262

**CEE 261I. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: CEE 161I, EARTHSYS 146A, ESS 246A

**CEE 262A. Hydrodynamics. 3-4 Units.**

The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow; equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor; and some knowledge of vector calculus and differential equations.

**CEE 262B. Transport and Mixing in Surface Water Flows. 3-4 Units.**

Application of fluid mechanics to problems of pollutant transport and mixing in the water environment. Mathematical models of advection, diffusion, and dispersion. Application of theory to problems of transport and mixing in rivers, estuaries, and lakes and reservoirs. Recommended: 262A and CME 102 (formerly ENGR 155A), or equivalents.

**CEE 262C. Hydrodynamics and Sediment Transport Modeling. 3 Units.**

Introduction to numerical methods for modeling surface water flows and sediment transport in rivers, lakes, estuaries and the coastal ocean. The first half of the course will focus on development of hydrodynamics models in one-, two-, and three dimensions, including numerical methods for the shallow water equations and momentum and scalar transport, and turbulence modeling. The second half of the course will incorporate sediment transport models into the hydrodynamics models covered in the first half of the quarter, along with discussion of bottom boundary layers in steady and wave-driven flows, bedform dynamics, suspended and bedload transport, and cohesive sediment dynamics. Prerequisite: CEE262A or ME351A or equivalent.

**CEE 262D. Introduction to Physical Oceanography. 4 Units.**

Formerly CEE 164. The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 162D, EARTHSYS 164, ESS 148

**CEE 262E. Rivers, Streams, and Canals. 3-4 Units.**

Formerly CEE 161A/264A. Introduction to the movement of water through natural and engineered channels, streams, and rivers. Basic equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Application of theory to the design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Limited enrollment in lab section. Prerequisite: CEE 101B or CEE 162A.

Same as: CEE 162E

**CEE 262F. Ocean Waves. 3 Units.**

The fluid mechanics of surface gravity waves in the ocean of relevance to engineers and oceanographers. Topics include irrotational waves, wave dispersion, wave spectra, effects of bathymetry (shoaling), mass transport, effects of viscosity, and mean currents driven by radiation stresses. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

**CEE 262G. Sediment Transport Modeling. 3 Units.**

Formerly CEE 264. Mechanics of sediment transport in rivers, estuaries and coastal oceans, with an emphasis on development of models and application of three-dimensional software tools. Topics include bottom boundary layers in steady and wave-driven flows, bedform dynamics, suspended and bedload transport, cohesive sediments. Prerequisites: CEE262A or consent of instructor.

**CEE 262I. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: MATH 51 or CME100; and PHYSICS 41; and CEE 162A or CEE 101B or a graduate class in fluid dynamics or consent of the instructor.

Same as: CEE 162I, EARTHSYS 146B, ESS 246B

**CEE 263A. Air Pollution Modeling. 3-4 Units.**

The numerical modeling of urban, regional, and global air pollution focusing on gas chemistry and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving stiff systems of chemical ordinary differential, including the multistep implicit-explicit method, Gear's method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves developing a basic chemical ordinary differential equation solver. Prerequisite: CS 106A or equivalent.

**CEE 263B. Numerical Weather Prediction. 3-4 Units.**

Numerical weather prediction. Continuity equations for air and water vapor, the thermodynamic energy equation, and momentum equations derived for the atmosphere. Numerical methods of solving partial differential equations, including finite-difference, finite-element, semi-Lagrangian, and pseudospectral methods. Time-stepping schemes: the forward-Euler, backward-Euler, Crank-Nicolson, Heun, Matsuno, leapfrog, and Adams-Bashforth schemes. Boundary-layer turbulence parameterizations, soil moisture, and cloud modeling. Project developing a basic weather prediction model. Prerequisite: CS 106A or equivalent.

**CEE 263C. Weather and Storms. 3 Units.**

Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics. Same as: CEE 63

**CEE 263D. Air Pollution and Global Warming: History, Science, and Solutions. 3 Units.**

Survey of Survey of air pollution and global warming and their renewable energy solutions. Topics: evolution of the Earth's atmosphere, history of discovery of chemicals in the air, bases and particles in urban smog, visibility, indoor air pollution, acid rain, stratospheric and Antarctic ozone loss, the historic climate record, causes and effects of global warming, impacts of energy systems on pollution and climate, renewable energy solutions to air pollution and global warming. UG Reqs: GER: DBNatSci. Same as: CEE 64

**CEE 263G. Energy Policy in California and the West. 1 Unit.**

This seminar provides an in-depth analysis of the role of California state agencies and Western energy organizations in driving energy policy development, technology innovation, and market structures, in California, the West and internationally. The course covers three areas: 1) roles and responsibilities of key state agencies and Western energy organizations; 2) current and evolving energy and climate policies; and 3) development of the 21st century electricity system in California and the West. The seminar will also provide students a guideline of what to expect in professional working environment. Specific meeting dates for the course are as follows: April 21 10am-2pm/ May 12 10am-1pm/ June 2 10am-1pm.

Same as: POLISCI 73, PUBLPOL 73

**CEE 263S. Atmosphere/Energy Seminar. 1 Unit.**

Interdisciplinary seminar with talks by researchers and practitioners in the fields of atmospheric science and renewable energy engineering. Addresses the causes of climate, air pollution, and weather problems and methods of addressing these problems through renewable and efficient energy systems. May be repeated for credit.

**CEE 265A. Sustainable Water Resources Development. 3 Units.**

Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Influence of international aid agencies and NGOs on water projects. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.

**CEE 265C. Water Resources Management. 3 Units.**

Optimal equilibrium between water supply and water demand, under specific local and regional physical, environmental, social and economic constraints. Principles in the context of sustainable development, increasing water scarcity in many parts of the world, and hydrologic uncertainty including that associated with climate change. Operations and water quality in reservoirs, river basins, and groundwater systems; non-conventional water sources; demand management options; and the institutional and legal framework. Same as: CEE 165C

**CEE 265D. Water and Sanitation in Developing Countries. 1-3 Unit.**

Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor, see jennadavis.stanford.edu for application.

**CEE 265E. Adaptation to Sea Level Rise and Extreme Weather Events. 3 Units.**

Students are introduced to basic aspects of climate change in the context of sea level rise and the intensity and frequency of extreme-weather events. Climate change adaptations are adjustments in behaviors, plans and projects to reduce society's vulnerability to climate change impacts. Major adaptation approaches relevant to civil and environmental engineers are reviewed. Adaptation measures considered include structural and ecologically-based measures for dealing with sea level rise and storm surges, as well as planned migration and managed retreat (i.e., deliberately altering flood defenses to allow flooding of presently protected areas). Strategies for adaptation to changes in extreme weather events, including floods and droughts, are also considered; examples include disaster response management systems and weather insurance. Illustrations of innovative adaptation measures taken by cities are featured as are techniques associated with climate-smart agriculture. Common barriers to climate change adaptation are also reviewed. Limited enrollment. Admission preference given to students in CEE graduate programs for Environmental Engineering, EFMH and EES followed by seniors doing the coastal focus area within the CEE Department's Environmental Systems Engineering major.

**CEE 266A. Watersheds and Wetlands. 4 Units.**

Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: CEE 101B or CEE 162A or equivalent. (Freyberg). Same as: CEE 166A

**CEE 266B. Floods and Droughts, Dams and Aqueducts. 4 Units.**

Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg). Same as: CEE 166B

**CEE 266C. Dams, Reservoirs, and their Sustainability. 3 Units.**

An investigation of dams and reservoirs and their short- and long-term costs, benefits, and impacts. Dam safety, operating rules and reoperation in response to change, fish passage, reservoir sediment management, fish passage and habitat, dam removal. Heavy reliance on case studies, technical literature, and discussion. Enrollment limited. Graduate status or permission of the instructor. Prerequisite: CEE 266A, 266B, or equivalents.

**CEE 266D. Water Resources and Water Hazards Field Trips. 2 Units.**

Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.

Same as: CEE 166D

**CEE 268. Groundwater Flow. 3-4 Units.**

Flow and mass transport in porous media. Applications of potential flow theory and numerical modeling methods to practical groundwater problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing; capture zones of wells; and mixing schemes for in-situ remediation. Prerequisites: calculus and introductory fluid mechanics.

**CEE 269A. Environmental Engineering Seminar. 1 Unit.**

Presentations on current research in environmental engineering by Civil & Environmental Engineering faculty.

**CEE 269B. Environmental Engineering Seminar. 1 Unit.**

Presentations on current research, practice and thinking in environmental engineering by visiting academics and practitioners.

**CEE 269C. Environmental Engineering Seminar. 1 Unit.**

Presentations on current research, practice and thinking in environmental engineering by visiting academics and practitioners.

**CEE 270. Movement and Fate of Organic Contaminants in Waters. 3 Units.**

Transport of chemical constituents in surface and groundwater including advection, dispersion, sorption, interphase mass transfer, and transformation; impacts on water quality. Emphasis is on physicochemical processes and the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.

**CEE 270B. Environmental Organic Reaction Chemistry. 2-3 Units.**

With over 70,000 chemicals now in production worldwide, predicting their fate in the environment is a difficult task. The course focuses on developing two key skills. First, students should develop the ability to derive mass balance equations used to quantify the fate of chemicals in the environment. With so many chemicals having been introduced in the past ~60 years, many of the key parameters needed for mass balance models have not been measured experimentally. The class builds on CEE 270, which developed methods of predicting equilibrium partitioning coefficients. For many situations involving reactions of target contaminants, equilibrium is not attained. The course develops methods of predicting the reactivity of chemicals based upon their chemical structures both qualitatively and quantitatively. natural reaction processes covered include acid-base speciation, nucleophilic substitution, oxidation/reduction reactions, and photochemical reactions. Key treatment reactions (ozone, UV treatment and advanced oxidation) are also covered. Prerequisites: CEE 270, Chem 31B/X.

**CEE 270S. Environmental Disasters. 2 Units.**

Mining and critical review of scientific literature for environmental impacts, especially chemical contamination caused by natural and anthropogenic disasters. Focus is on the development of research review skills, critical thinking and discussion of findings.

Same as: CEE 170S

**CEE 271A. Physical and Chemical Treatment Processes. 3 Units.**

Physical and chemical unit operations for water treatment, emphasizing process combinations for drinking water supply. Application of the principles of chemistry, rate processes, fluid dynamics, and process engineering to define and solve water treatment problems by flocculation, sedimentation, filtration, disinfection, oxidation, aeration, and adsorption. Investigative paper on water supply and treatment. Prerequisites: CEE 101B (or CEE 162A); CEE 270. Recommended: 273.

**CEE 271B. Environmental Biotechnology. 4 Units.**

Stoichiometry, kinetics, and thermodynamics of microbial processes for the transformation of environmental contaminants. Design of dispersed growth and biofilm-based processes. Applications include treatment of municipal and industrial waste waters, detoxification of hazardous chemicals, and groundwater remediation. Prerequisites: 270; 177 or 274A or equivalents.

**CEE 271D. Introduction to Wastewater Treatment Process Modeling. 2 Units.**

The course will present a structured protocol for simulator application comprising project definition, data collection and reconciliation, model set-up, calibration and validation, and simulation and result interpretation. This course will include a series of guided simulation exercises evaluating resource consumption (e.g., electrical energy, natural gas, chemicals) and resource recovery (e.g., biogas, struvite, biosolids, recycled water) from a variety of treatment plant configurations. Coursework will consist of guided simulation exercises, an end-of-the-quarter project evaluating an assigned plant configuration, and presenting model results to the class. Enrollment will be limited, with preference to CEE graduate students.

**CEE 271F. New Indicators of Well-Being and Sustainability. 3 Units.**

Explore new ways to better measure human development, comprehensive wealth and sustainability beyond standard economic indicators such as income and GDP. Examine how new indicators shape global, national and local policy worldwide. Well-being topics include health, happiness, trust, inequality and governance. Sustainability topics include sustainable development, environmental performance indicators, material flow analysis and decoupling, and inclusive wealth indicators. Students will build their own indicator of well-being and sustainability for a term paper. Same as: CEE 171F

**CEE 271M. Transport Phenomena: Momentum, heat and mass transport. 3 Units.**

Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.

Same as: CEE 371M

**CEE 272. Coastal Contaminants. 3-4 Units.**

Coastal pollution and its effects on ecosystems and human health. The sources, fate, and transport of human pathogens and nutrients. Background on coastal ecosystems and coastal transport phenomena including tides, waves, and cross shelf transport. Introduction to time series analysis with MATLAB. Undergraduates require consent of instructor.

**CEE 272R. Modern Power Systems Engineering. 3 Units.**

Focus is on Power Engineering from a systems point of view. Topics covered may include modeling of generation, transmission and distribution systems, load flow analysis, transient and steady-state stability analysis. Special emphasis given to modern market operations and dispatch, modeling intermittent controllable power sources, storage technologies, mechanisms for demand response, sensing the grid and the role of market mechanisms for deep integration. Course content may vary year to year.

**CEE 272T. SmartGrids and Advanced Power Systems Seminar. 1-2 Unit.**

A series of seminar and lectures focused on power engineering. Renowned researchers from universities and national labs will deliver bi-weekly seminars on the state of the art of power system engineering. Seminar topics may include: power system analysis and simulation, control and stability, new market mechanisms, computation challenges and solutions, detection and estimation, and the role of communications in the grid. The instructors will cover relevant background materials in the in-between weeks. The seminars are planned to continue throughout the next academic year, so the course may be repeated for credit. Same as: EE 292T

**CEE 273. Aquatic Chemistry. 3 Units.**

Chemical principles and their application to the analysis and solution of problems in aqueous geochemistry (temperatures near 25° C and atmospheric pressure). Emphasis is on natural water systems and the solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: CHEM 31 and 33, or equivalents.

**CEE 273A. Water Chemistry Laboratory. 3 Units.**

(Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.  
Same as: CEE 179A

**CEE 273B. The Business of Water. 2 Units.**

One of the fastest growing economic sectors is the water field, and private water companies are playing an increasingly important role in improving water management around the world. In some cases, however, the involvement of private companies in the water sector has also proven controversial (e.g., when private companies have taken over public water supply systems in developing countries such as Bolivia). This course will look at established or emerging businesses in the water sector and the legal, economic, and social issues that they generate. These businesses include investor-owned water utilities, water technology companies (e.g., companies investing in new desalination or water recycling technologies), water-right funds (who directly buy and sell water rights), social impact funds, innovative agricultural operations, water concessionaires, and infrastructure construction companies and investors. Each week will focus on a different business and company. Company executives will attend the class session and discuss their business with the class. In most classes, we will examine (1) the viability and efficacy of the company's business plan, (2) the legal and/or social issues arising from the business' work, and (3) how the business might contribute to improved water management and policy. Each student will be expected to write (1) two short reflection papers during the course of the quarter on businesses that present to the class, and (2) a 15-page paper at the conclusion of the class on either a water company of the student's choice or a policy initiative that can improve the role that business plays in improving water management (either in a particular sector or more generally). Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**CEE 273C. Environmental Engineering Applications of Membrane Technology. 3 Units.**

Introduction to membrane technology and processes with applications in R&D, water/wastewater treatment, and renewable energy. Membrane separation principles, reverse osmosis, nanofiltration, membrane characterization techniques, mass transport phenomena, fouling processes, rejection of salts and trace organics, brine disposal system design, energy and cost considerations, and pre- and post-treatment procedures. Case studies in environmental sustainability issues related to full scale treatment engineering.

**CEE 273D. Wastewater Treatment Process Simulators and Their Use for Emerging Technologies. 2 Units.**

Process simulators are used widely for analysis and design of municipal and industrial wastewater treatment facilities. The current generation of simulators integrates biological, chemical, and physical process models that enable steady-state and dynamic "whole plant" simulation of liquid and solids treatment process performance. This course reinforces the concepts presented in CEE 271A, CEE 271B, and CEE 273 and shows how these concepts are applied to analyze and design treatment systems for BOD removal, energy recovery, phosphorus removal and recovery, and nitrogen removal using BioWin TM 4, a commercially-available software package. A process-specific model for anaerobic treatment of domestic wastewater will also be developed for the new Staged Anaerobic Fluidized Membrane Bioreactor (SAF-MBR) based on the International Water Association (IWA) Anaerobic Digester Model No. 1 (ADM1) and implemented using the simulation software Aquasim.

**CEE 273F. Urban Water Use Efficiency and Conservation. 2 Units.**

Introduction to water reuse, including membrane treatment, groundwater infiltration, artificial turf, and runoff collection and use.

**CEE 274A. Environmental Microbiology I. 3 Units.**

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.  
Same as: CHEMENG 174, CHEMENG 274

**CEE 274B. Microbial Bioenergy Systems. 3 Units.**

Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents.  
Same as: CHEMENG 456

**CEE 274D. Pathogens and Disinfection. 3 Units.**

Introduction to epidemiology, major pathogens and infectious diseases, the immune system, movement and survival of pathogens in the environment, transfer of virulence and antibiotic resistance genes, and pathogen control, with an emphasis on public health engineering measures (disinfection). Prerequisite: 274A.

**CEE 274P. Environmental Health Microbiology Lab. 3-4 Units.**

Microbiology skills including culture-, microscope-, and molecular-based detection techniques. Focus is on standard and EPA-approved methods to enumerate and isolate organisms used to assess risk of enteric illnesses, such as coliforms, enterococci, and coliphage, in drinking and recreational waters including lakes, streams, and coastal waters. Student project to assess the microbial water quality of a natural water. Limited enrollment; priority to CEE graduate students. An application form must be filed and approved before admission to the class.

**CEE 274S. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.  
Same as: BIO 274S, BIOHOPK 274, ESS 253S

**CEE 275A. California Coast: Science, Policy, and Law. 3-4 Units.**

This interdisciplinary course integrates the legal, scientific, and policy dimensions of how we characterize and manage resource use and allocation along the California coast. We will use this geographic setting as the vehicle for exploring more generally how agencies, legislatures, and courts resolve resource-use conflicts and the role that scientific information and uncertainty play in the process. Our focus will be on the land-sea interface as we explore contemporary coastal land-use and marine resource decision-making, including coastal pollution, public health, ecosystem management; public access; private development; local community and state infrastructure; natural systems and significant threats; resource extraction; and conservation, mitigation and restoration. Students will learn the fundamental physics, chemistry, and biology of the coastal zone, tools for exploring data collected in the coastal ocean, and the institutional framework that shapes public and private decisions affecting coastal resources. There will be 3 to 4 written assignments addressing policy and science issues during the quarter, as well as a take-home final assignment. Special Instructions: In-class work and discussion is often done in interdisciplinary teams of students from the School of Law, the School of Engineering, the School of Humanities and Sciences, and the School of Earth, Energy, and Environmental Sciences. Students are expected to participate in class discussion and field trips. Elements used in grading: Participation, including class session and field trip attendance, writing and quantitative assignments. Cross-listed with Civil & Environmental Engineering (CEE 175A/275A), Earth Systems (EARTHSYS 175/275), and Law (LAW 2510). Open to graduate students and to advanced undergraduates with instructor consent.

Same as: CEE 175A

**CEE 275B. Process Design for Environmental Biotechnology. 3 Units.**

Use of microbial bioreactors for degradation of contaminants and recovery of clean water, clean energy and/or green materials. Student teams design, operate, and analyze bioreactors and learn to write consulting style reports. Limited enrollment. Prerequisites: 271B.

**CEE 275C. Water, Sanitation and Health. 1-4 Unit.**

Students acquire basic knowledge to participate in a dialogue on water, sanitation and health issues in developing and developed countries. The focus is on enteric pathogenic pollutants. Material includes: Important pathogens, their modes of transmission and the diseases they cause, their fate and transport in the environment, and the means by which they are measured; statistical methods for processing and interpreting waterborne pollutant concentrations, and interpreting data from epidemiology studies; microbial source tracking; epidemiology and quantitative microbial risk assessment; reduction of pathogens in water and sludge; and non-experimental water, sanitation, and hygiene research. Several laboratory sessions will allow students to measure indicator bacteria and viruses using culture-based techniques and expose students to molecular methods for measuring health-relevant targets in water.

**CEE 275K. The Practice of Environmental Consulting. 2 Units.**

Class consists of eight interactive two-hour seminars with discussions, and will cover the evolution of the environmental consulting business, strategic choices and alternative business models for private and public firms, a review of the key operational issues in managing firm, organizational strategies, knowledge management and innovation, and ethical issues in providing professional services. Case studies will be used to illustrate key concepts. Selected reading materials drawn from the technical and business literature on the consulting business. Student groups will prepare and present an abbreviated business plan for an environmental based business. Enrollment limited to CEE MS and PHD students.

**CEE 275P. Persuasive Communication for Environmental Scientists, Practitioners, and Entrepreneurs. 2 Units.**

Achieving environmental goals depends not only on innovative ideas and great science but also persuasive communication. What makes communication persuasive? The ability of the communicator to create value for his or her audience. This course will teach students how to: 1) focus on their audience and 2) create value for their audience using research-proven communication techniques. Students will master these techniques through oral and written exercises so that, after taking this course, they will speak and write more persuasively.

Same as: CEE 175P

**CEE 275S. Environmental Entrepreneurship and Innovation. 3 Units.**

Our current infrastructure for provision of critical services-clean water, energy, transportation, environmental protection; requires substantial upgrades. As a complement to the scientific and engineering innovations taking place in the environmental field, this course emphasizes the analysis of economic factors and value propositions that align value chain stakeholder interests.

Same as: CEE 175S

**CEE 276. Introduction to Human Exposure Analysis. 3 Units.**

(Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. Apply at first class for admission.

Same as: CEE 178

**CEE 276C. Energy Storage Integration - Vehicles, Renewables, and the Grid. 3 Units.**

This course will provide in-depth introduction to existing energy storage solutions being used on the electric grid and in vehicles with a primary focus on batteries and electrochemical storage. We will discuss the operating characteristics, cost and efficiency of these technologies and how tradeoff decisions can be made. Special attention will be given to system-level integration of new storage technologies, including chargers, inverters, battery management systems and controls, into the existing vehicle and grid infrastructure. Further investigations include issues relating to integration of electric vehicle charging with demand-side management, scheduled renewable energy absorption and local grid balancing. Class format involves regular guest lectures, required lab participation, and field trips to relevant sites. Enrollment is limited; if you are interested in taking the course, please fill out a brief questionnaire at <http://goo.gl/forms/i3YH91Qx05n> Please contact [jtaggart@stanford.edu](mailto:jtaggart@stanford.edu) with any questions regarding the application or course information.

Same as: CEE 176C

**CEE 276G. Sustainability Design Thinking. 3 Units.**

Application design thinking to make sustainability compelling, impactful and realizable. Analysis of contextual, functional and human-centered design thinking techniques to promote sustainable design of products and environments by holistically considering space, form, environment, energy, economics, and health. Includes Studio project work in prototyping, modeling, testing, and realizing sustainable design ideas.

Same as: CEE 176G

**CEE 277D. Water, Health & Development in Africa. 1 Unit.**

Graduate seminar focused on emerging research in the areas of water supply, sanitation, hygiene and health in developing countries. Limited enrollment; instructor permission required.

**CEE 277F. Advanced Field Methods in Water, Health and Development. 1-10 Unit.**

Field methods for assessing household stored water quality, hand contamination, behaviors, and knowledge related to water, sanitation and health. Limited enrollment. Instructor consent required.

**CEE 277L. Smart Cities & Communities. 3 Units.**

A city is comprised of people and a complex system of systems. Data provides the connective tissue between those systems. Smart cities use information technology (IT) to harness that data for operational efficiency, efficacy of government services, and sustainability. Key enablers covered include: IoT, open data, analytics, cloud and cognitive computing, and systems of engagement. System case studies will include: water, energy, transportation, buildings, food production, urban design, and social services. The evolving relationship between a city and its citizens as well as the risks / challenges of smart cities will also be explored.

Same as: CEE 177L

**CEE 277S. Design for a Sustainable World. 1-5 Unit.**

Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See <http://esw.stanford.edu> for application. (Staff).

Same as: CEE 177S

**CEE 277X. Current Topics in Sustainable Engineering. 1-3 Unit.**

This course is the first half of a two quarter, project-based design course that addresses the cultural, political, organizational, technical, and business issues at the heart of implementing sustainable engineering projects in the developing world. Students will be placed into one of three project teams and tackle a real-world design challenge in partnership with social entrepreneurs and NGOs. In CEE 177X/277X, students will gain the background skills and context necessary to effectively design engineering projects in developing nations. (Cardinal Course certified by the Haas Center). Instructor consent required.

Same as: CEE 177X

**CEE 278A. Air Pollution Fundamentals. 3 Units.**

The sources and health effects of gaseous and particulate air pollutants. The influence of meteorology on pollution: temperature profiles, stability classes, inversion layers, turbulence. Atmospheric diffusion equations, downwind dispersion of emissions from point and line sources. Removal of air pollutants via settling, diffusion, coagulation, precipitation. Mechanisms for ozone formation, in the troposphere versus in the stratosphere. Effects of airborne particle size and composition on light scattering/absorption, and on visual range. Prerequisites: MATH 51 or equivalent. Recommended: 101B, CHEM 31A, or equivalents.

**CEE 278C. Indoor Air Quality. 2-3 Units.**

Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Limited enrollment, preference to CEE students. Prerequisites: Math 42 or 21 and CEE 70, or equivalents.

Same as: CEE 172A

**CEE 279F. Frontiers of Anaerobic Treatment. 1 Unit.**

This seminar will present the latest findings on the operation and performance of ground-breaking anaerobic treatment processes for domestic wastewater. Specifically, this seminar will examine the performance of the Staged Anaerobic Fluidized-bed Membrane Bioreactor (SAF-MBR) using results from ongoing operations at the Codiga Resource Recover Center and from previous and parallel research efforts. The seminars will incorporate a description of the fundamentals of anaerobic treatment processes, a discussion of how the SAF-MBR process is different from typical anaerobic processes, and insights from operations along with implications for system design. Course work will include explorations of the costs, benefits, and market potential of this technology.

Same as: CEE 179F

**CEE 279S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings.

Same as: CEE 179S, EARTHSYS 179S, ESS 179S

**CEE 279W. Innovation in Water Sector. 1 Unit.**

A project class on the diffusion of ReNUWit technologies into practice (David Sedlak is the overall course lead at UC Berkeley, Chris Higgins is the lead at Colorado School of Mines, and Dick Luthy is the lead at Stanford). Specifically, the class will examine the pathway through which ReNUWit's engineered wetland technologies will be adopted by utilities and consultants beyond our current group of industrial partners. We will work together to prepare background information that will be used in a 2-day workshop involving ReNUWit researchers, utility leaders and technical experts in early 2015.

**CEE 280. Advanced Structural Analysis. 3-4 Units.**

Theoretical development and computer implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; equation solution techniques. Analysis of two- and three-dimensional truss and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques and programming assignments. Introduction to nonlinear analysis concepts. Prerequisites: elementary structural analysis and matrix algebra.

**CEE 281. Mechanics and Finite Elements. 3 Units.**

Fluid conduction and solid deformation; conservation laws: balance of mass and balance of momentum; generalized Darcy's law and Hooke's law in 3D; the use of tensors in mechanics; finite element formulation of boundary-value problems; variational equations and Galerkin approximations; basic shape functions, numerical integration, and assembly operations.

**CEE 282. Nonlinear Structural Analysis. 3-4 Units.**

Introduction to methods of geometric and material nonlinear analysis, emphasizing modeling approaches for framed structures. Large-displacement analysis, concentrated and distributed plasticity models, and nonlinear solution methods. Applications to frame stability and performance-based seismic design. Assignments emphasize computer implementation and applications. Prerequisites: 280 and an advanced course in structural behavior (e.g., 285A, 285B or equivalent).

**CEE 283. Structural Dynamics. 3-4 Units.**

Vibrations and dynamic response of simple structures under time dependent loads; dynamic analysis of single and multiple degrees of freedom systems; support motion; response spectra.

**CEE 284. Finite Element Methods in Structural Dynamics. 3-4 Units.**

Computational methods for structural dynamics analysis of discrete and continuous systems in free and forced vibration; finite element formulation; modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 283.

**CEE 285A. Advanced Structural Concrete Behavior and Design. 3-4 Units.**

Behavior and design of reinforced and prestressed concrete for building and bridge design. Topics will include flexural behavior, prestressed concrete design, and two-way slab design & analysis, among others.

**CEE 285B. Advanced Structural Steel Behavior and Design. 3-4 Units.**

Advanced topics in structural steel design. Topics include composite floor systems; bolted and welded connections; beam-column connections; innovative lateral load resisting systems. As part of this course students design a 15-story steel building. Prerequisite: basic course in structural steel design CEE181 or equivalent.

**CEE 287. Earthquake Resistant Design and Construction. 3-4 Units.**

Evaluation, design, and construction of structures in seismic regions. Factors influencing earthquake ground motions, design spectra, design of linear and nonlinear single- and multiple-degree-of-freedom-system structures, force-based and displacement-based design methods, capacity design, detailing and construction of steel and reinforced concrete structures, introduction to performance-based design, seismic isolation, and energy dissipation. Prerequisites: 283 and either 285A or 285B.

**CEE 288. Introduction to Performance Based Earthquake Engineering. 3-4 Units.**

Earthquake phenomena, faulting, ground motion, earthquake hazard formulation, effects of earthquakes on manmade structures, response spectra, Fourier spectra, soil effects on ground motion and structural damage, methods for structural damage evaluation, and formulation of the performance-based earthquake engineering problems. Prerequisites: 203, 283.

**CEE 289. Random Vibrations. 3-4 Units.**

Introduction to random processes. Correlation and power spectral density functions. Stochastic dynamic analysis of multi-degree-of-freedom structures subjected to stationary and non-stationary random excitations. Crossing rates, first-excursion probability, and distributions of peaks and extremes. Applications in earthquake, wind, and ocean engineering. Prerequisite: 203 or equivalent.

**CEE 290. Structural Performance and Failures. 2 Units.**

Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.

**CEE 291. Solid Mechanics. 3 Units.**

Vector and tensor algebra; vector and tensor analysis; kinetics, basic physical quantities, global and local balance laws, representative material models of 1D and 3D continua at small strains; thermodynamics of general internal variable formulations of inelasticity; integration algorithms for inelastic 1D and 3D materials; basic solution techniques for boundary value problems in 1D and 3D.

**CEE 292. Continuum Mechanics. 3 Units.**

Introduction to vectors and tensors: kinematics, deformation, forces, and stress concept of continua; balance principles; aspects of objectivity; hyperelastic materials; thermodynamics of materials; variational principles. Prerequisite: CEE 291 or equivalent.  
Same as: ME 338

**CEE 293. Foundations and Earth Structures. 3 Units.**

Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by method of slices including search algorithms for the critical slip surface. Prerequisite: 101C or equivalent.

**CEE 294. Computational Poromechanics. 3 Units.**

Continuum and finite element formulations of steady-state and transient fluid conduction problems on geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; undrained condition, mesh locking, B-bar and strain projection methods; finite element formulations of multiphase dynamic problems. Computing assignments. Prerequisite: CEE 281 or equivalent.

**CEE 295. Plasticity Modeling and Computation. 3 Units.**

Rate-independent elastoplasticity; classical plasticity models for metals and cohesive-frictional materials; cap plasticity models for porous materials; return-mapping algorithm; shear bands, faults, and other discontinuities; Lagrange multipliers, penalty and augmented Lagrangian methods for frictional contact; multiscale techniques: extended finite element and strong discontinuity methods; fault rupture dynamics with bulk plasticity. Prerequisite: CEE 281 or equivalent.

**CEE 297M. Managing Critical Infrastructure. 2 Units.**

Safe and effective performance of infrastructure systems is critical to our economy, quality of life and safety. This course will present topics associated with risk analysis and management of critical civil infrastructure systems, tolerable risk and community resilience. Methods of risk analysis including systems analysis, reliability analysis, expert elicitation and systems analysis for spatially distributed infrastructure systems will be presented. Aspects of seismic and flood risk analysis will also be discussed. Case histories and lessons learned from Hurricane Katrina, Tohoku earthquake, among others will be presented. The evolution of change in the risk management of civil infrastructure systems; how they are analyzed, designed and operated is discussed. Guest speakers. Student presentations. (Prerequisite: CEE 203 or equivalent).

**CEE 298. Structural Engineering and Geomechanics Seminar. 1 Unit.**

Recommended for all graduate students. Lectures on topics of current interest in professional practice and research.

**CEE 299. Independent Study in Civil Engineering for CEE-MS Students. 1-5 Unit.**

Directed study for CEE-MS students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.

**CEE 299L. Independent Project in Civil and Environmental Engineering. 1-4 Unit.**

Prerequisite: Consent of Instructor.

**CEE 29N. Managing Natural Disaster Risk. 3 Units.**

Natural disasters arise from the interaction of natural processes, such as earthquakes or floods, with human development that suffers safety-related and economic losses. We cannot predict exactly when those disasters will occur, or prevent them entirely, but we have a number of engineering and policy options that can reduce the impacts of such events.

**CEE 300. Thesis. 1-15 Unit.**

Research by Engineer candidates.  
Same as: Engineer Degree

**CEE 301. The Energy Seminar. 1 Unit.**

Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.  
Same as: ENERGY 301, MS&E 494

**CEE 305. Damage and Failure Mechanics of Structural Systems. 3-4 Units.**

Examine the mechanics and failure mechanisms of structural deterioration mechanisms and hazards. Overview of fracture mechanics concepts as a general basis for analyzing brittle failure modes in steel and concrete structures. Analysis and design theory for corrosion, fatigue, fire and other damage mechanisms in steel and concrete structures. New methods for mitigation of these failure modes and hazards will be introduced, including new construction materials, structural designs and protection methods.

**CEE 306. Computational Fracture Mechanics. 3 Units.**

Brief review continuum mechanics; energy principles of mechanics; introduction to fracture mechanics; constrained problems; advanced finite element concepts like mixed, assumed, and enhanced strain methods; computational fracture strategies like cohesive finite elements, embedded and extended finite element methods. Prerequisite: CEE 281 or equivalent.

**CEE 308. Topics in Disaster Resilience Research. 1 Unit.**

This seminar will explore past and current research on disaster risk and resilience, towards the development of new frontiers in resilience engineering science research. Designed for graduate students engaged in the topic of risk and resilience research, the seminar will be organized around weekly readings and discussion groups. May be repeat for credit. Same as: GEOPHYS 308

**CEE 31. Accessing Architecture Through Drawing. 5 Units.**

Preference to Architectural Design and CEE majors; others by consent of instructor. Drawing architecture to probe the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment.

**CEE 316. Sustainable Built Environment Research. 3 Units.**

Intended for early stage Ph.D. students in Sustainable Design and Construction (SDC). Covers dominant methodological approaches at the intersection of engineering, social management science and computer science. Overviews an array of methods available for research, focusing on methods commonly used in SDC. Publications using various methods will be analyzed, and journal review processes will be discussed. Major deliverable is research proposal using one or more of the methods discussed. Students will gain familiarity with the array of methods available for SDC research, know how to apply the methods in their own research area, and receive guidance on publishing their research in scientific journals.

**CEE 31Q. Accessing Architecture Through Drawing. 5 Units.**

Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment.

**CEE 320. Integrated Facility Engineering. 1 Unit.**

Individual and group presentations on goals, research, and state-of-practice of virtual design and construction in support of integrated facility engineering, including objectives for the application and further development of virtual design and construction technologies. May be repeated for credit.

**CEE 322. Data Analytics for Urban Systems. 3 Units.**

TBA.

**CEE 323A. Infrastructure Finance and Governance. 1 Unit.**

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

**CEE 323B. Infrastructure Finance and Governance. 1 Unit.**

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter, and Spring quarters.

**CEE 323C. Infrastructure Finance and Governance. 1 Unit.**

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

**CEE 324. Industrialized Construction. 1-2 Unit.**

The course will present driving forces, comprehensive concepts, technologies, and managerial aspects of Industrialized Construction. Further a series of case studies of successful and failed industry implementations in Sweden, North America and Japan will be presented, showcasing process and technology platforms; use of renewable resources and other sustainable design and construction practices. The contrast between industrialized construction practices in Sweden, the U.S. and other countries is highlighted. Project-orientated vs. product-oriented approaches are essential, along with business models and strategies for industrialized construction companies and their opportunities for innovations. The course includes lectures, case studies, and course group-project assignments with leading companies in the industry. Visiting lecturer Dr Jerker Lessing, one of Sweden's leading experts on industrialized construction with more than 15 years of experience in this field, is giving this course. This is a unique opportunity to learn about this comprehensive, emerging construction concept. Dr Lessing's research at Lund University has pioneered the area of industrialized construction and established models and strategic perspectives that are widely adopted throughout academia and industry. Dr Lessing has published articles and books and he frequently lectures on the topic in Sweden and internationally. He is the Director and General manager of Research and Development at BoKlok, an industrialized house-building company which is a joint venture of the construction company SKANSKA and furniture giant IKEA. The class will be taught as a condensed two week course. Readings and discussions will be organized in the weeks before the lecture component of the class, a group project after. During weeks 1-5, class will not meet regularly and only meet a few times for reading discussions and guest speakers. When they occur, these meetings will be held either Tuesday or Thursday 8-9am in Y2E2 292A. A detailed class schedule will be available before the start of the quarter. Notes: Attendance Mandatory. No Exam. Case and Problem Discussion. CR/NC and Auditing Not Allowed. Eligible for SDC Building & Infrastructure Development concentration area requirement. Number of students limited to 20; prerequisites: CEE100 or equivalent. Please direct questions to jerker.lessing@boklok.se or adusser@stanford.edu and co.

**CEE 325. CapaCity Design Studio. 5 Units.**

Silicon Valley's rapid expansion has created explosive urban development in a fragile and under-prepared natural context. Delicate coastal ecology and rapid urbanization (expanding technology headquarters, new residential housing, parking, services, etc.) are competing for space. The same land also serves the regional functions of transport, open space, recreation, water supply, flood protection and wastewater treatment. Compounding the problems between these competing factors are global climate change instabilities increasing the certainty of catastrophic flooding, infrastructure collapse, and other urban resilience challenges. Students will be immersed in a process that allows them to understand and spatially identify these risks, develop a vocabulary and an understanding of innovative tools to respond to them, and then work with expert practitioners to create unique design responses. Students will be provided with urban design frameworks (for planning, site development, and conservation) combined with advanced sustainable design concepts (such as resource co-optimization, adaptable infrastructure platforms, and high performance urban ecology) by working with expert lecturers and in small groups. Students will ultimately develop a series of visual and technical presentations to propose a final thesis for a local intervention that could be replicated in other coastal contexts globally. This course has been designed to develop student learning through a project-based format. Students will be organized into design teams of 3 or 4 and will have the semester to collaborate with partners on an interdisciplinary proposal including policy and design recommendations.

**CEE 326. Autonomous Vehicle Frameworks Developing and Applying Comparison Metrics. 2-3 Units.**

Autonomous vehicles have been a fast-growing area of interest for research, development, and commercialization. This interdisciplinary research-based class explores methods for evaluating and comparing autonomous vehicles. Research teams find, define and assess metrics, including reaction time, time efficiency, error rate, safety, and information sharing. Collaborate with national and international experts. Consideration of economic, social and environmental implications. Independent and team projects will contribute to ongoing research.

**CEE 328A. Multidisciplinary Design and Simulation of Building Envelopes. 3 Units.**

Curtain walls are a manufactured product ubiquitous in the world of architecture and engineering that must meet structural, thermal, acoustic, environmental, and economic performance requirements. This course focuses on design strategies for building envelopes and explores new design approaches including parametric 3D modeling, simulation, and Multidisciplinary Design Optimization (MDO) methods that leverage computation to augment human abilities to identify novel, high performing solutions. Prerequisite: CEE 220A or equivalent. Limited to 16 students.

**CEE 32A. Psychology of Architecture. 3 Units.**

This course argues that architecture often neglects the interdisciplinary investigation of our internal psychological experience and the way it impacts our creation of space. How does our inner life influence external design? How are we impacted emotionally, physically, psychologically by the spaces we inhabit day to day? How might we intentionally imbue personal and public spaces with specific emotions? This seminar serves as a call to action for students interested in approaching architecture with a holistic understanding of the emotional impact of space. Sample topics addressed will include: conscious vs. unconscious design; the ego of architecture; psycho-spatial perspectives; ideas of home; integral/holistic architecture; phenomenology of inner and outer spaces; exploring archetypal architecture; and translating emotion through environment.

**CEE 32B. Design Theory. 4 Units.**

This seminar focuses on the key themes, histories, and methods of architectural theory – a form of architectural practice that establishes the aims and philosophies of architecture. Architectural theory is primarily written, but it also incorporates drawing, photography, film, and other media. One of the distinctive features of modern and contemporary architecture is its pronounced use of theory to articulate its aims. One might argue that modern architecture is modern because of its incorporation of theory. This course focuses on those early-modern, modern, and late-modern writings that have been and remain entangled with contemporary architectural thought and design practice. Rather than examine the development of modern architectural theory chronologically, it is explored architectural through thematic topics. These themes enable the student to understand how certain architectural theoretical concepts endure, are transformed, and can be furthered through his/her own explorations.

**CEE 32D. Construction: The Writing of Architecture. 4 Units.**

This seminar focuses on the construction of architectural writing. The class will analyze this idea through four topics: formal analysis, manifesto, translation, and preservation. The seminar is divided into two-week modules with each of these four concepts functioning as organizing principles. The first week of each module will involve familiarizing the seminar with both the terms and rhetorical tactics of the given theme by reading and analyzing specific texts and completing a short written analysis (1-2 pages). The second week will expand upon this foundation and involve further analysis in addition to each student writing a short paper (3-4 pages) drawing on the examples discussed and their own experiences in the discipline. The goal of the seminar is for each student to be able to analyze how an architectural writing is constructed and to develop his/her skills in the construction of his/her own writing.

**CEE 32F. Light, Color, and Space. 3 Units.**

This course explores color and light as a medium for spatial perception. Through the introduction of color theory, color mixing, and light analyses, students will learn to see and use light and color fields as a way to shape experience. We will examine the work of a range of architects and artist who use light and color to expand the field of perception (i.e. Rothko, Turrell, Eliasson, Holl, Aalto).

**CEE 32G. Architecture Since 1900. 4 Units.**

Art 142 is an introduction to the history of architecture since 1900 and how it has shaped and been shaped by its cultural contexts. The class also investigates the essential relationship between built form and theory during this period.

Same as: ARTHIST 142

**CEE 32H. Responsive Structures. 3 Units.**

This Design Build seminar investigates the use of metal as a structural, spatial and organizational medium. We will examine the physical properties of post-formable plywood, and develop a structural system and design which respond to site and programmatic conditions. The process includes model building, prototyping, development of joinery, and culminates in the full scale installation of the developed design on campus. This course may be repeated for credit (up to three times). Class meeting days/times are as follows: April 14, 9a-5p; April 28, 10a-5p; May 3, 7-9p; May 19, 10a-6:30p; May 20, 10a-6:30p.

Same as: CEE 132H

**CEE 32Q. Place: Making Space Now. 3 Units.**

This seminar argues that architects are ultimately "placemakers," and questions what that means in the contemporary world. Part I investigates the meaning of the word "place." Additional background for understanding contemporary place making will include a critique of the history of modern place-making through an examination of modern form. Part II examines two traditional notions of place by scale: from "home" to "the city." What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part III presents challenges to the traditional notions of place discussed in Part II. Topics addressed include: What does it mean to be "out of place"? What sense of place does a nomad have, and how is this represented? What are the "non-places" and how can architects design for these spaces? Part IV addresses the need to re-conceptualize contemporary space. The role of digital and cyber technologies, the construction of locality in a global world, and the in-between places that result from a world in flux are topics discussed in this section of the seminar. Learning goals: Specific goals include close reading of texts, understanding of philosophical thinking and writing, argument under uncertainty, and developed concepts of place, space and architecture.

**CEE 32R. American Architecture. 4 Units.**

A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world. Same as: AMSTUD 143A, ARTHIST 143A, ARTHIST 343A

**CEE 32S. The Situated Workplace and Public Life. 4 Units.**

The modern workplace has undergone fundamental change and continues to evolve. The context of work in many industries is today being shaped substantially by changing workforce demographics, the pervasiveness of mobile and embedded information technologies, hyper-connected work models on a global scale, evolving notions of health and well being, etc. Our public realm is changing too. People are moving to cities in greater numbers than ever before posing both challenges and opportunities related to new levels of density, sustainable resource management, resilient infrastructures, as well as new forms of civic engagement at neighborhood levels, to name but a few. These changes at an urban scale impact how and where public life happens and how it interacts with new modalities at work. This course will combine research, conceptual explorations, studio design work, seminars and guest lectures to explore the impact of the changing workplace on the morphology of the city by examining these bi-coastal seats of innovation. As the creative workplace continues to evolve, how will it engage the public realm within both well-established urban frameworks such as San Francisco and Boston, and emerging suburban contexts, such as Silicon Valley? The course will join graduate students from the Northeastern University School of Architecture with students from the Stanford University Architectural Design program. Students will reside primarily at their prospective universities and will travel selectively for site research, team charrettes and project reviews. Project sites on both coasts will be utilized for research and studio work. This is an opportunity for students from two top universities, both situated in the epicenters of workplace change, to explore and conduct valuable research on an issue that is changing their urban environments.

**CEE 32T. Making and Remaking the Architect: Edward Durell Stone and Stanford. 4 Units.**

How does an architect establish a career? How is an architect remembered? What makes a building significant and how should it be preserved, if at all? Fundamental questions about the practice and production of architecture will be examined in this seminar that focuses on the work of Edward Durell Stone (1902-78) and specifically on his work at Stanford and in Palo Alto. By 1955, Stone was so well established that he founded an office in Palo Alto to design the Stanford Medical Center (currently slated for destruction) and several other significant local public buildings, such as the Palo Alto Civic Center. Through site visits to his buildings, research in the Stanford archives, and interviews with architects who worked in his office (among other strategies), students will question how architecture produced in the immediate post-WWII period is thought about historically and how and when it should be preserved.

**CEE 32U. California Modernism: The Web of Apprenticeship. 4 Units.**

This course will study at the development of Modernism in pre and post WWII California. The class will investigate responses to climatic, technological, and cultural changes that were specific to the state but have now become an idealized trend. We will look at architects and landscape architects who apprenticed with significant design leaders and track how their involvement and explore resulted in changes in building technologies, and influenced the next generation of design thinking and experimentation. The investigations will occur through research, drawings and models, as well as site visits.

**CEE 32V. Architectural Design Lecture Series Course. 1 Unit.**

This seminar is a companion to the Spring Architecture and Landscape Architecture Lecture Series. Students will converse with lecturers before the lectures, attend the lecture, and prepare short documents (written, graphic, exploratory) for two of the lectures. The four course meeting dates will correspond with the lecture dates TBD. The meeting times are 4:30 PM -5:30 PM for the seminar and 6:30 - 7:45 for the lecture.

**CEE 32W. Making Meaning: A Purposeful Life in Design. 3 Units.**

As designers, how do we lead a life with meaning? What is a fulfilling life in design and how do we develop personal and professional practices that support this aim? This experiential course will explore how to nourish a purposeful life amidst a culture that can value productivity over presence in the field, identifying "busyness" as a marker of personal worth. How do we bring depth to not only the design process but our individual and collective lives as well? Investigations will include: exploring personal passions, discovering meaningful work in design, understanding work/life/play balance, practicing self-reflection, integrating wellness, cultivating community, and practicing design with integrity. Our time in class will be enjoyed sharing meals, discourse, play, and reflections with both the class cohort and designers that lead lives or purpose and meaning.

**CEE 32X. Modern and Contemporary World Architecture: A Cultural History in Twenty Five Buildings. 4 Units.**

This survey course is a guided tour of twenty five case studies from the last hundred years; interrogates how architecture responds to the aesthetic, technological, political, and cultural issues of the societies they belong to, all over the world. Same as: ARTHIST 141

**CEE 32Y. Architecture & Gender. 4 Units.**

This advanced seminar introduces students to the seemingly inconspicuous relation between architecture and gender. The course studies how modern societies create easily, controlled docile spaces, thus pursuing the absent bodies of its members - be it through symbolic or material means. This troubled history of the powers of architecture to neglect sexuality and impose strict gender roles is analyzed in class discussions through recent feminist and queer theoretical approaches and tested on case studies. Same as: ARTHIST 248A

**CEE 33A. Michelangelo Architect. 5 Units.**

The architecture of Michelangelo Buonarroti (1475-1564), "Father and Master of all the Arts," redefined the possibilities of architectural expression for generations. This course considers his civic, ecclesiastic, and palatial works. It proceeds from his beginnings in Medicean Florence to his fulfillment in Papal Rome. It examines the anxiety of influence following his death and his enduring legacy in modernism. Topics include: Michelangelo's debt to Classical and Early Renaissance prototypes; his transformation of the canon; the iterative sketch as disegno; architecture and the body; the queering of architectural language; sketch, scale, and materiality; Modernism and Michelangelo. The historiography of Michelangelo has predominantly favored studies in painting and sculpture. Our focus on architecture encourages students to test new ideas and alternative approaches to his work. Same as: ARTHIST 416A, ITALIAN 216

**CEE 341. Virtual Design and Construction. 3 Units.**

Virtual Design and Construction (VDC) starts by understanding the client's objectives for building performance and the translation of these objectives into measurable project and production objectives. Based on a culture of proactive and constructive engagement, three mutually supportive strategies are essential to achieve these objectives: (1) the knowledge of the many disciplines contributing to the design and construction of a buildable, usable, operable, and sustainable building needs to be orchestrated concurrently, (2) the information supporting the project team must be integrated and be accessible seamlessly, and (3) the workflow carried out by the project team must enable the creation of integrated knowledge and information and lead to decisions that stick. This course will teach all the essential elements of VDC. Prerequisite: 100 or consent of instructor. Recommended: CEE 240, CEE 241.

**CEE 345. Network Analysis for Urban Systems. 3 Units.**

The objectives of this course are to: 1) introduce you to the mathematical theory of networks and common metrics of networks; 2) develop an understanding of how to utilize network models to study urban systems; 3) provide an opportunity to apply network models to analyze a real urban system. Students are expected to have a strong background in calculus and linear algebra before taking this course and should be comfortable with the calculation and manipulation of matrices. Experience in a numerical scripting language (preferably Python, R or Matlab) is necessary for the final project. Coursework will consist of graded problem sets pertaining to both theory of networks and applications to urban systems. There will be a final project where students will be required to apply network based methods to the analysis of real data of an urban system. (subject to change).

**CEE 361. Turbulence Modeling for Environmental Fluid Mechanics. 2-4 Units.**

An introduction to turbulence and its modeling, including Reynolds-averaged and large-eddy simulation models. Derivation of closure approximations and models. Impact of numerical code truncation error on turbulence model value and accuracy. Discussion of typical models and their applications to turbulent flows in rivers, estuaries, the coastal ocean and the atmospheric boundary layer (e.g., wind turbines and weather models). Prerequisites: knowledge of hydrodynamics or atmosphere dynamics and the basics of transport and mixing in the environment; consent of instructor.

**CEE 362. Numerical Modeling of Subsurface Processes. 3-4 Units.**

Numerical modeling including: problem formulation, PDEs and weak formulations, and choice of boundary conditions; solution using the finite-element code COMSOL Multiphysics with a variety of solvers and pre- and postprocessing of data; and interpretation of results. Problems include: flow in saturated porous media with complex boundaries and heterogeneities; solute transport with common reaction models; effects of heterogeneity on dispersion, dilution, and mixing of solutes; variable-density flow and seawater intrusion; upscaling or coarsening of scale; and biofilm modeling. Enrollment limited to 5.

**CEE 362A. Uncertainty Quantification. 3 Units.**

Uncertainty analysis in computational science. Probabilistic data representation, propagation techniques and validation under uncertainty. Mathematical and statistical foundations of random variables and processes for uncertainty modeling. Focus is on state-of-the-art propagation schemes, sampling techniques, and stochastic Galerkin methods. The concept of model validation under uncertainty and the determination of confidence bounds estimates. Prerequisite: basic probability and statistics at the level of CME 106 or equivalent. Same as: ME 470

**CEE 362G. Imaging with Incomplete Information. 3-4 Units.**

Statistical and computational methods for inferring images from incomplete data. Bayesian inference methods are used to combine data and quantify uncertainty in the estimate. Fast linear algebra tools are used to solve problems with many pixels and many observations. Applications from several fields but mainly in earth sciences. Prerequisites: Linear algebra and probability theory. Same as: CME 262

**CEE 363A. Mechanics of Stratified Flows. 3 Units.**

The effects of density stratification on flows in the natural environment. Basic properties of linear internal waves in layered and continuous stratification. Flows established by internal waves. Internal hydraulics and gravity currents. Turbulence in stratified fluids. Prerequisites: 262A,B, CME 204.

**CEE 363B. Chaos and Turbulence. 3 Units.**

An overview of the statistical analysis of unsteady flows, with a focus on chaos and turbulence. Topics will include random variables and statistical analysis; self-similarity, scaling, and symmetries; the turbulent energy cascade and the Kolmogorov similarity hypotheses; intermittency, refined similarity, and multifractal analysis; mixing and transport in chaotic and turbulent flows; and an overview of the effects of additional conservation laws on flow statistics. Prerequisites: CEE 262A or ME 351A, or permission of instructor.

**CEE 363C. Ocean and Estuarine Modeling. 3 Units.**

Advanced topics in modeling for ocean and estuarine environments, including methods for shallow water, primitive, and nonhydrostatic equations on Cartesian, curvilinear, and unstructured finite-volume grid systems. Topics include accuracy and stability analyses, free-surface methods, nonhydrostatic solvers, turbulence modeling, vertical coordinate systems, and advanced Eulerian and Lagrangian advection techniques. Prerequisites: CEE262A or ME351A, CME 200, 206, or equivalents.

**CEE 363F. Oceanic Fluid Dynamics. 3 Units.**

Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics. Same as: ESS 363F

**CEE 363G. Field Techniques in Coastal Oceanography. 3 Units.**

This course focuses on the design and implementation of coastal oceanographic field studies from implementation through analysis. A wide range of field instrumentation and techniques, including AUVs and scientific diving is covered. Field studies. Data collection and analysis under instructor guidance.

**CEE 363H. Topics in Stratified Turbulence. 2 Units.**

An exploration of classical and current papers dealing with the behavior of turbulence in stratified environments. This is a seminar-style class where each student will be expected to make presentations and lead discussions during the course of the quarter. Enrollment is limited and is based on the consent of the instructor. Prerequisites – graduate coursework in turbulence and stratified flows.

**CEE 364F. Advanced Topics in Geophysical Fluid Dynamics. 2-3 Units.**

A seminar-style class covering the classic papers on the theory of the large-scale ocean circulation. Topics include: wind-driven gyres, mesoscale eddies and geostrophic turbulence, eddy-driven recirculation gyres, homogenization of potential vorticity, the ventilated thermocline, subduction, and the abyssal circulation. Prerequisite: EESS 363F or CEE 363F. Recommended: EESS 246B.

Same as: ESS 364F

**CEE 365A. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 365B. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 365C. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 365D. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 370A. Environmental Research. 5-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 370B. Environmental Research. 5-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 370C. Environmental Research. 5-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 370D. Environmental Research. 3-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 371L. Helminthic Disease Monitoring and Control.. 5 Units.**

Assessment will be based upon weekly written and/or oral reports, with a final written critical review due at the end of the quarter.

**CEE 371M. Transport Phenomena: Momentum, heat and mass transport. 3 Units.**

Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.

Same as: CEE 271M

**CEE 374A. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374B. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374C. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374D. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374M. Advanced Topics in Watershed Systems Modeling. 4 Units.**

Basic principles of watershed systems analysis is required for water resources evaluation, watershed-scale water quality issues, and watershed-scale pollutant transport problems. The dynamics of watershed-scale processes and the human impact on natural systems, and for developing remediation strategies are studied, including terrain analysis and surface and subsurface characterization procedures and analysis.

**CEE 374S. Advanced Topics in Microbial Pollution. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374T. Advanced Topics in Coastal Pollution. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374U. Advanced Topics in Submarine Groundwater Discharge. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374V. Advanced Topics in Microbial Source Tracking. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374W. Advanced Topics in Water, Health and Development. 1-18 Unit.**

Advanced topics in water, health and development. Emphasis on low-and-middle-income countries. Class content varies according to interests of students. Instructor consent required.

**CEE 374X. Advanced Topics in Multivariate Statistical Analysis. 1-6 Unit.**

Analysis of experimental and non-experimental data using multivariate modeling approaches. May be repeated for credit. Permission of instructor required for enrollment.

**CEE 375A. Water, Climate, and Health. 3 Units.**

Students in this course will review and discuss current literature on the water, climate, and human health nexus. We will review the climate-change projections from the most recent IPCC assessment and discuss their implications for water access and human health, with an emphasis on low- and middle-income countries. Each student will take responsibility for leading at least one class discussion, and will write a research proposal describing novel research on the water, climate and human health nexus. Course enrollment is capped. Permission to enroll must be obtained from the instructors through an application process.

**CEE 377. Research Proposal Writing in Environmental Engineering and Science. 1-3 Unit.**

For first- and second-year post-master's students preparing for thesis defense. Students develop progress reports and agency-style research proposals, and present a proposal in oral form. Prerequisite: consent of thesis adviser.

**CEE 378D. Seminar of Statistical Analysis of Multidisciplinary Primary Data. 1-3 Unit.**

Practical management and analysis techniques for primary data collected in multidisciplinary projects. Selection of appropriate statistical tests, interpretation of results, and effective communication of findings to lay audiences. Univariate, bivariate and multivariate techniques, including hypothesis testing, nonparametric statistics, regression analysis and matching. Use of SPSS statistical package. Limited enrollment. Prerequisite: consent of instructor.

**CEE 379. Introduction to PHD Studies in Civil and Environmental Engineering. 1 Unit.**

This seminar course will cover important topics for students considering a PhD in Civil and Environmental Engineering. Sessions will include presentations and discussions on career development, exploring research and adviser options, and the mechanics of PhD studies, including General Qualifying Exam requirements for all CEE PHD Students. In addition, CEE faculty will give presentations on their research. This seminar is required for CEE students considering a PhD or preparing to sit for the General Qualifying Exam in Civil and Environmental Engineering.

**CEE 381. Advanced Engineering Informatics. 1-4 Unit.****CEE 385. Performance-Based Earthquake Engineering. 3-4 Units.**

Synthesis and application of approaches to performance-based design and assessment that recently have been developed or are under development. Emphasis is on quantitative decision making based on life-cycle considerations that incorporate direct losses, downtime losses, and collapse, and the associated uncertainties. Hazard analysis, response simulation, damage and loss estimation, collapse prediction. Case studies. Prerequisites: 282, 287, and 288.

**CEE 398. Report on Civil Engineering Training. 1 Unit.**

On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: qualified offer of employment and consent of adviser as per I-Center procedures.

**CEE 399. Advanced Engineering Problems. 1-10 Unit.**

Individual graduate work under the direction of a faculty member on a subject of mutual interest. For Engineer Degree students and Pre-quals Doctoral students. Student must have faculty sponsor. May be repeated for credit.

**CEE 400. Thesis. 1-15 Unit.**

For students who have successfully completed the department general qualifying examination. Research and dissertation for the Ph.D. degree. Same as: Ph.D. Degree

**CEE 50N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.**

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended. Same as: EARTHSYS 49N, ESS 49N

**CEE 6. Physics of Cities. 3 Units.**

An introduction to the modern study of complex systems with cities as an organizing focus. Topics will include: cities as interacting systems; cities as networks; flows of resources and information through cities; principles of organization, self-organization, and complexity; how the properties of cities scale with size; and human movement patterns. No particular scientific background is required, but comfort with basic mathematics will be assumed. Prerequisites: MATH 19 and 20, or the equivalent.

**CEE 63. Weather and Storms. 3 Units.**

Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics.

Same as: CEE 263C

**CEE 64. Air Pollution and Global Warming: History, Science, and Solutions. 3 Units.**

Survey of Survey of air pollution and global warming and their renewable energy solutions. Topics: evolution of the Earth's atmosphere, history of discovery of chemicals in the air, bases and particles in urban smog, visibility, indoor air pollution, acid rain, stratospheric and Antarctic ozone loss, the historic climate record, causes and effects of global warming, impacts of energy systems on pollution and climate, renewable energy solutions to air pollution and global warming. UG Reqs: GER: DBNatSci. Same as: CEE 263D

**CEE 70. Environmental Science and Technology. 3 Units.**

Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems.

Same as: ENGR 90

**CEE 70N. Water, Public Health, and Engineering. 3 Units.**

Preference to frosh. Linkages between water, wastewater and public health, with an emphasis on engineering interventions. Topics include the history of water and wastewater infrastructure development in the U.S. and Europe; evolution of epidemiological approaches for water-related health challenges; biological and chemical contaminants in water and wastewater and their management; and current trends and challenges in access to water and sanitation around the world. Identifying ways in which freshwater contributes to human health; exposure routes for water- and sanitation-illness. Classifying illnesses by pathogen type and their geographic distribution. Identifying the health and economic consequences of water- and sanitation-related illnesses; costs and benefits of curative and preventative interventions. Interpreting data related to epidemiological and environmental concepts. No previous experience in engineering is required.

**CEE 70Q. The Food, Water, and Waste Nexus. 3 Units.**

This course will explore the connections between water access, fecal waste management, and food safety and provision in low- and middle-income countries. The interconnections between food, water, and waste will be discussed as it relates to human health and well-being. Topics that will be covered in the course include 1) farm to fork contamination pathways of food 2) food hygiene practices and barriers to implementation 3) waste water reuse practices 4) management of water for multiple uses 5) potential impact climate change may have on the connections of these systems. The students in the course will undertake individual research that explores the connections between these systems and identifies potential strategies to improve human health and well-being.

**CEE 73. Water: An Introduction. 3 Units.**

Lake Tahoe's waters are so clear you can follow a diver 70 feet below your boat. A Lake Erie summer often means that nearshore waters have a green surface scum obscuring everything below. California, suffering from drought, is seriously considering reclamation and direct potable reuse of sewage – aka toilet to tap. Can we (or should we) do this? Why is Tahoe clear, Erie green? This class introduces students to the fundamental tools and science used to understand and manage both natural and human-engineered water systems. Each student will use these tools to explore a water topic of their choosing.

**CEE 801. TGR Project. 0 Units.**

Same as: Engineer Degree

**CEE 802. TGR Dissertation. 0 Units.**

Same as: PhD degree

**CEE 80N. Engineering the Built Environment: An Introduction to Structural Engineering. 3 Units.**

In this seminar, students will be introduced to the history of modern bridges, buildings and other large-scale structures. Classes will include presentations on transformations in structural design inspired by the development of new materials, increased understanding of hazardous overloads and awareness of environmental impacts. Basic principles of structural engineering and how to calculate material efficiency and structural safety of structural forms will be taught using case studies. The course will include a field trip to a Bay Area large-scale structure, hands-on experience building a tower and computational modeling of bridges, and a paper and presentation on a structure or structural form of interest to the student. The goal of this course is for students to develop an understanding and appreciation of modern structures, influences that have led to new forms, and the impact of structural design on society and the environment. Students from all backgrounds are welcome.

**CEE 83. Seismic Design Workshop. 2 Units.**

Introduction to seismic design for undergraduate students. Structural design concepts are introduced based on physical and mathematical principles. General overview of mechanics of materials, structural analysis, structural systems and earthquake resistant design. The class is intended to prepare students for the EERI 2018 Seismic Design Competition, where students design, analyze and fabricate a five-foot tall balsa wood structure. Hands on workshops focus on numerical simulation using commercial software and experimental testing. All majors are welcome. Pre-requisite: Physics 41, recommended: ENGR 14.

## Classics (CLASSICS)

**CLASSICS 101G. Advanced Greek: Lyric Poetry. 3-5 Units.**

(Formerly CLASSGRK 111.) Invectives, love songs, drinking songs, elegies, and choral odes from 700-500 B.C.E. Readings include Sappho, Alcaeus, Archilochus, Mimnermus, Alcman, Solon, and Pindar. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 101L. Advanced Latin: Seneca. 3-5 Units.**

(Formerly CLASSLAT 111.) Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 102G. Advanced Greek: Greek Scientific Writings. 3-5 Units.**

(Formerly CLASSGRK 112.) Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 102L. Advanced Latin: Rebel with a cause: Catiline. 3-5 Units.**

(Formerly CLASSLAT 112.) Beguiling. Riotous. Fallen. Lucius Sergius Catilina (108-62 BCE): Who was he? Reading of selections of Cicero's *Catilinarians* and *In Defense of Caelius*, and Sallust's *Catilinarian Conspiracy*. We will compare the three different Catilinarian villains within the framework of rhetoric, Cicero's and Sallust's styles (esp. metaphors), and explore the historian's possible debts to the orator. As needed, we will review questions of grammar and syntax, rhetorical terms, and historical context. Classics majors and minors must take course for letter grade. May be repeated for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 103G. Advanced Greek: Plato's *Crito*. 3-5 Units.**

(Formerly CLASSGRK 113.) Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 103L. Advanced Latin: Ovid's *Metamorphoses*. 3-5 Units.**

(Formerly CLASSLAT 113.) Classics majors and minors must take course for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 104A. Latin Syntax. 4 Units.**

(Formerly CLASSLAT 175A/275A.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A.

Same as: CLASSICS 204A

**CLASSICS 104B. Latin Syntax. 2 Units.**

(Formerly CLASSLAT 175B/275B) Intensive review of Latin syntax. Began with 104A/204A in Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses.

Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B.

Same as: CLASSICS 204B

**CLASSICS 112. Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice. 4 Units.**

(Formerly CLASSGEN 110.) Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.

Same as: TAPS 167

**CLASSICS 116. Human Rights in Historical Perspective. 3-5 Units.**

The course will examine the way in issues now considered to be at the core of human rights concerns have been dealt with in different historical and cultural contexts. The themes of the course will center on human trafficking and slavery, sexual violence, and mass atrocity crimes such as genocide. The course will thus not be a chronological survey but rather thematic and comparative in its approach, including consideration, of course, of ancient societies in Greece, Rome, and China.

Same as: HUMRTS 106

**CLASSICS 11G. Intermediate Greek: Prose. 5 Units.**

(Formerly CLASSGRK 101.) Transition to reading narrative Grammar review and vocabulary-building.

**CLASSICS 11L. Intermediate Latin: Introduction to Literature. 5 Units.**

(Formerly CLASSLAT 101.) Phonology, morphology, semantics, and syntax. Readings in prose and poetry. Analysis of literary language, including rhythm, meter, word order, narrative, and figures of speech. May be repeat for credit.

**CLASSICS 121. Ecology in Philosophy and Literature. 3-5 Units.**

(Formerly CLASSGEN 116.) The basic principles of ecological thinking, exploring the ways that different writers represent and relate to the natural world. Some key questions: What is nature, and where do humans fit in the natural world? How exactly do humans differ from other animals? Do these differences make us superior beings? What are our ethical responsibilities towards the earth and its inhabitants? In what ways have the technologies of writing, television, and computers affected humankind's relationship to the natural world?.

**CLASSICS 123. Ancient Medicine. 3-4 Units.**

Contemporary medical practice traces its origins to the creation of scientific medicine by Greek doctors such as Hippocrates and Galen. Is this something of which modern medicine can be proud? The scientific achievements and ethical limitations of ancient medicine when scientific medicine was no more than another form of alternative medicine. Scientific medicine competed in a marketplace of ideas where the boundaries between scientific and social aspects of medicine were difficult to draw.

**CLASSICS 124. Ancient and Modern Medicine. 3-4 Units.**

Imagine a world where the Universe has a built-in purpose and point. How would this belief impact man's place in nature? Imagine a world where natural substances have "powers." How might this impact diet and pharmacology? Magical vs. scientific healing: a clear divide? Disease and dehumanization: epilepsy, rabies. Physical and mental health: black bile and melancholy. The ethical and scientific assumptions hidden in medical language and imagery. How ancient medicine and modern medicine (especially alternative medicine) illuminate each other.

**CLASSICS 126. Intermediate Greek: Sophocles' Antigone. 5 Units.**

(Formerly CLASSGRK 102.) Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 12L. Intermediate Latin: Cicero and Catullus. 5 Units.**

(Formerly CLASSLAT 102.) In this class you will practice with and reinforce the advanced vocabulary, forms, and syntax of classical Latin you have previously acquired. The primary emphasis of this course is on developing fluency in reading Latin. You will have opportunities to discuss topics and issues raised by the readings. Your knowledge of the content and syntax of the readings will be assessed by several short translation/grammar quizzes. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 136. The Greek Invention of Mathematics. 3-5 Units.**

How was mathematics invented? A survey of the main creative ideas of ancient Greek mathematics. Among the issues explored are the axiomatic system of Euclid's Elements, the origins of the calculus in Greek measurements of solids and surfaces, and Archimedes' creation of mathematical physics. We will provide proofs of ancient theorems, and also learn how such theorems are even known today thanks to the recovery of ancient manuscripts.

Same as: MATH 163

**CLASSICS 137. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 237, TAPS 165C, TAPS 265C

**CLASSICS 13G. Intermediate Greek: Homer's Iliad. 5 Units.**

(Formerly CLASSGRK 103.) Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 13L. Intermediate Latin: Vergil's Aeneid, Books 7-12. 5 Units.**

(Formerly CLASSLAT 103.) Vocabulary, forms and syntax. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 14. Greek and Latin Roots of English. 3 Units.**

(Formerly CLASSGEN 9) Goal is to improve vocabulary, comprehension of written English, and standardized test scores through learning the Greek and Latin components of English. Focus is on patterns and processes in the formation of the lexicon. Terminology used in medicine, business, education, law, and humanities; introduction to principles of language history and etymology. Greek or Latin not required.

**CLASSICS 145. Early Christian Gospels. 4 Units.**

An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.

Same as: RELIGST 132D

**CLASSICS 146. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire the largest empire before Rome has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film 300 and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

Same as: CLASSICS 246, RELIGST 229, RELIGST 329

**CLASSICS 147. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian-Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 247, RELIGST 209, RELIGST 309

**CLASSICS 148. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 248, RELIGST 209E, RELIGST 309E

**CLASSICS 150. Majors Seminar. 5 Units.**

(Formerly CLASSGEN 176.) Required of Classics majors and minors in junior or senior year; students contemplating honors should take this course in junior year. Advanced skills course involving close reading, critical thinking, editing, and writing. In-class and take-home writing and revising exercises. Final paper topic may be on any subject related to Classics. Fulfills WIM requirement for Classics. Winter Quarter topic: investigating a wide range of ethical dilemmas raised by the ownership of the classical past in the 21st century. Spring Quarter topic: Why study Classics? The uses and abuses of classical studies.

**CLASSICS 151. Ten Things: An Archaeology of Design. 3 Units.**

(Formerly CLASSART 113/213.) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgwood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.

Same as: ARCHLGY 151

**CLASSICS 154. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-5 Units.**

(Formerly CLASSART 145.) Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era. At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.

Same as: ARCHLGY 145

**CLASSICS 156. Design of Cities. 3-5 Units.**

Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.

Same as: ARCHLGY 156, CLASSICS 256

**CLASSICS 157. The Archaeology of Cyprus. 3-5 Units.**

This seminar course introduces students to the island of Cyprus in the eastern Mediterranean and its archaeology, from the origins of human occupation to the end of antiquity. Readings and discussions of material culture and texts will explore the history and practice of Cypriot archaeology in relation to those of Greece and the Near East. Key themes will include: islands and insularity, continuity vs. change, sex and identity, the rise of the state, regionalism, and imperial conquest. Suitable for both graduate and undergraduate students.

Same as: CLASSICS 257

**CLASSICS 158. Iconoclasm. 5 Units.**

By the seventh century three large political entities formed in the Mediterranean the Umayyads, the Carolingians, and the Byzantines each competed for legitimacy; all three emerged from the ashes of Late Antique culture, yet each tried to carve out an identity out of this common foundation. In this parting of the ways, the three empires took among others the issue of what constitutes an image and what role it plays in devotion. Eik'n, imago, ura became the basis on which to built differences and accuse the other political players of idolatry. This course explores medieval image theory, especially the phenomena of iconoclasm, iconophobia, and aniconism. The discussions focus on monuments in the Mediterranean as well as objects in the Cantor collection and facsimiles of manuscripts at the Bowes Art Library.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 258, REES 409

**CLASSICS 15N. Saints, Warriors, Queens, and Cows. 3 Units.**

The literature of medieval Ireland (600-1400 AD) is rich in tales about war and adventure, pagan gods, and otherworld voyages. The sagas of kings and queens sit side by side (sometimes in the same medieval manuscripts) with stories of holy men and women, and exquisite poetry in praise of nature or important persons. We will explore this largely unfamiliar but fascinating world through careful reading of the primary texts, backed up by some secondary works on history, myth, and society. In addition, the influence of early Irish literature on such later writers as W. B. Yeats and Flann O'Brien will be investigated. Readings include heroic stories of Finn and Cú Chulainn; the Cattle Raid of Cooley; the Voyage of Bran; satires; bardic praise-poems; monastic poems; and Sweeney Astray (Buile Shuibhne).

**CLASSICS 160. Design Thinking for the Creative Humanities. 3-5 Units.**

This class introduces Design Thinking to students in the Humanities and Social Sciences. Under a growth mindset of creative exploration and experiment, we will share a tool kit drawn from design thinking and the arts to develop our imaginative capacity to innovate. The standpoint is that creative imagination is not a property of the artistic or design genius but comprises skills and competencies that can be easily learned and adapted to all sorts of circumstances: personal, organizational, business, community.

Same as: CLASSICS 260

**CLASSICS 161. Introduction to Greek Art I: The Archaic Period. 4 Units.**

This lecture course explores Greek art and culture from 1000-480. In the beginning archaic art forms are more abstract than life-like, closer to Calder than Michelangelo. While Homer describes the rippling muscles (and egos) of his heroes, vase-painters and sculptors prefer abstraction. This changes in the 7th C. as a result of commerce with the Near East and Egypt. Imported Near Eastern bronzes and ivories awaken the Greeks to a wider range of subjects, techniques and ambitions. Later in the century, Greeks in Egypt learn to carve hard stone from Egyptian masters. Throughout the 6th C. Greek artists assimilate what they had borrowed, compete with one another, defy their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. When the Persians invade the Acropolis in 480, they find artifacts with little trace of alien influence or imprint - omens of the defiant Greek military that would prevail at Salamis and Plataea.

Same as: ARTHIST 101

**CLASSICS 162. Introduction to Greek Art II: The Classical Period. 4 Units.**

The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how Athens and the rest of Greece proceed in the fourth century to rebuild their lives and the monuments that define them. Earlier artistic traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending depictions of gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time but pursued different interests. Drawn to the inner lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His famous Maenad, a devotee of Dionysos who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. In the work of these and other fourth century personalities, the stage is set for Alexander the Great and his conquest of a kingdom extending from Greece to the Indus River. (Formerly CLASSART 102).

Same as: ARTHIST 102

**CLASSICS 163. Artists, Athletes, Courtesans and Crooks. 5 Units.**

The seminar covers a range of topics devoted to the makers of Greek art and artifacts, the ancient Greeks who used them in life and the afterlife, and the miscreants - from Lord Elgin to contemporary tomb-looters and dealers- whose deeds have damaged, deracinated and desecrated temples, sculptures and grave goods. Readings include ancient texts in translation, books and articles by eloquent experts, legal texts and lively page-turners. Classes meet in the seminar room and the Cantor Center. Same as: ARTHIST 203

**CLASSICS 164. Roman Gladiators. 3-5 Units.**

In modern America, gladiators are powerful representatives of ancient Rome (Spartacus, Gladiator). In the Roman world, gladiators were mostly slaves and reviled, barred from certain positions in society and doomed to short and dangerous lives. A first goal of this course is to analyze Roman society not from the top down, from the perspective of politicians, generals and the literary elite, but from the bottom up, from the perspective of gladiators and the ordinary people in the stands. A second goal is to learn how work with very different kinds of evidence: bone injuries, ancient weapons, gladiator burials, laws, graffiti written by gladiators or their fans, visual images of gladiatorial combats, and the intricate architecture and social control of the amphitheater. A final goal is to think critically about modern ideas of Roman bloodthirst. Are these ideas justified, given the ancient evidence?

Same as: ARCHLGY 165

**CLASSICS 166. The Body in Roman Art. 4-5 Units.**

(Formerly CLASSART 105.) Ancient and modern ideas about the body as ideal and site of lived experience. Themes include representation, portrayal, power, metamorphosis, and replication. Works that exemplify Roman ideas of heroism and power versus works portraying nude women, erotic youth, preserved corpses, and suffering enemies. Recommended: background in ancient Mediterranean art, archaeology, history, or literature. May be repeated for credit.

Same as: ARCHLGY 166

**CLASSICS 168. Engineering the Roman Empire. 3-5 Units.**

(Formerly CLASSART 117.) Enter the mind, the drafting room, and the building site of the Roman architects and engineers whose monumental projects impressed ancient and modern spectators alike. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from columns, domes and obelisks to road networks, machines and landscape modification, we investigate the materials, methods, and knowledge behind Roman innovation, and the role of designed space in communicating imperial identity.

Same as: ARCHLGY 118

**CLASSICS 169. Archaeology of Britannia. 3-4 Units.**

Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.

Same as: ARCHLGY 169

**CLASSICS 16N. Sappho: Erotic Poetess of Lesbos. 3 Units.**

(Formerly CLASSGEN 24N.) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.

Same as: FEMGEN 24N

**CLASSICS 171. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.**

(Formerly CLASSART 106/206.) This course explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 106, ARTHIST 306

**CLASSICS 173. Hagia Sophia. 5 Units.**

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 208, ARTHIST 408, CLASSICS 273

**CLASSICS 176. History of Muslim Science: from Alexandria to Baghdad. 3-5 Units.**

How the Muslim world in the Middle Ages preserved and transformed ancient science - and thus made modern science possible. The class follows the ideas and contributions of several key authors such as Al-Khwarizmi (author of the Algorithm), Omar Khayyam and Ibn-Sina, always looking for a key question: what was distinctive about Muslim science, in its own civilization?

**CLASSICS 177. Describing and Identifying Ancient Coins. 3-5 Units.**

In numismatics, as in all other disciplines dealing with documentary sources of the ancient world (like epigraphy and papyrology), it is essential to work hands-on with the primary material. This course, an optional accompaniment to the graduate seminar in ancient numismatics, will focus on practical work with ancient coins from the collection at the Cantor Arts Center: students will learn how to describe and identify ancient coins and how to properly catalogue and classify them. A special focus will be on the identification of fakes. Participants will be trained to use the main reference works on ancient coinages in the Frank L. Kovacs library, recently donated to Stanford University.

Same as: CLASSICS 277

**CLASSICS 178. Ancient Greek Political Thought. 3-5 Units.**

This class traces some of the intellectual roots of modern political thought to authors of classical antiquity, such as Herodotus, Thucydides, Plato, Xenophon, and Aristotle. We will read portions of their work, in translation, as well as discuss the historical background. Topics will include: political duty, citizenship, and leadership; the origins and rise of Athenian direct democracy; the development of Greek law, constitutional change, and responses to civic strife and civil war.

**CLASSICS 17N. To Die For: Antigone and Political Dissent. 3 Units.**

(Formerly CLASSGEN 6N.) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. Same as: TAPS 12N

**CLASSICS 181. Classical Seminar: Origins of Political Thought. 3-5 Units.**

(Formerly CLASSHIS 133/333.) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. Same as: CLASSICS 381, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A

**CLASSICS 184. Ancient and Modern Slavery. 3-5 Units.**

The ancient Greeks and Roman created the largest and most durable slave system in world history. It formed one of the foundations of classical civilization. While cruelty and exploitation were ever-present features, ancient slavery was not race-based and many slaves came to be freed and fully integrated into society. We will investigate this complex institution from a comparative perspective and in the context of the experience of modern colonial slavery.

**CLASSICS 18N. The Artist in Ancient Greek Society. 3 Units.**

Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a man than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vases from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Ceramic sets with scenes of Dionysian excess were reserved for elite symposia from which those who potted and painted them were excluded. Sculptors were less lowly but even those who carved the Parthenon were still regarded as "mechanics," with soft bodies and soft minds (Xenophon) "indifferent to higher things" (Plutarch). The seminar addresses these issues. Students will read and discuss texts, write response papers and present slide lectures and gallery talks on aspects of the artist's profession. Same as: ARTHIST 100N

**CLASSICS 198. Directed Readings. 1-15 Unit.**

(Formerly CLASSGEN 160.) May be repeated for credit. Same as: Undergraduate

**CLASSICS 199. Undergraduate Thesis: Senior Research. 1-10 Unit.**

(Formerly CLASSGEN 199.) May be repeated for credit.

**CLASSICS 19N. Eloquence Personified: How To Speak Like Cicero. 3 Units.**

This course is an introduction to Roman rhetoric, Cicero's Rome, and the active practice of speaking well. Participants read a short rhetorical treatise by Cicero, analyze one of his speeches as well as more recent ones by, e.g., Kennedy, Martin Luther King Jr., and Obama, and watch their oratorical performances. During the remainder of the term they practice rhetoric, prepare and deliver in class two (short) speeches, and write an essay.

**CLASSICS 1G. Beginning Greek. 5 Units.**

(Formerly CLASSGRK 1.) No knowledge of Greek is assumed. Vocabulary and syntax of the classical language.

**CLASSICS 1L. Beginning Latin. 5 Units.**

(Formerly CLASSLAT 1.) Vocabulary and syntax of the classical language. No previous knowledge of Latin is assumed.

**CLASSICS 201G. Survey of Greek Literature: Archaic Greek. 3-5 Units.**

(Formerly CLASSGEN 208A.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 201L. Survey of Latin Literature: Literature of the Roman Republic. 3-5 Units.**

(Formerly CLASSGEN 207A.) One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years. Focus is on translation, textual criticism, genre, the role of Greece in shaping Roman literature, and oral versus written discourse.

**CLASSICS 202G. Survey of Greek Literature: Classical Greek. 3-5 Units.**

(Formerly CLASSGEN 208B.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 202L. Survey of Latin Literature: Augustan Age Latin. 3-5 Units.**

(Formerly CLASSGEN 207B.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Texts of Augustan literature required by the graduate syllabus, emphasizing poetry and major authors.

**CLASSICS 203G. Survey of Greek Literature: Hellenistic and Late Greek. 3-5 Units.**

(Formerly CLASSGEN 208C.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 203L. Survey of Latin Literature: Imperial Latin. 3-5 Units.**

(Formerly CLASSGEN 207C.) One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 204A. Latin Syntax. 4 Units.**

(Formerly CLASSLAT 175A/275A.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A. Same as: CLASSICS 104A

**CLASSICS 204B. Latin Syntax. 2 Units.**

(Formerly CLASSLAT 175B/275B) Intensive review of Latin syntax. Began with 104A/204A in Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B. Same as: CLASSICS 104B

**CLASSICS 205B. Greek Syntax: Prose Composition. 4 Units.**

(Formerly CLASSGRK 175B/275B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.

**CLASSICS 206A. The Semantics of Grammar. 2 Units.**

(Formerly CLASSGEN 205A.) Supplements CLASSICS 104A/204A. 206A: Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

**CLASSICS 206B. The Semantics of Grammar. 2 Units.**

(Formerly CLASSGEN 205B.) Supplements CLASSICS 104B/204B. 206A: Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

**CLASSICS 207L. The Pastoral in Post-Classical Literature. 1 Unit.**

For modern readers, the words pastoral and bucolic evoke picturesque scenes of pastureland and flocks of sheep in an Arcadian paradise first envisaged by the classical poets Theocritus and Virgil. This weekly reading group traces the long legacy of pastoral poetry in post-classical Latin literature, including the works of Dante, Petrarch, Boccaccio, Sannazaro, and Milton. Through the songs of their shepherds, we will rediscover the pastoral landscape as a site of intergenerational conflict between poets from antiquity to the Renaissance. All readings will be done in the original Latin. Prerequisite: at least one full year of Latin or permission of instructor. Course may be taken independently or as an optional extra weekly session of CLASSICS 102L Advanced Latin: Virgil's Eclogues and Georgics (in the latter case, please register for CLASSICS 102L).

**CLASSICS 208L. Latin 400-1700 CE. 1-2 Unit.**

Readings in later Latin, drawing on the vast bodies of texts from the late antique, medieval and early modern periods. Each week students will prepare selections in advance of class meetings; class time will be devoted to translation and discussion. Students taking this course will gain exposure to a wide range of later Latin texts; hone translation skills; and develop an awareness of the grammatical and stylistic features of post-classical Latin. The course is aimed both at classical Latinists seeking to broaden their reading experience and at medievalists and early modernists seeking to consolidate their Latin language skills. Sample readings: K.P. Harrington et al, *Medieval Latin* 2nd edn. M. Riley, *The Neo-Latin Reader*: selections from Petrarch to Rimbaud. Prior experience in Latin is required, preferably CLASSICS 11L. Equivalent accepted. Anyone unsure whether to take this course is encouraged to contact the instructor in advance. Same as: CLASSICS 6L, RELIGST 173X

**CLASSICS 211. PROSEMINAR: LATIN WORD ORDER. 2 Units.**

Latin word order is grammatically free but not pragmatically free. We will analyse the syntactic structures underlying the various Latin word orders and identify the pragmatic meanings they encode. Prerequisite: Classics 204.

**CLASSICS 212. Introduction to Latin Epigraphy. 2-3 Units.**

(Formerly CLASSGEN 219.) How to engage with epigraphic evidence through translation and contextualization of inscriptions. The materiality of inscriptions, geographical variation, and current scholarly debates in scholarship. How to use this evidence in research.

**CLASSICS 213. Proseminar: Documentary Papyrology. 3-5 Units.**

The focus will be on documentary papyrology. Students will be introduced to the basics of the discipline.

**CLASSICS 214. Proseminar: Ancient Numismatics. 3-5 Units.**

Graduate proseminar. Introductory overview of the heterogeneous coinages of antiquity, from the earliest coins of the Mediterranean to classical and Hellenistic Greek coins, Roman Republican, Imperial and provincial coinages as well as various ancient Oriental coinages. Topics include: numismatic terminology; techniques of coin production in antiquity; numismatic methodology (die studies; hoard studies; metrological analyses); quantifying coin production and ancient financial history; coins vs. other forms of money in antiquity; the study of ancient coinages in the Early Modern world. Students are expected to prepare talks on specific topics to be agreed upon. Required for ancient history graduate students; others by consent of instructor.

**CLASSICS 216. Advanced Paleography. 5 Units.**

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: HISTORY 315, RELIGST 329X

**CLASSICS 217. Western Receptions of Classical Latin Literature: Epic, Lyric, Elegy, Pastoral, Novel. 3-5 Units.**

This lecture class aims to explore the later reception of some major texts of Latin poetry and fiction in later European literatures and intellectual cultures from the medieval period until now, predominantly English but occasionally some other European modern languages [English translations supplied]. There will be some orientation in reception studies and its theory. Reading expectations will be mainly literary texts, no more than 100 pages in English per week; the course will look at translations and history of scholarship as well as literary adaptations. Particular attention will be paid to issues of cultural tension and later transformation of classical material in different historical and intellectual environments. It should be of interest to students of English and comparative literature as well as classicists.

**CLASSICS 21Q. Eight Great Archaeological Sites in Europe. 3-5 Units.**

(Formerly CLASSART 21Q.) Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring.

Same as: ARCHLGY 21Q

**CLASSICS 237. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, TAPS 165C, TAPS 265C

**CLASSICS 244. Classical Seminar: Rethinking Classics. 4-5 Units.**

Literary and philosophical texts from Antiquity (including Homer, the Greek tragedians, Plato, Aristotle, Virgil, and Augustine). In each case, we will examine the cultural contexts in which each text was composed (e.g. political regimes and ideologies; attitudes towards gender and sexuality; hierarchies of class and status; discourses on "barbarians" and resident aliens). We will study various theoretical approaches to these books in an effort to "rethink" these texts in the 21st century.

Same as: DLCL 321

**CLASSICS 246. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire the largest empire before Rome has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film *300* and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

Same as: CLASSICS 146, RELIGST 229, RELIGST 329

**CLASSICS 247. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian- Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 147, RELIGST 209, RELIGST 309

**CLASSICS 248. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the *Book of Kings of Ferdowsi*.

Same as: CLASSICS 148, RELIGST 209E, RELIGST 309E

**CLASSICS 256. Design of Cities. 3-5 Units.**

Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.

Same as: ARCHLGY 156, CLASSICS 156

**CLASSICS 257. The Archaeology of Cyprus. 3-5 Units.**

This seminar course introduces students to the island of Cyprus in the eastern Mediterranean and its archaeology, from the origins of human occupation to the end of antiquity. Readings and discussions of material culture and texts will explore the history and practice of Cypriot archaeology in relation to those of Greece and the Near East. Key themes will include: islands and insularity, continuity vs. change, sex and identity, the rise of the state, regionalism, and imperial conquest. Suitable for both graduate and undergraduate students.

Same as: CLASSICS 157

**CLASSICS 258. Iconoclasm. 5 Units.**

By the seventh century three large political entities formed in the Mediterranean the Umayyads, the Carolingians, and the Byzantines each competed for legitimacy; all three emerged from the ashes of Late Antique culture, yet each tried to carve out an identity out of this common foundation. In this parting of the ways, the three empires took among others the issue of what constitutes an image and what role it plays in devotion. Eik'n, imago, ura became the basis on which to built differences and accuse the other political players of idolatry. This course explores medieval image theory, especially the phenomena of iconoclasm, iconophobia, and aniconism. The discussions focus on monuments in the Mediterranean as well as objects in the Cantor collection and facsimiles of manuscripts at the Bowes Art Library.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, REES 409

**CLASSICS 260. Design Thinking for the Creative Humanities. 3-5 Units.**

This class introduces Design Thinking to students in the Humanities and Social Sciences. Under a growth mindset of creative exploration and experiment, we will share a tool kit drawn from design thinking and the arts to develop our imaginative capacity to innovate. The standpoint is that creative imagination is not a property of the artistic or design genius but comprises skills and competencies that can be easily learned and adapted to all sorts of circumstances ¿ personal, organizational, business, community.

Same as: CLASSICS 160

**CLASSICS 273. Hagia Sophia. 5 Units.**

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 208, ARTHIST 408, CLASSICS 173

**CLASSICS 277. Describing and Identifying Ancient Coins. 3-5 Units.**

In numismatics, as in all other disciplines dealing with documentary sources of the ancient world (like epigraphy and papyrology), it is essential to work hands-on with the primary material. This course, an optional accompaniment to the graduate seminar in ancient numismatics, will focus on practical work with ancient coins from the collection at the Cantor Arts Center: students will learn how to describe and identify ancient coins and how to properly catalogue and classify them. A special focus will be on the identification of fakes. Participants will be trained to use the main reference works on ancient coinages in the Frank L. Kovacs library, recently donated to Stanford University.

Same as: CLASSICS 177

**CLASSICS 28N. Inequality: the Last 100,000 Years. 3 Units.**

(Formerly CLASSHIS 13N.) This seminar traces the evolution of resource inequality from the Stone Age to the present. Only this long-term perspective reveals the forces that drive inequality and allows us to address two key questions: what causes inequality, and what factors have been capable of reducing it, at least for a while? We are going to confront challenging arguments: that inequality has been closely tied up with overall economic and human development, and that over the long course of history, war, revolution and pestilence were the most effective equalizers of income and wealth. This class will help you appreciate contexts and complexities that are usually obscured by partisan polemics and short-term thinking. Seminar participants will be directly involved in the instructor's current research project on the history of inequality. Same as: HISTORY 15N

**CLASSICS 298. Directed Reading in Classics. 1-15 Unit.**

(Formerly CLASSGEN 260.)  
Same as: Graduate Students

**CLASSICS 29Q. Questioning the Gods: Religious Thought and Literature in Classical Antiquity. 3 Units.**

Ancient Greek and Roman literature and philosophy dealing with theology and ethics. What is a god, and why should gods care about you or me? Do you have a soul, and if so what might happen to it when you die? Should you try to be a good person, and if so, how? Learn viewing fundamental questions like these through the eyes of ancient Greek and Roman thinkers. We will read tragedies and epic poetry, wrestle with the philosophical arguments, and apply forms scientific reasoning developed more than 2,000 years ago. This course offers highly sophisticated perspectives on religious and ethical issues that are still vitally important today, as well as a firm grasp of the culture of classical antiquity and the means it offers of understanding the world and our place in it.

**CLASSICS 2G. Beginning Greek. 5 Units.**

(Formerly CLASSGRK 2.) Continuation of CLASSICS 1G. Vocabulary and syntax of the classical language.

**CLASSICS 2L. Beginning Latin. 5 Units.**

(Formerly CLASSLAT 2.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 1L or equivalent placement.

**CLASSICS 301. Gateways to Classics. 1 Unit.**

(Formerly CLASSGEN 300A.) Focus on skills, methodologies and approaches in the study of Classics topics, with attention both to histories of the disciplines and to new developments. Required for first-year Classics graduate students.

**CLASSICS 302. Workshop on Teaching in Classics. 1 Unit.**

Introduction to pedagogical theories and techniques relevant to careers as Classics instructors. Classics faculty and advanced graduate students will lead sessions on language instruction, class discussions, assignments and feedback, and course design. Participants will read selections from modern scholarship on teaching and learning and engage in hands-on exercises.

**CLASSICS 304. Developing a Classics Dissertation Prospectus. 1-3 Unit.**

This workshop concentrates on the development process of writing a successful dissertation proposal and clarifies expectations of the defense process. Includes peer reviews of draft proposals with an aim to present provisional proposals by the end of term. Highly recommended for current third-year Classics Ph.D. students.

**CLASSICS 31. Greek Mythology. 3-5 Units.**

(Formerly CLASSGEN 18.) The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to the study of individuals and society. Illustrated lectures. Readings in translation of Homer, Hesiod, Herodotus, and the poets of lyric and tragedy. Weekly participation in a discussion section is required during regular academic quarters (Aut, Win, Spr).

**CLASSICS 318. Aristophanes: Comedy, and Democracy. 4-5 Units.**

(Formerly CLASSGEN 304.) Intensive study of three plays in Greek (Knights, Peace, Ecclesiazusae) and the rest of the corpus in English, with reference to formal features and a focus on how Old Comedy related to the democratic practices of Athens.

**CLASSICS 327. Petronius and Apuleius. 4-5 Units.**

Petronius' *Satyricon* and Apuleius' *Metamorphoses* represent the surviving Latin novel. Differences between them. Readings include Petronius' dinner at Trimalchio's and Apuleius' love story of Cupid and Psyche. Philological analysis, history of the novel, and social history of the Roman empire. The afterlife of these texts. Recent scholarship.

**CLASSICS 328. Augustine on Memory, Time, and the Self. 3-5 Units.**

(Formerly CLASSGEN 336.) This course examines Augustine's "Confessions" as an autobiographical discourse. It investigates his theories of memory and of time and address different theories of the "self." How does memory and the passing of time affect the notion of the self? Does Augustine's "subjective" theory of time offer an identifiable self? Is the self constructed by narratives? We will locate these issues in their cultural context by investigating Christian and pagan discourses and practices in Late Antiquity.

**CLASSICS 329. Roman Spaces. 3-5 Units.**

How might we make sense of the physical environment in the Roman world? What are the most useful units by which to make sense of its parts? What is the character and impact of human interventions? We'll take a detailed but wide-ranging look at Mediterranean landscapes, emphasizing the period of Roman hegemony. Proceeding systematically, we will get the measure of each province triangulating ancient texts (Strabo, Pliny the elder, Pausanias) and documents; the archaeological record; and the landscape itself.

**CLASSICS 330. Satire. 3-5 Units.**

The concept of "satire" as a social and literary force will be examined with equal attention given to examples in Greek and Latin. Texts to be analyzed include Greek iambos from the 7th century BC to early Byzantine times; selected portions of Old Comedy; Herodas; Lucian; Lucilius; Horace, Ovid, Juvenal, Persius, and Martial. Particular attention will be paid to authorial self-fashioning; limitations on verbal abuse; and ideas of propriety. All texts to be read in the original languages, with supplementary readings in English and on occasion French, German or Italian.

**CLASSICS 331. Words and Things in the History of Classical Scholarship. 4-5 Units.**

How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.

Same as: HISTORY 303F

**CLASSICS 335. Ekphrasis in Antiquity. 3-5 Units.**

What is "ekphrasis"? How was it theorized and practiced in antiquity? Description, interpretation, and the senses; The relationship between the verbal and the visual in antiquity from Homer to Philostratus.

**CLASSICS 336. Plato on Eros and Beauty. 3-5 Units.**

We read Plato's Symposium and Phaedrus; topics: love, beauty, language (oral and written). Graduate seminar, but open to seniors.

Same as: PHIL 306C

**CLASSICS 337. The Second Sophistic. 3-5 Units.**

The class will introduce students to the most important aspects of the Second Sophistic: linguistic and literary classicism, rhetoric and performance, typical literary forms. Particular emphasis will be on the social and political background of the movement (Greek identity, social distinction, sophists and gender). For students who wish to take the class for 4 or 5 units, part of the readings will be in the original Greek.

**CLASSICS 339. Catullus: Textual Criticism and Literary Interpretation. 3-5 Units.**

This seminar will read much of the work of the major Latin poet Catullus (including some of the longer poems) from the perspective of textual criticism and literary interpretation: the two are necessarily closely bound up, and the minimal and imperfect nature of the Catullan textual transmission gives excellent opportunities to concentrate on trying to work out what the poet wrote and why, as well as analysing his work from a literary perspective. It will give orientation in the principles and practice of textual criticism as well as on Catullus and late republican Latin poetry. Metre will also figure. We will read up to 12 pages of Latin per week with some secondary literature. A good knowledge of Latin is required.

**CLASSICS 34. Ancient Athletics. 3-4 Units.**

(Formerly CLASSGEN 34.) How the Olympic Games developed and how they were organized. Many other Greek festivals featured sport and dance competitions, including some for women, and showcased the citizen athlete as a civic ideal. Roman athletics in contrast saw the growth of large-scale spectator sports and professional athletes. Some toured like media stars; others regularly risked death in gladiatorial contests and chariot-racing. We will also explore how large-scale games were funded and how they fostered the development of sports medicine. Weekly participation in a discussion section is required; enroll in sections on coursework.

**CLASSICS 343. Poetics of the Iliad. 4-5 Units.**

(Formerly CLASSGRK 354.) The entire poem in Greek, with attention to issues of style and interpretation in light of the last 50 years of Homeric studies. Readings in secondary literature including key articles in French and German.

**CLASSICS 344. Plato on Eros, Logos, and Madness. 4-5 Units.**

The course focuses on Plato's Symposium and Phaedrus. It investigates the following topics: the role that eros plays in Plato's philosophy; the relation of love and beauty; the creation of metaphysical desire; Plato's conception of the gods, the divine Forms, and inspiration; philosophic madness and ecstatic thinking; oral dialogue vs. the written word; rhetoric, dialectic, and the limits of logos in the contemplation of truth.

**CLASSICS 345. Pantomime Dance in the Greco-Roman World. 3-5 Units.**

This seminar will examine the irresistible allure of pantomime dancing and its impressive popularity for several centuries; the remarkable social and political implications of pantomime performances until their effective banning in the sixth century A.D.; the relationship between pantomime performance and ancient dramatic texts and performances; the physical, sensual, and intellectual aspects of the genre; the body as a hermeneutic topos in the Imperial period and in Late Antiquity.

**CLASSICS 346. Aristotle's Protrepticus and its Background. 2-4 Units.**

In this seminar, we shall read Aristotle's Protrepticus. This is an early work of Aristotle that attempts to turn the reader to a philosophic life and it is by far the least read of his works on ethics. It was only recovered in the 19th century and only in the past 15 years or so do we have a reliable text. Thus studies of it are very much underdeveloped. We shall also read as background some other protreptic works by Plato and the rhetorician Isocrates. 2 unit option is only for Philosophy PhD students beyond the second year.

Same as: PHIL 315

**CLASSICS 35. Becoming Like God: An Introduction to Greek Ethical Philosophy. 3-5 Units.**

(Formerly CLASSGEN 35.) This course investigates key ethical philosophies in classical Greece. After reading several Greek tragedies (representing traditional Greek values), we examine the Greek philosophers' rejection of this tradition and their radically new ethical theories. Socrates, Plato, and Aristotle offered different ethical theories, but they shared basic conceptions of goodness and happiness. They argue that we could "become like gods" by achieving philosophic wisdom. What kind of wisdom is this? How does it make us ethically good and supremely happy people?.

**CLASSICS 353. Archaeology: Post-Humanist Agendas. 3-5 Units.**

How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies.

Same as: ARCHLGY 353

**CLASSICS 355. Landscape & Archaeology. 3-5 Units.**

TBD.

Same as: ARCHLGY 355

**CLASSICS 356. Mediterranean Regionalism. 3-5 Units.**

The ancient world enjoys scholarly traditions of both grand pan-Mediterranean narratives and focused studies of the individual landscapes and peoples who comprise them. Within archaeology, these latter explorations generally rely on expedient geographical designations, modern political boundaries, or survey areas as focused regions for discussion. Defining and interrogating the regions created and experienced by ancient peoples and assembling these into a coherent larger ancient picture proves far more difficult. This seminar explores the varied forms of ancient regionalisms—from archaeological (architecture, ceramics, coinage, sculpture, etc.) to social (language, religion, etc.)—and tools for investigating such patterns of human interaction.

Same as: ARCHLGY 356

**CLASSICS 358. The Archaeology of Ancient Mediterranean Environments. 4-5 Units.**

This seminar examines the interplay between classical archaeologists' conceptions and analyses of ancient Mediterranean environments. These themes loom large now - during what might be called the environmental turn of the Anthropocene in the humanities and social sciences - and their increasing resonance provides the basis for critical reflection of the discipline's past and future trends. Topics will include: environmental determinism, non-human agency, the role of science in archaeological/historical practice, and the compartmentalization of environment/climate as analytic focus.

**CLASSICS 367. Mediterranean Networks. 3-5 Units.**

The ancient Mediterranean was highly interconnected is common knowledge, and the idea of integration has become a defining factory in current approaches to Greco-Roman cultural identities. Yet how connectivity functioned, and how we should effectively analyze it, are less well understood. This seminar highlights emerging network approaches—both broad theoretical network paradigms and specific network science methodologies—as conceptual tools for archaeological and historical investigations of cultural interaction (economic, religious, artistic, colonial, etc.) across the Mediterranean world.

Same as: ARCHLGY 367

**CLASSICS 37. Humanities Core: Great Books, Big Ideas -- Europe, The Ancient World. 3 Units.**

This course will journey through ancient literature from Homer to St. Augustine; it will introduce participants to some of its fascinating features and big ideas; and it will reflect on questions such as: What is a good life, a good society? Who is in and who is out and why? What is the meaning of honor, and should it be embraced or feared? Where does human subjectivity fit into a world of matter, cause and effect? When is rebellion justified? What happens when a way of life or thought is upended? Do we have any duties to the past?.

Same as: DLCL 11, HUMCORE 11

**CLASSICS 370. Topics in Roman Art and Visual Culture. 3-5 Units.**

Ancient Roman visual culture both reflected and actively shaped political, social, cultural and economic situations. Artworks, imagery and things seen played roles in constructing experience, intervening in human relationships, representing meaning, and framing possibility in particular ways. This seminar explores some of the most exciting recent work on Roman art and visual culture. Topics may include viewing and reception, materiality and object relations, framing, and others.

**CLASSICS 372. Archaeology of Roman Slavery. 4-5 Units.**

(Formerly CLASSART 342.) The archaeological study of Roman slavery has been severely limited by a focus on identifying the traces of slaves in the material record. This seminar explores a range of newer and more broadly conceived approaches to understanding slavery and slaves' experiences, including spatial analysis, bioarchaeology, epigraphy, visual imagery, and comparative archaeologies of slavery. Students will learn about the current state of research, work with different kinds of evidence and a range of methodologies, and develop original research projects of their own.

Same as: ARCHLGY 342

**CLASSICS 373. Reception and Literacy in Roman Art. 5 Units.**

(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.

Same as: ARTHIST 422

**CLASSICS 375. Julius Caesar in Context. 4-5 Units.**

We shall look at the material, cultural and intellectual, and political world of the late Roman republic through the eyes of Caesar. Topics include: engineering, the city of Rome, geography, ethnography, archaeology in Gaul, Latin linguistics, poetry and patronage, the calendar, and the idea of Romanitas. Historians, archaeologists, and philologists are all equally welcome.

**CLASSICS 378. Ancient Greek Law and Justice. 3-5 Units.**

The development and practice of law and legal procedure in the ancient Greek world, emphasizing the well documented case of classical Athens. Constitutional, criminal, and civil law, approached through analysis of actual laws and speeches by litigants in Athenian courtrooms. Review of a growing scholarship juxtaposing Greek law to other prominent legal traditions and exploring the role of law in Greek social relations, economics, and literature, and its relationship to Greek conceptions of justice.

Same as: POLISCI 337L

**CLASSICS 38. Humanities: An Introduction to How Humans Think About Themselves. 3 Units.**

Ever since humans evolved, we have been asking ourselves what we are and how we should live. This course is an introduction to the answers that have been offered, asking why they have varied so much and how they might continue to change in the future. Combining literary, archaeological, and anthropological evidence from around the world with the insights of biology, psychology, and the social sciences, the class will trace the story from the origins of modern humans some 200,000-300,000 years ago forward to our own age. Central topics will include what makes humans different from other animals, whether there is a universal human nature, and how the humanities differ from the sciences. The course is intended as an introduction to the global history of humanistic thought and as a foundation for more detailed study in the humanities.

Same as: HUMCORE 1

**CLASSICS 380. Ancient Empires. 4-5 Units.**

What is an empire? How did they begin? Why have some imperialists been successful, while others failed dismally? Why do some people collaborate with imperialism, while others resist fiercely? This seminar examines the empires of the ancient East Mediterranean between 800 and 300 BC, focusing on two great imperial powers (Assyria, Persia) and three smaller societies on the receiving end of imperial conquest (Israel, Egypt, Greece), and asking why societies that were successful in resisting imperialism often then tried to create empires themselves. The evidence used comes mainly from epigraphy, the Hebrew Bible, and Herodotus. Some background in ancient history and/or comparative politics preferred.

**CLASSICS 381. Classical Seminar: Origins of Political Thought. 3-5 Units.**

(Formerly CLASSHIS 133/333.) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: CLASSICS 181, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A

**CLASSICS 382. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.**

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: POLISCI 231, POLISCI 331

**CLASSICS 384A. Ancient Greek Economic Development. 4-5 Units.**

(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: POLISCI 430A

**CLASSICS 384B. Ancient Greek Economic Development. 1-5 Unit.**

(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: POLISCI 430B

**CLASSICS 388. Histories of Greece. 3-5 Units.**

The first modern historical rewritings of ancient Greece: What made them modern? How did they shape what Greek history is today? Texts and things in the modern recovery of the Greek past; women, colonies, democracy and art as modern subjects of ancient Greek history; modern historiographical methods and theories in their social and cultural contexts; modern historicity and the Greek past. Reading includes ancient historians, Renaissance antiquarians, eighteenth-century Greek histories and Enlightenment writings on ancient Greeks, and current intellectual history scholarship.

**CLASSICS 389. Dark Ages Compared: Early Iron Age Greece and Early Medieval Britain. 3-5 Units.**

This seminar compares the collapse and revival of complex societies in Greece (1200-700 BC) and Britain (AD 400-800), looking at causes, economic, demographic, social, cultural, and political consequences, the uses of written and archaeological evidence, and what it means to call a period a "Dark Age." Some background in early Greek and/or Late Roman and early medieval history or archaeology is preferred.

**CLASSICS 39. Reinventing the Sophomore Experience. 1 Unit.**

The sophomore year brings a number of choices that undergraduates have to make. This course is a chance to explore those choices thoughtfully, without resorting to negative clichés ('sophomore slump'). Students will diagnose and discuss the issues at stake, including academic plans, campus life, work-life balance, longer-term life goals. The challenges and opportunities of leadership is an important theme, both in an abstract sense and practically: students will, in the course of the autumn term, design an event which will be held in the winter or spring term. This residentially-based course is aimed at students who have preassigned to Toyon's RISE program, Reinventing the Sophomore Experience. One unit only. Letter-grade only.

**CLASSICS 390. Origins of Political Thought. 3-5 Units.**

Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: PHIL 276D, POLISCI 430

**CLASSICS 396. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.**

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.

Same as: DLCL 396, HISTORY 336E

**CLASSICS 399. Dissertation Research in Classics. 1-10 Unit.**

(Formerly CLASSGEN 360.)

**CLASSICS 3G. Beginning Greek. 5 Units.**

(Formerly CLASSGRK 3.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2G or equivalent placement. CLASSICS 3G fulfills University language requirement.

**CLASSICS 3L. Beginning Latin. 5 Units.**

(Formerly CLASSLAT 3.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2L or equivalent placement. CLASSICS 3L fulfills the University language requirement.

**CLASSICS 40. Greek Philosophy. 4 Units.**

We shall cover the major developments in Greek philosophical thought, focusing on Plato, Aristotle, and the Hellenistic schools (the Epicureans, the Stoics, and the Sceptics). Topics include epistemology, metaphysics, psychology, ethics and political theory. No prereqs, not repeatable.

Same as: PHIL 100

**CLASSICS 42. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**CLASSICS 43. Exploring the New Testament. 4 Units.**

To explore the historical context of the earliest Christians, students will read most of the New Testament as well as many documents that didn't make the final cut. Non-Christian texts, Roman art, and surviving archeological remains will better situate Christianity within the ancient world. Students will read from the Dead Sea Scrolls, explore Gnostic gospels, hear of a five-year-old Jesus throwing divine temper tantrums while killing (and later resurrecting) his classmates, peruse an ancient marriage guide, and engage with recent scholarship in archeology, literary criticism, and history.

Same as: JEWISHST 86, RELIGST 86

**CLASSICS 4L. Intensive Beginning Latin. 12 Units.**

(Formerly CLASSLAT 10/210) Equivalent to a year of beginning Latin (three quarters; CLASSICS 1L, 2: and 3L), this course is designed to teach the fundamentals of the Latin language in eight weeks. We will focus primarily on acquiring the basics of Latin grammar, morphology, and vocabulary and developing basic reading skills. At the end of the course, students should be able to read easy Latin prose and poetry. We will be using Wheelock's Latin textbook and meeting three hours a day, four days a week. Grades will depend on class participation and on performance in weekly quizzes and in a final written exam. Classics majors and minors must take course for letter grade. CLASSICS 4L fulfills the University language requirement.

**CLASSICS 51. Introduction to Greek Archaeology. 3-5 Units.**

An introduction to the archaeology of ancient Greece, from the first city states through the cultural achievements of classical Athens to the conquest by Rome.

Same as: ARCHLGY 51

**CLASSICS 52. Introduction to Roman Archaeology. 3-5 Units.**

(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.

Same as: ARCHLGY 81

**CLASSICS 54. Introduction to World Architecture. 5 Units.**

This lecture course surveys the history of architecture and urbanism, from the first societies to the present, in Europe, West and East Asia, the Americas, and Africa. The course progresses by case studies of exemplary monuments and cities, and examines the built environment as both cultural artifact and architectural event. It considers the social and political circumstances of architectural invention as well as plumbing the depth of artistic context by which particular formal choices resonate with an established representational culture.

Same as: ARTHIST 3

**CLASSICS 56. Introduction to the Visual Arts: Prehistoric through Medieval. 5 Units.**

A survey of the art and architecture from the cave paintings of Lascaux to the Gothic Cathedrals of France; the material is organized both chronologically and thematically and covers a multiplicity of religions: pagan, Christian, and Islamic.

Same as: ARTHIST 1A

**CLASSICS 57. Introduction to Digital Archaeology. 4 Units.**

While the tools of Digital Archaeology frequently change, using digital tools has been part of the discipline for decades. These tools and approaches provide new forms of research, visualization, and outreach to archaeological investigations. This course is designed to introduce students of archaeology to the digital research methods useful to the discipline, and provide them with hands-on experience in three types of digital method: digital mapping, visualization, and 3D modeling. The goal of the course is for students to learn about the state of digital archaeology, to become familiar with common methods, and become aware of the resources available for research.

Same as: ARCHLGY 47

**CLASSICS 6G. Biblical Greek. 3-5 Units.**

(Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.

Same as: JEWISHST 5, RELIGST 171A

**CLASSICS 6L. Latin 400-1700 CE. 1-2 Unit.**

Readings in later Latin, drawing on the vast bodies of texts from the late antique, medieval and early modern periods. Each week students will prepare selections in advance of class meetings; class time will be devoted to translation and discussion. Students taking this course will gain exposure to a wide range of later Latin texts; hone translation skills; and develop an awareness of the grammatical and stylistic features of post-classical Latin. The course is aimed both at classical Latinists seeking to broaden their reading experience and at medievalists and early modernists seeking to consolidate their Latin language skills. Sample readings: n.K.P. Harrington et al, *Medieval Latin* 2nd edn. n.M. Riley, *The Neo-Latin Reader*: selections from Petrarch to Rimbaud. Prior experience in Latin is required, preferably CLASSICS 11L. Equivalent accepted. Anyone unsure whether to take this course is encouraged to contact the instructor in advance.

Same as: CLASSICS 208L, RELIGST 173X

**CLASSICS 7G. Biblical Greek. 3-5 Units.**

(Formerly CLASSGRK 6) This is a continuation of the Winter Quarter Biblical Greek Course. Pre-requisite: CLASSICS 6G (Formerly CLASSGRK 5) or a similar introductory course in Ancient Greek.

Same as: JEWISHST 5B

**CLASSICS 801. TGR M.A. Project. 0 Units.**

(Formerly CLASSGEN 801.)

**CLASSICS 802. TGR Ph.D. Dissertation. 0 Units.**

(Formerly CLASSGEN 802.)

**CLASSICS 81. Ancient Empires: Near East. 4-5 Units.**

Why do imperialists conquer people? Why do some people resist while others collaborate? This course tries to answer these questions by looking at some of the world's earliest empires. The main focus is on the expansion of the Assyrian and Persian Empires between 900 and 300 BC and the consequences for the ancient Jews, Egyptians, and Greeks. The main readings come from the Bible, Herodotus, and Assyrian and Persian royal inscriptions, and the course combines historical and archaeological data with social scientific approaches. Weekly participation in a discussion section is required.

**CLASSICS 82. The Egyptians. 3-5 Units.**

Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Participation in class is required.

Same as: AFRICAAM 30, HISTORY 48, HISTORY 148

**CLASSICS 83. The Greeks. 4-5 Units.**

(Formerly CLASSHIS 101.) 250 years ago, for almost the first time in history, a few societies rejected kings who claimed to know what the gods wanted and began moving toward democracy. Only once before had this happened—in ancient Greece. This course asks how the Greeks did this, and what they can teach us today. It uses texts and archaeology to trace the material and military sides of the story as well as cultural developments, and looks at Greek slavery and misogyny as well as their achievements. Weekly participation in a discussion section is required.

Same as: HISTORY 101

**CLASSICS 84. The Romans. 3-5 Units.**

(Formerly CLASSHIS 60.) How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. Weekly participation in a discussion section is required; enroll in sections on Coursework.

Same as: HISTORY 102A

## Communication (COMM)

**COMM 1. Introduction to Communication. 5 Units.**

Our world is being transformed by media technologies that change how we interact with one another and perceived the world around us. These changes are all rooted in communication practices, and their consequences touch on almost all aspects of life. In COMM 1 we will examine the effects of media technologies on psychological life, on industry, and on communities local and global through theorizing and demonstrations and critiques of a wide range of communication products and services.

**COMM 104W. Reporting, Writing, and Understanding the News. 5 Units.**

Techniques of news reporting and writing. The value and role of news in democratic societies. Gateway class to journalism. Prerequisite for all COMM 177/277 classes. Limited enrollment. Preference to COMM majors.

**COMM 106. Communication Research Methods. 4-5 Units.**

(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. Same as: COMM 206

**COMM 107S. Media, Culture, and the Politics of Gender. 3 Units.**

This course aims to provide a survey of various media and their role in the discursive construction of gender in and through culture. The first three weeks serve as an introduction to the historical and sociopolitical dimensions of gender, its intersection with media, and theoretical approaches to understanding it and political approaches to challenging it. Beginning with historical constructions of the gender binary, Foucault's *Herculine Barbin* an unearthed diary of a French hermaphrodite who lived an adolescent life in a Catholic orphanage for girls from about 1860-1870, is reclassified as a man, and commits suicide. The remainder of the course then tackles a range of media and examples of how they portray gender as well as examples of how they may be used to subvert oppressive gender roles or binaries, focusing on: the novel, film, music videos, news, and social media. Far from exhaustive, the readings and the topics covered are to provide a better, broader, but still-limited understanding of how media and culture construct gender, and how this also dramatically impacts the lives of queer and gender nonconforming individuals. For this reason, while the course does deal extensively with notions of masculinity, sexualization and objectification of, or the effects of sexism on, cisgendered women, a heavy focus of the course across many topics is on transgender individuals in media. These individuals, like *Herculine* in her time, unsettle this simplistic opposition through their very being and representation in public.

**COMM 108. Media Processes and Effects. 4-5 Units.**

(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.  
Same as: COMM 208

**COMM 109S. Psychology of Technology & Human-Technology Interaction. 3 Units.**

Products of design surround us, and shape our lives. This course will explore the human relationship with technology from a psychological point of view, and probe how technology can be designed to work in concert with those who use it. To survey this vast space, the course will cover seminal readings in the areas of human factors, human-computer interaction, product design, and psychology. The course will also delve into the area of design, with a collaborative final project integrating design and psychology.

**COMM 112S. Welcome to Cyberspace: An Introduction to the Internet. 3 Units.**

In this introductory-level class we will investigate the Internet as a material technology created in a specific historical and cultural context and explore how its architecture has shaped the ways we work, think, and relate to each other in 2018. First, we will learn what the Internet is, how it works, and why it came to be. Next, by working through a variety of historical and analytical texts, we will examine the reality and mythologies of cyberspace. Key areas of interest include economics, law, and how people use the Internet to connect. Over the course of the quarter, you will gain skills to think critically and analytically about issues related to the Internet in today's world and articulate your own positions on them.

**COMM 113. Computational Methods in the Civic Sphere. 4-5 Units.**

The widespread availability of public data provides a rich opportunity for those who can efficiently filter, interpret, and visualize information. Course develops necessary technical skills for data collection, analysis, and publication, including data mining and web visualization, with a focus on civic affairs and government accountability. Open to all majors and a range of technical skill levels. Involves tackling new tools and technical concepts in the pursuit of engaging, public-facing projects. (Graduate students enroll in 213). Prerequisite: COMM 273D, CS 106A, or CS 106B.  
Same as: COMM 213

**COMM 113S. Digital Media and Behavior. 3 Units.**

This course will explore how self-representation, interface design, and media affordances affect both online and offline behavior. Readings and lectures will introduce students to theories in psychology, communication, and human-computer interaction. Students will learn about media affordances, trends in media consumption, and think about the societal implications of having mediated identities. The second half of the course will focus on how media consumption and self-representation, coupled with interface design, affect attitudes and offline behavior. Topics include deception, social interactions, activism, empathy, and prosocial behaviors within the context of social networks, gaming, augmented and virtual reality. The course will include a combination of written assignments, labs, a group project, and a tour of the Virtual Human Interaction Lab.

**COMM 116. Journalism Law. 4-5 Units.**

(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.  
Same as: COMM 216

**COMM 120W. Digital Media in Society. 4-5 Units.**

Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students.  
Same as: AMSTUD 120, COMM 220

**COMM 121. Behavior and Social Media. 5 Units.**

This course examines behavioral approaches to understanding social media. The course will begin by discussing the design factors that shape behavior online, considering research in human-computer interaction that reflects and reveals communication practices and contexts. Next, the course will examine the psychological aspects of computer-mediated communication and virtual collaboration, including impression formation and management, deception, audience and social networks. Finally, the course will explore the ways in which human behavior is situated inside of social and institutional structures and cultural formations; and with that in mind, it will examine the complex interactions between behavior, society, and information technology.

**COMM 124. Lies, Trust, and Tech. 4-5 Units.**

Deception is one of the most significant and pervasive social phenomena of our age. Lies range from the trivial to the very serious, including deception between friends and family, in the workplace, and in security and intelligence contexts. At the same time, information and communication technologies have pervaded almost all aspects of human communication, from everyday technologies that support interpersonal interactions to, such as email and instant messaging, to more sophisticated systems that support organization-level interactions. Given the prevalence of both deception and communication technology in our personal and professional lives, an important set of questions have recently emerged about how humans adapt their deceptive practices to new communication and information technologies, including how communication technology affects the practice of lying and the detection of deception, and whether technology can be used to identify deception.  
Same as: COMM 224

**COMM 125. Perspectives on American Journalism. 4-5 Units.**

An examination of American journalism, focusing on how news is produced, distributed, and financially supported. Emphasis on current media controversies and puzzles, and on designing innovations in discovering and telling stories. (Graduate students register for COMM 225).  
Same as: AMSTUD 125, COMM 225

**COMM 127X. The Ethics of Anonymity. 1 Unit.**

When is it ethical to conceal your identity or to permit another to remain anonymous? What is the value to remaining unknown, and what might be the cost? Does anonymity free you to think, act, or be in ways you wouldn't otherwise? What else might it allow or constrain? How might your answers differ depending on the circumstances or context? In this one-unit lunchtime seminar, guest speakers will discuss topics that might include: anonymous sources in journalism; anonymity online; the history of anonymous authorship and attribution; whistleblowers and confidential informants; anonymous egg or sperm donors and birth parents; anonymity vs. confidentiality for research participants; anonymity and art; technology and anonymity.

Same as: CSRE 127X, ETHICSOC 2

**COMM 130N. The idea of a free press. 3-4 Units.**

Preference to freshmen. An examination of the meaning of freedom of the press, tied to but not bound by various Supreme Court rulings on the scope and purpose of the First Amendment's speech and press clauses. Discussions will include a look at the recent and rapid computerization of communication and what it portends for the future of a free press.

**COMM 131. Media Ethics and Responsibility. 4-5 Units.**

(Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism.

Same as: COMM 231

**COMM 133. Need to Know: The Tension between a Free Press and National Security Decision Making. 4-5 Units.**

This seminar examines the dynamic interaction at the highest levels of government and the media when news coverage of secret national security policy and operations impinges on United States defense, diplomatic and intelligence activities and decision making and affects the American political system. Prime examples: intelligence information about Russian hacking operations during the 2016 presidential election campaign, the unverified intelligence dossier on Donald Trump's Russian connections, the torrent of secret NSA programs disclosed by Edward Snowden. Students explore attitudes, practices, and actions by the media and the government through a series of case studies and simulations. Former editors, reporters, and government officials appear as guest speakers, including Michael Hayden, former director of the NSA and CIA. The goal of the course is to inform students about the vital but often fraught relationship between a free press and the government in a democratic society. For advanced undergraduates and graduate students. Application for enrollment required. The instructor is a former Washington bureau chief of The New York Times. Email Alexa Philippou (aphil723@stanford.edu) to request an application. Completed applications are due by 6pm (pacific) on March 25, 2018. Early applications welcome.

Same as: COMM 233

**COMM 135. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 235, COMM 335, POLISCI 234P, POLISCI 334P

**COMM 137W. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: AMSTUD 137, COMM 237, POLISCI 232T, POLISCI 332T

**COMM 138. Deliberative Democracy Practicum: Applying Deliberative Polling. 3-5 Units.**

In this course, students will work directly on a real-world deliberative democracy project using the method of Deliberative Polling. Students in this course will work in partnership with the Center for Deliberative Democracy at Stanford, a research center devoted to the research in democracy and public opinion around the world. This unique practicum will allow students to work on an actual Deliberative Polling project on campus. In just one quarter, the students will prepare for, implement, and analyze the results for an Deliberative Polling project. This is a unique opportunity that allows students to take part in the entire process of a deliberative democracy project. Through this practicum, students will apply quantitative and qualitative research methods in a local community or local high school and subsequently, analyze the relevant quantitative and qualitative data. Students will explore the underlying challenges and complexities of what it means to actually do community-engaged research in the real world. As such, this course will provide students with skills and experience in research design in deliberative democracy, community and stakeholder engagement, and the practical aspects of working in local communities. This practicum is a collaboration between the Center for Deliberative Democracy, the Bill Lane Center for the American West and the Haas Center for Public Service. nCDD website: <http://cdd.stanford.edu> Bill Lane Center website: <http://west.stanford.edu> Haas Center website: <https://haas.stanford.edu>.

Same as: COMM 238, CSRE 38

**COMM 140Q. Bubbles, Booms, and Busts: Representing the Economy. 3 Units.**

This course examines how various cultural representations of the economy shape popular imagination and everyday life. Focusing on the US, we will look at advertising, journalism, fiction, television, film, music, and finance industry texts to explore the representation of financial risk, crisis, and inequality for lay audiences at different historical moments. Students will be introduced to a range of disciplinary and methodological approaches to finance and representation including media studies, critical finance studies, history, sociology, and anthropology as we explore media production from such periods as the Depression era, postwar middle class growth, 1980 and 1990s financialization, and the 2008 financial crisis and its aftermath.

**COMM 142W. Media Economics. 4-5 Units.**

Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals' information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas.

Same as: COMM 242

**COMM 143W. Communication Policy and Regulation. 4-5 Units.**

Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time.

Same as: COMM 243

**COMM 145. Personality and Digital Media. 4-5 Units.**

Personality describes people's characteristic patterns of thinking, feeling, and behaving. This course will introduce students to the ways personality is expressed in digital devices (e.g., computers, smartphones) and platforms (e.g., social networks, virtual worlds). Readings and lectures will introduce students to theories of personality, the practice of assessing personality, and the broader societal implications of having mediated personalities. Course assignments will require students to apply the course concepts to explore personality expression in various digitally mediated contexts.

Same as: COMM 245

**COMM 151. The First Amendment: Freedom of Speech and Press. 4-5 Units.**

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251).

Same as: COMM 251, POLISCI 125P

**COMM 152. Constitutional Law. 3 Units.**

This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.

Same as: COMM 252, POLISCI 126P

**COMM 153. Political Campaigning in the Internet Age. 3 Units.**

This course will acquaint students with the changing environment for campaigns posed by the rise of the Internet. So much of the traditional way analysts have understood campaigns has revolved around television as the primary mode of campaign communication. The rise of the Internet, nonlinear television programming, and mobile communication enables new forms of campaigning. This course will examine the relevant social science on these topics, while at the same time bringing in guest lecturers from industry, campaigns, and media. Requirements: Students will be required to complete a 25 page research paper on a topic relevant to the course.

Same as: COMM 253

**COMM 153A. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

(Same as LAW 7057). In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter.

Same as: COMM 253A, POLISCI 72, PUBLPOL 146, PUBLPOL 246

**COMM 154. The Politics of Algorithms. 4-5 Units.**

Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms.

Same as: COMM 254, CSRE 154T, SOC 154

**COMM 157. Information Control in Authoritarian Regimes. 4-5 Units.**

Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control.

Same as: COMM 257, COMM 357

**COMM 162. Campaigns, Voting, Media, and Elections. 4-5 Units.**

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players – candidates, parties, journalists, and voters – in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.

Same as: COMM 262, POLISCI 120B

**COMM 164. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 264, POLISCI 124L, PSYCH 170

**COMM 166. Virtual People. 4-5 Units.**

(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

Same as: COMM 266

**COMM 171. Moving Pictures: Video Journalism for mobile and social platforms. 3-5 Units.**

(Graduate students register for 271.) Examine video journalism's crucial role in digital news media across mobile and social media platforms.

What are the specific needs of mobile platforms? How is new technology utilized to produce effective video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism. Students produce short video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: Journalism MA student or instructor's consent.

Same as: COMM 271

**COMM 172. Media Psychology. 4-5 Units.**

(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.

Same as: COMM 272

**COMM 176. Advanced Digital Media Production. 4-5 Units.**

In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes.

Prerequisite: COMM 275 or consent of instructor.

Same as: COMM 276

**COMM 177A. Computational Journalism. 4-5 Units.**

Focuses on using data and algorithms to lower the cost of discovering stories or telling stories in more engaging and personalized ways.

Project based assignments based on real-world challenges faced in newsrooms. Prior experience in journalism or computational thinking helpful. Prerequisite: Comm 273D, COMM 113/213, or the consent of instructor.

Same as: COMM 277A

**COMM 177C. Specialized Writing and Reporting: Environmental and Food System Journalism. 4-5 Units.**

Advanced reporting and writing course in the specific practices and standards of food journalism. This course begins with the assumption that students are familiar with the basics of reporting and research in journalism. We'll take those skills and apply them to the wide territory of food journalism, from farmer's markets to food waste, from travel and cultural writing to stories about agriculture and climate change.

We will read a range of the best food journalism and students will be charged with writing both long form narrative essays and short magazine style pieces. We'll talk about how to hone in on the truly interesting idea, how to get more out of the reporting process and how to turn the raw materials of research and interviews into polished, engaging prose. Admission by application only, available from [vv1@stanford.edu](mailto:vv1@stanford.edu). Deadline December 4.

Same as: COMM 277C, EARTHSYS 177C, EARTHSYS 277C

**COMM 177D. Specialized Writing and Reporting: Narrative Journalism. 4-5 Units.**

(Graduate students register for COMM 277D.) How to report, write, edit, and read long-form narrative nonfiction, whether for magazines, news sites or online venues. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best long-form narrative stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.

Same as: COMM 277D

**COMM 177E. Specialized Writing and Reporting: Telling the Story. 4-5 Units.**

This workshop will offer secrets to good storytelling, and constructive feedback every step of the way on a significant piece of journalism you want to publish. The instructor, a senior editor who has helped New York Times reporters win 10 Pulitzer Prizes, will teach the course along with some of those reporters as well as other journalists with expertise in various aspects of storytelling. The sessions will include 1) elements of a great story; 2) finding a great story; 3) reporting a story; 4) writing the proposal; 5) making a story come alive online; 6) giving feedback on and editing a story; 7) assuring your story gets maximum readership online. Your piece could be one you conceive for this class, or one you have already begun reporting. Prerequisite: COMM 104 or consent of instructor.

Same as: COMM 277E

**COMM 177I. Becoming a Watchdog: Law, Order & Algorithms. 4-5 Units.**

Graduate students register for COMM 277I.) Data and algorithms are transforming law enforcement and criminal justice, a shift that is ripe for rigorous journalistic exploration. This class is centered around several empirical projects in criminal justice, with the goal of fostering greater understanding, transparency, and public accountability. Students work in interdisciplinary teams, using a combination of statistical and journalistic methods. Some of the work may be published by news organizations or may be used to advance data journalism investigations. Students with a background in journalism (especially data journalism), statistics, computer science, law, or public policy are encouraged to participate. Enrollment is limited, and project teams will be selected during the first week of class. Prerequisite: COMM 104W, or consent of instructor.

Same as: COMM 277I

**COMM 177S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.**

(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online. Prerequisite: 104 or consent of instructor.

Same as: COMM 277S

**COMM 177Y. Specialized Writing and Reporting: Foreign Correspondence. 4-5 Units.**

(Graduate students register for COMM 277Y.) Study how being a foreign correspondent has evolved and blend new communication tools with clear narrative to tell stories from abroad in a way that engages a diversifying American audience in the digital age. Prerequisite: COMM 104W, COMM 279, or consent of instructor.

Same as: COMM 277Y

**COMM 195. Honors Thesis. 5 Units.**

Qualifies students to conduct communication research. Student must apply for department honors thesis program during Spring Quarter of junior year.

**COMM 199. Individual Work. 1-5 Unit.**

For students with high academic standing. May be repeated for credit.

**COMM 1B. Media, Culture, and Society. 5 Units.**

The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity. Same as: AMSTUD 1B

**COMM 206. Communication Research Methods. 4-5 Units.**

(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. Same as: COMM 106

**COMM 208. Media Processes and Effects. 4-5 Units.**

(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.

Same as: COMM 108

**COMM 212. Models of Democracy. 3-5 Units.**

Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments. Same as: COMM 312

**COMM 213. Computational Methods in the Civic Sphere. 4-5 Units.**

The widespread availability of public data provides a rich opportunity for those who can efficiently filter, interpret, and visualize information. Course develops necessary technical skills for data collection, analysis, and publication, including data mining and web visualization, with a focus on civic affairs and government accountability. Open to all majors and a range of technical skill levels. Involves tackling new tools and technical concepts in the pursuit of engaging, public-facing projects. (Graduate students enroll in 213). Prerequisite COMM 273D, CS 106A, or CS 106B. Same as: COMM 113

**COMM 216. Journalism Law. 4-5 Units.**

(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.

Same as: COMM 116

**COMM 220. Digital Media in Society. 4-5 Units.**

Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students.

Same as: AMSTUD 120, COMM 120W

**COMM 224. Lies, Trust, and Tech. 4-5 Units.**

Deception is one of the most significant and pervasive social phenomena of our age. Lies range from the trivial to the very serious, including deception between friends and family, in the workplace, and in security and intelligence contexts. At the same time, information and communication technologies have pervaded almost all aspects of human communication, from everyday technologies that support interpersonal interactions to, such as email and instant messaging, to more sophisticated systems that support organization-level interactions. Given the prevalence of both deception and communication technology in our personal and professional lives, an important set of questions have recently emerged about how humans adapt their deceptive practices to new communication and information technologies, including how communication technology affects the practice of lying and the detection of deception, and whether technology can be used to identify deception. Same as: COMM 124

**COMM 225. Perspectives on American Journalism. 4-5 Units.**

An examination of American journalism, focusing on how news is produced, distributed, and financially supported. Emphasis on current media controversies and puzzles, and on designing innovations in discovering and telling stories. (Graduate students register for COMM 225.).

Same as: AMSTUD 125, COMM 125

**COMM 231. Media Ethics and Responsibility. 4-5 Units.**

(Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism.

Same as: COMM 131

**COMM 233. Need to Know: The Tension between a Free Press and National Security Decision Making. 4-5 Units.**

This seminar examines the dynamic interaction at the highest levels of government and the media when news coverage of secret national security policy and operations impinges on United States defense, diplomatic and intelligence activities and decision making and affects the American political system. Prime examples: intelligence information about Russian hacking operations during the 2016 presidential election campaign, the unverified intelligence dossier on Donald Trump's Russian connections, the torrent of secret NSA programs disclosed by Edward Snowden. Students explore attitudes, practices, and actions by the media and the government through a series of case studies and simulations. Former editors, reporters, and government officials appear as guest speakers, including Michael Hayden, former director of the NSA and CIA. The goal of the course is to inform students about the vital but often fraught relationship between a free press and the government in a democratic society. For advanced undergraduates and graduate students. Application for enrollment required. The instructor is a former Washington bureau chief of The New York Times. Email Alexa Philippou (aphil723@stanford.edu) to request an application. Completed applications are due by 6pm (pacific) on March 25, 2018. Early applications welcome.

Same as: COMM 133

**COMM 235. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 135, COMM 335, POLISCI 234P, POLISCI 334P

**COMM 237. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Personality describes people's characteristic patterns of thinking, feeling, and behaving. This course will introduce students to the ways personality is expressed in digital devices (e.g., computers, smartphones) and platforms (e.g., social networks, virtual worlds). Readings and lectures will introduce students to theories of personality, the practice of assessing personality, and the broader societal implications of having mediated personalities. Course assignments will require students to apply the course concepts to explore personality expression in various digitally mediated contexts.

Same as: COMM 145

**COMM 251. The First Amendment: Freedom of Speech and Press. 4-5 Units.**

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251).

Same as: COMM 151, POLISCI 125P

**COMM 252. Constitutional Law. 3 Units.**

This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.

Same as: COMM 152, POLISCI 126P

**COMM 253. Political Campaigning in the Internet Age. 3 Units.**

This course will acquaint students with the changing environment for campaigns posed by the rise of the Internet. So much of the traditional way analysts have understood campaigns has revolved around television as the primary mode of campaign communication. The rise of the Internet, nonlinear television programming, and mobile communication enables new forms of campaigning. This course will examine the relevant social science on these topics, while at the same time bringing in guest lecturers from industry, campaigns, and media. Requirements: Students will be required to complete a 25 page research paper on a topic relevant to the course.

Same as: COMM 153

**COMM 253A. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

(Same as LAW 7057). In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter. Same as: COMM 153A, POLISCI 72, PUBLPOL 146, PUBLPOL 246

**COMM 254. The Politics of Algorithms. 4-5 Units.**

Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms. Same as: COMM 154, CSRE 154T, SOC 154

**COMM 257. Information Control in Authoritarian Regimes. 4-5 Units.**

Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control. Same as: COMM 157, COMM 357

**COMM 262. Campaigns, Voting, Media, and Elections. 4-5 Units.**

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players – candidates, parties, journalists, and voters – in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process. Same as: COMM 162, POLISCI 120B

**COMM 264. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 164, POLISCI 124L, PSYCH 170

**COMM 266. Virtual People. 4-5 Units.**

(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

Same as: COMM 166

**COMM 271. Moving Pictures: Video Journalism for mobile and social platforms. 3-5 Units.**

(Graduate students register for 271.) Examine video journalism's crucial role in digital news media across mobile and social media platforms. What are the specific needs of mobile platforms? How is new technology utilized to produce effective video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism. Students produce short video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: Journalism MA student or instructor's consent.

Same as: COMM 171

**COMM 272. Media Psychology. 4-5 Units.**

(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.

Same as: COMM 172

**COMM 273D. Public Affairs Data Journalism I. 4 Units.**

Even before the ubiquity of Internet access and high-powered computers, public accountability reporting relied on the concerted collection of observations and analytical problem-solving. We study the methods, and the data, used to discover leads and conduct in-depth reporting on public affairs, including election finance and safety regulations. Students gain practical experience with the digital tools and techniques of computer-assisted reporting. Prerequisite: Journalism M.A. student.

**COMM 274D. Public Affairs Data Journalism II. 4 Units.**

Learn how to find, create and analyze data to tell news stories with public service impact. Uses relational databases, advanced queries, basic statistics, and mapping to analyze data for storytelling. Assignments may include stories, blog posts, and data visualizations, with at least one in-depth project based on data analysis. Prerequisites: COMM 273D or Journalism M.A. student.

**COMM 275. Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video. 3-4 Units.**

Multimedia assignments coordinated with deadline reporting efforts in COMM 273 from traditional news beats using audio, still photography, and video. Use of digital audio recorders and audio production to leverage voice-over narration, interviews, and natural sound; use of digital still cameras and audio to produce audio slideshows; and the combination of these media with video in post-production with Final Cut Pro. Prerequisite: Journalism M.A. student. Corequisite: COMM 273.

**COMM 276. Advanced Digital Media Production. 4-5 Units.**

In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor.

Same as: COMM 176

**COMM 277A. Computational Journalism. 4-5 Units.**

Focuses on using data and algorithms to lower the cost of discovering stories or telling stories in more engaging and personalized ways. Project based assignments based on real-world challenges faced in newsrooms. Prior experience in journalism or computational thinking helpful. Prerequisite: Comm 273D, COMM 113/213, or the consent of instructor.

Same as: COMM 177A

**COMM 277C. Specialized Writing and Reporting: Environmental and Food System Journalism. 4-5 Units.**

Advanced reporting and writing course in the specific practices and standards of food journalism. This course begins with the assumption that students are familiar with the basics of reporting and research in journalism. We'll take those skills and apply them to the wide territory of food journalism, from farmer's markets to food waste, from travel and cultural writing to stories about agriculture and climate change. We will read a range of the best food journalism and students will be charged with writing both long form narrative essays and short magazine style pieces. We'll talk about how to hone in on the truly interesting idea, how to get more out of the reporting process and how to turn the raw materials of research and interviews into polished, engaging prose. Admission by application only, available from [vv1@stanford.edu](mailto:vv1@stanford.edu). Deadline December 4.

Same as: COMM 177C, EARTHSYS 177C, EARTHSYS 277C

**COMM 277D. Specialized Writing and Reporting: Narrative Journalism. 4-5 Units.**

(Graduate students register for COMM 277D.) How to report, write, edit, and read long-form narrative nonfiction, whether for magazines, news sites or online venues. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best long-form narrative stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.

Same as: COMM 177D

**COMM 277E. Specialized Writing and Reporting: Telling the Story. 4-5 Units.**

This workshop will offer secrets to good storytelling, and constructive feedback every step of the way on a significant piece of journalism you want to publish. The instructor, a senior editor who has helped New York Times reporters win 10 Pulitzer Prizes, will teach the course along with some of those reporters as well as other journalists with expertise in various aspects of storytelling. The sessions will include 1) elements of a great story; 2) finding a great story; 3) reporting a story; 4) writing the proposal; 5) making a story come alive online; 6) giving feedback on and editing a story; 7) assuring your story gets maximum readership online. Your piece could be one you conceive for this class, or one you have already begun reporting. Prerequisite: COMM 104 or consent of instructor.

Same as: COMM 177E

**COMM 277I. Becoming a Watchdog: Law, Order & Algorithms. 4-5 Units.**

Graduate students register for COMM 277I.) Data and algorithms are transforming law enforcement and criminal justice, a shift that is ripe for rigorous journalistic exploration. This class is centered around several empirical projects in criminal justice, with the goal of fostering greater understanding, transparency, and public accountability. Students work in interdisciplinary teams, using a combination of statistical and journalistic methods. Some of the work may be published by news organizations or may be used to advance data journalism investigations. Students with a background in journalism (especially data journalism), statistics, computer science, law, or public policy are encouraged to participate. Enrollment is limited, and project teams will be selected during the first week of class Prerequisite: COMM 104W, or consent of instructor.

Same as: COMM 177I

**COMM 277S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.**

(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online. Prerequisite: 104 or consent of instructor.

Same as: COMM 177S

**COMM 277Y. Specialized Writing and Reporting: Foreign Correspondence. 4-5 Units.**

(Graduate students register for COMM 277Y.) Study how being a foreign correspondent has evolved and blend new communication tools with clear narrative to tell stories from abroad in a way that engages a diversifying American audience in the digital age. Prerequisite: COMM 104W, COMM 279, or consent of instructor.

Same as: COMM 177Y

**COMM 278. Journalism and Imaginative Writing in America. 5 Units.**

Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers' backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

Same as: AMSTUD 257

**COMM 279. News Reporting & Writing Fundamentals. 3-4 Units.**

Learn beat reporting and writing skills including source development, interviewing, and story structure for news and features. Emphasis on developing news judgment, clear writing skills, and an ability to execute stories on deadline. Exercises and assignments mimic a newsroom. Students pursue local beats with a focus on public issues and complement written pieces with relevant data analyses and multimedia components. Prerequisite: Journalism M.A. student. Corequisite: COMM 275.

**COMM 280. Virtual Reality Journalism in the Public Sphere. 4 Units.**

The immersive space (cinematic VR and virtual reality) is journalism's newest and most exciting reporting and storytelling tool. We survey best practices and methods in this emerging medium and learn 360-degree video production and postproduction. Teams will illuminate issues and provoke conversation in the public sphere. Prerequisite: Preference to Journalism M.A. students. Please contact instructor for permission number to enroll.

**COMM 281. Exploring Computational Journalism. 3 Units.**

This course will explore the evolving field of computational journalism. Students will research and discuss the state of the field, and do projects in areas such as understanding the media ecosystem, stimulating media creation, and assessing media impact. Admission by application; please email James Hamilton at [jayth@stanford.edu](mailto:jayth@stanford.edu) to request application. Same as: CS 206

**COMM 289P. Journalism Thesis. 2-4 Units.**

MA thesis course. Focuses on development of in-depth journalism project, culminating in work of publishable quality.

**COMM 290. Media Studies M.A. Project. 1-2 Unit.**

Individual research for coterminal Media Studies students.

**COMM 291. Graduate Journalism Seminar. 1 Unit.**

Required of students in the graduate program in Journalism. Forum for current issues in the practice and performance of the press. The seminar frequently features Bay Area Journalists as guest speakers. May be repeated for credit.

**COMM 299. Individual Work. 1-4 Unit.**

**COMM 301. Communication Research, Curriculum Development and Pedagogy. 1 Unit.**

Designed to prepare students for teaching and research in the Department of Communication. Students will be trained in developing curriculum and in pedagogical practices, and will also be exposed to the research programs of various faculty members in the department. Required of all Ph.D. students.

**COMM 307. Summer Institute in Political Psychology. 3 Units.**

Lectures, discussion groups, and workshops addressing many applications of psychology to the analysis of political behavior. Public opinion, international relations, political decision-making, attitudes and beliefs, prejudice, social influence and persuasion, terrorism, news media influence, foreign policy, socialization, social justice.

**COMM 308. Graduate Seminar in Political Psychology. 1-3 Unit.**

For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.

Same as: POLISCI 324

**COMM 311. Theory of Communication. 1-5 Unit.**

Basic communication theory for first-year Ph.D. students in the Department of Communication. Introduction to basic writings and concepts in communication research. The goal is an introduction to issues in the field that are common in communication research. First half of the class will emphasize classic literature about field organization, history and theory. Second half will emphasize contemporary theory in areas that students select.

**COMM 312. Models of Democracy. 3-5 Units.**

Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments. Same as: COMM 212

**COMM 314. Ethnographic Methods. 1-5 Unit.**

This course offers an introduction to the practice and politics of ethnographic fieldwork. It provides a "how to" of ethnographic research, in which students will conduct an ethnographic project of their own, complemented by weekly readings and discussions. In the process, we will discuss the theory and epistemology of fieldwork, along with the practicalities and politics of fieldwork in different domains. We will examine different stages of ethnographic research (entering the field, conducting and recording fieldwork, exiting the field and writing it up), different methods (observations, interviews, "going along"), as well as distinct styles of ethnographic work (virtual ethnography, organizational ethnography, narrative ethnography, etc.). The course will serve as a participative workshop for students to exchange field notes, share practical advice, and consolidate their research interests. Prerequisite: Communication Ph.D. student, or consent of instructor.

Same as: SOC 319

**COMM 317. The Philosophy of Social Science. 1-5 Unit.**

Approaches to social science research and their theoretical presuppositions. Readings from the philosophy of the social sciences. Research design, the role of experiments, and quantitative and qualitative research. Cases from communication and related social sciences. Prerequisite: consent of instructor.

**COMM 318. Quantitative Social Science Research Methods. 1-5 Unit.**

An introduction to a broad range of social science research methods that are widely used in PhD work. Prerequisite: consent of instructor.

**COMM 320G. Advanced Topics in New Media and American Culture. 1-5 Unit.**

This course deals with advanced issues in computing and American cultural history since World War II. Primarily for Ph.D. students. Prerequisite: 220 or consent of instructor.

**COMM 324. Language and Technology. 3-5 Units.**

In this course we develop a model of how language reflects social and psychological dynamics in social media and other technologically-mediated contexts. The course lays out the main stages of analyzing language to understand social dynamics, including using theory to identify key discourse features, feature extraction, and classification and prediction. The course will draw on action-oriented language approaches to understand how people use language (e.g., grounding and joint action models), and then build on this approach to understand how discourse features from natural language can be used to answer questions from a wide range of social science questions, and ultimately, to the design of new technologies.

**COMM 326. Advanced Topics in Human Virtual Representation. 1-5 Unit.**

Topics include the theoretical construct of person identity, the evolution of that construct given the advent of virtual environments, and methodological approaches to understanding virtual human representation. Prerequisite: PhD student or consent of instructor.

**COMM 335. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 135, COMM 235, POLISCI 234P, POLISCI 334P

**COMM 339. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.**

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: POLISCI 421K, PSYCH 231

**COMM 345. Personality Expression in Digitally Mediated Contexts. 1-5 Unit.**

Digital devices (e.g., computers, smartphones, wearables) and platforms (e.g., social media sites, forums, virtual worlds) mediate much of our daily life. Each time we use digital media for communication, information seeking, or entertainment, we leave behind psychologically revealing digital footprints. In this course, we will explore how digital footprints can be used to understand individual differences in thinking, feeling, and behaving. Class activities and assignments will require students to apply the concepts to their own research projects.

**COMM 350. New Media and Journalism. 1-5 Unit.**

New media technologies are transforming how people create and consume information. In this course, we study journalism as an organized field of practice to examine what digital technologies change -- and what they don't change -- about production, diffusion, and reception of news around the globe. The course will cover topics such as changing professional boundaries in a networked environment; the decentralization of news production with social media platforms; the changes in editorial judgement related to automation; the construction of algorithmic audiences; and the promises and challenges associated with data journalism. Moving beyond simplistic analyses of the internet as a universal explanation for all changes in journalism, this course explores how new technologies interact with existing practices, representations, and institutions.

Same as: SOC 326

**COMM 357. Information Control in Authoritarian Regimes. 4-5 Units.**

Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control.

Same as: COMM 157, COMM 257

**COMM 360G. Political Communication. 1-5 Unit.**

An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students. Prerequisite: 260 or consent of instructor.

Same as: POLISCI 425

**COMM 361. Law of Democracy. 3-5 Units.**

Combined with LAW 7036 (formerly Law 577). This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577).

Same as: POLISCI 327C

**COMM 362. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.**

This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students).

Same as: POLISCI 425S

**COMM 372G. Seminar in Psychological Processing. 1-5 Unit.**

Limited to Ph.D. students. Advanced topics. Prerequisite: 272 or consent of instructor.

**COMM 378. Media and Time. 1-5 Unit.**

As media technologies change, they radically restructure our experience of time. This course will bring together readings from media psychology and media history in order to understand this process. Students will explore issues such as the acceleration of everyday life, new modes of screen use, and the transformation of cultural categories such as *the narrative* and *the event*. Ultimately the course aims to help prepare students to consider time in scholarship about media.

**COMM 380. Curriculum Practical Training. 1-5 Unit.**

Practical experience in the communication industries. Prerequisite: consent of instructor. Meets requirements for Curricular Practical Training for students on F-1 visas. (Staff).

**COMM 382. Research in Computational Social Science. 1-5 Unit.**

Massive datasets are increasingly available for research as digital technologies pervade our lives. These data represent new opportunities for social science research, but prominent examples of data science research bear little resemblance to the research designs of social scientific inquiry. In this course, we use machine learning and statistical tools on large-scale datasets to answer social science questions of cause and effect. Familiarity with Python recommended. Enrollment limited to PhD students in COMM or Social Science who have completed or are currently taking graduate quantitative methods sequences in Economics, Political Science, Sociology, or Statistics. Contact blazzari@stanford.edu for a permission number to enroll (please include a current CV).

**COMM 384. Media Technology Theory. 3-5 Units.**

This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students.

Same as: ARTHIST 465

**COMM 386. Media Cultures of the Cold War. 3-5 Units.**

The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and 'modern man' discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory.

Same as: ARTHIST 475

**COMM 397. Minor Research Project. 1-6 Unit.**

Individual research for Ph.D. candidates. Course may be repeated for credit.

**COMM 398. Major Research Project. 1-6 Unit.**

Individual research for Ph.D. candidates.

**COMM 399. Advanced Individual Work. 1-9 Unit.**

.

**COMM 801. TGR Project. 0 Units.**

.

**COMM 802. TGR Dissertation. 0 Units.**

.

**COMM 86SI. College Media Lab: digital and reporting skills for student journalists. 1-2 Unit.**

Journalism, especially college journalism, is undergoing rapid change in the 21st century. As native digital users, we are uniquely positioned to create and innovate in the new media landscape. This class is designed to provide students with a hands-on education in digitally-fluent college media reporting. Topics include photo, video and data reporting, media rights and responsibilities, and communications careers outside of journalism. The 'basics' of writing, blogging, and reporting the news will be taught and applied throughout the quarter. Guest lectures from professional reporters, academics, and communications professionals. Work completed for this class can be submitted to The Stanford Daily for publication. Pizza provided.

## Compar Stud in Race & Ethnic (CSRE)

### CSRE 100. Grassroots Community Organizing: Building Power for Collective Liberation. 3-5 Units.

Taught by long-time community organizer, Beatriz Herrera. This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner.

Same as: AFRICAAM 100, FEMGEN 100X, URBANST 108

### CSRE 100B. Grassroots Community Organizing Field Work. 1-5 Unit.

Continuation of projects and community engagement from CSRE 100. Prerequisite: completion of CSRE 100.

### CSRE 100P. Student and Community Organizing for Social Change. 1 Unit.

This course explores student and community organizing history, theories of practice, as well as models of social change through a mix of guest speakers from social justice groups, theoretical readings and practicum-based work. The major component of this course is participating in an intensive three-day skills-based training that will teach students how to be more strategic in their fight for justice on campus and in the community. The training consists of a series of presentations, exercises, and discussions that teach sets of skills and concepts related to student and community organizing. The course is designed for students with interests in student and community organizing, as well as those considering careers and leadership opportunities in a variety of nonprofit and social justice fields. This is designated as a one-unit course, with a community engaged learning option for two additional units. Proposed dates for intensive skills-based training are April 6th-8th and April 27th and 29th. Both dates are required.

### CSRE 101P. Student and Community Organizing for Social Change. 3 Units.

This course explores student and community organizing history, theories of practice, as well as models of social change through a mix of guest speakers from social justice groups, theoretical readings and practicum-based work. The major component of this course is participating in an intensive three-day skills-based training that will teach students how to be more strategic in their fight for justice on campus and in the community. The training consists of a series of presentations, exercises, and discussions that teach sets of skills and concepts related to student and community organizing. The course is designed for students with interests in student and community organizing, as well as those considering careers and leadership opportunities in a variety of nonprofit and social justice fields. This is designated as a one-unit course, with a community engaged learning option for two additional units. Proposed dates for intensive skills-based trainings are April 6th-8th and April 27th and 29th. Both dates are required.

### CSRE 102A. Art and Social Criticism. 5 Units.

Visual artists have long been in the forefront of social criticism in America. Since the 1960s, various visual strategies have helped emergent progressive political movements articulate and represent complex social issues. Which artists and particular art works/projects have become key anchors for discourses on racism, sexism, economic and social inequality, immigrant rights and climate change? We will learn about a spectrum of political art designed to raise social awareness, spark social change and rouse protest. The Art Workers Coalition's agit-prop opposing the Vietnam War and ACT-UP's emblematic signs and symbols during the AIDS/HIV crisis of the 1980s galvanized a generation into action. Works such as Judy Chicago's *The Dinner Party* (1979), Fred Wilson's *Mining the Museum* (1992), and Glenn Ligon's paintings appropriating fragments from African-American literature all raised awareness by excavating historical evidence of the long legacy resisting marginalization. For three decades feminist artists Barbara Kruger and the Guerilla Girls have combined institutional critique and direct address into a provocative form of criticality. Recent art for social justice is reaching ever broadening publics by redrawing the role of artist and audience exemplified by the democratization of poster making and internet campaigns of Occupy and the Movement for Black Lives. We will also consider the collective aesthetic activism in the Post-Occupy era including Global Ultra Luxury Faction, Climate Justice art projects, and the visual culture of Trump era mass protests. Why are each of these examples successful as influential and enduring markers of social criticism? What have these socially responsive practices contributed to our understanding of American history?

Same as: AFRICAAM 102B, AMSTUD 102, ARTHIST 162B, FEMGEN 102

### CSRE 103. Intergroup Communication. 3 Units.

In an increasingly globalized world, our ability to connect and engage with new audiences is directly correlated with our competence and success in any field. How do our intergroup perceptions and reactions influence our skills as communicators? This course uses experiential activities and discussion sections to explore the role of social identity in effective communication. The objective of the course is to examine and challenge our explicit and implicit assumptions about various groups to enhance our ability to successfully communicate across the complex web of identity.

Same as: PSYCH 103

### CSRE 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: AFRICAAM 106, EDUC 103B, EDUC 337

### CSRE 103F. Intergroup Communication Facilitation. 1 Unit.

This is a TA training course for Psych 103 - Intergroup Communication.

Same as: PSYCH 103F

### CSRE 103S. Gender in Native American Societies. 5 Units.

Seminar examines the impact of colonialism on gender roles & gender relations in American Indian communities beginning with the 17th century to the present. Topics include demographic changes; social, political & economic transformations associated with biological & spiritual assaults; the dynamism & diversity of native societies. Sources include history, ethnography, biography, autobiography, the novel & film.

Same as: FEMGEN 103S, NATIVEAM 103S

**CSRE 105. Religion and War in America. 4 Units.**

Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.

Same as: AMSTUD 105R, HISTORY 254D, HISTORY 354D, RELIGST 105

**CSRE 107. The Black Mediterranean: Greece, Rome and Antiquity. 4-5 Units.**

Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole.

Same as: AFRICAAM 107C

**CSRE 108. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, FEMGEN 101, TAPS 108

**CSRE 108C. Sugar and Slavery, Race and Revolution: The Caribbean 1450-1888. 3-5 Units.**

This course examines race and slavery across British, French, and Spanish islands, plus Brazil. The intensity of Caribbean slavery produced societies where more people were enslaved than free. The idea of "black" was invented and contested as Caribbean inhabitants leaned on African roots to shape new cultures. Sugar production sparked global wars and planted the seed of modern financial systems. Black people fought back, in ways large and small, marking the beginning of emancipation with the Haitian Revolution.

Same as: AFRICAAM 18C, HISTORY 8C, HISTORY 108C

**CSRE 108S. American Indian Religious Freedom. 3 Units.**

The persistence of tribal spiritual beliefs and practices in light of legal challenges (sacred geography and the 1st Amendment), treatment of the dead and sacred objects (repatriation), consumerism (New Age commodification), and cultural intellectual property protection (trademark, copyright, patent law). Focus is on contemporary issues and cases, analyzed through interdisciplinary scholarship and practical strategies to protect the fundamental liberty of American Indian religious freedom.

Same as: NATIVEAM 108S

**CSRE 109A. Federal Indian Law. 5 Units.**

Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country.

Same as: NATIVEAM 109A

**CSRE 109B. Indian Country Economic Development. 3 Units.**

The history of competing tribal and Western economic models, and the legal, political, social, and cultural implications for tribal economic development. Case studies include mineral resource extraction, gaming, and cultural tourism. 21st-century strategies for sustainable economic development and protection of political and cultural sovereignty.

Same as: NATIVEAM 109B

**CSRE 10A. Introduction to Identity, Diversity, and Aesthetics: Arts, Culture, and Pedagogy. 1 Unit.**

This weekly lecture series introduces students to the study of identity, diversity, and aesthetics through the work of leading artists and scholars affiliated with the Institute for Diversity in the Arts (IDA). This year's course highlights the educational impact of arts and culture. How can arts and culture help to advance pedagogies of liberation? Among other things, we will examine hip-hop education and how it illuminates ideas around culturally relevant and culturally sustaining pedagogies, indigenous knowledges, embodied knowledges, hip-hop feminisms, and community engaged research. We will look at case studies from East Palo Alto, CA and Cape Town, South Africa.

Same as: AFRICAAM 10A

**CSRE 10AY. Pacific Standard Time LA/LA creative projects in a Celebration Beyond Borders. 1-2 Unit.**

Students will have the opportunity to develop written and creative responses to the exploration of the region wide collaboration Pacific Standard Time LA/LA.

**CSRE 10SC. Inequality and Poverty in the United States. 2 Units.**

Social inequality is a feature of all advanced industrial societies. However, some societies have more inequality than others, and some types of inequality are more prominent in some societies than in others. Inequality in the United States is greater than in many other industrialized nations and has increased dramatically in the past forty years. Economic inequality, for example, is greater today than any time since the 1920s. Growing public awareness of this inequality has sparked a vigorous debate among politicians and public protests in city streets; some that have turned violent. The Occupy Movement was driven largely by resentment against the growing concentration of economic privilege within a small segment of society. Inequality was a prominent theme in the Bernie Sanders presidential campaign. Despite these debates and protests, there is no consensus about whether anything should be done to stem this trend. This class will focus on three domains of inequality in the United States: social class, gender, and racial inequality. The assigned reading and discussions will examine theories and research about the origins of social inequality; how inequality and poverty is reproduced over time; the consequences of inequality and poverty; and what might be done to reduce inequality and poverty in American society. Students will be expected to help lead and participate in class discussions, and to complete a weekly assignment based on the readings. In addition to the in-class instruction, students will have an opportunity to engage in public service activities directly related to poverty and inequality. Students will work with the Director of Community Engaged Learning (DCEL) from the Center for Comparative Studies in Race and Ethnicity who will assist with their participation in activities connected with social service agencies in the area, including agencies that deal with homelessness, food insecurity, and other needs.

Same as: SOC 11SC

**CSRE 110P. Mindful Leadership. 1-2 Unit.**

An exploration of one's inner life, ways of being in the world, and their expression in how one leads. Addresses the paradoxical task of merely paying attention to enhance our awareness of the socially constructed nature of reality and to feel comfortable to act with simplicity, empathy, and conviction. Through self-reflection, embodied practice, and creative expression through crossing borders students examine us and them. Mindful inquiry in expressed storytelling, collective knowing, appreciative intelligence, and is both scholarly and experiential.

Same as: LEAD 110

**CSRE 111. The California Missions: Art History and Reconciliation. 5 Units.**

Sites of the spirit and devotion, sites of genocide, foreboding actors in Alfred Hitchcock's *Vertigo*, the subject of fourth-grade school projects, the Spanish Missions of Alta California are complex sites of inquiry, their meanings and associations different for each visitor. This seminar examines the art and architecture of the California Missions built between 1769 and 1823. Constructed with local materials and decorated with reredos, paintings and sculptures from Mexico and Spain, the Missions are at once humble spaces and flagships of a belated global baroque. They were also the laboratories of indigenous artists and artisans. This course seeks to understand how Mission art was meant to function, how and why it was made, what its materials were, while asking what the larger role of art was in a global system of missions. Can the study of this art lead to the reconciliation of populations in North America and within the field of art history? The Missions require a specific reexamination of the relationship between European and colonial forms, not as objects of curiosity or diffusion but as viable and globally informed agents.

Same as: ARTHIST 211, NATIVEAM 211

**CSRE 112. Presidential Politics: Race, Gender, and Inequality in the 2016 Election. 3 Units.**

From the 2016 nomination process to the election. The complexities of identity and its role in uniting and dividing the electorate. Panels covering the media, political participation, and group affiliation.

Same as: AFRICAAM 109, POLISCI 123A

**CSRE 112X. Urban Education. 3-5 Units.**

(Graduate students register for EDUC 212 or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, EDUC 112, EDUC 212, SOC 129X, SOC 229X

**CSRE 113V. Freedom in Chains: Black Slavery in the Atlantic, 1400s-1800s. 5 Units.**

This course will focus on the history of slavery in the British, French, Spanish, Portuguese and Dutch Atlantic world(s), from the late 1400s to the 1800s. Its main focus will be on the experiences of enslaved Africans and their descendants. Between the sixteenth and nineteenth centuries, the Europeans forcibly embarked over 10 million Africans to the Americas. Drawing on methodologies used by historians, archaeologists and anthropologists, the course will reconstruct the daily lives and the socio-economic, cultural and political histories of these captives.

We will seek to hear their voices by investigating a variety of historical testimonies and recent scholarship. The course will examine slavery in the context of broader trends in Atlantic World studies, a field that has grown considerably in recent years, providing new ways of understanding historical developments across national boundaries. We will seek to identify commonalities and differences across time periods and regions and the reasons for those differences. Covered topics will include slave ship voyages, labor, agency, the creation of new identities (creolization), religion, race, gender, resistance, legacies, and memory.

Same as: AFRICAAM 113V, AFRICAST 113V, HISTORY 205D

**CSRE 114. Sound Tracks: Music, Memory, and Migration in the Twentieth Century. 3-4 Units.**

This course comprises a thematic exploration of forces, experiences, and after-effects of diasporas of communities in the Americas and Europe throughout the 20th century. Through close listening accompanied by historical and theoretical readings, students will gain deeper insights into the making of meaning in music and the role of music as a creative response to the challenges of migration and minority-status in the modern nation-state. Historical examples will draw from the Romani diaspora, Eastern-European Jewish liturgical sounds, the Mexican-US border, and from Jazz and the Blues. We explore issues of race, ethnicity, identity, nationalism, minoritization as they intersect in the sound tracks of diaspora.

Same as: MUSIC 114

**CSRE 117. Expanding Engineering Limits: Culture, Diversity, and Gender. 2-3 Units.**

This course investigates how culture, and diversity, including gender, shape who becomes an engineer, what problems get solved, and the quality of designs, technology, and products. We first examine the characteristics of engineering cultures – what are the interactions, symbols and ideas, and practices that define engineering? We then investigate how gender and other markers of diverse identities are interdependent and culturally constructed, how gender and other kinds of diversity are experienced in engineering cultures, and how these experiences have consequence for engineering innovation and the engineering profession. Finally, we analyze examples of cultural change in engineering and implications for engineering knowledge and practice. The course involves weekly presentations by distinguished scholars and engineers, readings, short writing assignments, small-group discussion, and exercises around one's own experiences in and related to engineering. Those taking the course for 3 units will also complete a research-based project, and must take the course for a letter grade to meet the undergraduate WAY-ED requirement.

Same as: CSRE 217, ENGR 117, FEMGEN 117, FEMGEN 217

**CSRE 117Q. Queer Arts: Remembering and Imagining Social Change. 4-5 Units.**

This interdisciplinary fine arts course is designed to examine the nature of artistic imagination, sources of creativity and the way this work helps shape social change. We will consider the relationship among muses, mentors and models for queer artists engaged in such fields as visual art, music, theatre, film, creative writing and dance. Exploring various cultures, lands and times, we will study the relationship between memory and vision in serious art. We will ask questions about the role of the artist in the academy and the broader social responsibility of the artist. We will locate some of the similarities and differences among artists, engage with different disciplines, and discover what we can learn from one another. This seminar requires the strong voices of all participants. To encourage students to take their ideas and questions beyond the classroom, we will be attending art events (performances, exhibits, readings) individually and in groups. The learning goals include a serious exploration of individual students' creativity, a more nuanced appreciation of diverse arts and a stronger understanding of the multifaceted nature of gender, race and class. Students will develop their abilities to write well-argued papers. They will stretch their imaginations in the written and oral assignments. And they will grow more confident as public speakers and seminar participants.

Same as: FEMGEN 117Q

**CSRE 117S. History of California Indians. 5 Units.**

Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system.

Same as: HISTORY 250A, NATIVEAM 117S

**CSRE 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.**

Interpreting the past is no longer just for people like historians and archaeologists, and it's no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they're putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ANTHRO 118A, ASNAMST 118A

**CSRE 119. Novel Perspectives on South Africa. 2-3 Units.**

21st-century South Africa continues its literary effervescence. In this class we'll sample some recent novels and related writings to tease out the issues shaping the country (and to some degree the continent) at present. Is 'South African literature' a meaningful category today? What are the most significant features we can identify in new writings and how do they relate to contemporary social dynamics? The course will appeal to anyone interested in present-day Cape Town or Johannesburg, including students who have spent a term in BOSP-Cape Town or plan to do so in future. Both undergraduate and graduate students are welcome. 2-3 units. Course may be repeated for credit. All students will write short analyses from the prescribed texts. Students taking the course for three units will write an extended essay on a topic agreed with the instructor.

Same as: AFRICAAM 119, AFRICAAM 219, AFRICAST 119, AFRICAST 219

**CSRE 11W. Service-Learning Workshop on Issues of Education Equity. 1 Unit.**

Introduces students to a variety of issues at stake in the public education of at-risk high school youth in California. Participants will hear from some of the leading faculty in the School of Education as well as the Departments of Psychology, Sociology, and others, who will share perspectives on the problems and challenges of educating a diverse student body in the state's public school system. The service-learning component of the workshop is a mentoring project (Stanford Students for Educational Equity) with junior class history students from East Palo Alto Academy High School, a Stanford charter school.

Same as: HISTORY 11W

**CSRE 12. Presidential Politics: Race, Gender, and Inequality in the 2016 Election. 1 Unit.**

From the 2016 nomination process to the election. The complexities of identity and its role in uniting and dividing the electorate. Panels covering the media, political participation, and group affiliation.

Same as: AFRICAAM 12, POLISCI 74

**CSRE 120F. Buying Black: Economic Sovereignty, Race, and Entrepreneurship in the USA. 4-5 Units.**

This seminar examines how communities of color have critiqued and transformed capitalism in America through concepts of economic independence, entrepreneurship, and sovereignty. By tracing concepts such as the double-duty dollar, casino/tribal capitalisms, retail boycotts, and buying black, the course traces ethnic entrepreneurialism in America. Students will also consider the international context of such US-based movements, particularly in relation to American imperialism and global supply-chain capitalism.

Same as: AFRICAAM 120F, ANTHRO 120F

**CSRE 121. Discourse of the Colonized: Native American and Indigenous Voices. 5 Units.**

Using the assigned texts covering the protest movements in the 20th century to the texts written from the perspective of the colonized at the end of the 20th century, students will engage in discussions on decolonization. Students will be encouraged to critically explore issues of interest through two short papers and a 15-20 minute presentation on the topic of interest relating to decolonization for Native Americans in one longer paper. Approaching research from an Indigenous perspective will be encouraged throughout.

Same as: NATIVEAM 121

**CSRE 121F. Latinidad in Schools: Cultural and Psychological Perspectives on the Experience of Latinx Students. 3 Units.**

Latinxs are the fastest growing ethnic group in the United States and are still experiencing inequities within the American educational system. While efforts have been made to address Latinx student success, evidenced by the ever-increasing high school graduation rate, we are still seeing the largest aspiration-attainment gap in college for Latinx students. This course will be in a seminar structure and will cover the various topics that scholars have identified as key factors in the educational success of Latinx students. We will begin the course by examining what racial and ethnic identity are and how they play a role in academic achievement. Then we look at how various social contexts family, school, and policy influence Latinx students in particular. Finally, we will review the literature on college access and persistence for Latinx students and the factors that help or hinder student success. This course will provide students with an overview of Latinx educational experiences in the U.S.

Same as: CHILATST 121F

**CSRE 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. PoliSci 150A, Stats 60 or Econ 1 is strongly recommended.

Same as: POLISCI 121L, PUBLPOL 121L

**CSRE 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, EDUC 121, LINGUIST 155

**CSRE 122E. Art in the Streets: Identity in Murals, Site-specific works, and Interventions in Public Spaces. 4 Units.**

This class will introduce students to both historical and contemporary public art practices and the expression of race and identity through murals, graffiti, site-specific works and performative interventions in public spaces. Involving lectures, guest speakers, field trips, and hands-on art practice, students will be expected to produce both an individual and group piece as a final project.

Same as: AFRICAAM 122E

**CSRE 122F. Histories of Race in Science and Medicine at Home and Abroad. 4 Units.**

This course has as its primary objective, the historical study of the intersection of race, science and medicine in the US and abroad with an emphasis on Africa and its Diasporas in the US. By drawing on literature from history, science and technology studies, sociology and other related disciplines, the course will consider the sociological and cultural concept of race and its usefulness as an analytical category. The course will explore how the study of race became its own "science" in the late-Enlightenment era, the history of eugenics—a science of race aimed at the ostensible betterment of the overall population through the systematic killing or "letting die" of humanity's "undesirable" parts, discuss how the ideology of pseudo-scientific racism underpinned the health policies of the French and British Empires in Africa, explore the fraught relationship between race and medicine in the US, discuss how biological notions of race have quietly slipped back into scientific projects in the 21st century and explore how various social justice advocates and scholars have resisted the scientific racisms of the present and future and/or proposed new paths towards a more equitable and accessible science.

Same as: AFRICAAM 122F, AFRICAST 122F, HISTORY 248D

**CSRE 123A. American Indians and the Cinema. 5 Units.**

Hollywood and the film industry have had a major influence on American society for nearly a century. Initially designed to provide entertainment, the cinema broadened its impact by creating images perceived as real and essentialist. Hollywood's Indians have been the main source of information about who American Indians are and Hollywood has helped shape inaccurate and stereotypical perceptions that continue to exist today. This course looks chronologically at cinematic interpretations and critically examines accurate portrayals of American Indians and of American history.

Same as: NATIVEAM 123A

**CSRE 123B. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care. Note: This course must be taken for a letter grade to be eligible for WAYS credit.

Same as: AFRICAAM 223, COMPLIT 223, HUMBIO 175H, MED 220

**CSRE 123F. Navigating a Multicultural World: Practical recommendations for individuals, groups, & institutions. 4 Units.**

The world is becoming increasingly multicultural, as groups of different races, ethnicities, ages, genders, and socioeconomic classes are coming into closer and more frequent contact than ever before. With increased cultural contact comes the need to create spaces that are inclusive and culturally sensitive. In addition, individuals must learn to live, work, and communicate in a multicultural world. How can we leverage research from cultural psychology to promote the best possible individual, interpersonal, and institutional outcomes for all groups? This course will serve as an introduction on how to create multicultural worlds and individuals. Drawing heavily on research, this course begins with a review of what culture is and how it influences individual thoughts, emotions, and behaviors. We then discuss multiculturalism (e.g., what is it, what are some costs and benefits) before addressing how to promote optimal functioning in multicultural settings.

**CSRE 124A. Youth in the Global South: Beyond Active Subjects and Passive Objects. 5 Units.**

In this course, we will explore the wide variety of ways youth has been culturally constructed (as well as dynamically experienced) across the Global South. Youth is an enduring and powerful concept for understanding competing forms of cultural contestations and political transformations. In the wake of global economic inequality, political instabilities and the emergence of new indigenous movements and social demands, youth is simultaneously associated with discourses over "crisis" and "possibilities."

Same as: ANTHRO 142A

**CSRE 125E. Shades of Green: Redesigning and Rethinking the Environmental Justice Movements. 3-5 Units.**

Historically, discussions of race, ethnicity, culture, and equity in the environment have been relegated to the environmental justice movement, which often focuses on urban environmental degradation and remains separated from other environmental movements. This course will seek to break out of this limiting discussion. We will explore access to outdoor spaces, definitions of wilderness, who is and isn't included in environmental organizations, gender and the outdoors, how colonialism has influenced ways of knowing, and the future of climate change. The course will also have a design thinking community partnership project. Students will work with partner organizations to problem-solve around issues of access and diversity. We value a diversity of experiences and epistemological beliefs, and therefore undergraduates and graduate students from all disciplines are welcome.

Same as: EARTHSYS 125, EARTHSYS 225, URBANST 125

**CSRE 125V. The Voting Rights Act. 5 Units.**

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: AFRICAAM 125V, POLISCI 125V

**CSRE 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings. Same as: AFRICAAM 126B, EDUC 136B, EDUC 236B, PUBLPOL 126B

**CSRE 127A. Can't Stop Won't Stop: A History Of The Hip-Hop Arts. 2-4 Units.**

This course explores the history and development of the hip-hop arts movement, from its precursor movements in music, dance, visual arts, literature, and folk and street cultures to its rise as a neighborhood subculture in the Bronx in the early 1970s through its local, regional and global expansion and development. Hip-hop aesthetics, structures, and politics will be explored within the context of the movement's rise as a post-multicultural form in an era of neoliberal globalization. (This course must be taken for a letter grade and a minimum of 3 units to satisfy a Ways requirement.) Same as: AFRICAAM 127A

**CSRE 127X. The Ethics of Anonymity. 1 Unit.**

When is it ethical to conceal your identity or to permit another to remain anonymous? What is the value to remaining unknown, and what might be the cost? Does anonymity free you to think, act, or be in ways you wouldn't otherwise? What else might it allow or constrain? How might your answers differ depending on the circumstances or context? In this one-unit lunchtime seminar, guest speakers will discuss topics that might include: anonymous sources in journalism; anonymity online; the history of anonymous authorship and attribution; whistleblowers and confidential informants; anonymous egg or sperm donors and birth parents; anonymity vs. confidentiality for research participants; anonymity and art; technology and anonymity. Same as: COMM 127X, ETHICSOC 2

**CSRE 128. What We Want is We: Identity in Visual Arts, Social Engagement, and Civic Propositions. 4 Units.**

This studio practicum examines contemporary culture through case studies on visual art, race theory, urban studies, and resistance legacies. This class looks at strategies of socially engaged art practices, community building endeavors, and the complications peculiar to these projects. From these case studies, students will make public art/text/performative experiments and learn research and grant writing approaches for designing long-term political projects. Students will translate their research into grant proposals that will be judged by a professional panel during the final week. Course guests include granting agencies/arts foundations and international artists, curators, city planners, and activists (live/video conferences).

**CSRE 129. Camus. 4-5 Units.**

"The Don Draper of Existentialism" for Adam Gopnik, "the ideal husband of contemporary letters" for Susan Sontag, and "the admirable conjunction of a man, of an action, and of a work" for Sartre, Camus embodies the very French figure of the "intellectuel engagé," or public intellectual. From his birth in 1913 into a poor family in Algeria to the Nobel Prize in Literature in 1957, from Saint Germain-des-Prés to his predilection for the mediterranean culture, Camus captured the quest for universalism, for the politics of justice, and engaged in the great ethical battles of his time, from the fight against nazism and communism, from questioning colonial rules to the haunting Algerian War, and his complex "silence" over the war. Camus the Algerian, Camus the moralist, Camus the Resistant: through readings and films, we will explore his multiple, long-lasting legacies. Readings from Albert Camus, Kamel Daoud, Mouloud Feraoun, Alice Kaplan, Orhan Pamuk, A.B. Yehoshua, Assia Djebar, Jean-Paul Sartre, Yasmina Khadra. Movies include "The Stranger," and "Far from Men." This course is a gateway for French Studies, with special emphasis on oral proficiency. Taught in French.

Same as: FRENCH 129, HISTORY 235F

**CSRE 129B. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, FRENCH 229, HUMBIO 175L, MED 234

**CSRE 13. Digital Humanities and African American History Black History in the Age of the Digital Database. 1 Unit.**

The focus of this workshop is on the social and cultural histories and present conditions relating to social movements and the role of leaders and heroes in urban settings. The workshop seeks to foster historical consciousness of past struggles for justice through collective action as well as to introduce students to a diverse range of leaders of contemporary social justice movements. Additionally, as an underpinning concept, the course explores the changing meaning and importance of social and cultural heroes through history, literature, and music. Workshop activities will be divided between sessions with guest speakers and classes held to discuss background concepts and material. Same as: URBANST 103

**CSRE 130. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques.

Same as: AFRICAAM 130, EDUC 123, EDUC 322

**CSRE 131. Genes and Identity. 5 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: AFRICAAM 131, ANTHRO 131

**CSRE 132A. Social Inequality in Israel. 3 Units.**

Like the US, Israel is a nation of immigrants. Israel additionally shares with the US vast economic, ethnic/racial and gender gaps, which are shaped and are being shaped by the demographic diversity characterizing its society. The course will provide a comparative framework for analyzing social inequality in Israel. We will start by reviewing essential concepts and theories in the study of social stratification. We will then review the main cleavages characterizing Israeli society, while comparing them to gaps in other advanced societies and particularly the US. We will focus on class, gender and ethnicity as the main distinctions and will examine their implications for differences in life chances in several domains across the life course. We will conclude with a discussion of possible scenarios for change, which are relevant to both Israel and the US. Throughout the course, we will study critical thinking techniques and will use them for analyzing issues that are central for the analysis of social inequality in Israel and elsewhere.

Same as: JEWISHST 132A, SOC 102A

**CSRE 132J. Sociology of Jewishness. 3-5 Units.**

Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.

Same as: JEWISHST 132D, SOC 132J

**CSRE 133A. Anthropology of the Middle East. 3-5 Units.**

This course examines social, political, and religious dimensions of various Middle Eastern societies. Key topics include the development of the modern nation-state, the Islamic revival, human rights, and discourses of democracy. Course materials include ethnographic studies, novels, and films, which provide a rich contextualization of social life and cultural politics in the region.

Same as: ANTHRO 133A

**CSRE 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.**

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: AFRICAST 133B, ANTHRO 133B

**CSRE 133J. WELFARE, WORK AND POVERTY.. 3 Units.**

Early theorists of the welfare state described it as a reaction to the emergence of needs and interests of specific social groups during processes of economic development and change. Later theorists countered that the welfare state does not merely react to social cleavages during times of economic change but rather works to actively shape them, in line with worldviews or the interests of dominant group members. Adopting the latter approach, the goal of this course is to provide the tools and knowledge necessary for a critical evaluation of the social services provided to Israeli citizens and their impact on social and economic inequalities. The course will survey various approaches to the understanding of the goals of the welfare state. A comparative and historical account of the development of the welfare state will be presented, while highlighting recent developments, such as the increase in poverty rates and the aging of the population. During the course, we will examine the diverse needs that are served by the welfare state, as well as major dilemmas associated with the provision of services. Throughout the course, we will study critical thinking techniques and will use them for analyzing issues that are central for the development of social policies in Israel and the US.

Same as: JEWISHST 133A, SOC 103A

**CSRE 133P. Ethics and Politics in Public Service. 4 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: POLISCI 133Z, PUBLPOL 103Z, URBANST 122Z

**CSRE 134. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit.

Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, EDUC 214, NATIVEAM 134

**CSRE 135. Islam in America. 4 Units.**

This course explores the history of Islam in North America with special emphasis on the experience of Muslims in the United States. Contrary to popularly held belief, Muslims have been critical participants in the construction of American identity from the 16th century onwards when Muslim slaves were forcibly brought to Colonial America. Our course will explore the diverse ways Muslims in America have imagined, practiced, and negotiated their religious identity. We will move chronologically, and we will focus upon three crucial themes: the convergence of constructions of racial, religious, and national identities in America; the ever-shifting terrain of notions of authority and authenticity amongst Muslims in America; and global resonances of the practices and ideas of American Muslims.

Same as: AFRICAAM 135A, AMSTUD 135X, GLOBAL 137, RELIGST 135

**CSRE 135H. Conversations in CSRE: Case Studies in the Stanford Community. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: ANTHRO 135H

**CSRE 135I. CSRE House Seminar: Race and Ethnicity at Stanford. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: ANTHRO 135I

**CSRE 135P. The Psychology of Diverse Community. 3 Units.**

This course is an exploration. Its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities e.g. schools, universities, academic disciplines, etc.

Same as: PSYCH 135

**CSRE 136. White Identity Politics. 3-5 Units.**

Pundits proclaim that the 2016 Presidential election marks the rise of white identity politics in the United States. Drawing from the field of whiteness studies and from contemporary writings that push whiteness studies in new directions, this upper-level seminar asks, does white identity politics exist? How is a concept like white identity to be understood in relation to white nationalism, white supremacy, white privilege, and whiteness? We will survey the field of whiteness studies, scholarship on the intersection of race, class, and geography, and writings on whiteness in the United States by contemporary public thinkers, to critically interrogate the terms used to describe whiteness and white identities. Students will consider the perils and possibilities of different political practices, including abolishing whiteness or coming to terms with white identity. What is the future of whiteness? n\*Enrolled students will be contacted regarding the location of the course.

Same as: AFRICAAM 136B, ANTHRO 136B

**CSRE 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.**

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. nThis seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 138, ANTHRO 238

**CSRE 140C. Stand Up Comedy and the "Great American Joke" Since 1945. 5 Units.**

Development of American Stand Up Comedy in the context of social and cultural eruptions after 1945, including the Borscht Belt, the Chitlinz Circuit, the Cold War, censorship battles, Civil Rights and other social movements of the 60s and beyond. The artistry of stories, monologues, jokes, impersonations, persona, social satire, scatology, obscenity, riffs, rants, shtick, and more by such artists as Lenny Bruce, Dick Gregory, Richard Pryor, George Carlin, Margaret Cho, Sarah Silverman, Jon Stewart, Stephen Colbert, as well as precursors such as Mark Twain, minstrelsy and vaudeville and related films, TV shows, poems and other manifestations of similar sensibilities and techniques. Same as: AMSTUD 140

**CSRE 141. Gentrification. 5 Units.**

Neighborhoods in the Bay Area and around the world are undergoing a transformation known as gentrification. Middle- and upper-income people are moving into what were once low-income areas, and housing costs are on the rise. Tensions between newcomers and old timers, who are often separated by race, ethnicity, or sexual orientation, can erupt; high rents may force long-time residents to leave. In this class we will move beyond simplistic media depictions to explore the complex history, nature, causes and consequences of this process. Students will learn through readings, films, class discussions, and engagement with a local community organization. (Cardinal Course certified by the Haas Center). Same as: AFRICAAM 241A, URBANST 141

**CSRE 141E. Counterstory and Narrative Inquiry in Literature and Education. 3 Units.**

Counterstory is a method developed in critical legal studies that emerges out of the broad "narrative turn" in the humanities and social science. This course explores the value of this turn, especially for marginalized communities, and the use of counterstory as analysis, critique, and self-expression. Using an interdisciplinary approach, we examine counterstory as it has developed in critical theory, critical pedagogy, and critical race theory literatures, and explore it as a framework for liberation, cultural work, and spiritual exploration. Same as: EDUC 141, EDUC 341, LIFE 124

**CSRE 141S. Immigration and Multiculturalism. 5 Units.**

What are the economic effects of immigration? Do immigrants assimilate into local culture? What drives native attitudes towards immigrants? Is diversity bad for local economies and societies and which policies work for managing diversity and multiculturalism? We will address these and similar questions by synthesizing the conclusions of a number of empirical studies on immigration and multiculturalism. The emphasis of the course is on the use of research design and statistical techniques that allow us to move beyond correlations and towards causal assessments of the effects of immigration and immigration policy.

Same as: POLISCI 141A

**CSRE 141X. Intersectionality and Social Movements: Gender, Race, Sexuality and Collective Organizing. 4 Units.**

This course explores U.S. social movements from an intersectional perspective. How is social movement emergence related to participants' identities and experiences with inequality? How are the dynamics, targets and tactics of mobilized participants related to race, class, gender, age and/or sexuality? How have social movement scholars addressed the intersectional nature of identity and community? Readings include empirical and theoretical social movement texts, and discussion topics include feminist and civil rights movements, queer/LGBT movements, Occupy Wall Street and Black Lives Matter.

Same as: AFRICAAM 141X, FEMGEN 141, SOC 153

**CSRE 142A. What is Hemispheric Studies?. 5 Units.**

Will attempt to open up "America," beyond the United States. Have we reached the end of an era in our national literary imaginations? What is the utility and durability of the idea of the nation in a global era? New developments in hemispheric, Black Atlantic, and trans-american studies have raised questions about the very viability of US literary studies. Should we, as Franco Moretti suggests, map, count, and graph the relationships in our close (rhetorical) and "distant" readings of texts in the Americas? Topics include the definitions of concepts such as coloniality, modernity, time and the colonial difference, the encounters between world views of Europeans and indigenous Native American peoples, and the inventions of America, Latinamericanism, and Americanness.

**CSRE 144. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.**

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders.

Same as: ASNAMST 144, FEMGEN 144X

**CSRE 144G. Pop Feminism: Unrest and Unease in the Contemporary Feminist Moment. 3-5 Units.**

This course examines feminist reaction/expression/ to and in German and American pop culture. We will examine a feminist approach using a variety of different media, including film, music videos, and literature. We will consider the intersections of race and gender constructions, as well as the cultural aspects of each iteration of "pop." The course will be taught in English, but German-speaking students are encouraged to read in the original. nNote: This course contains sexually explicit content.

Same as: FEMGEN 144G, GERMAN 144

**CSRE 145. Race and Ethnic Relations in the USA. 4 Units.**

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.

Same as: SOC 145, SOC 245

**CSRE 145B. The African Atlantic. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during early and modern periods of globalization across the Atlantic, including the middle passage, exploration and colonialism, black internationalism, decolonization, immigration, and diasporic return. We will begin with Equiano's Interesting Narrative (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of self-making or new citizenship, to evoke histories of racial unity or examine psychic and social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Conrad, Condé, Olinto), epic and prose poetry (Césaire, Walcott), theoretical reflection (Gilroy, Glissant, Mudimbe, Benitez-Rojo), and literary autobiography (Barack Obama, Saidiya Hartman). Note: To be eligible for WAYS credit, you must take COMPLIT 145B for a minimum of 3 Units and a Letter Grade.

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, FRENCH 145B, FRENCH 345B

**CSRE 145F. Race and Power. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 145, ANTHRO 245

**CSRE 145H. Trauma, healing, and empowerment. 3 Units.**

This course will look at the ways in which humans are affected by the legacy of war, occupation and colonialism through themes of home, displacement, community, roots, identity, and inter-generational trauma. The approach is integrative, including scholarly investigation, embodied practice, and creative approach. This self-reflective process uses narrative, oral and written, as a means of becoming whole and healing personal, historical, and collective wounds.

Same as: LIFE 145

**CSRE 146. Community Matters: Research and Service with Community Organizations. 3-4 Units.**

(Taught in conjunction with URBANST 123B. Students participating in CRSI must enroll in CSRE 146. All others can enroll in either course.) This course focuses on issues of research design and how to select specific methodological strategies to assure ethical and effective partnership-based research. In this course, students will plan for their own participation in a CB(P)R project. Topical themes will include best practice strategies for (a) defining and selecting community problems or issues to be addressed, (b) generating relevant and useful research questions, (c) choosing specific means and methods for data collection [e.g., surveys, interviews, focus groups, etc.], (d) storing, organizing and analyzing data, (e) reflecting on and critiquing research findings, and (f) carrying out dissemination in ways that can be expected to enhance community power and advance community development. Students will be provided with opportunities to workshop their respective projects-in-development, (e.g., developing and sharing research questions, data collection instruments, strategies for engaging community constituents as co-researchers, etc.). Students will leave the course with a plan for participating in a CBPR project.

**CSRE 146A. Approaching Research and the Community. 2-3 Units.**

Comparative perspective on research with communities and basic overview of research methodologies, with an emphasis on the principles and practices of doing community-based research as a collaborative enterprise between academic researchers and community members. How academic scholarship can be made useful to communities. How service experiences and interests can be used to develop research questions in collaboration with communities and serve as a starting point for developing senior theses or other independent research projects. Through the coursework, students are encouraged to develop a draft proposal for an actual community-based research project. The course is highly recommended for students planning to apply for community-based summer research fellowships through the Haas Center for Public Service (Community-based Research Fellowship Program) or CRSE (Community Research Summer Internship). Students who complete the course will be given priority for these fellowships. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: URBANST 123

**CSRE 146B. Approaching Research in the Community: Design and Methods. 3 Units.**

(Taught concurrently with CSRE 146; you may enroll in either course.) This course focuses on issues of research design and how to select specific methodological strategies to assure ethical and effective partnership-based research. In this course, students will plan for their own participation in a CB(P)R project. Topical themes will include best practice strategies for (a) defining and selecting community problems or issues to be addressed, (b) generating relevant and useful research questions, (c) choosing specific means and methods for data collection [e.g., surveys, interviews, focus groups, etc.], (d) storing, organizing and analyzing data, (e) reflecting on and critiquing research findings, and (f) carrying out dissemination in ways that can be expected to enhance community power and advance community development. Students will be provided with opportunities to workshop their respective projects-in-development, (e.g., developing and sharing research questions, data collection instruments, strategies for engaging community constituents as co-researchers, etc.). This is a required course for students participating in the Haas Center for Public Service; Community-based Research Fellows Program, but enrollment is open to all Stanford students.

Same as: URBANST 123B

**CSRE 146J. Studies in Ethnomusicology: Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.**

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing field-notes, recording, transcription, analysis, and ethnographic writing. Pre-/co-requisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: MUSIC 146J, MUSIC 246J

**CSRE 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: AFRICAAM 19, AMSTUD 147J, MUSIC 147J, MUSIC 247J

**CSRE 147L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: CHILATST 147L, MUSIC 147L, MUSIC 247L

**CSRE 148. Comparative Ethnic Conflict. 4 Units.**

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.

Same as: SOC 148, SOC 248

**CSRE 149. The Laboring of Diaspora & Border Literary Cultures. 3-5 Units.**

Focus is given to emergent theories of culture and on comparative literary and cultural studies. How do we treat culture as a social force? How do we go about reading the presence of social contexts within cultural texts? How do ethno-racial writers re-imagine the nation as a site with many "cognitive maps" in which the nation-state is not congruent with cultural identity? How do diaspora and border narratives/texts strive for comparative theoretical scope while remaining rooted in specific local histories. Note: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: COMPLIT 149, ILAC 149

**CSRE 149A. The Urban Underclass. 4 Units.**

(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.

Same as: SOC 149, SOC 249, URBANST 112

**CSRE 14N. Growing Up Bilingual. 3 Units.**

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

Same as: CHILATST 14N, EDUC 114N

**CSRE 150. Race and Political Sociology. 3 Units.**

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.

Same as: SOC 150, SOC 250

**CSRE 150A. Race and Crime. 3 Units.**

The goal of this course is to examine social psychological perspectives on race, crime, and punishment in the United States. Readings will be drawn not only from psychology, but also from sociology, criminology, economics, and legal studies. We will consider the manner in which social psychological variables may operate at various points in the criminal justice system- from policing, to sentencing, to imprisonment, to re-entry. Conducted as a seminar. Students interested in participating should attend the first session and complete online application for permission at <https://goo.gl/forms/CAut7RKX6MewBluG3>.

Same as: PSYCH 150

**CSRE 150B. RACE AND CRIME PRACTICUM. 2-4 Units.**

This practicum is designed to build on the lessons learned in Psych 150: Race & Crime. In this community service learning course, students will participate in community partnerships relevant to race and crime, as well as reflection to connect these experiences to research and course content. Interested students should complete an application for permission at: <https://goo.gl/forms/CAut7RKX6MewBluG3>.

Prerequisite: Psych 150 (taken concurrently or previously).

Same as: PSYCH 150B

**CSRE 150G. Performing Race, Gender, and Sexuality. 4 Units.**

This theory and practice-based course will examine performances by and scholarly texts about artists who critically and mindfully engage race, gender, and sexuality. Students will cultivate their skills as artist-scholars through written assignments and the creation of performance-based works in response to the assigned material. Attendance and written reflection on the TAPS Vital Signs: Performance Art in the 21st Century performance art series are required. The practical component of the class will also incorporate meditation into the process of preparing for, making, and critiquing performance. We will approach mindfulness as method and theory in our own practice, as well in relation to the works studied, while attending to the ethics and current debates concerning its use. Examples of artists studied include James Luna, Nao Bustamante, William Pope.L, Yoko Ono, Cassils, Adrian Piper, Guillermo Gomez-Peña, Nikki S. Lee, and Ana Mendieta.

Same as: FEMGEN 150G, TAPS 150G

**CSRE 150S. Nineteenth Century America. 5 Units.**

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AFRICAAM 150B, AMSTUD 150B, HISTORY 150B

**CSRE 151D. Migration and Diaspora in American Art, 1800–Present. 4 Units.**

This lecture course explores American art through the lens of immigration, exile, and diaspora. We will examine a wide range of work by immigrant artists and craftsmen, paying special attention to issues of race and ethnicity, assimilation, displacement, and political turmoil. Artists considered include Emmanuel Leutze, Thomas Cole, Joseph Stella, Chiura Obata, Willem de Kooning, Mona Hatoum, and Julie Mehretu, among many others. How do works of art reflect and help shape cultural and individual imaginaries of home and belonging?

Same as: AMSTUD 151, ARTHIST 151, ARTHIST 351

**CSRE 152. Introduction to Improvisation in Dance: From Salsa to Vodun to Tap Dance. 3-4 Units.**

This seminar introduces students to Dance Studies by exploring the topic of improvisation, a central concept in multiple genres of dance and music. We will survey a range of improvised dance forms from salsa to vodun to tap dance through readings, video viewings, discussion, and movement exercises (no previous dance experience required). When studying each genre, we will examine how race, gender, sexuality, citizenship, and other power structures affect the practices and theorizations of improvisation. Topics include community and identity formation; questions of technique versus natural ability; improvisation as a spiritual practice; and the role of history in improvisers' quest for spontaneity. Course material will focus on improvised dance, but we will also read pertinent literature in jazz music, theatre, and the law.

Same as: AFRICAAM 52, TAPS 152

**CSRE 152K. Mixed-Race Politics and Culture. 5 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AFRICAAM 226, AMSTUD 152K, ENGLISH 152K

**CSRE 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.**

This course examines the significant role drugs play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 154, ANTHRO 254B

**CSRE 154C. Shall We Dance? Social Dancing as Political Practice. 3-4 Units.**

This seminar investigates social dancing as a political practice, and the dance floor as a place where race, ethnicity, class status, and sexuality are formed and contested. While many students may be familiar with salsa, and can imagine how it produces particular kinds of Latin/a femininities, this course asks students to expand the notion of social dancing beyond partner-dancing spheres. Course materials will focus on dance practices from the late-nineteenth century to present-day, ranging from rural Louisiana dancehalls to NYC nightclubs to Iranian backyards. We will examine how dances become racially coded (e.g., what makes a dance black or Latin@?), and understand how categories such as gender, class, and regionality intersect with such racializations. Students will engage in a range of activities, including reading, viewing films, and participating in occasional movement workshops (no previous dance experience required). Each student's final project will require independent, sustained, ethnographic research in a social dance setting of choice (e.g., student dance club, yoga studio, aerobics class, or YouTube).

**CSRE 154D. Black Magic: Ethnicity, Race, and Identity in Performance Cultures. 3-4 Units.**

In 2013, CaShawn Thompson devised a Twitter hashtag, #blackgirlmagic, to celebrate the beauty and intelligence of black women. Twitter users quickly adopted the slogan, using the hashtag to celebrate everyday moments of beauty, accomplishment, and magic. In contrast, #blackmagic is used to describe everything from the uncanny to the personal. This course examines the discursive phenomenon of "black magic" and its permutations throughout Anglo-American histories. We will investigate the binaries of black/dark, white/light magic that has entered our contemporary lexicon, reading material on religion, magic performance, and theater.

Same as: AFRICAAM 154G, FEMGEN 154G, TAPS 154G

**CSRE 154T. The Politics of Algorithms. 4-5 Units.**

Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms.

Same as: COMM 154, COMM 254, SOC 154

**CSRE 156. The Changing American City. 4 Units.**

After decades of decline, U.S. cities today are undergoing major transformations. Young professionals, Millennials, and members of the creative class are flocking to cities. Massive waves of immigration have transformed the racial and ethnic compositions of cities and their neighborhoods. Public housing projects that once defined the inner city are disappearing, and the recent housing boom and bust shook up the urban landscape. This class will include readings and discussion on contemporary developments in U.S. cities and how they relate to race, ethnicity, and class. Topics include immigration, gentrification, crime, public housing, and the housing crisis.

Same as: SOC 156A, SOC 256A, URBANST 156A

**CSRE 156J. Environment, Nature and Race. 3-5 Units.**

Environment, nature and race: Politics of belonging, exclusion, and embodiment. Scientific and popular understandings of race and ethnicity remain deeply entangled with ideas about "nature" and the "environment". This course will introduce students to some of the many ways that nature, environment, and race have been and remain intertwined, for better or for worse. What does it mean to claim race is "natural"? To what extent is race shaped by environment and vice versa? How are the politics of race linked to the politics of environmentalism? The class will begin with a brief treatment of current critical consensus on the biology of race and the cultural politics of race and nature, and move on to a theoretical discussion of how humans and "nature" interact. From there, the course moves into historical and ethnographic examples of the politics of race and the environment: the racialized and racializing character of particular environments; the ways that racial politics shape natural environments; and the politics of exclusion and belonging in environmental movements. Case studies will be both rural and urban and draw from anthropology, geography, history, and biology. The course will end by considering the recent resurgence of the race concept in biology. Same as: ANTHRO 156B

**CSRE 156T. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.**

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.

Same as: AFRICAAM 156, TAPS 156, TAPS 356

**CSRE 157P. Solidarity and Racial Justice. 4-5 Units.**

Is multiracial solidarity necessary to overcome oppression that disproportionately affects certain communities of color? What is frontline leadership and what role should people play if they are not part of frontline communities? In this course we will critically examine practices of solidarity and allyship in movements for collective liberation. Through analysis of historical and contemporary movements, as well as participation in movement work, we will see how movements have built multiracial solidarity to address issues that are important to the liberation of all. We will also see how racial justice intersects with other identities and issues. This course is for students that want to learn how to practice solidarity, whether to be better allies or to work more effectively with allies. There will be a community engaged learning option for this course. Students who choose to participate in this option will either work with Stanford's DGen Office or a community organization that is explicitly devoted to multiracial movement-building.

Same as: AFRICAAM 157P, AMSTUD 157P, FEMGEN 157P

**CSRE 159I. Literature and Protest. 3-5 Units.**

How does literary art get involved in politics? What is the border between propaganda and art? This class examines moments when writers seem suddenly not only to represent politically charged topics and themes, but to have a part in bringing about political change. We'll look at case studies from the anti-apartheid movement in South Africa, the American Civil Rights struggle, 19th century Russia, and more.

Same as: AFRICAAM 159A, ENGLISH 159A

**CSRE 160J. Conjure Art 101: Performances of Ritual, Spirituality and Decolonial Black Feminist Magic. 2 Units.**

Conjure Art is a movement and embodied practice course looking at the work and techniques of artists of color who utilize spirituality and ritual practices in their art making and performance work to evoke social change. In this course we will discuss the work of artists who bring spiritual ritual in their art making while addressing issues of spiritual accountability and cultural appropriation. Throughout the quarter we will welcome guest artists who make work along these lines, while exploring movement, writing, singing and visual art making. This class will culminate in a performance ritual co-created by students and instructor.

Same as: AFRICAAM 160J, DANCE 160J

**CSRE 160M. Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture. 3-4 Units.**

This course will introduce students to the ways in which the Middle East has been represented and performed by/in the 'West' through dance, performance, and popular culture in both historical and contemporary contexts. A brief look through today's media sources exposes a wide range of racialized and gendered representations of the Middle East that shape the way the world imagines the Middle East to be. As postcolonial theorist Edward Said explains, the framework we call Orientalism establishes the ontological character of the Orient and the Oriental as inherently 'Other'. Starting with 19th century colonialism and continuing into the post-9/11 era, this course will trace the Western production, circulation, and consumption of representations of the Middle East as 'Other' in relation to global geopolitics. We will further examine dance forms produced in mid-twentieth century Iran and Egypt, with particular attention to nation-state building and constructions of gender. Finally, we will examine artistic productions and practices from the Middle East and Middle Eastern diasporic communities that respond to colonialism, war, displacement, secularism, and Euro-American Empire. Using dance studies, postcolonial feminist, and critical race theoretical frameworks, we will consider the gender, racial, political, and cultural implications of selected performance works and practices in order to analyze how bodies produce meaning in dance, performance art, theater, film, photography, and new media. Students will engage in multiple modes of learning; the course will include lectures, engaged group discussions, viewing of live and recorded performance, embodied participation in dance practice, student oral presentations, and a variety of writing exercises. Course assignments will culminate in a final research project related to class themes and methods.

Same as: DANCE 160M, FEMGEN 160M, TAPS 160M

**CSRE 162. The Politics of Sex: Work, Family, and Citizenship in Modern American Women's History. 3-5 Units.**

This course explores the transition from Victorian to modern American womanhood by asking how Native, European, African, Mexican, and Asian American women navigated the changing sexual, economic, and political landscapes of the twentieth century. Through secondary readings, primary sources, films, music, and literature we explore the opportunities and boundaries on groups of women in the context of historical events that included immigration, urbanization, wartime, depression, the Cold War, as well as recurrent feminist and conservative political movements. Same as: AMSTUD 161, FEMGEN 161, HISTORY 61, HISTORY 161

**CSRE 162A. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.**

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).

Same as: RELIGST 162X, URBANST 126

**CSRE 162V. Advanced Research in Black Performing Arts. 1 Unit.**

What is the history of Committee for Black Performing Arts (CBPA)? How did it come into being and how do we carry/re-member the legacy forward and into the future? In this course students will engage in the research and archiving process as we dig into the history of CBPA on the eve of its 50th anniversary. Activities will include, digitizing and cataloguing film, video and documents, conducting interviews with former students and professors of CBPA, and guest lecturers with professional archivists. Same as: DANCE 162V

**CSRE 164. Immigration and the Changing United States. 4 Units.**

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

Same as: CHILATST 164, SOC 164, SOC 264

**CSRE 165. Identity and Academic Achievement. 3 Units.**

How do social identities affect how people experience academic interactions? How can learning environments be better structured to support the success of all students? In this class, we will explore how a variety of identities such as race, gender, social class, and athletic participation can affect academic achievement, with the goal of identifying concrete strategies to make learning environments at Stanford and similar universities more inclusive. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format.

Same as: AFRICAAM 165, PSYCH 165

**CSRE 165I. Afro-German Art Forms. 3-5 Units.**

The past few years has seen a growth in scholars investigating the complex identities and histories of Black/Afro-Germans. While other groups in the African Diaspora have one common story (i.e. slavery in the context of the Americas), the same cannot be said for Afro-Germans. Their stories are varied and cannot be explained with one narrative. This course seeks to introduce students to varied Afro-German voices and experiences through literature, film, and theory. Students in this course can expect to: develop skills in literary, art and performance analysis; weigh the historical, political, social, cultural and ideological aspects of race in Germany; think about the way Afro-Germans complicate German national identity; recognize contributions of Afro-Germans. This course will be taught in English, but German-speaking students are encouraged to read in the original.

Same as: AFRICAAM 165G, GERMAN 165

**CSRE 166B. Immigration Debates in America, Past and Present. 3-5 Units.**

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions.

Same as: HISTORY 166B, HISTORY 366B

**CSRE 167. Feminism and Contemporary Art. 4 Units.**

(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

Same as: ARTHIST 176, ARTHIST 376, FEMGEN 176

**CSRE 167C. Wandering in Strange Lands: Science Fiction of the Black Atlantic. 3-5 Units.**

African-American culture critic Greg Tate once remarked that "Black people live the estrangement that science fiction authors imagine. In light of his observation, this course proposes to look at the black science fiction (SF) tradition from a variety of angles. Some examples: How do black authors use familiar speculative tropes, such as encounters with aliens, to comment on matters of race? What happens when tropes from African-American realist fiction, such as the passing narrative, become science fictionalized? How does the intersection of race and gender affect speculative works by black women? And perhaps the most central question: What do we gain by looking at matters of race through the lens of SF?"

**CSRE 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CHILATST 168, FEMGEN 140H

**CSRE 16A. Dynamic Australia: immigrant and indigenous experiences. 1 Unit.**

How did modern Australian society take shape? Within this larger framework, several subsidiary questions will guide us: What have been the experiences of immigrants, of Aborigines and Torres Strait Islanders, and how have their relations evolved over time? To what degree has Australia been formed by successive waves of immigration? What has been the fate of the Aboriginal peoples? How have intergroup relations evolved since the start of colonialism in the late 18th century? What have been the elements of racial formation, and how have they changed over time? What does it mean to be Australian in the 21st century? How might the creative arts (e.g. music, literature, drama, painting, dance) help us understand Australian identities and intergroup dynamics? As a course project, students are required to informally interview someone whose life history has involved large-scale displacement, voluntary or otherwise. This is intended as a means of sharpening awareness of migration as a feature of modern world history as articulated at the level of individuals and communities. This course is primarily intended for students enrolled in or waitlisted for the BOSP Summer Seminar in Sydney (June-July 2016). However, all participants will find it a wide-ranging introduction to Australian society and a case study in intergroup dynamics.

**CSRE 170. Introduction to American Indian Literature. 5 Units.**

This course provides a general introduction to American Indian literatures, beginning with early translations, including oral literatures and autobiographies, and continuing with contemporary poetry and fiction written by American Indian writers. We will want to pay particular attention to the American Indian writers; connections to a specific locale or place. In what ways are the stories and poems evocative of a long-standing relationship to a "home landscape"? What is the nature of the relationship? How is that relationship to place similar to or different from our own? At the same time, we will want to pay attention to the nature and scope of the various representations of American Indians in the texts we examine, and ask how the representations reinforce and/or dispel popular and often stereotypical images of American Indian people. Finally, we will want to be aware of and understand our position as readers, particularly as readers who come from and are constituted by historical, social, political, cultural, and ethnic worlds different from or similar to the worlds we find in the books that we are reading.

Same as: NATIVEAM 170

**CSRE 171H. Mexicans in the United States. 5 Units.**

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: AMSTUD 271, CHILATST 171, HISTORY 271

**CSRE 174. History of South Africa. 5 Units.**

(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: AFRICAAM 147, HISTORY 147

**CSRE 174S. When Half is Whole: Developing Synergistic Identities and Mestiza Consciousness. 5 Units.**

This is an exploration of the ways in which individuals construct whole selves in societies that fragment, label, and bind us in categories and boxes. We examine identities that overcome the destructive dichotomies of *us* and *them*, *crossing* borders of race, ethnicity, culture, nation, sex, and gender. Our focus is on the development of hybrid and synergistic forms of identity and mestiza consciousness in which the whole is greater than the sum of its parts.

Same as: ASNAMST 174S

**CSRE 176S. Finding Meaning in Life's Struggles: Narrative Ways of Healing. 5 Units.**

We can find meaning in life's struggles through narrative ways of healing. The self-reflective, dynamic process of finding, telling, and living our stories connects us with our whole selves as well as with others. We find our stories through vulnerability and courage; tell them with humility and honesty; and live them authentically and responsibly. Our shared stories will focus on gratitude, acceptance, reconciliation, forgiveness and compassion, empowering us to overcome personal, community, and historical traumas and wounds. In a respectful, caring community we will discover our hidden wholeness by improvising with various experiential and embodied means of finding our stories; telling our stories in diverse ways, including writing, storytelling, music, and art; and living our stories by putting values into action.

Same as: TAPS 176S

**CSRE 177. Dramatic Writing: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: FEMGEN 177, TAPS 177, TAPS 277

**CSRE 177E. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, EDUC 177A, HUMBIO 29A

**CSRE 177F. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177B, EDUC 177B

**CSRE 177G. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177C, EDUC 177C

**CSRE 177I. Workshop with Young Jean Lee. 2-4 Units.**

Instructor Young Jean Lee is a playwright and director who will have two plays premiering on Broadway in 2018-2019. In this workshop, students will help to collaboratively perform, direct, and rewrite the script of one of these plays, which is about the intersection of class and race. The class will involve acting for students who want to act, directing for students who want to direct, and writing for students who want to write. The current character breakdown is as follows: 2 black women, 1 Asian-American woman, 1 Colombian woman, 1 Mexican-American man, 2 black men, 2 white women, 2 white men.

Same as: TAPS 177W, TAPS 277W

**CSRE 178. Ethics and Politics of Public Service. 3-5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

**CSRE 178B. Intensive Playwriting. 4 Units.**

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: TAPS 178B, TAPS 278

**CSRE 178P. The Science and Practice of Effective Advocacy. 3-5 Units.**

How can purposeful collective action change government policy, business practices and cultural norms? This course will teach students about the components of successful change campaigns and help develop the practical skills to carry out such efforts. The concepts taught will be relevant to both issue advocacy and electoral campaigns, and be evidence-based, drawing on lessons from social psychology, political science, communications, community organizing and social movements. The course will meet twice-a-week for 90 minutes, and class time will combine engaged learning exercises, discussions and lectures. There will be a midterm and final. Students will be able to take the course for 3 or 5 units. Students who take the course for 5 units will participate in an advocacy project with an outside organization during the quarter, attend a related section meeting and write reflections. If you enroll in the course for 5 units, you also need to enroll in the section URBANST 178-section 02.

Same as: PUBLPOL 178, URBANST 178

**CSRE 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 279C, FEMGEN 179C, TAPS 279C

**CSRE 17N. Race and Politics: Perspectives on the 2016 Presidential Election. 3 Units.**

This course is intended as a seminar-based exploration of the complex ways that race has informed political behavior and attitudes during the 2016 Presidential election. The class is designed to introduce freshmen to sociological ways of understanding the social world, and the rigors of college thinking more broadly. As a group we will explore the mechanisms through which race informs political behavior, while also paying close attention to the ways that politics also informs our understanding of race. The course treats race as multifaceted construct, with multiple (and often times conflicting) influences on political behavior. The course stresses then constructed nature of both race and politics. The course will be split into 3 parts. In the first part we will explore the relationship between racial identity and political behavior at the individual level. The second part of the course will examine how ideas about racial groups shape political attitudes and behaviors, as well as policy outcomes. The third part of the course will explore how race is used to mobilize political and economic actors.

Same as: AFRICAAM 17N, SOC 17N

**CSRE 180A. Foundations of Social Research. 4 Units.**

Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.

Same as: SOC 180A, SOC 280A

**CSRE 180B. Introduction to Data Analysis. 4 Units.**

Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses.

Same as: SOC 180B, SOC 280B

**CSRE 180E. Introduction to Chicana/Latina Studies. 5 Units.**

This course draws on intersectional and interdisciplinary approaches to introduce students to the range of issues, experiences, and methodologies that form the foundation of Latina/o/x studies. By considering the relationship between the creation of Latina and American identities, students will critically reconsider the borders that constitute the U.S. as a political and cultural formation. The course balances depth and breadth in its study of the variety of perspectives and experiences that come to be associated with U.S. Latinxs. Thus, we will analyze the histories of predominant U.S. Latinx sub-groups, such as Mexicans/Chicanxs and Puerto Ricans, while also incorporating considerations of the ways in which broader populations with ties to Central America, South America, and the Caribbean play crucial roles in constituting U.S. Latinx identities. Topics include the U.S./Mexico border and the borderlands; (im)migration and diaspora; literary and cultural traditions; music and expressive practices; labor and structural inequality; social movements; Latinx urbanism; gender and sexuality; political and economic shifts; and inter- and intra-group relations.

Sources include a range of social science and humanities scholarship. Same as: CHILATST 180E

**CSRE 181. Multicultural Issues in Higher Education. 4 Units.**

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

Same as: EDUC 181, EDUC 381

**CSRE 183. Re-Imagining American Borders. 5 Units.**

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual orientation, and class borders in the context of a current volatile national discussion about the place of Americans both here and in the world. How Anna Deavere Smith, Sherman Alexie, Shailja Patel or Ta-Nehisi Coates consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's 1986 conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these recent American narratives? Course includes creatively examining one's own identity.

Same as: AMSTUD 183, FEMGEN 183

**CSRE 185B. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 4-5 Units.**

(Same as HISTORY 85B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life – all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: HISTORY 185B, HISTORY 385C, JEWISHST 185B, REES 185B

**CSRE 186. The Psychology of Racial Inequality. 3 Units.**

Our topic is the psychology of racial inequality - thinking, feeling, and behaving in ways that contribute to racial stereotyping, prejudice, and discrimination, and how these processes in turn maintain and perpetuate inequality between racial groups. We will examine how these processes unfold at both the individual and the institutional levels. Throughout this course, you will familiarize yourself with the psychological perspectives, methods, and findings that help explain racial inequality, and we will explore ways to promote racial equality. The course will be conducted as a seminar, but most of what you learn will be through the readings and discussions. That is, this course is minimally didactic; the goal is to have you engage thoughtfully with the issues and readings spurred in part by sharing perspectives, confusions, and insights through writing and discussion. Each student will facilitate at least one class session by providing an introductory framework for the readings (~10-minute presentation with handouts that overviews the concepts, issues, and controversies). Together, we will broaden our knowledge base on the subject and explain, from a psychological perspective, the pervasiveness of racial inequality. Prerequisites: PSYCH 1 and PSYCH 10. Same as: PSYCH 186, PSYCH 286

**CSRE 187A. The Anthropology of Race, Nature, and Animality. 5 Units.**

As recently as the 40s, the S. Africa government labeled indigenous San people part of the animal landscape. Using the San example as a starting point, course examines socially, culturally, and politically constructed ideas about race, animality, and nature in the cultural and geographic settings of N. America, Australia, and Africa. How connections between race and nature have served as terrains of power through which people and governments have claimed territories and justified violence. Classic texts by nature writers and philosophers and current social science works that focus on race and ethnicity. Concepts such as gender, sex, and nature; environmental tourism; natural resource development; and indigeneity and animality. How ideas about race and nature have come together around concepts such as the myth of wilderness and the violence of considering certain people to be less-than-human. Issues of environmental politics and activism. Same as: ANTHRO 187A

**CSRE 188Q. Imagining Women: Writers in Print and in Person. 4-5 Units.**

Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects. Same as: FEMGEN 188Q

**CSRE 193. Jacob Lawrence's Twentieth Century: African American Art and Culture. 5 Units.**

This course explores African American art and culture through the lens of the Cantor Arts Center's rich holdings of work by Jacob Lawrence (1917-2000). Our approach will combine close looking with attention to Lawrence's cultural, political, and social contexts. Using Lawrence as starting point, we also will consider the work of African American artists such as Charles Alston, Norman Lewis, Aaron Douglas, Betye Saar, and Kara Walker in relation to historical events including the Harlem Renaissance, the Great Depression, World War II, and the Civil Rights Movement. Key themes include the interactions of art, music, and film; the history of radical black thought; as well as issues of curatorial display and conservation. Same as: ARTHIST 193

**CSRE 194KT. Topics in Writing & Rhetoric: The Last Hopi On Earth: The Rhetoric of Entertainment Inequity. 4 Units.**

While #OscarsSoWhite brought attention to the Academy's overwhelmingly White, male membership, the underbelly of the entertainment industry itself is rife with inequitable hiring of not only on-camera and on-stage performers but also directors, writers, and others behind the scenes. While there are several organizations from Racebending.com to the Geena Davis Institute on Gender in Media that seek to usher in more equitable representation, push back against the Industry's disparate employment practices has been documented for more than fifty years with what many argue is not proportionally positive movement. White males still garner almost half of all theatrical and television roles and represent more than 80% of episodic directors while entertainment hubs Los Angeles and New York City are more than 50% people of color and female. What will it take to attain equity in the entertainment industry? Why does it matter? In this course, students will examine rhetorical issues in promoting, defending, and opposing entertainment industry practices - writing and speaking across genres in persuasive response - and ultimately develop a collaborative 5-year strategic plan to usher in equity. This course is part of the PWR advanced elective track in Social and Racial Justice (SRJ). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For video course description, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/last-hopi-earth-rhetoric-entertainment-inequity>. Same as: PWR 194KT

**CSRE 194SS. Topics in Writing & Rhetoric: Making Rhetoric Matter: Human Rights at Home. 4 Units.**

'Human rights' often sounds like it needs defending in far-off places: in distant public squares where soldiers menace gatherings of citizens, in dark jails where prisoners are tortured for their politics, in unknown streets where gender inequality has brutal consequences. But Bryan Stevenson, a lawyer fighting for social and racial justice in the jails of Alabama, proposes that we try 'proximity': that we get close to the injustices that are already close to us. This class thus takes human rights as a local issue, focusing on how terms like 'human' and 'rights' are interpreted on our campus and in our neighborhoods, cities, and region. Instead of a traditional human rights policy framework, we'll use the lens of intersectional ethics to explore specific rhetorical issues in gender politics, citizenship, higher education, police brutality, and mass incarceration. We will write, speak, and move across genres, responding to the work of incarcerated artists, creating embodied workshops, 'translating' ideas into new media (does someone you know need an animated video about gender pronouns? Or maybe it's time for a podcast about #PrisonRenaissance?), doing collaborative research, and 'writing back' to our audiences. For course video and full description see: <https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/making-rhetoric-matter-human-rights-home>. This course is part of the PWR advanced elective track in Social and Racial Justice (SRJ). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>. Same as: PWR 194SS

**CSRE 196C. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section. Same as: ENGLISH 172D, PSYCH 155, SOC 146, TAPS 165

**CSRE 196D. Introduction to Comparative Studies in Race & Ethnicity: Continuing Community Engagement. 1-5 Unit.**

In this continuation of CSRE 196C, students will continue to develop an interactive map that explores race and community in the Bay Area, through the work of local musicians. In collaboration with the SF-based non-profit, PeaceTones, you will interview musicians and contribute to an online map. The working map can be found at [bayareamusicmap.weebly.com](http://bayareamusicmap.weebly.com). Students will complete readings to explore diversity in the arts, specifically focusing on policy and advocacy implications as we develop the map as a tool for this work. Students will also meet as a group every other week for 50 minutes to reflect and discuss the work (we will set a time that works for everyone) and submit bi-weekly reflections of 500 words.

**CSRE 198. Internship for Public Service. 1-5 Unit.**

Students should consult with CCSRE Director of Community Engaged Learning ([ddmurray@stanford.edu](mailto:ddmurray@stanford.edu)) to develop or gain approval for an internship that addresses race/ethnicity, public service, and social justice. Students will read a selection of short readings relevant to their placement, write bi-weekly reflections, and meet bi-weekly with the Director of Community Engaged Learning. Units are determined by the number of hours per week at the internship (2 hours/week = 1 unit; 5 hours/week = 2 units; 8 hours/week = 3 units; etc.) Group meetings may be required. May be repeated for credit.  
Same as: CHILATST 198

**CSRE 199. Preparation for Senior Thesis. 2-3 Units.**

This course is designed for juniors (majors, minors, and those seeking Interdisciplinary Honors in CSRE or FGSS) who intend to write a senior thesis in one of the CSRE Family of Programs or FGSS Interdisciplinary Honors. The course offers resources and strategies for putting together a significant and original senior thesis. Topics to be covered include: getting funding; finding an advisor; navigating the institutional review board; formulating an appropriate question; and finding the right data/medium/texts.

Same as: FEMGEN 199X

**CSRE 19N. Everyone Eats: Food, Religion and Culture. 3 Units.**

Food is one of the most essential aspects of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. In this seminar we will study how food habits have shaped religious traditions, and vice versa, how religious traditions have shaped food ways. Some traditions are centered around food regimens such as the dietary laws, derived from biblical law that shapes Jewish and Christian tradition very differently. Indeed, many religious and ethical thinkers, as well as anthropologists, have interpreted the meanings of the dietary laws very differently. Further, in many religious traditions the killing of animals and consumption of meat is deeply fraught. We will explore the history of food practices and their contemporary impact; the connections between food, religion, and identity; the meanings that religious thinkers and anthropologists have attributed to food habits; as well as the creative translations of religious traditions into contemporary food ethics by various social movements and groups, predominantly in the U.S.

Same as: JEWISHST 19N, RELIGST 19N

**CSRE 1A. My Journey: Conversations on Race and Ethnicity. 1 Unit.**

This course meets once a week for one hour, over lunch (provided). Students will meet with CSRE faculty who will share their work, their life stories, their reasons for believing that race and ethnicity are of central concern to all members of our society. Diverse fields will be represented: sociology, history, literature, psychology and others.

**CSRE 1V. A History of Race. 1 Unit.**

This course will survey the idea of race and its history. We will focus our attention on the construction of the idea of race, and we will trace the ways in which this concept has changed over time. The course will start with a panel discussion on definitions of race in history, and as presented in different academic disciplines today. This discussion will be followed by two lectures tracing histories of race from Antiquity until the twentieth century. The last session will be a roundtable on the continuing role of race in the United States today. Covered topics will include explicit and implicit bias, institutionalized racism, race and criminal justice, equal justice initiatives and protests, racial stratification. The roles of politics, economics, science, religion, and nationalism, as well as the relationships between race, gender, and class will also be discussed. This course meets 5 times: Attendance at a January 17 panel (<https://ccsre.stanford.edu/events/ccsre-faculty-seminar-series-panel-discussion>) and class on Feb 12, Feb 26, March 5 & March 12th.

**CSRE 200R. Directed Research. 1-5 Unit.**

.

**CSRE 200W. Directed Reading. 1-5 Unit.**

.

**CSRE 200X. CSRE Senior Seminar. 5 Units.**

Required for CSRE-related students, including those who opt to write honors theses in other departments and programs. Research and the writing of the senior honors thesis or senior paper under the supervision of a faculty project adviser. The process of research including conceptualization, development of prospectus, development of theses, research, analysis, and writing.

**CSRE 200Y. CSRE Senior Honors Research. 1-10 Unit.**

.

**CSRE 200Z. CSRE Senior Honors Research. 1-10 Unit.**

.

**CSRE 201. From Confederate Monuments to Wikipedia: The Politics of Remembering the Past. 5 Units.**

Gateway course for Public History/Public Service track. Examines various ways history is used outside of the classroom, and its role in political/cultural debates in the U.S. and abroad. Showcases issues and careers in public history with guest speakers.

Same as: AFRICAAM 102, HISTORY 201

**CSRE 201B. Making Meaning: Art, Culture & Social Change. 3 Units.**

Are you an artist seeking a greater purpose for your art? Would you like to gain a sense of history and best practices for engaging your community in creative work? Practice of and an awareness of the concerns relevant to public art did not begin with Serra's Tilted Arc in 1980s. In contrast to the concerns of public art projects in the western practice of public art as extensions of the museum, this course explores the creative expression that emanates from community and cultural tradition. In communities around the world publicly engaged art making has flourished through creative tradition and collective engagements in social life. These traditions fostered creative works as collective practice, democratic participation, and interventionist impulses. From Agosto Boals's Theater of the Oppressed, to El Teatro Campesino's Farmworker actos, to the Free Southern Theater, from the Fandango's of southern Veracruz, to muralism of Los Tres Grandes, and the SNCC Freedom Singers, this course links the history of community cultural expression of peoples around the globe as a means to expand contemporary concerns of public and socially engaged art beyond a strictly postmodern art context.

Same as: CHILATST 201B

**CSRE 201D. Public Art Interventions in Social & Cultural Spaces. 4-5 Units.**

This team-taught course brings long-time artists, organizers, and researchers to present a range of strategies for creating public art and cultural productions in various social and cultural spaces. Our exploration of public art engages ideas about social space and public discourse. An approach that finds parallels in the art history lexicon of community-based; social sculpture, and place-making to name a few of the movements identified as other than the fine arts, ours is centered on work made collectively and in social and lived spaces through dialogue and conversation with others.

**CSRE 201X. Senior Seminar: For students with a second CSRE Family major. 5 Units.**

Required for students working to fulfill WIM requirements for a second CSRE Family of Programs major; including those who opt to write honors theses in other departments and programs. Research and the writing of the senior honors thesis or senior paper under the supervision of a faculty project adviser. The process of research including conceptualization, development of prospectus, development of theses, research, analysis, and writing.

**CSRE 203H. Trauma and History. 2 Units.**

This course will examine trauma as a historical process, following the intergenerational impacts of history's darker dramas, analyzing collective strategies for coping and healing after trauma, and asking whether we can speak of "traumatized societies." Short readings and weekly discussions.

Same as: HISTORY 203K

**CSRE 20N. What counts as "race," and why?. 4 Units.**

Preference to freshmen. Seminar discussion of how various institutions in U.S. society employ racial categories, and how race is studied and conceptualized across disciplines. Course introduces perspectives from demography, history, law, genetics, sociology, psychology, and medicine. Students will read original social science research, learn to collect and analyze data from in-depth interviews, and use library resources to conduct legal/archival case studies.

Same as: SOC 20N

**CSRE 21. African American Vernacular English. 3-5 Units.**

Vocabulary, pronunciation and grammatical features of the systematic and vibrant vernacular English [AAVE] spoken by African Americans in the US, its historical relation to British dialects, and to English creoles spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The course will also explore the role of AAVE in the Living Arts of African Americans, as exemplified by writers, preachers, comedians and actors, singers, toasters and rappers, and its connections with challenges that AAVE speakers face in the classroom and courtroom. Service Learning Course (certified by Haas Center). UNITS: 3-5 units. Most students should register for 4 units. Students willing and able to tutor an AAVE speaking child in East Palo Alto and write an additional paper about the experience may register for 5 units, but should consult the instructor first. Students who, for exceptional reasons, need a reduced course load, may request a reduction to 3 units, but more of their course grade will come from exams, and they will be excluded from group participation in the popular AAVE Happenin at the end of the course.

Same as: AFRICAAM 21, LINGUIST 65, LINGUIST 265

**CSRE 216X. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.**

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, AMSTUD 216, EDUC 216, HISTORY 255E

**CSRE 217. Expanding Engineering Limits: Culture, Diversity, and Gender. 2-3 Units.**

This course investigates how culture, and diversity, including gender, shape who becomes an engineer, what problems get solved, and the quality of designs, technology, and products. We first examine the characteristics of engineering cultures – what are the interactions, symbols and ideas, and practices that define engineering? We then investigate how gender and other markers of diverse identities are interdependent and culturally constructed, how gender and other kinds of diversity are experienced in engineering cultures, and how these experiences have consequence for engineering innovation and the engineering profession. Finally, we analyze examples of cultural change in engineering and implications for engineering knowledge and practice. The course involves weekly presentations by distinguished scholars and engineers, readings, short writing assignments, small-group discussion, and exercises around one's own experiences in and related to engineering. Those taking the course for 3 units will also complete a research-based project, and must take the course for a letter grade to meet the undergraduate WAY-ED requirement.

Same as: CSRE 117, ENGR 117, FEMGEN 117, FEMGEN 217

**CSRE 218. Islam, Race and Revolution: A Pan-American Approach. 3-5 Units.**

Taking a pan-American approach to the study of religious traditions, this upper-level course traces the history of the critical intersection between race, religion and revolution among Muslims from the turn of the nineteenth century until the present day. Moving from the Atlantic Revolutions of the late eighteenth and early nineteenth centuries, to the United States, to the decolonizing Third World, and then finally to the contemporary Middle East, this class will emphasize that Islam and race together have been used by many groups in order to challenge existing power structures, agitate for change, and more than occasionally, transform the social, cultural and governmental structures comprising their worlds. Moreover, although this class is concentrated upon religious formations in the Americas, students will explore global events throughout the Muslim world in order to examine how global politics contribute to religious formations, solidarities and identities. At the conclusion of this course, students will be expected to write a 10-15 page research paper, and a topic will be chosen in consultation with the instructor. Students will also be expected to write weekly reflection papers, which will serve to facilitate class discussion. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.

Same as: AMSTUD 218, RELIGST 218, RELIGST 318

**CSRE 21N. How to Make a Racist. 3 Units.**

How do children, with no innate beliefs or expectations about race, grow up to be racist? To address this complex question, this seminar will introduce students to the cognitive, social, and cultural factors that contribute to the development of racial stereotyping, prejudice, and discrimination. We will begin by defining key concepts (e.g., 'What is race and what is racism?'), and will then take a developmental approach to examine racist thought from early childhood until adulthood. The seminar will include lectures that will provide an introduction to each topic. These lectures will be supplemented by readings and discussion. Students will engage thoughtfully and critically with the topics and readings by sharing experiences, perspectives, confusions, and insights through discussion and in writing. Students with diverse experiences and perspectives will be welcomed and encouraged to participate.

Same as: AFRICAAM 121N, PSYCH 21N

**CSRE 220. Public Policy Institute. 1-2 Unit.**

\*\* This course meets and concludes prior to Autumn Quarter. If you were not a student in this year's PPI, please DO NOT ENROLL. \*\*  
Public Policy Institute serves to: provide students with information and perspectives on important public policy issues that have particular relevancy to matters of race and ethnicity in American society, past and present; expose students to faculty and other professionals working on public policy-related issues; and provide insight into the legislative process of public policy making at the state and local levels. Students are expected to conduct research necessary to write a policy brief on a particular issue, and make a presentation based on the policy brief. A field trip to Sacramento introduces students to policymakers and current policy matters of importance to marginalized communities in California.

**CSRE 221. Sentencing, Corrections, and Criminal Justice Policy. 3 Units.**

This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore sentencing theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, the effectiveness of rehabilitation, the relationship between sanctions and crime, and the consequences of prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation, and either: (1) three reflection papers of 5 to 7 pages each, or (2) a longer research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the research (R) requirement, with consent of the instructor. Elements used in grading: Class participation, reflection papers or research paper. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 221) and open to Juniors and Seniors, Law (LAW 621), Public Policy (PUBLPOL 221). Same as: PUBLPOL 221

**CSRE 221D. Peacemaking Circles: Crafting Challenging Conversations in a Conflicted World. 3 Units.**

Explore indigenous cultural methods of navigating and resolving conflict while developing and designing new tools to promote peace across Native America. Peacemaking is a form of conflict resolution that has been traditionally used by indigenous communities and continues to have a strong presence in many tribal judicial systems today. Throughout this interactive, skills-based course students will practice and design for the art of Peacemaking and conflict-resolution. Students can expect to unpack the components of strong listening, leadership, and effective cultural competency-- abilities that are crucial in any conflict situation. By exposing students to Peacemaking, the psychology behind decision making, and design thinking, we challenge students to rethink the structures currently in place to handle conflict.   
The only background skills necessary for this course are a dedication to participate and interact with the class and a willingness to embrace diverse perspectives.   
Course meets 9:30am-5:00pm in d.School room 160 on the following dates: Jan 11-12, Jan 25-26, Feb 9, Mar 8-9. Same as: NATIVEAM 221

**CSRE 222. The Political Psychology of Intolerance. 5 Units.**

This seminar explores the political psychology of intolerance. It focuses on two problems in particular: race in America and the challenge of Muslim inclusion in Western Europe. It concentrates on primary research. The readings consist of both classic and contemporary (including on-going) studies of prejudice and politics. Same as: POLISCI 222

**CSRE 223. Building Creative Cultures in Organizations. 4-5 Units.**

\*\*We will be visiting partner organizations off campus on Wednesdays during class. Therefore, we would strongly encourage students to plan their schedules including extra travel time to and from Stanford. All organizations should be within a 30 minute drive to campus.   
\*\*To apply for the class, submit an application: [https://docs.google.com/forms/d/e/1FAIpQLSeGrrVae\\_2PkTXhYRrIhv0AXK8KsITFsvZeMcTImMgix6LrxA/viewform](https://docs.google.com/forms/d/e/1FAIpQLSeGrrVae_2PkTXhYRrIhv0AXK8KsITFsvZeMcTImMgix6LrxA/viewform)   
\*\*For more information, check out the course website: <https://dschool.stanford.edu/classes/building-creative-culture-in-organizations>   
Students will spend half of their class time at the d.school and half of their class time at organizations across Silicon Valley, ranging from startups to large enterprises. Through empathy interviews with employees you will learn to identify facilitators and barriers that organizations face when they transition to human-centered and design thinking culture. You will design and test interventions that will help them enhance their creative culture. The course is highly experiential and interdisciplinary. Come ready to unpack the biggest challenges of creative teams, explore interesting companies, connect with engaging thought leaders, and reflect on the future of work.

**CSRE 226. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, POLISCI 226, POLISCI 326

**CSRE 226X. Curating Experience: Representation in and beyond Museums. 2-4 Units.**

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience. (This course must be taken for a minimum of 3 units to satisfy a Ways requirement.)

Same as: AMSTUD 226X, EDUC 226

**CSRE 227. Juvenile Crime, Juvenile Justice. 3 Units.**

Juveniles are accorded special status under the American legal system. This introductory course will examine the historical precedents and philosophical reasons for treating juveniles differently from adults, and review empirical evidence about child development that can illuminate the reasons for their special status within the court system. Students will learn about the distribution of juvenile delinquency and the impact of significant social and institutional influences on delinquency: family, school, peers, and drugs. The course will also provide a detailed overview of the juvenile system, from its beginning to the current state of the institution, which will include a review of police work with juveniles, pretrial procedures, and the juvenile court and corrections systems. Major court rulings that have shaped contemporary juvenile justice will be presented. Finally, the course will consider dispositional options available to Courts, and will identify the most effective in reducing delinquency. By the conclusion of this course, students should have an understanding of the juvenile justice system and how it compares with the adult justice system, what programs work to reduce recidivism, and be cognizant of some of the major legal and policy issues confronting that system today. The course format will combine lecture, group discussions, and guest presentations. Students may also have the opportunity to observe the juvenile justice system first hand by attending a juvenile court session, visiting a correctional facility for adjudicated delinquents, and hearing directly from those who work with high-risk youth on probation or in the community. Written Work. Each student will write four reflection papers, 5-7 pages each (about 1,700 words) over the quarter. Due dates will be listed in the class syllabus. Elements used in grading: Final grades will be based on the four reflection papers (20% each) and class participation (20%). This course is open to 2Ls, and 3Ls in the Law School. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 227); open to Juniors and Seniors.

**CSRE 229. Racial Justice Through Law. 3 Units.**

Racial inequality pervades American life. Race related controversies arise with depressing regularity. This, more than half a century after the Supreme Court's landmark decision in *Brown v Board of Education*, after landmark federal civil rights legislation, and at a time when many Americans profess to be colorblind. This course will examine why and how racial injustice persists, and the role of law in furthering or impeding the cause of racial justice. These questions will be explored across a variety of settings, including criminal justice, college admissions, political participation, primary/secondary education, employment, housing, hate speech, and the formation of family relationships. The class will employ a discussion based approach in which student participation is essential. Elements used in grading: Exam, class participation. Open to Junior and Senior undergraduates. Meets along with LAW 229.

**CSRE 230. Law, Order & Algorithms. 3 Units.**

Data and algorithms are transforming law enforcement and criminal justice, a shift that is ripe for rigorous empirical and narrative exploration. This class is centered around several data-driven projects in criminal justice, with the goal of fostering greater understanding, transparency, and public accountability. Students work in interdisciplinary teams, using a combination of statistical and journalistic methods. Some of the work may be published by news organizations or may be used to advance data journalism investigations. Students with a background in statistics, computer science, law, public policy or journalism are encouraged to participate. Enrollment is limited, and project teams will be selected during the first week of class.

Same as: MS&E 330, SOC 279

**CSRE 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.**

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: AFRICAAM 233A, EDUC 233A

**CSRE 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: EDUC 145, EDUC 243

**CSRE 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.**

This seminar will explore the impact and relative salience of racial/ethnic identity on select issues including: discrimination, social justice, mental health and academic performance. Theoretical perspectives on identity development will be reviewed, along with research on other social identity variables, such as social class, gender and regional identifications. New areas within this field such as the complexity of multiracial identity status and intersectional invisibility will also be discussed. Though the class will be rooted in psychology and psychological models of identity formation, no prior exposure to psychology is assumed and other disciplines-including cultural studies, feminist studies, and literature-will be incorporated into the course materials.

Same as: AFRICAAM 245, EDUC 245

**CSRE 246. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: AFRICAAM 236, AMSTUD 246, HISTORY 256G, HISTORY 356G, RELIGST 246, RELIGST 346

**CSRE 249. The Algerian Wars. 3-5 Units.**

From Algiers the White to Algiers the Red, Algiers, the Mecca of the Revolutionaries in the words of Amilcar Cabral, this course offers to study the Algerian Wars since the French conquest of Algeria (1830-) to the Algerian civil war of the 1990s. We will revisit the ways in which the war has been narrated in literature and cinema, popular culture, and political discourse. A special focus will be given to the Algerian War of Independence (1954-1962). The course considers the racial representations of the war in the media, the continuing legacies surrounding the conflict in France, Africa, and the United States, from Che Guevara to the Black Panthers. A key focus will be the transmission of collective memory through transnational lenses, and analyses of commemorative events and movies. nReadings from James Baldwin, Assia Djebar, Albert Camus, Frantz Fanon, Mouloud Feraoun. Movies include "The Battle of Algiers," "Days of Glory," and "Viva Laldjérie." nTaught in English.

Same as: FRENCH 249, HISTORY 239G, JEWISHST 249

**CSRE 252C. The Old South: Culture, Society, and Slavery. 5 Units.**

This course explores the political, social, and cultural history of the antebellum American South, with an emphasis on the history of African-American slavery. Topics include race and race making, slave community and resistance, gender and reproduction, class and immigration, commodity capitalism, technology, disease and climate, indigenous Southerners, white southern honor culture, the Civil War, and the region's place in national mythmaking and memory.

Same as: AFRICAAM 252C, HISTORY 252C

**CSRE 255D. Racial Identity in the American Imagination. 4-5 Units.**

From Sally Hemings to Barack Obama, this course explores the ways that racial identity has been experienced, represented, and contested throughout American history. Engaging historical, legal, and literary texts and films, this course examines major historical transformations that have shaped our understanding of racial identity. This course also draws on other imaginative modes including autobiography, memoir, photography, and music to consider the ways that racial identity has been represented in American society. Most broadly, this course interrogates the problem of American identity and examines the interplay between racial identity and American identity.

Same as: AFRICAAM 255, AMSTUD 255D, HISTORY 255D, HISTORY 355D

**CSRE 256SI. Race, Class and Global Health. 2 Units.**

This course's goal is to critically engage students in the socioeconomic and racial disparities in healthcare outcomes and encourage students to think broadly about the complex relationship between institutions, healthcare providers, socioeconomic status, and race/ethnicity. The topics will center on conceptual issues important for understanding how socioeconomic and minority status can lead to poor health outcomes examining how conscious and unconscious institutional biases affect treatment, care, and access, and addressing proposals for how to reduce disparities in health care. The focus of the course is broad. The first three weeks will center on public health issues due to global healthcare trends, including the results of disparities in the United States. These discussions will frame our sessions in the latter six weeks, which will each consist of a case study of specific cases of disparities and response to such inequities worldwide, from India to Rwanda. Each class's discussion will be guided by case studies. The readings will come from a variety of sources, including academic journals, more popular journals and magazines, books and government documents. Student will be expected to complete the readings and a reflection in advance of class each week. Each week will additionally include optional readings that will guide additional discussion.

Same as: MED 256SI

**CSRE 258. Black Feminist Theater and Theory. 4 Units.**

From the rave reviews garnered by Angelina Weld Grimke's lynching play, Rachel to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorriane Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan-Lori Parks, Ntozake Shange, Pearl Cleage, Sarah Jones, Anna DeVeare Smith, Alice Childress, Lydia Diamond and Zora Neale Hurston.).

Same as: AFRICAAM 258, FEMGEN 258X, TAPS 258

**CSRE 260. California's Minority-Majority Cities. 4-5 Units.**

Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

Same as: HISTORY 260, URBANST 169

**CSRE 262C. African American Literature and the Retreat of Jim Crow. 5 Units.**

After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the "new liberalism."

Same as: AFRICAAM 262C, AMSTUD 262C

**CSRE 268C. Poverty in America. 4-5 Units.**

During the twentieth century, Americans launched numerous bold efforts to reduce poverty in the United States. Federal welfare policy, community-based programs, academic research, philanthropic charity, and grassroots activism committed time and resources to the cause, but poverty—and inequality—have persisted. Why? This seminar considers the origins, implementation, and consequences of these remedies, noting in particular how race, gender, citizenship, family composition, and geography have shaped the lives of those in poverty and the public and private responses to it.

Same as: AMSTUD 268C, HISTORY 268C, HISTORY 368C

**CSRE 272A. Teaching Mexican American History in High School. 5 Units.**

The purpose of the course is two fold: 1) to expose students to salient historical themes and topics in Mexican American history, and 2) to establish a mentoring project with students currently enrolled in Mexican American history courses at Luis Valdez Leadership Academy (LVLA) high school in San Jose. Students will gain a broad understanding of Mexican American history, especially since the early twentieth century, with a particular focus on the Chicano Movement of the 1960s and 1970s. Students must also commit to enrollment in Hist 272F in spring quarter.

Same as: CHILATST 272A, HISTORY 272D

**CSRE 272B. Teaching Mexican American History in High School, Part II. 5 Units.**

Prerequisite: HISTORY 272D. This course is the second part of a continuing course about teaching Mexican American history in high school. In addition to continuing the mentoring work with students at Luis Valdez Leadership Academy, the spring quarter course will focus on the conceptualization, design, and development of a website that will provide resources for U.S. history teachers who seek information about Mexican American history. Students will identify primary sources, bibliographies, lesson plans, and other materials for use by high school teachers.

Same as: CHILATST 272B, HISTORY 272F

**CSRE 273. Caribbean Migration to the United States. 4-5 Units.**

The course will explore the history of Caribbean migration to the United States.

Same as: AFRICAAM 273C, HISTORY 273C, HISTORY 373C

**CSRE 275B. History of Modern Mexico. 4-5 Units.**

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Same as: AMSTUD 275B, CHILATST 275B, HISTORY 275B, HISTORY 375C

**CSRE 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, FEMGEN 179C, TAPS 279C

**CSRE 27SI. Revolution and the Pilipinx Diaspora: Exploring Global Activism in Local Communities. 1-2 Unit.**

This course aims to provide students with an opportunity to not only learn about current issues in the local Filipino American community, but also develop their own plans to take action on social justice issues. Through mediums of art and reflection, we will explore themes of diaspora and liberation by focusing on the Filipino experience and the local and vocal histories of activism in the Bay Area. We will be connecting local histories to the current global narrative while also connecting our past to our own identity formation as activists and community leaders. In doing so, we hope to explore the implications of local activism within the greater context of global organizing. The course will expose students to local community leaders and ways in which they can support and plug in to local initiatives.

**CSRE 28SI. What is Whiteness? Historical and Contemporary Definitions of White Racial Identity in the U.S.. 1-2 Unit.**

This course will explore one central question: What does it mean to be White, and how has that changed over time and place? From Abigail Fisher to Kreyshaw to the Tsarnaev brothers, we will use narratives and experiences of Whiteness to illuminate historical and contemporary understandings of what it means to be White in 2013. Through this class, students will share their own encounters with Whiteness, and will develop tools and strategies for navigating privileged identities and engaging within Stanford's diverse student community.

**CSRE 295F. Race and Ethnicity in East Asia. 4-5 Units.**

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day.

Same as: ASNAMST 295F, HISTORY 295F, HISTORY 395F

**CSRE 29SI. Migration is Beautiful: Histories, Realities, and Policies of Immigrant Justice. 1 Unit.**

In the current political landscape, many political stakeholders have endorsed anti-immigrant policies using inflammatory rhetoric that has disturbed American attitudes toward immigration. This course challenges the underlying assumptions of this discourse. We will begin by analyzing the history of immigration policy and politics in the United States. We will discuss specific issues related to border control, detention, and law enforcement and then delve into the intersections of immigration, criminal justice, health, and education policies. Throughout, we will emphasize the importance of using empirical data and personal narratives when analyzing and participating in the contemporary discourse on immigration-related issues.

**CSRE 30N. The Science of Diverse Communities. 3 Units.**

This course is an exploration. Most generally, its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities - all with a particular focus on educational communities like schools, universities, academic disciplines, etc., but with the hope that such principles might generalize to other kinds of organizations and the broader society. The readings range from those on the origins of human communities and social identities to those on intergroup trust building. They also aim to embed our discussions in the major diversity issues of the day, or example, what's in the news about campus life. Thus the course has a practical purpose: to develop testable ideas for improving the comfort level, fairness and goodness-for-all of identity diverse communities—especially in educational settings. The course also has a basic science purpose: to explore the psychological significance of community. Is there a psychological need for community? Is there something about a need for community that can't be reduced to other needs, for example, for a gender, racial or sexual-orientation identity? How strong is the need for community against other needs? What kinds of human groupings can satisfy it? In meeting this need, can membership in one community substitute for membership in others? What do people need from communities in order to thrive in them? Do strong diverse communities dampen intergroup biases? Can strong community loyalty mitigate identity tensions within communities? Such questions, the hope is, will help us develop a more systematic understanding of the challenges and opportunities inherent in diverse human communities.

Same as: EDUC 30N, PSYCH 30N, SOC 179N

**CSRE 30Q. The Big Shift. 4 Units.**

Is the middle class shrinking? How do people who live at the extremes of American society- the super rich, the working poor and those who live on the margins, imagine and experience "the good life"? How do we understand phenomena such as gang cultures, addiction and the realignment of white consciousness? This class uses the methods and modes of ethnographic study in an examination of American culture. Ethnographic materials range from an examination of the new American wealth boom of the last 20 years (Richistan by Robert Frank) to the extreme and deadly world of the invisible underclass of homeless addicts on the streets of San Francisco (Righteous Dopefiend by Phillippe Bourgois and Jeff Schonberg). The experiences of Hispanic immigrants and the struggle to escape gang life in Los Angeles are highlighted in the story of Homeboy Industries a job creation program initiated by a priest working in LA's most deadly neighborhoods (G-Dog and the Homeboys by Celeste Fremon). Finally in Searching for Whitopia: an improbable journey into the heart of White America, Rich Benjamin explores the creation of ethnic enclaves (whitopias) as fear over immigration and the shrinking white majority redefine race consciousness in the 21st century. Each of these narratives provides a window into the various ways in which Americans approach the subjects of wealth and the good life, poverty and the underclass, and the construction of class, race, and gender in American society. Students will not be required to have any previous knowledge, just curiosity and an open mind.

Same as: ANTHRO 30Q

**CSRE 30SI. Housing Justice and Stratification in the Bay Area. 1 Unit.**

This is a survey course on relevant topics to local housing justice concerns, including current debates in housing policy and the role of various sectors in shaping the local housing market. This course will prepare participants to both personally engage in service learning and critically engage with actors in housing policy over spring break. To begin, we will explore paradigms of critical community engagement and develop a decolonized framework about the history of the local land. With these underlying philosophies in mind, we will dive into the politics behind ongoing gentrification, the rise of the city and the decline of suburbs in the Bay Area. From there, we will analyze housing policies which have strongly influenced the local housing situation, including national policies such as the Fair Housing Act and East Palo Alto affordability measures. To close, the course will focus on the role of different actors and sectors in affecting change. We will examine possible obligations local technology companies and real estate developers might have in shaping the region's housing market. Finally, we will study the notion of housing as a human right and ask whether achieving housing justice would require a formally declared right to affordable and fair housing.

**CSRE 31SI. Food + Race. 1 Unit.**

If we are what we eat, Food + Race is a class that explores what we eat and how we talk about it. In this student-initiated course, we will look at popular culture and discourse as a gateway to issues like just labour practices and equitable access, cultural authenticity, family histories of immigration, appropriation and consumerism, and global colonial domination. From The Great British Bake Off to Korean tacos in L.A., we'll ask "What does food really mean?" and "What does food really mean to us?"

**CSRE 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.**

This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.

Same as: ANTHRO 32

**CSRE 32A. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, EDUC 32, EDUC 432, TAPS 32

**CSRE 32SI. Whiteness. 1-2 Unit.**

This course provides an introduction to the concept of Whiteness. We will investigate the historical origin of "Whiteness" and "White people," examine some of the institutional and interpersonal privileges associated with Whiteness, and explore contemporary debates about White entitlement, White culture, and White charity. As we are articulating the problem of Whiteness, we will also be exploring strategies and models of "White allyship," and asking the surprisingly difficult questions of: How can White people work for racial justice, and how can people of all races work to disrupt Whiteness and White Supremacy? This class is intended for students of all majors and backgrounds interested in learning about Whiteness.

**CSRE 33SI. Examining Access for FLI Students in Higher Education. 1 Unit.**

Stanford's past two presidents have steadfastly declared Stanford as a vehicle of upwards mobility and to correct inequalities. Essentially, this means providing sufficient access to students who often are most in need: first-generation and/or low-income (FLI) students. However, what exactly is access? How can we understand different kinds of access in order to improve the holistic quality of education students receive? To answer these questions, we will define access and the forces which shape it, such as economic systems, intersectionality, and the educational pipeline. Next, to better prepare ourselves as advocates for educational improvement, we will examine the historical trend of access at colleges as case studies (Stanford, Berkeley, Foothills, and Brown). Finally, we will ask how accessibility influences how students fare after leaving the educational system. Ultimately, we will gain analytical and heuristic techniques to pinpoint and advocate for improvements to educational access for FLI students.

**CSRE 34SI. The Chicago Gap: Bridging Latinx Youth Education. 1 Unit.**

By the year 2050, Latinos will make up a quarter of the United States population, doubling in its current size. Without a doubt, this increase in population is sure to affect American economy and policy. Unfortunately, Latinos seem to be on the slow path to social mobility in the United States, and face many setbacks as a community. More specifically, the Latinx pupil dropout rate is the highest amongst all ethnic groups. While Latinos are enrolling in college at higher rates than ever before they are not graduating with four-year degrees as often as other students. Our course will cover the dynamic linguistic, cultural, and economic themes involved in this discourse. We will reimagine citizenship as it pertains to accessing higher education and discuss tracks and pipelines that have lead Latinx students to different outlets. More specifically, we will cover the impact that location and environment have on a pupil's perception of themselves and their capabilities, while also reflecting on Chicago's history of education and racial segregation.

**CSRE 36. REPRESENT! Covering Race, Culture, and Identity In The Arts through Writing, Media, and Transmedia.. 5 Units.**

Probably since the first audience formed for the first chalk scrawls in a cave, there have been storytellers to narrate that caveperson's art and life, and critics to troll that caveperson's choice and usage of color. And so it goes. This course is an exploration into how to cover race, culture, and identity in the arts in journalism, such as print, web, video, radio, and podcasting. It is also an arts journalism practicum. During the quarter, we will be working toward creating work that is publishable in various venues and outlets. In this course, we will be discussing exemplary arts writers and their works and interrogating critical questions around race, identity, representation, and ethics. Experienced journalists, editors, and experts from different platforms and backgrounds will also be imparting important skills and training that will help you to navigate today's working media and transmedia environments. Those who enroll in the class will be expected to produce quality content (e.g. articles, blog posts, video reports, podcasts) for media outlets. Some travel outside of class may be required for additional reporting and training. This seminar class will be By Instructor Approval Only. Please submit an application by February 22 at 11:59pm. Starred items are required. The app is available at: <http://bit.ly/RepresentClass36> Those selected for this class will be informed by March 2nd so that they may enroll in the course. Please do not apply for the course if you are unsure about completing it. If you have any questions, you may email the instructor at: [jeffc410@stanford.edu](mailto:jeffc410@stanford.edu). Same as: AFRICAAM 36

**CSRE 38. Deliberative Democracy Practicum: Applying Deliberative Polling. 3-5 Units.**

In this course, students will work directly on a real-world deliberative democracy project using the method of Deliberative Polling. Students in this course will work in partnership with the Center for Deliberative Democracy at Stanford, a research center devoted to the research in democracy and public opinion around the world. This unique practicum will allow students to work on an actual Deliberative Polling project on campus. In just one quarter, the students will prepare for, implement, and analyze the results for an Deliberative Polling project. This is a unique opportunity that allows students to take part in the entire process of a deliberative democracy project. Through this practicum, students will apply quantitative and qualitative research methods in a local community or local high school and subsequently, analyze the relevant quantitative and qualitative data. Students will explore the underlying challenges and complexities of what it means to actually do community-engaged research in the real world. As such, this course will provide students with skills and experience in research design in deliberative democracy, community and stakeholder engagement, and the practical aspects of working in local communities. This practicum is a collaboration between the Center for Deliberative Democracy, the Bill Lane Center for the American West and the Haas Center for Public Service. nnCDD website: <http://cdd.stanford.edu> Bill Lane Center website: <http://west.stanford.edu> Haas Center website: <https://haas.stanford.edu>. Same as: COMM 138, COMM 238

**CSRE 385. Race, Ethnicity, and Language: Pedagogical Possibilities. 3-4 Units.**

This seminar explores the intersections of language and race/racism/ racialization in the public schooling experiences of students of color. We will briefly trace the historical emergence of the related fields of sociolinguistics and linguistic anthropology, explore how each of these scholarly traditions approaches the study of language, and identify key points of overlap and tension between the two fields before considering recent examples of inter-disciplinary scholarship on language and race in urban schools. Issues to be addressed include language variation and change, language and identity, bilingualism and multilingualism, language ideologies, and classroom discourse. We will pay particular attention to the implications of relevant literature for teaching and learning in urban classrooms. Same as: EDUC 389C

**CSRE 389A. Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations. 3-5 Units.**

Language, as a cultural resource for shaping our identities, is central to the concepts of race and ethnicity. This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. We begin with an examination of the concepts of race and ethnicity and what it means to be "doing race," both as scholarship and as part of our everyday lives. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations (Asian, Black, Latino, Native American, White, etc.) participate in similar, yet different, ways of drawing racial and ethnic distinctions. The seminar will draw heavily on scholarship in (linguistic) anthropology, sociolinguistics and education. We will explore how we talk and don't talk about race, how we both position ourselves and are positioned by others, how the way we talk can have real consequences on the trajectory of our lives, and how, despite this, we all participate in maintaining racial and ethnic hierarchies and inequality more generally, particularly in schools. Same as: ANTHRO 320A, EDUC 389A, LINGUIST 253

**CSRE 3E. Michelle Obama in American Culture. 1 Unit.**

Never before has the United States had a First Lady like Michelle Obama. During her eight years in the White House, Michelle Obama transformed traditional meanings of womanhood, marriage, motherhood, and style and created new possibilities for what it means to be strong and what it means to be beautiful. No First Lady has ever been so scrutinized but also so beloved: from her J. Crew dresses to her Let's Move campaign, from her vegetable gardens to her chiseled arms, and from her powerful speeches to her casual and always authentic personality. This class examines the impact on American culture of the most popular First Lady in American history. Same as: AFRICAAM 3E, AMSTUD 3E, FEMGEN 3E, HISTORY 3E

**CSRE 41. Black & White Race Relations in American Fiction & Film. 3-5 Units.**

Movies and the fiction that inspires them; power dynamics behind production including historical events, artistic vision, politics, and racial stereotypes. What images of black and white does Hollywood produce to forge a national identity? How do films promote equality between the races? What is lost or gained in film adaptations of books? NOTE: Students must attend the first day; admission to the class will be determined based on an in class essay. Same as: AFRICAAM 101, AMSTUD 101

**CSRE 41A. Genes and Identity. 3 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race. Same as: AFRICAAM 41, ANTHRO 41

**CSRE 44. Living Free: Embodying Healing and Creativity in The Era of Racial Justice Movements. 1-4 Unit.**

What does it mean to live free? It is often said that the one demand for the Movement for Black Lives is to "stop killing us." This demand has led Black artists, thinkers, organizers, and healers to envision work and embody practices that resist the subjugation and erasure of their bodies. This surge of creativity has impacted and intersected with work happening in queer and trans communities and in many other communities of color, including indigenous movements for safe and clean water, student protests against campus racism, the undocumented movement, prison abolition among others. This justice based work urges us to interrupt systems of violence with systems of healing that recover traditions, invent new modalities, and connect to survival practices developed by many generations of people in community. In this course we will bring together leading artists, thinkers, organizers, and healers to envision work and embody practices that resist the subjugation and erasure of their bodies, land, and natural resources. In this course we ask: what does it mean to embody health? How can we shift frameworks of pathology into frameworks of wholeness? What practices can we develop, recover, and share that help us create systems that support and value equity, healing and creativity for communities most at risk? And finally, how can we all live free? Same as: AFRICAAM 144

**CSRE 45Q. Understanding Race and Ethnicity in American Society. 4 Units.**

Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. Same as: SOC 45Q

**CSRE 47Q. Heartfulness: Mindfulness, Compassion, and Responsibility. 3 Units.**

We practice mindfulness as a way of enhancing well-being, interacting compassionately with others, and engaging in socially responsible actions as global citizens. Contemplation is integrated with social justice through embodied practice, experiential learning, and creative expression. Class activities and assignments include journaling, mindfulness practices, and expressive arts. We build a sense of community through appreciative intelligence, connected knowing, deep listening and storytelling.

**CSRE 50Q. Life and Death of Words. 4 Units.**

In this course, we explore the world of words: their creation, evolution, borrowing, change, and death. Words are the key to understanding the culture and ideas of a people, and by tracing the biographies of words we are able to discern how the world was, is, and might be perceived and described. We trace how words are formed, and how they change in pronunciation, spelling, meaning, and usage over time. How does a word get into the dictionary? What do words reveal about status, class, region, and race? How is the language of men and women critiqued differently within our society? How does slang evolve? How do languages become endangered or die, and what is lost when they do? We will visit the Facebook Content Strategy Team and learn more about the role words play in shaping our online experiences. Together, the class will collect Stanford language and redesign the digital dictionary of the future. Trigger Warning: Some of the subject matter of this course is sensitive and may cause offense. Please consider this prior to enrolling in the course.

Same as: ENGLISH 50Q, FEMGEN 50Q, LINGUIST 50Q, NATIVEAM 50Q

**CSRE 50S. Nineteenth Century America. 3 Units.**

(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AFRICAAM 50B, HISTORY 50B

**CSRE 51K. Election 2016. 1 Unit.**

The 2016 Presidential Election season has been anything but ordinary. So much in the Democratic and Republican primaries consistently defied conventional wisdom and upended the predictions of experts. This course will attempt, with the help of distinguished guests, to make sense of an election that defies all historical precedent and to take stock of the health of American democracy. Class is jointly offered for Continuing Studies students and Stanford students. As a 1 unit, online course for Stanford students, enrollment is unlimited. Registration for the course offers online access to a livestream of each class session, participation in online discussions, access to course website and materials, and admission to a lottery for attending each class in person.

Same as: HISTORY 51K, POLISCI 51K

**CSRE 51Q. Comparative Fictions of Ethnicity. 4 Units.**

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question—Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"? Note: To be eligible for WAYS credit, you must take course for a Letter Grade. Same as: AMSTUD 51Q, COMPLIT 51Q

**CSRE 51S. American Travel, Tourism and Empire in the Pacific, 1880s-1970s. 5 Units.**

What does it mean to be a traveler or a tourist? Is travel a form of empire or exploitation? Can it ever be an innocent form of economic and cultural exchange? This class will examine how cultures of travel and tourism helped everyday Americans understand and shape the country's political, social, and economic challenges from the 1880s to 1970s, as the U.S. evolved from a continental empire, into an overseas empire, and finally into an informal empire.

Same as: AMSTUD 51S, HISTORY 51S

**CSRE 52D. Asian American Human Development: Cultural Perspectives on Psychology, Education and Critical Issues. 3 Units.**

In this course, we will examine the critical issues in Asian American growth and development with particular attention given to current theoretical and research perspectives within a diverse society. We will consider topics related to their cultural identity, cognitive, and socio-emotional development, engaging in the ethnic discourse on Confucian history and culture, Eastern and Western thought and learning, tiger parenting, gender roles, the model minority stereotype, acculturation and bicultural identity, and mental health. This course uniquely integrates the fields of history, education, psychology, human biology, and ethnic studies as we seek to understand the underlying processes of the Asian American person as an individual and as an effective member of the larger society.

Same as: ASNAMST 52D

**CSRE 52H. I, Biologist: Diversity Improves the Science of Biology. 1 Unit.**

Disciplinary priorities, research agendas, and innovations are determined by the diversity of participants and problem-solving is more successful with a broad range of approaches. Using case studies in biological research, we propose to use these insights to help our students learn why a diverse scientific community leads to better discovery and improves the relevance of science to society. Our premise is that a diverse set of perspectives will impact not only how we learn science, but how we do science.

Same as: BIO 52

**CSRE 54N. African American Women's Lives. 3 Units.**

This course encourages students to think critically about historical sources and to use creative and rigorous historical methods to recover African American women's experiences, which often have been placed on the periphery of American history and American life.

Same as: AFRICAAM 54N, AMSTUD 54N, FEMGEN 54N, HISTORY 54N

**CSRE 55M. MMUF Seminar. 1 Unit.**

This seminar is designed to help MMUF honor students in the following ways: (1) developing and refining research paper topics, (2) learning about the various approaches to research and writing, and (3) connecting to Stanford University resources such as the library and faculty. May be repeat for credit.

**CSRE 55N. Batman, Hamilton, Díaz, and Other Wondrous Lives. 3-5 Units.**

This seminar concerns the design and analysis of imaginary (or constructed) worlds for narratives and media such as films, comics, and literary texts. The seminar's primary goal is to help participants understand the creation of better imaginary worlds - ultimately all our efforts should serve that higher purpose. Some of the things we will consider when taking on the analysis of a new world include: What are its primary features - spatial, cultural, biological, fantastic, cosmological? What is the world's ethos (the guiding beliefs or ideals that characterize the world)? What are the precise strategies that are used by the artist to convey the world to us and us to the world? How are our characters connected to the world? And how are we - the viewer or reader or player - connected to the world? Note: This course must be taken for a letter grade to be eligible for WAYS credit.

**CSRE 5I. Hamilton: An American Musical. 1 Unit.**

"Hamilton" is one the most popular and most celebrated musicals in American history. It has received 11 Tony Awards, including best musical, and 16 Tony nominations, the most nominations in Broadway history. It won the Pulitzer Prize and a Grammy Award. The musical draws on the language and rhythms of hip-hop and R & B, genres that are underrepresented in the musical theater tradition. "Hamilton" has redefined the American musical, particularly in terms of sound, casting, and storytelling. What explains the deep cultural impact and acclaim for this play? This interdisciplinary course examines Alexander Hamilton and his world as well as Hamilton: An American Musical through a series of lectures from faculty in History, Theater and Performance Studies, English, Music, and Writing and Rhetoric.

Same as: AFRICAAM 5I, AMSTUD 5I, HISTORY 3G

**CSRE 61. Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders. 3-4 Units.**

This introduction to dance studies course explores dance practice and performance as means for producing cultural meaning. Through theoretical and historical texts and viewing live and recorded dance, we will develop tools for analyzing dance and understanding its place in social, cultural, and political structures. This uses dance and choreography as a lens to more deeply understand a wide range of identity and cultural formations, such as gender, race, sexuality, (dis)ability, (trans)nationality, and empire. We will analyze dancing bodies that move across stages, dance clubs, film screens, and border zones. We will examine dance from diverse locales and time periods including ballet, modern and contemporary dance, contact improvisation, folkloric dance, burlesque, street dance, queer club dance, drag performance, music videos, TV dance competitions, and intermedia/new media performance. In addition to providing theoretical and methodological grounding in dance studies, this course develops performance analysis skills and hones the ability to write critically and skillfully about dance. No previous experience in dance is necessary to successfully complete the course.

Same as: DANCE 161D, FEMGEN 161D, TAPS 161D

**CSRE 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.**

This course explores the long history of ideas about gender and equality. Each week we read, dissect, compare, and critique a set of primary historical documents (political and literary) from around the world, moving from the 15th century to the present. We tease out changing arguments about education, the body, sexuality, violence, labor, politics, and the very meaning of gender, and we place feminist critics within national and global political contexts.

Same as: AMSTUD 63N, FEMGEN 63N, HISTORY 63N

**CSRE 64. Racial and Ethnic Diversity in Modern America. 4-5 Units.**

How ethnicity influenced the American experience and how prevailing attitudes about racial and ethnic groups over time have affected the historical and contemporary reality of the nation's major minority populations. Focus is on the past two centuries.

Same as: HISTORY 64

**CSRE 66. Spectacular Trials: Sex, Race and Violence in Modern American Culture. 5 Units.**

This course will use the phenomenon of the spectacular trial as a framework for exploring the intersections of sex, race, and violence in the formation of modern American culture. Beginning in the late nineteenth century and continuing through the 1990s, we will focus our inquiry on a number of notorious cases, some associated with familiar names—the Scottsboro Boys, Emmett Till, O.J. Simpson—others involving once-infamous actors—like Joan Little and Inez Garcia—whose ordeals have receded into historical memory, considering a range of questions arising from this thematic nexus. For instance, in what ways are sexual transgressions racialized and gendered? What are the practical and theoretical ramifications of the seemingly inextricable conjunction of sex and violence in legal and popular discourse? And what insights might such spectacles afford when broached as an arena in which sexual meanings, identities, and practices are refracted and ultimately constructed? We will also examine the role of the pertinent professions in the evolution of these events, in particular how the interplay of law, medicine, psychiatry, and forensic science helped define the shifting boundaries of legality, and how print, radio, and television journalism operated not only in sensationalizing, but also in reflecting, modeling, and shaping prevailing attitudes and behaviors. Our study of this vital facet of our society of the spectacle will draw on a series of compelling secondary readings complemented by a diverse array of primary sources—from contemporaneous pamphlets and newspaper accounts to photographs, letters, trial testimony, and psychological commentary—that will enable class members to evaluate the strengths and weaknesses of different textual genres, experiment with alternative methods of fashioning historical interpretations, and contemplate the ways history might be employed to illuminate the persistent problems of racial bias, reflexive sexualization, and the packaging of trials as mass entertainment in the present day.

Same as: AMSTUD 106

**CSRE 68. Martin Luther King, Jr.: The Inner Life and Global Vision. 3-5 Units.**

Martin Luther King, Jr., was the 20th-century's best-known African-American leader, but the religious roots of his charismatic leadership are far less widely known. The documents assembled and published by Stanford's King Research and Education Institute provide the source materials for this exploration of King's swift rise to international prominence as an articulate advocate of global peace and justice.

Same as: AFRICAAM 68D, AMSTUD 168D, HISTORY 68D, HISTORY 168D

**CSRE 74. History of South Africa. 3 Units.**

(Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: AFRICAAM 47, HISTORY 47

**CSRE 78. Art + Community: Division, Resilience & Reconciliation. 1-5 Unit.**

Violence and trauma isolates and segregates us. Part of the healing process must be about coming back into community. Freedom is meaningful only insofar as it lifts all, especially those who have been done the most harm. In times of violence and polarization, art can heal and brings people together. In this course, we will explore how we make and sustain community, especially in the face of threats from within and without. We will do this especially through examining how artists and culture workers of color develop and advance practices that build mutuality, criticality, renewal, trust, and joy in the face of ongoing racial injustice and cultural inequity.

Same as: AFRICAAM 78

**CSRE 81. Race and the Law: Historical and Contemporary Perspectives. 5 Units.**

When Obama began his presidential tenure in 2009, many commentators declared the U.S. a truly colorblind society, a place where race (read: non-whiteness) no longer served as an impediment to individual and group aspirations, indeed had become so insignificant as to be practically invisible. In late fall 2014, in the aftermath of the police-involved killings of Eric Garner, Michael Brown, and Tamir Rice, society is confronted with a radically different social and political landscape. Yet events like these, while doubtless underscoring the fallaciousness of the equalitarian narrative, are regrettably commonplace. What, if anything, occurred during the intervening years that might explain the apparent displacement of hope by despair? With the advent of the Black Lives Matter movement, the persistence of bias and discrimination against people of color, particularly at the interface of African American males and law enforcement authorities, has attained a place of prominence on the public agenda, presenting a significant opportunity for citizen-activists, legislators, and policymakers to combine forces to effectuate meaningful change. To take advantage of this moment, it is imperative to understand the origins and development of the entrenched structural inequalities manifest in contemporary America. What role have law and legal institutions played in hindering and facilitating the promise of equality for all citizens? How far are we from realizing that vaunted democratic aspiration? This course offers participants an opportunity to systematically engage with recent events in Baltimore, Ferguson, and elsewhere in an historically informed manner that foregrounds questions of race, citizenship, and law. Against the backdrop of the achievements of the Civil Rights Movement, it considers such topics as the rise of urban ghettos and the use of segregationist practices like redlining and steering in helping to sustain them; resegregation in the late 20th-early 21st century; differential arrest and sentencing patterns; and, crucially, the extraordinary growth of the American carceral state.

Same as: AMSTUD 108

**CSRE 82G. Making Palestine Visible. 3-5 Units.**

Israel-Palestine is one of the most difficult subjects to talk about, in large part because we in the United States do not have much exposure to Palestinian history, culture, and politics in their own terms. This course aims to humanize Palestinians and asks why Palestinian claims to rights are illegible for much of the American public. We begin to answer this question by examining a broad sampling of history, structures of power and law, culture, and contemporary political issues.

Same as: COMPLIT 82, COMPLIT 182, HISTORY 82G, HISTORY 182G

**CSRE 85B. Jews in the Contemporary World: Faith and Ethnicity, Visibility and Vulnerability. 3 Units.**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life—all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: HISTORY 85B, JEWISHST 85B, REES 85B

**CSRE 88. Who We Be: Art, Images & Race in Post-Civil Rights America. 2-4 Units.**

Over the past half-century, the U.S. has seen profound demographic and cultural change. But racial progress still seems distant. After the faith of the civil rights movement, the fervor of multiculturalism, and even the brief euphoria of a post-racial moment, we remain a nation divided. Resegregation is the norm. The culture wars flare as hot as ever. This course takes a close examination of visual culture, particularly images, works, and ideas in the contemporary arts, justice movements, and popular culture to discuss North American demographic and cultural change and cultural politics over the past half-century. From the Watts uprising to the #BlackLivesMatter movement, from multiculturalism through hip-hop to post-identity art, we will deeply explore the questions: How do Americans see race now? Do we see each other any more clearly than before?

Same as: AFRICAAM 188, ARTHIST 154B

**CSRE 89. Race, Ethnicity, and Electoral Politics. 4 Units.**

This course explores the role that racial and ethnic politics play in American political campaigns and elections. This will include readings that explore the power of ethnoracial voting blocs (e.g. the Black vote and the Latino vote), as well as the challenges and advantages of candidates that are people of color. We will discuss how changing demographics are changing the political landscape, and how candidates and political parties are responding to those changes. This will include, of course, significant attention to ongoing battles at the national (e.g. Trump v. Clinton), state (e.g. Kamala Harris v. Loretta Sanchez), and local levels, most often in California but in other geographic areas as well. We will also explore historic candidacies and elections (e.g. Jesse Jackson) and political parties (e.g. La Raza Unida party) that help put the 2016 races into perspective.

Same as: AMSTUD 89

**CSRE 91. Exploring American Religious History. 4 Units.**

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: AMSTUD 91, HISTORY 260K, RELIGST 91

**CSRE 94. Topics in Writing and Rhetoric: Empathy, Ethics, and Compassion Meditation. 4 Units.**

Does not fulfill NSC requirement. In this course, we'll extend this discussion by expanding our thinking about rhetoric as a means of persuasion to consider its relation to empathy-as a mode of listening to and understanding audiences and communities we identify with as well as those whose beliefs and actions can be lethal. We'll also practice compassion meditation and empathetic rhetoric to see how these ethical stances affect us individually and investigate the ways they may and may not be scaled to address social justice more broadly. Finally, with the course readings and discussions in mind, you will explore a social justice issue and create an essay, a workshop, campaign or movement strategy, podcast, vlog, infographic, Facebook group, syllabus, etc. to help move us closer to positive change. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>. Same as: PWR 194DH

**CSRE 95. Liberation Through Land: Organic Gardening and Racial Justice. 2 Units.**

Through field trips, practical work and readings, this course provides students with the tools to begin cultivating a relationship to land that focuses on direct engagement with sustainable gardening, from seed to harvest. The course will take place on the O'Donohue Family Stanford Educational Farm, where students will be given the opportunity to learn how to sow seeds, prepare garden beds, amend soils, build compost, and take care of plants. The history of forced farm labor in the U.S., from slavery to low-wage migrant labor, means that many people of color encounter agricultural spaces as sites of trauma and oppression. In this course we will explore the potential for revisiting a narrative of peaceful relation to land and crop that existed long before the trauma occurred, acknowledging the beautiful history of POC coexistence with land. Since this is a practical course, there will be a strong emphasis on participation. Application available at [https://docs.google.com/forms/d/e/1FAIpQLScdKKp7mtTNzS0-qc-La97LPj9w8SsWNZ5xrAYVjikTR86F6Q/viewform?usp=sf\\_link](https://docs.google.com/forms/d/e/1FAIpQLScdKKp7mtTNzS0-qc-La97LPj9w8SsWNZ5xrAYVjikTR86F6Q/viewform?usp=sf_link); deadline to apply is September 19, 2017, at midnight. The course is co-sponsored by the Institute for Diversity in the Arts (IDA) and the Earth Systems Program.

Same as: EARTH SYS 95

**CSRE 95I. Revolutionary Practices: Space and Public Discourse in Iran. 4 Units.**

Description: This course examines the mediums of public art that have been voices of social change, protest and expressions of community desire in Iran. It will offer a unique glimpse into Iran's contemporary art and visual culture through the investigation of public art practices such as graffiti and street art, as well as older traditions of Naghali and Iranian Coffeehouse Painting.

Same as: GLOBAL 145

**CSRE 99. Housing Justice Research Lab. 1-3 Unit.**

In this course, students will contribute to ongoing community-based research projects focused on housing justice in the Bay Area. Students will work directly with local community organizations working in advocacy, legal aid, and community research. Projects may include interviews, historical research, surveys, case studies, participant observation, media analysis, and writing op-eds. Students will have the opportunity to select from research projects developed by the community partners and instructors. Students that want to engage in an alternative project should consult with the instructors. Students are encouraged to enroll for multiple quarters to develop more substantial projects and deeper relationships with community partners.

Same as: URBANST 187

## Comparative Literature (COMPLIT)

**COMPLIT 100. CAPITALS: How Cities Shape Cultures, States, and People. 3-5 Units.**

This course takes students on a trip to eight capital cities, at different moments in time: Renaissance Florence, Golden Age Madrid, Colonial Mexico City, Enlightenment and Romantic Paris, Existential and Revolutionary St. Petersburg, Roaring Berlin, Modernist Vienna, and bustling Buenos Aires. While exploring each place in a particular historical moment, we will also consider the relations between culture, power, and social life. How does the cultural life of a country intersect with the political activity of a capital? How do large cities shape our everyday experience, our aesthetic preferences, and our sense of history? Why do some cities become cultural capitals? Primary materials for this course will consist of literary, visual, sociological, and historical documents (in translation); authors we will read include Boccaccio, Lope de Vega, Sor Juana, Montesquieu, Baudelaire, Dostoyevsky, Irmgard Keun, Freud, and Borges. Note: To be eligible for WAYS credit, you must take the course for a minimum of 3 Units and a Letter Grade.

Same as: DLCL 100, FRENCH 175, GERMAN 175, HISTORY 206E, ILAC 175, ITALIAN 175, URBANST 153

**COMPLIT 101. What Is Comparative Literature?. 5 Units.**

The course, open to all undergraduates, is for anyone serious about literature. After first asking what "literature" is and what cultural roles it may fulfill, the course continues by exploring what, then, may be the cultural, political, historical and institutional needs to which "comparative literature" responds. A short story by Jorge Luis Borges and an accompanying essay serve as an introduction to both sets of questions. We will then look at a few texts of the western tradition from Aristotle through the Middle Ages to the Renaissance, taken as standard for later ideas and practices of literature, eventually, too, at one or two that clearly acknowledge possibilities of quite different traditions for the role played by what may be called the "fictive imagination." A series of texts, two plays, two (possibly three) novels, some poems, some critical writings, will then show other traditions interacting transculturally with and/or against western ones. Students will be able to choose their readings among several.

**COMPLIT 102. Film Series: Understanding Turkey Through Film. 1 Unit.**

Join us in our quest to understand the recent developments in Turkey and their impact on its people through cinematic production. Set against the backdrop of Turkey's cultural, political and social transformation in the last decade, the movies in this series tell the uneasy stories of individuals whose lives are affected by this disruptive change. By examining the link between individual troubles and public issues, the films confront issues such as globalization, gender and racial hierarchy, neo-liberal urban transformation, male domination, state oppression, and women's oppression in Turkey. Each screening will be followed by a discussion lead by invited scholars of Turkey or film directors. At each screening we will look closely at a film and discuss how the directors and script writers responded to larger scale cultural and social dynamics to present them as personal stories. All screenings are free and open to the public. All attendees are encouraged to participate in the post-screening discussions. All films are in Turkish with English subtitles.  
Same as: COMPLIT 302

**COMPLIT 106. Public Writing for Human Rights. 1-3 Unit.**

One of the most important aspects of human rights work is of course advocacy. Thanks in large part to the development of the Internet, more and more people now have the ability to study, analyze, and write on human rights issues and disseminate their ideas widely. The course will involve learning how to write effectively about human rights for the wider public. We will study and learn from successful examples of such writing from around the world. Students are strongly encouraged to explore this genre of writing in different languages. The course will both study contemporary human rights issues and use the TeachingHumanRights.org website as a platform for our blogs.

**COMPLIT 108. Contemporary Hebrew and English Poetry in Translation. 2-4 Units.**

A workshop in literary translation, focusing on Hebrew and English poetry and/or short prose. Together the class will engage in creating a bilingual anthology of contemporary works and discussing problems of literary translation such as preserving ambiguities, translating cultural context, literary conventions and poetic forms. Special focus on issues related to understanding and transferring the concept of "The Contemporary" between cultures. With guest translators. Advanced knowledge of Hebrew and English is required. Readings include: (Hebrew) Avot Yeshurun, Natan Zach, David Avidan, Haim Gouri, Sigal Ben-Yair, Almog Behar, Aharon Shabtai; (English) Marilyn Hacker, Annie Finch, Charles Bernstein, Ann Carson, Derek Walcott, David Whyte, Lyn Hejinian, Billy Collins, Mary Oliver, Kay Ryan. NOTE: Taught in Hebrew and English. At least some knowledge of Hebrew required. "This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit."

**COMPLIT 10N. Shakespeare and Performance in a Global Context. 3 Units.**

Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

**COMPLIT 110. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.  
Same as: COMPLIT 310, FEMGEN 110X, FEMGEN 310X

**COMPLIT 113. Feminist Poetry in the U.S., 1973-2017. 3-5 Units.**

Traces the development of feminist poetry in the United States from second wave feminists like Adrienne Rich, Audre Lorde, and Alicia Ostriker to contemporary poetry of Anne Boyer, Steph Burt, and Eileen Myles, among others. We will think broadly about the relationship between politics and poetry, and focus specifically on the influences of second- and third- wave feminism on poetry produced by women in the U.S. from the 1970s until today.  
Same as: FEMGEN 113X

**COMPLIT 114. Masterpieces: Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers.  
Same as: COMPLIT 350, GERMAN 150, GERMAN 350, JEWISHST 145

**COMPLIT 115. Vladimir Nabokov: Displacement and the Liberated Eye. 1-5 Unit.**

How did the triumphant author of "the great American novel" *Lolita* evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels *The Luzhin Defense*, *Invitation to a Beheading*, *Lolita*, *Lolita* the film, and *Pale Fire*, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces *Lolita* and *Pale Fire*. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.  
Same as: COMPLIT 315, SLAVIC 156, SLAVIC 356

**COMPLIT 119. The Turkish Novel. 1-5 Unit.**

Designed as a survey, this course will examine the modern Turkish novel from the early days of the Republic to the present day. We will examine the aesthetic, political, and social aspects of the Turkish novel by reading major samples of national, historical, philosophical, village, and modernist novels. Discussions will be conducted in English. Students will have an option to read the primary sources in Turkish or in English. Contact Burcu Karahan for meeting time and place.  
Same as: COMPLIT 319

**COMPLIT 11Q. Shakespeare, Playing, Gender. 3 Units.**

Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender. Note: This course must be taken for a letter grade to be eligible for WAYS credit.

**COMPLIT 121. Poems, Poetry, Worlds. 5 Units.**

What is poetry? How does it speak in many voices to questions of history, society, and personal experience? Why does it matter? The reading and interpretation of poetry in crosscultural comparison as experience, invention, form, sound, knowledge, and part of the world. The readings address poetry of several cultures (Brazil, Chile, France, Germany, Greece, Italy, Occitania, Peru) in comparative relation to that of the English-speaking world, and in light of classic and recent theories of poetry. Same as: DLCL 141

**COMPLIT 122. Literature as Performance. 5 Units.**

Theater as performance and as literature. Historical tension between text and spectacle, thought and embodiment in western and other traditions since Greek antiquity. Dramas read in tandem with theory, live performances, and audiovisuals. Same as: DLCL 142

**COMPLIT 123. The Novel and the World. 5 Units.**

<b>Before the Digital Era: the European Design of the Novel</b> The course will trace the development of the modern literary genre par excellence through some of its great milestones from the 17th century to the present. Works by Austen, Flaubert, Dostoevsky, Queirós, Mann, Roth, Woolf, Lampedusa and Rodoreda. <em>Lazarillo de Tormes</em>, Jane Austen: <em>Pride and Prejudice</em>, Flaubert: <em>Madame Bovary</em>, Dostoevsky: <em>Crime and Punishment</em>, Eça de Queirós: <em>The City and the Mountains</em>, Thomas Mann: <em>Death in Venice</em>, Joseph Roth: <em>Radietskymarsh</em>, Virginia Woolf: <em>Mrs. Dalloway</em>, Giuseppe Tomasi di Lampedusa, <em>The Leopard</em>, Mercé Rodoreda: <em>The Time of the Doves</em>. Same as: DLCL 143

**COMPLIT 124. The (Un)American Renaissance. 3-5 Units.**

The period between the 1820s and the 1860s has traditionally been called the "American Renaissance": a time when the U.S. nation, and its literature, flourished. The nineteenth century witnessed the publication of a number of important American texts that gave rise to a new national literary tradition, including familiar titles like *The Scarlet Letter*, *Moby-Dick*, and *Leaves of Grass*. Yet, as the nation stretched its geographical coordinates, writers from outside of this predominantly white, male literary heritage issued their own responses to the vision of a "New World Democracy." This course surveys and contextualizes these responses. Reading authors from Native American, Latino/a, African American, and French creole cultures, we'll expand our study of American literature to include writers who interrogate the project of American Democracy from both within and outside of the nation. While analyzing autobiographies, poems, short stories, and speeches we will also learn to read paintings, Native American sign systems, and newspaper sketches, in an exploration of what it meant to be "American" and what counted as "Literature" in the golden era of American Letters. Same as: ENGLISH 120

**COMPLIT 125. The Art of Authoritarianism. 3-5 Units.**

Hitler. Stalin. Che Guevara. Eva Perón. Darth Vader. Whether they make you tremble with fear or with excitement, some leaders lead by charisma as much as by their policies. This course explores representations of authority and authoritarianism to interrogate the charms and dangers of charismatic leadership. Focusing on single-leader societies, primarily from the twentieth century, we consider examples from visual culture, literature, film, and propaganda, along with readings from political science. In analyzing power through aesthetic and political frames, students will develop a critical understanding of the intersections between governments, rulers, and art in recent history and today.

**COMPLIT 127B. The Hebrew and Jewish Short Story. 3-5 Units.**

Short stories from Israel, the US and Europe including works by Agnon, Kafka, Keret, Castel-Bloom, Kashua, Singer, Benjamin, Freud, biblical myths and more. The class will engage with questions related to the short story as a literary form and the history of the short story. Reading and discussion in English. Optional: special section with readings and discussions in Hebrew. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade. Same as: JEWISHST 147B

**COMPLIT 130. Fin-de-siècle Literature and Culture. 3-5 Units.**

Literature and culture of the 1860's to 1900's in Paris, London, Berlin, and Vienna. Aestheticism, Symbolism, Decadence; the new social drama; art nouveau; the dandy and the New Woman; sexology; degeneration. Works by Mallarmé, Baudelaire, Wilde, Huysmans, Hofmannsthal, Ibsen, Shaw, and various New Woman writers; historical and social contexts.

**COMPLIT 132. The Grandeur of Epic: Poetry, Narrative, and World from Homer to Evolutionary Biology. 3-5 Units.**

Explores the mystery and power of epic. This ancient word, which at its root means "what is spoken," first classified certain traditions of archaic Greek poetry, especially Homer's *Iliad* and *Odyssey*. It now appears everywhere from slang to contemporary scientific discourse. Though some might dismiss its proliferation as an accident of everyday speech, the course will take the phenomenon of "epic" seriously, asking what it is about this oldest of genres that continues to inspire our collective imagination.

**COMPLIT 136. Refugees, Politics and Culture in Contemporary Germany. 1-5 Unit.**

Responses to refugees and immigration to Germany against the backdrop of German history and in the context of domestic and European politics. Topics include: cultural difference and integration processes, gender roles, religious traditions, populism and neo-nationalism. Reading knowledge of German, another European language, or an immigrant language will be useful for research projects, but not required. NOTE: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: COMPLIT 336A, GERMAN 136, GERMAN 336
