**COMPLIT 145. Reflection on the Other: The Jew and the Arab in Literature. 3-5 Units.**

How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music. Note: To be eligible for WAYS credit, you must take course for a Letter Grade.

Same as: AMELANG 126, JEWISHST 106

**COMPLIT 145B. The African Atlantic. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during early and modern periods of globalization across the Atlantic, including the middle passage, exploration and colonialism, black internationalism, decolonization, immigration, and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of self-making or new citizenship, to evoke histories of racial unity or examine psychic and social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Conrad, Condé, Olinto), epic and prose poetry (Césaire, Walcott), theoretical reflection (Gilroy, Glissant, Mudimbe, Benitez-Rojo), and literary autobiography (Barack Obama, Saidiya Hartman). Note: To be eligible for WAYS credit, you must take COMPLIT 145B for a minimum of 3 Units and a Letter Grade.

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

**COMPLIT 149. The Laboring of Diaspora & Border Literary Cultures. 3-5 Units.**

Focus is given to emergent theories of culture and on comparative literary and cultural studies. How do we treat culture as a social force? How do we go about reading the presence of social contexts within cultural texts? How do ethno-racial writers re-imagine the nation as a site with many "cognitive maps" in which the nation-state is not congruent with cultural identity? How do diaspora and border narratives/texts strive for comparative theoretical scope while remaining rooted in specific local histories. Note: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: CSRE 149, ILAC 149

**COMPLIT 170. Theodor W. Adorno: History, Aesthetics, Catastrophe. 3-5 Units.**

Theodor W. Adorno (1903-1969) was one of the most influential German thinkers of the 20th century. This seminar aims to introduce students to Adorno's varied oeuvre, from his contributions to the critique of culture, his theory of history, his re-thinking of Hegelianism and Marxism, to his contributions to aesthetics. We will also consider Adorno's various intellectual forebears, collaborators and interlocutors (Hegel, Marx, Lukács, Horkheimer, Habermas). All texts and discussions are in English. Undergraduates welcome.

Same as: COMPLIT 370, GERMAN 170, GERMAN 370

**COMPLIT 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**COMPLIT 182. Making Palestine Visible. 3-5 Units.**

Israel-Palestine is one of the most difficult subjects to talk about, in large part because we in the United States do not have much exposure to Palestinian history, culture, and politics in their own terms. This course aims to humanize Palestinians and asks why Palestinian claims to rights are illegible for much of the American public. We begin to answer this question by examining a broad sampling of history, structures of power and law, culture, and contemporary political issues.

Same as: COMPLIT 82, CSRE 82G, HISTORY 82G, HISTORY 182G

**COMPLIT 183. Self-Impersonation: Fiction, Autobiography, Memoir. 5 Units.**

Course will examine the intersecting genres of fiction, autobiography, and memoir. Topics will include the literary construction of selfhood and its constituent categories (gender, race, ethnicity, religion, etc.); the role of language in the development of the self; the relational nature of the self (vis-à-vis the family, "society," God); the cultural status of "individuality"; the concept of childhood; and the role of individual testimony in our understanding of family, religious and national history. In addition to short theoretical works, authors will include Knausgaard, Nabokov, Hoffman, Winterson, Said, Levi, Barthes, and Duras.

Same as: ENGLISH 183E

**COMPLIT 194. Independent Research. 1-5 Unit.**

(Staff).

**COMPLIT 199. Senior Seminar. 5 Units.**

What is criticism? When we interpret literature today, are we fulfilling the critical vocation? What are the alternatives? We consider the origins of the idea of the critic in nineteenth-century culture, its development in the twentieth century, and its current exponents, revisionists, and dissenters. Senior seminar for Comparative Literature Senior majors only.

**COMPLIT 200. War and the Modern Novel. 3-5 Units.**

From the turn of the 19th century to well into the 20th century, novelists developed the theme of alienation and the decline of civilization. Along with the fall of centuries-old empires, World War I brought about the collapse of traditional European values and the dissociation of the subject. The aestheticizing of violence and the ensuing insecurity inaugurated the society of totally administered life, based on universal suspicion and pervasive guilt. The seminar will study narrative responses to these developments in some of the foremost authors of the 20th century from several European literatures: Knut Hamsun, Joseph Roth, Ernst Jünger, Virginia Woolf, Franz Kafka, Curzio Malaparte, Thomas Mann, Mercè Rodoreda, Antonio Lobo Antunes, and Jaime Cabré. Taught in English.

Same as: ILAC 200E

**COMPLIT 204. Indigenous Poetics and the Politics of Resistance. 3 Units.**

In 1969 a group of university students and Native activists calling themselves the Indians of All Tribes gathered on Alcatraz Island in an act of political protest that would turn out to be the longest occupation of U.S. lands in the nation's history. Claiming title to the territory under a nineteenth-century treaty, the Indians of All Tribes broadcasted their protest through an independent radio show and newsletter that included important political and poetic writings by the activists. This course builds outward from the Occupation of Alcatraz to understand the deep historical relationship between political resistance and poetic expression in Indigenous communities. We will read broadly on poetics and Indigenous political theory, beginning with non-alphabetic writings and Indigenous understandings of communal and political life, and concluding with formally innovative collections by Indigenous poets working on issues like climate justice and language revitalization.

Same as: NATIVEAM 204

**COMPLIT 208. The Cosmopolitan Introvert: Modern Greek Poetry and its Itinerants. 3 Units.**

Overview of the last century of Greek poetry with emphasis on modernism. Approximately 20 modern Greek poets (starting with Cavafy and Nobel laureates Seferis and Elytis and moving to more modern writers) are read and compared to other major European and American writers. The themes of the cosmopolitan itinerant and of the introvert, often co-existing in the same poet, connect these idiosyncratic voices. The course uses translations and requires no knowledge of Greek but original texts can also be shared with interested students. Note: The course is open to both undergraduate and graduate students.

**COMPLIT 215. Literature and Bliss. 1-5 Unit.**

In his final on-campus seminar at Stanford, the Instructor proposes to think through from a historical and systematic angle, the capacity of literary texts to make us imagine ecstatic situations of intensity and happiness rather than focusing on the description of such moments, we will try to understand how literary forms, under certain conditions, can temporarily transform the relation of our minds to the material world and to other human beings. \*\*Grading: Seminar Participation and 10-15 page final paper\*\*.

**COMPLIT 216. Jazz and Literature. 3-5 Units.**

This course explores the special connection between jazz and literature. In texts that range from American novels to the poetry of African independence movements, jazz emerges at once as a structuring principle (as in Toni Morrison's *Jazz* and James Baldwin's *The Amen Corner*) and a unifying theme (for example, Noémia de Sousa's "A Billie Holiday, Cantora"). It is also part of a larger philosophical discussion on rhythm that connects to deep questions of selfhood, ethics, democracy, listening, and vital force. If you love jazz and want to dig deeper into its possibilities or want to find new ways to express literature's power, this class provides the venue. The rest is, as Sonny Rollins put it, "creation and surprise."

Same as: AFRICAAM 216

**COMPLIT 222A. Myth and Modernity. 1-5 Unit.**

Masters of German 20th- and 21st-Century literature and philosophy as they present aesthetic innovation and confront the challenges of modern technology, social alienation, manmade catastrophes, and imagine the future. Readings include Nietzsche, Freud, Rilke, Musil, Brecht, Kafka, Döblin, Benjamin, Juenger, Arendt, Musil, Mann, Adorno, Celan, Grass, Bachmann, Bernhardt, Wolf, and Kluge. Taught in English. Note: To be eligible for WAYS credit, you must take GERMAN 222 or COMPLIT 222A for a minimum of 3 Units and a letter grade.

Same as: GERMAN 222, GERMAN 322

**COMPLIT 223. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care. Note: This course must be taken for a letter grade to be eligible for WAYS credit.

Same as: AFRICAAM 223, CSRE 123B, HUMBIO 175H, MED 220

**COMPLIT 228D. Literature and Technology: An Introduction to Digital Humanities. 1-5 Unit.**

What do computers have to do with the study of literature? Can programming help us learn more about texts? Students in this course will explore these and similar questions through project-based learning. By developing their own digital research project, either in collaboration or solo, students will gain an understanding of the methods and challenges of the field known as "digital humanities". Students will also read and discuss scholarship about the use of computers for the study of literature using Lacuna, an online reading and annotation environment developed at Stanford. Class time will be divided between theory and practice: we will discuss readings that contextualize and question the tools and methods commonly used, then we will use those tools and methods in project work.

Same as: COMPLIT 338D, DLCL 228

**COMPLIT 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

Same as: AFRICAAM 229, AFRICAST 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

**COMPLIT 235E. Dante's "Inferno". 3-5 Units.**

Intensive reading of Dante's "Inferno" (the first canticle of his three canticle poem *The Divine Comedy*). Main objective: to learn how to read the *Inferno* in detail and in depth, which entails both close textual analysis as well as a systematic reconstruction of the Christian doctrines that subtend the poem. The other main objective is to understand how Dante's civic and political identity as a Florentine, and especially his exile from Florence, determined his literary career and turned him into the author of the poem. Special emphasis on Dante's moral world view and his representation of character. Taught in English. nNOTE: Enrollment requires Professor Harrison's approval. Please contact him directly at [harrison@stanford.edu](mailto:harrison@stanford.edu).

Same as: ITALIAN 235E

**COMPLIT 236E. Dante's "Purgatorio" and "Paradiso". 4-5 Units.**

Reading the second and third canticles of Dante's *Divine Comedy*. Prerequisite: students must have read Dante's *Inferno* in a course or on their own. Taught in English. Recommended: reading knowledge of Italian.

Same as: ITALIAN 236E

**COMPLIT 245. Introductory Ottoman Turkish. 1-3 Unit.**

This course is an introduction to basic orthographic conventions and grammatical characteristics of Ottoman Turkish through readings in printed material from the 19th and 20th centuries. Selected readings will range from poetry to prose, from state documents, newspaper and journal articles to reference works. Course is open to both undergraduate and graduate students. Prior knowledge of modern Turkish is required (Completion of COMPLIT 248A, COMPLIT 248B Reading Turkish I&II and COMPLIT 248C Advanced Turkish OR AMELANG 184 & 185 First & Second Year Turkish OR a solid knowledge of Turkish grammar.) Please contact the instructor for more information.

**COMPLIT 247. Bollywood and Beyond: An Introduction to Indian Film. 3-5 Units.**

A broad engagement with Indian cinema: its relationship with Indian politics, history, and economics; its key thematic concerns and forms; and its adaptation of and response to global cinematic themes, genres, and audiences. Locating the films within key critical and theoretical debates and scholarship on Indian and world cinemas. Goal is to open up what is often seen as a dauntingly complex region, especially for those who are interested in but unfamiliar with its histories and cultural forms. Same as: GLOBAL 250

**COMPLIT 248A. Reading Turkish I. 2-4 Units.**

Reading Turkish I is an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; since the goal is advanced reading level, the focus is mainly on grammar, reading comprehension, and translation. With full concentration on reading, we will be able to cover advanced material in a short amount of time. The course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. nnCOMPLIT 248A Reading Turkish I is followed by COMPLIT 248B Reading Turkish II in the Winter and COMPLIT 248C Advanced Turkish for Research in the Spring."

**COMPLIT 248B. Reading Turkish II. 2-4 Units.**

This course is the continuation of COMPLIT 248A Reading Turkish I, which served as an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; it focuses only on reading, and as a result we will be able to cover advanced material in a short amount of time. This course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. COMPLIT 248B is followed by COMPLIT 248C Advanced Turkish for Research in the Spring.

**COMPLIT 248C. Advanced Turkish-English Translation. 2-4 Units.**

This course is the continuation of COMPLIT 248A Reading Turkish I and COMPLIT 248B Reading Turkish II. Refining advanced grammar, reading, and translation skills in modern Turkish through intensive reading and translation from a variety of source texts. Emphasis on Turkish cultural, historical, literary, and political texts depending on students' academic interests. Prerequisites COMPLIT 248A & B or prior knowledge of Turkish and consultation with the instructor is necessary.

**COMPLIT 249A. The Iranian Cinema: Image and Meaning. 1-3 Unit.**

This course will focus on the analysis of ten Iranian films with the view of placing them in discourse on the semiotics of Iranian art and culture. The course will also look at the influence of a wide array of cinematic traditions from European, American, and Asian masters on Iranian cinema. Note: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Same as: GLOBAL 249A

**COMPLIT 249B. Iranian Cinema in Diaspora. 1-3 Unit.**

Despite enormous obstacles, immigrant Iranian filmmakers, within a few decades (after the Iranian Revolution), have created a slow but steady stream of films outside Iran. They were originally started by individual spontaneous attempts from different corners of the world and by now we can identify common lines of interest amongst them. There are also major differences between them. These films have never been allowed to be screened inside Iran, and without any support from the global system of production and distribution, as independent and individual attempts, they have enjoyed little attention. Despite all this, Iranian cinema in exile is in no sense any less important than Iranian cinema inside Iran. In this course we will view one such film, made outside Iran, in each class meeting and expect to reach a common consensus in identifying the general patterns within these works and this movement. Questions such as the ones listed below will be addressed in our meetings each week: What changes in aesthetics and point of view of the filmmaker are caused by the change in his or her work environment? Though unwantedly these films are made outside Iran, how related are they to the known (recognized) cinema within Iran? And in fact, to what extent do these films express things that are left unsaid by the cinema within Iran? NOTE: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: GLOBAL 249B

**COMPLIT 249C. Contemporary Iranian Theater. 1-3 Unit.**

Today, Iranian plays both in traditional and contemporary styles are staged in theater festivals throughout the world and play their role in forming a universal language of theater which combine the heritages from countries in all five continents. Despite many obstacles, some Iranian plays have been translated into English and some prominent Iranian figures are successful stage directors outside Iran. Forty-six years ago when "Theater in Iran" (a monograph on the history of Iranian plays) by Bahram Beyzaie was first published, it put the then contemporary Iranian theater movement "which was altogether westernizing itself blindly" face to face with a new kind of self-awareness. Hence, today's generation of playwrights and stage directors in Iran, all know something of their theatrical heritage. In this course we will spend some class sessions on the history of the theater in Iran and some class meetings will be concentrating on contemporary movements and present day playwrights. Given the dearth of visual documents, an attempt will be made to present a picture of Iranian theater to the student. Students are expected to read the recommended available translated plays of the contemporary Iranian playwrights and participate in classroom discussions. Note: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: GLOBAL 249C

**COMPLIT 252A. Great Arabic Poetry. 3-5 Units.**

Introduction to the canon of Arabic poetry from the sixth to the twenty-first century. Imru' al-Qays, al-Mutanabbi, Mahmud Darwish, and more. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor.

**COMPLIT 252B. Great Arabic Prose. 3-5 Units.**

Introduction to the best Arabic Literature from the 790s to 2016. Al-Jahiz, Naguib Mahfouz, and much more. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor. Note: This course must be taken for a minimum of 3 units and a letter grade to be eligible for WAYS credit.

**COMPLIT 301. Baroque and Neobaroque. 3-5 Units.**

The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.

Same as: ENGLISH 233, ILAC 293E

**COMPLIT 302. Film Series: Understanding Turkey Through Film. 1 Unit.**

Join us in our quest to understand the recent developments in Turkey and their impact on its people through cinematic production. Set against the backdrop of Turkey's cultural, political and social transformation in the last decade, the movies in this series tell the uneasy stories of individuals whose lives are affected by this disruptive change. By examining the link between individual troubles and public issues, the films confront issues such as globalization, gender and racial hierarchy, neo-liberal urban transformation, male domination, state oppression, and women's oppression in Turkey. Each screening will be followed by a discussion lead by invited scholars of Turkey or film directors. At each screening we will look closely at a film and discuss how the directors and script writers responded to larger scale cultural and social dynamics to present them as personal stories. All screenings are free and open to the public. All attendees are encouraged to participate in the post-screening discussions. All films are in Turkish with English subtitles.

Same as: COMPLIT 102

**COMPLIT 303. Early Modern Prose Fictions. 3-5 Units.**

The course considers the English and European prose fictions of the sixteenth and seventeenth centuries—romances, picaresques, pastorals, narratives of social class, and other genres—in the context of Renaissance and present-day theories of fiction. How is narrative form conditioned by social reality, and in turn how does it provide a zone for reflection on that reality in terms different from those of the more codified genres of drama and poetry?

Same as: ENGLISH 302

**COMPLIT 310. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, FEMGEN 110X, FEMGEN 310X

**COMPLIT 315. Vladimir Nabokov: Displacement and the Liberated Eye. 1-5 Unit.**

How did the triumphant author of "the great American novel" *Lolita* evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels *The Luzhin Defense*, *Invitation to a Beheading*, *Lolita*, *Lolita* the film, and *Pale Fire*, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces *Lolita* and *Pale Fire*. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.

Same as: COMPLIT 115, SLAVIC 156, SLAVIC 356

**COMPLIT 319. The Turkish Novel. 1-5 Unit.**

Designed as a survey, this course will examine the modern Turkish novel from the early days of the Republic to the present day. We will examine the aesthetic, political, and social aspects of the Turkish novel by reading major samples of national, historical, philosophical, village, and modernist novels. Discussions will be conducted in English. Students will have an option to read the primary sources in Turkish or in English. Contact Burcu Karahan for meeting time and place.

Same as: COMPLIT 119

**COMPLIT 320A. Epic and Empire. 5 Units.**

Focus is on Virgil's *Aeneid* and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

Same as: ENGLISH 314

**COMPLIT 323. The Renaissance Atlantic. 3-5 Units.**

The seminar questions common ideas about early-modern Europe and the "modernity" then established. It looks at Africa, the Americas and Europe as equal partners in making what is now called the Renaissance. Among these ideas are those of the "subject" and the "other," of "history," fiction, "science," "literature," etc. We will discuss issues of cultural exchange; colonialism and postcolonialism; history and orature; the "fictive imagination" and the politics of "literature"; formations of "methodical" knowledge; and the very idea of Renaissance and all it entails for people's still-normative understanding of Euro-modernity. We will do this chiefly through texts from Africa and the Americas, as well as Spanish, English and French Europe. We look at invasion, cultural imposition, indigenous cultures and back-formation of European culture, and the aforementioned concepts and issues as they set certain kinds of cultural creations in place whose continuing dominance and supposed "universality" needs querying.

**COMPLIT 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.**

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students.

Same as: MTL 334A

**COMPLIT 336A. Refugees, Politics and Culture in Contemporary Germany. 1-5 Unit.**

Responses to refugees and immigration to Germany against the backdrop of German history and in the context of domestic and European politics. Topics include: cultural difference and integration processes, gender roles, religious traditions, populism and neo-nationalism. Reading knowledge of German, another European language, or an immigrant language will be useful for research projects, but not required. NOTE: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: COMPLIT 136, GERMAN 136, GERMAN 336

**COMPLIT 338D. Literature and Technology: An Introduction to Digital Humanities. 1-5 Unit.**

What do computers have to do with the study of literature? Can programming help us learn more about texts? Students in this course will explore these and similar questions through project-based learning. By developing their own digital research project, either in collaboration or solo, students will gain an understanding of the methods and challenges of the field known as "digital humanities". Students will also read and discuss scholarship about the use of computers for the study of literature using Lacuna, an online reading and annotation environment developed at Stanford. Class time will be divided between theory and practice: we will discuss readings that contextualize and question the tools and methods commonly used, then we will use those tools and methods in project work.

Same as: COMPLIT 228D, DLCL 228

**COMPLIT 345B. The African Atlantic. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during early and modern periods of globalization across the Atlantic, including the middle passage, exploration and colonialism, black internationalism, decolonization, immigration, and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of self-making or new citizenship, to evoke histories of racial unity or examine psychic and social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Conrad, Condé, Olinto), epic and prose poetry (Césaire, Walcott), theoretical reflection (Gilroy, Glissant, Mudimbe, Benitez-Rojo), and literary autobiography (Barack Obama, Saidiya Hartman). Note: To be eligible for WAYS credit, you must take COMPLIT 145B for a minimum of 3 Units and a Letter Grade.

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, CSRE 145B, FRENCH 145B, FRENCH 345B

**COMPLIT 348. US-Mexico Border Fictions: Writing La Frontera, Tearing Down the Wall. 3-5 Units.**

A border is a force of containment that inspires dreams of being overcome, crossed, and cursed; motivates bodies to climb over walls; and threatens physical harm. This graduate seminar places into comparative dialogue a variety of perspectives from Chicana/o and Mexican/Latin American literary studies. Our seminar will examine fiction and cultural productions that range widely, from celebrated Mexican and Chicano/a authors such as Carlos Fuentes (*La frontera de cristal*), Yuri Herrera (*Señales que precederan al fin del mundo*), Willivaldo Delgado (*La Virgen del Barrio Árabe*), Américo Paredes (*George Washington Gómez: A Mexico-Texan Novel*), Gloria Anzaldúa (*Borderlands/La Frontera: The New Mestiza*), and Sandra Cisneros (*Carmelo: Puro Cuento*), among others, to musicians whose contributions to border thinking and culture have not yet been fully appreciated such as Herb Albert, Ely Guerra, Los Tigres del Norte, and Café Tacvba. Last but not least, we will screen and analyze Orson Welles' iconic border films *Touch of Evil* and Rodrigo Dorfman's *Los Sueños de Angélica*. Proposing a diverse and geographically expansive view of the US-Mexico border literary and cultural studies, this seminar links the work of these authors and musicians to struggles for land and border-crossing rights, anti-imperialist forms of trans-nationalism, and to the decolonial turn in border thinking or *pensamiento fronterizo*. It forces us to take into account the ways in which shifts in the nature of global relations affect literary production and negative aesthetics especially in our age of (late) post-industrial capitalism.

Same as: ILAC 348

**COMPLIT 350. Masterpieces: Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers.

Same as: COMPLIT 114, GERMAN 150, GERMAN 350, JEWISHST 145

**COMPLIT 352A. The Novel in Africa. 3-5 Units.**

A study of the novel as generic form and site of theorization for African writers and scholars of literature, via close reading of key works of fiction and critical analysis. We will consider the place of historical and cultural context in creative and artistic production, publication, and reception within the continent and beyond it. We will certainly pay close attention to innovation at the level of form, theme, plot, characterization, style or poetics. But we will also attend to questions that arise with the formation of African literature as an autonomous corpus and field, including those critical questions that concern uses of orality, performance, and tradition as indices of authenticity; the challenges and possibilities of language; and the common presumption of the nation as realist or allegorical frame, as well as its complex relationship to class, gender, and ethnic minoritization.

Same as: AFRICAAM 352

**COMPLIT 359A. Philosophical Reading Group. 1 Unit.**

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English.

Same as: FRENCH 395, ITALIAN 395

**COMPLIT 369. Introduction to the Profession of Literary Studies. 1-2 Unit.**

A survey of how literary theory and other methods have been made institutional since the nineteenth century. The readings and conversation are designed for entering Ph.D. students in the national literature departments and comparative literature.

Same as: DLCL 369, FRENCH 369, GERMAN 369, ITALIAN 369

**COMPLIT 36A. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

Same as: ARTHIST 36, EALC 36, ENGLISH 71, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, RELIGST 21X, SLAVIC 36

**COMPLIT 370. Theodor W. Adorno: History, Aesthetics, Catastrophe. 3-5 Units.**

Theodor W. Adorno (1903-1969) was one of the most influential German thinkers of the 20th century. This seminar aims to introduce students to Adorno's varied oeuvre, from his contributions to the critique of culture, his theory of history, his re-thinking of Hegelianism and Marxism, to his contributions to aesthetics. We will also consider Adorno's various intellectual forebears, collaborators and interlocutors (Hegel, Marx, Lukács, Horkheimer, Habermas). All texts and discussions are in English. Undergraduates welcome.

Same as: COMPLIT 170, GERMAN 170, GERMAN 370

**COMPLIT 371. Aesthetics, Politics, and Modernity: Critical Theory and China. 2-5 Units.**

Environmental degradation and ecological crises have given rise to critiques and cultural reflection. This class will bring together issues of aesthetics, politics, and artworks around environmental concerns. We will study Marxist (Marx, David Harvey, and Eagleton) and Frankfurt School (Adorno and Benjamin) critiques of capitalist production as the source of environment degradation, the alienation of humans from nature, human domination over nature, the colonization and plunder of nature in the third world, and elite domination of working classes. We will study and critique the notion of anthropocentrism as a key ideology for scientific and technological advances at the expense of communities, the environment, and the planet. We will review romantic, feminist and other ecological critiques of industrial modernity and the endless pursuit of economic growth and profit. Taking a global and comparative perspective, we will study Chinese eco-critical literature and films, which include short SF fiction, films *Sanxia haoren* (Still Life) directed by Jia Zhangke and *Kekexili* (Mountain patrol) by Lu Chuan. Chinese is not required. PhD students are required to write a term paper of 20-25 pages. MA and undergraduate students will write two short essays of 10 pages in response to the questions from readings and discussion. Same as: CHINA 371

**COMPLIT 37Q. Zionism and the Novel. 3 Units.**

At the end of the nineteenth century, Zionism emerged as a political movement to establish a national homeland for the Jews, eventually leading to the establishment of the State of Israel in 1948. This seminar uses novels to explore the changes in Zionism, the roots of the conflict in the Middle East, and the potentials for the future. We will take a close look at novels by Israelis, both Jewish and Arab, in order to understand multiple perspectives, and we will also consider works by authors from the North America and from Europe. Note: This course must be taken for a letter grade to be eligible for WAYS credit. Same as: JEWISHST 37Q

**COMPLIT 398L. Literary Lab. 2-5 Units.**

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab. Same as: ENGLISH 398L

**COMPLIT 399. Individual Work. 1-15 Unit.****COMPLIT 51Q. Comparative Fictions of Ethnicity. 4 Units.**

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question—Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"? Note: To be eligible for WAYS credit, you must take course for a Letter Grade. Same as: AMSTUD 51Q, CSRE 51Q

**COMPLIT 55N. Batman, Hamilton, Díaz, and Other Wondrous Lives. 3-5 Units.**

This seminar concerns the design and analysis of imaginary (or constructed) worlds for narratives and media such as films, comics, and literary texts. The seminar's primary goal is to help participants understand the creation of better imaginary worlds - ultimately all our efforts should serve that higher purpose. Some of the things we will consider when taking on the analysis of a new world include: What are its primary features - spatial, cultural, biological, fantastic, cosmological? What is the world's ethos (the guiding beliefs or ideals that characterize the world)? What are the precise strategies that are used by the artist to convey the world to us and us to the world? How are our characters connected to the world? And how are we - the viewer or reader or player - connected to the world? Note: This course must be taken for a letter grade to be eligible for WAYS credit. Same as: CSRE 55N

**COMPLIT 57. Human Rights and World Literature. 5 Units.**

Human rights may be universal, but each appeal comes from a specific location with its own historical, social, and cultural context. This summer we will turn to literary narratives and films from a wide number of global locations to help us understand human rights; each story taps into fundamental beliefs about justice and ethics, from an eminently human and personal point of view. What does it mean not to have access to water, education, free speech, for example? This course has two components. The first will be a set of readings on the history and ethos of modern human rights. These readings will come from philosophy, history, political theory. The second, and major component is comprised of novels and films that come from different locations in the world, each telling a compelling story. We will come away from this class with a good introduction to human rights history and philosophy and a set of insights into a variety of imaginative perspectives on human rights issues from different global locations. Readings include: Amnesty International, *Freedom: Stories Celebrating the Universal Declaration of Human Rights* Andrew Clapman, *Human Rights: A Very Short Introduction* James Dawes, *That the World May Know* Walter Echo-Hawk, *In the Light of Justice* Amitav Ghosh, *The Hungry Tide* Bessie Head, *Maru* Ursula LeGuin, *The Word for World is Forest*.

**COMPLIT 680. Curricular Practical Training. 1-3 Unit.**

CPT course required for international students completing degree. Prerequisite: Comparative Literature Ph.D. candidate.

**COMPLIT 70N. Animal Planet and the Romance of the Species. 3-4 Units.**

Preference to freshmen. This course considers a variety of animal characters in Chinese and Western literatures as potent symbols of cultural values and dynamic sites of ethical reasoning. What does pervasive animal imagery tell us about how we relate to the world and our neighbors? How do animals define the frontiers of humanity and mediate notions of civilization and culture? How do culture, institutions, and political economy shape concepts of human rights and animal welfare? And, above all, what does it mean to be human in the pluralistic and planetary 21st century? Note: To be eligible for WAYS credit, you must take course for a Letter Grade. Same as: CHINA 70N

**COMPLIT 71N. Islamic Identities. 3 Units.**

What is Islamic identity? Who decides? This course looks at four moments in time: Arabic judges and politicians in Golden Age Iraq; activists in modern Indonesia; Black Americans in the early twenty-first century; the Stanford community in Fall Quarter 2017. This course will include an introduction to Islam, questions about the Quran and violence, and some literature.

**COMPLIT 802. TGR Dissertation. 0 Units.**

**COMPLIT 82. Making Palestine Visible. 3-5 Units.**

Israel-Palestine is one of the most difficult subjects to talk about, in large part because we in the United States do not have much exposure to Palestinian history, culture, and politics in their own terms. This course aims to humanize Palestinians and asks why Palestinian claims to rights are illegible for much of the American public. We begin to answer this question by examining a broad sampling of history, structures of power and law, culture, and contemporary political issues.

Same as: COMPLIT 182, CSRE 82G, HISTORY 82G, HISTORY 182G

## Comparative Medicine (COMP MED)

**COMP MED 107. Comparative Brain Evolution. 4 Units.**

Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

Same as: COMP MED 207

**COMP MED 110. Pre-Vet Advisory. 1 Unit.**

For students interested in a career in veterinary medicine. How to meet the academic and practical experience prerequisites for admission to veterinary school. Networking with other pre-vet students. Periodic group meetings with guest speakers presenting career options in veterinary medicine. Prerequisite: consent of instructor.

**COMP MED 115C. Life in the Zoo: Behavior, Welfare and Enrichment. 2 Units.**

What makes for a good life in a zoo? For that matter, what makes a good zoo? The psychological and physical wellbeing of the animals? The contribution to research, conservation, and education? The guest experience? Students will learn first-hand how animal welfare science provides an evidence-based approach to optimize and balance each of these demands so that "good welfare is good business." Through a unique experience at San Francisco Zoo students will learn how to apply principles of animal behavior to design environmental enrichments which benefit both the animals and the complex mission of a zoo. Students will be guided through the process of assessing an exhibit from the point of view of the animal's behavior and wellbeing, educational opportunities, and guest experience; developing an enrichment plan; designing and building enrichments for the animals; interacting with the public as docents; and assessing the overall effectiveness of a new enrichment; before finally presenting their work at a "mini-conference." The course will be taught with an emphasis on self-guided learning, student-led class time, hands-on experience, and service-learning. Most days will begin with students presenting what they have learned the previous day to the class, followed by student-led discussion, preparation time for the day's activities, and then time out in the zoo. The course will be taught by Dr. Garner (whose introductory seminar in Animal Behavior is strongly recommended, though not required) and Dr. Watters (Vice President of Animal Wellness and Animal Behavior, San Francisco Zoological Society).

**COMP MED 198. Undergraduate Directed Reading in Comparative Medicine. 1-3 Unit.**

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research.

**COMP MED 199. Undergraduate Research. 1-3 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**COMP MED 200. One Health Journal Club. 1 Unit.**

Participants report on and review scientific articles published in peer reviewed journals. Focus is on manuscripts which report basic and mechanistic discoveries, animal modeling and translational research. The objective is to introduce MLAS students to critical scientific review of hypothesis-based research and experimental design, data analysis and interpretation. Enrollment limited to undergraduate and graduate students currently matriculated or planning to enroll in the MS in Laboratory Animal Science degree program.

**COMP MED 201. Neuro-Cellular Core. 2 Units.**

Focuses on fundamental aspects of cellular neurophysiology. Topics include exploration of electrophysiological properties of neurons, synaptic structure and function and synaptic plasticity. The course consists of didactic lectures and student-led discussions of classical papers. Incorporates simulation program Neuron. Enrollment restricted to students enrolled in Neurosciences Graduate Program.

Same as: NEPR 201

**COMP MED 202. Research Biomethodology for Laboratory Animal Science. 2 Units.**

Emphasis is on providing introductory training and practical, hands-on research animal biomethodology. Topics include basic care and principals guiding the use of research animals, animal health and welfare, enrichment, basic mouse handling, rodent breeding, and the principals of rodent aseptic surgery and anesthesia. The objective of this course is to teach basic skills in animal handling, animal care and biomethodological research techniques. Content delivered online and in-person.

**COMP MED 205. Animal Use in Biomedical Research. 3 Units.**

How and why animals are used in biomedical science. Addresses human and animal disease entities and how animal research has contributed to the treatment and cure of disease. Significant portions of this course are devoted to documenting the humane care and treatment of laboratory animals in research, including, but not limited to such topics as law and ethics, animal behavior, animal modeling, and the animal activist movement. Course topics will also include: What advances have been made as a result of the use of animals in research? Who conducts animal research? Predominant animal species used in biomedical research, facts and myths; the regulation of biomedical research; housing and care of laboratory animals; why new drugs must be tested; animal use in stem cell research, cancer research and genetically engineered mice; career choices in biomedical research.

**COMP MED 207. Comparative Brain Evolution. 4 Units.**

Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

Same as: COMP MED 107

**COMP MED 209. Laboratory Animal Medicine Seminar. 2 Units.**

Focuses on husbandry, care and diseases of major laboratory animal species (rodents, fish and amphibians, swine, sheep, rabbits, monkeys); regulatory and compliance, applied principals of animal modeling, and factors that influence animal research, animal behavior and research reproducibility. The objective of this course is to provide students with an overview of the history of laboratory animal science, current industry standards and practices, and the fundamentals of laboratory animal diseases. Department consent required for enrollment. May be repeated for credit.

**COMP MED 210. Introduction to Mouse Histopathology. 3 Units.**

Focus is on anatomy and histology (microscopic anatomy) of the entire mouse, proper instrument handling and dissection technique, proper tissue fixation, trimming and orientation in cassettes, identification of normal organ histology on H & E-stained slides using a light microscope, use of special stains, and digital image acquisition. Basic pathological processes (inflammation, necrosis, apoptosis, hyperplasia, cancer) and how these manifest in different organs comprises the pathology aspect of this course. Participants present the pathology of their lab's mouse models. Preference to graduate students working with mouse models. Dissection labs. Comfort with mouse handling and previous participation in VSC mouse handling and euthanasia workshops recommended.

**COMP MED 211. Biostatistics for the Life Sciences. 2 Units.**

Emphasis is on real-world experimental design and analysis in the life sciences, with particular focus on modern techniques that maximize power and minimize sample size, and avoiding common errors contributing to false discovery and the reproducibility crisis. This is a flipped-classroom. Class time is devoted to discussion of assigned reading (primarily Grafen & Hails 2002 "Modern statistics for the life sciences"), critique of papers, working through example data sets, and developing analyses for the students' own research data. The objective is to provide MLAS students with a fundamental understanding of basic statistics, particularly as applied to the design and planning of animal-based research projects. Enrollment is limited to MLAS students, unless student has course director consent.

**COMP MED 215. Synaptic Properties and Neuronal Circuits. 2-3 Units.**

Focus is on synapses and circuits in the central nervous system. Objective is to demonstrate how the specific properties of different synapses play a role in the function of neuronal circuits. The main types of synapses are covered, including both ionotropic and metabotropic-receptor-dependent synapses and their related circuits in the CNS. Lectures and student presentations. If taken for 3 units qualifies as a Core Course satisfying requirements in Cellular, Molecular & Developmental Neuroscience in the Neurosciences Graduate Program. Students enrolling for 3 units write an NIH-style proposal on a selected synapse, proposing a study of its properties and related function and presenting the proposal to the class for critique and discussion.

**COMP MED 260. Masters Laboratory Animal Science Practicum/ Laboratory Research. 1-15 Unit.**

Research laboratory and clinical service (pathology, diagnostic laboratory, surgery, husbandry, anesthesiology, aquatics, facility business and management, etc.), quarterly rotations for students enrolled in the Master's of Laboratory Animal Science program. The objective of this course is to provide students with hands on experience in research laboratories using animal models and to provide experience working in the daily operations of a large, veterinary service center. Fulfills the practicum and research requirements of MLAS students.

**COMP MED 290. MLAS Career Development. 1-6 Unit.**

Focus is on career development for graduate students and trainees enrolled in a trainee program in the Department of Comparative Medicine. Seminar topics include career pathways in laboratory animal science, resume preparation, manuscript preparation and authorship, life in academics, life in industry and biopharma, regulatory agencies, veterinary and medical school. Speakers include faculty, speakers from industry and pharmaceutical companies, veterinary school and medical school graduates, regulatory and compliance professionals, research scientists, and animal research program/laboratory managers. Students may choose to shadow veterinary clinical faculty or rotate through basic science laboratory, by special arrangement. The objective is to introduce students to the multiple career pathways available to individuals with advanced training in laboratory animal science. May be taken up to six quarters.

**COMP MED 299. Directed Reading in Comparative Medicine. 1-18 Unit.**

Prerequisite: consent of instructor. (Staff).

**COMP MED 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**COMP MED 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Opportunities are available in comparative medicine and pathology, immunohistochemistry, electron microscopy, molecular genetics, quantitative morphometry, neuroanatomy and neurophysiology of the hippocampus, pathogenesis of intestinal infections, immunopathology, biology of laboratory rodents, anesthesiology of laboratory animals, gene therapy of animal models of neurodegenerative diseases, and development and characterization of transgenic animal models. Prerequisite: consent of instructor.

**COMP MED 801. TGR Project. 0 Units.****COMP MED 80N. Animal behavior: sex, death, and sometimes food!. 3 Units.**

Preference to freshman. Behavior is what makes animals special (thirsty plants don't walk to water), but why do animals behave the way they do? What does their behavior tell us about their inner lives, and about ourselves? What do lipstick and cuckoos and fireflies have in common? Why would nobody want to be a penguin? What do mice say to each other in their pee-mail? Learning how to think about questions like these gives us a unique perspective on the natural world. Format: Discussion and criticism of video examples, documentaries, and research papers. Topics: History and approaches to animal behavior; development of behavior, from genetics to learning; mechanisms of behavior, from neurons to motivation; function of behavior, from honest signals to selfish genes; the phylogeny of behavior, from domestication to speciation; and modern applications of behavior, from abnormal behavior, to conservation, to animal welfare, and animal consciousness.

**COMP MED 81N. Comparative Anatomy and Physiology of Mammals. 3 Units.**

Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16.

**COMP MED 83. Horse Medicine. 2 Units.**

The course will explore most common equine diseases, ranging from colic to lameness are reviewed using problem-oriented approach. Topics include: equine infectious diseases, care of the newborn foal, medical emergencies, and neurological disorders. The course includes a 2 hour lab on the physical and neurological examination of the horse at the Stanford Red Barn. Students will also have the opportunity to ride polo ponies and learn the basics of polo during a trip to the Stanford Polo Team Fields.

**COMP MED 84Q. Globally Emerging Zoonotic Diseases. 3 Units.**

Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

**COMPMED 85N. Animal Use in Biomedical Research. 3 Units.**

Preference to freshmen. How and why animals are used in biomedical science. Addresses human and animal disease entities and how animal research has contributed to the treatment and cure of disease. Significant portions of this course are devoted to documenting the humane care and treatment of laboratory animals in research, including, but not limited to such topics as laws and ethics, animal behavior, animal modeling, and the animal activist movement. Course topics will also include: What advances have been made as a result of the use of animals in research? Who conducts animal research? Predominant animal species used in biomedical research, facts and myths; the regulation of biomedical research; housing and care of laboratory animals; why new drugs must be tested; animal use in stem cell research, cancer research and genetically engineered mice; career choices in biomedical research.

**COMPMED 87Q. Laboratory Mouse in Biomedical Research. 3 Units.**

Preference to sophomores. Focus is on the laboratory mouse, a widely used and important research model. Topics include the ethics of animal use in research; the natural history, origin and husbandry of the mouse; characteristics of key mouse strains; its anatomy and physiology; common diseases and their effects on research; coat color genetics relative to human diseases; immunodeficient mouse models; and genetic engineering of mice. The laboratory includes necropsy, handling, introduction to anesthesia and surgery, identification methods, and common research techniques using live and dead mice. Enrollment limited to 14 students.

**COMPMED 89Q. Ouch it Hurts! The Comparative Neurobiology of Pain. 3 Units.**

Preference to sophomores. Focus is on understanding the basic neurobiology of pain pathways. Topics include the physiology, pharmacology, and clinical aspects of effective pain management. In both humans and animals pain is part of the protective mechanisms that prevent further injury to the body. However, if the pain process continues unchecked, it can become extremely detrimental.

## Comput & Math Engr (CME)

**CME 10. How to learn Mathematics - New ideas from the science of learning. 1 Unit.**

This course will help provide the transition from high school to college learning and encourage the positive ideas and mindsets that shape productive learning. We will consider what learning theories have to tell us about mathematics learning, the nature of good teaching and the reasons for ongoing inequities in mathematics learning and participation. This seminar is for those who would like a more positive relationship with mathematics, and are interested in learning about ways to tackle education inequalities. Learning goals: First, it introduces students to theories of learning and in particular the learning of mathematics. Mathematics plays a key role in many students' learning identities and is often the cause of low self-esteem and anxiety. Research tells us that this is because mathematics in the US is taught in highly ineffective ways. Indeed there is a large gap between what we know works from research and what happens in most mathematics classrooms. This seminar will give participants an understanding of ways to relate positively to mathematics, to learn mathematics most productively and some of the learning barriers that often deny students the opportunity to engage with mathematics in productive ways. Second, the course will teach students about the inequalities that pervade the education system in the United States. We will examine the barriers to the participation of women and students of color and we will consider why social class and race are both strong predictors of mathematics achievement. It is hoped that students will leave the course with greater knowledge of why mathematics is important - to themselves and to the future of society. Course participants will be given the opportunity to take part in a mathematics camp, designed to change the pathways of middle school students, similar to this previous camp: <https://www.youcubed.org/solving-math-problem/> and to take part in the work of youcubed.org. if they wish.

Same as: EDUC 105

**CME 100. Vector Calculus for Engineers. 5 Units.**

Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Introduction to linear algebra: matrix operations, systems of algebraic equations, methods of solution and applications. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: 10 units of AP credit (Calc BC with 5, or Calc AB with 5 or placing out of the single variable math placement test: <https://exploreddegrees-nextyear.stanford.edu/undergraduatedegreesandprograms/#aptextt>), or Math 19-21.

Same as: ENGR 154

**CME 100A. Vector Calculus for Engineers, ACE. 6 Units.**

Students attend CME100/ENGR154 lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Enrollment by department permission only. Prerequisite: must be enrolled in the regular CME100-01 or 02. Application at: <https://engineering.stanford.edu/students/programs/engineering-diversity-programs/additional-calculus-engineers>.

**CME 102. Ordinary Differential Equations for Engineers. 5 Units.**

Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and nonlinear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: 10 units of AP credit (Calc BC with 5, or Calc AB with 5 or placing out of the single variable math placement test: <https://exploreddegreesnextyear.stanford.edu/undergraduatedegreesandprograms/#aptxtt>), or Math 19-21. Recommended: CME100. Same as: ENGR 155A

**CME 102A. Ordinary Differential Equations for Engineers, ACE. 6 Units.**

Students attend CME102/ENGR155A lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: students must be enrolled in the regular section (CME102) prior to submitting application at: <https://engineering.stanford.edu/students/programs/engineering-diversity-programs/additional-calculus-engineers>.

**CME 103. Introduction to Matrix Methods. 3-5 Units.**

Introduction to applied linear algebra with emphasis on applications. Vectors, norm, and angle; linear independence and orthonormal sets; applications to document analysis. Clustering and the k-means algorithm. Matrices, left and right inverses, QR factorization. Least-squares and model fitting, regularization and cross-validation. Constrained and nonlinear least-squares. Applications include time-series prediction, tomography, optimal control, and portfolio optimization. Undergraduate students should enroll for 5 units, and graduate students should enroll for 3 units. Prerequisites: MATH 51 or CME 100, and basic knowledge of computing (CS 106A is more than enough, and can be taken concurrently). EE103/CME103 and Math 104 cover complementary topics in applied linear algebra. The focus of EE103 is on a few linear algebra concepts, and many applications; the focus of Math 104 is on algorithms and concepts. Same as: EE 103

**CME 104. Linear Algebra and Partial Differential Equations for Engineers. 5 Units.**

Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. Same as: ENGR 155B

**CME 104A. Linear Algebra and Partial Differential Equations for Engineers, ACE. 6 Units.**

Students attend CME104/ENGR155B lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: students must be enrolled in the regular section (CME104) prior to submitting application at: <https://engineering.stanford.edu/students/programs/engineering-diversity-programs/additional-calculus-engineers>.

**CME 106. Introduction to Probability and Statistics for Engineers. 4 Units.**

Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51 or 52. Same as: ENGR 155C

**CME 108. Introduction to Scientific Computing. 3 Units.**

Introduction to Scientific Computing Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, unconstrained optimization, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Implementation of numerical methods in MATLAB programming assignments. Prerequisites: MATH 51, 52, 53; prior programming experience (MATLAB or other language at level of CS 106A or higher). Same as: MATH 114

**CME 151A. Interactive Data Visualization in D3. 1 Unit.**

This four-week short course introduces D3, a powerful tool for creating interactive data visualizations on the web ([d3js.org](http://d3js.org)). The class is geared toward scientists and engineers who want to better communicate their personal projects and research through visualizations on the web. The class will cover the basics of D3: inputting data, creating scales and axes, and adding transitions and interactivity, as well as some of the most used libraries: stack, cluster and force layouts. The class will be based on short workshops and a final project. A background in programming methodology at the level of CS106A is assumed. The course will make use of Javascript, experience is recommended but not necessary.

**CME 181. Projects in Applied and Computational Mathematics. 3 Units.**

Teams of students use techniques in applied and computational mathematics to tackle problems of their choosing. Students will have the opportunity to pursue open-ended projects in a variety of areas: economics, physics, political science, operations research, etc. Projects can cover (but are not limited to!) topics such as mathematical modeling of real-world phenomena (population dynamics), data-driven applications (movie recommendations) or complex systems in engineering (optimal control). Each team will be paired with a graduate student mentor working in applied and computational mathematics. Limited enrollment. Prerequisites: CME 100/102/104 or equivalents, or instructor consent. Recommended: CME 106/108 and familiarity with programming at the level of CME 192/193.

**CME 192. Introduction to MATLAB. 1 Unit.**

This short course runs for the first four weeks/eight lectures of the quarter and is offered each quarter during the academic year. It is highly recommended for students with no prior programming experience who are expected to use MATLAB in math, science, or engineering courses. It will consist of interactive lectures and application-based assignments. The goal of the short course is to make students fluent in MATLAB and to provide familiarity with its wide array of features. The course covers an introduction of basic programming concepts, data structures, and control/flow; and an introduction to scientific computing in MATLAB, scripts, functions, visualization, simulation, efficient algorithm implementation, toolboxes, and more.

**CME 193. Introduction to Scientific Python. 1 Unit.**

This short course runs for the first four weeks of the quarter. It is recommended for students who are familiar with programming at least at the level of CS106A and want to translate their programming knowledge to Python with the goal of becoming proficient in the scientific computing and data science stack. Lectures will be interactive with a focus on real world applications of scientific computing. Technologies covered include Numpy, SciPy, Pandas, Scikit-learn, and others. Topics will be chosen from Linear Algebra, Optimization, Machine Learning, and Data Science. Prior knowledge of programming will be assumed, and some familiarity with Python is helpful, but not mandatory.

**CME 195. Introduction to R. 1 Unit.**

This short course runs for four weeks beginning in the second week of the quarter and is offered in fall and spring. It is recommended for students who want to use R in statistics, science, or engineering courses and for students who want to learn the basics of R programming. The goal of the short course is to familiarize students with R's tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. No prior programming experience is needed. Topics covered include basic data structures, File I/O, graphs, control structures, etc, and some useful packages in R.

Same as: STATS 195

**CME 200. Linear Algebra with Application to Engineering Computations. 3 Units.**

Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH51.

Same as: ME 300A

**CME 204. Partial Differential Equations in Engineering. 3 Units.**

Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.

Same as: ME 300B

**CME 206. Introduction to Numerical Methods for Engineering. 3 Units.**

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.

Same as: ME 300C

**CME 207. Numerical Methods in Engineering and Applied Sciences. 3 Units.**

Scientific computing and numerical analysis for physical sciences and engineering. Advanced version of CME206 that, apart from CME206 material, includes nonlinear PDEs, multidimensional interpolation and integration and an extended discussion of stability for initial boundary value problems. Recommended for students who have some prior numerical analysis experience. Topics include: 1D and multi-D interpolation, numerical integration in 1D and multi-D including adaptive quadrature, numerical solutions of ordinary differential equations (ODEs) including stability, numerical solutions of 1D and multi-D linear and nonlinear partial differential equations (PDEs) including concepts of stability and accuracy. Prerequisites: linear algebra, introductory numerical analysis (CME 108 or equivalent).

Same as: AA 214A, GEOPHYS 217

**CME 211. Software Development for Scientists and Engineers. 3 Units.**

Basic usage of the Python and C/C++ programming languages are introduced and used to solve representative computational problems from various science and engineering disciplines. Software design principles including time and space complexity analysis, data structures, object-oriented design, decomposition, encapsulation, and modularity are emphasized. Usage of campus wide Linux compute resources: login, file system navigation, editing files, compiling and linking, file transfer, etc. Versioning and revision control, software build utilities, and the LaTeX typesetting software are introduced and used to help complete programming assignments. Prerequisite: introductory programming course equivalent to CS 106A or instructor consent.

Same as: EARTH 211

**CME 212. Advanced Software Development for Scientists and Engineers. 3 Units.**

Advanced topics in software development, debugging, and performance optimization are covered. The capabilities and usage of common libraries and frameworks such as BLAS, LAPACK, FFT, PETSc, and MKL/ACML are reviewed. Computer representation of integer and floating point numbers, and interoperability between C/C++ and Fortran is described. More advanced software engineering topics including: representing data in files, signals, unit and regression testing, and build automation. The use of debugging tools including static analysis, gdb, and Valgrind are introduced. An introduction to computer architecture covering processors, memory hierarchy, storage, and networking provides a foundation for understanding software performance. Profiles generated using gprof and perf are used to help guide the performance optimization process. Computational problems from various science and engineering disciplines will be used in assignments. Prerequisites: CME 200 / ME 300A and CME 211.

**CME 213. Introduction to parallel computing using MPI, openMP, and CUDA. 3 Units.**

This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP. CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms).

Same as: ME 339

**CME 214. Software Design in Modern Fortran for Scientists and Engineers. 3 Units.**

This course introduces software design and development in modern Fortran. Course covers the functional, object-oriented-, and parallel programming features introduced in the Fortran 95, 2003, and 2008 standards, respectively, in the context of numerical approximations to ordinary and partial differential equations; introduces object-oriented design and design schematics based on the Unified Modeling Language (UML) structure, behavior, and interaction diagrams; cover the basic use of several open-source tools for software building, testing, documentation generation, and revision control. Recommended: Familiarity with programming in Fortran 90, basic numerical analysis and linear algebra, or instructor approval.

Same as: EARTH 214

**CME 215A. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: AA 215A

**CME 215B. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: AA 215B

**CME 232. Introduction to Computational Mechanics. 3 Units.**

Provides an introductory overview of modern computational methods for problems arising primarily in mechanics of solids and is intended for students from various engineering disciplines. The course reviews the basic theory of linear solid mechanics and introduces students to the important concept of variational forms, including the principle of minimum potential energy and the principles of virtual work. Specific model problems that will be considered include deformation of bars, beams and membranes, plates, and problems in plane elasticity (plane stress, plane strain, axisymmetric elasticity). The variational forms of these problems are used as the starting point for developing the finite element method (FEM) and boundary element method (BEM) approaches providing an important connection between mechanics and computational methods.

Same as: ME 332

**CME 237. Networks, Markets, and Crowds. 3 Units.**

The course explores the underlying network structure of our social, economic, and technological worlds and uses techniques from graph theory and economics to examine the structure & evolution of information networks, social contagion, the spread of social power and popularity, and information cascades. Prerequisites: basic graph and probability theory.

Same as: MS&E 237

**CME 242. Mathematical and Computational Finance Seminar. 1 Unit.**

May be repeat for credit.

Same as: MS&E 446A, STATS 239

**CME 243. Risk Analytics and Management in Finance and Insurance. 3 Units.**

Market risk and credit risk, credit markets. Back testing, stress testing and Monte Carlo methods. Logistic regression, generalized linear models and generalized mixed models. Loan prepayment and default as competing risks. Survival and hazard functions, correlated default intensities, frailty and contagion. Risk surveillance, early warning and adaptive control methodologies. Banking and bank regulation, asset and liability management. Prerequisite: STATS 240 or equivalent.

Same as: STATS 243

**CME 244. Project Course in Mathematical and Computational Finance. 1-6 Unit.**

For graduate students in the MCF track; students will work individually or in groups on research projects.

**CME 245. Topics in Mathematical and Computational Finance. 1 Unit.**

Description: Current topics for enrolled students in the MCF program: This course is an introduction to computational, statistical, and optimizations methods and their application to financial markets. Class will consist of lectures and real-time problem solving. Topics: Python & R programming, interest rates, Black-Scholes model, financial time series, capital asset pricing model (CAPM), options, optimization methods, and machine learning algorithms. Appropriate for anyone with a technical and solid applied math background interested in honing skills in quantitative finance. Prerequisite: basic statistics and exposure to programming. Can be repeated up to three times.

**CME 249. Using Design for Effective Data Analysis. 1 Unit.**

Teams of students use techniques in applied and computational mathematics to tackle problems with real world data sets. Application of design methodology adapted for data analysis will be emphasized; leverage design thinking to come up with efficient and effective data driven insights; explore design thinking methodology in small group setting; apply design thinking to a specific data centric problem and make professional group presentation of the results. Limited enrollment. Prerequisites: CME100/102/104 or equivalents, or instructor consent. Recommended: CME106/108 and familiarity with programming at the level of CME 192/193.

**CME 249A. Statistical Arbitrage. 1 Unit.**

Course will cover trading strategies that are bottom up, market neutral, with trading driven by statistical or econometric models and strategies such as pair trading and index arbitrage. Models may focus on tendency of short term returns to revert, leads/lags among correlated instruments, volume momentum, or behavioral effects. nTopics include: (a) a taxonomy of market participants and what motivates trading, (b) methods of exploring relationships between instruments, (c) portfolio construction across a large number of instruments, (d) risks inherent in statistical arbitrage (e) nonstationarity of relationships due to changes in market regulations, fluctuations in market volatility and other factors and (f) frictions such as costs of trading and constraints. Students will team to analyze the provided data sets which cover distinct dynamic market regimes.

**CME 250. Introduction to Machine Learning. 1 Unit.**

A Short course presenting the principles behind when, why, and how to apply modern machine learning algorithms. We will discuss a framework for reasoning about when to apply various machine learning techniques, emphasizing questions of over-fitting/under-fitting, regularization, interpretability, supervised/unsupervised methods, and handling of missing data. The principles behind various algorithms—the why and how of using them—will be discussed, while some mathematical detail underlying the algorithms—including proofs—will not be discussed. Unsupervised machine learning algorithms presented will include k-means clustering, principal component analysis (PCA), and independent component analysis (ICA). Supervised machine learning algorithms presented will include support vector machines (SVM), classification and regression trees (CART), boosting, bagging, and random forests. Imputation, the lasso, and cross-validation concepts will also be covered. The R programming language will be used for examples, though students need not have prior exposure to R. Prerequisite: undergraduate-level linear algebra and statistics; basic programming experience (R/Matlab/Python).

**CME 250A. Machine Learning on Big Data. 1 Unit.**

A short course presenting the application of machine learning methods to large datasets. Topics include: brief review of the common issues of machine learning, such as, memorizing/overfitting vs learning, test/train splits, feature engineering, domain knowledge, fast/simple/dumb learners vs slow/complex/smart learners; moving your model from your laptop into a production environment using Python (scikit) or R on small data (laptop sized) at first; building math clusters using the open source H2O product to tackle Big Data, and finally to some model building on terabyte sized datasets. Prerequisites: basic knowledge of statistics, matrix algebra, and unix-like operating systems; basic file and text manipulation skills with unix tools: pipes, cut, paste, grep, awk, sed, sort, zip; programming skill at the level of CME211 or CS106A.

**CME 251. Geometric and Topological Data Analysis. 3 Units.**

Mathematical computational tools for the analysis of data with geometric content, such images, videos, 3D scans, GPS traces – as well as for other data embedded into geometric spaces. Global and local geometry descriptors allowing for various kinds of invariances. The rudiments of computational topology and persistent homology on sampled spaces. Clustering and other unsupervised techniques. Spectral methods for geometric data analysis. Non-linear dimensionality reduction. Alignment, matching, and map computation between geometric data sets. Function spaces and functional maps. Networks of data sets and joint analysis for segmentation and labeling. The emergence of abstractions or concepts from data. Prerequisites: discrete algorithms at the level of 161; linear algebra at the level of CME103.

Same as: CS 233

**CME 253. Introduction to GPU Computing and CUDA. 1 Unit.**

Covers the fundamentals of accelerating applications with GPUs (Graphics Processing Units); GPU programming with CUDA and OpenACC, debugging, thrust/CUB, profiling, optimization, debugging, and other CUDA tools. Libraries to easily accelerate compute code will be presented and deployment on larger systems will be addressed, including multi-GPU environments. Several practical examples will be detailed, including deep learning. Pre-requisite: knowledge of C/C++ at the level of CME211 or CS106b.

**CME 257. Advanced Topics in Scientific Computing with Julia. 1 Unit.**

This course will rapidly introduce students to the Julia programming language, with the goal of giving students the knowledge and experience necessary to navigate the language and package ecosystem while using Julia for their own scientific computing needs. The course will begin with learning the basics of Julia, and then introduce students to git version control and package development. Additional topics include: common packages, parallelism, interfacing with shared object libraries, and aspects of Julia's implementation (e.g. core numerical linear algebra). Lectures will be interactive, with an emphasis on collaboration and learning by example. Prerequisites: Data structures at the level of CS106B, experience with one or more scientific computing languages (e.g. Python, Matlab, or R), and some familiarity with the Unix shell. No prior experience with Julia or git is required.

**CME 258. Libraries for Numerical Linear Algebra and Optimization. 1 Unit.**

This course will cover standard libraries commonly used for numerical linear algebra and optimization, with an emphasis on giving students experience with using the libraries on real examples. The course will cover software for direct methods (BLAS, Atlas, LAPACK, Eigen), iterative methods (ARPACK, Krylov Methods), and linear/nonlinear optimization (MINOS, SNOPT). Prerequisites: at least one course in numerical linear algebra (preferably at the level of CME 200 or CME 302), and one course in numerical optimization, as well as experience with at least one compiled language such as C/C++/Fortran.

**CME 262. Imaging with Incomplete Information. 3-4 Units.**

Statistical and computational methods for inferring images from incomplete data. Bayesian inference methods are used to combine data and quantify uncertainty in the estimate. Fast linear algebra tools are used to solve problems with many pixels and many observations. Applications from several fields but mainly in earth sciences. Prerequisites: Linear algebra and probability theory.

Same as: CEE 362G

**CME 263. Introduction to Linear Dynamical Systems. 3 Units.**

Applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations, and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular-value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer-matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: Linear algebra and matrices as in EE103 or MATH104; ordinary differential equations and Laplace transforms as in EE102B or CME 102.

Same as: EE 263

**CME 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.**

Computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules and cells. These computational methods play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course topics include protein structure prediction, protein design, drug screening, molecular simulation, cellular-level simulation, image analysis for microscopy, and methods for solving structures from crystallography and electron microscopy data. Prerequisites: elementary programming background (CS 106A or equivalent) and an introductory course in biology or biochemistry.

Same as: BIOE 279, BIOMEDIN 279, BIOPHYS 279, CS 279

**CME 285. Computational Modeling in the Cardiovascular System. 3 Units.**

This course introduces computational modeling methods for cardiovascular blood flow and physiology. Topics in this course include analytical and computational methods for solutions of flow in deformable vessels, one-dimensional equations of blood flow, cardiovascular anatomy, lumped parameter models, vascular trees, scaling laws, biomechanics of the circulatory system, and 3D patient specific modeling with finite elements; course will provide an overview of the diagnosis and treatment of adult and congenital cardiovascular diseases and review recent research in the literature in a journal club format. Students will use SimVascular software to do clinically-oriented projects in patient specific blood flow simulations.

Same as: BIOE 285, ME 285

**CME 291. Master's Research. 1-6 Unit.**

Students require faculty sponsor. (Staff).

**CME 292. Advanced MATLAB for Scientific Computing. 1 Unit.**

Short course running first four weeks of the quarter (8 lectures) with interactive online lectures and application based assignment. Students will access the lectures and assignments on <https://suclass.stanford.edu>. Students will be introduced to advanced MATLAB features, syntaxes, and toolboxes not traditionally found in introductory courses. Material will be reinforced with in-class examples, demos, and homework assignment involving topics from scientific computing. MATLAB topics will be drawn from: advanced graphics (2D/3D plotting, graphics handles, publication quality graphics, animation), MATLAB tools (debugger, profiler), code optimization (vectorization, memory management), object-oriented programming, compiled MATLAB (MEX files and MATLAB coder), interfacing with external programs, toolboxes (optimization, parallel computing, symbolic math, PDEs). Scientific computing topics will include: numerical linear algebra, numerical optimization, ODEs, and PDEs.

**CME 298. Basic Probability and Stochastic Processes with Engineering Applications. 3 Units.**

Calculus of random variables and their distributions with applications. Review of limit theorems of probability and their application to statistical estimation and basic Monte Carlo methods. Introduction to Markov chains, random walks, Brownian motion and basic stochastic differential equations with emphasis on applications from economics, physics and engineering, such as filtering and control. Prerequisites: exposure to basic probability.

Same as: MATH 158

**CME 300. First Year Seminar Series. 1 Unit.**

Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford. May be repeated for credit.

**CME 302. Numerical Linear Algebra. 3 Units.**

Solution of linear systems, accuracy, stability, LU, Cholesky, QR, least squares problems, singular value decomposition, eigenvalue computation, iterative methods, Krylov subspace, Lanczos and Arnoldi processes, conjugate gradient, GMRES, direct methods for sparse matrices. Prerequisites: CME 108, MATH 114, MATH 104.

**CME 303. Partial Differential Equations of Applied Mathematics. 3 Units.**

First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: Basic coursework in multivariable calculus and ordinary differential equations, and some prior experience with a proof-based treatment of the material as in Math 171 or Math 61CM (formerly Math 51H).

Same as: MATH 220

**CME 305. Discrete Mathematics and Algorithms. 3 Units.**

Topics: Basic Algebraic Graph Theory, Matroids and Minimum Spanning Trees, Submodularity and Maximum Flow, NP-Hardness, Approximation Algorithms, Randomized Algorithms, The Probabilistic Method, and Spectral Sparsification using Effective Resistances. Topics will be illustrated with applications from Distributed Computing, Machine Learning, and large-scale Optimization. Prerequisites: CS 261 is highly recommended, although not required.

Same as: MS&E 316

**CME 306. Numerical Solution of Partial Differential Equations. 3 Units.**

Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.

Same as: MATH 226

**CME 307. Optimization. 3 Units.**

Applications, theories, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, and linearly and nonlinearly constrained problems. Modern applications in communication, game theory, auction, and economics. Prerequisites: MATH 113, 115, or equivalent.

Same as: MS&E 311

**CME 308. Stochastic Methods in Engineering. 3 Units.**

The basic limit theorems of probability theory and their application to maximum likelihood estimation. Basic Monte Carlo methods and importance sampling. Markov chains and processes, random walks, basic ergodic theory and its application to parameter estimation. Discrete time stochastic control and Bayesian filtering. Diffusion approximations, Brownian motion and an introduction to stochastic differential equations. Examples and problems from various applied areas. Prerequisites: exposure to probability and background in analysis.

Same as: MATH 228, MS&E 324

**CME 309. Randomized Algorithms and Probabilistic Analysis. 3 Units.**

Randomness pervades the natural processes around us, from the formation of networks, to genetic recombination, to quantum physics. Randomness is also a powerful tool that can be leveraged to create algorithms and data structures which, in many cases, are more efficient and simpler than their deterministic counterparts. This course covers the key tools of probabilistic analysis, and application of these tools to understand the behaviors of random processes and algorithms. Emphasis is on theoretical foundations, though we will apply this theory broadly, discussing applications in machine learning and data analysis, networking, and systems. Topics include tail bounds, the probabilistic method, Markov chains, and martingales, with applications to analyzing random graphs, metric embeddings, random walks, and a host of powerful and elegant randomized algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent.

Same as: CS 265

**CME 321A. Mathematical Methods of Imaging. 3 Units.**

Image denoising and deblurring with optimization and partial differential equations methods. Imaging functionals based on total variation and l-1 minimization. Fast algorithms and their implementation.

Same as: MATH 221A

**CME 321B. Mathematical Methods of Imaging. 3 Units.**

Array imaging using Kirchhoff migration and beamforming, resolution theory for broad and narrow band array imaging in homogeneous media, topics in high-frequency, variable background imaging with velocity estimation, interferometric imaging methods, the role of noise and inhomogeneities, and variational problems that arise in optimizing the performance of array imaging algorithms.

Same as: MATH 221B

**CME 322. Spectral Methods in Computational Physics. 3 Units.**

Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability. Same as: ME 408

**CME 323. Distributed Algorithms and Optimization. 3 Units.**

The emergence of clusters of commodity machines with parallel processing units has brought with it a slew of new algorithms and tools. Many fields such as Machine Learning and Optimization have adapted their algorithms to handle such clusters. Topics include distributed and parallel algorithms for: Optimization, Numerical Linear Algebra, Machine Learning, Graph analysis, Streaming algorithms, and other problems that are challenging to scale on a commodity cluster. The class will focus on analyzing parallel and distributed programs, with some implementation using Apache Spark and TensorFlow.

**CME 325. Numerical Approximations of Partial Differential Equations in Theory and Practice. 1-2 Unit.**

Finite volume and finite difference methods for initial boundary value problems in multiple space dimensions. Emphasis is on formulation of boundary conditions for the continuous and the discrete problems. Analysis of numerical methods with respect to stability, accuracy, and error behavior. Techniques of treating non-rectangular domains, and effects of non-regular grids.

**CME 326. Numerical Methods for Initial Boundary Value Problems. 3 Units.**

Initial boundary value problems model many phenomena in engineering and science such as, fluid flow problems, wave propagation, fluid-structure interaction, conjugate heat transfer and financial mathematics. We discuss numerical techniques for such simulations and focus on the underlying principles and theoretical understanding. Emphasis is on stability, convergence and efficiency for methods applied to hyperbolic and parabolic initial boundary value problems.

**CME 327. Numerical Methods for Stiff Problems. 3 Units.**

Focus is on analysis of numerical techniques for stiff ordinary differential equations, including those resulting from spatial discretization of partial differential equations. Topics include stiffness, convergence, stability, adaptive time stepping, implicit time-stepping methods (SDIRK, Rosenbrock), linear and nonlinear system solvers (Fixed Point, Newton, Multigrid, Krylov subspace methods) and preconditioning. Pre-requisites: CME200/ME300A or equivalent; or consent of instructor.

**CME 328. Advanced Topics in Partial Differential Equations. 3 Units.**

Contents change each time and is taught as a topics course, most likely by a faculty member visiting from another institution. May be repeated for credit. Topic in 2012-13: numerical solution of time-dependent partial differential equations is a fundamental tool for modeling and prediction in many areas of science and engineering. In this course we explore the stability, accuracy, efficiency, and appropriateness of specialized temporal integration strategies for different classes of partial differential equations including stiff problems and fully implicit methods, operator splitting and semi-implicit methods, extrapolation methods, multirate time integration, multi-physics problems, symplectic integration, and temporal parallelism. Prerequisites: recommended CME303 and 306 or with instructor's consent.

**CME 330. Applied Mathematics in the Chemical and Biological Sciences. 3 Units.**

Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents. Same as: CHEMENG 300

**CME 334. Advanced Methods in Numerical Optimization. 3 Units.**

Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit. Same as: MS&E 312

**CME 335. Advanced Topics in Numerical Linear Algebra. 3 Units.**

Possible topics: Classical and modern (e.g., focused on provable communication minimization) algorithms for executing dense and sparse-direct factorizations in high-performance, distributed-memory environments; distributed dense eigensolvers, dense and sparse-direct triangular solvers, and sparse matrix-vector multiplication; unified analysis of distributed Interior Point Methods for symmetric cones via algorithms for distributing Jordan algebras over products of second-order cones and Hermitian matrices. May be repeated for credit. Prerequisites: CME 302 and CME 304 (or equivalents).

**CME 336. Linear and Conic Optimization with Applications. 3 Units.**

Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent. Same as: MS&E 314

**CME 338. Large-Scale Numerical Optimization. 3 Units.**

The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basis factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335. Same as: MS&E 318

**CME 342. Parallel Methods in Numerical Analysis. 3 Units.**

Emphasis is on techniques for obtaining maximum parallelism in numerical algorithms, especially those occurring when solving matrix problems, partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models (MPI, GPU Computing with CUDA & quick review), matrix computations, FFT, fast multiple methods, domain decomposition, graph partitioning, discrete algorithms. Prerequisites: 302 or 200 (ME 300A), 213 or equivalent, or consent of instructor. Recommended: differential equations and knowledge of a high-level programming language such as C or C++ (F90/95 also allowable).

**CME 345. Model Reduction. 3 Units.**

Model reduction is an indispensable tool for computational-based design and optimization, statistical analysis, embedded computing, and real-time optimal control. This course presents the basic mathematical theory for projection-based model reduction. Topics include: notions of linear dynamical systems and projection; projection-based model reduction; error analysis; proper orthogonal decomposition; Hankel operator and balancing of a linear dynamical system; balanced truncation method; modal truncation and other reduction methods for linear oscillators; model reduction via moment matching methods based on Krylov subspaces; introduction to model reduction of parametric systems and notions of nonlinear model reduction. Course material is complemented by a balanced set of theoretical, algorithmic and Matlab computer programming assignments. Prerequisites: CME 200 or equivalent, CME 263 or equivalent and basic numerical methods for ODEs.

**CME 356. Engineering Functional Analysis and Finite Elements. 3 Units.**

Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.

Same as: ME 412

**CME 358. Finite Element Method for Fluid Mechanics. 3 Units.**

Mathematical theory of the finite element method for incompressible flows; related computational algorithms and implementation details. Poisson equation; finite element method for simple elliptic problems; notions of mathematical analysis of non-coercive partial differential equations; the inf-sup or Babushka-Brezzi condition and its applications to the Stokes and Darcy problems; presentation of stable mixed finite element methods and corresponding algebraic solvers; stabilization approaches in the context of advection-diffusion equation; numerical solution of the incompressible Navier-Stokes equations by finite element method. Theoretical, computational, and MATLAB computer programming assignments. Prerequisites: foundation in multivariate calculus and ME 335A or equivalent.

**CME 362. An Introduction to Compressed Sensing. 3 Units.**

Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize).

Same as: STATS 330

**CME 364A. Convex Optimization I. 3 Units.**

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability.

Same as: CS 334A, EE 364A

**CME 364B. Convex Optimization II. 3 Units.**

Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Monotone operators and proximal methods; alternating direction method of multipliers. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Course requirements include project. Prerequisite: 364A. Same as: EE 364B

**CME 371. Computational Biology in Four Dimensions. 3 Units.**

Cutting-edge research on computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules, cells, and everything in between. These techniques, which draw on approaches ranging from physics-based simulation to machine learning, play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course is devoted primarily to reading, presentation, discussion, and critique of papers describing important recent research developments. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).

Same as: BIOMEDIN 371, BIOPHYS 371, CS 371

**CME 372. Applied Fourier Analysis and Elements of Modern Signal Processing. 3 Units.**

Introduction to the mathematics of the Fourier transform and how it arises in a number of imaging problems. Mathematical topics include the Fourier transform, the Plancherel theorem, Fourier series, the Shannon sampling theorem, the discrete Fourier transform, and the spectral representation of stationary stochastic processes. Computational topics include fast Fourier transforms (FFT) and nonuniform FFTs. Applications include Fourier imaging (the theory of diffraction, computed tomography, and magnetic resonance imaging) and the theory of compressive sensing.

Same as: MATH 262

**CME 375. Advanced Topics in Convex Optimization. 3 Units.**

Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (Math 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization.

Same as: MATH 301

**CME 390. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in applied mathematics. Qualified ICME students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. May be repeated three times for credit.

**CME 399. Special Research Topics in Computational and Mathematical Engineering. 1-15 Unit.**

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

**CME 400. Ph.D. Research. 1-15 Unit.**

.

**CME 444. Computational Consulting. 1-3 Unit.**

Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.

**CME 500. Departmental Seminar. 1 Unit.**

Weekly research lectures by doctoral students, experts from academia, national laboratories, and industry. May be repeated for credit.

**CME 510. Linear Algebra and Optimization Seminar. 1 Unit.**

Recent developments in numerical linear algebra and numerical optimization. Guest speakers from other institutions and local industry. Goal is to bring together scientists from different theoretical and application fields to solve complex scientific computing problems. May be repeated for credit.

**CME 520. Topics in Simulation of Human Physiology & Anatomical Systems. 1 Unit.**

Biweekly interdisciplinary lecture series on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lectures by instructors and guest speakers on topics such as surgical simulation, anatomical & surgical Modeling, neurological Systems, and biomedical models of human movement. Group discussions, team based assignments, and project work. Prerequisite: Medical students, residents or fellows from school of medicine, and computationally oriented students with a strong interest to explore computational and mathematical methods related to the health sciences.

Same as: SURG 253

**CME 801. TGR Project. 0 Units.****CME 802. TGR Dissertation. 0 Units.**

## Computer Science (CS)

**CS 101. Introduction to Computing Principles. 3-5 Units.**

Introduces the essential ideas of computing: data representation, algorithms, programming "code", computer hardware, networking, security, and social issues. Students learn how computers work and what they can do through hands-on exercises. In particular, students will see the capabilities and weaknesses of computer systems so they are not mysterious or intimidating. Course features many small programming exercises, although no prior programming experience is assumed or required. CS101 is not a complete programming course such as CS106A. CS101 is effectively an alternative to CS105. A laptop computer is recommended for the in-class exercises.

**CS 102. Big Data: Tools and Techniques, Discoveries and Pitfalls. 3-4 Units.**

Aimed at non-CS undergraduate and graduate students who want to learn the basics of big data tools and techniques and apply that knowledge in their areas of study. Many of the world's biggest discoveries and decisions in science, technology, business, medicine, politics, and society as a whole, are now being made on the basis of analyzing massive data sets. At the same time, it is surprisingly easy to make errors or come to false conclusions from data analysis alone. This course provides a broad and practical introduction to big data: data analysis techniques including databases, data mining, and machine learning; data analysis tools including spreadsheets, relational databases and SQL, Python, and R; data visualization techniques and tools; pitfalls in data collection and analysis; historical context, privacy, and other ethical issues. Tools and techniques are hands-on but at a cursory level, providing a basis for future exploration and application. Prerequisites: comfort with basic logic and mathematical concepts, along with high school AP computer science, CS106A, or other equivalent programming experience.

**CS 103. Mathematical Foundations of Computing. 3-5 Units.**

Mathematical foundations required for computer science, including propositional predicate logic, induction, sets, functions, and relations. Formal language theory, including regular expressions, grammars, finite automata, Turing machines, and NP-completeness. Mathematical rigor, proof techniques, and applications. Prerequisite: CS106B or equivalent. CS106B may be taken concurrently with CS103.

**CS 103A. Mathematical Problem-solving Strategies. 1 Unit.**

Problem solving strategies and techniques in discrete mathematics and computer science. Additional problem solving practice for CS103. In-class participation required. Prerequisite: consent of instructor. Co-requisite: CS103.

**CS 105. Introduction to Computers. 3-5 Units.**

For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor. Prerequisite: minimal math skills.

**CS 106A. Programming Methodology. 3-5 Units.**

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Emphasis is on good programming style and the built-in facilities of respective languages. No prior programming experience required. Summer quarter enrollment is limited. Alternative versions of CS106A are available which cover most of the same material but in different programming languages: Java [Fall, Win, Spr, or Sum qtr enroll in CS106A Section 1] Javascript [Fall qtr enroll in CS 106A Section 2] Python [Winter or Spring qtr enroll in CS 106A Section 3]. Same as: ENGR 70A

**CS 106AJ. Programming Methodology in JavaScript. 3-5 Units.**

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the JavaScript programming language. Emphasis is on good programming style and the built-in facilities of the JavaScript language. No prior programming experience required. This course covers most of the same material as CS106A Section 1 in Java and CS 106A Section 3 in Python, but this course uses the JavaScript programming language. To enroll in this class, enroll in CS 106A Section 2 for Fall Qtr. May be taken for 3 units by grad students.

**CS 106AP. Programming Methodology in Python. 3-5 Units.**

Introduction to the engineering of computer applications in Python, emphasizing modern software engineering principles: decomposition, abstraction, and testing. Emphasis is on good programming style. This course covers most of the same material as CS106A Section 1 in Java and CS 106A Section 2 in JavaScript, but this course uses the Python programming language which is popular for general engineering and web development. Required readings will all be available for free on the web. Students are encouraged to bring a laptop to lecture to do the live exercises which are integrated with lecture. No prior programming experience required. To enroll in this class, enroll in CS 106A Section 3. May be taken for 3 units by grad students. Enrollment is limited for winter quarter 2017-18 but from spring quarter 2017-18 enrollment will be unlimited.

**CS 106B. Programming Abstractions. 3-5 Units.**

Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. Summer quarter enrollment is limited.

Same as: ENGR 70B

**CS 106E. Practical Exploration of Computing. 3-4 Units.**

A follow up class to CS106A for non-majors which will both provide practical web programming skills and cover essential computing topics including computer security and privacy. Additional topics will include digital representation of images and music, an exploration of how the Internet works, and a look at the internals of the computer. Students taking the course for 4 units will be required to carry out supplementary programming assignments in addition to the course's regular assignments. Prerequisite: 106A or equivalent.

**CS 106L. Standard C++ Programming Laboratory. 1 Unit.**

Supplemental lab to 106B and 106X. Additional features of standard C++ programming practice. Possible topics include advanced C++ language features, standard libraries, STL containers and algorithms, object memory management, operator overloading, and inheritance. Prerequisite: consent of instructor. Corequisite: 106B or 106X.

**CS 106S. Programming Abstractions and Social Good. 1 Unit.**

Supplemental lab to CS 106B and CS 106X. Students will apply fundamental computer science concepts learned in 106B/X to problems in the social good space (such as health, government, education, and environment). Course consists of in-class activities designed by local tech companies and nonprofits. Corequisite: 106B or 106X.

**CS 106X. Programming Abstractions (Accelerated). 3-5 Units.**

Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Winter quarter assignments will be based in CS department research. Prerequisite: excellence in 106A or equivalent, or consent of instructor. Winter quarter enrollment limited to 30. Same as: ENGR 70X

**CS 107. Computer Organization and Systems. 3-5 Units.**

Introduction to the fundamental concepts of computer systems. Explores how computer systems execute programs and manipulate data, working from the C programming language down to the microprocessor. Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, elements of code compilation, memory organization and management, and performance evaluation and optimization. Prerequisites: 106B or X, or consent of instructor.

**CS 107E. Computer Systems from the Ground Up. 3-5 Units.**

Introduction to the fundamental concepts of computer systems through bare metal programming on the Raspberry Pi. Explores how five concepts come together in computer systems: hardware, architecture, assembly code, the C language, and software development tools. Students do all programming with a Raspberry Pi kit and several add-ons (LEDs, buttons). Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, compilation, memory organization and management, debugging, hardware, and I/O. Prerequisite: 106B or X, and consent of instructor. There is a \$50 required lab fee.

**CS 108. Object-Oriented Systems Design. 3-4 Units.**

Software design and construction in the context of large OOP libraries. Taught in Java. Topics: OOP design, design patterns, testing, graphical user interface (GUI) OOP libraries, software engineering strategies, approaches to programming in teams. Prerequisite: 107.

**CS 109. Introduction to Probability for Computer Scientists. 3-5 Units.**

Topics include: counting and combinatorics, random variables, conditional probability, independence, distributions, expectation, point estimation, and limit theorems. Applications of probability in computer science including machine learning and the use of probability in the analysis of algorithms. Prerequisites: 103, 106B or X, multivariate calculus at the level of MATH 51 or CME 100 or equivalent.

**CS 109L. Statistical Computing with R Laboratory. 1 Unit.**

Supplemental lab to CS109. Introduces the R programming language for statistical computing. Topics include basic facilities of R including mathematical, graphical, and probability functions, building simulations, introductory data fitting and machine learning. Provides exposure to the functional programming paradigm. Corequisite: CS109.

**CS 110. Principles of Computer Systems. 3-5 Units.**

Principles and practice of engineering of computer software and hardware systems. Topics include: techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; atomicity and coordination of parallel activities; security, and encryption; and performance optimizations. Prerequisite: 107.

**CS 124. From Languages to Information. 3-4 Units.**

Extracting meaning, information, and structure from human language text, speech, web pages, social networks. Methods include: string algorithms, edit distance, language modeling, the noisy channel, naive Bayes, inverted indices, collaborative filtering, PageRank. Applications such as question answering, sentiment analysis, information retrieval, text classification, social network models, chatbots, sequence alignment, spell checking, speech processing, recommender systems. Prerequisites: CS103, CS107, CS109. Same as: LINGUIST 180, LINGUIST 280

**CS 131. Computer Vision: Foundations and Applications. 3-4 Units.**

Robots that can navigate space and perform duties, search engines that can index billions of images and videos, algorithms that can diagnose medical images for diseases, or smart cars that can see and drive safely: Lying in the heart of these modern AI applications are computer vision technologies that can perceive, understand and reconstruct the complex visual world. This course is designed for students who are interested in learning about the fundamental principles and important applications of computer vision. Course will introduce a number of fundamental concepts in computer vision and expose students to a number of real-world applications, plus guide students through a series of projects such that they will get to implement cutting-edge computer vision algorithms. Prerequisites: Students should be familiar with Python (i.e. have programmed in Python before) and Linux; plus Calculus & Linear Algebra.

**CS 140. Operating Systems and Systems Programming. 3-4 Units.**

Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: CS 110.

**CS 140E. Operating systems design and implementation. 3-4 Units.**

This is an experimental course offering. Students will implement a simple, clean operating system (virtual memory, processes, file system) on a raspberry pi computer and use the result to run a variety of devices. Enrollment is limited, and students should expect the course to have rough edges since it is the first offering.

**CS 142. Web Applications. 3 Units.**

Concepts and techniques used in constructing interactive web applications. Browser-side web facilities such as HTML, cascading stylesheets, the document object model, and JavaScript frameworks and Server-side technologies such as server-side JavaScript, sessions, and object-oriented databases. Issues in web security and application scalability. New models of web application deployment. Prerequisites: CS 107 and CS 108.

**CS 143. Compilers. 3-4 Units.**

Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103 or 103B, and 107.

**CS 144. Introduction to Computer Networking. 3-4 Units.**

Principles and practice. Structure and components of computer networks, packet switching, layered architectures. Applications: web/http, voice-over-IP, p2p file sharing and socket programming. Reliable transport: TCP/IP, reliable transfer, flow control, and congestion control. The network layer: names and addresses, routing. Local area networks: ethernet and switches. Wireless networks and network security. Prerequisite: CS 110.

**CS 145. Introduction to Databases. 3-4 Units.**

The course covers database design and the use of database management systems for applications. It includes extensive coverage of the relational model, relational algebra, and SQL. The course includes database design and relational design principles based on dependencies and normal forms. Many additional key database topics from the design and application-building perspective are also covered: indexes, views, transactions, authorization, integrity constraints, triggers, on-line analytical processing (OLAP), JSON, and emerging NoSQL systems. Class time will include guest speakers from industry and additional advanced topics as time and class interest permits. Prerequisites: 103 and 107 (or equivalent).

**CS 146. Introduction to Game Design and Development. 3 Units.**

This project-based course provides an introduction to game design covering topics like 2D/3D Art, Audio, User Interfaces, Production, Narrative Design, Marketing, and Publishing. Speakers from the profession will provide relevant context during a weekly seminar. Weekly assignments include in-depth materials and require students to independently create small video games. Classroom meetings will be used to foster student project discussions, and deepen understanding of material. The course culminates with students forming project teams to create a final video game. Assignments will be completed within the Unity game development engine; prior Unity experience is not required. Given class size limitations, an online survey will be distributed before class starts and students will be selected so to achieve a diverse class composition. Prerequisite: CS 106A or equivalent programming experience.

**CS 147. Introduction to Human-Computer Interaction Design. 3-5 Units.**

Introduces fundamental methods and principles for designing, implementing, and evaluating user interfaces. Topics: user-centered design, rapid prototyping, experimentation, direct manipulation, cognitive principles, visual design, social software, software tools. Learn by doing: work with a team on a quarter-long design project, supported by lectures, readings, and studios. Prerequisite: 106B or X or equivalent programming experience. Recommended that CS Majors have also taken one of 142, 193P, or 193A.

**CS 148. Introduction to Computer Graphics and Imaging. 3-4 Units.**

Introductory prerequisite course in the computer graphics sequence introducing students to the technical concepts behind creating synthetic computer generated images. Focuses on using OpenGL to create visual imagery, as well as an understanding of the underlying mathematical concepts including triangles, normals, interpolation, texture mapping, bump mapping, etc. Course will cover fundamental understanding of light and color, as well as how it impacts computer displays and printers. Class will discuss more thoroughly how light interacts with the environment, constructing engineering models such as the BRDF, plus various simplifications into more basic lighting and shading models. Also covers ray tracing technology for creating virtual images, while drawing parallels between ray tracers and real world cameras to illustrate various concepts. Anti-aliasing and acceleration structures are also discussed. The final class mini-project consists of building out a ray tracer to create visually compelling images. Starter codes and code bits will be provided to aid in development, but this class focuses on what you can do with the code as opposed to what the code itself looks like. Therefore grading is weighted toward in person "demos" of the code in action - creativity and the production of impressive visual imagery are highly encouraged. Prerequisites: CS 107, MATH 51.

**CS 149. Parallel Computing. 3-4 Units.**

This course is an introduction to parallelism and parallel programming. Most new computer architectures are parallel; programming these machines requires knowledge of the basic issues of and techniques for writing parallel software. Topics: varieties of parallelism in current hardware (e.g., fast networks, multicore, accelerators such as GPUs, vector instruction sets), importance of locality, implicit vs. explicit parallelism, shared vs. non-shared memory, synchronization mechanisms (locking, atomicity, transactions, barriers), and parallel programming models (threads, data parallel/streaming, MapReduce, Apache Spark, SPMD, message passing, SIMT, transactions, and nested parallelism). Significant parallel programming assignments will be given as homework. The course is open to students who have completed the introductory CS course sequence through 110 and have taken CS 143.

**CS 154. Introduction to Automata and Complexity Theory. 3-4 Units.**

This course provides a mathematical introduction to the following questions: What is computation? Given a computational model, what problems can we hope to solve in principle with this model? Besides those solvable in principle, what problems can we hope to efficiently solve? In many cases we can give completely rigorous answers; in other cases, these questions have become major open problems in computer science and mathematics. By the end of this course, students will be able to classify computational problems in terms of their computational complexity (Is the problem regular? Not regular? Decidable? Recognizable? Neither? Solvable in P? NP-complete? PSPACE-complete?, etc.). Students will gain a deeper appreciation for some of the fundamental issues in computing that are independent of trends of technology, such as the Church-Turing Thesis and the P versus NP problem. Prerequisites: CS 103 or 103B.

**CS 155. Computer and Network Security. 3 Units.**

For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system security, application security (web, apps, databases), malware, privacy, and security for mobile devices. Course projects focus on building reliable code. Prerequisite: 110. Recommended: basic Unix.

**CS 157. Logic and Automated Reasoning. 3 Units.**

An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103 or 103B.

**CS 161. Design and Analysis of Algorithms. 3-5 Units.**

Worst and average case analysis. Recurrences and asymptotics. Efficient algorithms for sorting, searching, and selection. Data structures: binary search trees, heaps, hash tables. Algorithm design techniques: divide-and-conquer, dynamic programming, greedy algorithms, amortized analysis, randomization. Algorithms for fundamental graph problems: minimum-cost spanning tree, connected components, topological sort, and shortest paths. Possible additional topics: network flow, string searching. Prerequisite: 103 or 103B; 109 or STATS 116.

**CS 166. Data Structures. 3-4 Units.**

Techniques in the design, analysis, and implementation of data structures. Isometries between data structures (including red/black trees and 2-3-4 trees), amortized analysis (including Fibonacci heaps and splay trees), and randomization (including count-min sketches and dynamic perfect hash tables). Data structures for integers and strings (including van Emde Boas trees and suffix trees). Possible additional topics include functional data structures, concurrent data structures, and spatial data structures. Prerequisites: CS107 and CS161.

**CS 168. The Modern Algorithmic Toolbox. 3-4 Units.**

This course will provide a rigorous and hands-on introduction to the central ideas and algorithms that constitute the core of the modern algorithms toolkit. Emphasis will be on understanding the high-level theoretical intuitions and principles underlying the algorithms we discuss, as well as developing a concrete understanding of when and how to implement and apply the algorithms. The course will be structured as a sequence of one-week investigations; each week will introduce one algorithmic idea, and discuss the motivation, theoretical underpinning, and practical applications of that algorithmic idea. Each topic will be accompanied by a mini-project in which students will be guided through a practical application of the ideas of the week. Topics include hashing, dimension reduction and LSH, boosting, linear programming, gradient descent, sampling and estimation, and an introduction to spectral techniques. Prerequisites: CS107 and CS161, or permission from the instructor.

**CS 170. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.**

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit. Space is limited; see <https://ccrma.stanford.edu/courses/128> for information about the application and enrollment process. May be repeat for credit. Same as: MUSIC 128

**CS 173. A Computational Tour of the Human Genome. 3 Units.**

(Only one of 173 or 273A counts toward any CS degree program.) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing; functional landscape of the human genome (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures on current genomic research topics. Class will be similar in spirit to CS273A, which will not be offered this year. Prerequisites: CS107 or equivalent background in programming.

**CS 181. Computers, Ethics, and Public Policy. 4 Units.**

Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X. To take this course, students need permission of instructor and may need to complete an assignment due at the first day of class.

**CS 181W. Computers, Ethics, and Public Policy. 4 Units.**

Writing-intensive version of CS181. Satisfies the WIM requirement for Computer Science, Engineering Physics, STS, and Math/Comp Sci undergraduates. To take this course, students need permission of instructor and may need to complete an assignment due at the first day of class.

Same as: WIM

**CS 183E. Effective Leadership in High-Tech. 1 Unit.**

You will undoubtedly leave Stanford with the technical skills to excel in your first few jobs. But non-technical skills are just as critical to making a difference. This seminar is taught by two industry veterans in engineering leadership and product management. In a small group setting, we will explore how you can be a great individual contributor (communicating with clarity, getting traction for your ideas, resolving conflict, and delivering your best work) and how you can transition into leadership roles (finding leadership opportunities, creating a great team culture, hiring and onboarding new team members). We will end by turning back to your career (picking your first job and negotiating your offer, managing your career changes, building a great network, and succeeding with mentors). Prerequisites: Preference given to seniors and co-terms in Computer Science and related majors. Enrollment limited and application required for admittance.

**CS 183F. Startup School: The First 100 Days. 2 Units.**

Starting a company is hard. Starting a company and building it into a successful, lasting business is even more so. This course aims to teach the fundamentals of starting a startup through a 10-week interactive class, with the goal of decreasing the barrier to entry for new entrepreneurs. Instruction will focus primarily on the first 100 days, from ideation to execution, covering the minutiae of company structure, product design, core metric evaluation, ethics and so on. Lectures will be taught by experts in the startup space, accompanied by small group learning sessions with active entrepreneurs.

**CS 190. Software Design Studio. 3 Units.**

This course will teach the art of software design: how to decompose large complex systems into classes that can be implemented and maintained easily. Topics include information hiding, thick classes, API design, managing complexity, and how to write in-code documentation. The class will involve significant system software implementation and will use an iterative approach consisting of implementation, review, and revision. The course will be taught in a studio format with in-class discussions and code reviews in addition to lectures. Prerequisites: CS 140. Application and consent of instructor required. Apply at: <https://web.stanford.edu/class/cs190>.

**CS 191. Senior Project. 1-6 Unit.**

Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. Register using instructor's section number. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results. Prerequisite: Completion of at least 135 units.

**CS 191W. Writing Intensive Senior Project. 3-6 Units.**

Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS191. Register using the section number of an Academic Council member. Prerequisite: Completion of at least 135 units.

Same as: WIM

**CS 192. Programming Service Project. 1-4 Unit.**

Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.

**CS 193A. Android Programming. 3 Units.**

Introduction to building applications for Android platform. Examines key concepts of Android programming: tool chain, application life-cycle, views, controls, intents, designing mobile UIs, networking, threading, and more. Features weekly lectures and a series of small programming projects. Phone not required, but a phone makes the projects more engaging. Prerequisites: 106B or Java experience at 106B level. Enrollment limited and application required.

**CS 193C. Client-Side Internet Technologies. 3 Units.**

Client-side technologies used to create web sites such as Google maps or Gmail. Includes HTML5, CSS, JavaScript, the Document Object Model (DOM), and Ajax. Prerequisite: programming experience at the level of CS106A.

**CS 193P. iOS Application Development. 3 Units.**

Tools and APIs required to build applications for the iPhone and iPad platforms using the iOS SDK. User interface design for mobile devices and unique user interactions using multi-touch technologies. Object-oriented design using model-view-controller paradigm, memory management, Swift programming language. Other topics include: object-oriented database API, animation, multi-threading, networking and performance considerations. Prerequisites: C language and object-oriented programming experience exceeding 106B or X level. Previous completion of any one of the following is required: CS 107<<https://explorecourses.stanford.edu/search?view=catalog&filter=coursestatus-Active=on&page=0&q=CS107>>, 108 (preferred) or 110. Recommended: UNIX, graphics, databases.

**CS 193S. Scalability Engineering. 3 Units.**

Learn to solve real world engineering challenges in this programming project course. Scale projects not just from the coding and engineering perspective, but use those same techniques to increase usability, popularity, development velocity and maintainability. Discover how engineering applies to project ideation, self and team development, customer acquisition, user experience. As we build applications, we will cover tools and practices for scalable programming including: the javascript ecosystem, containers and cloud platforms, agile development, growth hacking. We focus on rapid feedback loops to build better systems faster. In one quarter, develop scalable habits to build apps designed to grow. Application required. Prerequisites: one or more of CS 140, 142, 145, 147.

**CS 193X. Web Programming Fundamentals. 3-5 Units.**

Introduction to full-stack web development with an emphasis on fundamentals. Client-side topics include layout and rendering through HTML and CSS, event-driven programming through JavaScript, and single-threaded asynchronous programming techniques including Promises. Focus on modern standardized APIs and best practices. Server-side topics include the development of RESTful APIs, JSON services, and basic server-side storage techniques. Covers desktop and mobile web development. Enrollment is limited. Application required. Apply at <https://goo.gl/forms/nlQte0QVpU6maRq2byn11:59pm> Tuesday, March 28. Prerequisite: 106B or equivalent.

**CS 194. Software Project. 3 Units.**

Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Preference given to seniors. May be repeat for credit. Prerequisites: CS 110 and CS 161.

**CS 194H. User Interface Design Project. 3-4 Units.**

Advanced methods for designing, prototyping, and evaluating user interfaces to computing applications. Novel interface technology, advanced interface design methods, and prototyping tools. Substantial, quarter-long course project that will be presented in a public presentation. Prerequisites: CS 147, or permission of instructor.

**CS 194W. Software Project. 3 Units.**

Restricted to Computer Science and Electrical Engineering undergraduates. Writing-intensive version of CS194. Preference given to seniors.

Same as: WIM

**CS 195. Supervised Undergraduate Research. 3-4 Units.**

Directed research under faculty supervision. Students are required to submit a written report and give a public presentation on their work.

**CS 196. Computer Consulting. 2 Units.**

Focus is on Macintosh and Windows operating system maintenance and troubleshooting through hardware and software foundation and concepts. Topics include operating systems, networking, security, troubleshooting methodology with emphasis on Stanford's computing environment. Not a programming course. Prerequisite: 1C or equivalent.

**CS 198. Teaching Computer Science. 3-4 Units.**

Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; see <http://cs198.stanford.edu>.

**CS 198B. Additional Topics in Teaching Computer Science. 1 Unit.**

Students build on the teaching skills developed in CS198. Focus is on techniques used to teach topics covered in CS106B. Prerequisite: successful completion of CS198.

**CS 199. Independent Work. 1-6 Unit.**

Special study under faculty direction, usually leading to a written report. Letter grade; if not appropriate, enroll in 199P.

**CS 199P. Independent Work. 1-6 Unit.**

(Staff).

**CS 1C. Introduction to Computing at Stanford. 1 Unit.**

For those with limited experience with computers or who want to learn more about Stanford's computing environment. Topics include: computer maintenance and security, computing resources, Internet privacy, and copyright law. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Consultant (RCC). Final project. Not a programming course.

**CS 1U. Practical Unix. 1 Unit.**

A practical introduction to using the Unix operating system with a focus on Linux command line skills. Class will consist of video tutorials and weekly hands-on lab sections. Topics include: grep and regular expressions, ZSH, Vim and Emacs, basic and advanced GDB features, permissions, working with the file system, revision control, Unix utilities, environment customization, and using Python for shell scripts. Topics may be added, given sufficient interest. Course website: <http://cs1u.stanford.edu>.

**CS 20. Tensorflow for Deep Learning Research. 2 Units.**

This course will cover the fundamentals and contemporary usage of the Tensorflow library for deep learning research. Through the course, students will use Tensorflow to build models of different complexity, from simple linear/logistic regression to convolutional neural network and recurrent neural networks with LSTM to solve tasks such as word embeddings, translation, optical character recognition. Students will also learn best practices to structure a model and manage research experiments. Prerequisites: CS229 or CS224D/N.

**CS 202. Law for Computer Science Professionals. 1 Unit.**

Intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.

**CS 203. Cybersecurity: A Legal and Technical Perspective. 2 Units.**

This class will use the case method to teach basic computer, network, and information security from technology, law, policy, and business perspectives. Using real world topics, we will study the technical, legal, policy, and business aspects of an incident or issue and its potential solutions. The case studies will be organized around the following topics: vulnerability disclosure, state sponsored sabotage, corporate and government espionage, credit card theft, theft of embarrassing personal data, phishing and social engineering attacks, denial of service attacks, attacks on weak session management and URLs, security risks and benefits of cloud data storage, wiretapping on the Internet, and digital forensics. Students taking the class will learn about the techniques attackers use, applicable legal prohibitions, rights, and remedies, the policy context, and strategies in law, policy and business for managing risk. Grades will be based on class participation, two reflection papers, and a final exam. Special Instructions: This class is limited to 65 students, with an effort made to have students from Stanford Law School (30 students will be selected by lottery) and students from Computer Science (30 students) and International Policy Studies (5 students). Elements used in grading: Class Participation (20%), Written Assignments (40%), Final Exam (40%). Cross-listed with the Law School (Law 4004) and International Policy Studies (IPS course number TBD). Same as: IPS 251

**CS 204. Legal Informatics. 2-3 Units.**

Legal informatics based on representation of regulations in computable form. Encoding regulations facilitate creation of legal information systems with significant practical value. Convergence of technological trends, growth of the Internet, advent of semantic web technology, and progress in computational logic make computational law prospects better. Topics: current state of computational law, prospects and problems, philosophical and legal implications. This course is \*Cross\* listed with LAW 4019. Prerequisite: basic concepts of programming.

**CS 205A. Mathematical Methods for Robotics, Vision, and Graphics. 3 Units.**

Continuous mathematics background necessary for research in robotics, vision, and graphics. Possible topics: linear algebra; the conjugate gradient method; ordinary and partial differential equations; vector and tensor calculus. Prerequisites: 106B or X; MATH 51; or equivalents.

**CS 205B. Mathematical Methods for Fluids, Solids, and Interfaces. 3 Units.**

Numerical methods for simulation of problems involving solid mechanics and fluid dynamics. Focus is on practical tools needed for simulation, and continuous mathematics involving nonlinear hyperbolic partial differential equations. Possible topics: finite element method, highly deformable elastic bodies, plasticity, fracture, level set method, Burgers' equation, compressible and incompressible Navier-Stokes equations, smoke, water, fire, and solid-fluid coupling. Prerequisite: 205A or equivalent.

**CS 206. Exploring Computational Journalism. 3 Units.**

This course will explore the evolving field of computational journalism. Students will research and discuss the state of the field, and do projects in areas such as understanding the media ecosystem, stimulating media creation, and assessing media impact. Admission by application; please email James Hamilton at jayth@stanford.edu to request application. Same as: COMM 281

**CS 208E. Great Ideas in Computer Science. 3 Units.**

Great Ideas in Computer Science Covers the intellectual tradition of computer science emphasizing ideas that reflect the most important milestones in the history of the discipline. Topics include programming and problem solving; implementing computation in hardware; algorithmic efficiency; the theoretical limits of computation; cryptography and security; computer networks; machine learning; and the philosophy behind artificial intelligence. Readings will include classic papers along with additional explanatory material. Enrollment limited to students in the Master's program in Computer Science Education.

**CS 210A. Software Project Experience with Corporate Partners. 3-4 Units.**

Two-quarter project course. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real-world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: CS 109 and 110.

**CS 210B. Software Project Experience with Corporate Partners. 3-4 Units.**

Continuation of CS210A. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of the instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: CS 210A.

**CS 213. Creating Great VR: From Ideation to Monetization. 1 Unit.**

Covering everything from VR fundamentals to futurecasting to launch management, this course will expose you to best practices and guidance from VR leaders that helps positions you to build great VR experiences.

**CS 21SI. AI for Social Good. 2 Units.**

Students will learn about and apply cutting-edge artificial intelligence techniques to real-world social good spaces (such as healthcare, government, education, and environment). Taught jointly by CS+Social Good and the Stanford AI Group, the aim of the class is to empower students to apply these techniques outside of the classroom. The class will focus on techniques from machine learning and deep learning, including regression, support vector machines (SVMs), neural networks, convolutional neural networks (CNNs), and recurrent neural networks (RNNs). The course alternates between lectures on machine learning theory and discussions with invited speakers, who will challenge students to apply techniques in their social good domains. Students complete weekly coding assignments reinforcing machine learning concepts and applications. Prerequisites: programming experience at the level of CS107, mathematical fluency at the level of CS103, comfort with probability at the level of CS109 (or equivalent). Application required for enrollment.

**CS 221. Artificial Intelligence: Principles and Techniques. 3-4 Units.**

Artificial intelligence (AI) has had a huge impact in many areas, including medical diagnosis, speech recognition, robotics, web search, advertising, and scheduling. This course focuses on the foundational concepts that drive these applications. In short, AI is the mathematics of making good decisions given incomplete information (hence the need for probability) and limited computation (hence the need for algorithms). Specific topics include search, constraint satisfaction, game playing, Markov decision processes, graphical models, machine learning, and logic. Prerequisites: CS 103 or CS 103B/X, CS 106B or CS 106X, CS 107, and CS 109 (algorithms, probability, and programming experience).

**CS 223A. Introduction to Robotics. 3 Units.**

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra. Same as: ME 320

**CS 224N. Natural Language Processing with Deep Learning. 3-4 Units.**

Methods for processing human language information and the underlying computational properties of natural languages. Focus on deep learning approaches: understanding, implementing, training, debugging, visualizing, and extending neural network models for a variety of language understanding tasks. Exploration of natural language tasks ranging from simple word level and syntactic processing to coreference, question answering, and machine translation. Examination of representative papers and systems and completion of a final project applying a complex neural network model to a large-scale NLP problem. Prerequisites: calculus and linear algebra; CS124 or CS121/221. Same as: LINGUIST 284

**CS 224S. Spoken Language Processing. 2-4 Units.**

Introduction to spoken language technology with an emphasis on dialogue and conversational systems. Automatic speech recognition, speech synthesis, dialogue management, and applications to digital assistants, search, and spoken language understanding systems. Covers state-of-the-art approaches based on deep learning as well as traditional methods. Prerequisites: CS 124, 221, 224N, or 229. Same as: LINGUIST 285

**CS 224U. Natural Language Understanding. 3-4 Units.**

Project-oriented class focused on developing systems and algorithms for robust machine understanding of human language. Draws on theoretical concepts from linguistics, natural language processing, and machine learning. Topics include lexical semantics, distributed representations of meaning, relation extraction, semantic parsing, sentiment analysis, and dialogue agents, with special lectures on developing projects, presenting research results, and making connections with industry. Prerequisites: one of LINGUIST 180, CS 124, CS 224N, CS224S, or CS221; and logical/ semantics such as LINGUIST 130A or B, CS 157, or PHIL150. Same as: LINGUIST 188, LINGUIST 288

**CS 224W. Analysis of Networks. 3-4 Units.**

Networks are a fundamental tool for modeling complex social, technological, and biological systems. Coupled with emergence of online social networks and large-scale data availability in biological sciences, this course focuses on the analysis of massive networks which provide many computational, algorithmic, and modeling challenges. This course develops computational tools that reveal how the social, technological, and natural worlds are connected, and how the study of networks sheds light on these connections. Topics include: how information spreads through society; robustness and fragility of food webs and financial markets; algorithms for the World Wide Web; friend prediction in online social networks; identification of functional modules in biological networks; disease outbreak detection.

**CS 225A. Experimental Robotics. 3 Units.**

Hands-on laboratory course experience in robotic manipulation. Topics include robot kinematics, dynamics, control, compliance, sensor-based collision avoidance, and human-robot interfaces. Second half of class is devoted to final projects using various robotic platforms to build and demonstrate new robot task capabilities. Previous projects include the development of autonomous robot behaviors of drawing, painting, playing air hockey, yoyo, basketball, ping-pong or xylophone. Prerequisites: 223A or equivalent.

**CS 225B. Robot Programming Laboratory. 3-4 Units.**

For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); probabilistic methods, including Markov localization and particle filters. Student programmed robot contest. Programming is in C++ on Unix machines, done in teams. Prerequisite: programming at the level of 106B, 106X, 205, or equivalent.

**CS 227B. General Game Playing. 3 Units.**

A general game playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.

**CS 228. Probabilistic Graphical Models: Principles and Techniques. 3-4 Units.**

Probabilistic graphical modeling languages for representing complex domains, algorithms for reasoning using these representations, and learning these representations from data. Topics include: Bayesian and Markov networks, extensions to temporal modeling such as hidden Markov models and dynamic Bayesian networks, exact and approximate probabilistic inference algorithms, and methods for learning models from data. Also included are sample applications to various domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.

**CS 229. Machine Learning. 3-4 Units.**

Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics. Same as: STATS 229

**CS 229A. Applied Machine Learning. 3-4 Units.**

You will learn to implement and apply machine learning algorithms. This course emphasizes practical skills, and focuses on giving you skills to make these algorithms work. You will learn about commonly used learning techniques including supervised learning algorithms (logistic regression, linear regression, SVM, neural networks/deep learning), unsupervised learning algorithms (k-means), as well as learn about specific applications such as anomaly detection and building recommender systems. This class is taught in the flipped-classroom format. You will watch videos and complete in-depth programming assignments and online quizzes at home, then come to class for discussion sections. This class will culminate in an open-ended final project, which the teaching team will help you on. Prerequisites: Programming at the level of CS106B or 106X, and basic linear algebra such as Math 51.

**CS 229T. Statistical Learning Theory. 3 Units.**

How do we formalize what it means for an algorithm to learn from data? This course focuses on developing mathematical tools for answering this question. We will present various common learning algorithms and prove theoretical guarantees about them. Topics include classical asymptotics, method of moments, generalization bounds via uniform convergence, kernel methods, online learning, and multi-armed bandits. Prerequisites: A solid background in linear algebra and probability theory, statistics and machine learning (STATS 315A or CS 229). Convex optimization (EE 364A) is helpful but not required. Same as: STATS 231

**CS 22A. The Social & Economic Impact of Artificial Intelligence. 1 Unit.**

Recent advances in computing may place us at the threshold of a unique turning point in human history. Soon we are likely to entrust management of our environment, economy, security, infrastructure, food production, healthcare, and to a large degree even our personal activities, to artificially intelligent computer systems. The prospect of "turning over the keys" to increasingly autonomous systems raises many complex and troubling questions. How will society respond as versatile robots and machine-learning systems displace an ever-expanding spectrum of blue- and white-collar workers? Will the benefits of this technological revolution be broadly distributed or accrue to a lucky few? How can we ensure that these systems respect our ethical principles when they make decisions at speeds and for rationales that exceed our ability to comprehend? What, if any, legal rights and responsibilities should we grant them? And should we regard them merely as sophisticated tools or as a newly emerging form of life? The goal of CS22 is to equip students with the intellectual tools, ethical foundation, and psychological framework to successfully navigate the coming age of intelligent machines.

Same as: IPS 200

**CS 230. Deep Learning. 3-4 Units.**

Deep Learning is one of the most highly sought after skills in AI. We will help you become good at Deep Learning. In this course, you will learn the foundations of Deep Learning, understand how to build neural networks, and learn how to lead successful machine learning projects. You will learn about Convolutional networks, RNNs, LSTM, Adam, Dropout, BatchNorm, Xavier/He initialization, and more. You will work on case studies from healthcare, autonomous driving, sign language reading, music generation, and natural language processing. You will master not only the theory, but also see how it is applied in industry. You will practice all these ideas in Python and in TensorFlow, which we will teach. AI is transforming multiple industries. After this course, you will likely find creative ways to apply it to your work. This class is taught in the flipped-classroom format. You will watch videos and complete in-depth programming assignments and online quizzes at home, then come in to class for advanced discussions and work on projects. This class will culminate in an open-ended final project, which the teaching team will help you on. Prerequisites: Familiarity with programming in Python and Linear Algebra (matrix / vector multiplications). CS 229 may be taken concurrently.

**CS 231A. Computer Vision: From 3D Reconstruction to Recognition. 3-4 Units.**

(Formerly 223B) An introduction to the concepts and applications in computer vision. Topics include: cameras and projection models, low-level image processing methods such as filtering and edge detection; mid-level vision topics such as segmentation and clustering; shape reconstruction from stereo, as well as high-level vision tasks such as object recognition, scene recognition, face detection and human motion categorization. Prerequisites: linear algebra, basic probability and statistics.

**CS 231N. Convolutional Neural Networks for Visual Recognition. 3-4 Units.**

Computer Vision has become ubiquitous in our society, with applications in search, image understanding, apps, mapping, medicine, drones, and self-driving cars. Core to many of these applications are the tasks of image classification, localization and detection. This course is a deep dive into details of neural network architectures with a focus on learning end-to-end models for these tasks, particularly image classification. During the 10-week course, students will learn to implement, train and debug their own neural networks and gain a detailed understanding of cutting-edge research in computer vision. The final assignment will involve training a multi-million parameter convolutional neural network and applying it on the largest image classification dataset (ImageNet). We will focus on teaching how to set up the problem of image recognition, the learning algorithms (e.g. backpropagation), practical engineering tricks for training and fine-tuning the networks and guide the students through hands-on assignments and a final course project. Much of the background and materials of this course will be drawn from the ImageNet Challenge: <http://image-net.org/challenges/LSVRC/2014/index>. Prerequisites: Proficiency in Python; familiarity with C/C++; CS 131 and CS 229 or equivalents; Math 21 or equivalent, linear algebra.

**CS 232. Digital Image Processing. 3 Units.**

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students learn to apply material by implementing and investigating image processing algorithms in Matlab and optionally on Android mobile devices. Term project. Recommended: EE261, EE278. Same as: EE 368

**CS 233. Geometric and Topological Data Analysis. 3 Units.**

Mathematical computational tools for the analysis of data with geometric content, such images, videos, 3D scans, GPS traces – as well as for other data embedded into geometric spaces. Global and local geometry descriptors allowing for various kinds of invariances. The rudiments of computational topology and persistent homology on sampled spaces. Clustering and other unsupervised techniques. Spectral methods for geometric data analysis. Non-linear dimensionality reduction. Alignment, matching, and map computation between geometric data sets. Function spaces and functional maps. Networks of data sets and joint analysis for segmentation and labeling. The emergence of abstractions or concepts from data. Prerequisites: discrete algorithms at the level of 161; linear algebra at the level of CME103. Same as: CME 251

**CS 234. Reinforcement Learning. 3 Units.**

To realize the dreams and impact of AI requires autonomous systems that learn to make good decisions. Reinforcement learning is one powerful paradigm for doing so, and it is relevant to an enormous range of tasks, including robotics, game playing, consumer modeling and healthcare. This class will briefly cover background on Markov decision processes and reinforcement learning, before focusing on some of the central problems, including scaling up to large domains and the exploration challenge. One key tool for tackling complex RL domains is deep learning and this class will include at least one homework on deep reinforcement learning. Prerequisites: proficiency in python, CS 229 or equivalents or permission of the instructor; linear algebra, basic probability.

**CS 238. Decision Making under Uncertainty. 3-4 Units.**

This course is designed to increase awareness and appreciation for why uncertainty matters, particularly for aerospace applications. Introduces decision making under uncertainty from a computational perspective and provides an overview of the necessary tools for building autonomous and decision-support systems. Following an introduction to probabilistic models and decision theory, the course will cover computational methods for solving decision problems with stochastic dynamics, model uncertainty, and imperfect state information. Topics include: Bayesian networks, influence diagrams, dynamic programming, reinforcement learning, and partially observable Markov decision processes. Applications cover: air traffic control, aviation surveillance systems, autonomous vehicles, and robotic planetary exploration. Prerequisites: basic probability and fluency in a high-level programming language.

Same as: AA 228

**CS 239. Advanced Topics in Sequential Decision Making. 3-4 Units.**

Survey of recent research advances in intelligent decision making for dynamic environments from a computational perspective. Efficient algorithms for single and multiagent planning in situations where a model of the environment may or may not be known. Partially observable Markov decision processes, approximate dynamic programming, and reinforcement learning. New approaches for overcoming challenges in generalization from experience, exploration of the environment, and model representation so that these methods can scale to real problems in a variety of domains including aerospace, air traffic control, and robotics. Students are expected to produce an original research paper on a relevant topic. Prerequisites: AA 228/CS 238 or CS 221.

Same as: AA 229

**CS 240. Advanced Topics in Operating Systems. 3 Units.**

Recent research. Classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.

**CS 241. Embedded Systems Workshop. 2 Units.**

Project-centric building hardware and software for embedded computing systems. Students work on an existing project of their own or join one of these projects. Syllabus topics will be determined by the needs of the enrolled students and projects. Examples of topics include: interrupts and concurrent programming, deterministic timing and synchronization, state-based programming models, filters, frequency response, and high-frequency signals, low power operation, system and PCB design, security, and networked communication. Prerequisite: CS107 (or equivalent).

Same as: EE 285

**CS 242. Programming Languages. 3 Units.**

Central concepts in modern programming languages, impact on software development, language design trade-offs, and implementation considerations. Functional, imperative, and object-oriented paradigms. Formal semantic methods and program analysis. Modern type systems, higher order functions and closures, exceptions and continuations. Modularity, object-oriented languages, and concurrency. Runtime support for language features, interoperability, and security issues. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.

**CS 243. Program Analysis and Optimizations. 3-4 Units.**

Program analysis techniques used in compilers and software development tools to improve productivity, reliability, and security. The methodology of applying mathematical abstractions such as graphs, fixpoint computations, binary decision diagrams in writing complex software, using compilers as an example. Topics include data flow analysis, instruction scheduling, register allocation, parallelism, data locality, interprocedural analysis, and garbage collection. Prerequisites: 103 or 103B, and 107.

**CS 244. Advanced Topics in Networking. 3-4 Units.**

Classic papers, new ideas, and research papers in networking. Architectural principles: why the Internet was designed this way? Congestion control. Wireless and mobility; software-defined networks (SDN) and network virtualization; content distribution networks; packet switching; data-center networks. Prerequisite: 144 or equivalent.

**CS 244B. Distributed Systems. 3 Units.**

Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144.

**CS 244C. Readings and Projects in Distributed Systems. 3-6 Units.**

Companion project option for 244B. Corequisite: 244B.

**CS 245. Database Systems Principles. 3 Units.**

File organization and access, buffer management, performance analysis, and storage management. Database system architecture, query optimization, transaction management, recovery, concurrency control. Reliability, protection, and integrity. Design and management issues. Prerequisites: 145, 161.

**CS 246. Mining Massive Data Sets. 3-4 Units.**

Availability of massive datasets is revolutionizing science and industry. This course discusses data mining and machine learning algorithms for analyzing very large amounts of data. The focus is on algorithms and systems for mining big data. Topics include: Big data systems (Hadoop, Spark, Hive); Link Analysis (PageRank, spam detection, hubs-and-authorities); Similarity search (locality-sensitive hashing, shingling, minhashing, random hyperplanes); Stream data processing; Analysis of social-network graphs; Association rules; Dimensionality reduction (UV, SVD, and CUR decompositions); Algorithms for very-large-scale mining (clustering, nearest-neighbor search); Large-scale machine learning (gradient descent, support-vector machines, classification, and regression); Submodular function optimization; Computational advertising. Prerequisites: At least one of CS107 or CS145.

**CS 246H. Mining Massive Data Sets Hadoop Lab. 1 Unit.**

Supplement to CS 246 providing additional material on Hadoop. Students will learn how to implement data mining algorithms using Hadoop, how to implement and debug complex MapReduce jobs in Hadoop, and how to use some of the tools in the Hadoop ecosystem for data mining and machine learning. Topics: Hadoop, MapReduce, HDFS, combiners, secondary sort, distributed cache, SQL on Hadoop, Hive, Cloudera ML/Oryx, Mahout, Hadoop streaming, implementing Hadoop jobs, debugging Hadoop jobs, TF-IDF, Pig, Sqoop, Oozie, HBase, Impala. Prerequisite: CS 107 or equivalent.

**CS 247. Human-Computer Interaction Design Studio. 3-4 Units.**

Project-based focus on interaction design process, especially early-stage design and rapid prototyping. Methods used in interaction design including needs analysis, user observation, sketching, concept generation, scenario building, and evaluation. Prerequisites: 147 or equivalent background in design thinking; 106B or equivalent background in programming. Recommended: CS 142 or equivalent background in web programming.

**CS 247L. Human Computer Interaction Technology Laboratory. 1 Unit.**

Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247.

**CS 248. Interactive Computer Graphics. 3-4 Units.**

This is the second course in the computer graphics sequence, and as such it assumes familiarity with rendering and image creation. The course has a strong focus on sampling methods, computational geometry, animation, and simulation. Topics include sampling theory, texture mapping, transformations, splines, implicit surfaces, geometric modeling, animation curves, inverse kinematics, character animation, motion capture and editing, image compression and virtual reality. Students will perform programming assignments and a self-selected final project that explores concepts covered in the class. Prerequisite: CS 107, MATH 51.

**CS 250. Algebraic Error Correcting Codes. 3 Units.**

Introduction to the theory of error correcting codes, emphasizing algebraic constructions, and diverse applications throughout computer science and engineering. Topics include basic bounds on error correcting codes; Reed-Solomon and Reed-Muller codes; list-decoding, list-recovery and locality. Applications may include communication, storage, complexity theory, pseudorandomness, cryptography, streaming algorithms, group testing, and compressed sensing. Prerequisites: Linear algebra, basic probability (at the level of, say, CS109, CME106 or EE178) and "mathematical maturity" (students will be asked to write proofs). Familiarity with finite fields will be helpful but not required. Same as: EE 387

**CS 251. Bitcoin and Crypto Currencies. 3 Units.**

For advanced undergraduates and for graduate students. The potential applications for Bitcoin-like technologies is enormous. The course will cover the technical aspects of crypto-currencies, blockchain technologies, and distributed consensus. Students will learn how these systems work and how to engineer secure software that interacts with the Bitcoin network and other crypto currencies. Prerequisite: CS110. Recommended: CS255.

**CS 254. Computational Complexity. 3 Units.**

An introduction to computational complexity theory. Topics include the P versus NP problem; diagonalization; space complexity: PSPACE, Savitch's theorem, and NL=coNL; counting problems and #P-completeness; circuit complexity; pseudorandomness and derandomization; complexity of approximation; quantum computing; complexity barriers. Prerequisites: 154 or equivalent; mathematical maturity.

**CS 255. Introduction to Cryptography. 3 Units.**

For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (symmetric and public key), digital signatures, data integrity, authentication, key management, PKI, zero-knowledge protocols, and real-world applications. Prerequisite: basic probability theory.

**CS 257. Logic and Artificial Intelligence. 2-4 Units.**

This is a course at the intersection of philosophical logic and artificial intelligence. After reviewing recent work in AI that has leveraged ideas from logic, we will slow down and study in more detail various components of high-level intelligence and the tools that have been designed to capture those components. Specific areas will include: reasoning about belief and action, causality and counterfactuals, legal and normative reasoning, natural language inference, and Turing-complete logical formalisms including (probabilistic) logic programming and lambda calculus. Our main concern will be understanding the logical tools themselves, including their formal properties and how they relate to other tools such as probability and statistics. At the end, students should expect to have learned a lot more about logic, and also to have a sense for how logic has been and can be used in AI applications. Prerequisites: A background in logic, at least at the level of Phil 151, will be expected. In case a student is willing to put in the extra work to catch up, it may be possible to take the course with background equivalent to Phil 150 or CS 157. A background in AI, at the level of CS 221, would also be very helpful and will at times be expected. 2 unit option only for PhD students past the second year. Course website: <http://web.stanford.edu/class/cs257/>. Same as: PHIL 356C

**CS 261. Optimization and Algorithmic Paradigms. 3 Units.**

Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent.

**CS 263. Algorithms for Modern Data Models. 3 Units.**

We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models. Prerequisite: Algorithms at the level of CS 261. Same as: MS&E 317

**CS 264. Beyond Worst-Case Analysis. 3 Units.**

This course is motivated by problems for which the traditional worst-case analysis of algorithms fails to differentiate meaningfully between different solutions, or recommends an intuitively "wrong" solution over the "right" one. This course studies systematically alternatives to traditional worst-case analysis that nevertheless enable rigorous and robust guarantees on the performance of an algorithm. Topics include: instance optimality; smoothed analysis; parameterized analysis and condition numbers; models of data (pseudorandomness, locality, diffuse adversaries, etc.); average-case analysis; robust distributional analysis; resource augmentation; planted and semi-random graph models. Motivating problems will be drawn from online algorithms, online learning, constraint satisfaction problems, graph partitioning, scheduling, linear programming, hashing, machine learning, and auction theory. Prerequisites: CS161 (required). CS261 is recommended but not required.

**CS 265. Randomized Algorithms and Probabilistic Analysis. 3 Units.**

Randomness pervades the natural processes around us, from the formation of networks, to genetic recombination, to quantum physics. Randomness is also a powerful tool that can be leveraged to create algorithms and data structures which, in many cases, are more efficient and simpler than their deterministic counterparts. This course covers the key tools of probabilistic analysis, and application of these tools to understand the behaviors of random processes and algorithms. Emphasis is on theoretical foundations, though we will apply this theory broadly, discussing applications in machine learning and data analysis, networking, and systems. Topics include tail bounds, the probabilistic method, Markov chains, and martingales, with applications to analyzing random graphs, metric embeddings, random walks, and a host of powerful and elegant randomized algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent. Same as: CME 309

**CS 267. Graph Algorithms. 3 Units.**

An introduction to advanced topics in graph algorithms. Focusing on a variety of graph problems, the course will explore topics such as small space graph data structures, approximation algorithms, dynamic algorithms, and algorithms for special graph classes. Topics include: approximation algorithms for shortest paths and graph matching, distance oracles, graph spanners, cliques and graph patterns, dynamic algorithms, graph coloring, algorithms for planar graphs. Prerequisites: 161 or the equivalent mathematical maturity.

**CS 268. Geometric Algorithms. 3 Units.**

Techniques for design and analysis of efficient geometric algorithms for objects in 2-, 3-, and higher dimensions. Topics: convexity, triangulations and simplicial complexes, sweeping, partitioning, and point location. Voronoi/Delaunay diagrams and their properties. Arrangements of curves and surfaces. Intersection and visibility problems. Geometric searching and optimization. Random sampling methods. Range searching. Impact of numerical issues in geometric computation. Example applications to robotic motion planning, visibility preprocessing and rendering in graphics, and model-based recognition in computer vision. Prerequisite: discrete algorithms at the level of 161. Recommended: 164.

**CS 269G. Almost Linear Time Graph Algorithms. 3 Units.**

Over the past decade there has been an explosion in activity in designing new provably efficient fast graph algorithms. Leveraging techniques from disparate areas of computer science and optimization researchers have made great strides on improving upon the best known running times for fundamental optimization problems on graphs, in many cases breaking long-standing barriers to efficient algorithm design. In this course we will survey these results and cover the key algorithmic tools they leverage to achieve these breakthroughs. Possible topics include but are not limited to, spectral graph theory, sparsification, oblivious routing, local partitioning, Laplacian system solving, and maximum flow. Prerequisites: calculus and linear algebra.

Same as: MS&E 313

**CS 269I. Incentives in Computer Science. 3 Units.**

Many 21st-century computer science applications require the design of software or systems that interact with multiple self-interested participants. This course will provide students with the vocabulary and modeling tools to reason about such design problems. Emphasis will be on understanding basic economic and game theoretic concepts that are relevant across many application domains, and on case studies that demonstrate how to apply these concepts to real-world design problems. Topics include auction and contest design, equilibrium analysis, cryptocurrencies, design of networks and network protocols, reputation systems, social choice, and social network analysis. Case studies include BGP routing, Bitcoin, eBay's reputation system, Facebook's advertising mechanism, Mechanical Turk, and dynamic pricing in Uber/Lyft. Prerequisites: CS106B/X and CS161, or permission from the instructor.

**CS 269O. Introduction to Optimization Theory. 3 Units.**

Introduction of core algorithmic techniques and proof strategies that underlie the best known provable guarantees for minimizing high dimensional convex functions. Focus on broad canonical optimization problems and survey results for efficiently solving them, ultimately providing the theoretical foundation for further study in optimization. In particular, focus will be on first-order methods for both smooth and non-smooth convex function minimization as well as methods for structured convex function minimization, discussing algorithms such as gradient descent, accelerated gradient descent, mirror descent, Newton's method, interior point methods, and more. Prerequisite: multivariable calculus and linear algebra.

Same as: MS&E 213

**CS 270. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving. 3 Units.**

Methods for modeling biomedical systems and for building model-based software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Students learn about current trends in the development of advanced biomedical software systems and acquire hands-on experience with several systems and tools. Prerequisites: CS106A, basic familiarity with biology.

Same as: BIOMEDIN 210

**CS 272. Introduction to Biomedical Informatics Research Methodology. 3-5 Units.**

Capstone Biomedical Informatics (BMI) experience. Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Issues related to research reproducibility. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 214 or 215 or 217 or 260. Preference to BMI graduate students. Consent of instructor required.

Same as: BIOE 212, BIOMEDIN 212, GENE 212

**CS 273A. The Human Genome Source Code. 3 Units.**

A computational introduction to the most amazing programming language on the planet: your genome. Topics include genome sequencing (assembling source code from code fragments); the human genome functional landscape: variable assignments (genes), control-flow logic (gene regulation) and run-time stack (epigenomics); human disease and personalized genomics (as a hunt for bugs in the human code); genome editing (code injection) to cure the incurable; and the source code behind amazing animal adaptations. Algorithmic approaches will introduce ideas from computational genomics, machine learning and natural language processing. Course includes primers on molecular biology, and text processing languages. No prerequisites.

Same as: BIOMEDIN 273A, DBIO 273A

**CS 273B. Deep Learning in Genomics and Biomedicine. 3 Units.**

Recent breakthroughs in high-throughput genomic and biomedical data are transforming biological sciences into "big data" disciplines. In parallel, progress in deep neural networks are revolutionizing fields such as image recognition, natural language processing and, more broadly, AI. This course explores the exciting intersection between these two advances. The course will start with an introduction to deep learning and overview the relevant background in genomics and high-throughput biotechnology, focusing on the available data and their relevance. It will then cover the ongoing developments in deep learning (supervised, unsupervised and generative models) with the focus on the applications of these methods to biomedical data, which are beginning to produced dramatic results. In addition to predictive modeling, the course emphasizes how to visualize and extract interpretable, biological insights from such models. Recent papers from the literature will be presented and discussed. Students will be introduced to and work with popular deep learning software frameworks. Students will work in groups on a final class project using real world datasets. Prerequisites: College calculus, linear algebra, basic probability and statistics such as CS109, and basic machine learning such as CS229. No prior knowledge of genomics is necessary.

Same as: BIODS 237, BIOMEDIN 273B, GENE 236

**CS 274. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.**

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisite: CS 106B; recommended: CS161; consent of instructor for 3 units.

Same as: BIOE 214, BIOMEDIN 214, GENE 214

**CS 275. Translational Bioinformatics. 4 Units.**

Computational methods for the translation of biomedical data into diagnostic, prognostic, and therapeutic applications in medicine. Topics: multi-scale omics data generation and analysis, utility and limitations of public biomedical resources, machine learning and data mining, issues and opportunities in drug discovery, and mobile/digital health solutions. Case studies and course project. Prerequisites: programming ability at the level of CS 106A and familiarity with biology and statistics. Same as: BIOE 217, BIOMEDIN 217, GENE 217

**CS 275A. Symbolic Musical Information. 2-4 Units.**

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files. Same as: MUSIC 253

**CS 275B. Music Query, Analysis, and Style Simulation. 2-4 Units.**

Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor. Same as: MUSIC 254

**CS 276. Information Retrieval and Web Search. 3 Units.**

Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems; text clustering and classification; Web search engines including crawling and indexing, link-based algorithms, web metadata, and question answering; distributed word representations. Prerequisites: CS 107, CS 109, CS 161. Same as: LINGUIST 286

**CS 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.**

Computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules and cells. These computational methods play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course topics include protein structure prediction, protein design, drug screening, molecular simulation, cellular-level simulation, image analysis for microscopy, and methods for solving structures from crystallography and electron microscopy data. Prerequisites: elementary programming background (CS 106A or equivalent) and an introductory course in biology or biochemistry. Same as: BIOE 279, BIOMEDIN 279, BIOPHYS 279, CME 279

**CS 28. Artificial Intelligence, Entrepreneurship and Society in the 21st Century and Beyond. 2 Units.**

Technical developments in artificial intelligence (AI) have opened up new opportunities for entrepreneurship, as well as raised profound longer term questions about how human societal and economic systems may be reorganized to accommodate the rise of intelligent machines. In this course, closely cotaught by a Stanford professor and a leading Silicon Valley venture capitalist, we will examine the current state of the art capabilities of existing artificial intelligence systems, as well as economic challenges and opportunities in early stage startups and large companies that could leverage AI. We will focus on gaps between business needs and current technical capabilities to identify high impact directions for the development of future AI technology. Simultaneously, we will explore the longer term societal impact of AI driven by inexorable trends in technology and entrepreneurship. The course includes guest lectures from leading technologists and entrepreneurs who employ AI in a variety of fields, including healthcare, education, selfdriving cars, computer security, natural language interfaces, computer vision systems, and hardware acceleration.

**CS 294A. Research Project in Artificial Intelligence. 3 Units.**

Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.

**CS 294H. Research Project in Human-Computer Interaction. 3 Units.**

Student teams under faculty supervision work on research and implementation of a large project in HCI. State-of-the-art methods related to the problem domain. Prerequisites CS 377, 147, 247, or permission from instructor.

**CS 294S. Research Project in Software Systems and Security. 3 Units.**

Topics vary. Focus is on emerging research themes such as programmable open mobile Internet that spans multiple system topics such as human-computer interaction, programming systems, operating systems, networking, and security. May be repeated for credit. Prerequisites: CS 103 and 107.

**CS 294W. Writing Intensive Research Project in Computer Science. 3 Units.**

Restricted to Computer Science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the CS 294 project they have chosen.

**CS 295. Software Engineering. 3 Units.**

Software specification, testing and verification. The emphasis is on automated tools for developing reliable software. The course covers material—drawn primarily from recent research papers—on the technology underlying these tools. Assignments supplement the lectures with hands-on experience in using these tools and customizing them for solving new problems. The course is appropriate for students intending to pursue research in program analysis and verification, as well as for those who wish to add the use of advanced software tools to their skill set. Prerequisites: 108. Recommended: a project course such as 140, 143 or 145.

**CS 298. Seminar on Teaching Introductory Computer Science. 1 Unit.**

Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor. Same as: EDUC 298

**CS 300. Departmental Lecture Series. 1 Unit.**

Priority given to first-year Computer Science Ph.D. students. CS Masters students admitted if space is available. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole.

**CS 309A. Cloud Computing Seminar. 1 Unit.**

For science, engineering, computer science, business, education, medicine, and law students. Cloud computing is bringing information systems out of the back office and making it core to the entire economy. Furthermore with the advent of smarter machines cloud computing will be integral to building a more precision planet. This class is intended for all students who want to begin to understand the implications of this technology. Guest industry experts are public company CEOs who are either delivering cloud services or using cloud services to transform their businesses.

**CS 315A. Parallel Computer Architecture and Programming. 3 Units.**

The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience.

**CS 315B. Parallel Computing Research Project. 3 Units.**

Advanced topics and new paradigms in parallel computing including parallel algorithms, programming languages, runtime environments, library debugging/tuning tools, and scalable architectures. Research project. Prerequisite: consent of instructor.

**CS 316. Advanced Multi-Core Systems. 3 Units.**

In-depth coverage of the architectural techniques used in modern, multi-core chips for mobile and server systems. Advanced processor design techniques (superscalar cores, VLIW cores, multi-threaded cores, energy-efficient cores), cache coherence, memory consistency, vector processors, graphics processors, heterogeneous processors, and hardware support for security and parallel programming. Students will become familiar with complex trade-offs between performance-power-complexity and hardware-software interactions. A central part of CS316 is a project on an open research question on multi-core technologies. Prerequisites: EE 180 (formerly 108B) and EE 282. Recommended: CS 149.

**CS 323. Automated Reasoning: Theory and Applications. 3-4 Units.**

Intelligent computer agents must reason about complex, uncertain, and dynamic environments. This course is a graduate level introduction to automated reasoning techniques and their applications, covering logical and probabilistic approaches. Topics include: logical and probabilistic foundations, backtracking strategies and algorithms behind modern SAT solvers, stochastic local search and Markov Chain Monte Carlo algorithms, variational techniques, classes of reasoning tasks and reductions, and applications.

**CS 325B. Data for Sustainable Development. 3-5 Units.**

The sustainable development goals (SDGs) encompass many important aspects of human and ecosystem well-being that are traditionally difficult to measure. This project-based course will focus on ways to use inexpensive, unconventional data streams to measure outcomes relevant to SDGs, including poverty, hunger, health, governance, and economic activity. Students will apply machine learning techniques to various projects outlined at the beginning of the quarter. The main learning goals are to gain experience conducting and communicating original research. Prior knowledge of machine learning techniques, such as from CS 221, CS 229, CS 231N, STATS 202, or STATS 216 is required. Open to both undergraduate and graduate students. Enrollment limited to 24. Students must apply for the class by filling out the form at <https://goo.gl/forms/9LSZF7IPkHadix5D3>. A permission code will be given to admitted students to register for the class.

Same as: EARTHSYS 162, EARTHSYS 262

**CS 326. Topics in Advanced Robotic Manipulation. 3-4 Units.**

This course provides a survey of the most important and influential concepts in autonomous robotic manipulation. It includes classical concepts that are still widely used and recent approaches that have changed the way we look at autonomous manipulation. We cover approaches towards motion planning and control using visual and tactile perception as well as machine learning. This course is especially concerned with new approaches for overcoming challenges in generalization from experience, exploration of the environment, and learning representation so that these methods can scale to real problems. Students are expected to present one paper in a tutorial, debate a paper once from the Pro and once from the Con side. They are also expected to propose an original research project and work on it towards a research paper. Recommended: CS 131, 223A, 229 or equivalents.

**CS 326A. Motion Planning. 3 Units.**

Computing object motions in computer graphics, geometrical computing, robotics, or artificial intelligence for applications such as design, manufacturing, robotics, animated graphics, surgical planning, drug design, assembly planning, graphic animation of human figures, humanoid robots, inspection and surveillance, simulation of crowds, and biology. Path planning methods to generate collision-free paths among static obstacles. Extensions include uncertainty, mobile obstacles, manipulating moveable objects, maneuvering with kinematic constraints, and making and breaking contacts. Configuration space, geometric arrangements, and random sampling. Theoretical methods.

**CS 327A. Advanced Robotic Manipulation. 3 Units.**

Advanced control methodologies and novel design techniques for complex human-like robotic and bio mechanical systems. Class covers the fundamentals in operational space dynamics and control, elastic planning, human motion synthesis. Topics include redundancy, inertial properties, haptics, simulation, robot cooperation, mobile manipulation, human-friendly robot design, humanoids and whole-body control. Additional topics in emerging areas are presented by groups of students at the end-of-quarter mini-symposium. Prerequisites: 223A or equivalent.

**CS 329. Topics in Artificial Intelligence. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 329M. Topics in Artificial Intelligence: Algorithms of Advanced Machine Learning. 3 Units.**

This advanced graduate course explores in depth several important classes of algorithms in modern machine learning. We will focus on understanding the mathematical properties of these algorithms in order to gain deeper insights on when and why they perform well. We will also study applications of each algorithm on interesting, real-world settings. Topics include: spectral clustering, tensor decomposition, Hamiltonian Monte Carlo, adversarial training, and variational approximation. Students will learn mathematical techniques for analyzing these algorithms and hands-on experience in using them. We will supplement the lectures with latest papers and there will be a significant research project component to the class. Prerequisites: Probability (CS 109), linear algebra (Math 113), machine learning (CS 229), and some coding experience.

**CS 331B. Representation Learning in Computer Vision. 3 Units.**

A representation performs the task of converting an observation in the real world (e.g. an image, a recorded speech signal, a word in a sentence) into a mathematical form (e.g. a vector). This mathematical form is then used by subsequent steps (e.g. a classifier) to produce the outcome, such as classifying an image or recognizing a spoken word. Forming the proper representation for a task is an essential problem in modern AI. In this course, we focus on 1) establishing why representations matter, 2) classical and modern methods of forming representations in Computer Vision, 3) methods of analyzing and probing representations, 4) portraying the future landscape of representations with generic and comprehensive AI/vision systems over the horizon, and finally 5) going beyond computer vision by talking about non-visual representations, such as the ones used in NLP or neuroscience. The course will heavily feature systems based on deep learning and convolutional neural networks. We will have several teaching lectures, a number of prominent external guest speakers, as well as presentations by the students on recent papers and their projects. Prerequisites: CS131A, CS231A, CS231B, or CS231N. If you do not have the required prerequisites, please contact a member of the course staff before enrolling in this course.

**CS 332. Advanced Survey of Reinforcement Learning. 3 Units.**

This class will provide a core overview of essential topics and new research frontiers in reinforcement learning. Planned topics include: model free and model based reinforcement learning, policy search, Monte Carlo Tree Search planning methods, off policy evaluation, exploration, imitation learning, temporal abstraction/hierarchical approaches, safety and risk sensitivity, human-in-the-loop RL, inverse reinforcement learning, learning to communicate, and insights from human learning. Students are expected to create an original research paper on a related topic. Prerequisites: CS221 or AA238/CS238 or CS234 or CS229 or similar experience.

**CS 333. Safe and Interactive Robotics. 3-4 Units.**

Once confined to the manufacturing floor, robots are quickly entering the public space at multiple levels: drones, surgical robots, service robots, and self-driving cars are becoming tangible technologies impacting the human experience. Our goal in this class is to learn about and design algorithms that enable robots to reason about their actions, interact with one another, the humans, and the environment they live in, as well as plan safe strategies that humans can trust and rely on. This is a project-based graduate course that studies algorithms in formal methods, control theory, and robotics, which can improve the state-of-the-art human-robot systems. We focus on designing new algorithms for enhancing safe and interactive autonomy. Recommended: Introductory course in AI and robotics.

**CS 334A. Convex Optimization I. 3 Units.**

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability. Same as: CME 364A, EE 364A

**CS 341. Project in Mining Massive Data Sets. 3 Units.**

Team project in data mining and machine learning of very large-scale data, including the problem statement, implementation, and evaluation of a solution. Students work on real problems on real-world data. The course provides access to large real-world data and access to big data cloud computing infrastructure (Amazon EC2, Google Cloud Platform). Some lectures on relevant materials will be given (Hadoop, Spark, Hive, Amazon EC2) as well as other topics of relevance to projects.

**CS 344. Topics in Computer Networks. 3 Units.**

High-performance network system design. Students will work in teams of two to build a fully functioning Internet router. Students will design the control plane in C on a Linux host and will design the data plane in the new P4 language on the NetFPGA 4 x 10GE switch. For the midterm milestone, teams must demonstrate that their routers can interoperate with the other teams by building a small scale datacenter topology. In the final 3-4 weeks of the class, teams will participate in an open-ended design challenge. Prerequisites: At least one student in each team must have taken CS144 at Stanford and completed Lab 3 (static router), Verilog experience for one member of each team is helpful but not required. Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 345S. Data-intensive Systems for the Next 1000x. 3-4 Units.**

The last decade saw enormous shifts in the design of large-scale data-intensive systems due to the rise of Internet services, cloud computing, and Big Data processing. Where will we see the next 1000x increases in scale and data volume, and how should data-intensive systems accordingly evolve? This course will critically examine a range of trends, including the Internet of Things, drones, smart cities, and emerging hardware capabilities, through the lens of software systems research and design. Students will perform a comparative analysis by reading and discussing cutting-edge research while performing their own original research. Prerequisites: Strong background in software systems, especially databases (CS 245) and distributed systems (CS 244B), and/or machine learning (CS 229). Undergraduates who have completed CS 245 are strongly encouraged to attend.

**CS 348A. Computer Graphics: Geometric Modeling & Processing. 3-4 Units.**

The mathematical tools needed for the geometrical aspects of computer graphics and especially for modeling smooth shapes. Fundamentals: homogeneous coordinates, transformations, and perspective. Theory of parametric and implicit curve and surface models: polar forms, Bézier arcs and de Casteljau subdivision, continuity constraints, B-splines, tensor product, and triangular patch surfaces. Subdivision surfaces and multi-resolution representations of geometry. Representations of solids and conversions among them. Surface reconstruction from scattered data points. Geometry processing on meshes, including simplification and parameterization. Prerequisite: linear algebra at the level of CME103. Recommended: 248.

**CS 348B. Computer Graphics: Image Synthesis Techniques. 3-4 Units.**

Intermediate level, emphasizing high-quality image synthesis algorithms and systems issues in rendering. Topics include: Reyes and advanced rasterization, including motion blur and depth of field; ray tracing and physically based rendering; Monte Carlo algorithms for rendering, including direct illumination and global illumination; path tracing and photon mapping; surface reflection and light source models; volume rendering and subsurface scattering; SIMD and multi-core parallelism for rendering. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

**CS 348C. Computer Graphics: Animation and Simulation. 3 Units.**

Core mathematics and methods for computer animation and motion simulation. Traditional animation techniques. Physics-based simulation methods for modeling shape and motion: particle systems, constraints, rigid bodies, deformable models, collisions and contact, fluids, and fracture. Animating natural phenomena. Methods for animating virtual characters and crowds. Additional topics selected from data-driven animation methods, realism and perception, animation systems, motion control, real-time and interactive methods, and multi-sensory feedback. Recommended: CS 148 and/or 205A. Prerequisite: linear algebra.

**CS 348V. Visual Computing Systems. 3-4 Units.**

Visual computing tasks such as computational photography, image/video analysis, 3D reconstruction, and real-time 3D graphics are key responsibilities of modern computer systems ranging from sensor-rich smart phones, autonomous robots, and large data centers. These workloads demand exceptional system efficiency and this course examines the key ideas, techniques, and challenges associated with the design of parallel (and heterogeneous) systems that execute and accelerate visual computing applications. This course is intended for graduate and advanced undergraduate-level systems students interested in architecting efficient graphics, image processing, and computer vision platforms (both new hardware architectures and domain-optimized programming frameworks) and for students in graphics, vision, and ML that seek to understand throughput computing principles so they can develop scalable algorithms that map efficiently these future platforms. Students will perform daily research paper readings, complete simple programming assignments, and compete a self-selected term project. Prerequisites: CS 107 or equivalent. Recommended: Parallel computing or computer architecture (CS 149, EE 282), some background in techniques in either deep learning (CS 230, CS 231N), computer vision (CS 231A), digital image processing (CS 232).

**CS 349. Topics in Programming Systems. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 349D. Cloud Computing Technology. 3 Units.**

The largest change in the computer industry over the past five years has arguably been the emergence of cloud computing: organizations are increasingly moving their workloads to managed public clouds and using new, global-scale services that were simply not possible in private datacenters. However, both building and using cloud systems remains a black art with many difficult research challenges. This research seminar will cover industry and academic work on cloud computing and survey challenges including programming interfaces, cloud native applications, resource management, pricing, availability and reliability, privacy and security. Students will also propose and develop an original research project. Prerequisites: For graduate students, background in computer systems (CS 240, 244, 244B or 245) is strongly recommended. Undergrads will need instructor's approval.

**CS 352. Pseudo-Randomness. 3-4 Units.**

Pseudorandomness is the widely applicable theory of efficiently generating objects that look random, despite being constructed using little or no randomness. Since pseudorandom objects can replace uniformly distributed ones (in a well-defined sense), one may view pseudorandomness as an extension of our understanding of randomness through the computational lens. We will study the basic tools pseudorandomness, such as limited independence, randomness extractors, expander graphs, and pseudorandom generators. We will also discuss the applications of pseudorandomness to derandomization, cryptography and more. We will cover classic result as well as cutting-edge techniques. Prerequisites: CS 154 and CS 161, or equivalents.

**CS 355. Advanced Topics in Cryptography. 3 Units.**

Topics: Pseudo randomness, multiparty computation, pairing-based and lattice-based cryptography, zero knowledge protocols, and new encryption and integrity paradigms. May be repeated for credit. Prerequisite: 255.

**CS 359. Topics in the Theory of Computation. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 359B. Designing Decentralized Applications on Blockchain. 3 Units.**

This project-based class focuses on understanding the elements of blockchain application development. Students will learn methods to design, implement and evaluate programs on fault tolerant cryptocurrency systems. Such systems could be viewed as a giant global slow distributed computer with public storage that can communicate to the real world through oracles. Alongside lectures, there will be a quarter-long project where students design, implement and evaluate a novel distributed application on a modern blockchain, such as the ones of the Ethereum or NEO cryptocurrencies. The Bitcoin blockchain will be also briefly discussed as background knowledge. Enrollment is competitive, so potential students must complete an application; see <http://cs359b.stanford.edu> for details. Recommended: CS 251 or 255. Prerequisites: CS 110, CS 142, or permission by the instructor.

**CS 359C. Topics in Theory of Computation: Classics of Cryptography. 3 Units.**

This course will review some of the greatest discoveries in modern cryptography: zero-knowledge proofs, factoring algorithms, elliptic-curve cryptography, post-quantum cryptography, and more. Some of the topics we will cover have immediate practical applications. Other topics we will study for their potential future applications. And yet others we will study for the theoretical insights they provide. The course readings will be a combination of the original "classic" papers and more modern treatments of the same topics. Prerequisite: CS 255, an equivalent course, or permission of instructors.

**CS 361. Engineering Design Optimization. 3-4 Units.**

Design of engineering systems within a formal optimization framework. This course covers the mathematical and algorithmic fundamentals of optimization, including derivative and derivative-free approaches for both linear and non-linear problems, with an emphasis on multidisciplinary design optimization. Topics will also include quantitative methodologies for addressing various challenges, such as accommodating multiple objectives, automating differentiation, handling uncertainty in evaluations, selecting design points for experimentation, and principled methods for optimization when evaluations are expensive. Applications range from the design of aircraft to automated vehicles. Prerequisites: some familiarity with probability, programming, and multivariable calculus.

Same as: AA 222

**CS 368. Algorithmic Techniques for Big Data. 3 Units.**

Designing algorithms for efficient processing of large data sets poses unique challenges. This course will discuss algorithmic paradigms that have been developed to efficiently process data sets that are much larger than available memory. We will cover streaming algorithms and sketching methods that produce compact data structures, dimension reduction methods that preserve geometric structure, efficient algorithms for numerical linear algebra, graph sparsification methods, as well as impossibility results for these techniques.

**CS 369. Topics in Analysis of Algorithms. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 369H. Hierarchies of Integer Programming Relaxations. 3 Units.**

Mathematical programming relaxations of integer programming formulations are a popular way to apply convex optimization techniques to hard combinatorial optimization problems. Such relaxations can be made closer to their integer programming counterparts by adding constraints; a systematic way to achieve this is via hierarchies of relaxations. Several such hierarchies are well-studied in the literature: Lovasz-Schrijver, Sherali-Adams and the Parrilo-Lasserre sum-of-squares (SoS) hierarchy. Recently, these hierarchies have received a lot of attention due to their potential to make progress on long standing algorithmic questions, and connections to various other areas such as computational complexity, combinatorial and polynomial optimization, quantum computing, proof complexity and so on. In this course we will cover recent research results in this area for problems arising from optimization, machine learning, computational complexity and more, discussing both lower and upper bounds. Prerequisites: Mathematical maturity (required), exposure to algorithms (strongly recommended), and optimization (recommended).

**CS 371. Computational Biology in Four Dimensions. 3 Units.**

Cutting-edge research on computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules, cells, and everything in between. These techniques, which draw on approaches ranging from physics-based simulation to machine learning, play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course is devoted primarily to reading, presentation, discussion, and critique of papers describing important recent research developments. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).

Same as: BIOMEDIN 371, BIOPHYS 371, CME 371

**CS 373. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.

Same as: BIO 268, BIOMEDIN 245, GENE 245, STATS 345

**CS 375. Large-Scale Neural Network Modeling for Neuroscience. 3 Units.**

Introduction to designing, building, and training neural networks for modeling brain and behavioral data, including: deep convolutional neural network models of sensory systems (vision, audition, somatosensation); recurrent neural networks for dynamics, memory and attention; integration of variational and generative methods for cognitive modeling; and methods and metrics for comparing such models to real-world neural data. Attention will be given both to established methods as well as cutting-edge techniques. Students will learn conceptual bases for deep neural network models, and will also implement learn to implement and train large-scale models in Tensorflow using GPUs. Requirements: Fluency in Unix shell and Python programming, familiarity with differential equations, linear algebra, and probability theory, and one or more courses in cognitive or systems neuroscience.

Same as: PSYCH 249

**CS 376. Human-Computer Interaction Research. 3-4 Units.**

Prepares students to conduct original HCI research by reading and discussing seminal and cutting-edge research papers. Main topics are ubiquitous computing, social computing, and design and creation; breadth topics include HCI methods, programming, visualization, and user modeling. Student pairs perform a quarter-long research project. Prerequisites: For CS and Symbolic Systems undergraduates/masters students, an A- or better in CS 147 or CS 247. No prerequisite for PhD students or students outside of CS and Symbolic Systems.

**CS 377C. Topics in HCI: Crowdsourcing and Social Computing. 3-4 Units.**

This project-based class focuses on the design of social computing and crowdsourcing systems. Students will learn how to engage large groups of people online, from microtask crowdsourcing to the design of online communities. The course will cover best practices for system design such as motivating participation, ethical guidelines, agreement measures, and gold standards. Advanced topics such as expert and team-based crowdsourcing, incentive design, and complex crowd workflows will also be discussed. Students will learn about the application of crowdsourcing to other areas of computer science, and how the field relates to social psychology and organizational behavior. Prerequisite: CS 147.

**CS 377D. Topics in Learning and Technology: d.compress - Designing Calm. 3 Units.**

Contents of the course change each year. The course can be repeated. Stress silently but steadily damages physical and emotional well-being, relationships, productivity, and our ability to learn and remember. This highly experiential and project-oriented class will focus on designing interactive technologies to enable calm states of cognition, emotion, and physiology for better human health, learning, creativity and productivity. Same as: EDUC 328A

**CS 377E. Designing Solutions to Global Grand Challenges. 3-4 Units.**

In this course we creatively apply information technologies to collectively attack Global Grand Challenges (e.g., global warming, rising healthcare costs and declining access, and ensuring quality education for all). Interdisciplinary student teams will carry out need-finding within a target domain, followed by brainstorming to propose a quarter long project. Teams will spend the rest of the quarter applying user-centered design methods to rapidly iterate through design, prototyping, and testing of their solutions. This course will interweave a weekly lecture with a weekly studio session where students apply the techniques hands-on in a small-scale, supportive environment.

**CS 377I. Designing Systems for Humans. 3-4 Units.**

Complex problems require sophisticated approaches. In this project-based hands-on course, students explore the design of systems, information and interface for human use. The design of systems is about modeling the flow of interactions, data and context, exploring the possible inputs and outputs and crafting a design response that is useful, appropriate and robust. Through the design of user scenarios, information flows, maps and models, students will also gain an understanding of the differences and synergies between design and the organization of information, and the ability to evaluate and analyze the success of a system to achieve the intended goals. We will also examine the ethical consequences of design decisions and explore current issues arising from unintended consequences. Prerequisite: CS 147 or equivalent. 247 recommended, but not required. Offered on an experimental basis in Spring 2018.

**CS 377U. Understanding Users. 3-4 Units.**

This project-based class focuses on understanding the use of technology in the world. Students will learn generative and evaluative research methods to explore how systems are appropriated into everyday life in a quarter-long project where they design, implement and evaluate a novel mobile application. Quantitative (e.g. A/B testing, instrumentation, analytics, surveys) and qualitative (e.g. diary studies, contextual inquiry, ethnography) methods and their combination will be covered along with practical experience applying these methods in their project. Prerequisites: CS 147, 193A/193P (or equivalent mobile programming experience).

**CS 379. Interdisciplinary Topics. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 379C. Computational Models of the Neocortex. 3 Units.**

This course emphasizes approaches to scaling the technologies of computer science and systems neuroscience to take advantage of the exponential trend in computational power known as Moore's Law. Modern methods in signal processing and machine learning are combined with technologies for managing large datasets common in industry. Classes feature scientists presenting novel approaches for analyzing the structure and function of complex neural circuits. Grading is based on class participation (30%), a project proposal due at midterm (20%), and a final project demonstration and report due by the end of finals (50%). Team projects are encouraged, especially multi-disciplinary collaborations. Prerequisites are basic high-school biology, good math skills and familiarity with machine learning. Some background in computer vision and signal processing is important for projects in structural analysis. Familiarity with modern artificial neural network technologies is a plus for projects in functional analysis. For more detail, see <http://www.stanford.edu/class/cs379c/> with special attention to the CALENDAR and DISCUSSION tabs from past classes available by following the ARCHIVES link.

**CS 390A. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C may each be taken once.

**CS 390B. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

**CS 390C. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

**CS 390D. Part-time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390P. Part-time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390Q. Part-Time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390R. Part-Time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390S. Part-Time CPT. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390T. Part-Time CPT. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390U. Part-Time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390V. Part-time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390W. Part-time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 393. Computer Laboratory. 1-9 Unit.**

For CS graduate students. A substantial computer program is designed and implemented; written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

**CS 395. Independent Database Project. 1-6 Unit.**

For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

**CS 399. Independent Project. 1-9 Unit.**

Letter grade only. This course is for graduate students only. Undergraduate students should enroll in CS199.

**CS 399P. Independent Project. 1-9 Unit.**

Graded satisfactory/no credit. This course is for graduate students only. Undergraduate students should enroll in CS199P.

**CS 402. Beyond Bits and Atoms: Designing Technological Tools. 3-4 Units.**

Practicum in designing and building technology-enabled curricula and hands-on learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. The course will focus on designing low-cost technologies, particularly for urban school in the US and abroad. We will explore theoretical and design frameworks from the constructionist learning perspective, critical pedagogy, interaction design for children. Interested students should complete the application at <https://web.stanford.edu/class/educ211> by January 5, and come to the first class at 9am in CERAS 101.

Same as: EDUC 236

**CS 402L. Beyond Bits and Atoms - Lab. 1-3 Unit.**

This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad. Interested students should complete the application at <https://web.stanford.edu/class/educ211> by January 5, and come to the first class at 9am in CERAS 101.

Same as: EDUC 211

**CS 41. Hap.py Code: The Python Programming Language. 2 Units.**

The fundamentals and contemporary usage of the Python programming language. Primary focus on developing best practices in writing Python and exploring the extensible and unique parts of Python that make it such a powerful language. Topics include: data structures (e.g. lists and dictionaries) and characteristic pythonic conventions such as anonymous functions, iterables, and powerful built-ins (e.g. map, filter, zip). We will also cover object-oriented design, the standard library, and common third-party packages (e.g. requests, pillow). Time permitting, we will explore modern Python-based web frameworks and project distribution. Prerequisite: 106B/X or equivalent. Application required.

**CS 42. Callback Me Maybe: Contemporary Javascript. 2 Units.**

Introduction to the JavaScript programming language with a focus on building contemporary applications. This course consists of in-class activities and programming assignments that challenge students to create functional web apps (e.g. Yelp, Piazza, Instagram). Topics include syntax/semantics, event-based programming, document object model (DOM), application programming interfaces (APIs), asynchronous JavaScript and XML (AJAX), Node.js, and MongoDB. Prerequisite: CS 107.

**CS 424M. Learning Analytics and Computational Modeling in Social Science. 3-4 Units.**

Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy.

Same as: EDUC 390

**CS 428. Computation and cognition: the probabilistic approach. 3 Units.**

This course will introduce the probabilistic approach to cognitive science, in which learning and reasoning are understood as inference in complex probabilistic models. Examples will be drawn from areas including concept learning, causal reasoning, social cognition, and language understanding. Formal modeling ideas and techniques will be discussed in concert with relevant empirical phenomena.

Same as: PSYCH 204

**CS 43. Functional Programming in Clojure. 2 Units.**

Clojure is a dialect of Lisp that runs on the JVM, CLR, or Javascript engine. This course explores the fundamentals and philosophy of Clojure, with emphasis on the benefits of immutability and functional programming that make it such a powerful and fun language. Topics include: immutability, functional programming (function composition, higher order functions), concurrency (atoms, promises, futures, actors, Software Transactional Memory, etc), LISP (REPL-driven development, homoiconicity, macros), and interop (between Clojure code and code native to the host VM). The course also explores design paradigms and looks at the differences between functional programming and object-oriented programming, as well as bottom-up versus top-down design.

**CS 431. High-level Vision: From Neurons to Deep Neural Networks. 3 Units.**

Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations.

Same as: PSYCH 250

**CS 448. Topics in Computer Graphics. 3-4 Units.**

Topic changes each quarter. Recent topics: computational photography, data visualization, character animation, virtual worlds, graphics architectures, advanced rendering. See <http://graphics.stanford.edu/courses> for offerings and prerequisites. May be repeated for credit.

**CS 448B. Data Visualization. 3 Units.**

Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, reading, and project. Prerequisite: one of 147, 148, or equivalent.

**CS 448H. Topics in Computer Graphics: Agile Hardware Design. 3 Units.**

Topic changes each quarter. Recent topics: computational photography, data visualization, character animation, virtual worlds, graphics architectures, advanced rendering. See <http://graphics.stanford.edu/courses> for offerings and prerequisites. May be repeated for credit.

**CS 448I. Computational Imaging and Display. 3 Units.**

Spawned by rapid advances in optical fabrication and digital processing power, a new generation of imaging technology is emerging: computational cameras at the convergence of applied mathematics, optics, and high-performance computing. Similar trends are observed for modern displays pushing the boundaries of resolution, contrast, 3D capabilities, and immersive experiences through the co-design of optics, electronics, and computation. This course serves as an introduction to the emerging field of computational imaging and displays. Students will learn to master bits and photons.

Same as: EE 367

**CS 45N. Computers and Photography: From Capture to Sharing. 3-4 Units.**

Preference to freshmen with experience in photography and use of computers. Elements of photography, such as lighting, focus, depth of field, aperture, and composition. How a photographer makes photos available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. No programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

**CS 468. Topics in Geometric Algorithms: Machine Learning for 3D Data. 3 Units.**

Contents of this course change with each offering. Past offerings have included geometric matching, surface reconstruction, collision detection, computational topology. May be repeated for credit. Winter 2013/14 iteration will cover Computational Symmetry & Regularity and spring quarter 2013/14 will cover data-driven shape analysis. Prerequisites: Math 52 or equivalent, basic coding.

**CS 476A. Music, Computing, Design I: Art of Design for Computer Music. 3-4 Units.**

Creative design for computer music software. Programming, audiovisual design, as well as software design for musical tools, instruments, toys, and games. Provides paradigms and strategies for designing and building music software, with emphases on interactive systems, aesthetics, and artful product design. Course work includes several programming assignments and a "design+implement" final project. Prerequisite: experience in C/C++ and/or Java. See <https://ccrma.stanford.edu/courses/256a/>.

Same as: MUSIC 256A

**CS 476B. Music, Computing, Design II: Virtual and Augmented Reality for Music. 3-4 Units.**

Aesthetics, design, and exploration of creative musical applications of virtual reality (VR) and augmented reality (AR), centered around VR and mobile technologies. Comparison between AR, VR, and traditional software design paradigms for music. Topics include embodiment, interaction design, novel instruments, social experience, software design + prototyping. Prerequisite: MUSIC 256A / CS 476A.

Same as: MUSIC 256B

**CS 47SI. Cross-Platform Mobile Development. 2 Units.**

The fundamentals of cross-platform mobile application development using the React Native framework (RN). Primary focus on developing best practices in creating apps for both iOS and Android by using Javascript and existing web + mobile development paradigms. Students will explore the unique aspects that made RN a primary tool for mobile development within Facebook, Instagram, Airbnb, Walmart, Tesla, and UberEats. Skills developed over the course will be consolidated by the completion of a final project. Required Prerequisites: at least one of the following: CS142, CS193P, CS193A (Web/Mobile development or heavy project-based class experience). Apply here: <https://goo.gl/forms/sF3TDYd5mN7V8f1W2> by January 13th (Saturday of week one).

**CS 499. Advanced Reading and Research. 1-15 Unit.**

Letter grade only. Advanced reading and research for CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor. This course is for graduate students only. Undergraduate students should enroll in CS199.

**CS 499P. Advanced Reading and Research. 1-15 Unit.**

Graded satisfactory/no credit. Advanced reading and research for CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor. This course is for graduate students only. Undergraduate students should enroll in CS199P.

**CS 49N. Using Bits to Control Atoms. 3 Units.**

This is a crash course in how to use a stripped-down computer system about the size of a credit card (the raspberry pi computer) to control as many different sensors as we can implement in ten weeks, including LEDs, motion sensors, light controllers, and accelerometers. The ability to fearlessly grab a set of hardware devices, examine the data sheet to see how to use it, and stitch them together using simple code is a secret weapon that software-only people lack, and allows you to build many interesting gadgets. We will start with a "bare metal" system — no operating system, no support — and teach you how to read device data sheets describing sensors and write the minimal code needed to control them (including how to debug when things go wrong, as they always do). This course differs from most in that it is deliberately mostly about what and why rather than how — our hope is that the things you are able at the end will inspire you to follow the rest of the CS curriculum to understand better how things you've used work. Prerequisites: knowledge of the C programming language. A Linux or Mac laptop that you are comfortable coding on.

**CS 50. Using Tech for Good. 2 Units.**

Students in the class will work in small teams to implement high-impact projects for partner organizations. Taught by the CS+Social Good team, the aim of the class is to empower you to leverage technology for social good by inspiring action, facilitating collaboration, and forging pathways towards global change. Recommended: CS 106B, CS 42 or 142. Class is open to students of all years. May be repeated for credit. Cardinal Course certified by the Haas Center.

**CS 51. CS + Social Good Studio: Designing Social Impact Projects. 2 Units.**

Get real-world experience launching and developing your own social impact projects! Students work in small teams to develop high-impact projects around problem domains provided by partner organizations, under the guidance and support of design/technical coaches from industry and non-profit domain experts. Along with support, resources, and community discussion, the class provides an outlet for students to create social change through CS while providing students with experience engaging in the full product development cycle on real-world projects. Prerequisite: CS 147, equivalent experience, or consent of instructors.

**CS 52. CS + Social Good: Implementing Social Impact Projects. 2 Units.**

Continuation of CS51 (CS + Social Good Studio: Designing Social Impact Projects). Teams enter the quarter having completed and tested a minimal viable product (MVP) with a well-defined target user, and a community partner. Students will learn to apply scalable technical frameworks, methods to measure social impact, tools for deployment, user acquisition techniques and growth/exit strategies. The purpose of the class is to facilitate students to build a sustainable infrastructure around their product idea. CS52 will host mentors, guest speakers and industry experts for various workshops and coaching-sessions. The class culminates in a showcase where students share their projects with stakeholders and the public. Prerequisite: CS 51, or consent of instructor.

**CS 52I. Seminar on AI Safety. 1 Unit.**

In this seminar, we will focus on the challenges in the design of safe and verified AI-based systems. We will explore some of the major problems in this area from the viewpoint of industry and academia. We plan to have a weekly seminar speaker to discuss issues such as verification of AI systems, reward misalignment and hacking, secure and attack-resilient AI systems, diagnosis and repair, issues regarding policy and ethics, as well as the implications of AI safety in automotive industry. Prerequisites: There are no official prerequisites but an introductory course in artificial intelligence is recommended.

**CS 522. Seminar in Artificial Intelligence in Healthcare. 1 Unit.**

Artificial intelligence is poised to make radical changes in healthcare, transforming areas such as diagnosis, genomics, surgical robotics, and drug discovery. In the coming years, artificial intelligence has the potential to lower healthcare costs, identify more effective treatments, and facilitate prevention and early detection of diseases. This class is a seminar series featuring prominent researchers, physicians, entrepreneurs, and venture capitalists, all sharing their thoughts on the future of healthcare. We highly encourage students of all backgrounds to enroll (no AI/healthcare background necessary). Speakers and more at [shift.stanford.edu/healthai](http://shift.stanford.edu/healthai).

**CS 53SI. Discussion in Tech for Good. 1 Unit.**

This course introduces students to various intersections of social good and technology through a weekly discussion and speaker series. Students will be given a space to exchange ideas and experiences regarding a certain social issue. Invited speakers come from industry, academia, and non-profit organizations. They will share their career paths, what drove them to these fields, and advice for students. The topics examined will span a broad variety of social issues — from race and class to education and sustainability — and help students better understand how to kick off their journey in using computer science for social good.

**CS 547. Human-Computer Interaction Seminar. 1 Unit.**

Weekly speakers on human-computer interaction topics. May be repeated for credit.

**CS 54N. Great Ideas in Computer Science. 3 Units.**

Stanford Introductory Seminar. Preference to freshmen. Covers the intellectual tradition of computer science emphasizing ideas that reflect the most important milestones in the history of the discipline. No prior experience with programming is assumed. Topics include programming and problem solving; implementing computation in hardware; algorithmic efficiency; the theoretical limits of computation; cryptography and security; and the philosophy behind artificial intelligence.

**CS 56N. Great Discoveries and Inventions in Computing. 3 Units.**

This seminar will explore some of both the great discoveries that underlie computer science and the inventions that have produced the remarkable advances in computing technology. Key questions we will explore include: What is computable? How can information be securely communicated? How do computers fundamentally work? What makes computers fast? Our exploration will look both at the principles behind the discoveries and inventions, as well as the history and the people involved in those events. Some exposure to programming will be helpful, but it not strictly necessary.

**CS 57I. Surgical Robotics Seminar. 1 Unit.**

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. Engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role. May be repeated for credit. Same as: ME 57I

**CS 58I. Media Innovation. 1 Unit.**

This course will introduce students interested in computer science, engineering, and media to what's possible and probable when it comes to media innovation. Speakers from multiple disciplines and industry will discuss a range of topics in the context of evolving media with a focus on the technical trends, opportunities and challenges surfacing in the unfolding media ecosystem. Speakers will underscore the need to innovate to survive in the media and information industries. Open to both undergraduates and graduate students.

**CS 62N. Let There Be Computations. 3 Units.**

The class will discuss the Theory of Computing as an ambitious intellectual endeavor with impact beyond Computer Science. What are computations? How can their study capture important aspects of the evolution of species, the structure of social networks, and the working of your smart phone? What are the laws of efficiency and complexity that govern computations? We will see surprising algorithms for very familiar problems as well as simple problems no one knows how to solve efficiently. We will encounter logic paradoxes that expose the limitations of computations and explore the different worlds we may be living in, depending on the answers to some of the central problems on computations.

The class is intended for students with a wide range of interests. The course will not involve programming. While our class will not rely on any deep mathematics (beyond basic high-school math) we will deal with mathematical formalization of concepts and with mathematical problem-solving. Therefore, some mathematical maturity and interest would be useful.

**CS 7. Personal Finance for Engineers. 1 Unit.**

Introduction to the fundamentals and analysis specifically needed by engineers to make informed and intelligent financial decisions. Course will focus on actual industry-based financial information from technology companies and realistic financial issues. Topics include: behavioral finance, budgeting, debt, compensation, stock options, investing and real estate. No prior finance or economics experience required.

**CS 801. TGR Project. 0 Units.****CS 802. TGR Dissertation. 0 Units.****CS 82. Social Impacts of Media Innovation. 1 Unit.**

Media innovation merges technical and cultural development and benefits diverse social groups in different ways. Considering historic media innovations such as cinema, hip-hop, and the works of innovator in residence Paul D. Miller aka DJ Spooky, the course focuses on what ideas benefit whom. Lectures and workshops underscore the need to innovate to survive and get heard, and offer know-how for radical innovation in the arts and entertainment industry. Course projects will be considered for inclusion in the Stanford Humanities Showcase. Open to both undergraduate and graduate students.

**CS 83. Playback Theater For Research. 3 Units.**

Playback combines elements of theater, community work and storytelling. In a playback show, a group of actors and musicians create an improvised performance based on the audience's personal stories. A playback show brings about a powerful listening and sharing experience. During the course, we will tell, listen, play together, and train in playback techniques. We will write diaries to process our experience in the context of education and research. The course is aimed to strengthen listening abilities, creativity and the collaborative spirit, all integral parts of doing great science. In playback, as in research, we are always moving together, from the known, to the unknown, and back.

There is limited enrollment for this class. Application is required. Apply here: [https://docs.google.com/forms/d/1gR4bGkFZh\\_ycMBGMz1Alluyv7WyQfX5xTjanGlclK-A/prefill](https://docs.google.com/forms/d/1gR4bGkFZh_ycMBGMz1Alluyv7WyQfX5xTjanGlclK-A/prefill).

**CS 9. Problem-Solving for the CS Technical Interview. 1 Unit.**

This course will prepare students to interview for software engineering and related internships and full-time positions in industry. Drawing on multiple sources of actual interview questions, students will learn key problem-solving strategies specific to the technical/coding interview. Students will be encouraged to synthesize information they have learned across different courses in the major. Emphasis will be on the oral and combination written-oral modes of communication common in coding interviews, but which are unfamiliar settings for problem solving for many students. Prerequisites: CS 106B or X.

**CS 96SI. Mobilizing Healthcare - iOS Development for Mobile Health. 2 Units.**

How can mobile technology can be leveraged to tackle pressing problems in healthcare? Our class will feature guest lecturers from Verily (formerly Google Life Sciences), Apple Health, and mobile health companies in developing countries and in the Bay Area. This class will give an overview of the fundamentals and contemporary usage of iOS development with a Mobile Health focus. Primary focus on developing best practices for Apple HealthKit and ResearchKit among other tools for iOS application development. Students will complete a project in the mobile health space sponsored and advised by professionals and student TAs. Recommended: CS193P or iOS development at a similar level. Apply at <https://enrollcs96si.typeform.com/to/FGGHVI> by Sept 30.

**Dance (DANCE)****DANCE 1. Introduction to Contemporary Dance & Movement: Liquid Flow. 1 Unit.**

Students in Liquid Flow will participate in a dance and movement class that 1) teaches the fundamentals of dance technique, and 2) addresses the way that you already dance in the world. Through discovering your own DIY movement signature and being aware of one another's dance, motion, and energy in space, we will transform the way that we move and connect to one another to inhabit flow states from the dance studio, into everyday life, and ultimately onto the stage.

Accompanied by contemporary and live music, Students will develop articulation, flexibility and "grace", learn contemporary and classic dance vocabulary, gain freedom dancing with others and mine dance's potential for social transformation and connection. Designed for beginners, we welcome student movers from diverse dance traditions, non-dancers, athletes, and more advanced dancers, who desire fluidity in their daily life, from thought to action.

**DANCE 100. Dance, Movement and Medicine: Immersion in Dance for PD. 1-2 Unit.**

Combining actual dancing with medical research, this Cardinal Course investigates the dynamic complementary relationship between two practices, medicine and dance, through the lens of Parkinson's disease (PD), a progressive neurological disease that manifests a range of movement disorders. "Dance for PD" is an innovative approach to dancing –and to teaching dance –for those challenged by PD. Course format consists of: 1. Weekly Lecture/Seminar Presentation: Partial list of instructors include Ms. Frank, Dr. Bronte-Stewart and other Stanford medical experts & research scientists, David Leventhal (Director, "Dance for PD") and Bay Area "Dance for PD" certified master teachers, filmmaker Dave Iverson, Damara Ganley, and acclaimed choreographers Joe Goode, Alex Ketley, Judith Smith (AXIS Dance). 2. Weekly Dance Class: Stanford students will fully participate as dancers, and creative partners, in the Stanford Neuroscience Health Center's ongoing "Dance for Parkinson's" community dance class for people with PD. This Community Engaged Learning component provides opportunity to engage meaningfully with people in the PD community. Dancing together weekly, students will experience firsthand the embodied signature values of "Dance for PD" classes: full inclusion, embodied presence, aesthetic and expressive opportunity for creative engagement, and community-building in action. A weekly debriefing session within Friday's class time will allow students to integrate seminar material with their movement experiences.

NO PRE-REQUISITES: No prior dance experience required. Beginners are welcome. Same as: NENS 222

**DANCE 102. Musical Theater Dance Styles. 1 Unit.**

Students will be able to demonstrate period specificity, character of style through learning different musical theater dances from the early 20th C. to the present. ALL students will participate in an end of quarter showing of the choreography developed and composed in class. nClass will be supplemented with the occasional guest, DJ accompaniment and video viewing.

Same as: MUSIC 184E

**DANCE 106. Choreography Project: Dancing, Recollected. 1 Unit.**

Collaboratively directed by Ketley and Frank, students will create dance material prompted by weekly interactions with residents of Lytton Gardens Assisted Living Residence. Students will meet twice weekly: once in studio on-campus, and once on-site with Lytton residents.

Drawing from interviews and interactions with Lytton residents, students will engage in an evolving rehearsal process including movement score creation, aesthetic discussion, revision with active involvement of the residents, and performance. The course culminates in performance(s) of the dance work for Lytton residents, staff, and families on-site at the end of the quarter.

**DANCE 106I. Stanford Dance Community: Inter-Style Choreography Workshop. 1-2 Unit.**

Designed for adventurous dancers, choreographers and student dance team leaders across Stanford campus. Students will explore a multiplicity of dance styles presented both by peer choreographers, as well as professionals in the field, to create a community of dancers who want to experiment and innovate within their form. The emphasis of the class is on individual growth as a dancer and dance maker through exposure to new and unfamiliar styles. Student dance team leaders and dancers with a strong interest in both choreography and learning different forms are highly encouraged to attend. Interested participants encouraged but not required to contact instructor, Aleta Hayes: ahayes1@stanford.edu. Course will consist of weekly choreography master classes taught by peers, composition intensives facilitated by the instructor, and guest professional master classes, not represented by the class participants.

**DANCE 107. Disruptive Choreography: Student Choreographers Creating Innovative Work. 1 Unit.**

Collaboratively taught by choreographers and Stanford dance faculty Alex Ketley and Diane Frank, this is a body-based investigation and studio class. As a class we will take a conspiratorial approach toward choreographic processes that insure breakthrough moments of innovation as students investigate, create, and eventually perform their own dance works. Both instructors have a wide range of choreographic experience which they will use to guide students through a myriad of approaches they can deploy when devising new dance and physical performance. Pre-requisite: A curiosity about making your own work and diversifying your understanding of movement generation and the infinite possible forms dances can take. Dancers of all genres, training backgrounds, and levels of experience are strongly encouraged to enroll. The quarter of studio exploration work will culminate in a public performance of the created works during the last week of class.

**DANCE 108. Hip Hop Meets Broadway. 1 Unit.**

What happens when Hip Hop meets "Fosse", "Aida", "Dream Girls" and "In the Heights"?nThe most amazing collaboration of Hip Hop styles adapted to some of the most memorable Broadway Productions.nThis class will explore the realm between Hip Hop Dance and the Broadway Stage. Infusing Acting thru dance movement and exploring the Art of Lip Sync thru Hip Hop Dance styles.

**DANCE 123. Hot Mess: Deliberate Failure as Practice. 2 Units.**

A dance class in how we become the worst dancer possible. The foundation of this class has many parts. One is that, in almost every respect the way we gain insight into anything is to understand more clearly its polarity. As a class we purposely explore chaos, failure, and "bad" dancing, with the hope that then we will have a greater chance to understand and refine our personal notions around beauty. The class also acknowledges that creativity is at times born from the loss of control. Instead of looking at this idea obliquely, Hot Mess looks at this directly by having dancers confront a number of movement and vocal prompts that are literally impossible to execute in any good way. This class embraces and celebrates destabilization, with all the exuberance, fear, and learning that can happen when we accept and practice being lost.

**DANCE 128. Roots Modern Experience - Mixed Level. 1 Unit.**

In this course students will be introduced to a series of Afro-contemporary dance warm ups and dance combinations that are drawn from a broad range of modern dance techniques, somatic practices and dance traditions of the African diaspora with a particular focus on Afro Brazilian, Afro Cuban and Haitian dance forms. Our study of these dance disciplines will inform the movement vocabulary, technical training, class discussions, and choreography we experience in this course. Students will learn more about the dances and rhythms for the Orishas of Brazil and Cuba, and the Loa of Haiti with an additional focus on other African diaspora dance forms such as, Cuban Haitian, Palo, Samba and Samba-Reggae. Dance combinations will consist of dynamic movement patterns that condition the body for strength, flexibility, endurance, musicality and coordination. Through this approach to our warm ups and class choreography, we will deepen our analysis and understanding of how African diaspora movement traditions are inherently embedded in many expressions of the broadly termed form known as contemporary dance. Same as: AFRICAAM 128

**DANCE 131. Beginning/Intermediate Ballet. 1 Unit.**

Structured studio practice reviewing the basics of ballet technique including posture, placement, the foundation steps and ballet terms, and progressing to more complex positions and combination of steps. Emphasis is placed on improving forms, developing coordination and connectivity, securing balance, increasing strength, flexibility, sense of lines, and sensitivity to rhythm and music.

**DANCE 132. Ballet Technique & Classical Variations. 1 Unit.**

For Intermediate/Advanced Students. Structured studio practice reviewing the basics of ballet technique including posture, placement, the foundation steps and ballet terms, and progressing to more complex positions and combination of steps. Emphasis is placed on improving forms, developing coordination and connectivity, securing balance, increasing strength, flexibility, sense of lines, and sensitivity to rhythm and music and as well as learning the variations from existing ballets: Sleeping Beauty, Swan Lake, Paquita(just to name a few).

**DANCE 141. Advanced Contemporary Modern Technique. 2 Units.**

This advanced dance technique class is grounded in the technical training, aesthetics, and choreographic processes of Merce Cunningham, American dancer and master choreographer. Practice will increase strength, speed, articulation, amplitude and clarity of dancing. Class will provide a solid technical base applicable to other forms of dancing. Dancers must be ready to work at a high intermediate/advanced level to enroll. Short readings and concert attendance will supplement studio work. Cunningham-based technique is particularly well-suited to dancers with prior training in ballet; dancers with prior training in any form are welcome. nMay be repeated for credit.

**DANCE 142. Intermediate/Advanced Contemporary Dance Technique. 1 Unit.**

This intermediate/advanced dance technique class is grounded in the technical training, aesthetic sensibilities, and choreographic processes of Merce Cunningham, American dancer/master choreographer. This studio work at an intermediate/advanced level will build technical strength, speed, line, and rhythmic acuity/musicality and amplitude in dancing. The class will provide solid technical training useful and applicable to other forms of dancing. Dancers must be ready to work at an intermediate/advanced level to enroll. Studio practice will be supplemented by readings, video viewing, concert attendance, and participation in special workshops with guest artists. Though Cunningham-based dance technique is particularly well-suited to dancers with prior training in ballet, dancers with prior training in all forms of dance are welcome and strongly encouraged to enroll. May be repeated for credit.

**DANCE 146. Social Dance II. 1 Unit.**

Intermediate non-competitive social ballroom dance. The partner dances found in today's popular culture include Lindy hop, Viennese waltz, hustle, traveling foxtrot, plus intermediate/advanced levels of cross-step waltz and nightclub two-step. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46.

**DANCE 147. Living Traditions of Swing. 1 Unit.**

Swing dancing: the early Lindy of the 1920s; 6- and 8-count Lindy hop, Shag, Big Apple, 1950s Rock 'n' Roll swing, disco Hustle and West Coast Swing. Partnering and improvisation. Swing's crosscultural influences and personal creativity. May be repeated for credit.

**DANCE 148. Intermediate Ballet. 1 Unit.**

Intermediate Ballet at Stanford is designed for students who have done ballet in their past, but maybe have stepped away from the form for awhile. The class focuses on technique, musicality, vocabulary, coordination and artistic choice. The class looks at ballet as an enduring and vibrant movement system that can be used for classical purposes or as a way to strengthen and diversify the movement vocabulary inherent in other dance forms like modern, hip-hop, or social dancing. Any questions can be directed to Lecturer Alex Ketley at [aketley@stanford.edu](mailto:aketley@stanford.edu).

**DANCE 149. Advanced Ballet. 2 Units.**

Advanced Ballet at Stanford is offered for students who are interested in rigorous, complex, and artistically compelling ballet training. The class focuses on technique, but in the broad sense of how ballet as a movement system can be used for a wide range of dance disciplines. The class honors the historical training legacy that defines classical ballet, but is in no way shackled to that history in an antiquated fashion. The students are encouraged to explore the form as artists, to question its foundations, and find their own sense of agency within classical dance. Students with a strong background in ballet are encouraged to come, but also students with less ballet training are welcome as long as they have an email dialog with the lecturer beforehand. Any questions can be directed to Lecturer Alex Ketley at [aketley@stanford.edu](mailto:aketley@stanford.edu).

**DANCE 156. Social Dance III. 1 Unit.**

Intermediate non-competitive social ballroom dance: intermediate/advanced waltz, redowa, Bohemian National Polka, intermediate/advanced tango, cha-cha, and salsa. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46. Dance 156 may immediately follow Dance 46.

**DANCE 160. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries. Same as: FEMGEN 160, TAPS 160, TAPS 260

**DANCE 160J. Conjure Art 101: Performances of Ritual, Spirituality and Decolonial Black Feminist Magic. 2 Units.**

Conjure Art is a movement and embodied practice course looking at the work and techniques of artists of color who utilize spirituality and ritual practices in their art making and performance work to evoke social change. In this course we will discuss the work of artists who bring spiritual ritual in their art making while addressing issues of spiritual accountability and cultural appropriation. Throughout the quarter we will welcome guest artists who make work along these lines, while exploring movement, writing, singing and visual art making. This class will culminate in a performance ritual co-created by students and instructor.

Same as: AFRICAAM 160J, CSRE 160J

**DANCE 160M. Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture. 3-4 Units.**

This course will introduce students to the ways in which the Middle East has been represented and performed by/in the 'West' through dance, performance, and popular culture in both historical and contemporary contexts. A brief look through today's media sources exposes a wide range of racialized and gendered representations of the Middle East that shape the way the world imagines the Middle East to be. As postcolonial theorist Edward Said explains, the framework we call Orientalism establishes the ontological character of the Orient and the Oriental as inherently 'Other'. Starting with 19th century colonialism and continuing into the post-9/11 era, this course will trace the Western production, circulation, and consumption of representations of the Middle East as 'Other' in relation to global geopolitics. We will further examine dance forms produced in mid-twentieth century Iran and Egypt, with particular attention to nation-state building and constructions of gender. Finally, we will examine artistic productions and practices from the Middle East and Middle Eastern diasporic communities that respond to colonialism, war, displacement, secularism, and Euro-American Empire. Using dance studies, postcolonial feminist, and critical race theoretical frameworks, we will consider the gender, racial, political, and cultural implications of selected performance works and practices in order to analyze how bodies produce meaning in dance, performance art, theater, film, photography, and new media. Students will engage in multiple modes of learning; the course will include lectures, engaged group discussions, viewing of live and recorded performance, embodied participation in dance practice, student oral presentations, and a variety of writing exercises. Course assignments will culminate in a final research project related to class themes and methods.

Same as: CSRE 160M, FEMGEN 160M, TAPS 160M

**DANCE 161D. Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders. 3-4 Units.**

This introduction to dance studies course explores dance practice and performance as means for producing cultural meaning. Through theoretical and historical texts and viewing live and recorded dance, we will develop tools for analyzing dance and understanding its place in social, cultural, and political structures. This uses dance and choreography as a lens to more deeply understand a wide range of identity and cultural formations, such as gender, race, sexuality, (dis)ability, (trans)nationality, and empire. We will analyze dancing bodies that move across stages, dance clubs, film screens, and border zones. We will examine dance from diverse locales and time periods including ballet, modern and contemporary dance, contact improvisation, folkloric dance, burlesque, street dance, queer club dance, drag performance, music videos, TV dance competitions, and intermedia/new media performance. In addition to providing theoretical and methodological grounding in dance studies, this course develops performance analysis skills and hones the ability to write critically and skillfully about dance. No previous experience in dance is necessary to successfully complete the course. Same as: CSRE 61, FEMGEN 161D, TAPS 161D

**DANCE 161H. Dance, History and Conflict. 4 Units.**

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict. Same as: TAPS 161H

**DANCE 162H. Baroque Modernities: Dance, Theater, Film, Political Theory. 4 Units.**

What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century – becoming particularly prominent in the 1980s – beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-century dance and theater to contemporary dance, film and literature. Same as: TAPS 162H

**DANCE 162V. Advanced Research in Black Performing Arts. 1 Unit.**

What is the history of Committee for Black Performing Arts (CBPA)? How did it come into being and how do we carry/re-member the legacy forward and into the future? In this course students will engage in the research and archiving process as we dig into the history of CBPA on the eve of its 50th anniversary. Activities will include, digitizing and cataloguing film, video and documents, conducting interviews with former students and professors of CBPA, and guest lecturers with professional archivists. Same as: CSRE 162V

**DANCE 190. Special Research. 1-5 Unit.**

Topics related to the discipline of dance. May be repeated for credit.

**DANCE 191. Independent Research. 1-18 Unit.**

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

**DANCE 2. Introduction to Dance & Movement: Afro Flows. 1 Unit.**

Students in Afro Flows will focus on fundamentals of contemporary dance, gain fluid movement in everyday life and develop a rhythmic sensibility. This class invites participants to be more expressive and spontaneous in their movement choices. In addition to set movement warm ups, students will also learn footwork from different traditions, including tap and current social dance styles to expand their dance vocabulary. Through this approach and live percussion, students will discover their own natural rhythmic capability, as well as learn to attune with the environment and with others. No previous experience required. Questions? Contact: Aleta Hayes (ahayes1@stanford.edu).

**DANCE 25. Studio to Stage: Student Choreography Projects. 1 Unit.**

Make your own dance! In Studio-to-Stage, student choreographers propose, develop, rehearse, and perform their own dances under the close guidance of a faculty mentor. Together, mentor and dance maker discover rehearsal processes that will support and realize the proposed work, including movement investigation, music/sound choices, costuming, and lighting. The course culminates in a group concert showing. Dance is broadly defined as any intentional movement, including fusion forms and innovation. Dance makers of all levels, styles, and training backgrounds are strongly encouraged to enroll. Concert format, logistics, and level of theatrical production will be determined by the collective ambition and imagination of the participants. TAPS will provide some technical support towards the culminating showing of works.

**DANCE 27. Faculty Choreography. 1 Unit.**

Creation, rehearsal, performance of faculty choreography. Casting by audition/invitation, first week of the quarter. For detailed project descriptions and full rehearsal/performance schedules, contact choreographers directly. New Work by Diane Frank. Rehearsals Mon / Wed, 6-8:30 pm. This group work investigates literal and imaginative tools – objects, memories, movement fragments, gestures, advice – used to find or create the extraordinary within the ordinary tasks and times of our lives. Rehearsals culminate in 3 TAPS Main Stage performances on shared dance faculty concert, end of week 9.

**DANCE 290. Special Research. 1-18 Unit.**

Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.

**DANCE 30. Chocolate Heads Performance Project: Dance & Intercultural Performance Creation. 2 Units.**

Students from diverse dance styles (ballet to hip-hop to contemporary) participate in the dance-making/remix process and collaborate with musicians, visual artists, designers and spoken word artists, to co-create a multidisciplinary finished production and installation. Students of all dance or athletic backgrounds are welcome to audition on Wednesday, September 28th and Monday, October 4th during class time. Visual artists, musicians and dancers may also contact the instructor for further information at ahayes1@stanford.edu. Same as: AFRICAAM 37

**DANCE 3SI. Bollywood Balle Balle. 1 Unit.**

This is a survey course of Bollywood dance styles throughout history, with particular focus on the modern filmi dance. Throughout the course, students will learn the history and context of particular dance styles through discussions of integration with popular Indian cinema.

**DANCE 45. Dance Improv StratLab: Freestyle Improvisation from Contemporary to Hip Hop & Beyond. 1-2 Unit.**

This class is an arena for physical and artistic exploration to fire the imagination of dance improvisers, cultivate sensation and perception within and without studio practice and to promote interactive intelligence. Students will learn to harness and transform habitual movement patterns and dance trainings as resources for new ways of moving: expand their awareness of being a part of a bigger picture, while being attentive to everything all at once: and to use visual, aural and kinesthetic responses to convert those impulses into artistic material. Class will be accompanied by live and recorded music and include weekly jam sessions. Open to students from all dance, movement, athletic backgrounds and skill levels. Beginners welcome.  
Same as: AFRICAAM 45

**DANCE 46. Social Dance I. 1 Unit.**

Introduction to non-competitive social ballroom dance. The partner dances found in today's popular culture include 3 kinds of swing, 3 forms of waltz, tango, salsa, cha-cha and nightclub two-step. The course also includes tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. The emphasis on comfort, partnering and flexibility enables students to dance with partners whose experience comes from any dance tradition.

**DANCE 48. Beginning Ballet. 1 Unit.**

Fundamentals of ballet technique including posture, placement, the foundation steps, and ballet terms; emphasis on the development of coordination, balance, flexibility, sense of lines, and sensitivity to rhythm and music. May be repeated for credit.

**DANCE 50. Contemporary Choreography. 1 Unit.**

Each day Ketley will develop a new phrase of choreography with the students and use this as the platform for investigation. Consistent lines of inquiry include; sculpting with the body as an emotional, instinctual, and graphic landscape, how the fracturing and the complication of strands of information can feel generative of new ways of moving, discussions around how our use of time is directly correlated to our sense of presence, and the multitude of physical colors available to each of us as artists as we expand our curiosity about movement. Classes will be very physical, trusting that much of our knowledge is contained in the body. For questions please e-mail [aketley@stanford.edu](mailto:aketley@stanford.edu).

**DANCE 58. Beginning Hip Hop. 1 Unit.**

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

**DANCE 59. Intermediate-Advanced Hip-Hop. 1 Unit.**

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

**DANCE 63. Beginning Dance and Dance Making. 1 Unit.**

This Choreography course is designed to expose students to fundamental techniques and approaches used in the creation of dance. All of the basic elements of dance composition will be creatively touched upon including: style, form, theme and variation, narrative versus abstract methods of expression, elements of time, quality and use of space, motif and repetition. These different tools will be illustrated and the options and restrictions of each will be explored. Practical assignments will culminate in a performance of work generated and arranged by the instructor and students. The course is recommended for all students interested in the artistic process in a creative situation.

**DANCE 71. Introduction to Capoeira: An African Brazilian Art Form. 1 Unit.**

Capoeira is an African Brazilian art form that incorporates, dance, music, self-defense and acrobatics. Created by enslaved Africans in Brazil who used this form as a tool for liberation and survival, it has since become a popular art form practiced around the world. In this course students will learn basic movements for both Capoeira Angola and Capoeira Regional, and the history of this rich and physically rigorous art form. Students will learn basic acrobatic skills, be introduced to Capoeira songs, and learn to play rhythms on the drum, pandeiro (tambourine), and the Berimbau – a single stringed bow instrument. This course will be physically rigorous and fun! No previous experience necessary.  
Same as: AFRICAAM 71

## Developmental Biology (DBIO)

**DBIO 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**DBIO 200. Genetics and Developmental Biology Training Camp. 1 Unit.**

Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.  
Same as: GENE 200

**DBIO 201. Cells and Signaling in Regenerative Medicine.. 2 Units.**

Mechanisms that direct human development from conception to birth. Conserved molecular and cellular pathways regulate tissue and organ development; errors in these pathways result in congenital anomalies and human diseases. Topics: molecules regulating development, cell induction, developmental gene regulation, cell migration, programmed cell death, pattern formation, stem cells, cell lineage, and development of major organ systems. Emphasis on links between development and clinically significant topics including infertility, assisted reproductive technologies, contraception, prenatal diagnosis, teratogenesis, inherited birth defects, fetal therapy, adolescence, cancer, and aging. Limit enrollment only to Medical Student and Masters in Genetics students.

**DBIO 210. Developmental Biology. 4 Units.**

Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, gene regulation, organogenesis, tissue patterning, cell lineage, maternal inheritance, cell-cell communication, signaling, and regeneration in developmental processes in well-studied organisms such as vertebrates, insects, and nematodes. Team-taught. Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics.

**DBIO 211. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.**

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 42, or equivalent.

Same as: BIOE 211, BIOE 311, BIOPHYS 311

**DBIO 215. Frontiers in Biological Research. 1 Unit.**

Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems. Same as: BIOC 215, GENE 215

**DBIO 219. Special Topics in Development and Cancer: Evolutionary and Quantitative Perspectives. 3 Units.**

The course will serve as a literature-based introductory guide for synthesis of ideas in developmental biology and cancer, with an emphasis on evolutionary analysis and quantitative thinking. The goal for this course is for students to understand how we know what we know about fundamental questions in the field of developmental biology and cancer, and how we ask good questions for the future. We will discuss how studying model organisms has provided the critical breakthroughs that have helped us understand developmental and disease mechanisms in higher organisms. The students are expected to be able to read the primary literature and think critically about experiments to understand what is actually known and what questions still remain unanswered. Students will develop skills in the educated guesswork to apply order-of-magnitude methodology to questions in development and cancer.

Same as: BIOE 219

**DBIO 220. Genomics and Personalized Medicine. 3 Units.**

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200.

Same as: GENE 210

**DBIO 273A. The Human Genome Source Code. 3 Units.**

A computational introduction to the most amazing programming language on the planet: your genome. Topics include genome sequencing (assembling source code from code fragments); the human genome functional landscape: variable assignments (genes), control-flow logic (gene regulation) and run-time stack (epigenomics); human disease and personalized genomics (as a hunt for bugs in the human code); genome editing (code injection) to cure the incurable; and the source code behind amazing animal adaptations. Algorithmic approaches will introduce ideas from computational genomics, machine learning and natural language processing. Course includes primers on molecular biology, and text processing languages. No prerequisites.

Same as: BIOMEDIN 273A, CS 273A

**DBIO 299. Directed Reading in Developmental Biology. 1-18 Unit.**

Prerequisite: consent of instructor.

**DBIO 299C. CURRICULAR PRACTICAL TRAINING. 1 Unit.**

CPT Course required for international students completing degree requirements.

**DBIO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**DBIO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**DBIO 802. TGR Dissertation. 0 Units.**

## Earth Systems (EARTHSYS)

**EARTHSYS 10. Introduction to Earth Systems. 4 Units.**

For non-majors and prospective Earth Systems majors. Multidisciplinary approach using the principles of geology, biology, engineering, and economics to describe how the Earth operates as an interconnected, integrated system. Goal is to understand global change on all time scales. Focus is on sciences, technological principles, and sociopolitical approaches applied to solid earth, oceans, water, energy, and food and population. Case studies: environmental degradation, loss of biodiversity, and resource sustainability.

**EARTHSYS 100. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.**

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

Same as: ESS 101

**EARTHSYS 101. Energy and the Environment. 3 Units.**

Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42.

Same as: ENERGY 101

**EARTHSYS 102. Fundamentals of Renewable Power. 3 Units.**

Do you want a much better understanding of renewable power technologies? Did you know that wind and solar are the fastest growing forms of electricity generation? Are you interested in hearing about the most recent, and future, designs for green power? Do you want to understand what limits power extraction from renewable resources and how current designs could be improved? This course dives deep into these and related issues for wind, solar, biomass, geothermal, tidal and wave power technologies. We welcome all student, from non-majors to MBAs and grad students. If you are potentially interested in an energy or environmental related major, this course is particularly useful. Recommended: Math 21 or 42.  
Same as: ENERGY 102

**EARTHSYS 103. Understanding Energy. 3-5 Units.**

Energy is a fundamental driver of human development and opportunity. At the same time, our energy system has significant consequences for our society, political system, economy, and environment. For example, energy production and use is the number one source of greenhouse gas emissions. In taking this course, students will not only understand the fundamentals of each energy resource – including significance and potential, conversion processes and technologies, drivers and barriers, policy and regulation, and social, economic, and environmental impacts – students will also be able to put this in the context of the broader energy system and think critically about how and why society has chosen particular energy resources. Both depletable and renewable energy resources are covered, including oil, natural gas, coal, nuclear, biomass and biofuel, hydroelectric, wind, solar thermal and photovoltaics (PV), geothermal, and ocean energy, with cross-cutting topics including electricity, storage, climate change, sustainability, green buildings, energy efficiency, transportation, and the developing world. The course is 4 units, which includes lecture and in-class discussion, readings and videos, assignments, and two off-site field trips. Enroll for 5 units to also attend the Workshop, an interactive discussion section on cross-cutting topics that meets once per week for 80 minutes (timing TBD based on student schedules). The 3-unit option requires instructor approval - please contact Diana Ginnebaugh. Website: <http://web.stanford.edu/class/cee207a/> Course was formerly called Energy Resources. Prerequisites: Algebra. May not be taken for credit by students who have completed CEE 107S.

Same as: CEE 107A, CEE 207A

**EARTHSYS 104. The Water Course. 3 Units.**

The Central Valley of California provides a third of the produce grown in the U.S., but has a desert climate, thus raising concerns about both food and water security. The pathway that water takes rainfall to the irrigation of fields (the water course) determines the quantity and quality of the available water. Working with various data sources (remote sensing, gauges, wells) allows us to model the water budget in the valley and explore the way in which recent droughts and increasing demand are impacting freshwater supplies.

Same as: GEOPHYS 70

**EARTHSYS 105. Food and Community: Food Security, Resilience and Equity. 2-3 Units.**

What can communities do to bolster food security, resiliency, and equity in the face of climate change? This course aims to respond to this question, in three parts. In Part I, we will explore the most current scientific findings on trends in anthropogenic climate forcing and the anticipated impacts on global and regional food systems. Specifically, Part I will review the anticipated impact of climate change on severe weather events, crop losses, and food price volatility and the influence of these impacts on global and regional food insecurity and hunger. In Part II, we will consider what communities can do to promote food security and equity in the face of these changes, by reviewing the emerging literature on food system resiliency. Finally, we will facilitate a conference in which multi-disciplinary teams from around the country will gather to initiate regional planning projects designed to enhance food system resilience and equity. Cardinal Course (certified by Haas Center). Limited enrollment. May be repeated for credit.

Same as: EARTHSYS 205

**EARTHSYS 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: BIO 105A

**EARTHSYS 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: BIO 105B

**EARTHSYS 106. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 206, ECON 106, ECON 206, ESS 106, ESS 206

**EARTHSYS 106C. CROP GENETIC IMPROVEMENT: Scientific Facts vs. Fiction. 2 Units.**

This lecture and discussion course will review the scientific evidence on the use and impacts of genetic engineering in global food and agricultural systems. The class will cover the history and details of crop genetic improvement, ranging from primitive domestication to CRISPR technologies. We will examine the risks and benefits of crop genetic technologies in agriculture with regards to productivity, farm incomes, food safety, human health and nutrition, and environmental impacts. We will also discuss the current and future use of genetic engineering techniques for enhancing climate resilience and nutritional outcomes in agricultural systems worldwide. Finally, we will discuss the ethics of using modern genetic approaches for crop improvement, and the policy environment surrounding the use of these genetic techniques. Our expectation is that students enrolled in the course will attend all class sections and participate actively in the discussions. Students will be asked to identify peer-reviewed, scientific papers on the impacts of specific crop genetic improvements. Depending on the class size, students will also be asked to help lead class discussions. At the end of the course, students will work in groups to debate a selected topic on the use of genetic engineering in agriculture, to be announced during the course. Prerequisites: One course in biology and one course in economics are suggested. Completion of "Feeding Nine Billion" and "The World Food Economy" classes would also be helpful, as would a class in genetics, but there are no strict course requirements.

**EARTHSYS 107. Control of Nature. 3 Units.**

Think controlling the earth's climate is science fiction? It is when you watch *Snowpiercer* or *Dune*, but scientists are already devising geoengineering schemes to slow climate change. Will we ever resurrect the woolly mammoth or even a T. Rex (think Jurassic Park)? Based on current research, that day will come in your lifetime. Who gets to decide what species to save? And more generally, what scientific and ethical principles should guide our decisions to control nature? In this course, we will examine the science behind ways that people alter and engineer the earth, critically examining the positive and negative consequences. We'll explore these issues first through popular movies and books and then, more substantively, in scientific research.

Same as: ESS 107

**EARTHSYS 11. Introduction to Geology. 5 Units.**

Why are earthquakes, volcanoes, and natural resources located at specific spots on the Earth surface? Why are there rolling hills to the west behind Stanford, and soaring granite walls to the east in Yosemite? What was the Earth like in the past, and what will it be like in the future? Lectures, hands-on laboratories, in-class activities, and one field trip will help you see the Earth through the eyes of a geologist. Topics include plate tectonics, the cycling and formation of different types of rocks, and how geologists use rocks to understand Earth's history.

Same as: GS 1

**EARTHSYS 110. Introduction to the foundations of contemporary geophysics. 3 Units.**

Introduction to the foundations of contemporary geophysics. Topics drawn from broad themes in: whole Earth geodynamics, geohazards, natural resources, and environment. In each case the focus is on how the interpretation of a variety of geophysical measurements (e.g., gravity, seismology, heat flow, electromagnetics, and remote sensing) can be used to provide fundamental insight into the behavior of the Earth.

Prerequisite: CME 100 or MA TH 51, or co-registration in either.

Same as: GEOPHYS 110

**EARTHSYS 111. Biology and Global Change. 4 Units.**

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.

Same as: BIO 117, ESS 111

**EARTHSYS 112. Human Society and Environmental Change. 4 Units.**

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1.

Same as: EARTHSYS 212, ESS 112, HISTORY 103D

**EARTHSYS 113. Earthquakes and Volcanoes. 3 Units.**

Is the "Big One" overdue in California? What kind of damage would that cause? What can we do to reduce the impact of such hazards in urban environments? Does "fracking" cause earthquakes and are we at risk? Is the United States vulnerable to a giant tsunami? The geologic record contains evidence of volcanic super eruptions throughout Earth's history. What causes these gigantic explosive eruptions, and can they be predicted in the future? This course will address these and related issues. For non-majors and potential Earth scientists. No prerequisites. More information at: <https://stanford.box.com/s/zr8ar28efmuo5wtlj6gj2jbxle76r4lu>.

Same as: GEOPHYS 90

**EARTHSYS 114. Environmental Change and Emerging Infectious Diseases. 4-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, ANTHRO 277, EARTHSYS 214, HUMBIO 114

**EARTHSYS 115. Wetlands Ecology of the Pantanal Prefield Seminar. 2-3 Units.**

This seminar will prepare students for their overseas field experience in the Pantanal, Brazil, the largest wetland in the world, studying wetlands ecology and conservation in situ. Students will give presentations on specific aspects of the Pantanal and lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. Additional topics include: logistics, health and safety, cultural sensitivity, geography and politics, and basic language skills; also, post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus. Students will have the opportunity to participate in a pilot study aimed at developing a series of innovative online curriculum based upon their field experience.

**EARTHSYS 115N. Desert Biogeography of Namibia Prefield Seminar. 3 Units.**

Desert environments make up a third of the land areas on Earth, ranging from the hottest to the coldest environments. Aridity leads to the development of unique adaptations among the organisms that inhabit them. Climate change and other processes of desertification as well as increasing human demand for habitable and cultivatable areas have resulting in increasing need to better understand these systems. Namibia is a model system for studying these processes and includes the Sossuvlei (Sand Sea) World Heritable Site. This seminar will prepare students for their overseas field experience in Namibia. The seminar will provide an introduction to desert biogeography and culture, using Namibia as a case study. During the seminar, students will each give two presentations on aspects of desert biogeography and ecology, specific organisms and their adaptations to arid environments, cultural adaptations of indigenous peoples and immigrants, ecological threats and conservation efforts, and/or national and international policy towards deserts. Additional assignments include a comprehensive dossier and a final exam. Students will also carry out background research for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be limited. In addition, we will cover logistics, health and safety, cultural sensitivity, geography, and politics. We will deal with post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus.

Same as: AFRICAST 114N

**EARTHSYS 115T. Island Biogeography of Tasmania Prefield Seminar. 3 Units.**

Islands are natural laboratories for studying a wide variety of subjects including biological diversity, cultural diversity, epidemiology, geology, climate change, conservation, and evolution. This field seminar focuses on Island Biogeography in one of the most extraordinary and well-preserved ecosystems in the world: Tasmania. Tasmanian devils, wombats, and wallabies – the names conjure up images of an exotic faraway place, a place to appreciate the incredibly diversity of life and how such striking forms of life came to be. This course will prepare students for their overseas seminar in Tasmania. Students will give presentations on specific aspects of the Tasmania and will lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. Additional topics to be addressed include: logistics, health and safety, group dynamics, cultural sensitivity, history, and politics. We will also address post-field issues such as reverse culture shock, and ways to consolidate and build up abroad experiences after students return to campus.

**EARTHSYS 116. Ecology of the Hawaiian Islands. 4 Units.**

Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: BIO 116

**EARTHSYS 117. Earth Sciences of the Hawaiian Islands. 4 Units.**

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTH 117, ESS 117

**EARTHSYS 118. Heritage, Environment, and Sovereignty in Hawaii. 4 Units.**

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

Same as: ANTHRO 118

**EARTHSYS 119. Will Work for Food. 1 Unit.**

This is a speaker series class featuring highly successful innovators in the food system. Featured speakers will talk in an intimate, conversational manner about their current work, as well as about their successes, failures, and learnings along the way. Additional information can be found here: <http://feedcollaborative.org/speaker-series/>.

Same as: EARTHSYS 219

**EARTHSYS 120. Social Science Field Research Methods and Applications. 5 Units.**

Fundamentals of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course introduces observational field research and compares it with experimental field research. Significant attention devoted to explaining the details of research design as well as what can and cannot be learned through each type of field research. Emphasis placed on the theory of the design and analysis of statistical experiments. Topics include: sample size selection, power and size of statistical hypothesis tests, partial compliance, sample selection bias and methods for accounting for it. Development of critical reading skills emphasized through class discussions of academic journal articles and popular media accounts of field research. Examples of best practice field research studies presented as well as examples of commonly committed errors; students are expected to articulate and challenge or defend underlying assumptions and the extent to which real-world research matches up with concepts covered in lecture. Practical aspects of field work, including efficient and cost-effective data collection, teamwork, field team supervision, budget management, and common ethical considerations. Grading based on weekly problem sets that focus on developing data analysis skills using statistical software, a midterm examination, and a final project in which students write a detailed research proposal. Students can also apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 and either STATS 60 or Econ 102A or equivalent.

Same as: ECON 121, PUBLPOL 120, PUBLPOL 220

**EARTHSYS 121. Building a Sustainable Society: New Approaches for Integrating Human and Environmental Priorities. 3 Units.**

"Building a Sustainable Society: New approaches for integrating human and environmental priorities" draws on economics, natural resources management, sociology and leadership science to examine theoretical frameworks and diverse case studies that illustrate challenges as well as effective strategies in building a sustainable society where human beings and the natural environment thrive. Themes include collaborative consumption, the sharing economy, worker-owned cooperatives, community-corporate partnerships, cradle to cradle design, social entrepreneurship, impact investing, "beyond GDP", and transformative leadership. Critical perspectives, lectures and student-led discussions guide analysis of innovations within public, private and civic sectors globally. Students explore their personal values and motivations and develop their potential to become transformative leaders.

**EARTHSYS 122. Evolution of Marine Ecosystems. 3-4 Units.**

Life originally evolved in the ocean. When, why, and how did the major transitions occur in the history of marine life? What triggered the rapid evolution and diversification of animals in the Cambrian, after more than 3.5 billion years of Earth's history? What caused Earth's major mass extinction events? How do ancient extinction events compare to current threats to marine ecosystems? How has the evolution of primary producers impacted animals, and how has animal evolution impacted primary producers? In this course, we will review the latest evidence regarding these major questions in the history of marine ecosystems. We will develop familiarity with the most common groups of marine animal fossils. We will also conduct original analyses of paleontological data, developing skills both in the framing and testing of scientific hypotheses and in data analysis and presentation.

Same as: BIO 119, GS 123, GS 223B

**EARTHSYS 123. Asian Americans and Environmental Justice. 3-5 Units.**

One central tenet of the environmental justice movement is centering the leadership of frontline communities. Unfortunately, the struggles of Asian Americans on the frontlines of corporate environmental pollution and extraction are less visible and less well-known. In this course, we will explore the Asian American voices that have contributed to the development of the environmental justice movement and the leadership that is shaping the future of this movement. This course is designed to provide students with education about the history of the environmental justice movement, the future being envisioned, and the strategies that are needed to get to the vision. It will draw on lectures, readings, guest presentations, case studies, and the instructor's more than 15 years of experience with organizing and social justice campaigns. Students will learn about the principles guiding the environmental justice movement; the vision and framework of how we achieve a just transition to a regenerative economy; the process of organizing and campaign work to advance a community agenda; and skills in collecting, analyzing, and communicating information.

Same as: ASNAMST 123

**EARTHSYS 124. Measurements in Earth Systems. 3-4 Units.**

A classroom, laboratory, and field class designed to provide students familiarity with techniques and instrumentation used to track biological, chemical, and physical processes operating in earth systems, encompassing upland, aquatic, estuarine, and marine environments. Topics include gas and water flux measurement, nutrient and isotopic analysis, soil and water chemistry determination. Students will develop and test hypotheses, provide scientific evidence and analysis, culminating in a final presentation.

Same as: ESS 212

**EARTHSYS 125. Shades of Green: Redesigning and Rethinking the Environmental Justice Movements. 3-5 Units.**

Historically, discussions of race, ethnicity, culture, and equity in the environment have been relegated to the environmental justice movement, which often focuses on urban environmental degradation and remains separated from other environmental movements. This course will seek to break out of this limiting discussion. We will explore access to outdoor spaces, definitions of wilderness, who is and isn't included in environmental organizations, gender and the outdoors, how colonialism has influenced ways of knowing, and the future of climate change. The course will also have a design thinking community partnership project. Students will work with partner organizations to problem-solve around issues of access and diversity. We value a diversity of experiences and epistemological beliefs, and therefore undergraduates and graduate students from all disciplines are welcome.

Same as: CSRE 125E, EARTHSYS 225, URBANST 125

**EARTHSYS 128. Evolution of Terrestrial Ecosystems. 4 Units.**

The what, when, where, and how do we know it regarding life on land through time. Fossil plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) are all covered, including how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. The course involves both lecture and lab components. Graduate students registering at the 200-level are expected to write a term paper, but can opt out of some labs where appropriate.

Same as: GS 128, GS 228

**EARTHSYS 129. Geographic Impacts of Global Change: Mapping the Stories. 4 Units.**

Forces of global change (eg., climate disruption, biodiversity loss, disease) impart wide-ranging political, socioeconomic, and ecological impacts, creating an urgent need for science communication. Students will collect data for a region of the US using sources ranging from academic journals to popular media and create an interactive Story Map (<http://stanford.maps.arcgis.com/apps/StorytellingTextLegend/index.html?appid=dafe2393fd2e4acc8b0a4e6e71d0b6d5>) that merges the scientific and human dimensions of global change. Students will interview stakeholders as part of a community-engaged learning experience and present the Map to national policy-makers. Our 2014 Map is being used by the CA Office of Planning & Research.

**EARTHSYS 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.**

The ecologically and geologically diverse Rocky Mountain area is being strongly impacted by changing land use patterns, global and regional environmental change, and societal demands for energy and natural resources. This field program emphasizes coupled environmental and geological problems in the Rocky Mountains, covering a broad range of topics including the geologic origin of the American West from three billion years ago to the present; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West related to changing land-use patterns and increased demand for its abundant natural resources. In addition to the science aspects of this course we will also investigate the unique western culture of the area particularly in regards to modern ranching and outfitting in the American West. These broad topics are integrated into a coherent field-study as we examine earth/ environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and the mountainous region of Teton National Park. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. The students will read two required books prior to this course that will be discussed on the trip. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming. Students must arrive in Salt Lake City on Monday, September 4. (Hotel lodging will be provided for the night of September 4, and thereafter students will travel as a Sophomore College group.) We will return to campus on Friday, September 22.

Same as: ESS 12SC, GS 12SC

**EARTHSYS 130. Designing and Evaluating Community Engagement Programs for Social and Environmental Change. 3 Units.**

Non-profit organizations seeking to achieve social and environmental change often run outreach and education programs to engage community members in their cause. Effective application of social science theory and methods may improve the design and evaluation of such community engagement programs. In this class, we partner with environmental and social justice organizations in the Bay Area to explore two questions: 1) How can recent findings from the social sciences be applied to design more effective community engagement programs? 2) How can we rigorously evaluate outreach and education programs to ensure they are achieving the desired objectives? The course will include an overview of key theories from psychology, sociology, and education, field trips to partnering organizations, and a term-long community-engaged research project focused on designing and/or evaluating a local outreach or educational program that is meant to achieve social and environmental change.

Same as: ENVRES 201

**EARTHSYS 131. Pathways in Sustainability Careers. 1 Unit.**

Interactive, seminar-style sessions expose students to diverse career pathways in sustainability. Professionals from a variety of careers discuss their work, their career development and decision-points in their career pathways, as well as life style aspects of their choices.

Same as: EARTH 131

**EARTHSYS 132. Evolution of Earth Systems. 4 Units.**

This course examines biogeochemical cycles and how they developed through the interaction between the atmosphere, hydrosphere, biosphere, and lithosphere. Emphasis is on the long-term carbon cycle and how it is connected to other biogeochemical cycles on Earth. The course consists of lectures, discussion of research papers, and quantitative modeling of biogeochemical cycles. Students produce a model on some aspect of the cycles discussed in this course. Grades based on class interaction, student presentations, and the modeling project.

Same as: EARTHSYS 232, ESS 132, ESS 232

**EARTHSYS 133. Social Entrepreneurship Collaboratory. 4 Units.**

Interdisciplinary student teams create and develop U.S. and international social entrepreneurship initiatives. Proposed initiatives may be new entities, or innovative projects, partnerships, and/or strategies impacting existing organizations and social issues in the U.S. and internationally. Focus is on each team's research and on planning documents to further project development. Project development varies with the quarter and the skill set of each team, but should include: issue and needs identification; market research; design and development of an innovative and feasible solution; and drafting of planning documents. In advanced cases, solicitation of funding and implementation of a pilot project. Enrollment limited to 20. May be repeated for credit.

Same as: URBANST 133

**EARTHSYS 136. The Ethics of Stewardship. 2-3 Units.**

What responsibilities do humans have to nonhuman nature and future generations? How are human communities and individuals shaped by their relationships with the natural world? What are the social, political, and moral ramifications of drawing sustenance and wealth from natural resources? Whether we realize it or not, we grapple with such questions every time we turn on the tap, fuel up cars, or eat meals -and they are key to addressing issues like global climate change and environmental justice. In this class, we consider several perspectives on this ethical question of stewardship: the role of humans in the global environment. In addition to reading written work and speaking with land stewards, we will practice stewardship at the Stanford Educational Farm. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: EARTHSYS 236

**EARTHSYS 138. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.**

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see [internationalurbanization.org](http://internationalurbanization.org) for details. Prerequisites: consent of the instructor(s).

Same as: CEE 126, IPS 274, URBANST 145

**EARTHSYS 139. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.**

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. To apply, please email the instructor ([gdaily@stanford.edu](mailto:gdaily@stanford.edu)) with a brief description of your background and research interests.

Same as: BIO 138, BIO 238, EARTHSYS 239

**EARTHSYS 13SC. People, Land, and Water in the Heart of the West. 2 Units.**

Salmon River. Sun Valley. Pioneer Mountains. The names speak of powerful forces and ideas in the American West. Central Idaho - a landscape embracing snow-capped mountains, raging rivers, sagebrush deserts, farms, ranches, and resort communities - is our classroom for this field-based seminar led by David Freyberg, professor of Civil and Environmental Engineering, and David Kennedy, professor emeritus of History. This course focuses on the history and future of a broad range of natural resource management issues in the western United States. We will spend a week on campus preparing for a two-week field course in Idaho exploring working landscapes, private and public lands, water and fisheries, conservation, and the history and literature of the relationship between people and the land in the American West. After the first week spent on campus, we will drive to Idaho to begin the field portion of our seminar. In Idaho, we will spend time near Twin Falls, at Lava Lake Ranch near Craters of the Moon National Monument, in Custer County at the Upper Salmon River, and near Stanley in the Sawtooth National Forest. No prior camping experience is required, but students should be comfortable living outdoors in mobile base camps for periods of several days. Students will investigate specific issues in-depth and present their findings at the end of the course.

**EARTHSYS 140. The Energy-Water Nexus. 3 Units.**

Energy, water, and food are our most vital resources constituting a tightly intertwined network: energy production requires water, transporting and treating water needs energy, producing food requires both energy and water. The course is an introduction to learn specifically about the links between energy and water. Students will look first at the use of water for energy production, then at the role of energy in water projects, and finally at the challenge in figuring out how to keep this relationship as sustainable as possible. Students will explore case examples and are encouraged to contribute examples of concerns for discussion as well as suggest a portfolio of sustainable energy options.  
Same as: GEOPHYS 80

**EARTHSYS 141. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.  
Same as: EARTHSYS 241, ESS 141, ESS 241, GEOPHYS 141

**EARTHSYS 142. Remote Sensing of Land. 4 Units.**

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.  
Same as: EARTHSYS 242, ESS 162, ESS 262

**EARTHSYS 143. Molecular Geomicrobiology Laboratory. 4 Units.**

In this course, students will be studying the biosynthesis of cyclic lipid biomarkers, molecules that are produced by modern microbes that can be preserved in rocks that are over a billion years old and which geologist use as molecular fossils. Students will be tasked with identifying potential biomarker lipid synthesis genes in environmental genomic databases, expressing those genes in a model bacterial expression system in the lab, and then analyzing the lipid products that are produced. The overall goal is for students to experience the scientific research process including generating hypotheses, testing these hypotheses in laboratory experiments, and communicating their results through a publication style paper. Prerequisites: BIO83 and CHEM35 or permission of the instructor.  
Same as: BIO 142, ESS 143, ESS 243

**EARTHSYS 144. Fundamentals of Geographic Information Science (GIS). 3-4 Units.**

Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. All students are required to attend a weekly lab session.  
Same as: ESS 164

**EARTHSYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.  
Same as: CEE 161I, CEE 261I, ESS 246A

**EARTHSYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: MATH 51 or CME100; and PHYSICS 41; and CEE 162A or CEE 101B or a graduate class in fluid dynamics or consent of the instructor.  
Same as: CEE 162I, CEE 262I, ESS 246B

**EARTHSYS 148. Grow it, Cook it, Eat it. An Experiential Exploration of How and Why We Eat What We Eat. 3 Units.**

This course provides an introductory exploration of the social, cultural, and economic forces that influence contemporary human diets. Through the combination of interrelated lectures by expert practitioners and hands-on experience planting, tending, harvesting, cooking, and eating food from Stanford's dining hall gardens, students will learn to think critically about modern agricultural practices and the relationship between cuisine and human and ecological health outcomes. Students will also learn and apply basic practices of human-centered design to develop simple frameworks for understanding various eating behaviors in Stanford's dining halls and to develop and test hypotheses for how R&DE Stanford Dining might influence eating behaviors to effect better health outcomes for people and the planet. This class, which is offered through the FEED Collaborative in the School of Earth, Energy and Environmental Sciences, requires an application. For more information about the FEED Collaborative, application procedures and deadlines, and other classes we teach, please visit our website at <http://feedcollaborative.org>.

**EARTHSYS 149. Wild Writing. 3 Units.**

What is wilderness and why does it matter? In this course we will interrogate answers to this question articulated by influential and diverse American environmental thinkers of the 19th, 20th, and 21st centuries, who through their writing transformed public perceptions of wilderness and inspired such actions as the founding of the National Park System, the passage of the Wilderness Act and the Clean Air and Water Acts, the establishment of the Environmental Protection Agency, and the birth of the environmental and climate justice movements. Students will also develop their own responses to the question of what is wilderness and why it matters through a series of writing exercises that integrate personal narrative, wilderness experience, and environmental scholarship, culminating in a ~3000 word narrative nonfiction essay. This course will provide students with knowledge, tools, experience, and skills that will empower them to become more persuasive environmental storytellers and advocates. If you are interested in signing up for the course, complete this pre-registration form [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_9XqZeZs036Wlvop](https://stanforduniversity.qualtrics.com/jfe/form/SV_9XqZeZs036Wlvop). Same as: EARTHSYS 249

**EARTHSYS 15. Gender, Land Rights, and Climate Change: An International Perspective. 1 Unit.**

For decades, numerous and far-reaching consequences of anthropogenic climate change have disproportionately affected women, from poverty, food and water security, to land tenure and forced migration, to education and health. As a result, mitigating climate change has enormous implications for women's lives worldwide, yet too few national or international policies address this critical intersection. This weekly seminar will examine this dynamic in light of the Sustainable Development Goals and Paris Climate Treaty. The course will feature guest speakers, reading discussions, and communication exercises to spur policy reform and help students acquire relevant information for their future endeavors.

**EARTHSYS 151. Biological Oceanography. 3-4 Units.**

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (ESS/EARTHSYS 152/252). Prerequisites: BIO 43 and ESS 8 or equivalent.

Same as: EARTHSYS 251, ESS 151, ESS 251

**EARTHSYS 152. Marine Chemistry. 3-4 Units.**

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (ESS/EARTHSYS 151/251).

Same as: EARTHSYS 252, ESS 152, ESS 252

**EARTHSYS 154. Intermediate Writing: Communicating Climate Change: Navigating the Stories from the Frontlines. 4 Units.**

In the next two decades floods, droughts and famine caused by climate change will displace more than 250 million people around the world. In this course students will develop an increased understanding of how different stakeholders including scientists, aid organizations, locals, policy makers, activists, and media professionals communicate the climate change crisis. They will select a site experiencing the devastating effects and research the voices telling the stories of those sites and the audiences who are (or are not) listening. Students might want to investigate drought-ridden areas such as the Central Valley of California or Darfur, Sudan; Alpine glaciers melting in the Alps or in Alaska; the increasingly flooded Pacific islands; the hurricane ravaged Gulf Coast, among many others. Data from various stakeholders will be analyzed and synthesized for a magazine length article designed to bring attention to a region and/or issue that has previously been neglected. Students will write and submit their article for publication. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

Same as: PWR 91EP

**EARTHSYS 155. Science of Soils. 3-4 Units.**

Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology.

Same as: ESS 155

**EARTHSYS 158. Geomicrobiology. 3 Units.**

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 258, ESS 158, ESS 258

**EARTHSYS 159. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.**

This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. It will address economic issues, legal constraints, and political challenges associated with various emissions-reduction strategies, and it will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies, the strengths and weaknesses of alternative policy instruments, trade-offs among alternative policy objectives, and decision making under uncertainty. Prerequisites: Econ 50 or its equivalent.

Same as: ECON 159, ECON 209, PUBLPOL 159

**EARTHSYS 160. Sustainable Cities. 4-5 Units.**

Service-learning course that exposes students to sustainability concepts and urban planning as a tool for determining sustainable outcomes in the Bay Area. Focus will be on the relationship of land use and transportation planning to housing and employment patterns, mobility, public health, and social equity. Topics will include government initiatives to counteract urban sprawl and promote smart growth and livability, political realities of organizing and building coalitions around sustainability goals, and increasing opportunities for low-income and communities of color to achieve sustainability outcomes. Students will participate in team-based projects in collaboration with local community partners and take part in significant off-site fieldwork. Prerequisites: consent of the instructor. (Cardinal Course certified by the Haas Center.) Same as: URBANST 164

**EARTHSYS 162. Data for Sustainable Development. 3-5 Units.**

The sustainable development goals (SDGs) encompass many important aspects of human and ecosystem well-being that are traditionally difficult to measure. This project-based course will focus on ways to use inexpensive, unconventional data streams to measure outcomes relevant to SDGs, including poverty, hunger, health, governance, and economic activity. Students will apply machine learning techniques to various projects outlined at the beginning of the quarter. The main learning goals are to gain experience conducting and communicating original research. Prior knowledge of machine learning techniques, such as from CS 221, CS 229, CS 231N, STATS 202, or STATS 216 is required. Open to both undergraduate and graduate students. Enrollment limited to 24. Students must apply for the class by filling out the form at <https://goo.gl/forms/9LSZF7IPkHadix5D3>. A permission code will be given to admitted students to register for the class. Same as: CS 325B, EARTHSYS 262

**EARTHSYS 164. Introduction to Physical Oceanography. 4 Units.**

Formerly CEE 164. The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). Same as: CEE 162D, CEE 262D, ESS 148

**EARTHSYS 16SC. Water and Power in the Pacific Northwest: The Columbia River. 2 Units.**

This seminar will explore the nature of and coupling between water and energy resources in the Pacific Northwest, using the Columbia River as our case study. We will explore the hydrologic, meteorologic, and geologic basis of water and energy resources, and the practical, social, environmental, economic, and political issues surrounding their development in the West. The Columbia River and its watershed provide a revealing prototype for examining these issues. A transnational, multi-state river with the largest residual populations of anadromous salmonids in the continental US, it provides a substantial fraction of the electrical energy produced in the Northwest (the Grand Coulee dam powerhouse on the Columbia is the largest-capacity hydropower facility in the US), it is a major bulk commodity transportation link to the interior West via its barge navigation system, it provides the water diversions supporting a large area of irrigated agriculture in Washington and Idaho, and its watershed is home to significant sources of solar and wind energy. We will use the Columbia to study water and energy resources, and especially their coupling, in the context of rapid climate change, ecosystem impacts, economics, and public policy. We will begin with a week of classroom study and discussion on campus, preparing for the field portion of the seminar. We will then travel to the Columbia basin, spending approximately 10 days visiting a number of water and energy facilities across the watershed, e.g., solar, wind, and natural gas power plants; dams and reservoirs with their powerhouses, fish passage facilities, navigation locks, and flood-mitigation systems; an irrigation project; operation centers; and offices of regulatory agencies. We will meet with relevant policy experts and public officials, along with some of the stakeholders in the basin. Over the summer students will be responsible for assigned readings from several sources, including monographs, online materials, and recent news articles. During the trip, students will work in small groups to analyze and assess one aspect of the coupling between water and energy resources in the Northwest. The seminar will culminate in presentations on these analyses. Travel expenses during the seminar will be provided (except incidentals) by the Bill Lane Center for the American West and Sophomore College. Same as: CEE 17SC, ENERGY 12SC

**EARTHSYS 16SI. Environmental Justice in the Bay Area. 2 Units.**

Hands-on, discussion-based class that seeks to expose students to the intersectionality of social justice and environmental well being. Through student-led talks and field trips around the Bay, the course pushes participants to think about connections between issues of privilege, race, health, gender equality, and class in environmental issues. Students from all experiences and fields of study are encouraged to join to gain a sense of place, engage critically with complex challenges, and learn about environmental justice in and out of the classroom. Same as: URBANST 16SI

**EARTHSYS 170. Environmental Geochemistry. 4 Units.**

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. Same as: GS 170, GS 270

**EARTHSYS 172. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.**

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 170, ANTHRO 270

**EARTHSYS 176. Open Space Management Practicum. 4-5 Units.**

The unique patchwork of urban-to-rural land uses, property ownership, and ecosystems in our region poses numerous challenges and opportunities for regional conservation and environmental stewardship. Students in this class will address a particular challenge through a faculty-mentored research project engaged with the Peninsula Open Space Trust, Acterra, or the Amah Mutsum Land Trust that focuses on open space management. By focusing on a project driven by the needs of these organizations and carried out through engagement with the community, and with thorough reflection, study, and discussion about the roles of scientific, economic, and policy research in local-scale environmental decision-making, students will explore the underlying challenges and complexities of what it means to actually do community-engaged research for conservation and open space preservation in the real world. As such, this course will provide students with skills and experience in research design in conservation biology and ecology, community and stakeholder engagement, land use policy and planning, and the practical aspects of land and environmental management.

Same as: EARTHSYS 276

**EARTHSYS 176A. Open Space Practicum Independent Study. 1-2 Unit.**

Additional practicum units for students intent on continuing their projects from EARTHSYS 176. Students who enroll in 176A must have completed EARTHSYS 176: Open Space Management Practicum, or have consent of the instructors.

**EARTHSYS 177C. Specialized Writing and Reporting: Environmental and Food System Journalism. 4-5 Units.**

Advanced reporting and writing course in the specific practices and standards of food journalism. This course begins with the assumption that students are familiar with the basics of reporting and research in journalism. We'll take those skills and apply them to the wide territory of food journalism, from farmer's markets to food waste, from travel and cultural writing to stories about agriculture and climate change. We will read a range of the best food journalism and students will be charged with writing both long form narrative essays and short magazine style pieces. We'll talk about how to hone in on the truly interesting idea, how to get more out of the reporting process and how to turn the raw materials of research and interviews into polished, engaging prose. Admission by application only, available from [vv1@stanford.edu](mailto:vv1@stanford.edu). Deadline December 4.

Same as: COMM 177C, COMM 277C, EARTHSYS 277C

**EARTHSYS 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings.

Same as: CEE 179S, CEE 279S, ESS 179S

**EARTHSYS 18. Promoting Sustainability Behavior Change at Stanford. 2 Units.**

Stanford Green Living Council training course. Strategies for designing and implementing effective behavior change programs for environmental sustainability on campus. Includes methods from community-based social marketing, psychology, behavioral economics, education, public health, social movements, and design. Students design a behavior change intervention project targeting a specific environmental sustainability-related behavior. Lectures online and weekly sections/workshops.

**EARTHSYS 180. Principles and Practices of Sustainable Agriculture. 3-4 Units.**

Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing. Application required. Deadline: March 14  
Application: [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_bdBA34jEZxfdf](https://stanforduniversity.qualtrics.com/jfe/form/SV_bdBA34jEZxfdf).

Same as: ESS 280

**EARTHSYS 181. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 281, ESS 181, ESS 281, URBANST 181

**EARTHSYS 182A. Ecological Farm Systems. 1-2 Unit.**

A project-based course emphasizing ways of doing in sustainable agricultural systems based at the Stanford Educational Farm. Students will work individually and in small groups on projects at the Stanford Educational Farm. This winter the course will include orchard establishment and educational garden design in addition to other topics. Instructor consent required. Application Only (Due January 9th): [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_7714hyXJoRWGh0l](https://stanforduniversity.qualtrics.com/jfe/form/SV_7714hyXJoRWGh0l).

**EARTHSYS 185. Feeding Nine Billion. 4-5 Units.**

Feeding a growing and wealthier population is a huge task, and one with implications for many aspects of society and the environment. There are many tough choices to be made—on fertilizers, groundwater pumping, pesticide use, organics, genetic modification, etc. Unfortunately, many people form strong opinions about these issues before understanding some of the basics of how food is grown, such as how most farmers currently manage their fields, and their reasons for doing so. The goal of this class is to present an overview of global agriculture, and the tradeoffs involved with different practices. Students will develop two key knowledge bases: basic principles of crop ecology and agronomy, and familiarity with the scale of the global food system. The last few weeks of the course will be devoted to building on this knowledge base to evaluate different future directions for agriculture.

**EARTHSYS 186. Farm and Garden Environmental Education Practicum. 2 Units.**

Farms and gardens provide excellent settings for place-based environmental education that emphasize human ecological relationships and experiential learning. The O'Donohue Family Stanford Educational Farm is the setting to explore the principles and practices of farm and garden-based education in conjunction with the farm's new field trip program for local youth. The course includes readings and reflections on environmental education and emphasis on learning by doing, engaging students in the practice of team teaching. Application required. Deadline: March 14. Application: [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_9SPufdULCh93rBT](https://stanforduniversity.qualtrics.com/jfe/form/SV_9SPufdULCh93rBT). Same as: EARTHSYS 286

**EARTHSYS 187. FEED the Change: Redesigning Food Systems. 2-3 Units.**

FEED the Change is a project-based course focused on solving real problems in the food system. Targeted at upper-class undergraduates, this course provides an opportunity for students to meet and work with thought-leading innovators, to gain meaningful field experience, and to develop connections with faculty, students, and others working to create impact in the food system. Students in the course will develop creative confidence by learning and using the basic principles and methodologies of human-centered design, storytelling, and media design. Students will also learn basic tools for working effectively in teams and for analyzing complex social systems. FEED the Change is taught at the d.school and is offered through the FEED Collaborative in the School of Earth. This class requires an application. For application information and more information about our work and about past class projects, please visit our website at <http://feedcollaborative.org/classes/>.

**EARTHSYS 188. Social and Environmental Tradeoffs in Climate Decision-Making. 1-2 Unit.**

How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoenvironmental approaches in an integrated context, culminating in a climate stabilization group project. Same as: EARTHSYS 288

**EARTHSYS 190. The Multimedia Story. 2-3 Units.**

Stories are how we understand ourselves and the world. This course will teach how to plan, research, report and produce a long-form, rich-media science/environment feature story. Students will work in groups or individually to master the blending of text with data visualization, photos, audio, and video. Teachers are experienced digital journalists at leading national and international publications with a close eye on trends and innovations in online, investigative, and data journalism. Using the landmark New York Times story Snow Fall (<http://nyti.ms/1eTyf2Y>) as a departure point, the course will examine the questions: how do we engage and inform the public around critical environmental topics? How do we explain complex and sometimes hidden factors shaping the future of our world? Students are asked to express interest through this form: <http://bit.ly/2odHw07>.

**EARTHSYS 191. Concepts in Environmental Communication. 3 Units.**

Introduction to the history, development, and current state of communication of environmental science and policy to non-specialist audiences. Includes fundamental principles, core competencies, and major challenges of effective environmental communication in the public and policy realms and an overview of the current scope of research and practice in environmental communication. Intended for graduate students and advanced undergraduates, with a background in environmental science and/or policy studies. Prerequisite: Earth Systems core (EarthSys 111 and EarthSys 112) or equivalent. (Meets Earth Systems WIM requirement.). Same as: EARTHSYS 291

**EARTHSYS 196. Implementing Climate Solutions at Scale. 3 Units.**

Climate change is the biggest problem humanity has ever faced, and this course will teach students about the means and complexity of solving it. The instructors will guide the students in the application of key data and analysis tools for their final project, which will involve developing integrated plans for eliminating greenhouse gas emissions (100% reductions) by 2050 for a country, state, province, sector, or industry. Same as: EARTHSYS 296

**EARTHSYS 199. Honors Program in Earth Systems. 1-9 Unit.****EARTHSYS 20. The Cuisine of Change: Promoting Child Health and Combating Food Insecurity. 1 Unit.**

ASB Course. The course on nutrition, health and food insecurity is split into four projects: 1) Workshop a Story, in which students craft a personal narrative with input from the class, 2) Pose a Question, in which students in pairs attempt to educate the class on many sides of the same issue, 3) Create a Dish, in which students develop original dishes in support of local organizations, and 4) Teach a Class, in which students, in teams, develop a curriculum to be implemented in over the spring break trip. Furthermore, each section will expand the scope of the issue from the individual to the community and all the way up to national policies. The course will be a mix of some of the best lecturers and professors that we've encountered in our time at Stanford as well as a smattering of community challenges. Come with a willingness to push your comfort zone, as some of the activities include creative presentations, taking a no added sugar challenge, get vulnerable, and developing an intelligent attitude toward healthy eating.

**EARTHSYS 200. Environmental Communication in Action: The SAGE Project. 3 Units.**

This course is focused on writing about sustainability for a public audience through an ongoing project, SAGE (Sound Advice for a Green Earth), that is published by Stanford Magazine. Students contribute to SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. (Meets Earth Systems WIM requirement).

**EARTHSYS 201. Editing for Publication. 2 Units.**

Most student writing experiences end with a "final" written draft, but that leaves out crucial steps in the publication process. In this course, advanced students take responsibility for final editing and publication of the environmental advice column SAGE, starting with answers researched and written by students in EARTHSYS 200. Topics include developmental editing and project management for the SAGE project, structural editing for overall organization and impact of individual pieces, line editing for clarity and style, and fact checking and copy editing for accuracy and consistency.

**EARTHSYS 205. Food and Community: Food Security, Resilience and Equity. 2-3 Units.**

What can communities do to bolster food security, resiliency, and equity in the face of climate change? This course aims to respond to this question, in three parts. In Part I, we will explore the most current scientific findings on trends in anthropogenic climate forcing and the anticipated impacts on global and regional food systems. Specifically, Part I will review the anticipated impact of climate change on severe weather events, crop losses, and food price volatility and the influence of these impacts on global and regional food insecurity and hunger. In Part II, we will consider what communities can do to promote food security and equity in the face of these changes, by reviewing the emerging literature on food system resiliency. Finally, we will facilitate a conference in which multi-disciplinary teams from around the country will gather to initiate regional planning projects designed to enhance food system resilience and equity. Cardinal Course (certified by Haas Center). Limited enrollment. May be repeated for credit.

Same as: EARTHSYS 105

**EARTHSYS 206. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, ECON 106, ECON 206, ESS 106, ESS 206

**EARTHSYS 207. Spanish in Science/Science in Spanish. 2 Units.**

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology.

Same as: BIO 208

**EARTHSYS 21. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.**

Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.

Same as: ANTHRO 18, ARCHLGY 12, HUMBIO 182

**EARTHSYS 210A. Senior Capstone and Reflection. 3 Units.**

The Earth Systems Senior Capstone and Reflection, required of all seniors, provides students with opportunities to synthesize and reflect on their learning in the major. Students participate in guided career development and planning activities and initiate work on an independent or group capstone project related to an Earth Systems problem or question of interest. In addition, students learn and apply principles of effective oral communication through developing and giving a formal presentation on their internship. Students must also take EARTHSYS 210P, Earth Systems Capstone Project, in the quarter following the Senior Capstone and Reflection Course. Prerequisite: Completion of an approved Earth Systems internship (EARTHSYS 260).

**EARTHSYS 210B. Senior Capstone and Reflection. 3 Units.**

The Earth Systems Senior Capstone and Reflection, required of all seniors, provides students with opportunities to synthesize and reflect on their learning in the major. Students participate in guided career development and planning activities and initiate work on an independent or group capstone project related to an Earth Systems problem or question of interest. In addition, students learn and apply principles of effective oral communication through developing and giving a formal presentation on their internship. Students must also take EARTHSYS 210P, Earth Systems Capstone Project, in the quarter following the Senior Capstone and Reflection Course. Prerequisite: Completion of an approved Earth Systems internship (EARTHSYS 260).

**EARTHSYS 210P. Earth Systems Capstone Project. 2 Units.**

Students work independently or in groups to complete their Senior Capstone Projects. They will participate in regular advising meetings with the instructor(s), and will give a final presentation on their projects at the end of the quarter in a special Earth Systems symposium. Prerequisite: EARTHSYS 210A, B, or C.

**EARTHSYS 211. Fundamentals of Modeling. 3-5 Units.**

Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods.

Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: Basic knowledge of statistics.

Same as: ESS 211

**EARTHSYS 212. Human Society and Environmental Change. 4 Units.**

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1.

Same as: EARTHSYS 112, ESS 112, HISTORY 103D

**EARTHSYS 214. Environmental Change and Emerging Infectious Diseases. 4-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, ANTHRO 277, EARTHSYS 114, HUMBIO 114

**EARTHSYS 219. Will Work for Food. 1 Unit.**

This is a speaker series class featuring highly successful innovators in the food system. Featured speakers will talk in an intimate, conversational manner about their current work, as well as about their successes, failures, and learnings along the way. Additional information can be found here: <http://feedcollaborative.org/speaker-series/>.

Same as: EARTHSYS 119

**EARTHSYS 225. Shades of Green: Redesigning and Rethinking the Environmental Justice Movements. 3-5 Units.**

Historically, discussions of race, ethnicity, culture, and equity in the environment have been relegated to the environmental justice movement, which often focuses on urban environmental degradation and remains separated from other environmental movements. This course will seek to break out of this limiting discussion. We will explore access to outdoor spaces, definitions of wilderness, who is and isn't included in environmental organizations, gender and the outdoors, how colonialism has influenced ways of knowing, and the future of climate change. The course will also have a design thinking community partnership project. Students will work with partner organizations to problem-solve around issues of access and diversity. We value a diversity of experiences and epistemological beliefs, and therefore undergraduates and graduate students from all disciplines are welcome.

Same as: CSRE 125E, EARTHSYS 125, URBANST 125

**EARTHSYS 232. Evolution of Earth Systems. 4 Units.**

This course examines biogeochemical cycles and how they developed through the interaction between the atmosphere, hydrosphere, biosphere, and lithosphere. Emphasis is on the long-term carbon cycle and how it is connected to other biogeochemical cycles on Earth. The course consists of lectures, discussion of research papers, and quantitative modeling of biogeochemical cycles. Students produce a model on some aspect of the cycles discussed in this course. Grades based on class interaction, student presentations, and the modeling project.

Same as: EARTHSYS 132, ESS 132, ESS 232

**EARTHSYS 235. Podcasting the Anthropocene. 3 Units.**

The Anthropocene refers to the proposed geologic age defined by the global footprint of humankind. It's an acknowledgement of the tremendous influence people and societies exert on Earth systems. Students taking the course will identify a subject expert, workshop story ideas with fellow students and instructors, conduct interviews, iteratively write audio scripts, and learn the skills necessary to produce final audio podcast as their final project. Our expectation is that the final projects will be published on the award-winning Generation Anthropocene podcast, with possible opportunities to cross post in collaboration with external media partners. Students taking EARTHSYS 135/235 are strongly encouraged to take EARTHSYS 135A/235A beforehand. Meets Earth Systems WIM requirement. (Cardinal Course certified by the Haas Center).

**EARTHSYS 236. The Ethics of Stewardship. 2-3 Units.**

What responsibilities do humans have to nonhuman nature and future generations? How are human communities and individuals shaped by their relationships with the natural world? What are the social, political, and moral ramifications of drawing sustenance and wealth from natural resources? Whether we realize it or not, we grapple with such questions every time we turn on the tap, fuel up cars, or eat meals -and they are key to addressing issues like global climate change and environmental justice. In this class, we consider several perspectives on this ethical question of stewardship: the role of humans in the global environment. In addition to reading written work and speaking with land stewards, we will practice stewardship at the Stanford Educational Farm. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: EARTHSYS 136

**EARTHSYS 238. Land Use Law. 3 Units.**

(Same as LAW 2505.) This course focuses on the pragmatic (more than theoretical) aspects of contemporary land use law and policy, including: the tools and legal foundation of modern land use law; the process of land development; vested property rights, development agreements, and takings; growth control, sprawl, and housing density; and direct democracy over land use. We explore how land use decisions affect environmental quality and how land use decision-making addresses environmental impacts. Special Instructions: All graduate students from other departments are encouraged to enroll, and no pre-requisites apply. Student participation is essential. Roughly two-thirds of the class time will involve a combination of lecture and classroom discussion. The remaining time will engage students in case studies based on actual land use issues and disputes. Elements used in grading: Attendance, class participation, writing assignments, and final exam. Elements used in grading: Attendance, Class Participation, Final Exam.

**EARTHSYS 239. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.**

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests.

Same as: BIO 138, BIO 238, EARTHSYS 139

**EARTHSYS 24. Quick Capture and Questions: Practicing Natural History Through Watercolor. 1 Unit.**

This course makes space to use art as an entry point for closer observation, deeper curiosity, and better understanding of natural systems. With a series of guest experts in art, science, and the practice of natural history, we will investigate the Jasper Ridge Biological Preserve through a number of lenses, microscopic to macroscopic. In each session, we will venture into the preserve to explore how field journaling, quick capture watercolor, and expressive language can mediate insight and sense of connection. Come build a community of practice with us! Apply at <https://tinyurl.com/earthsys24> and direct further questions to Freya Chay ([freyac@stanford.edu](mailto:freyac@stanford.edu)) and Hannah Black ([hmcblack@stanford.edu](mailto:hmcblack@stanford.edu)).

**EARTHSYS 241. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, ESS 141, ESS 241, GEOPHYS 141

**EARTHSYS 242. Remote Sensing of Land. 4 Units.**

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, ESS 162, ESS 262

**EARTHSYS 243. Environmental Advocacy and Policy Communication. 3 Units.**

Although environmental science suggests that coordinated policy action is critically necessary to address a host of pressing issues - from global climate change to marine pollution to freshwater depletion - governments have been slow to act. This course focuses on the translation of environmental science to public discourse and public policy, with an emphasis on the causes of our current knowledge-to-action gap and policy-sphere strategies to address it. We will read classic works of environmental advocacy, map our political system and the public relations and lobbying industries that attempt to influence it, grapple with analytical perspectives on effective and ethical environmental policy communication, engage with working professionals in the field, learn effective strategies for written and oral communication with policymakers, and write and workshop op-eds.

**EARTHSYS 249. Wild Writing. 3 Units.**

What is wilderness and why does it matter? In this course we will interrogate answers to this question articulated by influential and diverse American environmental thinkers of the 19th, 20th, and 21st centuries, who through their writing transformed public perceptions of wilderness and inspired such actions as the founding of the National Park System, the passage of the Wilderness Act and the Clean Air and Water Acts, the establishment of the Environmental Protection Agency, and the birth of the environmental and climate justice movements. Students will also develop their own responses to the question of what is wilderness and why it matters through a series of writing exercises that integrate personal narrative, wilderness experience, and environmental scholarship, culminating in a ~3000 word narrative nonfiction essay. This course will provide students with knowledge, tools, experience, and skills that will empower them to become more persuasive environmental storytellers and advocates. If you are interested in signing up for the course, complete this pre-registration form [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_9XqZeZs036Wlvop](https://stanforduniversity.qualtrics.com/jfe/form/SV_9XqZeZs036Wlvop). Same as: EARTHSYS 149

**EARTHSYS 250. Directed Research. 1-9 Unit.**

Independent research. Student develops own project with faculty supervision. May be repeated for credit.

**EARTHSYS 251. Biological Oceanography. 3-4 Units.**

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (ESS/EARTHSYS 152/252). Prerequisites: BIO 43 and ESS 8 or equivalent.

Same as: EARTHSYS 151, ESS 151, ESS 251

**EARTHSYS 252. Marine Chemistry. 3-4 Units.**

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (ESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, ESS 152, ESS 252

**EARTHSYS 255. Microbial Physiology. 3 Units.**

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry.

Same as: BIO 180, ESS 255, GS 233A

**EARTHSYS 256. Soil and Water Chemistry. 3 Units.**

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: ESS 256

**EARTHSYS 258. Geomicrobiology. 3 Units.**

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, ESS 158, ESS 258

**EARTHSYS 260. Internship. 1 Unit.**

Supervised field, lab, or private sector project. May consist of directed research under the supervision of a Stanford faculty member, participation in one of several off campus Stanford programs, or an approved non-Stanford program relevant to the student's Earth Systems studies. Required of and restricted to declared Earth Systems majors. Includes 15-page technical summary research paper that is subject to iterative revision.

**EARTHSYS 262. Data for Sustainable Development. 3-5 Units.**

The sustainable development goals (SDGs) encompass many important aspects of human and ecosystem well-being that are traditionally difficult to measure. This project-based course will focus on ways to use inexpensive, unconventional data streams to measure outcomes relevant to SDGs, including poverty, hunger, health, governance, and economic activity. Students will apply machine learning techniques to various projects outlined at the beginning of the quarter. The main learning goals are to gain experience conducting and communicating original research. Prior knowledge of machine learning techniques, such as from CS 221, CS 229, CS 231N, STATS 202, or STATS 216 is required. Open to both undergraduate and graduate students. Enrollment limited to 24. Students must apply for the class by filling out the form at <https://goo.gl/forms/9LSZF7IPkHadix5D3>. A permission code will be given to admitted students to register for the class.

Same as: CS 325B, EARTHSYS 162

**EARTHSYS 263F. Groundwork for COP21. 1 Unit.**

This course will prepare undergraduate and cotermin students to observe the climate change negotiations (COP 21) in Paris in November/December 2015. Students will develop individual projects to be carried out before and during the negotiation session and be paired with mentors. Please note: Along with EARTHSYS 163E/CEE 163E, this course is part of the required two-course-set in which undergraduate and cotermin masters degree students must enroll to receive accreditation to the climate negotiations.

**EARTHSYS 272. Antarctic Marine Geology. 3 Units.**

For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

Same as: ESS 242

**EARTHSYS 276. Open Space Management Practicum. 4-5 Units.**

The unique patchwork of urban-to-rural land uses, property ownership, and ecosystems in our region poses numerous challenges and opportunities for regional conservation and environmental stewardship. Students in this class will address a particular challenge through a faculty-mentored research project engaged with the Peninsula Open Space Trust, Acterra, or the Amah Mutsun Land Trust that focuses on open space management. By focusing on a project driven by the needs of these organizations and carried out through engagement with the community, and with thorough reflection, study, and discussion about the roles of scientific, economic, and policy research in local-scale environmental decision-making, students will explore the underlying challenges and complexities of what it means to actually do community-engaged research for conservation and open space preservation in the real world. As such, this course will provide students with skills and experience in research design in conservation biology and ecology, community and stakeholder engagement, land use policy and planning, and the practical aspects of land and environmental management. Same as: EARTHSYS 176

**EARTHSYS 276A. Open Space Practicum Independent Study. 1-2 Unit.**

Additional practicum units for students intent on continuing their projects from EARTHSYS 276. Students who enroll in 276A must have completed EARTHSYS 276: Open Space Management Practicum, or have consent of the instructors.

**EARTHSYS 277C. Specialized Writing and Reporting: Environmental and Food System Journalism. 4-5 Units.**

Advanced reporting and writing course in the specific practices and standards of food journalism. This course begins with the assumption that students are familiar with the basics of reporting and research in journalism. We'll take those skills and apply them to the wide territory of food journalism, from farmer's markets to food waste, from travel and cultural writing to stories about agriculture and climate change. We will read a range of the best food journalism and students will be charged with writing both long form narrative essays and short magazine style pieces. We'll talk about how to hone in on the truly interesting idea, how to get more out of the reporting process and how to turn the raw materials of research and interviews into polished, engaging prose. Admission by application only, available from [vv1@stanford.edu](mailto:vv1@stanford.edu). Deadline December 4.

Same as: COMM 177C, COMM 277C, EARTHSYS 177C

**EARTHSYS 281. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, ESS 181, ESS 281, URBANST 181

**EARTHSYS 286. Farm and Garden Environmental Education Practicum. 2 Units.**

Farms and gardens provide excellent settings for place-based environmental education that emphasize human ecological relationships and experiential learning. The O'Donohue Family Stanford Educational Farm is the setting to explore the principles and practices of farm and garden-based education in conjunction with the farm's new field trip program for local youth. The course includes readings and reflections on environmental education and emphasis on learning by doing, engaging students in the practice of team teaching. Application required. Deadline: March 14. Application: [https://stanforduniversity.qualtrics.com/jfe/form/SV\\_9SPufdULCh93rbT](https://stanforduniversity.qualtrics.com/jfe/form/SV_9SPufdULCh93rbT).

Same as: EARTHSYS 186

**EARTHSYS 288. Social and Environmental Tradeoffs in Climate Decision-Making. 1-2 Unit.**

How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoengineering approaches in an integrated context, culminating in a climate stabilization group project.

Same as: EARTHSYS 188

**EARTHSYS 289A. FEED Lab: Food System Design & Innovation. 3-4 Units.**

FEED Lab is a 3-4 unit introductory course in design thinking and food system innovation offered through the FEED Collaborative. Targeted at graduate students interested in food and the food system, this course provides a series of diverse, primarily hands-on experiences (design projects with industry-leading thinkers, field work, and collaborative leadership development) in which students both learn and apply the process of human-centered design to projects of real consequence in the food system. The intent of this course is to develop students' creative confidence, collaborative leadership ability, and skills in systems thinking to prepare them to be more effective as innovators and leaders in the food system. This course is mandatory for any student wishing to qualify for the FEED Collaborative's summer Leadership and Innovation Program, in which select students participate in full-time, paid, externship roles with collaborating thought-leaders in the industry. Admission is by application: <http://feedcollaborative.org/classes/>.

**EARTHSYS 289B. FEED Lab: Food System Design & Innovation. 3-4 Units.**

Primarily a follow-on course to EARTHSYS 289A, this course is an experiential education platform that enables students already experienced in design thinking to collaborate with faculty and industry thought-leaders on projects of real consequence in the local food system. A select cohort of students will work in small, diverse teams and will interact closely with the teaching team in an intentionally creative and informal classroom setting. Students will deepen their skills in design thinking and social entrepreneurship by working on projects sponsored by leading innovators in the FEED Collaborative's network. Some projects may turn into summer internships or research projects for students interested in continuing their work. Admission is by application: <http://feedcollaborative.org/classes/>.

**EARTHSYS 290. Master's Seminar. 2 Units.**

Required of and open only to Earth Systems master's students. Reflection on the Earth Systems coterminous experience and development of skills to clearly articulate interdisciplinary expertise to potential employers, graduate or professional schools, colleagues, business partners, etc. Hands-on projects to take students through a series of guided reflection activities. Individual and small group exercises. Required, self-chosen final project encapsulates each student's MS expertise in a form relevant to his or her future goals (ie. a personal statement, research poster, portfolio, etc.).

**EARTHSYS 291. Concepts in Environmental Communication. 3 Units.**

Introduction to the history, development, and current state of communication of environmental science and policy to non-specialist audiences. Includes fundamental principles, core competencies, and major challenges of effective environmental communication in the public and policy realms and an overview of the current scope of research and practice in environmental communication. Intended for graduate students and advanced undergraduates, with a background in environmental science and/or policy studies. Prerequisite: Earth Systems core (EarthSys 111 and EarthSys 112) or equivalent. (Meets Earth Systems WIM requirement.)

Same as: EARTHSYS 191

**EARTHSYS 292. Multimedia Environmental Communication. 3 Units.**

Introductory theory and practice of effective, accurate and engaging use of photography and web video production in communicating environmental science and policy concepts to the public. Emphasis on fundamental technique and process more than gear. Includes group project work, instructor and peer critiquing of work, and substantial out-of-class project work. Limited class size, preference to Earth Systems Master's students. No previous photography or video experience necessary.

**EARTHSYS 293. Environmental Communication Practicum. 1-5 Unit.**

Students complete an internship or similar practical experience in a professional environmental communication setting. Potential placements include environmental publications, NGOs, government agencies, on-campus entities, and science centers and museums. Restricted to students enrolled in the Environmental Communication Master of Arts in Earth Systems. Can be completed in any quarter.

**EARTHSYS 294. Environmental Communication Capstone. 1-5 Unit.**

The Earth Systems Master of Arts, Environmental Communication capstone project provides students with an opportunity to complete an ambitious independent project demonstrating mastery of an area of environmental communication. Capstone projects are most often applied communication projects such as writing, photography, or video projects; expressive or artistic works; or student-initiated courses, workshops, or curriculum materials. Projects focused on academic scholarship or communication theory research may also be considered. Restricted to students enrolled in the Earth Systems Master of Arts, Environmental Communication Program.

**EARTHSYS 296. Implementing Climate Solutions at Scale. 3 Units.**

Climate change is the biggest problem humanity has ever faced, and this course will teach students about the means and complexity of solving it. The instructors will guide the students in the application of key data and analysis tools for their final project, which will involve developing integrated plans for eliminating greenhouse gas emissions (100% reductions) by 2050 for a country, state, province, sector, or industry. Same as: EARTHSYS 196

**EARTHSYS 297. Directed Individual Study in Earth Systems. 1-9 Unit.**

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

**EARTHSYS 298. Earth Systems Book Review. 2 Units.**

For Earth Systems master's students and advanced undergraduates only. Analysis and discussion of selected literary nonfiction books relevant to Earth systems topics. Examples of previous topics include political presentations of environmental change in the popular press, review of the collected works of Aldo Leopold, disaster literature, and global warming.

**EARTHSYS 299. M.S. Thesis. 1-9 Unit.****EARTHSYS 323. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. Same as: BIOHOPK 182H, BIOHOPK 323H, ESS 323

**EARTHSYS 332. Theory and Practice of Environmental Education. 3 Units.**

Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.

Same as: EDUC 332

**EARTHSYS 36N. Life at the Extremes: From the Deep Sea to Deep Space. 3 Units.**

Preference to freshmen. Microbial life is diverse and resilient on Earth; could it survive elsewhere in our solar system? This seminar will investigate the diversity of microbial life on earth, with an emphasis on extremophiles, and consider the potential for microbial life to exist and persist in extraterrestrial locales. Topics include microbial phylogenetic and physiological diversity, biochemical adaptations of extremophiles, ecology of extreme habitats, and apparent requirements and limits of life. Format includes lectures, discussions, lab-based activities and local field trips. Basics of microbiology, biochemistry, and astrobiology.

**EARTHSYS 37N. Climate Change: Science & Society. 3 Units.**

Preference to freshmen. How and why do greenhouse gases cause climate to change? How will a changing climate affect humans and natural ecosystems? What can be done to prevent climate change and better adapt to the climate change that does occur? Focus is on developing quantitative understanding of these issues rooted in both the physical and social sciences. Exercises based on simple quantitative observations and calculations; algebra only, no calculus.

**EARTHSYS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.**

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March.

Same as: ESS 38N, GS 38N

**EARTHSYS 4. Coevolution of Earth and Life. 4 Units.**

Earth is the only planet in the universe currently known to harbor life. When and how did Earth become inhabited? How have biological activities altered the planet? How have environmental changes affected the evolution of life? Are we living in a sixth mass extinction? In this course, we will develop and use the tools of geology, paleontology, geochemistry, and modeling that allow us to reconstruct Earth's 4.5 billion year history and to reconstruct the interactions between life and its host planet over the past 4 billion years. We will also ask what this long history can tell us about life's likely future on Earth. We will also use One half-day field trip.

Same as: GS 4

**EARTHSYS 41N. The Global Warming Paradox. 3 Units.**

Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

**EARTHSYS 42. The Global Warming Paradox II. 1 Unit.**

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions of topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. Prerequisite: EESS 41N or EARTHSYS 41N or consent of instructor. Same as: ESS 42

**EARTHSYS 44N. The Invisible Majority: The Microbial World That Sustains Our Planet. 3 Units.**

Microbes are often viewed through the lens of infectious disease yet they play a much broader and underappreciated role in sustaining our Earth system. From introducing oxygen into the Earth's atmosphere over 2 billion years ago to consuming greenhouse gases today, microbial communities have had (and continue to have) a significant impact on our planet. In this seminar, students will learn how microbes transformed the ancient Earth environment into our modern planet, how they currently sustain our Earth's ecosystems, and how scientists study them both in the present and in the past. Students will be exposed to the fundamentals of microbiology, biogeochemistry, and Earth history.

**EARTHSYS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough. 3 Units.**

Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.

Same as: ESS 46N

**EARTHSYS 46Q. Environmental Impact of Energy Systems: What are the Risks?. 3 Units.**

In order to reduce CO<sub>2</sub> emissions and meet growing energy demands during the 21st Century, the world can expect to experience major shifts in the types and proportions of energy-producing systems. These decisions will depend on considerations of cost per energy unit, resource availability, and unique national policy needs. Less often considered is the environmental impact of the different energy producing systems: fossil fuels, nuclear, wind, solar, and other alternatives. One of the challenges has been not only to evaluate the environmental impact but also to develop a systematic basis for comparison of environmental impact among the energy sources. The course will consider fossil fuels (natural gas, petroleum and coal), nuclear power, wind and solar and consider the impact of resource extraction, refining and production, transmission and utilization for each energy source.

Same as: GS 46Q

**EARTHSYS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.**

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

Same as: CEE 50N, ESS 49N

**EARTHSYS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays. 3 Units.**

Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay.

Same as: ESS 56Q

**EARTHSYS 57Q. Climate Change from the Past to the Future. 3 Units.**

Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

Same as: ESS 57Q

**EARTHSYS 61Q. Food and security. 3 Units.**

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

Same as: ESS 61Q, INTNLREL 61Q

**EARTHSYS 8. The Oceans: An Introduction to the Marine Environment. 4 Units.**

The course will provide a basic understanding of how the ocean functions as a suite of interconnected ecosystems, both naturally and under the influence of human activities. Emphasis is on the interactions between the physical and chemical environment and the dominant organisms of each ecosystem. The types of ecosystems discussed include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, and near-shore dead zones. Lectures, multimedia presentations, group activities, and tide-pooling day trip.

Same as: ESS 8

**EARTHSYS 801. TGR Project. 0 Units.****EARTHSYS 9. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EDUC 9, HUMBIO 9, PUBLPOL 74, URBANST 101

**EARTHSYS 90. Introduction to Geochemistry. 3-4 Units.**

The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry.

Same as: GS 90

**EARTHSYS 91. Earth Systems Writers Collective. 1 Unit.**

Come join a community of environmental writers, publish your work, and get course credit at the same time! Are you currently working on an article, an op-ed, translating your class projects into publishable pieces or pursuing a new writing project? Are you interested in publishing your work in the quarterly Earth Systems newsletter and the annual Earth Systems magazine? In this weekly seminar, you will collaborate with others and get constructive feedback from a community of peer writers. You can enroll in the Earth Systems Writers Collective for 1 or 2 units, or just join without signing up for course credit. May be repeat for credit.

**EARTHSYS 95. Liberation Through Land: Organic Gardening and Racial Justice. 2 Units.**

Through field trips, practical work and readings, this course provides students with the tools to begin cultivating a relationship to land that focuses on direct engagement with sustainable gardening, from seed to harvest. The course will take place on the O'Donohue Family Stanford Educational Farm, where students will be given the opportunity to learn how to sow seeds, prepare garden beds, amend soils, build compost, and take care of plants. The history of forced farm labor in the U.S., from slavery to low-wage migrant labor, means that many people of color encounter agricultural spaces as sites of trauma and oppression. In this course we will explore the potential for revisiting a narrative of peaceful relation to land and crop that existed long before the trauma occurred, acknowledging the beautiful history of POC coexistence with land. Since this is a practical course, there will be a strong emphasis on participation. Application available at [https://docs.google.com/forms/d/e/1FAIpQLScdKKp7mtTNzS0-qc-La97LPj9w8SsWNZ5xrAYVjikTR86F6Q/viewform?usp=sf\\_link](https://docs.google.com/forms/d/e/1FAIpQLScdKKp7mtTNzS0-qc-La97LPj9w8SsWNZ5xrAYVjikTR86F6Q/viewform?usp=sf_link); deadline to apply is September 19, 2017, at midnight. The course is co-sponsored by the Institute for Diversity in the Arts (IDA) and the Earth Systems Program.

Same as: CSRE 95

## Earth, Energy & Env Sciences (EEES)

### Economics (ECON)

**ECON 1. Principles of Economics. 5 Units.**

This is an introductory course in economics. We will cover both microeconomics (investigating decisions by individuals and firms) and macroeconomics (examining the economy as a whole). The primary goal is to develop and then build on your understanding of the analytical tools and approaches used by economists. This will help you to interpret economic news and economic data at a much deeper level while also forming your own opinions on economic issues. The course will also provide a strong foundation for those of you who want to continue on with intermediate microeconomics and/or intermediate macroeconomics and possibly beyond. In Spring 2017-2018 Econ 1 will use all class time for team-based learning instead of lectures; class attendance will be mandatory, and enrollment will be limited to 120 students.

**ECON 10. Microcosm of Silicon Valley and Wall Street. 1 Unit.**

Seminar in applied economics with focus on the microcosm of Silicon Valley, how growth companies are originated, managed and financed from start-up to IPO. Round-table discussion format. Applicable to those students with an interest in technology company formation, growth and finance including interaction with Wall Street. Enrollment limited to 10 juniors, seniors and co-term students.

**ECON 101. Economic Policy Seminar. 5 Units.**

Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: Econ 51 and 52, 102B, and two field courses. Some sections require additional prerequisites.

**ECON 102A. Introduction to Statistical Methods (Postcalculus) for Social Scientists. 5 Units.**

Probabilistic modeling and statistical techniques relevant for economics. Concepts include: probability trees, conditional probability, random variables, discrete and continuous distributions, correlation, central limit theorems, point estimation, hypothesis testing and confidence intervals for both one and two populations. Prerequisite: MATH 20 or equivalent.

**ECON 102B. Applied Econometrics. 5 Units.**

Hypothesis tests and confidence intervals for population variances, chi-squared goodness-of-fit tests, hypothesis tests for independence, simple linear regression model, testing regression parameters, prediction, multiple regression, omitted variable bias, multicollinearity, F-tests, regression with indicator random variables, simultaneous equation models and instrumental variables. Topics vary slightly depending on the quarter. Prerequisites: Econ 102A or equivalent. Recommended: computer experience (course often uses STATA software to run regressions).

**ECON 102C. Advanced Topics in Econometrics. 5 Units.**

The program evaluation problem. Identifying and estimating the effects of policies on outcomes of interest (e.g., tax rates on labor supply, etc.). Identifying and estimating the effects of human capital on earnings and other labor market outcomes. Topics: Instrumental variables estimation; limited dependent variable models (probit, logit, Tobit models); Panel data techniques (fixed and random effect models, dynamic panel data models); Duration models; Bootstrap and Estimation by Simulation. Prerequisite: Econ 102B.

**ECON 106. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, EARTHSYS 206, ECON 206, ESS 106, ESS 206

**ECON 107. Causal Inference and Program Evaluation. 5 Units.**

Methods for estimating and doing inference for causal effects. Discussion of randomized experiments, matching methods, the role of the propensity score, instrumental variables, regression discontinuity, and natural experiments. Theoretical aspects of these methods as well as detailed applications drawn from economics, political science, education, and health care. Prerequisite: Econ 102A or equivalent.

**ECON 110. History of Financial Crises. 5 Units.**

Financial crises are as old as financial markets themselves. There are many similarities between historical events. The 2008 credit crisis, for example, is far from unique. More often than not financial crises are the result of bubbles in certain asset classes or can be linked to a specific form of financial innovation. This course gives an overview of the history of financial crises, asset price bubbles, banking collapses and debt crises. We start with the Tulip mania in 1636 and end with the recent European debt crises. The purpose of the course is to understand the causes of past crises and to develop a conceptual framework that ties common elements together. We will discuss the lessons that we can draw for financial markets today. Prerequisites: Econ 50 or Econ 135.

**ECON 111. Money and Banking. 5 Units.**

The primary course goal is for students to master the logic, intuition and operation of a financial system - money, financial markets (money and capital markets, debt and equity markets, derivatives markets), and financial institutions and intermediaries (the Central Bank, depository institutions, credit unions, pension funds, insurance companies, venture capital firms, investment banks, mutual funds, etc.). In other words, how money/capital change hands between agents over time, directly and through institutions. Material will be both quantitative and qualitative, yet always highly analytical with a focus on active learning - there will be an approximately equal emphasis on solving mathematical finance problems (e.g. bond or option pricing) and on policy analysis (e.g. monetary policy and financial regulation.) Students will not be rewarded for memorizing and regurgitating facts, but rather for demonstrating the ability to reason with difficult problems and situations with which they might not previously be familiar. Prerequisite: Econ 50, 52. Strongly recommended but not required: some familiarity with finance and statistics (e.g. Econ 135 or 140, Econ 102A).

**ECON 112. Financial Markets and Institutions: Recent Developments. 5 Units.**

The course covers innovations, challenges and proposed changes to the financial system. Topics include new mortgage products, foreclosure rules, securitization, credit ratings, credit derivatives, dealer networks, repo financing, implications for prudential regulation & monetary policy. Emphasis is on quantitative studies of these topics. Prerequisites: Econ 52, Econ 102B.

**ECON 113. Economics of Innovation. 5 Units.**

The role of innovation and technological change in long run economic growth and the sources of innovation in science, technology, and commercialization. Founding of new industries and new markets. Commercialization of new technologies. Incentives and organization of science. Entrepreneurship. Openness and proprietary/controlled innovation. Selected public policies toward invention and innovation. The industrial revolution, the shifting international location of innovation, and the information revolution. Focus of the second half of the course is on the newest research on the newest industries. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51) and Econ 102B.

Same as: PUBLPOL 354

**ECON 118. Development Economics. 5 Units.**

The microeconomic problems and policy concerns of less developed countries. Topics include: health and education; risk and insurance; microfinance; agriculture; technology; governance. Emphasis is on economic models and empirical evidence. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 102B.

**ECON 119. The Russian Economy. 4-5 Units.**

Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.

Same as: REES 219

**ECON 11N. Understanding the Welfare System. 3 Units.**

Welfare-reform legislation passed by the federal government in the mid-1990s heralded a dramatic step in the movement that has been termed the devolution revolution, which is again being discussed in the context of healthcare reform. The centerpiece of devolution is the transfer of more responsibilities for antipoverty programs to the states. We will explore the effects of these reforms and the role that devolution plays in the ongoing debates over the designs of programs that make up America's social safety net. In addition to discussing conventional welfare programs (e.g., Medicaid, food stamps, TANF, SSI) and other governmental policies assisting low-income families (EITC, minimum wages), we will examine the trends in governmental spending on anti-poverty programs and how our nation defines poverty and eligibility for income support. We will apply economics principles throughout to understand the effectiveness of America's antipoverty programs and their consequences on the behavior and circumstances of families. Prerequisites: A basic understanding/knowledge of introductory economics is recommended.

**ECON 120. Japan & the World: Innovation, Economic Growth, Globalization, and Int'l Security Challenges. 3-5 Units.**

This course introduces students to the economy, politics, and international relations of contemporary Japan. The course puts a particular emphasis on several emerging issues in Japan including innovation and economic dynamism, Japan's contributions to international peace and cooperation, and Japan's response to international economic and geopolitical challenges. The course will invite several guest instructors, each of whom is an expert on at least one of the issues that Japan faces today, to give lectures in addition to the main instructors. The guest lecturers will also be available outside of the classroom for further discussion during their stays at Stanford. Same as: EASTASN 153, EASTASN 253, POLISCI 115E

**ECON 121. Social Science Field Research Methods and Applications. 5 Units.**

Fundamentals of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course introduces observational field research and compares it with experimental field research. Significant attention devoted to explaining the details of research design as well as what can and cannot be learned through each type of field research. Emphasis placed on the theory of the design and analysis of statistical experiments. Topics include: sample size selection, power and size of statistical hypothesis tests, partial compliance, sample selection bias and methods for accounting for it. Development of critical reading skills emphasized through class discussions of academic journal articles and popular media accounts of field research. Examples of best practice field research studies presented as well as examples of commonly committed errors; students are expected to articulate and challenge or defend underlying assumptions and the extent to which real-world research matches up with concepts covered in lecture. Practical aspects of field work, including efficient and cost-effective data collection, teamwork, field team supervision, budget management, and common ethical considerations. Grading based on weekly problem sets that focus on developing data analysis skills using statistical software, a midterm examination, and a final project in which students write a detailed research proposal. Students can also apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 and either STATS 60 or Econ 102A or equivalent.

Same as: EARTHSYS 120, PUBLPOL 120, PUBLPOL 220

**ECON 124. Economic Development and Challenges of East Asia. 3-5 Units.**

This course explores East Asia's rapid economic development and the current economic challenges. For the purpose of this course, we will focus on China, Japan, and Korea. The first part of the course examines economic growth in East Asia and the main mechanisms. In this context, we will examine government and industrial policy, international trade, firms and business groups, and human capital. We will discuss the validity of an East Asian model for economic growth. However, rapid economic growth and development in East Asia was followed by economic stagnation and financial crisis. The second part of the course focuses on the current economic challenges confronting these countries, in particular, inequality, demography, and entrepreneurship and innovation. Readings will come from books, journal articles, reports, news articles, and case studies. Many of the readings will have an empirical component and students will be able to develop their understanding of how empirical evidence is presented in articles. Prerequisites: Econ 102B.

**ECON 125. Economic Development, Microfinance, and Social Networks. 5 Units.**

An introduction to the study of the financial lives of households in less developed countries, focusing on savings, credit, informal insurance, the expansion of microfinance, and social networks. Prerequisites- Econ 51 or Publpol 51 and Econ 102B.

**ECON 126. Economics of Health and Medical Care. 5 Units.**

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 156, BIOMEDIN 256, HRP 256

**ECON 127. Economics of Health Improvement in Developing Countries. 5 Units.**

Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and ECON 102B.

Same as: MED 262

**ECON 128. Economic Development: A Historical Perspective. 5 Units.**

The course explores the process of economic development from a historical perspective. It draws on contemporary theories of economic development and the historical experience of various regions over the last millennium. The substantive focus is on the cultural and institutional and social foundations for economic growth. The stalker focus is particularly on the Middle East, Europe and China. The course is conducted as a seminar based on in class discussion, readings, and students presentations. Limited Enrollment. Prerequisites: ECON 50, ECON 52, ECON 102B. Recommended: ECON 118.

**ECON 129. Credit markets and development: Some evidence from Latin America and the World. 5 Units.**

This course gives an overview of the importance (or not) of credit for development and the workings and failures of these markets from a microeconomic perspective. We will study retail credit markets, which include mortgage lending, credit cards, microcredit, auto loans, and loans to small firms. We will not cover macro credit topics like sovereign debt, the stock market, systemic risk, etc. We will draw on studies from México, the US and other countries. In the process we will also discuss on the main techniques to estimate causal effects. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), and Econ 102B.

**ECON 135. Finance for Non-MBAs. 3 Units.**

For graduate students and advanced undergraduates. This course teaches the foundations of finance, with applications in investment management, portfolio choice, and corporate finance. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities will also be discussed. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 50, ECON 102A, or equivalents; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

**ECON 136. Market Design. 5 Units.**

Use of economic theory and analysis to design allocation mechanisms and market institutions. Course focuses on three areas: the design of matching algorithms to solve assignment problems, with applications to school choice, entry-level labor markets, and kidney exchanges; the design of auctions to solve general resource allocation problems, with applications to the sale of natural resources, financial assets, radio spectrum, and advertising; and the design of platforms and exchanges, with applications to internet markets. Emphasis on connecting economic theory to practical applications. Students must write term paper.

Prerequisites: recommended: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51).

**ECON 137. Decision Modeling and Information. 5 Units.**

Effective decision models consider a decision maker's alternatives, information and preferences. The construction of such models in single-party situations with emphasis on the role of information. The course then evolves to two-party decision situations where one party has more information than the other. Models examined include: bidding exercises and the winner's curse, the Akerlof Model and adverse selection, the Principal-Agent model and risk sharing, moral hazard and contract design. Prerequisite: ECON 102A or equivalent. Recommended: Econ 50, Optimization and simulation in Excel.

**ECON 139D. Directed Reading. 1-10 Unit.**

May be repeated for credit.

**ECON 13N. Experimental Economics. 3 Units.**

This freshman seminar is for students who are interested in economics and want to get a hands on, front row experience with research. The goal of the seminar is to come up, as a group, with a research topic and question and implement an experiment to address the question.

**ECON 14. Navigating Financial Crises in the Modern Global Economy. 1 Unit.**

What causes financial crises? What are the keys to anticipating, preventing, and managing disruptions in the global financial system? This course prepares students to navigate future episodes as policymakers, finance professionals, and citizens by going inside the practical decisions made in an unfolding crisis, from the U.S. government and IMF to the boardroom and trading floor. Students will learn warning signs of distress; market structures that govern crisis dynamics; strategic interactions among the key actors; and lessons learned for creating a more resilient system. Concepts will be applied to real-world experiences in emerging market crises, the U.S. housing and global financial crisis, and the European sovereign crisis, as well as prospective risks from China's financial system and unwinding of extraordinary central bank stimulus.

Same as: PUBLPOL 14

**ECON 140. Introduction to Financial Economics. 5 Units.**

Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 102A.

**ECON 141. Public Finance and Fiscal Policy. 5 Units.**

What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic, historical and statistical analyses and current policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget deficits, the national debt and intergenerational equity; tax systems and tax reform; social security and healthcare programs and reforms; transfers to the poor; public goods and externalities; fiscal federalism; public investment and cost-benefit analysis; and the political economy of government decision-making. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 52 (can be taken concurrently).

Same as: PUBLPOL 107

**ECON 143. Finance and Society for non-MBAs. 4 Units.**

The financial system is meant to help people, businesses, and governments fund, invest, and manage risks, but it is rife with conflicts of interests and may allow people with more information and control to harm those with less of both. In this interdisciplinary course we explore the forces that shape the financial system and how individuals and society can benefit most from this system without being unnecessarily harmed and endangered. Topics include the basic principles of investment, the role and "dark side" of debt, corporations and their governance, banks and other financial institutions, why effective financial regulations are essential yet often fail, and political and ethical issues in finance. The approach will be rigorous and analytical but not overly technical mathematically. Prerequisite: Econ 1.

Same as: IPS 227, MS&E 147, POLISCI 127A, PUBLPOL 143

**ECON 145. Labor Economics. 5 Units.**

Analysis and description of labor markets. Determination of employment, hours of work, and wages. Wage differentials. Earnings inequality. Trade unions and worker co-operatives. Historical and international comparisons. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 102B.

**ECON 146. Economics of Education. 5 Units.**

How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market. The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: ECON 50, ECON 102B.

**ECON 147. The Economics of Labor Markets. 5 Units.**

This course will cover the economics of labor markets. Topics include: determinants of employment and unemployment, with a special focus on understanding business cycle fluctuations. Job creation and job destruction. The effects of technological change on the labor market. Determinants of labor supply and the effects of universal basic income. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), Econ 52, Econ 102B.

**ECON 149. The Modern Firm in Theory and Practice. 5 Units.**

Examines the empirics on the economics, management and strategy of organizations (e.g. firms). Topics include the organization of firms in US and internationally. Management practices around information systems, target setting and human resources. Focus on management practices in manufacturing, but also analyze retail, hospitals and schools, plus some recent field-experiments in developing countries. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 102B.

**ECON 145C. A Random Walk Down Wall Street. 2 Units.**

The title of this course is the title of one of the books that will be required summer reading. The course will introduce modern finance theory and cover a wide range of financial instruments: stocks, bonds, options, mutual funds, exchange traded funds, mortgage back securities, etc. Historical returns on different asset classes will be examined. The efficient market hypothesis and the case for and against index funds will be discussed. The course for 2015 will examine the ongoing policies to stimulate the economy, including the quantitative easing policy of the Federal Reserve. There will be coverage of global financial markets. We will try to reconcile the long-run return on stocks, bonds, and money market instruments with the capital asset pricing model. We will try to connect financial markets with the problems of the real economy including the entitlement programs. We will talk with venture capitalists, Federal Reserve officials, hedge fund and mutual fund managers, and those who manage large institutional endowments. Students will be expected to write a short paper and make an oral presentation to the class. A wide range of topics will be acceptable, including market regulation, the introduction of new financial instruments, the functioning of commodity futures markets, and evaluations of the federal government intervention in financial markets. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

**ECON 150. Economic Policy Analysis. 4-5 Units.**

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: PUBLPOL 104, PUBLPOL 204

**ECON 152. The Future of Finance. 2 Units.**

(Same as Law 1038) If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of global financial markets such as how the world has evolved post-financial crisis, how it is being disrupted by FinTech, RegTech, artificial intelligence, crowd financing, blockchain, machine learning & robotics (to name a few), how it is being challenged by IoT, cyber, financial warfare & crypto currency risks (to name a few) and how it is seizing new opportunities in fast-growing areas such as ETFs, new instruments/payment platforms, robo advising, big data & algorithmic trading (to name a few). The course will include guest-lecturer perspectives on how sweeping changes are transforming business models and where the greatest opportunities exist for students entering or touching the world of finance today including existing, new and disruptive players. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which is available on the Public Policy Program's website at <https://publicpolicy.stanford.edu/academics/undergraduate/forms>. See Consent Application Form for submission deadline.

Same as: ECON 252, PUBLPOL 364, STATS 238

**ECON 154. Law and Economics. 4-5 Units.**

This course explores the role of law in promoting well-being (happiness). Law, among its other functions, can serve as a mechanism to harmonize private incentives with cooperative gains, to maintain an equitable division of those gains, and to deter "cheating" and dystopia. Law is thus essential to civilization. Economic analysis of law focuses on the welfare-enhancing incentive effects of law and its enforcement and on law's role in reducing the risks of cooperation, achieved by fixing expectations of what courts or the state will do in various futures. Prerequisite: ECON 51 or PUBLPOL 51.

Same as: PUBLPOL 106, PUBLPOL 206

**ECON 155. Environmental Economics and Policy. 5 Units.**

Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). Evaluation of policies addressing local air pollution, global climate change, and the use of renewable resources. Connections between population growth, economic output, environmental quality, sustainable development, and human welfare. Prerequisite: ECON 50. May be taken concurrently with consent of the instructor.

**ECON 157. Imperfect Competition. 5 Units.**

The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51).

**ECON 159. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.**

This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. It will address economic issues, legal constraints, and political challenges associated with various emissions-reduction strategies, and it will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies, the strengths and weaknesses of alternative policy instruments, trade-offs among alternative policy objectives, and decision making under uncertainty. Prerequisites: Econ 50 or its equivalent.

Same as: EARTHSYS 159, ECON 209, PUBLPOL 159

**ECON 15Q. The Economics of Immigration in the US: Past and Present. 3 Units.**

The United States has long been perceived as a land of opportunity for immigrants. Yet, both in the past and today, policy makers have often expressed concerns that immigrants fail to integrate into US society and lower wages for existing workers. There is an increasingly heated debate about how strict migration policy should be. This debate is rarely based on discussion of facts about immigrants assimilation. This class will review the literature on historical and contemporary migrant flows. We will tackle three major questions in the economics of immigration: whether immigrants were positively or negatively selected from their sending countries; how immigrants assimilated into the US economy and society; and what effects that immigration may have on the economy, including the effect of immigration on native employment and wages. In each case, we will present studies covering the two main eras of US immigration history, the Age of Mass Migration from Europe (1850-1920) and the recent period of renewed mass migration from Asia and Latin America. Students will participate in a final project, which could include developing their own recommendations for how to design immigration policy in the US. Prerequisite: Econ 1.

**ECON 160. Game Theory and Economic Applications. 5 Units.**

Introduction to game theory and its applications to economics. Topics: strategic and extensive form games, dominant strategies, Nash equilibrium, subgame-perfect equilibrium, and Bayesian equilibrium. The theory is applied to repeated games, voting, auctions, and bargaining with examples from economics and political science. Prerequisites: Working knowledge of calculus and basic probability theory.

**ECON 162. Games Developing Nations Play. 5 Units.**

If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required. Same as: POLISCI 247A, POLISCI 347A

**ECON 164. The Law and Economics of the World Trading System. 5 Units.**

This course focuses on the purpose and design of the World Trade Organization (WTO). The course begins with a discussion of the economics of trade agreements and a brief introduction to the WTO as an institution. The course then considers a series of topics, which may include: the dispute resolution system; the choice between multilateral and regional or bilateral trade agreements; the international regulation of subsidies; the interface between international trade obligations and domestic regulation; safeguard measures; and trade preferences for developing countries in the WTO. Prerequisite: Econ 51.

**ECON 165. International Finance. 5 Units.**

We will explore models for analyzing a wide variety of issues in open-economy macroeconomics, such as the balance of payments; the determination of exchange rates; the relation between exchange rates and inflation; monetary and fiscal policy under flexible and fixed exchange rate regimes; macroeconomic gains (and pains?) from financial globalization; policy coordination and optimum currency areas; exchange rate crises; debt crises and the possibility of contagion. Our theoretical framework will structure our examination of important historical episodes and contemporary policy debates; the textbook will be supplemented with readings from recent scholarly articles and mainstream news sources. Active class participation is an important part of the course. Prerequisite: ECON 52.

**ECON 166. International Trade. 5 Units.**

Explaining patterns of trade among nations; characterizing the sources of comparative advantage in production and the prospect of gains from economies of scale. Enumerating and accounting for the net aggregate gains from trade, and identifying winners and losers from globalization. Analyzing the effects of international labor migration, foreign direct investment, outsourcing, and multinational companies. Strategic trade policy; international trade agreements; labor and environmental implications. We will review relevant theoretical frameworks, examine empirical evidence, and discuss historical and contemporary policy debates as covered in the popular press; active class participation is an important part of the course. Prerequisite: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51).

**ECON 178. Behavioral Economics. 5 Units.**

The field of behavioral economics draws on insights from other disciplines, especially psychology, to enrich our understanding of economic behavior. The course will discuss how people may display systematic behavioral patterns that diverge from the predictions of standard economic models, as well as the ways in which economists incorporate those considerations into their theories, and the implications of those theories for market outcomes and public policies. Prerequisites: ECON 50 and ECON 102A. Econ 51 is recommended.

**ECON 179. Experimental Economics. 5 Units.**

Methods and major subject areas that have been addressed by laboratory experiments. Focus is on a series of experiments that build on one another. Topics include decision making, two player games, auctions, and market institutions. How experiments are used to learn about preferences and behavior, trust, fairness, and learning. Final presentation of group projects. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 102A.

**ECON 17N. Energy, the Environment, and the Economy. 3 Units.**

Examines the intimate relationship between environmental quality and the production and consumption of energy. Assesses the economics efficiency and political economy implications of a number of current topics in energy and environmental economics. Topics include: the economic theory of exhaustible resources, Greenhouse Gas Emissions (GHG) control (cap and trade mechanisms and carbon fees), GHG emissions offsets, the Strategic Petroleum Reserve (SPR), the "smart" transmission grid for electricity, nuclear energy and nuclear waste, the real cost of renewable energy, natural gas and coal-fired electricity production, the global coal and natural gas markets, Corporate Average Fuel Efficiency (CAFE) and Low-Carbon Fuel Standards (LCFS), Energy Efficiency Investments and Demand Response, and Carbon Capture and Sequestration (CCS). For all topics, there will be reading to explain the economics and engineering behind the topic and class discussion to clarify and elaborate on this interaction.

**ECON 180. Honors Game Theory. 5 Units.**

Rigorous introduction to game theory and applications. Topics include solution concepts for static and dynamic games of complete and incomplete information, signaling games, repeated games, bargaining, and elements of cooperative game theory. Applications mainly from economics, but also political science, biology, and computer science. Prerequisites: Experience with abstract mathematics and willingness to work hard. No background in economics required.

**ECON 181. Honors Information and Incentives. 5 Units.**

Rigorous introduction to the theory of economic mechanisms under asymmetric information. Covers applications to price discrimination, taxation, regulation, long-term relationships, single-unit and multi-unit auctions. Forms a sequence with ECON 180 and ECON 182, but can be taken independently. Prerequisite: Experience with abstract mathematics and willingness to work hard. No prior knowledge of economics is required, although basic knowledge in game theory is useful.

**ECON 182. Honors Market Design. 5 Units.**

Rigorous introduction to the theory of matching and resource allocation, and its application to practical market design. Theory covers two-sided matching, "house allocation" problems, random assignment, and their variants. Applied topics include school choice, labor market, house allocation, and organ allocation for transplantation. Final paper required. Forms a sequence with ECON 180 and ECON 181, but can be taken independently. Prerequisites: Experience with abstract mathematics and willingness to work hard. No prior knowledge of economics is required, although basic knowledge in game theory is useful.

**ECON 183. The Cardinal Fund. 1-3 Unit.**

This is an experiential course that will cover the important concepts that underlying investment theory in Financial Economics. Students will manage an investment portfolio of at least \$1 million dollars. In doing so they will learn how risk and return are related in public capital markets. Students are expected to spend a substantial amount of time outside the classroom applying the knowledge they learn in the class. Prerequisites: Econ 51 (or IPS 204A, PublPol 301A), Econ 102B (or Stats 141, Stats 110, CEE 203, Earthsys 160, Educ 200C, Linguist 277, Psych 252), Econ 140 (or Econ 135), Econ 190 (or MS&E 140). Not accepting new students for 2017/2018.

**ECON 184. Institutional Investment Management: Theory and Practice. 5 Units.**

This course provides an introduction to the theory and practice of institutional investment management including asset allocation and manager selection across public and private equity, absolute return, real assets, and fixed income. The course is co-taught by the CIO of Stanford's endowment and takes the perspective of an institution with a long-term investment horizon like Stanford. We introduce and apply a framework for assessing investment strategies and investment firms. Students put theory into practice by meeting with leading investors from various asset classes. Enrollment capped at 20; required application due by September 6; see schedule section below for application instructions. Prerequisites: Econ 50 and 102A, may be taken concurrently.

**ECON 190. Introduction to Financial Accounting. 5 Units.**

This is a Case and Problem Discussion course. How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.

**ECON 191. Introduction to Cost Accounting. 5 Units.**

Focuses on how managers use accounting information for decision making. Students will study product and service costing, activity based costing, performance management and evaluation, CVP analysis, forecasting, factors to be considered in pricing decision, capital investment analysis, and quality management and measurement.

**ECON 198. Junior Honors Seminar. 5 Units.**

Primarily for students who expect to write an honors thesis. Weekly sessions go through the process of selecting a research question, finding relevant bibliography, writing a literature review, introduction, and study design, culminating in the write-up of an honors thesis proposal (prospectus) and the oral presentation of each student's research project. Students also select an adviser and outline a program of study for their senior year. Enrollment limited to 15. Same as: PUBLPOL 197

**ECON 199D. Honors Thesis Research. 1-10 Unit.**

In-depth study of an appropriate question and completion of a thesis of very high quality. Normally written under the direction of a member of the Department of Economics (or some closely related department). See description of honors program. Register for at least 1 unit for at least one quarter after your honors application is approved. Winter registration for one unit under the supervision of the Director of the Honors Program is mandatory for all honors students.

**ECON 19Q. Measuring the Performance of Governments in the U.S.. 3 Units.**

Spending by federal, state, and local governments accounts for about one-third of U.S. GDP and governments employ more than one-in-seven workers in the U.S. For most U.S. residents, government is represented by a complicated web of federal, state, and local policies. There is an increasingly contentious debate about the proper role of the government and regarding the impact of specific government policies. This debate is rarely grounded in a common set of facts. In this seminar, we will explore how each level of government interacts with U.S. residents through government services, public programs, taxes, and regulations. We will examine financial results for different levels of government while considering the net effects of government intervention on the health and economic well-being of individuals and families. Particular attention will be paid to certain sectors (e.g. education, health care, etc.) and to certain groups (e.g. those in poverty, the elderly, etc.). Along the way we will accumulate a set of metrics to assess the performance of each level of government while highlighting the formidable challenges of such an exercise. Prerequisite: Econ 1.

Same as: PUBLPOL 19Q

**ECON 202. Microeconomics I. 2-5 Units.**

(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; monotone comparative statics; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.

**ECON 202N. Microeconomics I For Non-Economics PhDs. 2-5 Units.**

Microeconomics I for non-Economics PhD students. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: understanding of the elements of multivariate calculus and linear algebra.

**ECON 203. Microeconomics II. 2-5 Units.**

(Non-Economics graduate students register for 203N.) Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities and public goods. The theory of imperfect competition: static Bertrand and Cournot competition, dynamic oligopoly, entry decisions, entry deterrence, strategic behavior to alter market conditions. Limited enrollment. Prerequisite: ECON 202.

**ECON 203N. Microeconomics II For Non-Economics PhDs. 2-5 Units.**

Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: understanding of the elements of multivariate calculus and linear algebra.

**ECON 204. Microeconomics III. 2-5 Units.**

Social Choice, including Arrow's theorem, the Gibbard-Satterthwaite theorem, and the Vickrey-Clarke-Groves mechanism. The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. Competitive equilibrium and the core. Limited enrollment. Non-Econ students need permission of instructor to enroll. Prerequisite: ECON 202 and 203.

**ECON 206. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, EARTHSYS 206, ECON 106, ESS 106, ESS 206

**ECON 209. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.**

This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. It will address economic issues, legal constraints, and political challenges associated with various emissions-reduction strategies, and it will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies, the strengths and weaknesses of alternative policy instruments, trade-offs among alternative policy objectives, and decision making under uncertainty. Prerequisites: Econ 50 or its equivalent.

Same as: EARTHSYS 159, ECON 159, PUBLPOL 159

**ECON 210. Macroeconomics I. 2-5 Units.**

Dynamic programming applied to a variety of economic problems. These problems will be formulated in discrete or continuous time, with or without uncertainty, with a finite or infinite horizon. There will be weekly problem sets and a take-home final that will require MATLAB programming. Limited enrollment.

**ECON 211. Macroeconomics II. 2-5 Units.**

Dynamic stochastic general equilibrium models using dynamic programming methods that are solved with MATLAB. Growth models (neoclassical, human capital, technical change) using optimal control theory. Limited enrollment. Prerequisite: ECON 210.

**ECON 212. Macroeconomics III. 2-5 Units.**

Real business cycle and new Keynesian models: business cycle fluctuations, inflation dynamics, the effects of monetary and fiscal policy, and optimal policy. Models of heterogeneity: search models of the labor market; precautionary savings and general equilibrium with incomplete markets; constrained efficiency; endogenous market incompleteness and recursive contracts; optimal taxation and redistribution. Limited enrollment. Prerequisites: ECON 203, ECON 210, ECON 211.

**ECON 214. Development Economics I. 2-5 Units.**

This course uses microeconomic analysis to understand development issues in lower income countries. Topics include institutions and governance; human capital accumulation; productivity; inequality; poverty traps. Prerequisites: 202 or 202N, 270.

**ECON 215. Development Economics II. 2-5 Units.**

This is a course focusing on macro development research. It will cover dynamic models of growth and development, with a focus on migration; technological change; the functioning of financial markets; and barriers to agricultural productivity in less developed countries. Prerequisites: 202 or 202N, 270.

**ECON 216. Development Economics III. 2-5 Units.**

This course focuses on savings, credit, informal insurance, the expansion of microfinance, social networks, social learning and technology adoption, public finance and firm organizations. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272.

**ECON 217. Topics in International Macroeconomics: Theory and Evidence for Latin America. 2-5 Units.**

Banking systems, interest rates, regulatory policies, and the productivity of capital in developing countries. Controlling inflation: fiscal and monetary policies for macroeconomic stability. Currency crises, exchange rates, and the liberalization of foreign trade. Further applications to transitional socialist economies in Asia and E. Europe.

**ECON 220. Political Economy I. 2-5 Units.**

Theoretical models of political economy. Potential topics include: basic social choice theory, democracy, electoral competition, political accountability, legislative bargaining, lobbying, corruption, autocratic politics, democratization, conflict and arms races, and institutional change. Attention to economics implications, including taxation, redistribution, and public goods. Prerequisite: Econ 203 or permission of instructors.

Same as: POLISCI 311E

**ECON 225. Economics of Technology and Innovation. 2-5 Units.**

Graduate seminar on current research on the economics of innovation. Topics include the design of optimal patent policies, copyright policies, and the role of human capital (science, immigration, skill-biased technical change). Emphasis on empirical analyses of historical and contemporary data.

**ECON 226. U.S. Economic History. 2-5 Units.**

The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the American national system of technology; the Great Depression of the 1930s; national economic performance in a globalizing world. Intended for graduate students.

**ECON 227. European Economic History. 2-5 Units.**

European Economic History: covers topics in European Economic History from the Middle Ages to the twentieth century (but does not cover detailed economic history of particular European countries). Topics include competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; the diffusion of knowledge; the formation, function, and persistence of institutions and organizations; the role of institutions and organizations (for example, apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the causes and consequences of income inequality; the economics of migration; the changing economic role of the family. The course will highlight the use of economic theory in guiding hypothesis testing, as well as the construction of new datasets and the execution of empirical analysis. Enrollment limited to graduate students.

**ECON 228. Institutions and Organizations in Historical Perspective. 2-5 Units.**

The course integrates historical analysis and economic theory in evaluating the nature and role of institutions in economic and political outcomes. The motivating question is the factors determining economic and political developments in the long run and the historical focus is on the Middle East, Europe, and China over the last millennium. The course first examines various approaches for the study of institutions, their nature and dynamics and then focuses on detailed discussions of frontier research papers.

**ECON 229. Causes and Consequences of the Rise in Inequality. 3 Units.**

In this class we will discuss the economic and institutional causes of the rise in inequality in the US and other countries over the last 40 years. We will also discuss the consequences of inequality in terms of social justice, economic welfare, aggregate economic performance, intergenerational mobility, and the possible implications of inequality for the recent global financial crisis.

**ECON 231. Analytics of Global Economic Externalities under Uncertainty. 3 Units.**

Fundamentally important issues for theoretical analysis of macro-dynamical systems with global externalities are the focus of this course's 9 (weekly) meetings: (i) public goods (e.g., information) and public bads (uncontrolled GHG emissions), (ii) sequential decision-making under uncertainty (e.g., multi-period investment programs, and management of evolving technology portfolios), and (iii) time discounting, allowing for rare events and catastrophic risks. Novel approaches to program designs for global climate stabilization, sustainable use of resources and the future adaptation of market mechanisms (e.g., carbon markets, and markets for potable water).

**ECON 233. Advanced Macroeconomics I. 2-5 Units.**

Topics in the theory and empirics of economic growth. For PhD-level students.

**ECON 234. Advanced Macroeconomics II. 2-5 Units.**

Modern macroeconomics of aggregate fluctuations in advanced economies. Current research on sovereign debt, fiscal policy and financial flows, low growth and stagnation, low interest rates, financial crises, unemployment fluctuations, and other timely topics. The course will be organized around the detailed study of recent research papers. Some lectures will be given by visiting macroeconomists. Students enrolled in MGTECON612 take the class for 4 units. Students develop a research proposal and present it to the instructors as the final exam. Prerequisite: Satisfaction of the economics department's core macro requirement or consent of the instructors.

**ECON 235. Advanced Macroeconomics III. 2-5 Units.**

Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.

**ECON 236. Financial Economics I. 2-5 Units.**

This course will cover research topics at the boundary between macroeconomics and finance. Topics may include the study of macroeconomic models with financial frictions, conventional and unconventional monetary policy, its transmission mechanism and the term structure of interest rates, sovereign debt crises, search frictions and segmentation in housing markets, (over)leveraging by households, heterogeneous expectations, excess volatility, financial bubbles and crises. Prerequisites: 210, 211, 212.

**ECON 237. Financial Economics II. 2-5 Units.**

This Ph.D. course will cover research topics at the boundary between macroeconomics and finance. Topics will include the study of macroeconomic models with financial frictions, the term structure of interest rates, conventional and unconventional monetary policy, sovereign debt crises, search frictions and segmentation in housing markets, (over)leveraging by households, heterogeneous expectations, excess volatility, financial bubbles and crises. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance.

Same as: MGTECON 617

**ECON 239D. Directed Reading. 1-10 Unit.**

May be repeated for credit.

**ECON 23N. Capitalism, Socialism and Democracy. 3 Units.**

We will explore the evolution and current performance of capitalist and socialist economies, their interaction with democracy, and the contemporary debate about the appropriate roles of individual vs. collective rights and responsibilities.

**ECON 24. SENSE Labs Social Enterprise Seminar. 2 Units.**

SENSE labs seminar incubates social entrepreneurship startups through bi-weekly meetings that feature guest speakers. Enrollment by application.

**ECON 241. Public Economics I. 2-5 Units.**

Introduction to key issues in public economics, including the optimal design of tax and transfer policy, income and wealth inequality, social mobility, the empirical effect of taxes on earnings and savings, and behavioral welfare economics. Students will learn frontier theoretical and empirical tools that are currently used to address questions of relevance to economic policy. Prerequisites: ECON 202-204, ECON 210, ECON 270, ECON 271, or equivalent with consent of instructor.

**ECON 242. Public Economics II. 2-5 Units.**

We analyze how workers and incomes respond to taxation and anti-poverty programs. We learn how to use taxes and economic mechanisms to address externalities (pollution, social "bads" and "goods"). We learn fundamental tax reform, public goods, fiscal federalism, local public goods, and (special emphasis) government's role in education. Prerequisites: 202, 203, 204, 210, 270, 271, or similar with consent of instructor. Recommended: 241.

**ECON 243. Public Economics III. 2-5 Units.**

The course covers various topics relating to social insurance. The first half of the course covers the rationale for government interventions into private insurance markets, adverse selection, social insurance design and the intersection between social insurance and intra-family insurance. The second half of the course covers local public policy and urban economics, and includes topics such as spatial equilibrium, place-based policies and housing policy. Prerequisites: Econ 202, 203, 204, 210, 270, 271, or equivalent with consent of instructor. Recommended: Econ 241 and 242.

**ECON 246. Labor Economics I. 2-5 Units.**

Topics in current applied microeconomic research including intertemporal labor supply models, public policy, program evaluation, job search, migration, consumption behavior. Student and faculty presentations.

**ECON 247. Labor Economics II. 2-5 Units.**

Recent topics in applied micro, focusing on papers from top journals (QJE, AER, JPE, Econometrica and REStud) over the last ten years. Broad overview of current topic and techniques in applied-micro research. Topics include inequality, polarization and skill-biased technical change, discrimination, technology adoption and the spread of information, management practices, field experiments, peer effects and academic spillovers. Combination of student and faculty presentations. Additional sessions on general presentations, paper writing and research skills to prepare for job market. Typically also run a class trip to the NBER West-Coast labor meetings at the San Francisco Fed.

**ECON 248. Labor Economics III. 2-5 Units.**

Topics in the determination of earnings and job mobility. Classes of models include: search, human capital, Roy, sorting, learning and compensating differentials. Basic models as well as contemporary empirical work will be discussed.

**ECON 249. Topics in Health Economics I. 2-5 Units.**

Course will cover various topics in health economics, from theoretical and empirical perspectives. Topics will include public financing and public policy in health care and health insurance; demand and supply of health insurance and healthcare; physicians' incentives; patient decision-making; competition policy in healthcare markets, intellectual property in the context of pharmaceutical drugs and medical technology; other aspects of interaction between public and private sectors in healthcare and health insurance markets. Key emphasis on recent work and empirical methods and modelling. Prerequisites: Micro and Econometrics first year sequences (or equivalent). Curricular prerequisites (if applicable): First year graduate Microeconomics and Econometrics sequences (or equivalent).

Same as: HRP 249, MED 249

**ECON 24N. Social Choice & Market Design. 3 Units.**

The design of mechanisms for group decision making, addressing questions about how apartment mates should choose rooms and share the rent, how a government should select and pay its suppliers, how a town should elect a mayor, or how students and college ought to be matches to one another. The first three weeks include classic papers by two Nobel-prize winning scholars about matching students and about government procurement. We will ask questions such as: What are the provable properties of these mechanisms? Is it possible for individuals or groups to manipulate the mechanisms for their own advantage? The remaining weeks focus on group decisions that are guided by "voting" mechanisms, showing the inherent trade-offs and proving theorems about the incompatibility among some simple, desirable properties of mechanisms. The ideas treated in this class are being used today to design new mechanisms for voting, matching, auctions and other applications, based on an awareness of the formal properties that the mechanisms may have.

**ECON 250. Environmental Economics. 2-5 Units.**

Theoretical and empirical analysis of sources of and solutions to environmental problems, with application to local pollution challenges and global environmental issues such as climate change. Topics include: analysis of market failure, choice of environmental policy instruments, integrating environmental and distortionary taxes, environmental policy making under uncertainty, valuing environmental amenities, and measuring /promoting sustainable development.

**ECON 251. Natural Resource and Energy Economics. 2-5 Units.**

Economic theory and empirical analysis of non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: exhaustible resources; renewable resources; and energy industry market structure, pricing, and performance. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

**ECON 252. The Future of Finance. 2 Units.**

(Same as Law 1038) If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of global financial markets such as how the world has evolved post-financial crisis, how it is being disrupted by FinTech, RegTech, artificial intelligence, crowd financing, blockchain, machine learning & robotics (to name a few), how it is being challenged by IoT, cyber, financial warfare & crypto currency risks (to name a few) and how it is seizing new opportunities in fast-growing areas such as ETFs, new instruments/payment platforms, robo advising, big data & algorithmic trading (to name a few). The course will include guest-lecturer perspectives on how sweeping changes are transforming business models and where the greatest opportunities exist for students entering or touching the world of finance today including existing, new and disruptive players. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which is available on the Public Policy Program's website at <https://publicpolicy.stanford.edu/academics/undergraduate/forms>. See Consent Application Form for submission deadline.

Same as: ECON 152, PUBLPOL 364, STATS 238

**ECON 253. Energy Markets: Theory and Evidence from Latin America. 2-5 Units.**

What theory and practice around the world and in Latin America tell us about the design of energy markets; how distributional impacts and enforcement capabilities affect their implementation. Topics include: pricing in wholesale electricity markets, role of long-term contracting, auction design, evidence from spot and contract markets; design of markets for pollution permits, alternative environmental policy instruments, evidence from existing and proposed carbon markets and others, imperfect information, adverse selection in opt-in provisions, effect on innovation, interaction between markets, market power. Advanced undergraduates and masters students are welcome to enroll.

**ECON 255. Economics of Communication. 2-5 Units.**

This course will cover theoretical and empirical work on the provision of information in markets. Likely topics include: theory of strategic communication; persuasion; advertising and brands; financial analysis and disclosure; political communication; text mining and automated content analysis; and the political economy and industrial organization of media. Prerequisites: Econ 202 and 210 (or equivalent).

**ECON 257. Industrial Organization 1. 2-5 Units.**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

**ECON 258. Industrial Organization IIA. 2-5 Units.**

Topics may include theoretical and empirical analysis of auctions, bargaining, price discrimination, advertising, brands, and markets for information, and research at the boundaries between IO and neighboring fields such as development, macro, trade, and behavioral economics.

**ECON 259. Industrial Organization II B. 2-5 Units.**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; economics of antitrust and regulation, with focus on energy and environmental economics; the role of information asymmetries in markets: adverse selection and moral hazard, with focus on insurance and credit markets.

**ECON 25N. Public Policy and Personal Finance. 3 Units.**

The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.

Same as: PUBLPOL 55N

**ECON 260. Industrial Organization III. 2-5 Units.**

Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: ECON 257, ECON 258.

**ECON 265. International Economics. 2-5 Units.**

International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

**ECON 266. International Trade I. 2-5 Units.**

This course covers an introduction to models of international trade and economic geography from both a theoretical and an empirical perspective. Prerequisites: Econ 202, 203, 204, 210, 211, 212, 270, 271, 272.

**ECON 267. International Trade II. 2-5 Units.**

The first part of this course covers the factor-proportions theory of international trade. The second and much larger part of the course covers commercial policy, with an emphasis on the economics of trade agreements.

**ECON 268. International Finance and Exchange Rates. 2-5 Units.**

Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries.

**ECON 269. International Finance and Exchange Rates II. 2-5 Units.**

This is the second half of the international finance sequence. Part I: intertemporal approach to the current account, international real business cycle models, international risk-sharing, gains from financial integration, global imbalances, and exchange rate determination. Part 2: open-economy monetary models and currency unions. Part 3: international finance policy, capital controls and foreign exchange interventions. Part 4: sovereign debt. . Prerequisites: Econ 210, 211, 212 and 268.

**ECON 270. Intermediate Econometrics I. 2-5 Units.**

Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

**ECON 271. Intermediate Econometrics II. 2-5 Units.**

Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis, nonlinear estimation. Limited enrollment. Prerequisite: 270.

**ECON 272. Intermediate Econometrics III. 2-5 Units.**

Continuation of 271. Analysis of randomized experiments, identification and estimation of treatment effects, instrumental variables, nonlinear models, generalized methods of moments. Prerequisites: Econ 271 or permission of instructor.

**ECON 273. Advanced Econometrics I. 2-5 Units.**

Possible topics: parametric asymptotic theory. M and Z estimators. General large sample results for maximum likelihood; nonlinear least squares; and nonlinear instrumental variables estimators including the generalized method of moments estimator under general conditions. Model selection test. Consistent model selection criteria. Nonnested hypothesis testing. Markov chain Monte Carlo methods. Nonparametric and semiparametric methods. Quantile Regression methods.

**ECON 274. Advanced Econometrics II. 2-5 Units.**

(Formerly 273B); Possible topics: nonparametric density estimation and regression analysis; sieve approximation; contiguity; convergence of experiments; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality; multiple hypothesis testing.

**ECON 276. Computational Econometrics. 2-5 Units.**

Theory and computational methods necessary to implement state-of-the-art econometric methods used in theory-based empirical work. Topics covered include: computation of nonlinear M-estimators subject to equality and inequality constraints, simulation estimators, indirect inference, Markov Chain Monte Carlo methods, resampling (bootstrap and sub-sampling) methods for estimation and inference, dynamic discrete choice models, continuous and discrete mixture models and estimation and inference for partially identified models.

**ECON 277. Behavioral and Experimental Economics III. 2-5 Units.**

Economics 277 is a course for graduate students in the Economics department writing dissertations with behavioral or experimental components. Economics 277 is part of a three course sequence (along with Econ 278 & 279), which has two main objectives: 1) examining theories and evidence related to the psychology of economic decision making; 2) introducing methods of experimental economics, and exploring major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objectives of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

**ECON 278. Behavioral and Experimental Economics I. 2-5 Units.**

This is the first half of a three course sequence (along with Econ 277 & 279) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

**ECON 279. Behavioral and Experimental Economics II. 2-5 Units.**

This is part of a three course sequence (along with Econ 277 & 278) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

**ECON 27N. The Economics of Gender. 3 Units.**

This seminar draws on empirical and theoretical insights from multiple fields within economics. The objective is to understand the role of gender in economic decision making, and the changing significance, timing and meaning of work, career and family. We will focus on recent work in experimental economics, and empirical work in the developed world. But at times we will widen the perspective to developing countries and consider historical changes as well.

**ECON 282. Contracts, Information, and Incentives. 2-5 Units.**

Basic theories and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, design of mechanisms and markets with limited communication, long-term relationships under commitment and under renegotiation, property rights and theories of the firm.

**ECON 283. Theory and Practice of Auction Market Design. 2-5 Units.**

This class will focus on several topics in auction market design and related areas. It is an advanced course, intended as a sequel to the more basic market/mechanism/auction design courses offered at the Economics department and the GSB. Students are expected to be familiar with the material in those courses. We will briefly review some basics of auction theory, but the main goal of the class is to bring students closer to doing independent research and introduce them to recent contributions and currently active research areas. Specific topics may include: multi-item and combinatorial auctions; robust auction design; applied auction design with practical applications; matching and pricing on the Internet; radio spectrum auctions; securities markets; commodities; complex procurements. Grading based on presentation, assignment, and term paper.

**ECON 285. Matching and Market Design. 2-5 Units.**

This is an introduction to market design, intended mainly for second year PhD students in economics (but also open to other graduates students from around the university and to undergrads who have taken undergrad market design). It will emphasize the combined use of economic theory, experiments and empirical analysis to analyze and engineer market rules and institutions. In this first quarter we will pay particular attention to matching markets, which are those in which price doesn't do all of the work, and which include some kind of application or selection process. In recent years market designers have participated in the design and implementation of a number of marketplaces, and the course will emphasize the relation between theory and practice, for example in the design of labor market clearinghouses for American doctors, and school choice programs in a growing number of American cities (including New York and Boston), and the allocation of organs for transplantation. Various forms of market failure will also be discussed. Assignment: One final paper. The objective of the final paper is to study an existing market or an environment with a potential role for a market, describe the relevant market design questions, and evaluate how the current market design works and/or propose improvements on the current design.

**ECON 286. Game Theory and Economic Applications. 2-5 Units.**

Aims to provide a solid basis in game-theoretic tools and concepts, both for theorists and for students focusing in other fields. Technical material will include solution concepts and refinements, potential games, supermodular games, repeated games, reputation, and bargaining models. The class will also address some foundational issues, such as epistemic and evolutionary modeling. Prerequisite: 203 or consent of instructor.

**ECON 288. Computational Economics. 2-5 Units.**

This course studies computational approaches for solving dynamic economic models. First, it provides background in numerical analysis (approximation, integration, optimization, error analysis), and describes local and global numerical methods (perturbation, Smolyak, endogenous grid, stochastic simulation, cluster grid methods). Then, it shows applications from recent economic literature representing challenges to computational methods (new Keynesian models with a zero lower bound, default risk models, Krusell-Smith models, international trade models, overlapping-generations models, nonstationary growth models, dynamic games). Finally, it surveys recent developments in software and hardware (Python, Julia, GPUs, parallel computing, supercomputers), as well as machine learning techniques. No prerequisites. Grading on the basis of problem sets and a final project.

**ECON 289. Advanced Topics in Game Theory and Information Economics. 2-5 Units.**

Topics course covering a variety of game theory topics with emphasis on market design, such as matching theory and auction theory. Final paper required. Prerequisites: ECON 285 or equivalent. ECON 283 recommended.

**ECON 290. Multiperson Decision Theory. 3 Units.**

Students and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.

**ECON 291. Social and Economic Networks. 2-5 Units.**

Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.

**ECON 292. Quantitative Methods for Empirical Research. 2-5 Units.**

This is an advanced course on quantitative methods for empirical research. Students are expected to have taken a course in linear models before. In this course I will discuss modern econometric methods for nonlinear models, including maximum likelihood and generalized method of moments. The emphasis will be on how these methods are used in sophisticated empirical work in social sciences. Special topics include discrete choice models and methods for estimating treatment effects.

**ECON 293. Machine Learning and Causal Inference. 3 Units.**

This course will cover statistical methods based on the machine learning literature that can be used for causal inference. In economics and the social sciences more broadly, empirical analyses typically estimate the effects of counterfactual policies, such as the effect of implementing a government policy, changing a price, showing advertisements, or introducing new products. Recent advances in supervised and unsupervised machine learning provide systematic approaches to model selection and prediction, methods that are particularly well suited to datasets with many observations and/or many covariates. This course will review when and how machine learning methods can be used for causal inference, and it will also review recent modifications and extensions to standard methods to adapt them to causal inference and provide statistical theory for hypothesis testing. We consider the estimation of average treatment effects as well as personalized policies. Applications to the evaluation of large-scale experiments, including online A/B tests and experiments on networks, will receive special attention.

**ECON 299. Practical Training. 1-10 Unit.**

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

**ECON 300. Third-Year Seminar. 1-10 Unit.**

Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.

**ECON 310. Macroeconomic Workshop. 1-10 Unit.**

.

**ECON 315. Development Workshop. 1-10 Unit.**

.

**ECON 325. Economic History Workshop. 1-10 Unit.**

May be repeated for credit.

**ECON 335. Experimental/Behavioral Seminar. 1-10 Unit.**

Field seminar in experimental and behavioral economics.

**ECON 341. Public Economics and Environmental Economics Seminar. 1-10 Unit.**

Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies; their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation. Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: ECON 241 or consent of instructor.

**ECON 345. Labor Economics Seminar. 1-10 Unit.****ECON 354. Law and Economics Seminar. 2-6 Units.**

This seminar will examine current research by lawyers and economists on a variety of topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Cross-listed with LAW 344.

**ECON 355. Industrial Organization Workshop. 1-10 Unit.**

Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research paper, make a formal presentation, and lead a structured discussion.

**ECON 365. International Trade Workshop. 1-10 Unit.****ECON 370. Econometrics Workshop. 1-10 Unit.****ECON 380. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

Same as: ETHICSOC 371R, PHIL 371D, POLISCI 431L

**ECON 391. Microeconomic Theory Seminar. 1-10 Unit.****ECON 400. Ph.D. Dissertation. 1-15 Unit.**

Pre-TGR dissertation research. (Staff).

**ECON 45. Using Big Data to Solve Economic and Social Problems. 4-5 Units.**

This course will show how "big data" can be used to understand and solve some of the most important social and economic problems of our time. The course will give students an introduction to frontier research in applied economics and social science in a non-technical manner. Topics include equality of opportunity, education, income inequality, racial segregation, innovation and entrepreneurship, social networks, urban planning, health, crime, and political partisanship. In the context of these topics, the course will also provide a non-technical introduction to basic statistical methods and data analysis techniques, including regression analysis, causal inference, quasi-experimental methods, and machine learning. Optional sections will provide a more advanced treatment of these methods for interested students. Each week, the course will include a guest lecturer from a Silicon Valley firm or government agency who will discuss real-world applications of data science.

**ECON 47. Media Markets and Social Good. 5 Units.**

This class will apply tools from economics and related social sciences to study the functioning of media markets and their impact on society. The guiding question will be: when and how do media best serve the social good? Topics will include the economics of two-sided markets, media bias, polarization, social media, fake news, advertising, propaganda, effects of media on children, media and crime, and the role of media in corruption, protests and censorship. The course will give students a non-technical introduction to social science empirical methods, including regression analysis, causal inference, experimental and quasi-experimental methods, and machine learning.

**ECON 50. Economic Analysis I. 5 Units.**

Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Monopoly in partial equilibrium. Economic tools developed from multivariable calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites: Econ 1 or 1V, and Math 51 or Math 51A or CME 100 or CME 100A.

**ECON 51. Economic Analysis II. 5 Units.**

Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities and public goods, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariate calculus is used. Prerequisite: ECON 50.

**ECON 52. Economic Analysis III. 5 Units.**

Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy, and their effects on growth, employment, and inflation. Prerequisites: ECON 50.

**ECON 78N. Economic Policies of the Presidential Candidates. 3 Units.**

In nearly all polls, American voters rank the economy as one of their most important concerns. In the presidential election, much of the debate for voters will be on questions of economic policy. In this course, we will delve deeply into economic policy issues to understand options for government intervention and possible outcomes. We will combine economic analysis with political science methodology to understand efficient and implementable policy proposals. Specific areas of interest will be taxation, budget, entitlement programs, economic regulation and competition policy, trade, demography, income inequality, and monetary policy. The course will incorporate other timely and salient policy issues as they arise during the course of the campaign. Students will be expected to write a short paper and make an oral presentation to the class. A wide range of topics will be acceptable, including those directly related to campaign issues as well as other long-term economic issues facing the country.

Same as: PUBLPOL 78N

**ECON 801. TGR Project. 0 Units.**

**ECON 802. TGR Dissertation. 0 Units.**

## Education (EDUC)

**EDUC 100A. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.**

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar provides an inquiry into the culture at Stanford and one's personal values. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

**EDUC 100B. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.**

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, there will be a "speaker's tour" of the research centers in the GSE, including the John Gardner Center, YouCubed, SCANCOR, PACE, the Lemann Center, and others. In the spring, the seminar will focus on Asian Pacific Islander populations, counterstory, and Critical Race Theory. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

**EDUC 100C. EAST House Seminar: International Human Rights and Education. 1-2 Unit.**

This course examines international human rights in theory and practice. The focus is on how education may be seen as both a human rights issue as well as a tool to educate citizens about their human rights. We will discuss basic theories of human rights, investigate education as a human right, and read works that have defined it as such, including human rights documents and declarations. Students taking the class for 2 units will meet an additional hour and have the opportunity to engage with a local education and development organization working in Central America.

**EDUC 101. Introduction to Teaching and Learning. 4 Units.**

This course is designed to help undergraduates explore career interests in education; it is the core course for the Undergraduate Minor in Education, and fulfills requirements for Honors in Education. The course considers the philosophy, history, politics, professional practice and social structures of teaching in the United States. Students will read and discuss teaching theory and research, participate in learning activities and visit school teaching sites, as well as examine and analyze artifacts and models of teaching.

**EDUC 102. Examining Social Structures, Power, and Educational Access. 2-4 Units.**

Goal is to prepare Education and Youth Development fellows for their work with adolescents in the Haas Center's pre-college summer programs and to define their role in addressing educational inequities in the summer programs and beyond.

**EDUC 102I. International Education Policy Workshop. 2-4 Units.**

This is a project-based workshop. Practical introduction to issues in educational policy making, education reform, educational planning, implementation of policy interventions, and monitoring and evaluation in developing country contexts. Preference to students enrolled in ICE/IEAPA, but open to other students interested in international development or comparative public policy with instructor's consent. Attendance at first class required for enrollment.

Same as: EDUC 202I

**EDUC 103A. Tutoring: Seeing a Child through Literacy. 3-4 Units.**

Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). May be repeated for credit.

Same as: EDUC 203A

**EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.**

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: AFRICAAM 106, CSRE 103B, EDUC 337

**EDUC 104. Introduction to the Profession of Teaching. 3 Units.**

This course explores the profession of teaching through an internship in a local elementary or high school classroom. Students will observe and assist instruction for four hours per week. In class, students will read, discuss, and respond to theory and research related to teaching. The course is open to all undergraduates with an interest in the teaching profession; and it may be especially useful for students who are considering entering the profession of teaching and wish to spend time in a classroom. No prior experience in teaching is required.

**EDUC 105. How to learn Mathematics - New ideas from the science of learning. 1 Unit.**

This course will help provide the transition from high school to college learning and encourage the positive ideas and mindsets that shape productive learning. We will consider what learning theories have to tell us about mathematics learning, the nature of good teaching and the reasons for ongoing inequities in mathematics learning and participation. This seminar is for those who would like a more positive relationship with mathematics, and are interested in learning about ways to tackle education inequalities. Learning goals: First, it introduces students to theories of learning and in particular the learning of mathematics. Mathematics plays a key role in many students' learning identities and is often the cause of low self-esteem and anxiety. Research tells us that this is because mathematics in the US is taught in highly ineffective ways. Indeed there is a large gap between what we know works from research and what happens in most mathematics classrooms. This seminar will give participants an understanding of ways to relate positively to mathematics, to learn mathematics most productively and some of the learning barriers that often deny students the opportunity to engage with mathematics in productive ways. Second, the course will teach students about the inequalities that pervade the education system in the United States. We will examine the barriers to the participation of women and students of color and we will consider why social class and race are both strong predictors of mathematics achievement. It is hoped that students will leave the course with greater knowledge of why mathematics is important - to themselves and to the future of society. Course participants will be given the opportunity to take part in a mathematics camp, designed to change the pathways of middle school students, similar to this previous camp: <https://www.youcubed.org/solving-math-problem/> and to take part in the work of [youcubed.org](http://youcubed.org), if they wish.

Same as: CME 10

**EDUC 106. Interactive Media in Education. 3-5 Units.**

Workshop.

**EDUC 107. Education and Inequality: Big Data for Large-Scale Problems. 3-5 Units.**

In this course, students will use data from the Stanford Education Data Archive (SEDA) to study the patterns, causes, consequences, and remedies of educational inequality in the US. SEDA is based on 200 million test score records, administrative data, and census data from every public school, school district, and community in the US. The course will include lectures, discussion, and small group research projects using SEDA and other data.

Same as: EDUC 207, SOC 107E, SOC 205

**EDUC 110. Sociology of Education: The Social Organization of Schools. 4 Units.**

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 310, SOC 132, SOC 332

**EDUC 111. The Young Adult Novel: A Literature For and About Adolescents. 4 Units.**

For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminal program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.

**EDUC 112. Urban Education. 3-5 Units.**

(Graduate students register for EDUC 212 or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, CSRE 112X, EDUC 212, SOC 129X, SOC 229X

**EDUC 113N. Mix | Remix | Mixtape: Writing and Reading DJ Culture. 3 Units.**

This course looks at the DJ as a crucial figure, a rhetor even, who influences both US and world culture and examines the DJ's practices as writing practices. From there we ask how other kinds of writing-public, academic, creative-can be informed by DJs and DJ culture. We will study specific practices like scratching, remixing, and the mixtape as well as different approaches and spaces in which DJs have shaped culture, from disco to Hip Hop to world music, from radio DJs to party DJs to beat-juggling and turntablism.

**EDUC 114N. Growing Up Bilingual. 3 Units.**

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants. Same as: CHILATST 14N, CSRE 14N

**EDUC 115N. How to Learn Mathematics. 3 Units.**

What is going on in mathematics education in the United States? Why do so many people hate and fear math? What contributes to the high levels of innumeracy in the general population? Why do girls and women opt out of math when they get a chance? In this seminar we will consider seminal research on math learning in K-12 classrooms, including a focus on equity. We will spend time investigating cases of teaching and learning, through watching videos and visiting schools. This seminar is for those who are interested in education, and who would like to learn about ways to help students (and maybe yourselves?) learn and enjoy mathematics. If you have had bad math experiences and would like to understand them and put them behind you, this seminar will be particularly good for you. The final project for this class will involve developing a case of one or more math learners, investigating their journeys in the world of math.

**EDUC 116N. Howard Zinn and the Quest for Historical Truth. 3 Units.**

With more than two million copies in print, Howard Zinn's *A People's History* is a cultural icon. We will use Zinn's book to probe how we determine what was true in the past. *A People's History* will be our point of departure, but our journey will visit a variety of historical trouble spots: debates about whether the US was founded as a Christian nation, Holocaust denial, and the "Birther" controversy of President Obama.

Same as: HISTORY 116N

**EDUC 117. Research and Policy on Postsecondary Access. 3 Units.**

The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).

Same as: EDUC 417

**EDUC 117N. Losing My Religion: Secularism and Spirituality in American Lives. 2-4 Units.**

In this seminar you will explore theory and practice, sociological data, spiritual writing, and case studies in an effort to gain a more nuanced understanding about how religion, spirituality, and secularism attempt to make legible the constellation of concerns, commitments, and behaviors that bridge the moral and the personal, the communal and the national, the sacred, the profane, and the rational. Together we will cultivate critical perspectives on practices and politics, beliefs and belonging that we typically take for granted.

Same as: AMSTUD 117N, RELIGST 13N

**EDUC 118S. Designing Your Stanford. 2 Units.**

DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to Design Thinking. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Admission to be confirmed by email to Axxess registered students prior to first class session. DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to design mindsets and practices. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Additional course information at <http://www.designingyourstanford.org>. Same as: ME 104S

**EDUC 119S. History of American Indian Education. 5 Units.**

How the federal government placed education at the center of its Indian policy in second half of 19th century, subjecting Native Americans to programs designed to erase native cultures and American Indian responses to those programs. Topics include traditional Indian education, role of religious groups, Meriam Report, Navajo-Hopi Rehabilitation Act, Johnson-O'Malley Act, and public schools. Same as: EDUC 429S, NATIVEAM 119S

**EDUC 11SC. Work and Family. 2 Units.**

Examination into the forces behind the rise in women's paid work and subsequent changes in the workplace and in families. Topics include gendered division of labor, decisions about marriage and childrearing, economic issues, employers' role in structuring work and family, and public policy issues such as anti-discrimination laws, divorce laws, and subsidized child care.

**EDUC 120. Sociology of Science. 3-4 Units.**

The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students. Same as: EDUC 320, SOC 330

**EDUC 120C. Education and Society. 4-5 Units.**

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling. Same as: EDUC 220C, SOC 130, SOC 230

**EDUC 122Q. Democracy in Crisis: Learning from the Past. 3 Units.**

This Sophomore Seminar will focus on U.S. democracy and will use a series of case studies of major events in our national history to explore what happened and why to American democracy at key pressure points. This historical exploration should shed light on how the current challenges facing American democracy might best be handled. (Cardinal Course certified by the Haas Center). Same as: HISTORY 52Q, POLISCI 20Q

**EDUC 123. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Same as: AFRICAAM 130, CSRE 130, EDUC 322

**EDUC 124. Collaborative Design and Research of Technology-integrated Curriculum. 3-4 Units.**

The course introduces participatory design models for the development and research of educational materials through a studio-based, partnership driven, technology-integrated curriculum project. The special topic taken up in 2018 will be concussion education for youth. This is a studio experience working collaboratively with students, parents, and athletic coaches to design, field test, and make recommendations about learning activities and technology use for a complex curriculum that will engage immersive 360 3D technologies and social media. We will partner with TeachAids, an international nonprofit, on the curriculum development. Cardinal Course certified by the Haas Center.

**EDUC 126A. Introduction to Public Service Leadership. 1-2 Unit.**

Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.

**EDUC 126B. Public Service Leadership Program Practicum. 1 Unit.**

This course is for students in the Public Service Leadership Program offered through the Haas Center for Public Service. The PSLP Practicum provides an opportunity for PSLP students to reflect on their own leadership experiences and to learn from each other's leadership experiences while continuing to build a community of peer service leaders. The PSLP Practicum will meet every other week throughout the quarter.

**EDUC 12SC. Hip Hop as a Universal Language. 2 Units.**

This seminar-cipher considers the prospect of Hip Hop as a Universal Language. Hip Hop Culture has captured the minds of youth "all around the world, from Japan to Amsterdam" (like the homie Kurupt says), shaping youth identities, styles, attitudes, languages, fashions, and both physical and political stances. The field of global Hip Hop studies has emerged as scholars around the world grapple with what is arguably the most profound cultural, musical, and linguistic youth movement of the early 21st century. Participants in this seminar-cipher will be engaged in critical discussions around a particular constellation of concerns: Hip Hop Cultures, youth identities, the politics of language, race, and ethnicity, and the simultaneous processes of globalization and localization. Through the examination of various texts (scholarly readings, documentary films, guest speakers and artists), we span the Global Hip Hop Nation through scenes as diverse as Hong Kong's urban center, Germany's Mannheim inner-city district of Weststadt, the Brazilian favelas, the streets of Lagos and Dar es Salaam, and the hoods of the San Francisco Bay Area to explore Hip Hop's global linguistic flows.

**EDUC 130. Introduction to Counseling. 3 Units.**

The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full efforts within reasonable time limits to improve their competence.

**EDUC 131. Mediation for Dispute Resolution. 3 Units.**

Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

Same as: PSYCH 152

**EDUC 134. Career and Personal Counseling. 3 Units.**

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 234, PSYCH 192

**EDUC 135. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 335, HRP 235, HUMBIO 26, MED 235

**EDUC 136. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.**

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 306D, SOC 231

**EDUC 136B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, CSRE 126B, EDUC 236B, PUBLPOL 126B

**EDUC 139. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 239, ME 139, ME 231

**EDUC 13SC. Language, Identity, and the Power of Public Discourse. 2 Units.**

Have you ever engaged in a conversation with someone who sounds different than you expect? This course explores instances like those that highlight the interaction between language and identity and its implications for learning. The theme of language and identity emerges as significant because of the subtle yet powerful impact it has on our cultural interactions. We have an inherent expectation of how we expect people to communicate. Yet, do these expectations interfere with teaching and learning practices? Many individuals take seminars and classes that focus on teaching professional modes of communication and discourse. This course will offer a detailed examination of scholarship that investigates the power of the subtle messages embedded in language. In addition, to gain a sense of the power of these interactions in practice, we will engage in the following research activities: (a) Participants will engage in school site visits to examine these interactions in practice; (b) Participants will engage in critical interviews of broadcasters at a local television station to discuss the role of language and identity in their presentation; and (c) We will visit a recording studio to discuss the role of language and identity with local hip-hop producers and artists.

**EDUC 140. Honors Research. 1-5 Unit.**

Provides opportunity for research in pursuit of senior honors theses.

**EDUC 141. Counterstory and Narrative Inquiry in Literature and Education. 3 Units.**

Counterstory is a method developed in critical legal studies that emerges out of the broad "narrative turn" in the humanities and social science. This course explores the value of this turn, especially for marginalized communities, and the use of counterstory as analysis, critique, and self-expression. Using an interdisciplinary approach, we examine counterstory as it has developed in critical theory, critical pedagogy, and critical race theory literatures, and explore it as a framework for liberation, cultural work, and spiritual exploration.

Same as: CSRE 141E, EDUC 341, LIFE 124

**EDUC 142. Foundational Course in Testing. 2-3 Units.**

Examines basic ideas in standardized testing and the implications and consequences of testing (e.g., fairness, accountability, and the testing of diverse populations) from a social, critical perspective.

**EDUC 145. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: CSRE 243, EDUC 243

**EDUC 148. Critical Perspectives on Teaching and Tutoring English Language Learners. 1-3 Unit.**

Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings. May be repeat for credit.

**EDUC 149. Theory and Issues in the Study of Bilingualism. 3-5 Units.**

Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings.

Same as: EDUC 249

**EDUC 14SC. Public Education and Schooling: The Great Equalizer or the Fiercely Competitive Field?. 2 Units.**

Everyone seems to have an opinion about the American educational landscape. After all, we all have attended schools of various sorts, which help to shape our understandings about education. Yet, the political, social, and cultural terrains are ever-changing, especially within public education. This seminar will focus on some of the main current issues in U.S. urban schools. This course will take an interdisciplinary approach to examining major issues facing public schools today and to discussing effective policies and practices. There are two main components to the seminar: first, students will engage in a review of current educational research and policy; and second, they will conduct some service learning activity in a local, low-income public high school. In small groups, students will co-design projects that both draw on ideas generated from their readings and discussions and involve local high school students and educators. Through various lenses, we will survey the landscape of urban education in the United States and explore myriad theories or explanations for existing conditions, crises, and policies. Students will read a number of works that focus on the multiple environs of the educational system; the economy, the political context, the demands of accountability and standardization, residential patterns, and social and cultural relationships. Such explanations and issues may transcend U.S. boundaries and could be applicable in multiple contemporary urban education settings.

**EDUC 151. The Future of Information. 4 Units.**

As information has a fascinating history (see HISTORY 5A), so it possesses a promising if concerning future. Through lecture, demonstration, and in-class web-work, this course will provide students with advanced strategies in (a) identifying sources and tools for advancing the quest for information; (b) assessing elements of trust, authority, and chicanery in the provision of information; (c) recognizing the economic and legal structures shaping information sources, services, and rights; and (d) discovering who is behind what information. With a focus on the info-worlds of journalism, learning, governance, students will acquire and practice the forensic skills and web savvy of fact-checkers and investigative reporters, activists and scholars. Here's a class set to determine the future course of information.

Same as: STS 151

**EDUC 155. First Year Reflections Seminar. 1 Unit.**

Restricted to first-year undergraduates; limited enrollment. There are two options for how to participate. You can either enroll in three class weekday sessions weeks 4, 5 & 6 or one weekend section. These times provide a structured time for students to explore their identities, values, and the kind of lives they want to lead. Exercises and discussions led by faculty, staff, and upper-class student co-facilitators. Tuesday sessions will occur on 1/30, 2/6 & 2/13; Wednesday sessions will occur on 1/31, 2/7 & 2/14; Thursday sessions will occur on 2/1, 2/8 & 2/15. Weekend sections are on Saturday, 2/3 OR Sunday, 2/11 (Weekend sessions are longer and students only participate in one).

**EDUC 15SC. Remix | Reading and Writing DJ Culture. 2 Units.**

"last night a DJ saved my life" –Indeep (1982 song) In a moment that has been widely described being defined by remix culture, what might we learn from the traditions and practices of the artists who gave us the remix? This course looks at the DJ as an crucial figure, a rhetor even, who influences both US and world culture and examines the DJ's practices as writing practices. From there we ask how other kinds of writing; public, academic, creative, can be informed by DJs and DJ culture. We will study specific practices like scratching, remixing, and the mixtape as well as different approaches and spaces in which DJs have shaped culture, from disco to Hip Hop to world music, from radio DJs to party DJs to beat-juggling and turntablism. In addition to our readings, viewings and work in class, participants in the course will be able to participate in a DJ workshop introducing basic techniques like mixing, and will attend at least 1 live DJ set in San Francisco or Oakland. The course will make turntables and a DJ controller available for students to work on mixes and DJ techniques live, in class.

**EDUC 165. History of Higher Education in the U.S.. 3-5 Units.**

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 265, HISTORY 158C

**EDUC 170. Preparation for Independent Public Service Projects. 1 Unit.**

Open only to recipients of the Haas Summer Fellowship, which offers students the opportunity to initiate and carry out an innovative service project in collaboration with a community partner. Goal is to expand upon the work fellows did during the application process with respect to the feasibility and sustainability of their field projects.

**EDUC 171. Preschool Counts: Engaging Young Children in Math. 1-3 Unit.**

Restricted to students who participate in a service learning program focused on early math learning. Training for activities in preschool classrooms. Focus is on the teaching of math to young children, but also includes background on issues related to young children's cognitive, language, and social development; classroom management; cultural diversity; and early childhood education programs. May be repeated for credit.

**EDUC 173. Gender and Higher Education: National and International Perspectives. 4 Units.**

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 273, FEMST 173, SOC 173, SOC 273

**EDUC 177A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, CSRE 177E, HUMBIO 29A

**EDUC 177B. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177B, CSRE 177F

**EDUC 177C. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177C, CSRE 177G

**EDUC 178. Latino Families, Languages, and Schools. 3-5 Units.**

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling.

Same as: EDUC 270

**EDUC 180. Directed Reading in Education. 1-15 Unit.**

For undergraduates and master's degree students. (All Areas).

**EDUC 180S. Pre-field Course for Alternative Spring Break. 1 Unit.**

Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more inform.

**EDUC 181. Multicultural Issues in Higher Education. 4 Units.**

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

Same as: CSRE 181, EDUC 381

**EDUC 183. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.**

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.

Same as: CHILATST 183X, EDUC 257

**EDUC 185. Master's Thesis. 1-15 Unit.**

(all areas).

**EDUC 190. Directed Research in Education. 1-15 Unit.**

For undergraduates and master's students. May be repeated for credit. (all areas).

**EDUC 192A. Interpersonal Learning & Leadership: An Introduction to the RA Role. 2 Units.**

Preparing students for roles as Resident and Community Assistants, "Intelligent Leadership" explores research on college student development, leadership and the complex dynamics of our changing society both within and outside the college environment. Participants will engage in course work that builds skills relevant to their positions and allow students to implement these skills in a real world environment. Through reflection, self-examination and engagement in interpersonal dynamics and analysis, students will examine how their peer group develops while at the university.

**EDUC 192B. Interpersonal Learning & Leadership - Row Staff Class. 2 Units.**

"Interpersonal Learning & Leadership - Row Staff Class" explores research on leadership and the complex dynamics of our changing society. Participants will engage in course work intended to build skills relevant to being on a Row Staff team. Students will practice self reflection, risk taking, facilitating, decision-making and group leadership. Students will develop strategies to build community and facilitate challenging conversations while creating a safe environment for their peers to do the same.

**EDUC 192C. Interpersonal Learning and Leadership: An introduction to the RA role while away from campus. 2 Units.**

"Interpersonal Learning & Leadership" explores research on leadership and the complex dynamics of our changing society. Participants will engage in course work intended to build skills relevant to the Resident Assistant/College Assistant position. Students will practice listening, question asking, self-reflection, risk taking, facilitating, conflict mediating and decision-making. They will explore how groups of people can come together for intellectual and interpersonal learning and growth within a complex society. Students will develop strategies to build community and facilitate challenging conversations while creating a safe environment for their peers to do the same.

**EDUC 192D. Interpersonal Learning and Leadership: Working with Ethnically Diverse Communities. 2 Units.**

"Interpersonal Learning & Leadership" explores research on leadership and the complex dynamics of our changing society. Participants will engage in course work intended to build skills relevant to the Ethnic Theme Associate position. Students will practice listening, question asking, self reflection, risk taking, facilitating, conflict mediating, decision-making and group leadership. They will explore how groups of people can come together for intellectual and interpersonal learning and growth within a complex society. Students will develop strategies to build community and facilitate challenging conversations while creating a safe environment for their peers to do the same.

**EDUC 192E. Interpersonal Learning and Leadership: Fraternity and Sorority life. 2 Units.**

This class will engage fraternity and sorority leadership in a meaningful discussion around the purpose and relevancy of the college fraternity and sorority. Participants will engage in coursework intended to build skills relevant to being a peer elected leader within their chapter. Specifically, students will research, discuss, and present on current trends impacting the contemporary fraternity and sorority community. Students will also practice self-reflection, decision-making, facilitating difficult conversations, and group leadership. Participants will gain a basic understanding of the challenges within the fraternity and sorority community and gain the skills necessary to analyze and approach these challenges successfully. As an outcome of this course, students will be able to look critically at Greek-letter organizations and their respective communities and will become better skilled as leaders to address problems and effect change as necessary.

**EDUC 193A. Listen Up! Core Peer Counseling Skills. 2 Units.**

Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings. Sections will be assigned during the first week of the quarter.

**EDUC 193B. Peer Counseling in the Chicano/Latino Community. 1 Unit.**

Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.  
Same as: CHILATST 193B

**EDUC 193C. Psychological Well-Being On Campus: Perspectives Of The Black Diaspora. 1 Unit.**

Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.

**EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives. 1 Unit.**

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.  
Same as: ASNAMST 193F

**EDUC 193G. Psychological Well-Being on Campus: A Focus on Gender and Sexual Identities. 1 Unit.**

This course examines mental health and psychological well-being across the spectrum of gender and sexual identities. It addresses the unique challenges that face LGBTQ-identified students, and provides tools for supporting peers as they navigate these challenges. Discussion topics include current conceptualizations of gender identity and sexual orientation, including sexual and gender fluidity; the intersection of queer identities with multiple identities such as ethnic/racial identify and faith/spirituality; unpacking stereotypes; queer relationships and sexuality, coming out and disclosure, and mental health issues.  
Same as: FEMGEN 193G

**EDUC 193N. Peer Counseling in the Native American Community. 1 Unit.**

Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.

**EDUC 193P. Peer Counseling at the Bridge. 1 Unit.**

Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.

**EDUC 193S. Peer Counseling on Comprehensive Sexual Health. 1 Unit.**

Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).

**EDUC 194A. Frosh 101: Leader Training. 1-2 Unit.**

This course will prepare students to lead Frosh 101, a discussion style course designed to help first-year students with their transition to Stanford's dynamic campus. This course will expose students to inclusive teaching practices and research on the impact mental health, diversity and inclusion and sense of belonging have on the experiences of undergraduates. This course is the first of two courses that Frosh 101 leaders will take.

**EDUC 197. Gender and Education in Global and Comparative Perspectives. 4 Units.**

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. As class meets just nine times, attendance at the first class meeting is required and no more than one absence is allowed in order to pass.

Same as: FEMGEN 297, SOC 134

**EDUC 199A. Undergraduate Honors Seminar. 3 Units.**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

**EDUC 199B. Undergraduate Honors Seminar. 1 Unit.**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

**EDUC 199C. Undergraduate Honors Seminar. 1 Unit.**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

**EDUC 200A. Introduction to Data Analysis and Interpretation. 4 Units.**

Primarily for master's students in the School of Education. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, descriptive statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression. All offerings of this course (whether meeting on Mon & Weds or Tues & Thurs) will be taught identically.

**EDUC 200B. Introduction to Qualitative Research Methods. 4 Units.**

(Formerly EDUC 151.) Primarily for master's students: An introduction to the core concepts and methods of qualitative research. Through a variety of hands-on learning activities, readings, field experiences, class lectures, and discussions, students will explore the processes and products of qualitative inquiry. This is a graduate level course. No undergraduates may enroll. Priority will be given to GSE students, and final enrollment depends on instructor approval after the first day of class.

**EDUC 201. History of Education in the United States. 3-5 Units.**

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: AMSTUD 201, HISTORY 258B

**EDUC 202. Introduction to Comparative and International Education. 4 Units.**

Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena.

**EDUC 202I. International Education Policy Workshop. 2-4 Units.**

This is a project-based workshop. Practical introduction to issues in educational policy making, education reform, educational planning, implementation of policy interventions, and monitoring and evaluation in developing country contexts. Preference to students enrolled in ICE/IEAPA, but open to other students interested in international development or comparative public policy with instructor's consent. Attendance at first class required for enrollment.

Same as: EDUC 102I

**EDUC 203. Using International Test Results in Educational Research. 4 Units.**

The course will analyze the origin and rationales given for various international tests, including FIMS, SIMS, TIMSS, PISA, the UNESCO tests in Latin America and Africa, and how they have been used in research and educational policy. The readings will cover the critiques leveled at such tests, the pros and cons about each type of test, the advantages and limitations of using international test data for policy research. The class will probably also do group projects utilizing data from the tests so students can familiarize themselves directly with the data.

**EDUC 203A. Tutoring: Seeing a Child through Literacy. 3-4 Units.**

Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). May be repeated for credit.

Same as: EDUC 103A

**EDUC 204. Introduction to Philosophy of Education. 3 Units.**

How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required.

Same as: PHIL 231

**EDUC 205. Biosocial Medicine: The Social, Psychological, and Biological Determinants of Behavior and Wellbeing. 2-3 Units.**

Explores how social forces, psychological influences, and biological systems combine to affect human behavior in early childhood, in the educational experience, and throughout the life course. Examines how behaviors are linked to well-being. Uses a flipped classroom model, in which a series of lectures are available for students to view on-line before class. In-class time then focuses on case studies from published research. Undergraduates enroll for 3 units. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: HUMBIO 65, SOMGEN 215

**EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction. 1-3 Unit.**

Required for M.A. students in ICE and IEPA. Orientation to the M.A. program and research project; exploration of resources for study and research.

**EDUC 206B. Applied Research Methods in International and Comparative Education II: Master's Paper Proposal. 1-3 Unit.**

Required for M.A. students in ICE and IEPA. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph.

**EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis. 1-3 Unit.**

Required for M.A. students in ICE and IEPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph.

**EDUC 206D. Applied Research Methods in International and Comparative Education IV: Master's Paper Workshop. 3 Units.**

Conclusion of the M.A. program in ICE and IEPA; required of M.A. students. Reviews of students' research in preparation for their MA paper.

**EDUC 207. Education and Inequality: Big Data for Large-Scale Problems. 3-5 Units.**

In this course, students will use data from the Stanford Education Data Archive (SEDA) to study the patterns, causes, consequences, and remedies of educational inequality in the US. SEDA is based on 200 million test score records, administrative data, and census data from every public school, school district, and community in the US. The course will include lectures, discussion, and small group research projects using SEDA and other data.

Same as: EDUC 107, SOC 107E, SOC 205

**EDUC 208B. Curriculum Construction. 3-4 Units.**

The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. Service Learning Course (certified by Haas Center).

**EDUC 209A. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.**

This is a required course for all POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209A is focused on orienting students to the academic and extra-curricular aspects of the experience as quickly as possible, while helping them coalesce as a group and learn how to leverage each other's professional knowledge. Another goal is to help student define their graduate degree goals, so they can plan their year in a very intentional manner that will result in a project or experiences they can highlight during the required Spring quarter POLS Project Forum.

**EDUC 209B. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.**

This is a required course for all POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209B focuses on building career skills and exposing students to a range of education research, policy, and practice and begins helping students conceptualize and frame their Spring POLS Project.

**EDUC 209C. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.**

This is a required course for POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209C focuses on developing the POLS Project for the Spring Forum while continuing to develop career skills and expose students to a range of education research, policy, and practice.

**EDUC 210. Policy, Organization, and Leadership Studies Internship Workshop. 1-3 Unit.**

Forum for POLS students to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. Fall Quarter is focused on understanding the intern's role within the larger organization. Winter Quarter is outward looking with a focus on understanding the broader fields the students' organizations reside within. Spring Quarter focus is on students learning from and being prepared to teach others.

**EDUC 211. Beyond Bits and Atoms - Lab. 1-3 Unit.**

This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad. Interested students should complete the application at <https://web.stanford.edu/class/educ211> by January 5, and come to the first class at 9am in CERAS 101. Same as: CS 402L

**EDUC 212. Urban Education. 3-5 Units.**

(Graduate students register for EDUC 212 or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. Same as: AFRICAAM 112, CSRE 112X, EDUC 112, SOC 129X, SOC 229X

**EDUC 213. Introduction to Teaching. 3-4 Units.**

Key concepts in teaching and learning; teacher content knowledge and pedagogical content knowledge; student prior knowledge and preconceptions; cognition and metacognition; classroom culture, motivation, and management; teaching diverse populations; comparison of teaching models; analysis of teaching; standards, accountability, and assessment of learning; assessing teaching quality; online learning and teaching.

**EDUC 214. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit. Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, NATIVEAM 134

**EDUC 215. LDT Internship Workshop. 1-3 Unit.**

The required internship is a cornerstone of the LDT program. This course will provide students an opportunity to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. It will allow the program director to monitor the quality of the experience and provide timely advice and support as needed for an optimal learning experience. The course will meet several times each quarter, adjacent to LDT seminar (Fridays, 12-1). An internship agreement will be required at the beginning of the course signed by the faculty advisor), as well as a reflection paper at the end of the course. Students will take the course for 1 unit, unless they request additional units for unpaid internship hours.

**EDUC 216. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.**

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, AMSTUD 216, CSRE 216X, HISTORY 255E

**EDUC 217. Free Speech, Academic Freedom, and Democracy. 3 Units.**

The course examines connected ideas of free speech, academic freedom, and democratic legitimacy that are still widely shared by many of us but have been subject to skeptical pressures both outside and inside the academy in recent years. The course explores the principled basis of these ideas, how well they might (or might not) be defended against skeptical challenge, and how they might be applied in particular controversies about the rights of students, instructors, and researchers. Same as: ETHICSOC 217X, PHIL 278C

**EDUC 218. Topics in Cognition and Learning: Technology and Multitasking. 3 Units.**

In our new media ecology, has affinity for social media and multitasking become addictive? Detrimental to learning and well-being? What can we learn from studies in the developmental cognitive sciences and cognitive neurosciences of reward, attention, memory & learning, motivation, stress, and self-regulation for tackling the behavioral design problems we face in crafting better socio-technical systems? This seminar course is designed to engage students in recent advances in this rapidly growing research area via discussions of both historical and late-breaking findings in the literature. By drawing on a breadth of studies ranging from cognitive development, cognitive neuroscience, and educational/training studies, students will gain an appreciation for specific ways interdisciplinary approaches can add value to specific programs of research.

**EDUC 219E. The Creative Arts in Elementary Classrooms. 2 Units.**

For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.

**EDUC 220A. Introduction to the Economics of Education. 4 Units.**

The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit.

**EDUC 220B. Introduction to the Politics of Education. 4 Units.**

(Same as GSBGEN 349.) The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA).

**EDUC 220C. Education and Society. 4-5 Units.**

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 120C, SOC 130, SOC 230

**EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations. 3-5 Units.**

Strongly recommended for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. This course is strongly recommended for POLS students pursuing K-12 leadership.

Same as: HISTORY 258E

**EDUC 220Y. Introduction to the Economics of Education: Economics Section. 1-2 Unit.**

For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A.

**EDUC 221A. Policy Analysis in Education. 4-5 Units.**

Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor.

**EDUC 222. Resource Allocation in Education. 4-5 Units.**

Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions.

**EDUC 223. Language Issues in Educational Research and Practice. 2 Units.**

Provides the conceptual foundation for reasoning about language and linguistic groups as critical to making sound decisions in educational research and practice in a global economy and in multilingual societies.

**EDUC 226. Curating Experience: Representation in and beyond Museums. 2-4 Units.**

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience. (This course must be taken for a minimum of 3 units to satisfy a Ways requirement.).

Same as: AMSTUD 226X, CSRE 226X

**EDUC 228E. Becoming Literate in School I. 2 Units.**

First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates STEP Elementary Teacher program. Instructional methods, formats, and materials.

**EDUC 228F. Becoming Literate in School II. 2 Units.**

Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary program. Theories for guiding instruction and curricular choices.

**EDUC 228G. Becoming Literate in School III. 2 Units.**

Third in a three-course required sequence of reading and language arts theory and methodology for candidates in STEP Elementary Teacher program. Theories for guiding instruction and curricular choices.

**EDUC 228H. Literacy, History, and Social Science. 1 Unit.**

How elementary school teachers can teach history and social science within a literacy framework. Topics include: historical thinking, reading, and writing; current research; applying nonfiction reading and writing strategies to historical texts; using primary sources with elementary students; adapting instruction to meet student needs; state standards; evaluating curriculum; assessing student knowledge; developing history and social science units; and embedding history and social science into the general literacy curriculum.

**EDUC 229A. Learning Design and Technology Seminar. 1-2 Unit.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology.

Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 229B. Learning Design and Technology Seminar. 1-2 Unit.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology.

Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 229C. Learning Design and Technology Seminar. 1-2 Unit.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology.

Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 229D. Learning Design and Technology Seminar. 2-5 Units.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology.

Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 231. Learning Religion: How People Acquire Religious Commitments. 4 Units.**

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education. May be repeat for credit.

Same as: AMSTUD 231X, JEWISHST 291X, RELIGST 231X

**EDUC 232. Culture, Learning, and Poverty. 2-3 Units.**

This course examines the categories and methods used to analyze and explain educational inequalities in the United States from 1950 to present. Approaches to theories of school failure and methods of intervention are distinguished by their ideas on the play of learning, language, cognition, culture, and social class in human development. Particular attention is given to the Culture of Poverty controversies of the 1960s and their recent emergence.

**EDUC 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.**

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: AFRICAAM 233A, CSRE 233A

**EDUC 233B. Adolescent Development and Mentoring in the Urban Context. 3 Units.**

Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers' motivations; attributions about poverty, and the problem of prejudice.

**EDUC 234. Career and Personal Counseling. 3 Units.**

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 134, PSYCH 192

**EDUC 236. Beyond Bits and Atoms: Designing Technological Tools. 3-4 Units.**

Practicum in designing and building technology-enabled curricula and hands-on learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. The course will focus on designing low-cost technologies, particularly for urban school in the US and abroad. We will explore theoretical and design frameworks from the constructionist learning perspective, critical pedagogy, interaction design for children. Interested students should complete the application at <https://web.stanford.edu/class/educ211> by January 5, and come to the first class at 9am in CERAS 101.

Same as: CS 402

**EDUC 236B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, CSRE 126B, EDUC 136B, PUBLPOL 126B

**EDUC 239. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139, ME 139, ME 231

**EDUC 240. Adolescent Development and Learning. 3 Units.**

How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 241. Race, Justice, and Integration. 3 Units.**

Recent philosophical research on injustice, race, and the ideal of racial integration.

Same as: AFRICAAM 241, PHIL 142, PHIL 242

**EDUC 242. Workshop on Instrument Development for Assessment, Research or Evaluation Purposes I. 3 Units.**

This course is designed with the belief that collecting information is a routine activity in which most researchers and educators are involved. Developing and improving instruments to gather information for descriptive, assessment, research, or evaluation purposes is a goal that unites all social sciences. Therefore, this course focuses on the technical skills required to develop, judge, and/or select quality instruments in diverse domains. The course will focus on your personal journey to develop or judge an instrument on something that is important for you.

**EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area. Same as: CSRE 243, EDUC 145

**EDUC 244. Classroom Management and Leadership. 3 Units.**

Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.

**EDUC 244E. Elementary Classroom Leadership and Management. 1 Unit.**

How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary only.

**EDUC 244F. Elementary Classroom Leadership and Management. 1 Unit.**

Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.

**EDUC 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.**

This seminar will explore the impact and relative salience of racial/ethnic identity on select issues including: discrimination, social justice, mental health and academic performance. Theoretical perspectives on identity development will be reviewed, along with research on other social identity variables, such as social class, gender and regional identifications. New areas within this field such as the complexity of multiracial identity status and intersectional invisibility will also be discussed. Though the class will be rooted in psychology and psychological models of identity formation, no prior exposure to psychology is assumed and other disciplines-including cultural studies, feminist studies, and literature-will be incorporated into the course materials.

Same as: AFRICAAM 245, CSRE 245

**EDUC 246A. Secondary Teaching Seminar. 4 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

**EDUC 246B. Secondary Teaching Seminar. 5 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

**EDUC 246C. Secondary Teaching Seminar. 4 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP).

**EDUC 246D. Secondary Teaching Seminar. 2-7 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

**EDUC 246E. Elementary Teaching Seminar. 3 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 246F. Elementary Teaching Seminar. 4-6 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 246G. Elementary Teaching Seminar. 3 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 246H. Elementary Teaching Seminar. 4 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 247. Moral and Character Education. 3 Units.**

Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today's schools; and contending theories concerning the goals of moral education.

**EDUC 249. Theory and Issues in the Study of Bilingualism. 3-5 Units.**

Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. Same as: EDUC 149

**EDUC 250. What Do Students Really Know? The Risks of Modern Assessment. 3 Units.**

This course focuses on helping students to advance their knowledge about theory, design and research issues related to assessing student learning for accountability and learning purposes. The course explores assessment topics with a critical perspective in two contexts: large-scale and classroom assessment. The course will help students become critical test consumers, better-informed assessment evaluators, and advocator of reliable, valid and fair assessments for culturally and linguistically diverse populations.

**EDUC 252. Introduction to Test Theory. 3 Units.**

Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation.

**EDUC 252L. Introduction to Test Theory - Lab. 2 Units.**

This course will cover the material from 252A in an applied setting. Emphasis will be in developing a capacity for applying and interpreting psychometrics techniques to real-world and simulated data.

**EDUC 256. Psychological and Educational Resilience Among Children and Youth. 4 Units.**

Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations. Same as: HUMBIO 149

**EDUC 257. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.**

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes. Same as: CHILATST 183X, EDUC 183

**EDUC 258. Literacy Development and Instruction. 3-5 Units.**

Literacy acquisition as a developmental and educational process. Problems that may be encountered as children learn to read. How to disentangle home, community, and school instruction from development.

**EDUC 260A. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.**

See <http://rogosateaching.com/stat209/>. Critical examination of statistical methods in social science and life sciences applications, especially for cause and effect determinations. Topics: mediating and moderating variables, potential outcomes framework, encouragement designs, multilevel models, heterogeneous treatment effects, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, path analysis and graphical models, group comparisons with longitudinal data. Prerequisite: intermediate-level statistical methods.

Same as: HRP 239, STATS 209

**EDUC 260B. Advanced Statistical Methods for Observational Studies. 2-3 Units.**

Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, and instrumental variables. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: HRP 261 and 262 or STAT 209 (HRP 239), or equivalent. See <http://rogosateaching.com/somgen290/>. Same as: CHPR 290, HRP 292, STATS 266

**EDUC 261. Sociocultural Theories of Learning & Development: Vygotsky & Bakhtin. 3 Units.**

Grounded in theories of Vygotsky and Bakhtin, this course will review commonly used, but often misunderstood, concepts about how context enters theories of learning and development. Topics will include: distinctions between development and learning; the place of culture in developing higher mental functions; the zone of proximal development, conceptions and misconceptions; contributions of activity theory; importance of heterogeneity and multivocality; and role of language in ideological becoming; or idea development. Focus will be on using theory to guide research.

**EDUC 262A. Curriculum and Instruction in English. 3 Units.**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP).

**EDUC 262B. Curriculum and Instruction in English. 3 Units.**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

**EDUC 262C. Curriculum and Instruction in English. 3 Units.**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP).

**EDUC 262D. Curriculum & Instruction Elective in English. 4 Units.**

Methodology of science instruction: teaching for English and language arts; linking the goals of teaching English with interdisciplinary curricula; opportunities to develop teaching materials. For STEP Program students only.

**EDUC 263A. Curriculum and Instruction in Mathematics. 3 Units.**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

**EDUC 263B. Curriculum and Instruction in Mathematics. 3 Units.**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

**EDUC 263C. Curriculum and Instruction in Mathematics. 3 Units.**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

**EDUC 263D. Curriculum & Instruction Elective in Math. 4 Units.**

Methodology of math instruction: teaching for mathematical thinking and reasoning; linking the goals of teaching math with literacy and interdisciplinary curricula; opportunities to develop teaching materials. For STEP Program students only.

**EDUC 263E. Quantitative Reasoning in Mathematics I. 2 Units.**

First of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

**EDUC 263F. Quantitative Reasoning in Mathematics II. 2 Units.**

Second of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

**EDUC 263G. Quantitative Reasoning in Mathematics III. 2 Units.**

Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

**EDUC 264A. Curriculum and Instruction in World Languages. 3 Units.**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP).

**EDUC 264B. Curriculum and Instruction in World Languages. 3 Units.**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

**EDUC 264C. Curriculum and Instruction in World Languages. 3 Units.**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP).

**EDUC 264E. Methods and Materials in Bilingual Classrooms. 2 Units.**

Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.

**EDUC 265. History of Higher Education in the U.S.. 3-5 Units.**

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 165, HISTORY 158C

**EDUC 266. Educational Neuroscience. 3 Units.**

An introduction to the growing intersection between education research and emerging research on functional brain development. Students will probe the contributions and limitations of emerging theoretical and empirical contribution of neuroscience approaches to specific academic skills such as reading and mathematics, as well as exposure to general processes crucial for educational success, including motivation, attention, and social cognition. Final projects will explore these themes in the service of interventions designed to improve how these functions.

**EDUC 267A. Curriculum and Instruction in Science. 3 Units.**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 267B. Curriculum and Instruction in Science. 3 Units.**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 267C. Curriculum and Instruction in Science. 3 Units.**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 267D. Curriculum & Instruction Elective in Science. 4 Units.**

Methodology of science instruction: teaching for scientific reasoning; linking the goals of teaching science with literacy and interdisciplinary curricula; opportunities to develop teaching materials. For STEP Program students only.

**EDUC 267E. Development of Scientific Reasoning and Knowledge. 2 Units.**

For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.

**EDUC 267F. Development of Scientific Reasoning and Knowledge II. 2 Units.**

Continuation of 267E. Scientific knowledge and pedagogical skills for supporting science instruction. Topics include: how children build scientific understandings and what that understanding might look and sound like in young children; what school science is and how concepts are connected to the doing of it; physical, life, and earth science constructs.

**EDUC 267G. Integrating the Garden into the Elementary Curriculum. 1 Unit.**

This mini-course uses the garden and kitchen environments to provide teacher candidates with real-world contexts in which to explore some of the key issues that children face in health, nutrition, and sustainability. Teacher candidates will gain an understanding of how to integrate the various themes with content areas and standards and an appreciation for the importance of addressing children's health needs in an era when the country is facing increased obesity and other health problems.

**EDUC 268A. Curriculum and Instruction in History and Social Science. 3 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

**EDUC 268B. Curriculum and Instruction in History and Social Science. 3 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

**EDUC 268C. Curriculum and Instruction in History and Social Science. 3 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

**EDUC 268D. Curriculum & Instruction Elective in History. 4 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy and interdisciplinary curricula; opportunities to develop teaching materials. For STEP Program students only.

**EDUC 269. The Ethics in Teaching. 1 Unit.**

Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.

**EDUC 270. Latino Families, Languages, and Schools. 3-5 Units.**

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling.

Same as: EDUC 178

**EDUC 271. Education Policy in the United States. 3 Units.**

(Same as GSBGEN 347) The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy.

**EDUC 273. Gender and Higher Education: National and International Perspectives. 4 Units.**

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 173, FEMST 173, SOC 173, SOC 273

**EDUC 275. Leading U.S. Schools. 3-4 Units.**

The landscape of schooling in the U.S. is dynamic and replete with ideologies, myths, and beliefs. Organizational theory, leadership theory, and empirical research are lenses through which students will develop a deeper and broader understanding of the similarities and differences among private schools, parochial schools, traditional K-12 schools, charter schools, and alternative schools. Students will connect theory and research to practice by visiting and learning about two or more schools of their choosing.

**EDUC 276. Educational Assessment. 3 Units.**

Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.

**EDUC 277. Education of Immigrant Students: Psychological Perspectives. 4 Units.**

Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity.

**EDUC 278. Introduction to Issues in Evaluation. 3-4 Units.**

Open to master's and doctoral students with priority to students in the School of Education. Focus is on the basic literature and major theoretical and practical issues in the field of program evaluation. Topics include: defining purpose, obtaining credible evidence, the role of the evaluator, working with stakeholder, values in evaluation, utilization, and professional standards. The course project is to design an evaluation for a complex national or international program selected by the instructor.

**EDUC 280. Learning & Teaching of Science. 3 Units.**

This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.

Same as: ENGR 295, PHYSICS 295

**EDUC 281. Technology for Learners. 3-4 Units.**

How can we use technology to improve learning? Many hope that technology will make learning easier, faster, or accessible to more learners. This course explores a variety of approaches to designing tools for learning, the theories behind them, and the research that tests their effectiveness. Strong focus on evaluating and designing new tools for specific learners and subjects. Space is limited. Priority is given to master's students in the LDT Master's Program. Cardinal Course certified by the Haas Center.

**EDUC 283. Child Development In and Beyond Schools. 2 Units.**

(Formerly EDUC 144). How schools form a context for children's social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.

**EDUC 284A. Designing Equitable Groupwork. 1 Unit.**

Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP).

**EDUC 284B. Designing Equitable Groupwork. 1 Unit.**

Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP).

**EDUC 285. Supporting Students with Special Needs. 2-3 Units.**

For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.

**EDUC 286B. Second Language Acquisition Research. 4 Units.**

Major research findings and theories in second language acquisition. Second language research and theories in formal and informal settings where a second language is learned.

**EDUC 287. Graduate Research Workshop on Psychological Interventions. 3 Units.**

Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.

Same as: PSYCH 274

**EDUC 288. Organizational Analysis. 4 Units.**

Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.

Same as: SOC 271

**EDUC 289. The Centrality of Literacies in Teaching and Learning. 3 Units.**

(Formerly EDUC 166.) Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP).

**EDUC 290. Instructional Leadership: Building Capacity for Excellent Teaching. 3-4 Units.**

This course focuses on the role of leaders in designing, supporting and sustaining excellent teaching. How do leaders create the organizational conditions to focus attention on the technical core of instruction, curriculum and assessment. Course goals: 1) explore a variety of educational leadership approaches, 2) investigate the theory of action underlying these approaches to leadership and consider the implications for instructional practice and 3) develop understanding of the relationship between the leadership approach and the learning environment.

**EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium. 1-3 Unit.**

Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other's work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.

**EDUC 292. Academic Writing for Clarity and Grace. 2-4 Units.**

Students will acquire helpful writing strategies, habits, and critical faculties; increase their sense of writing as revision; and leave them with resources that will support them in their own lifelong pursuit of good writing. Students will work on revising their own papers and editing papers of other students. Class will focus on exercises in a variety of critical writing skills: framing, concision, clarity, emphasis, rhythm, action, actors, argument, data, quotations, and usage. Course enrollment limited to graduate students.

**EDUC 293. Church, State, & Schools: Issues in Education & Religion. 4 Units.**

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: AMSTUD 293, RELIGST 293X

**EDUC 295. Learning and Cognition in Activity. 3 Units.**

Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.

Same as: PSYCH 261A

**EDUC 297. Teaching and Learning in Higher Education. 1-4 Unit.**

(Same as LAW 303) This course is co-taught by Tom Ehrlich, GSE, and Mariatte Denman, Office of the Vice Provost for Teaching & Learning. It provides doctoral and masters students with an opportunity to focus on teaching and learning along with graduate students from many disciplines throughout the university. Students watch and interview master teachers at Stanford, prepare a syllabus module for a workshop or class they might teach, and learn a range of effective pedagogical methods. The course is open not only to masters students and doctoral students from all schools who expect to work in higher education, but also to students interested in K-12 education, and they may develop a teaching module for use in those schools.

Same as: VPTL 297

**EDUC 298. Seminar on Teaching Introductory Computer Science. 1 Unit.**

Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

Same as: CS 298

**EDUC 299. Equity and Schooling. 3 Units.**

(Formerly EDUC 167.) Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP).

**EDUC 301. Workshop on Race, Ethnicity, and Language in Schools. 1-4 Unit.**

The Workshop on Race, Ethnicity, and Language in Schools is a new School of Education initiative that examines the profound and enduring relationships between race, ethnicity, and language in education in the U.S. and elsewhere. The seminar brings together an interdisciplinary group of leading scholars and graduate students in language in education to address the role of race and ethnicity in a host of complex and controversial language educational issues that cut across the areas of practice, policy, and pedagogy.

**EDUC 302. Behavior Design. 3 Units.**

Students learn Behavior Design and practice applying the methods to change human behavior in measurable ways. In this particular course, all projects will focus on one theme: Designing the first step.

**EDUC 303. Designing Learning Spaces. 3-4 Units.**

Project-based. How space shapes personal interactions and affords learning opportunities in formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.

**EDUC 304. Critical Theory and Pedagogy. 1-5 Unit.**

The course samples the work of Critical Theory, proper, critical theory more generally, and critical pedagogy in the schools, as it draws on the educational consequences of a school of thought. The project of critical theory is examined in light of the curricular applications that it has inspired and the scholarly implications of studying education in this seemingly critical theoretical manner. Students will evaluate a particular curricular point of application of these related theoretical developments. Course may be repeated 4 times.

**EDUC 305. A Political Economy of the Mind. 3-4 Units.**

This course seeks categories and procedures for the appreciation, description, analysis, and reorganization of people in difficult circumstances. Examples from the history of fiction and classic political economy are used to explore the strengths and weaknesses of various approaches. In depth attention to individual lives and daily struggles give fiction and economic theory more appropriately positive views of people without the advantages of schooling than most educational research. Readings include fiction by Defoe, Austen, Dickens, Hurston, and Morrison and economic visions from Smith, Marx, Veblen, Keynes, and Galbraith.

**EDUC 306A. Economics of Education in the Global Economy. 5 Units.**

Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development.

**EDUC 306B. Global Education Policy & Organization. 3-5 Units.**

Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.

Same as: PUBLPOL 316

**EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.**

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 136, SOC 231

**EDUC 306Y. Economic Support Seminar for Education and Economic Development. 1 Unit.**

Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A. (Carnoy).

**EDUC 308. Assessment Development, Adaptation, and Review. 3 Units.**

Offers a critical perspective for examining current practices concerning the development, adaptation, and review of assessment instruments in state, national, and international assessment contexts.

**EDUC 30N. The Science of Diverse Communities. 3 Units.**

This course is an exploration. Most generally, its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities - all with a particular focus on educational communities like schools, universities, academic disciplines, etc., but with the hope that such principles might generalize to other kinds of organizations and the broader society. The readings range from those on the origins of human communities and social identities to those on intergroup trust building. They also aim to embed our discussions in the major diversity issues of the day, or example, what's in the news about campus life. Thus the course has a practical purpose: to develop testable ideas for improving the comfort level, fairness and goodness-for-all of identity diverse communities—especially in educational settings. The course also has a basic science purpose: to explore the psychological significance of community. Is there a psychological need for community? Is there something about a need for community that can't be reduced to other needs, for example, for a gender, racial or sexual-orientation identity? How strong is the need for community against other needs? What kinds of human groupings can satisfy it? In meeting this need, can membership in one community substitute for membership in others? What do people need from communities in order to thrive in them? Do strong diverse communities dampen intergroup biases? Can strong community loyalty mitigate identity tensions within communities? Such questions, the hope is, will help us develop a more systematic understanding of the challenges and opportunities inherent in diverse human communities.

Same as: CSRE 30N, PSYCH 30N, SOC 179N

**EDUC 310. Sociology of Education: The Social Organization of Schools. 4 Units.**

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 110, SOC 132, SOC 332

**EDUC 311. Research Workshop in International Education. 1 Unit.**

International Education Initiative (IEI) is a cross-campus initiative to promote greater collaboration around research in international education at Stanford. It is designed to help students conduct higher quality research in international education and gain wide exposure to the international education research community. Students will have the chance to engage with invited speakers from outside Stanford, present and get feedback about their own research, and learn new methodological tools.

**EDUC 312. Relational Sociology. 4 Units.**

Conversations, social relationships and social networks are the core features of social life. In this course we explore how conversations, relationships, and social networks not only have their own unique and independent characteristics, but how they shape one another and come to characterize many of the settings we enter and live in. As such, students will be introduced to theories and research methodologies concerning social interaction, social relationships, and social networks, as well as descriptions of how these research strands interrelate to form a larger relational sociology that can be employed to characterize a variety of social phenomenon. This course is suitable to advanced undergraduates and doctoral students.

Same as: SOC 224B

**EDUC 313. The Education of American Jews. 4 Units.**

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Same as: JEWISHST 393X, RELIGST 313X

**EDUC 314. Technologies, Social Justice and Black Vernacular Culture. 3-5 Units.**

From texts to techne, from artifacts to discourses on science and technology, this course is an examination of how Black people in this society have engaged with the mutually constitutive relationships that endure between humans and technologies. We will focus on these engagements in vernacular cultural spaces, from storytelling traditions to music and move to ways academic and aesthetic movements have imagined these relationships. Finally, we will consider the implications for work with technologies in both school and community contexts for work in the pursuit of social and racial justice. Course is open to master's and doctoral students only.

**EDUC 315. Reforms in Federal Education Programs: The New ESSA through the Lens of Assessment and Language.. 2-5 Units.**

This seminar explores implications of three notable shifts in the new federal education law (ESSA): shifts in student assessment and school accountability practices; deliberate inclusion of English Learners throughout the law but in particular in Title I accountability; and, its consideration of appropriate quality of evidence to support its multiple programs. The course analyzes the law by examining legislative history, existing research of various components of NCLB, and considering research implications in the implementation of ESSA.

**EDUC 316. Social Network Methods. 4-5 Units.**

Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms.

Same as: SOC 369

**EDUC 318. The Discourses of Teaching Reading. 3-5 Units.**

Students examine language, social relationships, and students' textual sense-making to further develop their conceptions of reading comprehension and their pedagogical practice as reading teachers. What it means to comprehend text; how classroom discourse matters in the development of textual understanding; and what understandings, purposes, and relationships should matter in classroom talk about text. Field work in which students facilitate small group text discussions for the duration of the quarter at a location of their choice.

**EDUC 319. Research on Teaching. 1-4 Unit.**

Introduction and historical perspective to theory, methods, and substantive findings of research on teaching.

**EDUC 320. Sociology of Science. 3-4 Units.**

The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students.

Same as: EDUC 120, SOC 330

**EDUC 321. Analysis of Social Interaction. 3 Units.**

Practicum on discourse, interactional, and cultural analysis of videotaped data. Analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student.

**EDUC 322. Community-based Research As Tool for Social Change:Discourses of Equity in Communities & Classrooms. 3-5 Units.**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques.

Same as: AFRICAAM 130, CSRE 130, EDUC 123

**EDUC 323A. The Practice of Education Policy Analysis. 3-5 Units.**

Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education.

**EDUC 325A. Proseminar 1. 3 Units.**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

**EDUC 325B. Proseminar 2. 3 Units.**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

**EDUC 325C. Proseminar 3. 2-4 Units.**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

**EDUC 326. Advanced Regression Analysis. 3-4 Units.**

Social science researchers often deal with complex data and research questions that traditional statistics models like linear regression cannot adequately address. This course offers the opportunity to understand and apply two widely used types of advanced regression analysis that allow the examination of 1) multilevel data structures (multilevel models) and 2) multivariate research questions (structural equation models).

**EDUC 327A. The Conduct of Qualitative Inquiry. 3-4 Units.**

Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.

Same as: SOC 331

**EDUC 327C. The Conduct of Qualitative Inquiry. 1-4 Unit.**

For doctoral students. Students bring research data for analysis and writing. Preference to those who have completed 327A.

**EDUC 328. Topics in Learning and Technology: Core Mechanics for Learning. 3 Units.**

Contents of the course change each year. The course can be repeated. In game play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core mechanics that can drive learning forward, and if so, how to build them into learning environments.

**EDUC 328A. Topics in Learning and Technology: d.compress - Designing Calm. 3 Units.**

Contents of the course change each year. The course can be repeated. Stress silently but steadily damages physical and emotional well-being, relationships, productivity, and our ability to learn and remember. This highly experiential and project-oriented class will focus on designing interactive technologies to enable calm states of cognition, emotion, and physiology for better human health, learning, creativity and productivity. Same as: CS 377D

**EDUC 329. Seminar on Teacher Professional Development. 1-4 Unit.**

Theories, principles, design, and practices of professional development. Topics include: pedagogies of professional development; design principles for transformative professional development; frameworks and processes to support teacher learning; research on professional development processes and outcomes; and policy issues. Optional practicum in subsequent terms in which course participants are able to offer a professional development opportunity to practicing teachers through the Center to Support Excellence in Teaching.

**EDUC 330. Teaching English Language Learners: Issues in Policy, Leadership, and Instruction. 3-4 Units.**

Current perspectives and research on issues facing educators serving the English language learner population. Issues include federal education legislation, civil rights law, national Common Core Standards, content and language proficiency standards assessment and accountability, school improvement models, school structure, community engagement, addressing issues of long-term English learners, programming for newcomer ELLs, early childhood education, and promoting bilingualism.

**EDUC 332. Theory and Practice of Environmental Education. 3 Units.**

Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.

Same as: EARTHSYS 332

**EDUC 333A. Understanding Learning Environments. 3 Units.**

Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.

**EDUC 333B. Imagining the Future of Learning: SparkTruck - Designing Mobile Interventions for Education. 4 Units.**

Created at the d.school last year, SparkTruck has traveled over 15,000 miles across the USA, teaching thousands of kids how to build stuff and unleash their creativity. In this class, students will explore the potential of a mobile platform for affecting change in the educational ecosystem. Topics will include introductions to the design process, modern prototyping tools, and the complex education ecosystem. Students will work in teams in this project-based class, and an emphasis will be placed on real-world prototyping through hands-on field work in local schools. Interested and qualified students will have the opportunity to embark on a cross-country road trip in the SparkTruck this summer. Open to all graduate students and well-qualified undergrads of any major. Enrollment is limited. Apply at [www.sparktruck.org/apply](http://www.sparktruck.org/apply).

Same as: ME 376A

**EDUC 334. Strategic Educational Research and Organizational Reform Clinic. 4 Units.**

(Same as STRAMGT 360). This is a two-quarter clinical course offered in the Winter and Spring Quarters that brings together upper-level graduate students in education, law, and business from Stanford to collaborate with their peers at other universities (Columbia University, Harvard University, University of Pennsylvania, University of Michigan) and provide strategic research and consulting to public education organizations. Participants engage in a rigorous and rewarding learning experience, including: (i) An intensive seminar in the design, leadership and management, and transformation of public school systems, charter management organizations, start-ups, and other K-12 public- and social-sector institutions; (ii) Comprehensive skills training in team-based problem solving, strategic policy research, managing multidimensional (operational, policy, legal) projects to specified outcomes in complex environments, client counseling, and effective communication; and (iii) A high-priority consulting project for a public education sector client (e.g., school district, state education agency, charter management organization, non-profit) designing and implementing solutions to a complex problem at the core of the organization's mission to improve the educational outcomes and life chances of children. The participant's team work will allow public agencies throughout the nation to receive relevant, timely, and high-quality research and advice on institutional reforms that otherwise may not receive the attention they deserve.

**EDUC 334A. Youth and Education Law Project: Clinical Practice. 4 Units.**

(Same as LAW 660A). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

**EDUC 334B. Youth and Education Law Project: Clinical Methods. 4 Units.**

(Same as LAW 660B). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation, or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees of the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

**EDUC 334C. Youth and Education Law Project: Clinical Coursework. 4 Units.**

(Same as LAW 660C). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation, or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

**EDUC 335. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.  
Same as: AFRICAST 135, AFRICAST 235, EDUC 135, HRP 235, HUMBIO 26, MED 235

**EDUC 336. Language, Identity, and Classroom Learning. 1-3 Unit.**

As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.

**EDUC 336A. Law and Public Policy: Issues in Implementation. 3 Units.** (Same as LAW 636.) This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process by the agencies and organizations charged with implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as "management-based regulation" and "evidence-based" social service delivery, gives broad discretion to street-level service providers but subjects them to intensive monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradable rights (e.g. pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the contours of public law doctrine and the nature of lawyering in the public sector. Lawyers in the public sector are increasingly drawing on skills of institutional design and monitoring of the kind associated with private sector transactional practice. This seminar will examine some of the emerging general themes of innovative policy implementation and look at a range of case studies. Topics will include the conditions under which financial and other rewards and sanctions are useful in bringing about desired behaviors, the pluses and minuses of the creation of markets as alternatives to government run programs, and efforts at improving implementation by improving management activities. Examples will be taken from both regulation and social services, and are likely to include environmental protection, education, child protective services, healthcare, food and workplace safety, nuclear power safety, and regulation of financial institutions. We will invite presentations by academics and practitioners.

**EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.** Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students. Same as: AFRICAAM 106, CSRE 103B, EDUC 103B

**EDUC 338. Innovations in Education. 3-4 Units.** Each year students in this course explore a new design challenge related to teaching. This year we will focus on creating school models. We welcome graduate students from a wide range of disciplines. Admission by application. Please see more information at <http://dschool.stanford.edu>.

**EDUC 339. Advanced Topics in Quantitative Policy Analysis. 1-2 Unit.** For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.

**EDUC 340. Psychology and American Indian Mental Health. 3-5 Units.** Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities. Same as: NATIVEAM 240

**EDUC 341. Counterstory and Narrative Inquiry in Literature and Education. 3 Units.**

Counterstory is a method developed in critical legal studies that emerges out of the broad "narrative turn" in the humanities and social science. This course explores the value of this turn, especially for marginalized communities, and the use of counterstory as analysis, critique, and self-expression. Using an interdisciplinary approach, we examine counterstory as it has developed in critical theory, critical pedagogy, and critical race theory literatures, and explore it as a framework for liberation, cultural work, and spiritual exploration.

Same as: CSRE 141E, EDUC 141, LIFE 124

**EDUC 342. Child Development and New Technologies. 3 Units.**

Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.

**EDUC 343A. Navigating the Academic Profession. 1-2 Unit.**

For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.

**EDUC 343B. Practicum for fellows in the Stanford Preparing Future Professors Program. 1 Unit.**

Nine weekly one-hour sessions consisting of discussions of: (1) the previous week's SJSU shadowing experiences and (2) readings related to session themes.

**EDUC 343C. Preparing for Faculty Careers. 1 Unit.**

For graduate students and postdoctoral fellows from all disciplines who are considering a faculty career of any type and at any of a broad range of institutions. Numbers are limited and so whether formally registered (grad students) or attending as auditors (grad students or postdocs), all participants must commit to attending the entire course. Begins with a methodology to help determine if a faculty career is a good fit for the values, interests and abilities of each participant. Progresses to an exploration of different types of faculty roles and different institutional contexts (e.g., tenure-track vs. non-tenure-track; research-intensive vs. teaching-intensive; large vs. small; etc.). Discusses how to identify and land a faculty position. Ends with concrete tips on how to thrive in such a role. May be repeated for credit.

**EDUC 346. Research Seminar in Higher Education. 4 Units.**

Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups.

**EDUC 347. The Economics of Higher Education. 3-4 Units.**

(Same as GSBGEN 348) Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

**EDUC 348. Policy and Practice in Science Education. 3-4 Units.**

Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.

**EDUC 349. Comparative Higher Education. 3-4 Units.**

This course examines the expansion, impact, and organization of higher education across the world. This course engages students with sociological theory and comparative research on global and national sources of influence on higher education developments, e.g. admissions criteria, curricular content, governance structure.. At the end of the course students should be able to compare and contrast developments across countries.

Same as: SOC 297

**EDUC 350. Workshop on New Research. 1 Unit.**

This course will integrate attendance and participation at the research lectures given by visitors with separate, faculty-led workshops that discuss the presented study, its methodologies, and the research and policy contexts in which it is situated. This workshop will also provide an opportunity for professional development relevant to academic publishing and effective presentation.

**EDUC 351A. Statistical Methods for Longitudinal Research. 2-3 Units.**

See <http://rogosateaching.com/stat222/>. Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning, development, aging, and the effects of interventions.

Topics include: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. Prerequisite: intermediate statistical methods.

Same as: STATS 222

**EDUC 351B. Statistical Issues in Testing and Assessment. 2-3 Units.**

The new book by Howard Wainer, "Uneducated Guesses: Using Evidence to Uncover Misguided Education Policies" is the basis for this seminar. Also included will be supporting research literature and data analysis activities for topics such as college admissions, methods for missing data, assessment of achievement gaps, and the use of value-added analysis. See <http://www-stat.stanford.edu/~rag/ed351B/>.

**EDUC 352. Education Research Partnerships. 3-5 Units.**

This course focuses on developing and sustaining effective education research partnerships. Partnerships are essential in creating new research projects, conducting field-based inquiry, and in implementing lessons from research projects. The course emphasizes the power of successful partnerships in improving education while exploring potential barriers to the formation and productivity of partnerships. During this course there will be explicit opportunities for students to develop the knowledge and capacities necessary for effective collaborative partnership research.

**EDUC 353A. Problems in Measurement: Item Response Theory. 3 Units.**

Study of the mathematical models used in psychological measurement with an emphasis on item response theory (IRT). We will examine various problems, including estimation of item parameters and person abilities, polytomous response models, and other issues. A key focus of this course will be on developing applied skills with the relevant models. Prerequisites included EDUC 252 (or consent of the instructor).

**EDUC 353C. Problems in Measurement: Generalizability Theory. 3 Units.**

Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications.

**EDUC 354. School-Based Decision Making. 4 Units.**

Leadership and organizational issues. Leadership as it plays out in the pragmatic demands and tensions of site-level decision processes. Interdependence and complexity of several factors critical to school achievement and equity outcomes: governance, culture, instruction, resource alignment, inquiry, community engagement. School decision-making as a capacity-building process.

**EDUC 355. Higher Education and Society. 3 Units.**

For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.

**EDUC 356. Street History: Learning the Past in School and Out. 3-5 Units.**

Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?

Same as: HISTORY 337C

**EDUC 357. Science and Environmental Education in Informal Contexts. 3-4 Units.**

There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.

**EDUC 359B. Research on Science Teaching and Learning. 2-3 Units.**

An exploration and review of the main programs of research that have been conducted in the field of science education, their findings and implications.

**EDUC 359C. Science Literacy. 2-3 Units.**

The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

**EDUC 359F. Research in Mathematics Education: Conducting Inquiry. 2-4 Units.**

This seminar will serve as both a workshop for developing participants' own professional trajectories as mathematics education scholars and a forum for discussion on key issues related to conducting research and making an impact in the field of mathematics education. Participants will be invited to share their own research and to engage in discussions about possible impact. This seminar is restricted to mathematics education students.

**EDUC 360. Child Development in Contexts of Risk and Adversity. 3-4 Units.**

In this course students will learn about theoretical, methodological, and empirical issues pertaining to developmental psychopathology and resilience of children and adolescents. The course focuses on (1) current conceptual and empirical issues; (2) cognitive, affective, and motivational processes that underlie some of the most salient childhood mental health symptoms and disorders; (3) family, school, and cultural factors that contribute to developmental psychopathology and resilience; and (4) cutting-edge analytic methods that are currently employed in studies of developmental psychopathology and resilience.

**EDUC 361. Workshop: Networks and Organizations. 1-3 Unit.**

For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

Same as: SOC 361W

**EDUC 364. Cognition and Learning. 3-4 Units.**

Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

**EDUC 365. Social, Emotional, and Personality Development. 3 Units.**

Limited to doctoral students in DAPS and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

**EDUC 366. Learning in Formal and Informal Environments. 3 Units.**

How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web publications, and books. Collaborative written or multimedia research project in which students observe and document a non-school learning environment.

**EDUC 367. Cultural Psychology. 3-5 Units.**

(Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, crosscultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

**EDUC 368. Cognitive Development in Childhood and Adolescence. 3 Units.**

This course aims to broaden and deepen students' understanding of cognitive development from the prenatal period through adolescence. It will examine various theoretical, methodological, and empirical issues pertaining to different domains of cognitive development, such as neurobiological plasticity, infant cognition, theory of mind, memory, language, and executive functions. Throughout the course, as we survey research findings, we will discuss (1) methods that researchers have employed in their study of cognitive development; (2) limitations of current research and directions for future research; and (3) translation of research findings for practitioners and policymakers.

**EDUC 370. Parenting and Family Relationships in Childhood. 3-4 Units.**

This course will focus on the relevance of parenting and family relationships for children's development. We will examine studies of: (1) how parental and child behaviors contribute to sensitivity, responsiveness, scaffolding, autonomy, and control within the dyad; (2) parents' role in socializing children's emotions and their ethnic/racial identity; and (3) parents' involvement in early education. We will discuss cultural and economic factors affecting our conceptualization, measurement, and interpretations of parents' behaviors and their interactions with their children.

**EDUC 371. Social Psychology and Social Change. 2-3 Units.**

The course is intended as an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome, but priority for enrollment will be given to graduate students. In order to foster a vibrant, discussion-based class, enrollment will be capped at 20 students. Interested students should enroll in the class through simple enroll or access, and complete this survey (<https://tinyurl.com/SPSC17>) to be considered for admission to the course. Please contact the course TA, Michael Schwalbe ([schwalbe\[at\]stanford.edu](mailto:schwalbe[at]stanford.edu)), if you have any further questions.

Same as: PSYCH 265

**EDUC 373. Genetics and Society. 3 Units.**

This course will focus on social science engagement with developments in genetic research, focusing on two key issues. First, social scientists are trying to figure out how genetic data can be used to help them better understand phenomena they have been long endeavoring to understand. Second, social scientists try to improve understanding of how social environments moderate, amplify, or attenuate genetic influences on outcomes.

Same as: HUMBIO 158S, SOC 232

**EDUC 374. Philanthropy and Civil Society. 1-3 Unit.**

Cross-listed with Law (LAW 781), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: POLISCI 334, SOC 374

**EDUC 375A. Seminar on Organizational Theory. 5 Units.**

The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

Same as: MS&E 389, SOC 363A

**EDUC 375B. Seminar on Organizations: Institutional Analysis. 3-5 Units.**

Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

Same as: SOC 363B

**EDUC 376. Higher Education Leadership Colloquium. 2-3 Units.**

This course presents a series of speakers from Stanford and other higher education institutions who work at the middle to higher levels of administration. Speakers and topics are guided by student interest, but include a range from student affairs to finance. Sessions are intended to be interactive.

**EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.**

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

Same as: GSBGEN 346, PUBLPOL 317, SOC 377

**EDUC 377B. Strategic Management of Nonprofit Organizations and Social Ventures. 4 Units.**

(Same as STRAMGT 368). This course seeks to provide a survey of the strategic, governance, and management issues facing a wide range of nonprofit organizations and their executive and board leaders, in the era of venture philanthropy and social entrepreneurship. The students will also be introduced to core managerial issues uniquely defined by this sector such as development/fundraising, investment management, performance management and nonprofit finance. The course also provides an overview of the sector, including its history and economics. Cases involve a range of nonprofits, from smaller, social entrepreneurial to larger, more traditional organizations, including education, social service, environment, health care, religion, NGO's and performing arts. In exploring these issues, this course reinforces the frameworks and concepts of strategic management introduced in the core first year courses. In addition to case discussions, the course employs role plays, study group exercises and many outsider speakers.

**EDUC 377C. Philanthropy: Strategy, Innovation and Social Change. 3 Units.**

Appropriate for any student driven to effect positive social change from either the for-profit or nonprofit sector, Philanthropy will challenge students to expand their own strategic thinking about philanthropic aspiration and action. In recent decades, philanthropy has become an industry in itself - amounting to over \$358 billion in the year 2014. Additionally, the last decade has seen unprecedented innovation in both philanthropy and social value creation. This course explores the key operational and strategic distinctions between traditional philanthropic entities, such as community foundations, private foundations and corporate foundations; and innovative models, including funding intermediaries, open-source platforms, technology-driven philanthropies, impact investing and venture philanthropy. Course work will include readings and case discussions that encourage students to analyze both domestic and global philanthropic strategies as they relate to foundation mission, grantmaking, evaluation, financial management, infrastructure, knowledge management, policy change and board governance. Guest speakers will consist of high profile philanthropists, foundation presidents, social entrepreneurs and Silicon Valley business leaders creating new philanthropic models. The course will also provide students with real-world grantmaking experience in completing nonprofit organizational assessments and making grants to organizations totaling \$20,000.

**EDUC 377E. Improving and Measuring Social Impact. 3 Units.**

(Also GSBGEN 322). This course focuses on strategy and actionable measurement in government, non-profit organizations, market-based social enterprises, philanthropy, and impact investing. *¿Actionable¿* means that measurement is used by managers, investors, and other stakeholders in improving outcomes. The course explores the intersection of several ideas that seem to be in some tension with each other. (1) *¿In preparing for battle I have always found that plans are useless, but planning is indispensable.¿* (Dwight D. Eisenhower), (2) *You can't manage what you can't measure,* (3) *Measurement is expensive and its results are often ignored,* (4) *¿Not everything that counts can be counted and not everything that can be counted counts¿* (apocryphally attributed to Einstein), (5) *¿The more any quantitative social indicator is used for decision making, the more subject it will be to corruption pressures and the more apt it will be to distort and corrupt the social processes it is intended to monitor.¿* (Campbell's Law). Specifically, the course will include: strategic planning, logic models, theories of change, monitoring, and evaluation; measuring the social impact of governments, non-governmental organizations, and market-based social enterprises, and asking how philanthropists and impact investors can assess their own impact; impact investing, performance contracting, and social impact bonds; and techniques for improving the behavior and accountability of individuals and organizations. These issues will be addressed mainly through business school case studies, which place the students in the position of CEOs, managers, and investors called upon to make major decisions. **WARNING:** The course has a fair amount of reading - not more than is common in undergraduate and graduate courses, but more than is typical for MBA courses in the GSB.

**EDUC 377F. Disruptions in Education. 3 Units.**

(Same as GSBGEN 345). This course will explore the contemporary higher education industry, focusing especially on the places where disruptions of all kinds present significant opportunities and challenges for investors, entrepreneurs, and the businesses that serve this huge global market, as well as for faculty, students, and higher education administrators. Using a variety of readings and case studies to better understand recent disruptions and the unbundling occurring across the post-secondary landscape, from outside and inside the academy, both for-profit and non-profit, the course will examine technology in teaching and learning; the future of the degree and alternatives to the traditional credential; accreditation; competency based education; debt and education financing models; investing in the education space; and tertiary products and platforms that serve the student services market. Guests will include higher education leaders and practitioners, as well as investors and entrepreneurs.

**EDUC 377G. Problem Solving for Social Change. 3 Units.**

(Also GSBGEN 367). Stanford graduates will play important roles in solving many of today's and tomorrow's major societal problems -- such as improving educational and health outcomes, conserving energy, and reducing global poverty -- which call for actions by nonprofit, business, and hybrid organizations as well as governments. This course teaches skills and bodies of knowledge relevant to these roles through problems and case studies drawn from nonprofit organizations, for-profit social enterprises, and governments. Topics include designing, implementing, scaling, and evaluating social strategies; systems thinking; decision making under risk; psychological biases that adversely affect people's decisions; methods for influencing individuals' and organizations' behavior, ranging from incentives and penalties to "nudges;" human-centered design; corporate social responsibility; and pay-for-success programs. We will apply these concepts and tools to address an actual social problem facing Stanford University. (With the exception of several classes on strategy and evaluation, there is no substantial overlap with Paul Brest's and Mark Wolfson's course, Strategic Philanthropy and Impact Investing (GSBGEN 319), which has a different focus from this one.).

**EDUC 377H. Leadership & Diversity: Topics from Education. 3 Units.**

(Same as GSBGEN 377). This course will explore the critical role diversity plays in successful organizations and challenge students to develop their own brand of leadership, learning from leaders in education who have grappled with these challenges. As impact-oriented leaders aspiring to address challenges across social, economic, and political arenas, we have an imperative to advance diversity, and education provides the perfect canvas on which to explore this imperative. High-stakes issues such as school district reform, teacher effectiveness, and the school-to-prison pipeline present complex dilemmas that demand superb leadership skills. In this course, we will: (1) explore the role that diversity plays in complex leadership challenges; (2) study a range of effective leadership approaches considering different topics in education; and (3) understand our own values and decision-making criteria, developing tactics to improve our leadership capacity. We will examine contemporary leaders and controversies from education, draw upon timeless historical thinkers, enjoy the wisdom of guest speakers, and work intensively in small groups to highlight challenges, opportunities, and tradeoffs. By exploring a range of approaches and situations, we will work to a deeper understanding of ourselves and how to become more capable, empathetic, and effective leaders.

**EDUC 380. Supervised Internship. 1-15 Unit.****EDUC 381. Multicultural Issues in Higher Education. 4 Units.**

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

Same as: CSRE 181, EDUC 181

**EDUC 382. Student Development and the Study of College Impact. 4 Units.**

The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.

**EDUC 386. Leadership and Administration in Higher Education. 2 Units.**

Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts. Case study analysis of the problems and challenges facing today's higher education administrators.

**EDUC 387. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.**

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: SOC 311A

**EDUC 388A. Language Policies and Practices. 2 Units.**

For STEP teacher candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political, and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners' growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP).

**EDUC 388F. Introduction to Academic Language. 1 Unit.**

This course will provide opportunities for pre-service teachers to begin to develop an understanding of language uses, forms, and mechanics through application of a functional approach to academic language. By exploring language structures (phonology, morphology, syntax, semantics) as well as language-in-use (pragmatics and discourse), teacher candidates will be able to better recognize linguistic demands and challenges of students in the classroom.

**EDUC 389A. Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations. 3-5 Units.**

Language, as a cultural resource for shaping our identities, is central to the concepts of race and ethnicity. This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. We begin with an examination of the concepts of race and ethnicity and what it means to be "doing race," both as scholarship and as part of our everyday lives. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations (Asian, Black, Latino, Native American, White, etc.) participate in similar, yet different, ways of drawing racial and ethnic distinctions. The seminar will draw heavily on scholarship in (linguistic) anthropology, sociolinguistics and education. We will explore how we talk and don't talk about race, how we both position ourselves and are positioned by others, how the way we talk can have real consequences on the trajectory of our lives, and how, despite this, we all participate in maintaining racial and ethnic hierarchies and inequality more generally, particularly in schools. Same as: ANTHRO 320A, CSRE 389A, LINGUIST 253

**EDUC 389B. Race, Ethnicity, and Language: Writing Race, Ethnicity, and Language in Ethnography. 3-4 Units.**

This methods seminar focuses on developing ethnographic strategies for representing race, ethnicity, and language in writing without reproducing the stereotypes surrounding these categories and practices. In addition to reading various ethnographies, students conduct their own ethnographic research to test out the authors' contrasting approaches to data collection, analysis, and representation. The goal is for students to develop a rich ethnographic toolkit that will allow them to effectively represent the (re)production and (trans)formation of racial, ethnic, and linguistic phenomena.

Same as: ANTHRO 398B, LINGUIST 254

**EDUC 389C. Race, Ethnicity, and Language: Pedagogical Possibilities. 3-4 Units.**

This seminar explores the intersections of language and race/racism/racialization in the public schooling experiences of students of color. We will briefly trace the historical emergence of the related fields of sociolinguistics and linguistic anthropology, explore how each of these scholarly traditions approaches the study of language, and identify key points of overlap and tension between the two fields before considering recent examples of inter-disciplinary scholarship on language and race in urban schools. Issues to be addressed include language variation and change, language and identity, bilingualism and multilingualism, language ideologies, and classroom discourse. We will pay particular attention to the implications of relevant literature for teaching and learning in urban classrooms.

Same as: CSRE 385

**EDUC 391. Engineering Education and Online Learning. 3 Units.**

A project based introduction to web-based learning design. In this course we will explore the evidence and theory behind principles of learning design and game design thinking. In addition to gaining a broad understanding of the emerging field of the science and engineering of learning, students will experiment with a variety of educational technologies, pedagogical techniques, game design principles, and assessment methods. Over the course of the quarter, interdisciplinary teams will create a prototype or a functioning piece of educational technology.

Same as: ENGR 391

**EDUC 393. Proseminar: Education, Business, Politics. 3 Units.**

Overview of the field of education for joint degree (M.B.A./M.A.) students.

**EDUC 394. School and District Leadership to Support English Learners' Academic Achievement. 3-5 Units.**

NOTE: This will be a blended course comprising (1) two real-time face-to-face meetings during scheduled course time, one the first week of the quarter and one at the end; (2) two real-time but virtual "meets ups" during the quarter; (3) readings, discussions, and assignments done individually and in groups throughout the quarter; (4) a final project synthesizing student learning across course topics, to be presented and discussed in the last week's meeting. English learners (ELs) constitute nearly 10% of the U.S. public school population. At some point in their careers, the majority of educators will have English learners in their schools and classrooms. This course is designed for students interested in learning about the legal framework and research base for the education of ELs from the perspective of school and district leaders.

**EDUC 395. Scholarly Writing in Education and the Social Sciences. 3-5 Units.**

Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.

**EDUC 397A. Democracy and Education. 2-3 Units.**

John Dewey's *Democracy and Education* may be the most comprehensive and influential book on educational theory and practice. Conceptualizing democracy and its implications for schooling is its central concern. We offer a close reading of Dewey's effort paired with Denis Phillips's recent chapter by chapter commentary on Dewey's book. A century after *Democracy and Education* in 1916 and the founding of Stanford's School of Education in 1917, Phillips's *Companion* invites a reexamination of American democracy and education today.

**EDUC 398. Core Mechanics for Learning. 3 Units.**

In game play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core mechanics that can drive learning forward, and if so, how to build them into learning environments. The course mixes basic theory, research methods, and application of learning principles.

**EDUC 399A. Designing Surveys. 1-2 Unit.**

This workshop/course is designed for students who are designing a survey for use in a research project. The workshop content draws on relevant cognitive processing theories and research (on comprehension, retrieval, judgment, and reporting). In addition to some readings and a few lectures, this workshop is designed to be highly interactive and practical. By the end of the course students will have designed and pilot tested their survey instrument. Course may be repeated for credit.

**EDUC 400A. Introduction to Statistical Methods in Education. 3-4 Units.**

(Formerly EDUC 160.) Basic techniques in descriptive and inferential statistics for educational research will be covered with an emphasis on rigorous preparation for intermediate and advanced courses. Topics include central tendency, variance, probability, distributions, confidence interval, t-test, F-test, correlation, regression, and analysis of variance. Non-parametric statistics and graphical principles for data representation will also be addressed. Students will also be introduced to STATA in preparation for subsequent higher level courses.

**EDUC 400B. Statistical Analysis in Education: Regression. 5 Units.**

Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.

**EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences. 1 Unit.**

Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.

Same as: SPSS

**EDUC 401B. Mini Courses in Methodology: Stata. 1 Unit.**

The goal of this course is to familiarize students with the Stata statistical software package for use in quantitative research. By the end of the course, students should be able to import and export data, clean and manage data, conduct standard statistical tests (e.g., correlation, t-test, regression), and produce a graph.

**EDUC 401C. Data Analysis Examples Using R. 1 Unit.**

We will do basic and intermediate level data analysis examples, likethose that students will have seen in their courses, in R. Examplesinclude: descriptive statistics and plots, analysis of variance,ncorrelation and regression, categorical variables, multilevel data.nSee <http://rogosateaching.com/ed401/>.

**EDUC 401D. Multilevel Modeling Using R. 1 Unit.**

See <http://rogosateaching.com/stat196/> . Multilevel data analysis examples using R. Topics include: two-level nested data, growth curve modeling, generalized linear models for counts and categorical data, nonlinear models, three-level analyses. Class meets April 11, April 18, April 25, May 2, May 16.

Same as: STATS 196A

**EDUC 403. Education's Digital Future. 1 Unit.**

Digital technologies are rapidly evolving and reorganizing the way we play, learn, and work. Significant questions have emerged about how digital and networked information technologies might be both narrowing and widening gaps in access to learning opportunities. It is becoming clear that technology alone will not catalyze the forms of equity that are so essential for preparing young people and their families for a rapidly changing future. Instead we need to deeply rethink and intentionally redesign the social organizations and tools that provide learning opportunities (schools, workplaces, community organizations, libraries) and study these innovations at a regional as well as national level. In this course and public seminar, designed to foster new forms of collaboration and innovation, we will engage these questions through a series of invited conversations with a broad range of stakeholders including researchers, educators, and industry representatives. May be repeat for credit.

**EDUC 404. Topics in Brazilian Education: Public Policy and Innovation for the 21st Century. 1-2 Unit.**

The objective of this seminar is to provide students from different backgrounds an opportunity to learn about current issues and debates on Brazilian education. The seminar will cover topics on the history of Brazilian education; an overview of current school reforms at the federal level; educational assessments; education and economic growth; educational equity; teacher labor market; technology and education; early childhood; and higher education to Brazil.

**EDUC 405. Teaching the Humanities. 3 Units.**

This course, designed for graduate students in the humanities and education, explores approaches to teaching the humanities at both the secondary and collegiate levels, with a focus on the teaching of text, and how the humanities can help students develop the ability to read and think critically. The course explores purposes and pedagogical approaches for teaching humanities through a variety of texts and perspectives. The course is designed as an opportunity for doctoral students in the Humanities both to enrich their own teaching, and to broaden their understanding of professional teaching opportunities, including community college and secondary school teaching.

**EDUC 407. Lytics Seminar. 1-4 Unit.**

This course is a survey of research methods with applications in online learning. The methods covered are very interdisciplinary, including an introduction to machine learning, text/discourse analysis, causal modeling, and psychometrics. Broader questions in research methodology are also covered, including how to formulate a good research question, when to use qualitative or quantitative methods, and the relative merits of theory-driven confirmatory vs. exploratory research. The goal of this course is to support researchers in the online learning space and other fields in their research endeavors.

**EDUC 408. Social Interaction Analysis. 1-4 Unit.**

This seminar will focus on foundations and methodic approaches to the study of social interaction.

**EDUC 411. Early Childhood Education. 3-4 Units.**

This course addresses a broad set of topics that have implications for developmentally appropriate and effective early childhood education. It begins with children's social, emotional and cognitive development and issues related to poverty, culture and language. We will also examine research evidence on effective instruction for young children, evaluations of preschool interventions, and several current policy debates.

**EDUC 412. Workshop in Religion and Education. 1 Unit.**

This 1-unit workshop will explore the intersection of religion and education across a variety of learning environments and demographics. It invites an ongoing conversation of the relationships between schools, congregations, religious bodies, learners, seekers, philanthropy, and public education. Advanced students and visiting scholars will have an opportunity to present their work for discussion. May be repeat for credit. Same as: RELIGST 333X

**EDUC 413. Ethnographies of Religion: Education, Socialization, Indoctrination. 3-5 Units.**

Religion has long been a central preoccupation for ethnographers interested in the formation and function of social groups. Much ethnography of religion focuses on rituals and practices of inscription – exploring the ways in which religious communities turn concepts into practices (and vice versa) that reinscribe members within an collective. These efforts take many forms, but they are, at their core, educational, insofar as they serve as an informal curriculum for the acquisition and rehearsal of theological, communal, ritual, textual, and embodied forms. This seminar will focus on the educational aspects central to ethnographic approaches to the study of religion, looking into and beyond schools.

**EDUC 416. Issues and Alternative Approaches in the Testing of English Language Learners. 2-3 Units.**

This course is intended for future researchers, practitioners, and decision makers. It examines major challenges in the testing of English language learners (ELLs) from the perspective of validity and fairness. The course provides a critical review of current practices in large-scale assessment concerning ELLs in terms of three kinds of limitations: population misspecification, measurement error, and overgeneralization. The course also promotes creative thinking in the development of alternative views and practices in ELL testing.

**EDUC 417. Research and Policy on Postsecondary Access. 3 Units.**

The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center). Same as: EDUC 117

**EDUC 419. Academic Achievement of Language Minority Students. 3-5 Units.**

Emphasis is on the current state of knowledge in the research literature and comparisons to students' experiences and observations in bilingual education, English as a second language, reading instruction, cultural issues in education, and research methods.

**EDUC 421. Powerful Ideas for Learning Sciences and Technology Design. 3 Units.**

This course is intended as a graduate level seminar that provides in-depth readings and discussions, Professor Roy Pea's professional reflections, and student essay-writing on topics examined in Dr. Pea's select publications and associated influential writings.

**EDUC 424. Introduction to Research in Curriculum and Teacher Education. 2-5 Units.**

Required for first-year CTE doctoral students. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper.

**EDUC 425. Advanced Topics in Research on Self and Stigma. 1-3 Unit.**

This course focuses on the relevance of self, identity, and stigmatization to understanding and remedying social problems. A key focus will be on how interactions between the self-system and social systems (e.g. schools, workplaces, institutions) drive outcomes over time, including educational and economic inequality. More broadly, class discussion and readings will address a social psychological analysis of intervention and change.

**EDUC 429S. History of American Indian Education. 5 Units.**

How the federal government placed education at the center of its Indian policy in second half of 19th century, subjecting Native Americans to programs designed to erase native cultures and American Indian responses to those programs. Topics include traditional Indian education, role of religious groups, Meriam Report, Navajo-Hopi Rehabilitation Act, Johnson-O'Malley Act, and public schools. Same as: EDUC 119S, NATIVEAM 119S

**EDUC 430A. Experimental Research Designs in Educational Research. 3-5 Units.**

The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

**EDUC 430B. Causal Inference in Quantitative Educational and Social Science Research. 3-5 Units.**

This course surveys quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, fixed effects estimators, and difference-in-differences. We emphasize the proper interpretation of these research designs and critical engagement with their key assumptions for applied researchers. Prerequisites: Prior training in multivariate regression (e.g., ECON 102B or the permission of the instructor).

Same as: SOC 257

**EDUC 430C. Using Data to Describe the World: Descriptive Social Science Research Techniques. 3-5 Units.**

Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including individual fixed effects models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257.

Same as: SOC 258

**EDUC 437. Curricular Practical Training. 1-3 Unit.**

"Curricular Practical Training" independent study sections specifically created for international students in F-1 Visa Status who wish to receive credit and to be paid for internships.

**EDUC 438. Second Language Acquisition Theories: Implications for Policy, Instruction and Teacher Preparation. 3-5 Units.**

This course will first offer a snapshot of Second Language Acquisition (SLA) theories, contrast varying theoretical perspectives and examine how they inform the language teaching and learning process. It will then engage students in the examination and discussion of well-known approaches used in language instruction (e.g., leveled ELD, SIOP, CLIL, bilingual education, secondary foreign language education, heritage language instruction) in order to identify the theoretical perspectives informing particular pedagogies and practices.

**EDUC 445. Entrepreneurial Approaches to Education Reform. 3 Units.**

(Same as STRAMGT 335) In this course, students will investigate opportunities and challenges of entrepreneurial ventures trying to make a positive impact in public education. The course requires a basic level of understanding of the U.S. K-12 public school system. The first session will analyze the structure of the public education as an industry, with a special emphasis on understanding the achievement gap. Subsequent sessions will explore challenges in increasing efficacy, ensuring financial sustainability, and scaling for entrepreneurs who have sought to change student outcomes, solve pain points, and innovate. The course will feature a variety of ventures (including schools, education technology, training, and supplemental services) and organizational models (for-profit, not-for-profit, and benefit corporation). This course is suitable for students aspiring to be entrepreneurs, leaders in entrepreneurial organizations, leaders in educational organizations, Board members, donors or investors. (Note: this is not a "how-to" course on starting an entrepreneurial venture.).

**EDUC 447. Leading Change in Public Education. 2 Units.**

(Same as STRAMGT 537) American public education is in crisis. What will it take to get it back on track? As in all large-scale enterprises in need of transformative change, leadership matters greatly. This course focuses on what it takes from a strategic and extremely practical perspective to lead change in public education at the systems level. We will meet some of the most exciting educational leaders in public education today and dissect their leadership styles, strategies, innovations and solutions. We will look for lessons from traditional U.S. districts, successful charter management organizations, and international perspectives to determine what it takes to be an effective leader in education reform. Students will debate the strategies and efficacy of how different leaders approached systems-level change, and will form their own working hypotheses of what is needed to help transform the American education system. The course will end with a look at education fellowship programs and other ways for Stanford graduates to take on meaningful leadership roles in K-12 education reform. Dan Katzir worked for Bain & Company, Teach for America, and Sylvan Learning Systems before joining The Broad Foundation as its founding managing director. He is an experienced case study teacher and the editor of *The Redesign of Urban School Systems* (Harvard University Press, 2013). This course was designed to be taken in tandem with STRAMGT 535: Entrepreneurial Approaches to Education Reform and the courses will be highly complementary in approach.

**EDUC 450A. Qualitative Analysis in Education. 4 Units.**

Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.

**EDUC 450C. Qualitative Interviewing. 3 Units.**

Addressing the theoretical underpinnings of qualitative interviews as well as the application of theory to practice, this course considers different approaches to interviewing. Interview types covered will range from group interviews to individual interviews, and from unstructured, ethnographically oriented interviews to highly structured interviews. Working with community partners to facilitate application to practice, the students will move from theory to interview design, implementation, and initial stages of analysis, with an emphasis on consistency in approach and utility in graduate-level research.

**EDUC 453. Doctoral Dissertation. 1-15 Unit.**

For doctoral students only. (all areas).

**EDUC 460. Language, Culture, Cognition, and Assessment. 3 Units.**

Examines the intersection of language, culture, and cognition, and the implications of this intersection in educational assessment. Knowledge from different disciplines is used to reason about assessment from the conceptual, methodological, and social perspectives.

**EDUC 465. Development and Psychological Sciences (DAPS) Faculty Student Seminar. 1 Unit.**

Faculty and students in the DAPS graduate training program will convene to discuss how the disciplines of developmental and psychological sciences impact education, ground these issues in the work of current faculty and advanced student research, discuss professional development issues unique to this area, and share student perspectives on the field and their progress in the program. May be repeat for credit.

**EDUC 466. Doctoral Seminar in Curriculum Research. 2-4 Units.**

Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review.

**EDUC 467. QP Presentation Seminar and Symposium. 1-3 Unit.**

For 3rd and 4th year PhD students in CTE. Students will learn to transform their 2nd year qualifying papers into polished oral presentations suitable for professional academic conferences. Course will cover presentation skills, including appropriate use of visuals; time management; and strategic attention to key aspects of study background, motivation, methods, findings, conclusions, and implications. At the end of the course students will participate in a series of public symposia to present the results of their QP study. For additional units students will have the option to write proposals to present their studies at professional conferences.

**EDUC 470. Practicum. 1-15 Unit.**

For advanced graduate students. (all areas).

**EDUC 480. Directed Reading. 1-15 Unit.**

For advanced graduate students. (all areas).

**EDUC 490. Directed Research. 1-15 Unit.**

For advanced graduate students. (all areas).

**EDUC 493. Workshop in Design and Analysis of Comparative Studies. 1-3 Unit.**

A workshop for second-year and later students with data analysis or research design activities including dissertation planning or analysis. Readings and exercises developed around participating student research. Topics have included: multilevel data analysis, within-subjects designs, and implementation of matching methods for comparing non-equivalent groups. Various computing customs accommodated. See <http://web.stanford.edu/~rag/ed493/>. Prerequisite: intermediate statistical methods course work.

**EDUC 801. TGR Project. 0 Units.**

For advanced graduate students. Instructor consent required. (all areas).

**EDUC 802. TGR Dissertation. 0 Units.**

For advanced graduate students. Instructor consent required. (all areas).

**EDUC 9. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EARTHYSYS 9, HUMBIO 9, PUBLPOL 74, URBANST 101

**EDUC 98. Service Learning Practicum. 1 Unit.**

For Alternative Spring Break program leaders. The skills and philosophical framework to develop and lead an ASB experience. May be repeat for credit.

## Electrical Engineering (EE)

**EE 100. The Electrical Engineering Profession. 1 Unit.**

Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management.

**EE 101A. Circuits I. 4 Units.**

Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. Prerequisite: ENGR40 or ENGR40M is useful but not strictly required.

**EE 101B. Circuits II. 4 Units.**

Continuation of EE101A. Introduction to circuit design for modern electronic systems. Modeling and analysis of analog gain stages, frequency response, feedback. Filtering and analog-to-digital conversion. Fundamentals of circuit simulation. Prerequisites: EE101A, EE102A. Recommended: CME102.

**EE 102A. Signal Processing and Linear Systems I. 4 Units.**

Concepts and tools for continuous- and discrete-time signal and system analysis with applications in signal processing, communications, and control. Mathematical representation of signals and systems. Linearity and time invariance. System impulse and step responses. System frequency response. Frequency-domain representations: Fourier series and Fourier transforms. Filtering and signal distortion. Time/frequency sampling and interpolation. Continuous-discrete-time signal conversion and quantization. Discrete-time signal processing. Prerequisite: MATH 53 or CME 102.

**EE 102B. Signal Processing and Linear Systems II. 4 Units.**

Continuation of EE 102A. Concepts and tools for continuous- and discrete-time signal and system analysis with applications in communications, signal processing and control. Analog and digital modulation and demodulation. Sampling, reconstruction, decimation and interpolation. Finite impulse response filter design. Discrete Fourier transforms, applications in convolution and spectral analysis. Laplace transforms, applications in circuits and feedback control. Z transforms, applications in infinite impulse response filter design. Prerequisite: EE 102A.

**EE 103. Introduction to Matrix Methods. 3-5 Units.**

Introduction to applied linear algebra with emphasis on applications. Vectors, norm, and angle; linear independence and orthonormal sets; applications to document analysis. Clustering and the k-means algorithm. Matrices, left and right inverses, QR factorization. Least-squares and model fitting, regularization and cross-validation. Constrained and nonlinear least-squares. Applications include time-series prediction, tomography, optimal control, and portfolio optimization. Undergraduate students should enroll for 5 units, and graduate students should enroll for 3 units. Prerequisites: MATH 51 or CME 100, and basic knowledge of computing (CS 106A is more than enough, and can be taken concurrently). EE103/CME103 and Math 104 cover complementary topics in applied linear algebra. The focus of EE103 is on a few linear algebra concepts, and many applications; the focus of Math 104 is on algorithms and concepts.

Same as: CME 103

**EE 104. Introduction to Machine Learning. 3-5 Units.**

Introduction to machine learning. Formulation of supervised and unsupervised learning problems. Regression and classification. Data standardization and feature engineering. Loss function selection and its effect on learning. Regularization and its role in controlling complexity. Validation and overfitting. Robustness to outliers. Simple numerical implementation. Experiments on data from a wide variety of engineering and other disciplines. In this initial offering, enrollment is limited to 50 students. Undergraduate students should enroll for 5 units, and graduate students should enroll for 3 units. Prerequisites: EE 103; EE 178 or CS 109; CS106A or equivalent.

**EE 107. Embedded Networked Systems. 3 Units.**

Networked embedded systems are often hidden from our view, but they are a key component that enables our modern society. Embedded systems bridge our physical world with powerful digital measurement and control systems. Applications of today's embedded systems range from stabilization in drones authentication in credit cards, and even temperature control in toasters. In this class, students will learn about how to build an networked embedded system from the ground up. The lectures will focus on the key enabling components of embedded systems, including: Clocks, GPIO, Interrupts, Busses, Amplifiers, Regulators, Power supplies, ADC/DAC, DMA, and Storage. The goal of the class is to familiarize the students with these components such that they can build their own embedded systems in devices. Prerequisites: EE 102A or ENGR 40M.

**EE 108. Digital System Design. 4 Units.**

Digital circuit, logic, and system design. Digital representation of information. CMOS logic circuits. Combinational logic design. Logic building blocks, idioms, and structured design. Sequential logic design and timing analysis. Clocks and synchronization. Finite state machines. Microcode control. Digital system design. Control and datapath partitioning. Lab. \*In Autumn, enrollment preference is given to EE majors. Any EE majors who must enroll in Autumn are invited to contact the instructor. Formerly EE 108A.

**EE 109. Digital Systems Design Lab. 4 Units.**

The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 25; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X.

**EE 114. Fundamentals of Analog Integrated Circuit Design. 3-4 Units.**

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Differential circuits, frequency response, and feedback will also be covered. Performance evaluation using computer-aided design tools.

Undergraduates must take EE 114 for 4 units. Prerequisite: 101B.

GER:DB-EngrAppSci.

Same as: EE 214A

**EE 116. Semiconductor Devices for Energy and Electronics. 3 Units.**

The underpinnings of modern technology are the transistor (circuits), the capacitor (memory), and the solar cell (energy). EE 116 introduces the physics of their operation, their historical origins (including Nobel prize breakthroughs), and how they can be optimized for future applications. The class covers physical principles of semiconductors, including silicon and new material discoveries, quantum effects, band theory, operating principles, and device equations. Recommended (but not required) co-requisite: EE 65 or equivalent.

**EE 118. Introduction to Mechatronics. 4 Units.**

Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mechatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Prerequisites: ENGR 40, CS 106, or equivalents. Same as: ME 210

**EE 124. Introduction to Neuroelectrical Engineering. 3 Units.**

Fundamental properties of electrical activity in neurons, technology for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical systems.

Topics: action potential generation and propagation, neuro-MEMS and measurement systems, experimental design and statistical data analysis, information encoding and decoding, clinical diagnostic systems, and fully-implantable neural prosthetic systems design. Prerequisite: EE 101A and EE 102A.

**EE 133. Analog Communications Design Laboratory. 3-4 Units.**

Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminal EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A.

Same as: EE 233

**EE 134. Introduction to Photonics. 4 Units.**

Photonics, optical components, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication, sensor and imaging systems. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project on confocal microscopy or other method of sensing or analyzing biometric data. Laboratory experiments. Prerequisite: EE 102A and one of the following: EE 42, Physics 43, or Physics 63.

**EE 142. Engineering Electromagnetics. 3 Units.**

Introduction to electromagnetism and Maxwell's equations in static and dynamic regimes. Electrostatics and magnetostatics: Gauss's, Coulomb's, Faraday's, Ampere's, Biot-Savart's laws. Electric and magnetic potentials. Boundary conditions. Electric and magnetic field energy. Electrodynamics: Wave equation; Electromagnetic waves; Phasor form of Maxwell's equations. Solution of the wave equation in 1D free space: Wavelength, wave-vector, forward and backward propagating plane waves. Poynting's theorem. Propagation in lossy media, skin depth. Reflection and refraction at planar boundaries, total internal reflection. Solutions of wave equation for various 1D-3D problems: Electromagnetic resonators, waveguides periodic media, transmission lines. Formerly EE 141. Pre-requisites: Phys 43 or EE 42, CME 100, CME 102 (recommended).

**EE 14N. Things about Stuff. 3 Units.**

Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they elucidate broadly applicable scientific principles. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves.

**EE 151. Sustainable Energy Systems. 3 Units.**

Energy demand is expected to grow by 30% by 2025, while at the same time the European Union is demanding a carbon footprint at 1990 levels. We examine energy flow in the US and Europe, and deduce from it a strategy for sustainable growth. Potential solutions include distributed small scale networked energy generation, solar energy, wind and water, as well as nuclear energy. A systems perspective allows optimization. Fundamental concepts will be demonstrated in class through hands-on experiments.

**EE 153. Power Electronics. 3-4 Units.**

Addressing the energy challenges of today and the environmental challenges of the future will require efficient energy conversion techniques. This course will discuss the circuits used to efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The components used in these circuits (e.g., diodes, transistors, capacitors, inductors) will also be covered in detail to highlight their behavior in a practical implementation. A lab will be held with the class where students will obtain hands on experience with power electronic circuits. Formerly EE 292J. Prerequisite: EE 101B.

Same as: EE 253

**EE 155. Green Electronics. 4 Units.**

Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This course examines this technology and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. Topics include power converter topologies, periodic steady-state analysis, control, motors and drives, photovoltaic systems, and design of magnetic components. The course involves a hands-on laboratory and a substantial final project. Formerly EE 152. Required: EE101B, EE102A, EE108. Recommended: ENGR40 or EE122A.

Same as: EE 255

**EE 15N. The Art and Science of Engineering Design. 3 Units.**

The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures in designing a term project of their choice over the quarter. The second part of each lecture will consist of outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final design, (2) it presents the different functions that people play in a project, and (3) it gives students a chance to consider what role in a project would be best suited to their interests and skills.

**EE 168. Introduction to Digital Image Processing. 3-4 Units.**

Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formation and enhancement, imaging systems, perspective, morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming.

**EE 169. Introduction to Bioimaging. 3 Units.**

Bioimaging is important for both clinical medicine, and medical research. This course will provide an introduction to several of the major imaging modalities, using a signal processing perspective. The course will start with an introduction to multi-dimensional Fourier transforms, and image quality metrics. It will then study projection imaging systems (projection X-Ray), backprojection based systems (CT, PET, and SPECT), systems that use beam forming (ultrasound), and systems that use Fourier encoding (MRI). Prerequisites: EE102A, EE102B.

**EE 178. Probabilistic Systems Analysis. 4 Units.**

Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus.

**EE 179. Analog and Digital Communication Systems. 3 Units.**

This course covers the fundamental principles underlying the analysis, design and optimization of analog and digital communication systems. Design examples will be taken from the most prevalent communication systems today: cell phones, Wifi, radio and TV broadcasting, satellites, and computer networks. Analysis techniques based on Fourier transforms and energy/power spectral density will be developed. Mathematical models for random variables and random (noise) signals will be presented, which are used to characterize filtering and modulation of random noise. These techniques will then be used to design analog (AM and FM) and digital (PSK and FSK) communication systems and determine their performance over channels with noise and interference. Prerequisite: 102A.

**EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes. 3 Units.**

Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manoharan in that it emphasizes laboratory work and an experimental student-designed project. Prerequisites: high-school physics.

**EE 180. Digital Systems Architecture. 4 Units.**

The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Formerly EE 108B. Prerequisite: CS107 (required) and EE108 (recommended but not required).

**EE 190. Special Studies or Projects in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading. Course may be repeated for credit.

**EE 191. Special Studies and Reports in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190. Course may be repeated for credit.

**EE 191A. Special Studies and Reports in Electrical Engineering. 1 Unit.**

EE191A is part of the Accelerated Calculus for Engineers program. Independent work under the direction of a faculty member given for a letter grade only. EE 191A counts as a Math one unit seminar course: it is this unit that constitutes the ACE program.

**EE 191W. Special Studies and Reports in Electrical Engineering. 3-10 Units.**

WIM-version of EE 191. For EE students using special studies (e.g., honors project, independent research project) to satisfy then writing-in-major requirement. A written report that has gone through revision with an advisor is required. An advisor from the Writing Center is recommended. Same as: WIM

**EE 195. Electrical Engineering Instruction. 1-3 Unit.**

Students receive training from faculty or graduate student mentors to prepare them to assist in instruction of Electrical Engineering courses. The specific training and units of credit received are to be defined in consultation with one of the official instructors of EE 195. Note that University regulations prohibit students from being paid for the training while receiving academic credit for it. Enrollment limited.

**EE 203. The Entrepreneurial Engineer. 1 Unit.**

Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E. May be repeated for credit.

**EE 204S. Business Management for Electrical Engineers and Computer Scientists. 3 Units.**

For SCPD students including NDOs; see EE204 for description.

**EE 205. Product Management for Electrical Engineers and Computer Scientists. 3 Units.**

Successful products are the highest impact contribution anyone can make in product development. Students will learn to build successful products using fundamental concepts in Product Management. These include understanding customers, their job to be done, identifying new product opportunities, and defining what to build that is technically feasible, valuable to the customer, and easy to use. The course has two components, Product Management Project with corporate partners, and case-based classroom discussion of PM concepts and application. Prerequisite: Students must be currently enrolled in a MS or PhD engineering degree program.

**EE 207. Neuromorphics: Brains in Silicon. 3 Units.**

(Formerly EE 304) Neuromorphic systems run perceptual, cognitive and motor tasks in real-time on a network of highly interconnected nonlinear units. To maximize density and minimize energy, these units—like the brain's neurons—are heterogeneous and stochastic. The first half of the course covers learning algorithms that automatically synthesize network configurations to perform a desired computation on a given heterogeneous neural substrate. The second half of the course surveys system-on-a-chip architectures that efficiently realize highly interconnected networks and mixed analog-digital circuit designs that implement area and energy-efficient nonlinear units. Prerequisites: EE102A is required. Same as: BIOE 313

**EE 212. Integrated Circuit Fabrication Processes. 3 Units.**

For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford's Nanofabrication laboratory. Process simulators illustrate concepts. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410.

**EE 213. Digital MOS Integrated Circuits. 3 Units.**

Looks a little more deeply at how digital circuits operate, what makes a gate digital, and how to "cheat" to improve performance or power. To aid this analysis we create a number of different models for MOS transistors and choose the simplest one that can explain our the circuit's operation, using both hand and computer analysis. We explore static, dynamic, pulse-mode, and current mode logic, and show how they are used in SRAM design. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues are also covered. Formerly EE 313. Prerequisites: EE 101B, EE 108. Recommended: EE 271.

**EE 214A. Fundamentals of Analog Integrated Circuit Design. 3-4 Units.**

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Differential circuits, frequency response, and feedback will also be covered. Performance evaluation using computer-aided design tools. Undergraduates must take EE 114 for 4 units. Prerequisite: 101B. GER:DB-EngrAppSci. Same as: EE 114

**EE 214B. Advanced Analog Integrated Circuit Design. 3 Units.**

Analysis and design of analog integrated circuits in advanced MOS and bipolar technologies. Device operation and compact modeling in support of circuit simulations needed for design. Emphasis on quantitative evaluations of performance using hand calculations and circuit simulations; intuitive approaches to design. Analytical and approximate treatments of noise and distortion; analysis and design of feedback circuits. Design of archetypal analog blocks for networking and communications such as broadband gain stages and transimpedance amplifiers. Prerequisites: EE114/214A.

**EE 216. Principles and Models of Semiconductor Devices. 3 Units.**

Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.

**EE 218. Power Semiconductor Devices and Technology. 3 Units.**

This course starts by covering the device physics and technology of current silicon power semiconductor devices including power MOSFETs, IGBTs, and Thyristors. Wide bandgap materials, especially GaN and SiC are potential replacements for Si power devices because of their fundamentally better properties. This course explores what is possible in these new materials, and what the remaining challenges are for wide bandgap materials to find widespread market acceptance in power applications. Future clean, renewable energy systems and high efficiency power control systems will critically depend on the higher performance devices possible in these new materials. Prerequisites: EE 116 or equivalent.

**EE 21N. What is Nanotechnology?. 3 Units.**

Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman ("There's Plenty of Room at the Bottom"), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: Engines of Creation: The Coming Era of Nanotechnology by Eric Drexler, and Prey by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilities of nanotechnology.

**EE 222. Applied Quantum Mechanics I. 3 Units.**

Emphasis is on applications in modern devices and systems. Topics include: Schrödinger's equation, eigenfunctions and eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, operator approach to quantum mechanics, Dirac notation, angular momentum, hydrogen atom, calculation techniques including matrix diagonalization, perturbation theory, variational method, and time-dependent perturbation theory with applications to optical absorption, nonlinear optical coefficients, and Fermi's golden rule. Prerequisites: MATH 52 and 53, EE 65 or PHYSICS 65 (or PHYSICS 43 and 45). Same as: MATSCI 201

**EE 223. Applied Quantum Mechanics II. 3 Units.**

Continuation of 222, including more advanced topics: quantum mechanics of crystalline materials, methods for one-dimensional problems, spin, systems of identical particles (bosons and fermions), introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.

**EE 225. Biochips and Medical Imaging. 3 Units.**

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

Same as: MATSCI 382, SBIO 225

**EE 228. Basic Physics for Solid State Electronics. 3 Units.**

Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics.

**EE 22N. Medical Imaging Systems. 3 Units.**

Preference to freshmen. The technology of major imaging modalities used for disease diagnosis: x-ray, ultrasound, and magnetic resonance; their history, societal impact, and clinical applications. Field trips to a medical center and an imaging research lab. Term paper and presentation. Prerequisites: high school physics and calculus.

**EE 230. Biophotonics: Light in Biology. 3 Units.**

This course will provide an introduction to the use of optics in biology, primarily focusing on microscopy from an engineering perspective (i.e., the focus of the course is more on technology than biology). Course material will be interspersed with labs to provide hands-on experience with common techniques in modern microscopy (e.g., brightfield, fluorescence, confocal and phase contrast microscopy). Background in college physics strongly recommended. Programming experience with Matlab required. Suggested prerequisites: EE 134 or EE 236A.

**EE 233. Analog Communications Design Laboratory. 3-4 Units.**

Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminial EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A.

Same as: EE 133

**EE 234. Photonics Laboratory. 3 Units.**

Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 242 or equivalent. Recommended: EE 236A.

**EE 235. Analytical Methods in Biotechnology. 3 Units.**

This course provides fundamental principles underlying important analytical techniques used in modern biotechnology. The course comprises of lectures and hands-on laboratory experiments. Students will learn the core principles for designing, implementing and analyzing central experimental methods including polymerase chain reaction (PCR), electrophoresis, immunoassays, and high-throughput sequencing. The overall goal of the course is to enable engineering students with little or no background in molecular biology to transition into research in the field of biomedicine.

**EE 236A. Modern Optics. 3 Units.**

Geometrical optics, aberrations, optical instruments, radiometry. Ray matrices and Gaussian beams. Wave nature of light. Plane waves: at interfaces, in media with varying refractive index. Diffraction and Fourier optics. Interference, single-beam interferometers (Fabry-Perot), multiple-beam interferometers (Michelson, Mach-Zehnder). Polarization, Jones and Stokes calculi. Formerly EE 268. Prerequisites: EE 142 or familiarity with electromagnetism and plane waves.

**EE 236AL. Modern Optics - Laboratory. 1 Unit.**

The Laboratory Course allows students to work hands-on with optical equipment to conduct five experiments that compliment the lecture course. Examples are Gaussian Beams and Resonators, Interferometers, and Diffraction.

**EE 236B. Guided Waves. 3 Units.**

Maxwell's equations, constitutive relations. Kramers-Kronig relations. Modes in waveguides: slab, rectangular, circular. Photonic crystals, surface plasmon modes. General properties of waveguide modes: orthogonality, phase and group indices, group velocity dispersion. Chirped pulse propagation in dispersive media and its connection to Gaussian beam propagation. Time lens. Waveguide technologies: glass, silicon, III-V semiconductor, metallic. Waveguide devices: fibers, lasers, modulators, arrayed waveguide gratings. Scattering matrix description of passive optical devices, and constraints from energy conservation, time-reversal symmetry and reciprocity. Mode coupling, directional couplers, distributed-feedback structures. Resonators from scattering matrix and input-output perspective. Micro-ring resonators. Prerequisites: EE 236A and EE 242 or familiarity with differential form of Maxwell's equations.

**EE 236C. Lasers. 3 Units.**

Atomic systems, spontaneous emission, stimulated emission, amplification. Three- and four-level systems, rate equations, pumping schemes. Laser principles, conditions for steady-state oscillation. Transverse and longitudinal mode control and tuning. Exemplary laser systems: gas (HeNe), solid state (Nd:YAG, Ti:sapphire) and semiconductors. Elements of laser dynamics and noise. Formerly EE231. Prerequisites: EE 236B and familiarity with modern physics and semiconductor physics. Recommended: EE 216 and EE 223 (either may be taken concurrently).

**EE 23N. Imaging: From the Atom to the Universe. 3 Units.**

Preference to freshmen. Forms of imaging including human and animal vision systems, atomic force microscope, microscope, digital camera, holography and three-dimensional imaging, telescope, synthetic aperture radar imaging, nuclear magnetic imaging, sonar and gravitational wave imaging, and the Hubble Space telescope. Physical principles and exposure to real imaging devices and systems.

**EE 242. Electromagnetic Waves. 3 Units.**

Continuation of 142. Maxwell's equations. Plane waves in lossless and lossy media. Skin effect. Flow of electromagnetic power (Poynting's theorem). Reflection and refraction of waves at planar boundaries. Snell's law and total internal reflection. Reflection and refraction from lossy media. Guided waves. Parallel-plate and dielectric-slab waveguides. Hollow wave-guides, cavity resonators, microstrip waveguides, optical fibers. Interaction of fields with matter and particles. Antennas and radiation of electromagnetic energy. Prerequisites: EE 142 or PHYSICS 120.

**EE 243. Semiconductor Optoelectronic Devices. 3 Units.**

Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductor optoelectronic materials and heterostructures. Devices include: optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 or equivalent.

**EE 247. Introduction to Optical Fiber Communications. 3 Units.**

Fibers: single- and multi-mode, attenuation, modal dispersion, group-velocity dispersion, polarization-mode dispersion. Nonlinear effects in fibers: Raman, Brillouin, Kerr. Self- and cross-phase modulation, four-wave mixing. Sources: light-emitting diodes, laser diodes, transverse and longitudinal mode control, modulation, chirp, linewidth, intensity noise. Modulators: electro-optic, electro-absorption. Photodiodes: p-i-n, avalanche, responsivity, capacitance, transit time. Receivers: high-impedance, transimpedance, bandwidth, noise. Digital intensity modulation formats: non-return-to-zero, return-to-zero. Receiver performance: Q factor, bit-error ratio, sensitivity, quantum limit. Sensitivity degradations: extinction ratio, intensity noise, jitter, dispersion. Wavelength-division multiplexing. System architectures: local-area, access, metropolitan-area, long-haul. Prerequisites: EE 102A and EE 142.

**EE 251. High-Frequency Circuit Design Laboratory. 3 Units.**

Students will study the theory of operation of instruments such as the time-domain reflectometer, sampling oscilloscope and vector network analyzer. They will build on that theoretical foundation by designing, constructing and characterizing numerous wireless building blocks in the upper-UHF range (e.g., up to about 500MHz), in a running series of laboratory exercises that conclude in a final project. Examples include impedance-matching and coupling structures, filters, narrowband and broadband amplifiers, mixers/modulators, and voltage-controlled oscillators. Prerequisite: EE 114 or EE 214A.

**EE 252. Antennas. 3 Units.**

This course aims to cover the theory, simulation, and hands-on experiment in antenna design. Topics include: basic parameters to describe the performance and characteristics of an antenna, link budget analyses, solving the fields from a Hertzian dipole, duality, equivalence principle, reciprocity, linear wire antenna, circular loop antenna, antenna array, slot and patch antennas, helical antennas, wideband antennas, size reduction techniques, wideband small antennas, and circularly polarized (CP) small antennas. Students will learn to use a commercial electromagnetic simulator in lab sessions. A final project is designed to solve a research antenna design problem in biomedical area or wireless communications. Prerequisite: EE 142 or Physics 120 or equivalent. Enrollment capacity limited to 25 students.

**EE 253. Power Electronics. 3-4 Units.**

Addressing the energy challenges of today and the environmental challenges of the future will require efficient energy conversion techniques. This course will discuss the circuits used to efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The components used in these circuits (e.g., diodes, transistors, capacitors, inductors) will also be covered in detail to highlight their behavior in a practical implementation. A lab will be held with the class where students will obtain hands on experience with power electronic circuits. Formerly EE 292J. Prerequisite: EE 101B. Same as: EE 153

**EE 254. Advanced Topics in Power Electronics. 3 Units.**

In this course, we will study the practical issues related to the practical design of power electronic converters. We will also explore the trade-offs involved in selecting among the different circuits used to convert ac to dc, dc to ac and back to dc over a wide range of power levels suitable for different applications. In Advanced Topics in Power Electronic, as a multidisciplinary field, we will discuss power electronics circuits, extraction of transfer functions in Continuous and discontinuous conduction mode, voltage and current control of power converters, design of input/output filters to meet Electro Magnetic Interference specifications, layout of power electronics circuits and put this knowledge in a very practical context. Prerequisites: EE 153/253.

**EE 255. Green Electronics. 4 Units.**

Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This course examines this technology and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. Topics include power converter topologies, periodic steady-state analysis, control, motors and drives, photovoltaic systems, and design of magnetic components. The course involves a hands-on laboratory and a substantial final project. Formerly EE 152. Required: EE101B, EE102A, EE108. Recommended: ENGR40 or EE122A. Same as: EE 155

**EE 256. Numerical Electromagnetics. 3 Units.**

Principles and applications of numerical techniques for solving practical problems of electromagnetics. Finite-difference time-domain (FDTD) method and finite-difference frequency-domain (FDFD) method for solving Maxwell's equations. Numerical analysis of stability. Perfectly matched layer (PML) absorbing boundaries. Total-field/scattered-field (TF/SF) method. Waveguide mode analysis. Bloch boundary conditions. The course requires programming and the use of MATLAB or other equivalent tools. Prerequisite: EE 242 or equivalent.

**EE 261. The Fourier Transform and Its Applications. 3 Units.**

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, basic linear algebra, Comfort with sums and discrete signals, Fourier series at the level of 102A.

**EE 262. Two-Dimensional Imaging. 3 Units.**

Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: EE261. Recommended: EE278, EE279.

**EE 263. Introduction to Linear Dynamical Systems. 3 Units.**

Applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations, and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular-value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer-matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: Linear algebra and matrices as in EE103 or MATH104; ordinary differential equations and Laplace transforms as in EE102B or CME 102. Same as: CME 263

**EE 264. Digital Signal Processing. 3-4 Units.**

Digital signal processing (DSP) techniques and design of DSP applications. Topics include: discrete-time random signals; sampling and multi-rate systems; oversampling and quantization in A-to-D conversion; properties of LTI systems; quantization in fixed-point implementations of filters; digital filter design; discrete Fourier Transform and FFT; and spectrum analysis using the DFT. In the design part of the course, students develop basic DSP applications on an embedded processing platform. The 4-unit version of the course, which meets the EE design requirement, adds a final 4-week project and report. See [ee264.stanford.edu](http://ee264.stanford.edu) for more information. Prerequisite: EE 102A and EE 102B or equivalent, basic programming skills (Matlab and C++).

**EE 264W. Digital Signal Processing. 5 Units.**

Writing in the Major (WIM) version of the 4-unit EE 264 theory + lab/project course. This course also meets the EE design requirement. Digital signal processing (DSP) techniques and design of DSP applications. Topics include: discrete-time random signals; sampling and multi-rate systems; oversampling and quantization in A-to-D conversion; properties of LTI systems; quantization in fixed-point implementations of filters; digital filter design; discrete Fourier Transform and FFT; and spectrum analysis using the DFT. In the design part of the course, students complete basic labs and a 4 week final project and report. See [ee264.stanford.edu](http://ee264.stanford.edu) for more information. Prerequisite: EE 102A and EE 102B or equivalent, basic programming skills (Matlab and C++). Same as: WIM

**EE 266. Introduction to Stochastic Control with Applications. 3 Units.**

Focuses on conceptual foundation and algorithmic methodology of Dynamic Programming and Stochastic Control with applications to engineering, operations research, management science and other fields. Elaborates on the concept of probing, learning and control of stochastic systems, and addresses the practical application of the concept and methodology through the use of approximations. Prerequisites: 201, 221, or equivalents. Same as: MS&E 251

**EE 267. Virtual Reality. 3-4 Units.**

OpenGL, real-time rendering, 3D display systems, display optics & electronics, IMUs and sensors, tracking, haptics, rendering pipeline, multimodal human perception and depth perception, stereo rendering, presence. Emphasis on VR technology. Hands-on programming assignments. The 3-unit version requires a final programming assignment in which you create your own virtual environment. The 4-unit version requires a final course project and written report in lieu of the final assignment. Prerequisites: Strong programming skills, EE 103 or equivalent. Helpful: basic computer graphics / OpenGL.

**EE 267W. Virtual Reality. 5 Units.**

Writing in the Major (WIM) version of the 4-unit EE 267 theory + lab/project course. This course also meets the EE design requirement. Topics include: OpenGL, real-time rendering, 3D display systems, display optics & electronics, IMUs and sensors, tracking, haptics, rendering pipeline, multimodal human perception and depth perception, stereo rendering, presence. Emphasis on VR technology. Hands-on programming assignments. The 5-unit WIM version requires everything the 4-unit version does, i.e. a final course project and written report in lieu of the final assignment. The 5-unit WIM version additional requires participation in 2 writing in the major workshops, and weekly writing assignments. Prerequisites: Strong programming skills, EE 103 or equivalent. Helpful: basic computer graphics / OpenGL. Same as: WIM

**EE 26N. The Wireless World, and the Data You Leak. 3 Units.**

The world is increasingly based on wireless communication. Cell phones and WiFi are the most visible examples. Others are key fobs, water meters, gas and electric meters, garage door openers, baby monitors, and the list continues to expand. All of these produce RF signals you can detect and often decode. This seminar will explore how much information you broadcast throughout your day, and how it can easily be received and decoded using inexpensive hardware and public domain software. You will be able to explain why different information services use different frequencies, why they encode the information the way they do, and what security risks they present.

**EE 271. Introduction to VLSI Systems. 3 Units.**

Provides a quick introduction to MOS transistors and IC fabrication and then creates abstractions to allow you to create and reason about complex digital systems. It uses a switch resistor model of a transistor, uses it to model gates, and then shows how gates and physical layout can be synthesized from Verilog or SystemVerilog descriptions. Most of the class will be spent on providing techniques to create designs that can be validated, are low power, provide good performance, and can be completed in finite time. Prerequisites: 101A, 108A and 108B; familiarity with transistors, logic design, Verilog and digital system organization.

**EE 272. Design Projects in VLSI Systems. 3-4 Units.**

An introduction to mixed signal design. Working in teams you will create a small mixed-signal VLSI design using a modern design flow and CAD tools. The project involves writing a Verilog model of the chip, creating a testing/debug strategy for your chip, wrapping custom layout to fit into a std cell system, using synthesis and place and route tools to create the layout of your chip, and understanding all the weird stuff you need to do to tape-out a chip. Useful for anyone who will build a chip in their Ph.D. Pre-requisites: EE271 and experience in digital/analog circuit design.

**EE 273. Digital Systems Engineering. 3 Units.**

Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: EE101A and EE108A. Recommended: EE114/214A.

**EE 278. Introduction to Statistical Signal Processing. 3 Units.**

Review of basic probability and random variables. Random vectors and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Formerly EE 278B. Prerequisites: EE178 and linear systems and Fourier transforms at the level of EE102A,B or EE261.

**EE 279. Introduction to Digital Communication. 3 Units.**

Digital communication is a rather unique field in engineering in which theoretical ideas have had an extraordinary impact on the design of actual systems. The course provides a basic understanding of the analysis and design of digital communication systems, building on various ideas from probability theory, stochastic processes, linear algebra and Fourier analysis. Topics include: detection and probability of error for binary and M-ary signals (PAM, QAM, PSK), receiver design and sufficient statistics, controlling the spectrum and the Nyquist criterion, bandpass communication and up/down conversion, design trade-offs: rate, bandwidth, power and error probability, coding and decoding (block codes, convolutional coding and Viterbi decoding). Prerequisites: 179 or 261, and 178 or 278.

**EE 282. Computer Systems Architecture. 3 Units.**

Course focuses on how to build modern computing systems, namely notebooks, smartphones, and data centers, covering primarily their hardware architecture and certain system software aspects. For each system class, we cover the system architecture, processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability. We will also cover topics such as interactions with system software, virtualization, solid state storage, and security. The programming assignments allow students to explore performance/energy tradeoffs when using heterogeneous hardware resources on smartphone devices. Prerequisite: EE108B. Recommended: CS 140.

**EE 284. Introduction to Computer Networks. 3 Units.**

Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

**EE 285. Embedded Systems Workshop. 2 Units.**

Project-centric building hardware and software for embedded computing systems. Students work on an existing project of their own or join one of these projects. Syllabus topics will be determined by the needs of the enrolled students and projects. Examples of topics include: interrupts and concurrent programming, deterministic timing and synchronization, state-based programming models, filters, frequency response, and high-frequency signals, low power operation, system and PCB design, security, and networked communication. Prerequisite: CS107 (or equivalent). Same as: CS 241

**EE 290A. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290B. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290C. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290D. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290E. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent; for 290E, EE PhD degree candidacy, an "S" grade in EE 290D and instructor consent.

**EE 290F. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: EE PhD degree candidacy, an "S" grade in EE 290E and instructor consent.

**EE 290G. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: EE PhD degree candidacy, an "S" grade in EE 290F and instructor consent.

**EE 292A. Electronic Design Automation (EDA) and Machine Learning Hardware. 3 Units.**

The class teaches cutting-edge optimization and analysis algorithms for the design of complex digital integrated circuits and their use in designing machine learning hardware. It provides working knowledge of the key technologies in Electronic Design Automation (EDA), focusing on synthesis, placement and routing algorithms that perform the major transformations between levels of abstraction and get a design ready to be fabricated. As an example, the design of a convolutional neural network (CNN) for basic image recognition illustrates the interaction between hardware and software for machine learning. It will be implemented on a state-of-the-art FPGA board. Prerequisite: EE 108.

**EE 292B. Micro and Nanoscale Biosensing for Molecular Diagnostics. 3 Units.**

The course covers state-of-the-art and emerging bio-sensors, biochips, microfluidics, which will be studied in the context of molecular diagnostics. Students will briefly learn the relevant biology, biochemistry, and molecular biology pertinent to molecular diagnostics. Students will also become equipped with a thorough understanding of the interfaces between electronics, fluidics, and molecular biology. Topics will include microfluidics and mass transfer limits, electrode-electrolyte interfaces, electrochemical noise processes, biosensor system level characterization, determination of performance parameters such as throughput, detection limit, and cost, integration of sensor with microfluidics, and electronic readout circuitry architectures. Emphasis will be placed on in-depth quantitative design of biomolecular sensing platforms.

**EE 292C. Chemical Vapor Deposition and Epitaxy for Integrated Circuits and Nanostructures. 1 Unit.**

Fundamental aspects of CVD are initially considered, first focusing on processes occurring in the gas phase and then on those occurring on the surface. Qualitative understanding is emphasized, with minimal use of equations. Adding energy both thermally and by using a plasma is discussed; atomic-layer deposition is briefly considered. Examples of CVD equipment are examined. The second portion of the tutorial examines layers deposited by CVD. The focus is on group IV semiconductors  $\zeta$  especially epitaxial and heteroepitaxial deposition, in which the crystal structure of the depositing layer is related to that of the substrate. Polycrystalline silicon and the IC interconnect system are then discussed. Finally, the use of high-density plasmas for rapid gap filling is contrasted with alternative CVD dielectric deposition processes.

**EE 292E. Seminar Series for Image Systems Engineering. 1 Unit.**

Seminar. For engineering students interested in camera and display engineering, computer vision, and computational imaging. Speakers include Stanford faculty and research scientists as well as industry professionals, mostly from consumer electronics companies.

**EE 292G. NanoBioTechnology, Nanoscience and Sensing. 3 Units.**

Nanobiotechnology, which may be called a "Fundamental Technology of the 21st Century", is a new frontier for Biology with extremely important applications in medical diagnostics, therapeutics and drug discovery based on the development of new materials and sensors. The goal of this course is to provide an insight into the fundamentals of nanotechnology in biological and biomedical research by providing an overview of current topics in Nanoscience and Engineering and their modern day applications in biotechnology. This course will provide a bridge for students from a non-biology background at all levels to the world of Nanobiotechnology. Basic biological molecules and the importance of their detection as well as a thorough understanding of the interfaces between electronics, fluidics, and molecular biology are discussed. Focus is also provided on solid-state materials, Nanostructures and Nano devices and systems as related to biological applications especially detection and sensing, covering top-down MEMS fabrication and integration of sensors with microfluidics to bottom-up biochemistry, applications of Nanostructures and Nanobiotechnology in drug discovery, delivery, and controlled release and Nanobiotechnological applications in environment and food detection and mitigation.

**EE 292H. Engineering, Entrepreneurship & Climate Change. 1 Unit.**

The purpose of this seminar series course is to help students and professionals develop the tools to apply the engineering and entrepreneurial mindset to problems that stem from climate change, in order to consider and evaluate possible stabilizing, remedial and adaptive approaches. This course is not a crash course on climate change or policy. Instead we will focus on learning about and discussing the climate problems that seem most tractable to these approaches. Each week Dr. Field and/or a guest speaker will lead a short warm-up discussion/activity and then deliver a talk in his/her area of expertise. We will wrap up with small-group and full-class discussions of related challenges/opportunities and possible engineering-oriented solutions. Class members are asked to do background reading before each class, to submit a question before each lecture, and to do in-class brainstorming. May be repeated for credit.

**EE 292I. Insanely Great Products: How do they get built?. 1 Unit.**

Great products emerge from a sometimes conflict-laden process of collaboration between different functions within companies. This Seminar seeks to demystify this process via case-studies of successful products and companies. Engineering management and businesspeople will share their experiences in discussion with students. Previous companies profiled: Apple, Intel, Facebook, and Genentech – to name a few. Previous guests include: Jon Rubinstein (NeXT, Apple, Palm), Diane Greene (VMware), and Ted Hoff (Intel). Pre-requisites: None.

**EE 292L. Nanomanufacturing. 3 Units.**

Fundamentals of nanomanufacturing technology and applications. Topics include recent developments in process technology, lithography and patterning. Technology for FinFET transistors, NAND flash and 3D chips. Manufacturing of LEDs, thin film and crystalline solar cells. Flip classroom model is used supplementing classroom lectures with short videos. Guest speakers include distinguished engineers, entrepreneurs and venture capitalists actively engaged in nanomanufacturing. Prerequisite: background in device physics and process technology. Recommended: EE116, EE216, EE212.

**EE 292T. SmartGrids and Advanced Power Systems Seminar. 1-2 Unit.**

A series of seminar and lectures focused on power engineering. Renowned researchers from universities and national labs will deliver bi-weekly seminars on the state of the art of power system engineering. Seminar topics may include: power system analysis and simulation, control and stability, new market mechanisms, computation challenges and solutions, detection and estimation, and the role of communications in the grid. The instructors will cover relevant background materials in the in-between weeks. The seminars are planned to continue throughout the next academic year, so the course may be repeated for credit. Same as: CEE 272T

**EE 293A. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.**

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Prerequisites: MATSCI 145 and 152 or equivalent coursework in thermodynamics and electronic properties. Same as: ENERGY 293A, MATSCI 156, MATSCI 256

**EE 293B. Fundamentals of Energy Processes. 3 Units.**

For seniors and graduate students. Covers scientific and engineering fundamentals of renewable energy processes involving heat. Thermodynamics, heat engines, solar thermal, geothermal, biomass. Recommended: MATH 19-21; PHYSICS 41, 43, 45. Same as: ENERGY 293B

**EE 29N. Electromagnetic Sensors for the Internet of Things. 3 Units.**

Have you ever wondered how your phone know what way is up? How the traffic light know your car is there? How you can monitor your health with a smart bracelet? If so, you want to learn about electromagnetic sensors. In this course we will the electromagnetic principles that allows us to sense things and communicate with things at a distance. You will learn the fundamentals of electromagnetic sensing and build practical sensors in the laboratory.

**EE 300. Master's Thesis and Thesis Research. 1-15 Unit.**

Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade 'N' is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate. Course may be repeated for credit.

**EE 303. Autonomous Implantable Systems. 3 Units.**

Integrating electronics with sensing, stimulation, and locomotion capabilities into the body will allow us to restore or enhance physiological functions. In order to be able to insert these electronics into the body, energy source is a major obstacle. This course focuses on the analysis and design of wirelessly powered catheter-deliverable electronics. Emphases will be on the interaction between human and electromagnetic fields in order to transfer power to the embedded electronics via electromagnetic fields, power harvesting circuitry, electrical-tissue interface, and sensing and actuating frontend designs. Prerequisites: EE 252 or equivalent.

**EE 308. Advanced Circuit Techniques. 3 Units.**

Design of advanced analog circuits at the system level, including switching power converters, amplitude-stabilized and frequency-stabilized oscillators, voltage references and regulators, power amplifiers and buffers, sample-and-hold circuits, and application-specific op-amp compensation. Approaches for finding creative design solutions to problems with difficult specifications and hard requirements. Emphasis on feedback circuit techniques, design-oriented thinking, and hands-on experience with modern analog building blocks. Several designs will be built and evaluated, along with associated laboratory projects. Prerequisite: EE 251 or EE 314A.

**EE 309. Semiconductor Memory Devices and Technology. 3 Units.**

The functionality and performance of ULSI systems are increasingly dependent upon the characteristics of the memory subsystem. This course introduces the student to various memory devices: SRAM, DRAM, NVRAM (non-volatile memory). This course will cover various aspects of semiconductor memories, including basic operation principles, device design considerations, device scaling, device fabrication, memory array addressing and readout circuits. Various cell structures (e.g. 1T-1C, 6T, 4T, 1T-1R, 0T-1R, 1S-1R, floating gate FLASH, SONOS, NROM), and memory organization (open bit-line, folded bit-line, NAND, NOR, cross-point etc.). This course will include a survey of new memory concepts (e.g. magnetic tunnel junction memory (MRAM, SST-RAM), ferroelectric memory (FRAM), phase change memory (PCM), metal oxide resistive switching memory (RRAM), nanoconductive bridge memory (CBRAM)). Offered Alternate years. Pre-requisite: EE 216. Preferred: EE 316.

**EE 310. SystemX: Ubiquitous Sensing, Computing and Communication Seminar. 1 Unit.**

This is a seminar course with invited speakers. Sponsored by Stanford's SystemX Alliance, the talks will cover emerging topics in contemporary hardware/software systems design. Special focus will be given to the key building blocks of sensors, processing elements and wired/wireless communications, as well as their foundations in semiconductor technology, SoC construction, and physical assembly as informed by the SystemX Focus Areas. The seminar will draw upon distinguished engineering speakers from both industry and academia who are involved at all levels of the technology stack and the applications that are now becoming possible. May be repeat for credit.

**EE 311. Advanced Integrated Circuits Technology. 3 Units.**

What are the practical and fundamental limits to the evolution of the technology of modern MOS devices and interconnects? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of MOS devices and back-end (interconnect and contact) processing. What are future device structures and materials to maintain progress in integrated electronics? MOS front-end and back-end process integration. Prerequisites: EE 216 or equivalent. Recommended: EE 212.

**EE 312. Integrated Circuit Fabrication Laboratory. 3-4 Units.**

Formerly EE 410. Fabrication, simulation, and testing of a submicron CMOS process. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and electrical testing. Students also simulate the CMOS process using process simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow. Taught in the Stanford Nanofabrication Facility (SNF). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: EE 212, EE 216, or consent of instructor.

**EE 314A. RF Integrated Circuit Design. 3 Units.**

Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: EE214B.

**EE 314B. Advanced RF Integrated Circuit Design. 3 Units.**

Analysis and design of modern communication circuits and systems with emphasize on design techniques for high-frequency (into mm-wave) ICs. Topics include MOS, bipolar, and BiCMOS high-frequency integrated circuits, including power amplifiers, extremely wideband amplifiers, advanced oscillators, phase-locked loops and frequency-translation circuits. Design techniques for mm-wave silicon ICs (on-chip low-loss transmission lines, unilateralization techniques, in-tegrated antennas, harmonic generation, etc) will also be studied. Prerequisite: EE314A or equivalent course in RF or microwave.

**EE 315. Analog-Digital Interface Circuits. 3 Units.**

Analysis and design of circuits and circuit architectures for signal conditioning and data conversion. Fundamental circuit elements such as operational transconductance amplifiers, active filters, sampling circuits, switched capacitor stages and voltage comparators. Sensor interfaces for micro-electromechanical and biomedical applications. Nyquist and oversampling A/D and D/A converters. Prerequisite: EE 214B.

**EE 316. Advanced VLSI Devices. 3 Units.**

In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic transport) in small structures, and alternative device structures for VLSI. Prerequisites: 216 or equivalent. Recommended: EE 212.

**EE 320. Nanoelectronics. 3 Units.**

This course covers the device physics and operation principles of nanoelectric devices, with a focus on devices for energy-efficient computation. Topics covered include devices based on new nanomaterials such as carbon nanotubes, semiconductor nanowires, and 2D layered materials such as graphene; non-FET based devices such as nanoelectromechanical (NEM) relay, single electron transistors (SET) and resonant tunneling diodes (RTD); as well as FET-based devices such as tunnel FET. Devices targeted for both logic and memory applications are covered. Prerequisites: Undergraduate device physics, EE222, EE216, EE316. Recommended courses: EE223, EE228, EE311.

**EE 323. Energy in Electronics. 3 Units.**

EE 323 examines energy in modern nanoelectronics, from fundamentals to systems. Fundamental topics include energy storage and transfer via electrons and phonons, ballistic limits of current and heat, meso- to macroscale mobility and thermal conductivity. Applied topics include power in nanoscale devices (1D nanotubes and nanowires, 2D materials, 3D silicon CMOS, resistive memory and interconnects), circuit leakage, temperature measurements, thermoelectric energy conversion, and thermal challenges in densely integrated systems. Basic knowledge of semiconductors, transistors, and Matlab (or similar) are recommended.

**EE 327. Properties of Semiconductor Materials. 3 Units.**

Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semi-classical transport theory, semi-conductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination that are the foundations of modern transistors and optoelectronic devices. Prerequisites: EE216 or equivalent.

**EE 328. Physics of Advanced Semiconductor Devices. 3 Units.**

Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, HJ-bipolar transistors, HJ-FETs, nanostructures, tunneling, single electron transistor and photonic devices. Use of SENTARUS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research. Prerequisite: 216. Recommended: 316.

**EE 329. The Electronic Structure of Surfaces and Interfaces. 3 Units.**

Physical concepts and phenomena for surface science techniques probing the electronic and chemical structure of surfaces, interfaces and nanomaterials. Microscopic and atomic models of microstructures; applications including semiconductor device technology, catalysis and energy. Physical processes of UV and X-ray photoemission spectroscopy, Auger electron spectroscopy, surface EXAFS, low energy electron diffraction, electron/photon stimulated ion desorption, scanning tunneling spectroscopy, ion scattering, energy loss spectroscopy and related imaging methods; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor. Same as: PHOTON 329

**EE 331. Biophotonics: Light in Medicine and Biology. 3 Units.**

Current topics and trends in the use of light in medicine and for advanced microscopy. Course begins with a review of relevant optical principles (basic physics required). Key topics include: light-tissue interactions; sensing and spectroscopy; contrast-enhanced imaging; super-resolution and label-free microscopy; medical applications of light for diagnostics, in-vivo imaging, and therapy; nanophotonics and array technologies. Open to non-majors; programming experience (Matlab and/or C) required.

**EE 332. Laser Dynamics. 3 Units.**

Dynamic and transient effects in lasers including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, pulse shaping. Formerly EE 232. Prerequisite: 236C.

**EE 334. Micro and Nano Optical Device Design. 3 Units.**

Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: EE 242 or equivalent.

**EE 336. Nanophotonics. 3 Units.**

Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Sub-wavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: Electromagnetic theory at the level of 242. Same as: MATSCI 346

**EE 340. Optical Micro- and Nano-Cavities. 3 Units.**

Optical micro- and nano-cavities and their device applications. Types of optical cavities (microdisks, microspheres, photonic crystal cavities, plasmonic cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical cavities, including low-threshold lasers, optical modulators, quantum information processing devices, and bio-chemical sensors. Prerequisites: Advanced undergraduate or basic graduate level knowledge of electromagnetics, quantum.

**EE 346. Introduction to Nonlinear Optics. 3 Units.**

Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric-dipole susceptibilities. Free and forced waves; phase matching; slowly varying envelope approximation; dispersion, diffraction, space-time analogy. Harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation. Raman and Brillouin scattering; nonlinear processes in optical fibers. Prerequisites: 242, 236C.

**EE 347. Optical Methods in Engineering Science. 3 Units.**

Design and understanding of modern optical systems. Topics: geometrical optics; aberration theory; systems layout; applications such as microscopes, telescopes, optical processors. Computer ray tracing program as a design tool. Prerequisite: 236A or equivalent.

**EE 348. Advanced Optical Fiber Communications. 3 Units.**

Optical amplifiers: gain, saturation, noise. Semiconductor amplifiers. Erbium-doped fiber amplifiers. System applications: preamplified receiver performance, amplifier chains. Raman amplifiers, lumped vs. distributed amplification. Group-velocity dispersion management: dispersion-compensating fibers, filters, gratings. Interaction of dispersion and nonlinearity, dispersion maps. Multichannel systems. Wavelength-division multiplexing components: filters, multiplexers. WDM systems, crosstalk. Time, subcarrier, code and polarization-division multiplexing. Comparison of modulation techniques: differential phase-shift keying, phase-shift keying, quadrature-amplitude modulation. Comparison of detection techniques: noncoherent, differentially coherent, coherent. Prerequisite: 247.

**EE 349. Advanced Topics in Nano-Optics and Plasmonics. 3 Units.**

Electromagnetic phenomena at the nanoscale. Dipolar interactions between emitters and nanostructures, weak and strong coupling, surface plasmon polaritons and localized plasmons, electromagnetic field enhancements, and near-field coupling between metallic nanostructures. Numerical tools will be taught and used to simulate nano-optical phenomena. Prerequisite: EE 242 or equivalent.

**EE 355. Imaging Radar and Applications. 3 Units.**

Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278, EE279. Same as: GEOPHYS 265

**EE 356A. Resonant Converters. 3 Units.**

Miniaturization of efficient power converters remain a challenge in power electronics whose goal is to improving energy use and reducing waste. In this course, we will study the design of Resonant converters which are capable of operating at higher frequencies than their 'hard-switch' counterparts. Resonant converter are found in high performance applications where high control bandwidth and high power density are required. We will also explore practical design issues and trade off in selecting converter topologies in high performance applications. Prerequisites: EE153/EE253.

**EE 359. Wireless Communications. 3-4 Units.**

This course will cover advanced topics in wireless communications as well as current wireless system design. Topics include: an overview of current and future wireless systems; wireless channel models including path loss, shadowing, and statistical multipath channel models; fundamental capacity limits of wireless channels; digital modulation and its performance in fading and under intersymbol interference; techniques to combat fading including adaptive modulation and diversity; multiple antenna (MIMO) techniques to increase capacity and diversity, intersymbol interference including equalization, multicarrier modulation (OFDM), and spread spectrum; and multiuser system design, including multiple access techniques. Course is 3 units but can be taken for 4 units with an optional term project. Prerequisite: 279 or instructor consent.

**EE 364A. Convex Optimization I. 3 Units.**

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability.

Same as: CME 364A, CS 334A

**EE 364B. Convex Optimization II. 3 Units.**

Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Monotone operators and proximal methods; alternating direction method of multipliers. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Course requirements include project. Prerequisite: 364A.

Same as: CME 364B

**EE 367. Computational Imaging and Display. 3 Units.**

Spawned by rapid advances in optical fabrication and digital processing power, a new generation of imaging technology is emerging: computational cameras at the convergence of applied mathematics, optics, and high-performance computing. Similar trends are observed for modern displays pushing the boundaries of resolution, contrast, 3D capabilities, and immersive experiences through the co-design of optics, electronics, and computation. This course serves as an introduction to the emerging field of computational imaging and displays. Students will learn to master bits and photons.

Same as: CS 448I

**EE 368. Digital Image Processing. 3 Units.**

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students learn to apply material by implementing and investigating image processing algorithms in Matlab and optionally on Android mobile devices. Term project. Recommended: EE261, EE278.

Same as: CS 232

**EE 369A. Medical Imaging Systems I. 3 Units.**

Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: EE 261.

**EE 369B. Medical Imaging Systems II. 3 Units.**

Imaging internal structures within the body using magnetic resonance studied from a systems viewpoint. Analysis of magnetic resonance imaging systems including physics, Fourier properties of image formation, effects of system imperfections, image contrast, and noise. Prerequisite: EE 261.

**EE 369C. Medical Image Reconstruction. 3 Units.**

Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.

**EE 371. Advanced VLSI Circuit Design. 3 Units.**

Design of high-performance digital systems, the things that cause them to fail, and how to avoid these problems. Topics will focus on current issues including: wiring resistance and how to deal with it, power and Gnd noise and regulation, clock (or asynchronous) system design and how to minimize clocking overhead, high-speed I/O design, energy minimization including leakage control, and structuring your Verilog code to result in high-performance, low energy systems. Extensive use of modern CAD tools. Prerequisites: EE 213 and EE 271, or consent of instructor.

**EE 372. Data Science for High Throughput Sequencing. 3 Units.**

Extraordinary advances in sequencing technology in the past decade have revolutionized biology and medicine. Many high-throughput sequencing based assays have been designed to make various biological measurements of interest. This course explores the various computational and data science problems that arises from processing, managing and performing predictive analytics on this high throughput sequencing data. Specific problems we will study include genome assembly, haplotype phasing, RNA-Seq assembly, RNA-Seq quantification, single cell RNA-seq analysis, multi-omics analysis, and genome compression. We attack these problems through a combination of tools from information theory, combinatorial algorithms, machine learning and signal processing. Through this course, the student will also get familiar with various software tools developed for the analysis of real sequencing data. Prerequisites: Basic knowledge of probability at the level of EE 178. Some programming experience.

**EE 373A. Adaptive Signal Processing. 3 Units.**

Learning algorithms for adaptive digital filters. Self-optimization. Wiener filter theory. Quadratic performance functions, their eigenvectors and eigenvalues. Speed of convergence. Asymptotic performance versus convergence rate. Applications of adaptive filters to statistical prediction, process modeling, adaptive noise canceling, adaptive antenna arrays, adaptive inverse control, and equalization and echo canceling in modems. Artificial neural networks. Cognitive memory/human and machine. Natural and artificial synapses. Hebbian learning. The Hebbian-LMS algorithm. Theoretical and experimental research projects in adaptive filter theory, communications, audio systems, and neural networks. Biomedical research projects, supervised jointly by EE and Medical School faculty. Recommended: EE263, EE264, EE278.

**EE 376A. Information Theory. 3 Units.**

The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178 or STATS 116, or equivalent. Same as: STATS 376A

**EE 376B. Network Information Theory. 3 Units.**

Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A. Same as: STATS 376B

**EE 376C. Universal Schemes in Information Theory. 3 Units.**

Universal schemes for lossless and lossy compression, channel coding and decoding, prediction, denoising, and filtering. Characterization of performance limitations in the stochastic setting: entropy rate, rate-distortion function, channel capacity, Bayes envelope for prediction, denoising, and filtering. Lempel-Ziv lossless compression, and Lempel-Ziv based schemes for lossy compression, channel coding, prediction, and filtering. Discrete universal denoising. Compression-based approach to denoising. The compound decision problem. Prerequisites: EE376A.

**EE 376D. Wireless Information Theory. 3 Units.**

Information theory forms the basis for the design of all modern day communication systems. The original theory was primarily point-to-point, studying how fast information can flow across an isolated noisy communication channel. Until recently, there has been only limited success in extending the theory to a network of interacting nodes. Progress has been made in the past decade driven by engineering interest in wireless networks. The course provides a unified overview of this recent progress made in information theory of wireless networks. Starting with an overview of the capacity of fading and multiple-antenna wireless channels, we aim to answer questions such as: What is the optimal way for users to cooperate and exchange information in a wireless network? How much benefit can optimal cooperation provide over traditional communication architectures? How can cooperation help to deal with interference between multiple wireless transmissions? Formerly EE361. Prerequisites: EE376A.

**EE 377. Information Theory and Statistics. 3 Units.**

Information theoretic techniques in probability and statistics. Fano, Assouad, and Le Cam methods for optimality guarantees in estimation. Large deviations and concentration inequalities (Sanov's theorem, hypothesis testing, the entropy method, concentration of measure). Approximation of (Bayes) optimal procedures, surrogate risks,  $f$ -divergences. Penalized estimators and minimum description length. Online game playing, gambling, no-regret learning. Prerequisites: EE 376A (or equivalent) or STATS 300A. Same as: STATS 311

**EE 378A. Statistical Signal Processing. 3 Units.**

Basic concepts of statistical decision theory; Bayes decision theory; HMMs and their state estimation (Forward-backward), Kalman as special case, approximate state estimation (particle filtering, Extended Kalman Filter), unknown parameters; Inference under logarithmic loss, mutual information as a fundamental measure of statistical relevance, properties of mutual information: data processing, chain rules. Directed information. Prediction under logarithmic loss; Context Tree Weighting algorithm; Sequential decision making in general: prediction under general loss functions, causal estimation, estimation of directed information. Non-sequential inference via sequential probability assignments. Universal denoising; Denoising from a decision theoretic perspective: nonparametric function estimation, wavelet shrinkage, density estimation; Estimation of mutual information on large alphabets with applications such as boosting the Chow-Liu algorithm. Estimation of the total variation distance, estimate the fundamental limit is easier than to achieve the fundamental limit; Peetre's  $K$ -functional and bias analysis: bias correction using jackknife, bootstrap, and Taylor series; Nonparametric functional estimation. Prerequisites: Familiarity with probability theory and linear algebra at the undergraduate level.

**EE 378B. Inference, Estimation, and Information Processing. 3 Units.**

Techniques and models for signal, data and information processing, with emphasis on incomplete data, non-ordered index sets and robust low-complexity methods. Linear models; regularization and shrinkage; dimensionality reduction; streaming algorithms; sketching; clustering, search in high dimension; low-rank models; principal component analysis. Applications include: positioning from pairwise distances; distributed sensing; measurement/traffic monitoring in networks; finding communities/clusters in networks; recommendation systems; inverse problems. Prerequisites: EE278 and EE263 or equivalent. Recommended but not required: EE378A.

**EE 379. Digital Communication. 3 Units.**

Modulation: linear, differential and orthogonal methods; signal spaces; power spectra; bandwidth requirements. Detection: maximum likelihood and maximum a posteriori probability principles; sufficient statistics; correlation and matched-filter receivers; coherent, differentially coherent and noncoherent methods; error probabilities; comparison of modulation and detection methods. Intersymbol interference: single-carrier channel model; Nyquist requirement; whitened matched filter; maximum likelihood sequence detection; Viterbi algorithm; linear equalization; decision-feedback equalization. Multi-carrier modulation: orthogonal frequency-division multiplexing; capacity of parallel Gaussian channels; comparison of single- and multi-carrier techniques. Prerequisite: EE102B and EE278 (or equivalents). EE279 is helpful but not required.

**EE 380. Colloquium on Computer Systems. 1 Unit.**

Live presentations of current research in the design, implementation, analysis, and applications of computer systems. Topics range over a wide range and are different every quarter. Topics may include fundamental science, mathematics, cryptography, device physics, integrated circuits, computer architecture, programming, programming languages, optimization, applications, simulation, graphics, social implications, venture capital, patent and copyright law, networks, computer security, and other topics of related to computer systems. May be repeated for credit.

**EE 382A. Parallel Processors Beyond Multicore Processing. 3 Units.**

Formerly EE392Q. The current parallel computing research emphasizes multi-cores, but there are alternative array processors with significant potential. This hands-on course focuses on SIMD (Single-Instruction, Multiple-Data) massively parallel processors. Topics: Flynn's Taxonomy, parallel architectures, Kestrel architecture and simulator, principles of SIMD programming, parallel sorting with sorting networks, string comparison with dynamic programming (edit distance, Smith-Waterman), arbitrary-precision operations with fixed-point numbers, reductions, vector and matrix multiplication, image processing algorithms, asynchronous algorithms on SIMD ("SIMD Phase Programming Model"), Mandelbrot set, analysis of parallel performance.

**EE 382C. Interconnection Networks. 3 Units.**

The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.

**EE 384A. Internet Routing Protocols and Standards. 3 Units.**

Local area networks addressing and switching; IEEE 802.11 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: interior gateways (RIP, OSPF) and exterior gateways (BGP); multicast routing; multiprotocol label switching (MPLS). Routing in mobile networks: Mobile IP, Mobile Ad Hoc Networks (MANET), Wireless Mesh Networks. Prerequisite: EE 284 or CS 144.

**EE 384B. Multimedia Communication over the Internet. 3 Units.**

Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264), TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Emphasis will be placed on advances in network infrastructure and new services (VoIP, IPTV, Peer-to-peer communications, etc.) Prerequisite: 284 or CS 144. Recommended: 384A.

**EE 384C. Wireless Local and Wide Area Networks. 3 Units.**

Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE 802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. IEEE 802.11s Mesh Networks. IEEE 802.16 (WiMAX) network architecture and protocols: Physical Layer (OFDMA) and Media Access Control Layer. Current research papers in the open literature. Prerequisite: EE 284 or CS 244A.

**EE 384E. Networked Wireless Systems. 3 Units.**

Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284.

**EE 384S. Performance Engineering of Computer Systems & Networks. 3 Units.**

Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queueing networks and congestion management, dynamic programming and task/processor scheduling, network dimensioning and optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability.

**EE 385A. Robust and Testable Systems Seminar. 1-4 Unit.**

Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be repeated for credit. Prerequisite: consent of instructor.

**EE 386. Robust System Design. 3 Units.**

Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: EE 108, EE180, and EE 282.

**EE 387. Algebraic Error Correcting Codes. 3 Units.**

Introduction to the theory of error correcting codes, emphasizing algebraic constructions, and diverse applications throughout computer science and engineering. Topics include basic bounds on error correcting codes; Reed-Solomon and Reed-Muller codes; list-decoding, list-recovery and locality. Applications may include communication, storage, complexity theory, pseudorandomness, cryptography, streaming algorithms, group testing, and compressed sensing. Prerequisites: Linear algebra, basic probability (at the level of, say, CS109, CME106 or EE178) and "mathematical maturity" (students will be asked to write proofs). Familiarity with finite fields will be helpful but not required. Same as: CS 250

**EE 388. Modern Coding Theory. 3 Units.**

Tools for analysis and optimization of iterative coding systems. LDPC, turbo and, RA codes. Optimized ensembles, message passing algorithms, density evolution, and analytic techniques. Prerequisite: 376A.

**EE 390. Special Studies or Projects in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading. May be repeated for credit.

**EE 391. Special Studies and Reports in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390. May be repeated for credit.

**EE 392AA. Multi-Dimensional Data Transmission. 3 Units.**

EE 392AA focuses on state-of-the-art data communication systems that use multiple dimensions (parallel antennas, wires, links), including the latest versions of 5G, Wi-Fi, G.MGfast wireline, DOCSIS 3.1, and other systems that stress fundamental transmission limits. Topics include system design, particularly physical-layer modulation/coding for analysis and optimization for specific channels. Included are all vectored designs (MIMO, massive MIMO, SIMO, MISO) and methods to design and adapt both transmitter and receiver to variable channels. This course is approved for satisfying the MSEE Depth Sequence on Communication and Networking. Prerequisites: EE 278, EE 279, EE 379 or instructor consent.

**EE 392B. Industrial Internet of Things. 1 Unit.**

The seminar will feature guest lectures from the industry to discuss the state of the affairs in the Industrial Internet of Things (IIoT) with emphasis on existing and new Data Science, analytics, and Big Data applications. The class will address several verticals. One of them is electrical power industry, which is undergoing transition to renewables and distributed generation. Another one is aerospace industry including airlines and equipment vendors. Other verticals are oil and gas, data centers, and semiconductor manufacturing.

**EE 392E. VLSI Signal Processing. 3 Units.**

DSP architecture design. Study of circuit and architecture techniques in energy-area-performance space, design methodology based on a data-flow graph model that leads to hardware implementation. We explore automated wordlength reduction, direct and recursive filters, time-frequency analysis and other examples. The project focuses on architecture exploration for selected DSP algorithms. Useful for algorithm designers who consider hardware constraints and for circuit designers who prototype DSP algorithms in hardware. Prerequisites: EE102B and EE108A; Recommended: EE264 and EE271.

**EE 392I. Seminar on Trends in Computing and Communications. 1 Unit.**

Lectures series and invited talks on current trends in computing and communications, and ongoing initiatives for research and open innovation. This year's focus on evolving cloud computing architectures and their impact on the enterprise; big data trends and rise of the third platform; software as a service; wireless and cellular network architectures; mobility and mobile data proliferation; open mobile platforms (e.g. Android); multi-homed mobile networking, associated data communication and mobile resource trade-offs, and system implementation in smartphones and Android devices.

**EE 392K. Self-Programming Networks. 3 Units.**

This is an advanced topics course on building autonomous networks using data and techniques from machine learning. It covers two major application areas: Cloud Computing Systems and Mobile Wireless Networks. The course introduces the architecture of Self-Programming Networks for sensing, inferring, learning and control, consisting of (i) a "reflex layer" for inferring at line rate and at scale, and (ii) a "deliberate layer" for efficient resource scheduling and network control. Various sensing and inference algorithms for deriving insights and alerts from the sensed data will be discussed. Methods for synchronizing clocks across a large data center and using this to reconstruct the fine details of network performance (queue-depths, link utilizations and buffer and link compositions) in near real-time will be presented. Similarly, methods for inferring available bandwidth in dynamic mobile networks and using it to drive different application optimizations will be presented. Students will learn the use of neural networks and learning techniques (a) to accelerate inference and control algorithms, (b) for "workload fingerprinting", (c) for predicting wireless link capacities, and (d) for scheduling resources. Finally, the principles of creating an interactive database for detecting anomalies, raising alerts, and serving insights to the user will be discussed. The course involves a team-based project.

**EE 392T. Seminar in Chip Test and Debug. 1 Unit.**

Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binsplit modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371).

**EE 400. Thesis and Thesis Research. 1-15 Unit.**

Limited to candidates for the degree of Engineer or Ph.D. May be repeated for credit.

**EE 402A. Topics in International Technology Management. 1 Unit.**

Theme for Autumn 2017 is "The Rise of Commercial Space Businesses in Asia." Distinguished guest speakers from industry, governments, and universities present and discuss businesses from Asia related to outer space, including telecommunications, debris removal, payload launch services, space medicine, etc. See syllabus for specific requirements, which may differ from those of other seminars at Stanford. Same as: EASTASN 402A

**EE 402T. Entrepreneurship in Asia. 1 Unit.**

Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia. Same as: EALC 402T, EASTASN 402T

**EE 414. RF Transceiver Design Laboratory. 3 Units.**

Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: EE 314A and EE 251 (or EE 251).

**EE 42. Introduction to Electromagnetics and Its Applications. 5 Units.**

Electricity and magnetism and its essential role in modern electrical engineering devices and systems, such as sensors, displays, DVD players, and optical communication systems. The topics that will be covered include electrostatics, magnetostatics, Maxwell's equations, one-dimensional wave equation, electromagnetic waves, transmission lines, and one-dimensional resonators. Pre-requisites: MATH 42 or MATH 51 or CME 100 or equivalent.

Same as: ENGR 42

**EE 46. Engineering For Good: Save the World and Have Fun Doing It. 3 Units.**

Projects that provide immediate and positive impact on the world. Focus is on global health by learning from experts in this field. Students work on real-world projects with help from members of NGOs and social entrepreneurial companies as part of the hand-on learning experience. Prerequisite: ENGR 40 or EE 122A or CS 106B or consent of instructor.

**EE 469B. RF Pulse Design for Magnetic Resonance Imaging. 3 Units.**

Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.

**EE 60N. Man versus Nature: Coping with Disasters Using Space Technology. 4 Units.**

Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. GER:DB-EngrAppSci. Same as: GEOPHYS 60N

**EE 65. Modern Physics for Engineers. 4 Units.**

This course introduces the core ideas of modern physics that enable applications ranging from solar energy and efficient lighting to the modern electronic and optical devices and nanotechnologies that sense, process, store, communicate and display all our information. Though the ideas have broad impact, the course is widely accessible to engineering and science students with only basic linear algebra and calculus through simple ordinary differential equations as mathematics background. Topics include the quantum mechanics of electrons and photons (Schrödinger's equation, atoms, electrons, energy levels and energy bands; absorption and emission of photons; quantum confinement in nanostructures), the statistical mechanics of particles (entropy, the Boltzmann factor, thermal distributions), the thermodynamics of light (thermal radiation, limits to light concentration, spontaneous and stimulated emission), and the physics of information (Maxwell's demon, reversibility, entropy and noise in physics and information theory). Pre-requisite: Physics 41. Pre- or co-requisite: Math 53 or CME 102.

**EE 801. TGR Project. 0 Units.**

.

**EE 802. TGR Dissertation. 0 Units.**

May be repeated for credit.

# Energy Resources Engineering (ENERGY)

## **ENERGY 101. Energy and the Environment. 3 Units.**

Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42.  
Same as: EARTHSYS 101

## **ENERGY 101A. Energizing California. 1 Unit.**

A weekend field trip featuring renewable and nonrenewable energy installations in Northern California. Tour geothermal, bioenergy, and natural gas field sites with expert guides from the Department of Energy Resources Engineering. Requirements: One campus meeting and weekend field trip. Enrollment limited to 25. Freshman have first choice.

## **ENERGY 102. Fundamentals of Renewable Power. 3 Units.**

Do you want a much better understanding of renewable power technologies? Did you know that wind and solar are the fastest growing forms of electricity generation? Are you interested in hearing about the most recent, and future, designs for green power? Do you want to understand what limits power extraction from renewable resources and how current designs could be improved? This course dives deep into these and related issues for wind, solar, biomass, geothermal, tidal and wave power technologies. We welcome all student, from non-majors to MBAs and grad students. If you are potentially interested in an energy or environmental related major, this course is particularly useful. Recommended: Math 21 or 42.  
Same as: EARTHSYS 102

## **ENERGY 104. Sustainable Energy for 9 Billion. 3 Units.**

This course explores the transition to a sustainable energy system at large scales (national and global), and over long time periods (decades). Explores the drivers of global energy demand and the fundamentals of technologies that can meet this demand sustainably. Focuses on constraints affecting large-scale deployment of technologies, as well as inertial factors affecting this transition. Problems will involve modeling global energy demand, deployment rates for sustainable technologies, technological learning and economics of technical change. Recommended: ENERGY 101, 102.

## **ENERGY 110. Engineering Economics. 3 Units.**

The success of energy projects and companies is judged by technical, economic and financial criteria. This course will introduce concepts of engineering economy, e.g., time value of money, life cycle costs and financial metrics, and explore their application to the business of energy. We will use case studies, business school cases and possibly industry guest lecturers. Examples from the hydrocarbon businesses that dominate energy today will provide the framework for the analysis of both conventional and renewable energy.

## **ENERGY 120. Fundamentals of Petroleum Engineering. 3 Units.**

Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media.  
Same as: ENGR 120

## **ENERGY 120A. Flow Through Porous Media Laboratory. 1 Unit.**

Laboratory measurements of permeability and porosity in rocks. Applications to subsurface fluid mechanics. Course is intended as an accompaniment to Energy 120.

## **ENERGY 121. Fundamentals of Multiphase Flow. 3 Units.**

Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.  
Same as: ENERGY 221

## **ENERGY 122. Lunch with Numerics. 1 Unit.**

This course provides students hands-on experience in the design and implementation of numerical methods for challenging fluid flow problems in the earth sciences. The base software used is the public domain code MRST. Students will explore common pitfalls of well-known numerical approaches, assess effectiveness of numerical methods for heterogeneous and strongly nonlinear problems and gain more insight into numerical accuracy and stability concepts.

## **ENERGY 123. When Technology Meets Reality: An In-depth Look at the Deepwater Horizon Blowout and Oil Spill. 1 Unit.**

The Deepwater Horizon blowout and spill in April 2010 occurred on one of the most advanced deepwater drilling rigs in the world operated by one of the most experienced companies. In this course we will look at and discuss the technologies and management practices involved in deepwater drilling and discuss how an accident like this happens and what could have been done differently to avoid it. We will focus on the Horizon and also look briefly at other high profile industrial and technological accidents.

## **ENERGY 12SC. Water and Power in the Pacific Northwest: The Columbia River. 2 Units.**

This seminar will explore the nature of and coupling between water and energy resources in the Pacific Northwest, using the Columbia River as our case study. We will explore the hydrologic, meteorologic, and geologic basis of water and energy resources, and the practical, social, environmental, economic, and political issues surrounding their development in the West. The Columbia River and its watershed provide a revealing prototype for examining these issues. A transnational, multi-state river with the largest residual populations of anadromous salmonids in the continental US, it provides a substantial fraction of the electrical energy produced in the Northwest (the Grand Coulee dam powerhouse on the Columbia is the largest-capacity hydropower facility in the US), it is a major bulk commodity transportation link to the interior West via its barge navigation system, it provides the water diversions supporting a large area of irrigated agriculture in Washington and Idaho, and its watershed is home to significant sources of solar and wind energy. We will use the Columbia to study water and energy resources, and especially their coupling, in the context of rapid climate change, ecosystem impacts, economics, and public policy. We will begin with a week of classroom study and discussion on campus, preparing for the field portion of the seminar. We will then travel to the Columbia basin, spending approximately 10 days visiting a number of water and energy facilities across the watershed, e.g., solar, wind, and natural gas power plants; dams and reservoirs with their powerhouses, fish passage facilities, navigation locks, and flood-mitigation systems; an irrigation project; operation centers; and offices of regulatory agencies. We will meet with relevant policy experts and public officials, along with some of the stakeholders in the basin. Over the summer students will be responsible for assigned readings from several sources, including monographs, online materials, and recent news articles. During the trip, students will work in small groups to analyze and assess one aspect of the coupling between water and energy resources in the Northwest. The seminar will culminate in presentations on these analyses. Travel expenses during the seminar will be provided (except incidentals) by the Bill Lane Center for the American West and Sophomore College.  
Same as: CEE 17SC, EARTHSYS 16SC

**ENERGY 130. Well Log Analysis I. 3 Units.**

For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.

**ENERGY 141. Seismic Reservoir Characterization. 3-4 Units.**

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Offered every other year. Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112.

Same as: ENERGY 241, GEOPHYS 241A

**ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.**

Course gives an overview of concepts from geology and geophysics relevant for building subsurface reservoir models. Includes a required 1-day field trip and hands-on lab exercises. Target audience: MS and 1st year PhD students in PE/ERE/GS with little or no background in geology or geophysics. Topics include: basin and petroleum systems, depositional settings, deformation and diagenesis, introduction to reflection seismic data, rock and fluid property measurements, geostatistics, and flow in porous media.

Same as: ENERGY 246, GS 246

**ENERGY 153. Carbon Capture and Sequestration. 3-4 Units.**

CO<sub>2</sub> separation from syngas and flue gas for gasification and combustion processes. Transportation of CO<sub>2</sub> in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO<sub>2</sub>. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

Same as: ENERGY 253

**ENERGY 155. Undergraduate Report on Energy Industry Training. 1-3 Unit.**

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.

**ENERGY 158. Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull. 3 Units.**

This research-based seminar will evaluate the impact of market interventions in commercializing four segments of our energy mix: wind, photovoltaics, lighting, and batteries. To accelerate the development of new technologies to reduce greenhouse gas emissions and improve national security, governments use policies like direct R&D funding, financial incentives or penalties, mandatory targets or caps, and performance standards to create market conditions that favor emerging technologies. Findings outlining the most effective mix of interventions over time will be submitted for publication. Enrollment limited to 12 graduate and co-term students. Those interested please email a paragraph to cathyzoi@stanford.edu by September 16, 2013 expressing why you want to take part and research experience you can bring to the seminar.

**ENERGY 160. Modeling Uncertainty in the Earth Sciences. 3 Units.**

Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical tools available for modeling uncertainty of complex Earth systems as well as the impact uncertainty has on practical decisions for geo-engineering problems. The course focuses on practical breadth rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, sensitivity analysis, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS. Prerequisites: algebra (CME 104 or equivalent), introductory statistics course (CME 106 or equivalent).

**ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties. 3 Units.**

Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.

Same as: ENERGY 267

**ENERGY 171. Energy Infrastructure, Technology and Economics. 3 Units.**

Oil and gas represents more than 50% of global primary energy. In delivering energy at scale, the industry has developed global infrastructure with supporting technology that gives it enormous advantages in energy markets; this course explores how the oil and gas industry operates. From the perspective of these established systems and technologies, we will look at the complexity of energy systems, and will consider how installed infrastructure enables technology development and deployment, impacts energy supply, and how existing infrastructure and capital invested in fossil energy impacts renewable energy development. Prerequisites: Energy 101 and 102 or permission of instructor.

Same as: ENERGY 271

**ENERGY 175. Well Test Analysis. 3 Units.**

Lectures, problems. Application of solutions of unsteady flow in porous media to transient pressure analysis of oil, gas, water, and geothermal wells. Pressure buildup analysis and drawdown. Design of well tests. Computer-aided interpretation.

**ENERGY 180. Oil and Gas Production Engineering. 3 Units.**

Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120.

Same as: ENERGY 280

**ENERGY 191. Optimization of Energy Systems. 3-4 Units.**

Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 20, 41, or MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A, CS 106B).

Same as: ENERGY 291

**ENERGY 192. Undergraduate Teaching Experience. 1-3 Unit.**

Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.

**ENERGY 193. Undergraduate Research Problems. 1-3 Unit.**

Original and guided research problems with comprehensive report. May be repeated for credit.

**ENERGY 194. Special Topics in Energy and Mineral Fluids. 1-3 Unit.**

May be repeated for credit.

**ENERGY 199. Senior Project and Seminar in Energy Resources. 3-4 Units.**

Individual or group capstone project in Energy Resources Engineering. Emphasis is on report preparation. May be repeated for credit.

**ENERGY 201. Laboratory Measurement of Reservoir Rock Properties. 3 Units.**

In this course, students will learn methods for measuring reservoir rock properties. Techniques covered include core preservation and sample preparation; Rock petrography; Interfacial tension of fluids; Measurement of contact angles of fluids on reservoir media; Capillary pressure measurement and interpretation; Absolute and effective porosities; Absolute permeability; Multiphase flow including relative permeability and residual saturation. The class will be 1 3-hour lecture/lab per week, with readings and weekly assignments. A field trip to a professional core characterization lab may be included.

**ENERGY 202. Petroleum Industry Performance Management. 1 Unit.**

Coming up with the right technical solution is only the beginning & it must be implemented. The art and science of Performance Management. How to guarantee results with Leading and Lagging KPIs (Key Performance Indicators). Assessment using the FAIRTM Model (Focus, Accountability, Involvement, Response). Operating Rhythm™: Business Reviews, Boardwalks, One-Pagers, Handover, and Crew Talks. Project management's implementation plans, milestones, and clear deliverables. Sustainability. After Action Reviews (AARs). Continuous Improvement (CI). Coaching's GROW Model (Goal, Reality, Options, Will). The ABC Model (Antecedent & Behavior & Consequence). Students will solve three Case Studies with these tools; the instructor will present the actual solution & what worked, what didn't, and why.

**ENERGY 203. The Energy Transformation Collaborative. 1-3 Unit.**

Solving the global energy challenge will require the creation and successful scale-up of hundreds of new ventures. This project-based course provides a launchpad for the development and creation of transformational energy ventures and innovation models. Interdisciplinary teams will research, analyze, and develop detailed launch plans for high-impact opportunities in the context of the new energy venture development framework offered in this course.

**ENERGY 204. Achieving Universal Energy Access by 2030: Can it be done?. 2-3 Units.**

Today 1.2 billion people have no access to electricity; many more don't have power that is reliable. Activities the developed world counts on for economic growth are severely limited where there isn't reliable electricity. Cost reductions in distributed, renewable energy generation and battery storage technologies are creating opportunities to bring affordable power to communities that have never had it. This course will examine what will need to be in place so that electricity can reach everyone by 2030.

**ENERGY 20N. Technology in the Greenhouse. 3 Units.**

The evidence that human activities are changing the climate is overwhelming. Energy use is woven throughout the fabric of modern societies, and energy systems are also a primary way that humans interact with the global Earth systems like climate. We know enough about the potential impacts of climate change to see that we need to transform the world's energy systems to a much cleaner set of technologies with much lower greenhouse gas emissions. Economies that use energy in a clean, cost-effective way will be much more competitive in the future. The clean energy transition is now underway, with reductions in coal use and rapid growth in solar and wind deployment, but there is much more to do to limit the adverse impacts of climate change. This seminar explores technology options available to make the changes needed, in the developed and developing worlds. There is no shortage of energy available for our use. Instead, the challenge is to convert those energy resources into services like electricity and transportation, and that conversion requires technology, as well as policies and markets that enable innovation. The scale of the world's energy systems is dauntingly large, and we will need a well-diversified set of options to meet the challenge. Wind, solar, nuclear, carbon capture and storage for fossil fuel use, modified agriculture, electric (and automated) vehicles, advanced air conditioning, and many other technology options exist. We will consider these technologies and ask what barriers will have to be addressed if they are to be deployed at a scale large enough to reduce the impact climate change. The format will be discussions of technologies and their potential with a project and student presentations toward the end of the quarter.

**ENERGY 212. Environmental Aspects of Oil and Gas Production. 1 Unit.**

This course introduces students to the major environmental aspects of oil and gas production, including law, policy, regulation, impact assessment, and mitigation. Through readings, lectures, homework, in-class activities, and case studies, students learn about the major state/federal laws and regulatory programs governing oil and gas in the U.S., industry permitting and compliance strategies, and current public stakeholder issues/challenges (with a particular focus on climate change and water management). Emerging legislative/regulatory trends, advocacy approaches, and sustainability concepts also are explored.

**ENERGY 214. The Global Price of Oil. 2 Units.**

Understanding the current and future price of oil requires the synthesis of geologic, engineering, financial, geopolitical, and macroeconomic information. In this seminar, we will build a global supply curve for petroleum by studying the marginal and full-cycle production costs for each of the major resource categories. We will study how reserve classification varies globally, and how global petroleum resources and reserves have changed and are likely to change over time. We will further investigate how the time lag between resource discovery, project sanctioning, and full production will affect future supply. Finally, we will study the elasticity of oil demand and how that demand is likely to change over time as the developing world gets richer and as competition from other energy sources increases.

**ENERGY 216. Entrepreneurship in Energy. 2 Units.**

The combined forces of climate change, technological development, and geopolitics are disrupting the energy industry, yet the competitiveness and regulated nature of the mature markets for fuel, power, and materials have created meaningful barriers to entry for startup companies. In this case based course, students will study real energy startups to understand what challenges they have overcome and continue to face. Each week, the course will focus on a different company and the founder or CEO of that company will present. Topics will include advanced battery technologies, photovoltaic manufacturing, solar and wind project development, oil & gas exploration & production, advanced biofuels, electric vehicles, distributed power generation, and financing energy startups.

**ENERGY 217. Research Seminar: Energy Development in the Emerging Economy. 2-3 Units.**

Through this research project, students will dive into and gain firsthand experience on evaluating the efficacy of a portfolio of 34 energy technology start-up projects in emerging economies that encompasses a range of regions, energy sectors, and technologies. Student's will learn from each project's unique experiences, and gather critical data that may help support the success of future similar endeavors. Some questions students will be looking to answer include (1) Was the project able to accomplish its goal(s)? (2) Are there common success factors or similar roadblocks? (3) Is the technology and/or solution still effective and operational?  
Prerequisite: submit survey <https://precourt.typeform.com/to/NdtU0Z> and permission of instructor.

**ENERGY 221. Fundamentals of Multiphase Flow. 3 Units.**

Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.

Same as: ENERGY 121

**ENERGY 222. Advanced Reservoir Engineering. 3 Units.**

Lectures, problems. General flow equations, tensor permeabilities, steady state radial flow, skin, and succession of steady states. Injectivity during fill-up of a depleted reservoir, injectivity for liquid-filled reservoirs. Flow potential and gravity forces, coning. Displacements in layered reservoirs. Transient radial flow equation, primary drainage of a cylindrical reservoir, line source solution, pseudo-steady state. May be repeated for credit.  
Prerequisite: 221.

**ENERGY 223. Reservoir Simulation. 3-4 Units.**

Fundamentals of petroleum reservoir simulation. Equations for multicomponent, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206.

**ENERGY 224. Advanced Reservoir Simulation. 3 Units.**

Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation, upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.

**ENERGY 225. Theory of Gas Injection Processes. 3 Units.**

Lectures, problems. Theory of multicomponent, multiphase flow in porous media. Miscible displacement: diffusion and dispersion, convection-dispersion equations and its solutions. Method of characteristic calculations of chromatographic transport of multicomponent mixtures. Development of miscibility and interaction of phase behavior with heterogeneity. May be repeated for credit.  
Prerequisite: CME 200.

**ENERGY 226. Thermal Recovery Methods. 3 Units.**

Theory and practice of thermal recovery methods: steam drive, cyclic steam injections, and in situ combustion. Models of combined mass and energy transport. Estimates of heated reservoir volume and oil recovery performance. Wellbore heat losses, recovery production, and field examples.

**ENERGY 227. Enhanced Oil Recovery. 3 Units.**

The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.

**ENERGY 230. Advanced Topics in Well Logging. 3 Units.**

State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

**ENERGY 240. Data science for geoscience. 3 Units.**

Overview of some of the most important data science methods (statistics, machine learning & computer vision) relevant for geological sciences, as well as other fields in the Earth Sciences. Areas covered are: extreme value statistics for predicting rare events; compositional data analysis for geochemistry; multivariate analysis for designing data & computer experiments; probabilistic aggregation of evidence for spatial mapping; functional data analysis for multivariate environmental datasets, spatial regression and modeling spatial uncertainty with covariate information (geostatistics). Identification & learning of geo-objects with computer vision. Focus on practicality rather than theory. Matlab exercises on realistic data problems.

Same as: GS 240

**ENERGY 241. Seismic Reservoir Characterization. 3-4 Units.**

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Offered every other year. Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112.  
Same as: ENERGY 141, GEOPHYS 241A

**ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.**

Course gives an overview of concepts from geology and geophysics relevant for building subsurface reservoir models. Includes a required 1-day field trip and hands-on lab exercises. Target audience: MS and 1st year PhD students in PE/ERE/GS with little or no background in geology or geophysics. Topics include: basin and petroleum systems, depositional settings, deformation and diagenesis, introduction to reflection seismic data, rock and fluid property measurements, geostatistics, and flow in porous media.  
Same as: ENERGY 146, GS 246

**ENERGY 251. Thermodynamics of Equilibria. 3 Units.**

Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.

**ENERGY 253. Carbon Capture and Sequestration. 3-4 Units.**

CO<sub>2</sub> separation from syngas and flue gas for gasification and combustion processes. Transportation of CO<sub>2</sub> in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO<sub>2</sub>. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

Same as: ENERGY 153

**ENERGY 255. Master's Report on Energy Industry Training. 1-3 Unit.**

On-the-job training for master's degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit. Prerequisite: consent of adviser.

**ENERGY 259. Presentation Skills. 1 Unit.**

For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, text design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.

**ENERGY 262. Physics of Wind Energy. 3 Units.**

Formerly CEE 261. An introduction to the analysis and modeling of wind energy resources and their extraction. Topics include the physical origins of atmospheric winds; vertical profiles of wind speed and turbulence over land and sea; the wind energy spectrum and its modification by natural topography and built environments; theoretical limits on wind energy extraction by wind turbines and wind farms; modeling of wind turbine aerodynamics and wind farm performance. Final project will focus on development of a new wind energy technology concept. Prerequisites: CEE 262A or ME 351A.

Same as: CEE 261B, ME 262

**ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties. 3 Units.**

Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.

Same as: ENERGY 167

**ENERGY 269. Geothermal Reservoir Engineering. 3 Units.**

Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.

**ENERGY 271. Energy Infrastructure, Technology and Economics. 3 Units.**

Oil and gas represents more than 50% of global primary energy. In delivering energy at scale, the industry has developed global infrastructure with supporting technology that gives it enormous advantages in energy markets; this course explores how the oil and gas industry operates. From the perspective of these established systems and technologies, we will look at the complexity of energy systems, and will consider how installed infrastructure enables technology development and deployment, impacts energy supply, and how existing infrastructure and capital invested in fossil energy impacts renewable energy development. Prerequisites: Energy 101 and 102 or permission of instructor.

Same as: ENERGY 171

**ENERGY 273. Special Topics in Energy Resources Engineering. 1-3 Unit.****ENERGY 274. Complex Analysis for Practical Engineering. 3 Units.**

Complex analysis is closely related to potential theory, appearing in a variety of engineering disciplines, including flow dynamics, electrostatics, heat conduction and gravity fields. This course is devoted to explaining the fundamentals of complex analysis and instructing on how to develop mathematical tools to solve engineering problems in potential theory. Individual topics are lectured with motivating problems, so that students can understand why these subjects need to be covered and how these are applied to practical engineering problems.

**ENERGY 275. Quantitative Methods in Basin and Petroleum System Modeling. 1-3 Unit.**

Examine the physical processes operating in sedimentary basins by deriving the basic equations of fundamental, coupled geologic processes such as fluid flow and heat flow, deposition, compaction, mass conservation, and chemical reactions. Through hands-on computational exercises and instructor-provided "recipes," students will deconstruct the black box of basin modeling software. Students write their own codes (Matlab) as well as gain expertise in modern finite-element modeling software (PetroMod, COMSOL).

Same as: GS 256

**ENERGY 280. Oil and Gas Production Engineering. 3 Units.**

Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120.

Same as: ENERGY 180

**ENERGY 281. Applied Mathematics in Reservoir Engineering. 3 Units.**

The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green's functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.

**ENERGY 282. Chemical Kinetics of Fossil Fuel Creation and Utilization. 1 Unit.**

Chemical kinetics are an integral part of optimizing recovery of fossil fuels. After reviewing the genesis of various kinds of fossil fuels and the history of their use, the course describes the molecular structure of the various types and how that influences their pyrolysis kinetics. Methods for deriving reliable kinetics are covered, including how to determine which phenomenological models are appropriate. Applications discussed are petroleum formation, oil shale retorting, heavy oil upgrading, and coal liquefaction.

**ENERGY 284. Optimization and Inverse Modeling. 3 Units.**

Treatment of deterministic and stochastic optimization, gradient-based optimization, polytopy method, generalized least squares, non-linear least squares and confidence intervals by numerical methods and bootstrap. Adjoint method for gradient calculation. Genetic algorithms and simulated annealing. Development of proxy functions using regression techniques and neural networks. Application of optimization methods to solving non-linear inverse problems. Bayesian method, rejection sampling, metropolis sampling, uncertainty quantification. Parameterization of high-dimensional problems through various expansion techniques. Examples of various Earth sciences inverse problems including flow and wave equations. Requirements: CME 106 and 200 (or equivalent courses).

**ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery. 1 Unit.**

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.

**ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation. 1 Unit.**

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.

**ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor.

**ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor. (Horne).

**ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.

**ENERGY 285G. Geothermal Reservoir Engineering Research Seminar. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.

**ENERGY 285S. Smart Fields Research Seminar: Horizontal Well Technology. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in Smart Fields (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.

**ENERGY 289. Multiscale Methods for Transport in Porous Media. 3 Units.**

The concept of "tyranny of scales" in natural/engineered porous media refers to the disparity of temporal and spatial scales at which mass, momentum, and energy transport is best understood and at which predictions are needed for practical applications. Modeling approaches that incorporate process understanding at different temporal and spatial scales are often necessary to improve our predictive capabilities of natural and engineered porous media. The course focuses on the fundamental understanding of multiscale systems and corresponding modeling tools to analyze them.

**ENERGY 291. Optimization of Energy Systems. 3-4 Units.**

Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 20, 41, or MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A, CS 106B). Same as: ENERGY 191

**ENERGY 293A. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.**

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Prerequisites: MATSCI 145 and 152 or equivalent coursework in thermodynamics and electronic properties. Same as: EE 293A, MATSCI 156, MATSCI 256

**ENERGY 293B. Fundamentals of Energy Processes. 3 Units.**

For seniors and graduate students. Covers scientific and engineering fundamentals of renewable energy processes involving heat. Thermodynamics, heat engines, solar thermal, geothermal, biomass. Recommended: MATH 19-21; PHYSICS 41, 43, 45. Same as: EE 293B

**ENERGY 293C. Energy from Wind and Water Currents. 3 Units.**

This course focuses on the extraction of energy from wind, waves and tides. The emphasis in the course is technical leading to a solid understanding of established extraction systems and discussion of promising new technologies. We will also cover resource planning and production optimization through observations and computer simulations. The course includes at least one weekend field trip, and may include experiments in wind tunnel and/or flume. Prerequisites: CEE176B or EE293B, programming experience, understanding of fluid mechanics, electrical systems, and engineering optimization.

**ENERGY 294. Electrochemical Energy Storage Systems: Modeling and Estimation. 3 Units.**

The course focuses on modeling and estimation methods as necessary tools to extract the full potential from Lithium-ion batteries, specifically used in electrified vehicles. The complex nature of a battery system requires that a physics-based approach, in the form of electrochemical models, be used as a modeling platform to develop system-level control algorithms to allow designer to maximize batteries performance and longevity while guaranteeing safety operations. In this course, we will cover 1) first-principles methods to model battery dynamics, 2) electrochemical and control-oriented models, 3) parameter identification problems, 4) estimation algorithms for real-time application. A formal exposure to state space analysis and estimation of dynamical systems will be given.

**ENERGY 300. Graduate Directed Reading. 1-7 Unit.**

Independent studies under the direction of a faculty member for which academic credit may properly be allowed.

**ENERGY 301. The Energy Seminar. 1 Unit.**

Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit. Same as: CEE 301, MS&E 494

**ENERGY 355. Doctoral Report on Energy Industry Training. 1-3 Unit.**

On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of adviser.

**ENERGY 359. Teaching Experience in Energy Resources Engineering. 1 Unit.**

For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.

**ENERGY 360. Advanced Research Work in Energy Resources Engineering. 1-10 Unit.**

Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.

**ENERGY 361. Master's Degree Research in Energy Resources Engineering. 1-6 Unit.**

Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total.nn (Staff).

**ENERGY 362. Engineer's Degree Research in Energy Resources Engineering. 1-10 Unit.**

Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

**ENERGY 363. Doctoral Degree Research in Energy Resources Engineering. 1-10 Unit.**

Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.

**ENERGY 365. Special Research Topics in Energy Resources Engineering. 1-15 Unit.**

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

**ENERGY 369. Practical Energy Studies. 1-3 Unit.**

Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.

**ENERGY 801. TGR Project. 0 Units.**

.

**ENERGY 802. TGR Dissertation. 0 Units.**

.

## Engineering (ENGR)

**ENGR 10. Introduction to Engineering Analysis. 4 Units.**

Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses. Prerequisite: AP Physics and AP Calculus or equivalent.

**ENGR 100. Teaching Public Speaking. 3 Units.**

The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

**ENGR 102W. Writing for Engineers. 3 Units.**

Intensive practicum focusing on effective communication of technical, scientific, and professional information in industry and academia. Best writing practices for varied audiences, purposes, and media. Group workshops and individual conferences with instructors. Designed for undergraduates.

**ENGR 103. Public Speaking. 3 Units.**

Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment. Same as: ENGR 203

**ENGR 105. Feedback Control Design. 3 Units.**

Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102B, CME 102 (Math 53) or ME 161.

**ENGR 110. Perspectives in Assistive Technology (ENGR 110). 1-3 Unit.**

Seminar and student project course. Explores the medical, social, ethical, and technical challenges surrounding the design, development, and use of technologies that improve the lives of people with disabilities and older adults. Guest lecturers include engineers, clinicians, and individuals with disabilities. Field trips to local facilities, an assistive technology faire, and a film screening. Students from any discipline are welcome to enroll. 3 units for students (juniors, seniors, and graduate students preferred) who pursue a team-based assistive technology project with a community partner - enrollment limited to 24. 1 unit for seminar attendance only (CR/NC) or individual project (letter grade). Total enrollment limited to classroom capacity of 50. Projects can be continued as independent study in Spring Quarter. See <http://enr110.stanford.edu/>. Designated a Cardinal Course by the Haas Center for Public Service. Same as: ENGR 210

**ENGR 113A. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 213A

**ENGR 113C. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 213C

**ENGR 113D. SOLAR DECATHLON 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 213D

**ENGR 115. Design the Tech Challenge. 2 Units.**

Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit. Same as: ENGR 215

**ENGR 117. Expanding Engineering Limits: Culture, Diversity, and Gender. 2-3 Units.**

This course investigates how culture, and diversity, including gender, shape who becomes an engineer, what problems get solved, and the quality of designs, technology, and products. We first examine the characteristics of engineering cultures – what are the interactions, symbols and ideas, and practices that define engineering? We then investigate how gender and other markers of diverse identities are interdependent and culturally constructed, how gender and other kinds of diversity are experienced in engineering cultures, and how these experiences have consequence for engineering innovation and the engineering profession. Finally, we analyze examples of cultural change in engineering and implications for engineering knowledge and practice. The course involves weekly presentations by distinguished scholars and engineers, readings, short writing assignments, small-group discussion, and exercises around one's own experiences in and related to engineering. Those taking the course for 3 units will also complete a research-based project, and must take the course for a letter grade to meet the undergraduate WAY-ED requirement.

Same as: CSRE 117, CSRE 217, FEMGEN 117, FEMGEN 217

**ENGR 118. Cross-Cultural Design for Service. 3 Units.**

Students spend the summer in China working collaboratively to use design thinking for a project in the countryside. Students learn and apply the principles of design innovation including user research, ideation, prototyping, storytelling and more in a cross cultural setting to design a product or service that will benefit Chinese villagers. Students should be prepared to work independently in a developing region of China, to deal with persistent ambiguity, and to work with a cross-cultural, diverse team of students on their projects. Applications for Summer 2012 were due in March.

**ENGR 119. Community Engagement Preparation Seminar. 1 Unit.**

This seminar is designed for engineering students who have already committed to an experiential learning program working directly with a community partner on a project of mutual benefit. This seminar is targeted at students participating in the Summer Service Learning Program offered through Stanford's Global Engineering Program. Same as: ENGR 219

**ENGR 120. Fundamentals of Petroleum Engineering. 3 Units.**

Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. Same as: ENERGY 120

**ENGR 130. Science, Technology, and Contemporary Society. 4-5 Units.**

Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology.

**ENGR 131. Ethical Issues in Engineering. 4 Units.**

Fundamental ethical responsibilities of engineers. Ethical responsibilities to society, employers, colleagues, and clients; ethics, cost-benefit-risk analysis, and safety; informed consent; ethical responsibilities of radical engineering design; the ethics of whistleblowing; ethical issues engineers face as expert witnesses, consultants, and managers; ethical issues in engineering research, design, testing, and manufacturing; ethical issues arising from engineering work in foreign countries; and ethical issues arising from the social, cultural, and environmental contexts of contemporary engineering work. Contemporary case studies. Enrollment strictly limited to 60. Students seeking a slot must attend and complete an application at the first class session.

**ENGR 14. Intro to Solid Mechanics. 3 Units.**

Introduction to engineering analysis using the principles of engineering solid mechanics. Builds on the math and physical reasoning concepts in Physics 41 to develop skills in evaluation of engineered systems across a variety of fields. Foundational ideas for more advanced solid mechanics courses such as ME80 or CEE101A. Interactive lecture sessions focused on mathematical application of key concepts, with weekly complementary lab session on testing and designing systems that embody these concepts. Limited enrollment, subject to instructor approval. Pre-requisite: Physics 41.

**ENGR 140A. Leadership of Technology Ventures. 3-4 Units.**

First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).

**ENGR 140B. Leadership of Technology Ventures. 1-2 Unit.**

Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.

**ENGR 140C. Leadership of Technology Ventures. 2-3 Units.**

Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.

**ENGR 145. Technology Entrepreneurship. 4 Units.**

How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? Mentor-guided project focused on developing students' startup ideas, immersion in nuances of innovation and early stage entrepreneurship, case studies, research on the entrepreneurial process, and the opportunity to network with Silicon Valley's top entrepreneurs and venture capitalists. For undergraduates of all majors who seek to understand the formation and growth of high-impact start-ups in areas such as information, energy, medical and consumer technologies. No prerequisites. Limited enrollment.

**ENGR 15. Dynamics. 3 Units.**

The application of Newton's Laws to solve 2-D and 3-D static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and equations of motion, with application to mechanical, biomechanical, and aerospace systems. Computer numerical solution and dynamic response. Prerequisites: Calculus (differentiation and integration) such as MATH 41; and ENGR 14 (statics and strength) or a mechanics course in physics such as PHYSICS 41.

**ENGR 150. Data Challenge Lab. 3-5 Units.**

In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, data visualization, exploratory data analysis, and basic modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Limited enrollment; application required. See <http://datalab.stanford.edu> for more information.

**ENGR 154. Vector Calculus for Engineers. 5 Units.**

Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Introduction to linear algebra: matrix operations, systems of algebraic equations, methods of solution and applications. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: 10 units of AP credit (Calc BC with 5, or Calc AB with 5 or placing out of the single variable math placement test: <https://exploreddegrees-nextyear.stanford.edu/undergraduatedegreesandprograms/#apextt>), or Math 19-21. Same as: CME 100

**ENGR 155A. Ordinary Differential Equations for Engineers. 5 Units.**

Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and nonlinear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: 10 units of AP credit (Calc BC with 5, or Calc AB with 5 or placing out of the single variable math placement test: <https://exploreddegreesnextyear.stanford.edu/undergraduatedegreesandprograms/#apextt>), or Math 19-21. Recommended: CME100. Same as: CME 102

**ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers. 5 Units.**

Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. Same as: CME 104

**ENGR 155C. Introduction to Probability and Statistics for Engineers. 4 Units.**

Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51 or 52. Same as: CME 106

**ENGR 159Q. Japanese Companies and Japanese Society. 3 Units.**

Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. Same as: MATSCI 159Q

**ENGR 192. Engineering Public Service Project. 1-2 Unit.**

Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See <http://soe.stanford.edu/publicservice>. May be repeated for credit. Prerequisite: consent of instructor.

**ENGR 193. Discover Engineering: How to Aim High, Embrace Uncertainty, and Achieve Impact. 1 Unit.**

This weekly seminar will provide students of all engineering majors with practical leadership skills training (e.g. how to network, advocate for yourself, assert influence) in order to make innovative and meaningful contributions in their fields. Career exploration and mentorship opportunities will be delivered through an inspiring line up of guest speakers and interactive activities, demonstrations and tours. May be repeat for credit.

**ENGR 199. Special Studies in Engineering. 1-15 Unit.**

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor.

**ENGR 199W. Writing of Original Research for Engineers. 1-3 Unit.**

Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation.

**ENGR 20. Introduction to Chemical Engineering. 4 Units.**

Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. Same as: CHEMENG 20

**ENGR 202C. Technical Writing. 3 Units.**

How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science. This offering for CEE SDC students only.

**ENGR 202S. Directed Writing Projects. 1 Unit.**

Individualized writing instruction for students working on writing projects such as dissertations, proposals, grant applications, honors or engineering theses, journal articles, conference papers, and teaching and research statements. Weekly one-on-one conferences with writing instructors from the Technical Communication Program. Students receive close attention to and detailed feedback on their writing. No prerequisite. Grading: Satisfactory/No Credit. This course may be repeated for credit.

**ENGR 202W. Technical Writing. 3 Units.**

How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science.

**ENGR 203. Public Speaking. 3 Units.**

Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment. Same as: ENGR 103

**ENGR 205. Introduction to Control Design Techniques. 3 Units.**

Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab.

**ENGR 207A. Linear Control Systems I. 3 Units.**

Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205.

**ENGR 207B. Linear Control Systems II. 3 Units.**

Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: EE 263.

**ENGR 209A. Analysis and Control of Nonlinear Systems. 3 Units.**

Introduction to nonlinear phenomena: multiple equilibria, limit cycles, bifurcations, complex dynamical behavior. Planar dynamical systems, analysis using phase plane techniques. Describing functions. Lyapunov stability theory. SISO feedback linearization, sliding mode control. Design examples. Prerequisite: 205.

**ENGR 21. Engineering of Systems. 3 Units.**

A high-level look at techniques for analyzing and designing complex, multidisciplinary engineering systems, such as aircraft, spacecraft, automobiles, power plants, cellphones, robots, biomedical devices, and many others. The need for multi-level design, modeling and simulation approaches, computation-based design, and hardware and software-in-the-loop simulations will be demonstrated through a variety of examples and case studies. Several aspects of system engineering will be applied to the design of large-scale interacting systems and contrasted with subsystems such as hydraulic systems, electrical systems, and brake systems. The use of design-thinking, story-boarding, mockups, sensitivity analysis, simulation, team-based design, and the development of presentation skills will be fostered through several realistic examples in several fields of engineering.

**ENGR 210. Perspectives in Assistive Technology (ENGR 110). 1-3 Unit.**

Seminar and student project course. Explores the medical, social, ethical, and technical challenges surrounding the design, development, and use of technologies that improve the lives of people with disabilities and older adults. Guest lecturers include engineers, clinicians, and individuals with disabilities. Field trips to local facilities, an assistive technology faire, and a film screening. Students from any discipline are welcome to enroll. 3 units for students (juniors, seniors, and graduate students preferred) who pursue a team-based assistive technology project with a community partner - enrollment limited to 24. 1 unit for seminar attendance only (CR/NC) or individual project (letter grade). Total enrollment limited to classroom capacity of 50. Projects can be continued as independent study in Spring Quarter. See <http://engr110.stanford.edu/>. Designated a Cardinal Course by the Haas Center for Public Service. Same as: ENGR 110

**ENGR 213. Solar Decathlon. 1-4 Unit.**

Open to all engineering majors. Project studio for all work related to the Solar Decathlon 2013 competition. Each student will develop a personal work plan for the quarter with his or her advisor and perform multidisciplinary collaboration on designing systems for the home or pre-construction planning. Work may continue through the summer as a paid internship, as well as through the next academic year. For more information about the team and the competition, please visit [solardecathlon.stanford.edu](http://solardecathlon.stanford.edu).

**ENGR 213A. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113A

**ENGR 213C. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113C

**ENGR 213D. SOLAR DECATHLON 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA. Same as: ENGR 113D

**ENGR 215. Design the Tech Challenge. 2 Units.**

Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit. Same as: ENGR 115

**ENGR 219. Community Engagement Preparation Seminar. 1 Unit.**

This seminar is designed for engineering students who have already committed to an experiential learning program working directly with a community partner on a project of mutual benefit. This seminar is targeted at students participating in the Summer Service Learning Program offered through Stanford's Global Engineering Program. Same as: ENGR 119

**ENGR 231. Transformative Design. 3 Units.**

Too many alums are doing what they've always been told they're good at, and are living with regret and a sense that they're just resigned to doing this thing for the rest of their lives. Capabilities displaced their values as the primary decision driver in their lives. Our ultimate goal is to restore a sense of agency and passion into the lives of current Stanford students by creating the space to explore and experiment with the greatest design project possible: YOUR LIFE. We will turn d.school tools and mindsets onto the topic of our lives -- not in theory, but in reality -- and will prototype changes to make your life and career more fulfilling and rewarding. We will actively empathize and experiment in your life and work, so if you don't want to do that kind of self-examination, this class will not be a good fit for you.

**ENGR 240. Introduction to Micro and Nano Electromechanical Systems. 3 Units.**

Miniaturization technologies now have important roles in materials, mechanical, and biomedical engineering practice, in addition to being the foundation for information technology. This course will target an audience of first-year engineering graduate students and motivated senior-level undergraduates, with the goal of providing an introduction to M/NEMS fabrication techniques, selected device applications, and the design tradeoffs in developing systems. The course has no specific prerequisites, other than graduate or senior standing in engineering; otherwise, students will require permission of the instructors.

**ENGR 241. Advanced Micro and Nano Fabrication Laboratory. 3 Units.**

This project course focuses on developing processes for ExFab, a shared facility that supports flexible lithography, heterogeneous integration, and rapid micro prototyping. Team projects are approved by the instructor and are mentored by an ExFab staff member. Students will plan and execute experiments and document them in a final presentation and report, to be made available on the lab's Wiki for the benefit of the Stanford research community.

**ENGR 243. LAW, TECHNOLOGY, AND LIBERTY. 2 Units.**

New technologies from gene editing to networked computing have already transformed our economic and social structures and are increasingly changing what it means to be human. What role has law played in regulating and shaping these technologies? And what role can and should it play in the future? This seminar will consider these and related questions, focusing on new forms of networked production, the new landscape of security and scarcity, and the meaning of human nature and ecology in an era of rapid technological change. Readings will be drawn from a range of disciplines, including science and engineering, political economy, and law. The course will feature several guest speakers. There are no formal prerequisites in either engineering or law, but students should be committed to pursuing novel questions in an interdisciplinary context. The enrollment goal is to balance the class composition between law and non-law students. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course is cross-listed with the School of Engineering (TBA). May be repeat for credit. Same as: BIOE 242

**ENGR 245. The Lean LaunchPad: Getting Your Lean Startup Off the Ground. 3-4 Units.**

Apply the "Lean Startup" principles; "business model canvas," "customer development" and "Agile Engineering" to prototype, test, and iterate your idea while discovering if you have a profitable business model. This is the class adopted by the NSF and NIH as the Innovation Corps. Apply and work in teams. Info sessions held in November and December. Team applications required in December. Proposals can be software, hardware, or service of any kind. Projects are experiential and require incrementally building the product while talking to customers/partners each week. See course website <http://stanfordleanlaunchpad.weebly.com/>. Prerequisite: interest and passion in exploring whether a technology idea can become a real company. Limited enrollment.

**ENGR 250. Data Challenge Lab. 1-6 Unit.**

In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, exploratory data analysis, data visualization, and predictive modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Prerequisite: ENGR150. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

**ENGR 25B. Biotechnology. 3 Units.**

Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 20 or equivalent courage. Same as: CHEMENG 25B

**ENGR 25E. Energy: Chemical Transformations for Production, Storage, and Use. 3 Units.**

An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. Same as: CHEMENG 25E

**ENGR 280. From Play to Innovation. 2-4 Units.**

Focus is on enhancing the innovation process with playfulness. The class will be project-based and team-centered. We will investigate the human "state of play" to reach an understanding of its principal attributes and how important it is to creative thinking. We will explore play behavior, its development, and its biological basis. We will then apply those principles through design thinking to promote innovation in the corporate world. Students will work with real-world partners on design projects with widespread application. This course requires an application. You can find the application here: [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes).

**ENGR 281. d.media - Designing Media that Matters. 2-3 Units.**

The combination of always-on smartphones, instant access to information and global social sharing is changing behavior and shifting cultural norms. How can we design digital experiences that make this change positive? Join the d.media team and find out! This course is project-based and hands-on. Three projects will explore visual design, interaction design and behavioral design all in the context of today's technology landscape and in service of a socially positive user experience. See <http://dmedia.stanford.edu>, Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ENGR 290. Graduate Environment of Support. 1 Unit.**

For course assistants (CAs) and tutors in the School of Engineering tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.

**ENGR 295. Learning & Teaching of Science. 3 Units.**

This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.

Same as: EDUC 280, PHYSICS 295

**ENGR 298. Seminar in Fluid Mechanics. 1 Unit.**

Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.

**ENGR 299. Special Studies in Engineering. 1-15 Unit.**

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.

**ENGR 311A. Women's Perspectives. 1 Unit.**

Master's and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.

**ENGR 311B. Designing the Professional. 1 Unit.**

Once I get my degree, how do I get a life? What do you want out of life after Stanford? Wondering how to weave together what fits, is doable, and will be truly meaningful? Join us for Designing the Professional. This course applies the innovation principles of design thinking to the "wicked problem" of designing your life and vocation in and beyond Stanford. We'll approach these lifelong questions with a structured framework set in a seminar where you can work out your ideas in conversation with your peers. Seminar open to all graduate students (PhD, Masters) and Postdocs in all 7 schools.

**ENGR 311D. Portfolio to Professional: Supporting the Development of Digital Presence Through ePortfolios. 1 Unit.**

This course guides graduate students in creating a professional ePortfolio and establishing an online presence. The course includes seminar-style presentations and discussions, opportunities for feedback with career mentors, classmates, alumni, employers, and other community members using think-aloud protocols and peer review approaches. Curriculum modules focus on strategies for telling your story in the digital environment, platform considerations, evidence and architecture, visual design and user experience. Open to all graduate students and majors.

**ENGR 312. Science and Engineering Course Design. 2-3 Units.**

For students interested in an academic career and who anticipate designing science or engineering courses at the undergraduate or graduate level. Goal is to apply research on science and engineering learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.

Same as: VPPL 312

**ENGR 313. Topics in Engineering and Science Education. 1-2 Unit.**

This seminar series focuses on topics related to teaching science, technology, engineering, and math (STEM) courses based on education research. Each year focuses on a different topic related to STEM education. This course may be repeated for credit each year. This year we will explore problem-based learning in STEM courses, particularly focusing on design and evaluation of problem-based learning activities. The course will involve in-class discussions, small group activities, and guest lectures. Throughout the quarter, there will be several opportunities for directly practicing and applying STEM education strategies to specific teaching goals in your field.

**ENGR 341. Micro/Nano Systems Design and Fabrication. 3-5 Units.**

Laboratory course in micro and nano fabrication technology that combines lectures on theory and fundamentals with hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.

**ENGR 342. MEMS Laboratory II. 3-4 Units.**

Emphasis is on tools and methodologies for designing and fabricating N/MEMS-based solutions. Student interdisciplinary teams collaborate to invent, develop, and integrate N/MEMS solutions. Design alternatives fabricated and tested with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.

**ENGR 350. Data Impact Lab. 1-6 Unit.**

In this lab, multi-disciplinary teams of students tackle high-impact, unsolved problems for social sector partners. Teams receive mentorship and coaching from Stanford faculty, domain experts, and data science experts from industry. Sample projects include innovations for: poverty alleviation in the developing world, local government services, education, and healthcare. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

**ENGR 391. Engineering Education and Online Learning. 3 Units.**

A project based introduction to web-based learning design. In this course we will explore the evidence and theory behind principles of learning design and game design thinking. In addition to gaining a broad understanding of the emerging field of the science and engineering of learning, students will experiment with a variety of educational technologies, pedagogical techniques, game design principles, and assessment methods. Over the course of the quarter, interdisciplinary teams will create a prototype or a functioning piece of educational technology.

Same as: EDUC 391

**ENGR 40. Introductory Electronics. 5 Units.**

Not offered. Students wishing to complete the equivalent of ENGR 40 should enroll in both ENGR 40A and ENGR 40B.

**ENGR 40A. Introductory Electronics. 3 Units.**

First portion of the former ENGR 40, for students not pursuing degree in Electrical Engineering. Instruction to be completed in the first seven weeks of the quarter. Students wishing to complete the equivalent of ENGR 40 should enroll in both ENGR 40A and ENGR 40B. Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Lab. Lab assignments. Enrollment limited to 300.

**ENGR 40B. Introductory Electronics Part II. 2 Units.**

Second portion of the former ENGR 40. Instruction to be completed in the final three weeks of the quarter. Students wishing to complete the equivalent of ENGR 40 should enroll in both ENGR 40A and ENGR 40B. Students cannot enroll in ENGR 40B without enrolling in ENGR 40A. Students choose one the following sections (1) Frequency response of linear circuits, including basic filters, using phasor analysis. (2) Digital hardware and software implementations of a robot car. Lab. Lab assignments. Co-requisite: ENGR 40A. Enrollment limited to 300.

**ENGR 40M. An Intro to Making: What is EE. 3-5 Units.**

Is a hands-on class where students learn to make stuff. Through the process of building, you are introduced to the basic areas of EE. Students build a "useless box" and learn about circuits, feedback, and programming hardware, a light display for your desk and bike and learn about coding, transforms, and LEDs, a solar charger and an EKG machine and learn about power, noise, feedback, more circuits, and safety. And you get to keep the toys you build. Prerequisite: CS 106A.

**ENGR 42. Introduction to Electromagnetics and Its Applications. 5 Units.**

Electricity and magnetism and its essential role in modern electrical engineering devices and systems, such as sensors, displays, DVD players, and optical communication systems. The topics that will be covered include electrostatics, magnetostatics, Maxwell's equations, one-dimensional wave equation, electromagnetic waves, transmission lines, and one-dimensional resonators. Pre-requisites: MATH 42 or MATH 51 or CME 100 or equivalent.

Same as: EE 42

**ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis. 4 Units.**

The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials.

**ENGR 50E. Introduction to Materials Science, Energy Emphasis. 4 Units.**

Materials structure, bonding and atomic arrangements leading to their properties and applications. Topics include electronic, thermal and mechanical behavior; emphasizing energy related materials and challenges.

**ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis. 4 Units.**

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

**ENGR 60. Engineering Economics and Sustainability. 3 Units.**

Engineering Economics is a subset of the field of economics that draws upon the logic of economics, but adds that analytical power of mathematics and statistics. The concepts developed in this course are broadly applicable to many professional and personal decisions, including making purchasing decisions, deciding between project alternatives, evaluating different processes, and balancing environmental and social costs against economic costs. The concepts taught in this course will be increasingly valuable as students climb the career ladder in private industry, a non-governmental organization, a public agency, or in founding their own startup. Eventually, the ability to make informed decisions that are based in fundamental analysis of alternatives is a part of every career. As such, this course is recommended for engineering and non-engineering students alike. This course is taught exclusively online in every quarter it is offered. (Prerequisites: MATH 19 or 20 or approved equivalent.)

Same as: CEE 146S

**ENGR 62. Introduction to Optimization. 3-4 Units.**

Formulation and computational analysis of linear, quadratic, and other convex optimization problems. Applications in machine learning, operations, marketing, finance, and economics. Prerequisite: CME 100 or MATH 51.

Same as: MS&E 111, MS&E 211

**ENGR 62X. Introduction to Optimization (Accelerated). 3-4 Units.**

Optimization theory and modeling. The role of prices, duality, optimality conditions, and algorithms in finding and recognizing solutions. Perspectives: problem formulation, analytical theory, computational methods, and recent applications in engineering, finance, and economics. Theories: finite dimensional derivatives, convexity, optimality, duality, and sensitivity. Methods: simplex and interior-point, gradient, Newton, and barrier. Prerequisite: CME 100 or MATH 51 or equivalent.

Same as: MS&E 111X, MS&E 211X

**ENGR 70A. Programming Methodology. 3-5 Units.**

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Emphasis is on good programming style and the built-in facilities of respective languages. No prior programming experience required. Summer quarter enrollment is limited. Alternative versions of CS106A are available which cover most of the same material but in different programming languages: Java [Fall, Win, Spr, or Sum qtr enroll in CS106A Section 1] Javascript [Fall qtr enroll in CS 106A Section 2] Python [Winter or Spring qtr enroll in CS 106A Section 3].

Same as: CS 106A

**ENGR 70B. Programming Abstractions. 3-5 Units.**

Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. Summer quarter enrollment is limited.

Same as: CS 106B

**ENGR 70X. Programming Abstractions (Accelerated). 3-5 Units.**

Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Winter quarter assignments will be based in CS department research. Prerequisite: excellence in 106A or equivalent, or consent of instructor. Winter quarter enrollment limited to 30.

Same as: CS 106X

**ENGR 80. Introduction to Bioengineering (Engineering Living Matter). 4 Units.**

Students completing BIOE.80 should have a working understanding for how to approach the systematic engineering of living systems to benefit all people and the planet. Our main goals are (1) to help students learn ways of thinking about engineering living matter and (2) to empower students to explore the broader ramifications of engineering life. Specific concepts and skills covered include but are not limited to: capacities of natural life on Earth; scope of the existing human-directed bioeconomy; deconstructing complicated problems; reaction & diffusion systems; microbial human anatomy; conceptualizing the engineering of biology; how atoms can be organized to make molecules; how to print DNA from scratch; programming genetic sensors, logic, & actuators; biology beyond molecules (photons, electrons, etc.); what constraints limit what life can do?; what will be the major health challenges in 2030?; how does what we want shape bioengineering?; who should choose and realize various competing bioengineering futures?.

Same as: BIOE 80

**ENGR 90. Environmental Science and Technology. 3 Units.**

Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems.

Same as: CEE 70

## English (ENGLISH)

### ENGLISH 1. CSN Undergraduate Colloquium. 1 Unit.

This colloquium is intended for undergraduates who are interested in the history and theory of the novel, and who would like to attend the Center for the Study of the Novel's (CSN) annual conference. Before the conference, students will meet with CSN's graduate student staff, to read and discuss a small number of key texts by participating scholars, whose presentations students will then attend. After the conference, the colloquium will meet again, to discuss both the readings and conference papers, and explore their broader implications for the study of the novel. Attendance at both meetings of the colloquium, and at least one panel at the conference, is required for course credit.

Same as: DLCL 1

### ENGLISH 101A. How to Read Beowulf. 3-5 Units.

How much can we really know about something written a thousand or more years ago? In this class, we will work towards answering this question as we read the most famous piece of Old English literature. Our ultimate goal will be learning to read as medievalists, investigating what Beowulf's story, its characters, and its heroic ethos may have meant to its medieval audience's and what it means to us today. Whether you plan to research medieval topics in your undergraduate (or graduate) career, want to explore the medieval basis of modern fantasy and historical fiction, or just love a good epic tale, join us and learn to think, interpret, and research like a medievalist. This class can be taken as an Old English language course and/or an introduction to Old English literature in translation. All levels of experience are welcome!

### ENGLISH 101B. Multi-species Fictions: Animals and 20th Century American Literature. 3-5 Units.

What does it mean to be an animal? And what does it mean to be a person? Ideas about other species - how they think and feel, act and react - involve categories such as race, gender, class and ability in often-surprising ways. This course will trace the relationship between animal life and human identity in twentieth-century American fiction, from the advent of Darwinian thought to contemporary animal advocacy. Readings will include Jack London, Zora Neale Hurston, Linda Hogan, Ruth Ozeki, Philip K. Dick and Grant Morrison, as well selected texts from the growing field of critical animal theory. The course also offers an optional community engagement opportunity to work with Animal Assisted Happiness or another multi-species organization.

### ENGLISH 103B. Introduction to Old English Language and Literature. 5 Units.

Students will learn the language skills necessary to parse and translate the earliest literature written in the English language. The course will look at how Anglo-Saxon authors used the particularly rich qualities of their vernacular to craft texts that represent and reflect on war, a principal institution of their medieval society. Our discussion will consider how the conventions of genre and form, as well as contextual forces like religion, cultural tradition, and contemporary history, shaped their writing on the subject.

### ENGLISH 10A. Introduction to English I: Mapping Monsters in British Literature 650-1650. 5 Units.

Werewolves, dragons, cannibals, witches, sea monsters, faeries, moral monstrosity, madness, the uncanny and the grotesque the monstrous is frightening, fury-filled, unknowable, and seductive. Monsters inhabit the literary imagination and the historic landscape. Monsters live on the margins of society; they are culturally and ideologically fraught; they exhibit sexual, racial, religious, and physical difference. In this course, we shall examine the depiction and meaning of the monster in literature, manuscript images, and maps from England and Wales from about 650CE to 1650CE.

### ENGLISH 10B. Introduction to English I: What is Literary History?. 5 Units.

From the 14th to the 17th centuries, what are the relations between literature and history? How has our understanding of key works changed as historicism—or the approach that treats a period in its specificity—has changed? Discussion of how literature works as a force in culture, not only a reflection of other forces. Readings from Old English lyrics, Chaucer, the Gawain poet, More, Wyatt, Surrey, Lock, Sidney, Spenser, Raleigh, Marlowe, Shakespeare, Donne, Herbert, Milton and Cavendish.

### ENGLISH 10C. Introduction to English I: Tradition and Individuality, Medieval to Early Modern. 5 Units.

This course offers a comprehensive introduction to English literature from its beginning in the medieval period to the early seventeenth century. We will study individual literary voices and styles in the context of a growing national tradition. We will discuss major authors (such as Chaucer, More, Wyatt, Surrey, Sidney, Spenser, Jonson, Donne) and analyze representative literary works in a variety of genres, from the Old English elegy and Middle English lyrics to the Elizabethan sonnet, Renaissance comedy, and the allegorical epic. While the course equips students with specific analytical and interpretative tools necessary for a historical understanding of literature, it is equally committed to revealing the aesthetic interest that medieval and early modern literature still holds for the modern reader.

### ENGLISH 10UK. Lost in the Myths of Time. 1 Unit.

Robin Hood the Outlaw; Grendel, the monster of the moors; medieval battle-sites; early roadways: the remnants of medieval villages visible through Google Earth and cyber-visualization: this course will explore what ancient English landscapes and landmarks reveal about culture, society, politics, nation and identity a thousand years ago. (Mandatory for participants in the Lost in the Myths of Time Bing Overseas Seminar).

### ENGLISH 112A. Humanities Core: Great Books, Big Ideas -- Europe, Middle Ages and Renaissance. 3-4 Units.

This three-quarter sequence asks big questions of major texts in the European and American tradition. What is a good life? How should society be organized? Who belongs? How should honor, love, sin, and similar abstractions govern our actions? What duty do we owe to the past and future? The second quarter focuses on the transition from the Middle Ages to Modernity, Europe's re-acquaintance with classical antiquity and its first contacts with the New World. Authors include Dante, Shakespeare, Machiavelli, Cervantes, and Milton.

Same as: DLCL 12, FRENCH 12, HUMCORE 12

### ENGLISH 115D. Shakespeare, Language, Contexts. 5 Units.

This course will consider a range of Shakespeare plays (and the language of the plays) in relation to different contemporary and post-contemporary contexts, including transvestite theater, gender, sexuality, history, geopolitics, travel, and performance.

### ENGLISH 11A. Introduction to English II: From Milton to the Romantics. 5 Units.

Major moments in English literary history, from John Milton's *Paradise Lost* to John Keats's *Hyperion*. The trajectory involves a variety of literary forms, including Augustan satire, the illuminated poetry of William Blake's handcrafted books, the historical novel invented by Sir Walter Scott, the society novel of Jane Austen, and William Wordsworth's epic of psychological and artistic development. Literary texts will be studied in the context of important cultural influences, among them civil war, religious dissent, revolution, commercialization, colonialism, and industrialization.

**ENGLISH 11AX. Creative Writing: Short Fiction and Storytelling in the Arts. 2 Units.**

When we look closely at a photograph or painting, a story emerges, but how do we begin to interpret the meaning of that story without narration or passing time? When we listen to music or watch a ballet, we have a sense of emotion and drama, but why? And how has the artist created such things for us? These questions have great resonance for the fiction writer, who must generate from the most basic tool all the necessities of the short story: drama, character, setting, emotion, and lyricism. In order to write more affecting and beautiful stories, this course will ask us to explore beyond the literary, into the world of the visual and performing arts. We will pair short stories with paintings, films, songs, and performances. As we learn the many ways stories are told and experienced, we will bring these insights into our own work through prompted exercises, improv, games, collaboration, workshop, and revision. In addition to exercises, vignettes, and sketches, each student will complete a short story and have that story critiqued by both her peers and the instructor. Our primary aim in this class will be to make writing a daily practice that considers the work and value of art generally and in that way to take risks, succeed, reflect, revise, fail, and recover from failure.

**ENGLISH 11B. Introduction to English II: American Literature and Culture to 1855. 5 Units.**

(Formerly English 23/123). A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War. Same as: AMSTUD 150

**ENGLISH 11C. Introduction to English II: Milton and Melville. 5 Units.**

This course will study four literary masterpieces in depth: John Milton's *Paradise Lost* (1667; 1674); Book 4 of Jonathan Swift's *Gulliver's Travels* (1726); Jane Austen's *Persuasion* (1817); and Herman Melville's *Moby Dick* (1851). All of these works are complex and will repay close study. But they also work their way into an ongoing literary conversation in the western world and in that sense serve as touchstones for later writers. We will consider each work not only for its own aesthetic accomplishment but also in sometimes passionate debate with its author's historical circumstances.

**ENGLISH 120. The (Un)American Renaissance. 3-5 Units.**

The period between the 1820s and the 1860s has traditionally been called the "American Renaissance": a time when the U.S. nation, and its literature, flourished. The nineteenth century witnessed the publication of a number of important American texts that gave rise to a new national literary tradition, including familiar titles like *The Scarlet Letter*, *Moby-Dick*, and *Leaves of Grass*. Yet, as the nation stretched its geographical coordinates, writers from outside of this predominantly white, male literary heritage issued their own responses to the vision of a "New World Democracy." This course surveys and contextualizes these responses. Reading authors from Native American, Latino/a, African American, and French creole cultures, we'll expand our study of American literature to include writers who interrogate the project of American Democracy from both within and outside of the nation. While analyzing autobiographies, poems, short stories, and speeches we will also learn to read paintings, Native American sign systems, and newspaper sketches, in an exploration of what it meant to be "American" and what counted as "Literature" in the golden era of American Letters.

Same as: COMPLIT 124

**ENGLISH 122. Medieval Manuscripts, Digital Methodologies. 3-5 Units.**

Medieval Studies is entering a phase of digital abundance. In the last seven years, more medieval material has been put online than has ever been available for study at any point in the past. How can we engage with the growing mass of digitized material available to us? How does this sudden access impact the work we do, the types of questions we ask, the connections we make, and the audiences we write for? In this course, we will examine and evaluate digital medieval resources and software that has been created for interacting with those resources. Students will have the opportunity to design and create an innovative project based on medieval primary sources held at Stanford, applying current digital methods in the analysis and presentation of those resources. Same as: DLCL 122

**ENGLISH 122A. Austen and Woolf. 5 Units.**

Reading of three novels by Jane Austen, arguably the most influential and gifted of British female novelists, and three novels by Virginia Woolf, whose debt to Austen was immense. Topics include the relationship between women writers and the evolution of the English novel; the extraordinary predominance of the marriage plot in Austen's fiction (and the various transformations Woolf works on it); each novelist's relationship to the cultural and social milieu in which she wrote.

**ENGLISH 124. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, HISTORY 151, POLISCI 124A

**ENGLISH 126B. The Nineteenth Century Novel. 5 Units.**

A set of major works of art produced at the peak of the novel's centrality as a cultural form: Austen's *Emma*, Brontë's *Wuthering Heights*, Eliot's *Middlemarch*, Dickens's *Great Expectations*, Stevenson's *Dr. Jekyll and Mr. Hyde*, Hardy's *Tess of the d'Urbervilles*. The paradoxes of work, consciousness and the organization of narrative experience, habit and attention. Urban experience, shifting forms of individualism, ways of knowing other persons. Binary and concentric structures, happiness and moral action, arrays of characters.

**ENGLISH 127. The Tragedy of Becoming an Adult. 5 Units.**

We have to grow up. We have no choice in the matter. But what does this lack of choice mean for the way experience growing up, either as a tragedy or perhaps not? This course will explore various writers' approaches to one of the defining genres of the novel, the bildungsroman, the story of finding one's place in the world. We all negotiate between our youthful dreams and the compromises of experience. How do we forge our storylines? By choosing a vocation? A romantic partner? By moving from the country to the city, or from one country to another? Reading stories from Victorian and modernist Britain as well as contemporary America, we will question the variety of ways in which the bildungsroman explores questions of identity formation, social changes, and experiments in literary form. Readings include works by Charlotte Brontë, Charles Dickens, D.H. Lawrence, Gertrude Stein, Jeffrey Eugenides, Junot Díaz, and Hayao Miyazaki.

**ENGLISH 12A. Introduction to English III: Introduction to African American Literature. 5 Units.**

(Formerly English 43/143). In his bold study, *What Was African American Literature?*, Kenneth Warren defines African American literature as a late nineteenth- to mid-twentieth-century response to the nation's Jim Crow segregated order. But in the aftermath of the Jim Crow era and the Civil Rights movement, can critics still speak, coherently, of "African American literature"? And how does this political conception of African American literary production compare with accounts grounded in black language and culture? Taking up Warren's intervention, this course will explore African American literature from its earliest manifestations in the spirituals and slave narratives to texts composed at the height of desegregation and decolonization struggles at mid-century and beyond. Same as: AFRICAAM 43, AMSTUD 12A

**ENGLISH 12C. Introduction to English III: Modern Literature. 5 Units.**

Survey of the major trends in literary history from 1850 to the present.

**ENGLISH 130. Sex and the Novel. 5 Units.**

How do novels represent sexual life? This course reads texts from the eighteenth century to the present day, and considers how novelists represent the discombobulating effects of desire in fictional prose. Authors may include: S. Richardson, N. Hawthorne, J. Austen, E. Brontë, G. Gissing, H. James, D.H. Lawrence, J. Joyce, V. Nabokov, J. Baldwin, A. Hollinghurst and Z. Smith. Same as: FEMGEN 130S

**ENGLISH 131B. On the Road: American Travel Films. 3-5 Units.**

For more than a century, cars and cinema have occupied a romantic place in the American imagination, as vehicles that can take us someplace new, or engines for our fantasies of mobility, freedom and personal expression. Perhaps this is one reason why the road movie is one of the most enduring subgenres of twentieth-century film. In this class, we'll watch ten classic American travel films, one for each decade starting from Buster Keaton's silent *Go West* (1925) and arriving at Christopher Nolan's space epic *Interstellar* (2014). We thus begin on a train and end on a spaceship. In between we'll travel by car, bus, motorcycle and even on foot across America and beyond, in search of answers to the motivating questions for this course: what is the attraction of the open road, and how is the romance of its call embraced and challenged by the multiple genres of these films, the concerns of the decades in which they were produced, and the limits they impose on the idea of unrestricted travel, individual growth and independence.

**ENGLISH 131C. A.I.: Artificial Intelligence in Fiction. 3-5 Units.**

From self-driving cars to bots that alter democratic elections, artificial intelligence is growing increasingly powerful and prevalent in our everyday lives. Fiction has long been speculating about the technoutopia and catastrophe that A.I. could usher in. Indeed, fiction itself presents us with a kind of A.I. in the many characters that speak and think in its pages. So what constitutes an intelligence within literature or technology? In either field, is it ever possible to overcome the problem of other minds? Is there an ultimate boundary that demarcates bodies from machines? This course will begin with Mary Shelley's *Frankenstein* (1818) and Edgar Allan Poe's *Maelzel's Chess Player* (1836), then proceed through works such as Samuel Butler's *Erewhon* (1872), Isaac Asimov's *I, Robot* (1950), Stanley Kubrick's *2001: A Space Odyssey* (1968), and Stanford lecturer Scott Hutchins's *A Working Theory of Love* (2012), including a possible visit from Hutchins. Throughout, we will be asking ourselves what makes someone or something a person in our world today.

**ENGLISH 132C. Cosmopolitan Crime: Global Detective Fiction. 3-5 Units.**

Detective fiction is one of the most popular genres in the world. It is also, interestingly, one of the most international genres as well. In this course, we'll look at a selection of globally oriented detective stories, from the Sherlock Holmes to *The Tunnel*, and explore the ways in which detective fiction participates in the global imagination. How do these detective stories represent the tension between community and cultural difference? How do conceptions of cultural or racial otherness influence views of suspicion, guilt or innocence? How far does detective fiction fulfill a cosmopolitan ideal of transnational justice, and in what ways does it fall short? As we analyze the conventions of the detective genre and consider how it examines issues faced by our increasingly globalized community—including immigration, imperialism, identity politics, and terrorism—we'll ask larger questions about the nature of community, morality, law, and justice across national and cultural boundaries.

**ENGLISH 133C. King Arthur's Court: Medieval and Modern. 3-5 Units.**

Thomas Malory's Arthurian epic *Le Morte D'Arthur* is often thought of whimsically as the last medieval English text. As a prose narrative describing the gradual annihilation of King Arthur's legendary court at Camelot; the disintegration of the medieval courtly values that once held it together; and finally the death of Arthur himself to confirm its demise, the book seems in retrospect to be a fitting swan song for what we think of as the English middle ages. Through a focused reading of *Le Morte D'Arthur* students will be introduced to late medieval English literary history as we discuss the essential context of the poem—the Arthurian tradition, the linguistic qualities of late Middle English, and the birth of print culture in England. Our discussion of these subjects will open questions about how periods of literary history are defined by material and literary textual phenomena, as well as broader questions about how the modern idea of the medieval period was shaped by *Le Morte D'Arthur* and late medieval romance in general.

**ENGLISH 134. The Marriage Plot. 5 Units.**

The centrality of the marriage plot in the development of the British novel beginning in the 18th century with Samuel Richardson's *Pamela* and ending with Woolf's modernist novel *Mrs. Dalloway*. The relationship between novelistic plotting and the development of female characters into marriageable women. What is the relationship between the novel and feminine subjectivity? What aspects of marriage make it work as a plotting device? What kinds of marriages do marriage plots allow? Is the development of women's political agency related to their prominence in the novel form? Same as: FEMGEN 134

**ENGLISH 134A. Historical Fiction: Bringing the Past to Life in Text and Film. 3-5 Units.**

How does the past come to life, on the page and on the screen? From Walter Scott, to Toni Morrison, to the popular romances, films, and television series of today, this course considers a range of texts that draw their settings, characters, and plots from history. We will examine how each work addresses some of the central tensions of historical fiction: between the imagined past and the past as reconstructed through research, between description and the spirit of the past, between accuracy and relevance. Our focus will be on the craft of historical fiction and the power of techniques like description, dialogue, setting, and character to reanimate the past. For the final assessment, students will choose between a traditional argumentative paper and a historical story of their own invention.

**ENGLISH 134C. The Western: Imagining the West in Fiction and Film. 3-5 Units.**

The Wild West: a mythical place seared deep into the American imagination. Its familiar tropes lone riders on horseback, desert sunsets, saloon fights, train robberies echo through countless Western stories, novels, films, radio programs, and television series. Both formulaic and flexible, the Western has endured as a popular genre in American culture for more than a century, embodying and responding to many of the nation's broader anxieties surrounding its colonial history, its notions of masculinity and gender roles, its fascination with guns and violence, and its ideals of self-reliance and individualism. In this class we'll examine the Western genre through a selection of its central works in fiction and film, from the first dime novel Western, Ann S. Stephens Malaeska (1860), to Cormac McCarthy's acclaimed *Blood Meridian* (1985); and from the first silent film Western, Edwin S. Porter's *The Great Train Robbery* (1903), to the mid-century Hollywood films of John Ford, to Maggie Greenwald's feminist Western, *The Ballad of Little Jo* (1993). Along the way we'll examine the Western as both a literary form and a cultural phenomenon, probing the history of its enduring appeal as a genre. How do these novels and films construct, adapt, and subvert the form and expectations of the Western, and how do they both perpetuate and challenge the broader cultural problems of their, and our, time? Finally, as Californians and inheritors of the nation's westward expansion, what does the Western tell us about national myths of the West, and the place in which we live?

**ENGLISH 135C. Reading and Writing the Personal Essay. 3-5 Units.**

This course examines the literary and cultural significance of the personal essay. We will begin with some influential theories of the essay, and conclude by considering the changing media from periodicals to blogs in which it appears. In between, we will explore some of the many reasons writers have had for writing themselves into their essays, such as explaining their personal tastes, demanding action from their readers, bearing witness to trauma, and making the personal political. Course readings will be drawn from across the rich history of the personal essay, including works by Charles Lamb, Virginia Woolf, George Orwell, James Baldwin, Susan Sontag, Joan Didion, Alice Walker, David Foster Wallace, Elif Batuman, and Ta-Nehisi Coates. As we explore the literary history, structure, and style of the personal essay, we will also reflect on what this genre reveals about the modern person. How are individuals shaped by social, cultural, and political forces? How are the ways we construct and express ourselves affected by changes in the media? And what might the personal essay reveal about the shifting boundaries between self and other, public and private, fact and fiction? Throughout the course, students will complete a series of short critical assignments, culminating in a final paper in which they will apply what they have learned to produce personal essays of their own.

**ENGLISH 135E. William Blake: A Literary and Visual Exploration of the Illuminated Poetry. 5 Units.**

An introduction to the illuminated world of William Blake, poet, prophet, revolutionary, and visionary artist. The course will address Blake's visual iconography, belief system and ideology, unique mythology, and method of relief etching that allowed him to make every illuminated book a unique work of art, among them, *The Songs of Innocence and Experience*; *The Marriage of Heaven and Hell*; *The Book of Thel*; *Visions of the Daughters of Albion*; *The Book of Urizen*; *America a Prophecy*; and *Europe a Prophecy*.

Same as: ARTHIST 135

**ENGLISH 141C. Facts and Fictions: British Writing in the 1930s and the Rise of Fascism. 5 Units.**

In contemporary American politics where the phrase "alternative facts" has entered our lexicon in a post-truth attempt at media control, and where the activation of Brexit returns to Britain a little England model of insular nationalism, it might be a good time to return to the concerns of British writers in the 1930s about nationalism, militarism, and the politics of language. Well aware of nativist risks in a post-Depression era, as well as the loss of progressive ideals (unevenly) cultured during the 1920s, these writers explored the relationship and stakes between words and politics as they faced an increasingly fascistic continent. Writers include: G. Orwell, S. Jameson, W. Holtby, V. Brittain, N. Michinson, E. Waugh, S. Gibson, L. Woolf, V. Woolf, A. Huxley, W.H. Auden, C. Isherwood.

**ENGLISH 141F. Short Story to Big Screen. 3-5 Units.**

This course will study the adaptation from short stories to films, with a particular eye toward the form and structure of each media and their relationship to each other. Students will read a variety of 20th and 21st century stories and watch their adaptations (including "Rashomon" and "Brokeback Mountain"), as well as write a short screenplay adaptation and a short critical essay on a story/film of their choosing.

Same as: AMSTUD 141F

**ENGLISH 143A. American Indian Mythology, Legend, and Lore. 3-5 Units.**

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

Same as: AMSTUD 143M, ENGLISH 43A, NATIVEAM 143A

**ENGLISH 144. Major Modernists: Virginia Woolf, James Joyce, Katherine Mansfield, T. S. Eliot. 5 Units.**

What made modernism "new"? Is the movement "evergreen"? We examine representational change, narrative innovation, and political aesthetics in the poetry, short fiction, and novels of four iconic pioneers: Virginia Woolf, James Joyce, Katherine Mansfield, and T.S. Eliot.

**ENGLISH 145D. Jewish American Literature. 5 Units.**

From its inception, Jewish-American literature has taken as its subject as well as its context the idea of Jewishness itself. Jewish culture is a diasporic one, and for this reason the concept of Jewishness differs from country to country and across time. What stays remarkably similar, though, is Jewish self-perception and relatedly Jewish literary style. This is as true for the first-generation immigrant writers like Isaac Bashevis Singer and Anzia Yezierska who came to the United States from abroad as it is for their second-generation children born in the United States, and the children of those children. In this course, we will consider the difficulties of displacement for the emigrant generation and their efforts to sustain their cultural integrity in the multicultural American environment. We'll also examine the often comic revolt of their American-born children and grandchildren against their (grand-)parents nostalgia and failure to assimilate. Only by considering these transnational roots can one understand the particularity of the Jewish-American novel in relation to mainstream and minority American literatures. In investigating the link between American Jewish writers and their literary progenitors, we will draw largely but not exclusively from Russia and the countries of Eastern Europe.

Same as: AMSTUD 145D, JEWISHST 155D, REES 145D

**ENGLISH 146A. Steinbeck. 3-5 Units.**

Introduction to the work of an American writer, beloved by general readers, often reviled by critics, whose career spanned from the Great Depression through World War II to the social upheavals of the 1960s. Focus on the social and political contexts of Steinbeck's major works; his fascination with California and Mexico; his interdisciplinary interest in marine biology and in philosophy; his diverse experiments with literary form, including drama and film.

Same as: AMSTUD 146A

**ENGLISH 147A. Speaking of Baseball. 3-5 Units.**

Since its invention in the nineteenth century, baseball has been steeped in lore and rhetoric. A cultural commentator recently pegged it one of three significant American contributions to world culture, along with jazz and the U.S. constitution. Literary and artistic representations of baseball abound, often treating it as more than a game and only a little less than a religion. In this class, we'll track representations and grand claims made for baseball by American poets, novelists, and commentators of all sorts. We'll weigh the cornucopia of literary nonfiction depicting the game. The goal will be to map the scope of this literature, defining a tradition's edges, determining its peaks, assessing its limits, challenges, and stakes. This class is open to anyone, whether familiar with the game, or totally new to it. We'll cover a variety of issues: Americana, mythologies of sport, gender and class, race, history, sociology, lots of poetry, and film. Same as: AMSTUD 147A

**ENGLISH 148. Family Drama: American Plays about Families. 5 Units.**

Focus on great dramas about family life (Albee, Kushner, Shephard, Vogel, Kron, Nottage, Parks). Communication in writing and speaking about conflict central to learning in this class. Same as: TAPS 248

**ENGLISH 150J. Queer Poetry in America. 3-5 Units.**

Some poets are known for portraying alternative sexualities in their poetry. Others seem to cover sexuality up. Can we use a poem to determine whether a poet is gay, lesbian, bisexual, transgender, or questioning? Or do some poets simply defy categorization? What makes a poem queer? Is poetry somehow more or less queer than other literary forms? Even if we can answer these questions, what would they tell us about literature in general? This course will investigate such topics and more by tracking queer poetry in twentieth-century America. We'll start with nineteenth-century figures Walt Whitman and Emily Dickinson, then move on to Gertrude Stein, Hart Crane, Langston Hughes, Countee Cullen, Elizabeth Bishop, Allen Ginsberg, Frank O'Hara, and others. We'll ask what their poetry meant in their own times, as well as what it means to us in our present era of expanding civil rights and changing sexual attitudes. Same as: AMSTUD 150J, FEMGEN 150J

**ENGLISH 151F. Angelheaded Hipsters: Beat Writers of San Francisco and New York. 5 Units.**

Reading of central writers of the Beat movement (Ginsberg, Kerouac, di Prima, Snyder, Whalen) as well as some related writers (Creeley, Gunn, Levertov). Issues explored include NY and SF, Buddhism and leftist politics, poetry and jazz. Some exposure to reading poems to jazz accompaniment. Examination of some of the writers and performers growing out of the Beats: Bob Dylan, rock music, especially from San Francisco, and jazz.

**ENGLISH 152G. Harlem Renaissance and Modernism. 5 Units.**

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context.

**ENGLISH 152K. Mixed-Race Politics and Culture. 5 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement. Same as: AFRICAAM 226, AMSTUD 152K, CSRE 152K

**ENGLISH 153. Time, Space, and Place: Humanistic Inquiry in a Digital Age. 2-5 Units.**

What are the digital humanities? A definition might be: Digital humanities are those pursuits which use digital tools to explore topics of humanistic inquiry. But that definition is rather general. To have a more nuanced understanding of the digital humanities, students will be exposed to a number of its practices, and practitioners. Active engagement by all participants is expected. Students will read and annotate, map and perform digital textual analysis. Ultimately, students will have a better idea of what the digital humanities are, and will be introduced to different ways they can be practiced, opening up possibilities for further exploration.

**ENGLISH 153F. Transatlantic Female Modernists: Making it New with a Difference. 5 Units.**

How did American and British women writers in the early decades of the last century express their experiences of modernity in fiction and poetry? A major but oscillating critical lens on modernism has focused on questions of gender and sexuality, and how women expressed the experiences of writing as a woman during these years (1910-1940). But other differences and distinctions of race, class, culture, nation, and literary inheritance were also crucial to the endeavor to give voice to a new sense of identity for many of these women. This course aims to uncover what binds as well as what differentiates forms of political, aesthetic, and cultural representation in the works of several key innovators in this period: V. Woolf; Z. Neale Hurston; D. Barnes; K. Mansfield; N. Larson; A. Lowell; H.D.; J. Faust; N. Cunard.

**ENGLISH 154. Mapping the Romantic Imagination. 5 Units.**

In this course, we will apply spatial humanities techniques to the study of Romantic writing. In the lyric poetry, national tales and Gothic novels of the Romantic period, how did geography, both real and imagined, influence the kinds of writing that were possible? Were there kinds of writing that could only happen in certain kinds of places? Together, using a combination of GIS mapping and geo-location, we will create a digital, annotated map of the Romantic imaginative world.

**ENGLISH 154E. Twentieth-Century Irish Literature. 5 Units.**

Plays, poems, short stories, and novels. Writers include James Joyce, William Yeats, Mary Lavin, Kate O'Brien, William Trevor, Seamus Heaney, and Samuel Beckett. How the writer can sustain imaginative freedom and literary experiment in the face of a turbulent history.

**ENGLISH 154F. Film & Philosophy. 4 Units.**

Issues of authenticity, morality, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Blade Runner (Scott), Do The Right Thing (Lee), The Seventh Seal (Bergman), Fight Club (Fincher), La Jetée (Marker), Memento (Nolan), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English.

**ENGLISH 156B. Yvor Winters: Poetry and Criticism. 5 Units.**

Yvor Winters's poetry and fiction spanned several important eras: Renaissance poetry, American and French Symbolism, Imagism, and what he called "Post Symbolism." In this course we will cover a good deal of literary history through the works of Winters, the fiction and poetry of his wife, Janet Lewis, and a variety of poems that touched on their work, including American Indian songs, Japanese haiku, and the poetry of Emily Dickinson, Hart Crane, William Carlos Williams, Wallace Stevens, Louise Bogan, Catherine Davis, J.V. Cunningham, Edgar Bowers, and N Scott Momaday. Among our concerns will be ways of addressing a wide variety of poetic styles.

**ENGLISH 159. James Baldwin & Twentieth Century Literature. 5 Units.**

Black, gay and gifted, Baldwin was hailed as a "spokesman for the race", although he personally, and controversially, eschewed titles and classifications of all kinds. This course examines his classic novels and essays as well his exciting work across many lesser-examined domains - poetry, music, theatre, sermon, photo-text, children's literature, public media, comedy and artistic collaboration. Placing his work in context with other writers of the 20C (Faulkner, Wright, Morrison) and capitalizing on a resurgence of interest in the writer (NYC just dedicated a year of celebration of Baldwin and there are 2 new journals dedicated to study of Baldwin), the course seeks to capture the power and influence of Baldwin's work during the Civil Rights era as well as his relevance in the "post-race" transnational 21st century, when his prescient questioning of the boundaries of race, sex, love, leadership and country assume new urgency.

Same as: AFRICAAM 159, FEMGEN 159

**ENGLISH 159A. Literature and Protest. 3-5 Units.**

How does literary art get involved in politics? What is the border between propaganda and art? This class examines moments when writers seem suddenly not only to represent politically charged topics and themes, but to have a part in bringing about political change. We'll look at case studies from the anti-apartheid movement in South Africa, the American Civil Rights struggle, 19th century Russia, and more.

Same as: AFRICAAM 159A, CSRE 159I

**ENGLISH 15SC. A New Millennial Mix: The Art & Politics of the "Mixed Race Experience". 2 Units.**

Recently, The New York Times and the National Geographic have hailed the "new face of America" as young, global, and hybrid. The NY Times gave this demographic a name: Generation E.A. (Ethnically Ambiguous). Our course examines the political and aesthetic implications of Generation E.A., and the hot new vogue for all things mixed. Galvanized by the 2000 census with its "mark one or more" (MOOM) racial option, dozens of organizations, websites, affinity and advocacy groups, modeling and casting agencies, television pilots, magazines, and journals—all focused on multi-racial/multi-cultural experiences—have emerged in the last few years. We will analyze representations of mixed race and multiculturalism in law, literature, history, art, performance, film, comedy, and popular culture. These cultural and legal events are changing the way we talk and think about race. Importantly, our seminar also broadens this discussion beyond race, exploring how crossings of the color-line so often intersect with other aspects of experience related to gender, religion, culture, or class. Field trips, films, communal lunches, and interactive assignments help us explore the current controversies over mixed-race identification and, more generally, the expressive and political possibilities for representing complex identities. Requirements include three two- to three-page analytical writing assignments, a presentation that can include an optional artistic or media component, and a final group-designed project. If you are a citizen of the 21st century, this class is for and about you.

**ENGLISH 160. Poetry and Poetics. 5 Units.**

Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through diction, imagery, and technical elements of verse.

**ENGLISH 161. Narrative and Narrative Theory. 5 Units.**

An introduction to stories and storytelling—that is, to narrative. What is narrative? When is narrative fictional and when non-fictional? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How has storytelling changed over time? Focus on various forms, genres, structures, and characteristics of narrative.

**ENGLISH 162W. Writing Intensive Seminar in English. 5 Units.**

In these highly regarded, small-group seminars, students explore unique topics in English language literature, reading select primary texts alongside exemplary critical works and/or other cultural artifacts, while also honing their research and writing skills through series of assignments that culminate in a substantial original research essay. Classes are capped at 8, allowing for individualized attention and rich feedback. Click Schedule below to see individual course titles (in Notes). For fuller details and descriptions, go to <https://english.stanford.edu/courses/2017-18-english-162w>. Enrollment is by permission. English majors must take at least one WISE to fulfill WIM. Non-majors are welcome, space permitting. Contact the English Department's Student Services Manager, Melanie Ester ([melaniee@stanford.edu](mailto:melaniee@stanford.edu)), for more information.

Same as: WISE

**ENGLISH 163F. Shakespeare Now and Then. 5 Units.**

In this Introduction to Shakespeare on film, we will study approximately five Shakespearean plays, including *Romeo and Juliet*, *Much Ado About Nothing*, and *Macbeth*, alongside a selection of their movie adaptations. As well as getting to grips with the plays printed texts, we will investigate how the plays meanings and significations can change radically in performance.

**ENGLISH 166. Who were the Vikings?. 3-5 Units.**

Who were the Vikings and what has been their influence on contemporary culture? This course provides a broad introduction to Viking society and culture as well as to their legacy in the modern world. We will look at Viking life, mythology, literature, art and archaeology as well as modern adaptations of Viking culture in music, literature, film and television. We will read some of the great works of Viking literature & tales of Odin and Thor, of magic and monsters, of adventures across the seas - and examine online exhibitions of Vikings artefacts and settlements in Europe and Newfoundland. During the first half of the course, students will begin thinking about their final project & a creative reimagining one of the texts or artefacts which we will discuss in class. The latter half of the course will focus on the development of the Vikings as a cultural model for modern creative expression. We will investigate how Norse themes, characters and forms were adapted in Germany, England and the USA in the nineteenth and twentieth centuries by writers, artists and composers such as Richard Wagner, William Morris, Henry Longfellow and J.R.R. Tolkien. The course will conclude with a discussion of how the Vikings (and Viking ideas) are represented today in popular culture, including the 1958 Kirk Douglas film, *The Vikings*, the TV shows *The Vikings* and *Game of Thrones* and the Marvel comic books series. Students will be encouraged to examine the ways in which these texts engage with their historical models and consider how this might influence their own creative project.

**ENGLISH 167H. The Ethical Gangster. 3-5 Units.**

(English majors must register for 5 units) A study of recent developments in understanding human moral psychology using mafia movies to explore the differences between Kantian and Utilitarian moral theory. We will study the greatest hits of gangster fiction and film, from Fielding's *Jonathan Wild* to *The Sopranos*.

**ENGLISH 16SC. Learning Theater: From Audience to Critic at the Oregon Shakespeare Festival. 2 Units.**

Who doesn't love going to a play: sitting in the darkened theater, an anonymous member of the audience waiting to be entertained, charmed, and challenged? But how many of us know enough about the details of the plays, their interpretation, their production, and acting itself, to allow us to appreciate fully the theatrical experience? In this seminar, we will spend 13 days in Ashland, Oregon, at the Oregon Shakespeare Festival (OSF), where we will attend these plays: Shakespeare's *Henry V*, *Othello*, *Love's Labour's Lost*, and *Romeo and Juliet*; the world premiere of Mary Kathryn Nagle's *Mannahatta*; Kate Hamill's *Sense and Sensibility*, based on Jane Austen's novel; Richard Rodgers and Oscar Hammerstein's *Oklahoma!*; the world premiere of Idris Goodwin's *The Way the Mountain Moved*; Frances Ya-Chu Cowhig's *Snow in Midsummer*, based on the classical Chinese drama *The Injustice of Dou Yi That Moved Heaven and Earth* by Guan Hanqing; and Lauren Gunderson's *The Book of Will*. (To read more about these productions, go to [www.osfashland.org](http://www.osfashland.org)). We will also spend time backstage, meeting with actors, designers, and artistic and administrative directors of OSF. Students will read the plays before the seminar begins. In Ashland, they will produce staged readings and design a final paper based on one of the productions. These reviews will be delivered to the group and turned in on Thursday, September 20. Note: This seminar will convene in Ashland on Monday, September 3, and will adjourn to Stanford on Sunday, September 16. Students must arrive in Ashland by 4:00 p.m. on September 3. Room and board in Ashland and transportation to Stanford will be provided and paid for by the program.

**ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: CSRE 196C, PSYCH 155, SOC 146, TAPS 165

**ENGLISH 172J. The Ethics of Metaphor: Identities in Parallel. 5 Units.**

Many of our political arguments are arguments by analogy. But analogies between ethnic and racial experiences are especially problematic, and especially incendiary. This class will think about metaphor and contend with how it's used in both fictional and nonfictional texts concerning race and ethnicity. The works we will read in this class are uncomfortable. They're uncomfortable because they address suffering and pain; they're uncomfortable because they compare suffering and pain; they're uncomfortable because of what they get right and because of what they don't. This is a class fundamentally concerned with how we traverse boundaries of race and ethnicity ethically, and about thinking through when and how authors have failed to do so. When does empathy become presumption? When does altruism become condescension? When does exploration become voyeurism? We will plumb these questions (to which there are no clear answers) through the lens of speeches, poetry, sci-fi, film, essays, short stories, and novels.

**ENGLISH 175E. Animals and the Fictions of Identity. 3-5 Units.**

In a post-Darwin world, the notion that we might all have an animal alter-ego lurking inside seems quite familiar. But ideas about animals—how they think and feel, act and react—involve identity categories such as race, gender, class and ability in surprising ways. This course will trace the relationship between animality and human life in twentieth-century American fiction, from race and indigeneity in Jack London's dog stories to the storytelling practices of contemporary animal advocacy groups. The course may also include an experiential component in which students will have the opportunity to explore multispecies concerns with a local organization.

Same as: AMSTUD 175E

**ENGLISH 179. Cultures of Disease: Cancer and HIV/AIDS. 5 Units.**

History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.

Same as: ANTHRO 179

**ENGLISH 180B. Reading Politics: The History and Future of Literacy. 3-5 Units.**

Reading is a political act. Through our major texts of Charles Dickens's *Oliver Twist*, Zora Neale Hurston's *The Eatonville Anthology*, and Azar Nafisi's *Reading Lolita in Tehran*, we will explore the classed, racialized, and gendered power dynamics of literacy and literature. How can books incite social revolutions? How can they maintain harmful inequalities? When is reading a tool of empowerment and when is it a tool of social control? We will examine these questions in a number of contexts, ranging from Victorian London, to the Jim Crow American South, from the Islamic revolution in Iran to a Silicon Valley proliferating with new forms of scientific, technological, and financial literacy. The course includes a significant service learning component, in which students will volunteer to tutor underprivileged readers through Bay Area literacy programs. Final projects will ask students to reflect on these tutoring experiences and consider the complex politics at work in the act of teaching someone to read.

**ENGLISH 182J. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.**

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's *Othello*. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960's play, *Who's Afraid of Virginia Woolf?*.

Same as: FEMGEN 112, FEMGEN 212

**ENGLISH 183E. Self-Impersonation: Fiction, Autobiography, Memoir. 5 Units.**

Course will examine the intersecting genres of fiction, autobiography, and memoir. Topics will include the literary construction of selfhood and its constituent categories (gender, race, ethnicity, religion, etc.); the role of language in the development of the self; the relational nature of the self (vis-à-vis the family, "society," God); the cultural status of "individuality"; the concept of childhood; and the role of individual testimony in our understanding of family, religious and national history. In addition to short theoretical works, authors will include Knusgaard, Nabokov, Hoffman, Winterson, Said, Levi, Barthes, and Duras.

Same as: COMPLIT 183

**ENGLISH 184E. Literary Text Mining. 5 Units.**

This course will train students in applied methods for computationally analyzing texts for humanities research. The skills students will gain will include basic programming for textual analysis, applied statistical evaluation of results and the ability to present these results within a formal research paper or presentation. Students in the course will also learn the prerequisite steps of such an analysis including corpus selection and cleaning, metadata collection, and selecting and creating an appropriate visualization for the results.

**ENGLISH 185A. Literature and Medicine. 5 Units.**

Virginia Woolf once wrote, "The merest schoolgirl when she falls in love has Shakespeare or Keats to speak her mind for her, but let a sufferer try to describe a pain in his head to a doctor and language at once runs dry." Problems of representation are at the heart of the experiences of physical suffering and medical care; how has literature defined and redefined its relationship to these experiences? Topics include medical and literary interpretation, illness and metaphor, and the evolution of the surface-depth model of the self. The course centers on major works of literature that engage the imaginative potential of medicine and the narrative structures of disease, by authors including Jane Austen, Leo Tolstoy, and Arthur Conan Doyle, read alongside paintings (Rembrandt's *The Anatomy Lesson of Dr. Nicolaes Tulp*), film (Ingmar Bergman's *Cries and Whispers*), medical descriptions of disease, diagnostic tools, and theory (e.g., Sontag's *Illness as Metaphor*).

**ENGLISH 186B. The American Underground: Crime and the Criminal in American Literature. 5 Units.**

The literary representation of crime and the criminal from postrevolutionary through contemporary American literature. Topics will include the enigma of the criminal personality; varieties of crime, from those underwritten by religious or ethical principle to those produced by the deformations of bias; the impact on narrative form of the challenge of narrating crime; and the significance attributed to gratuitous crime in the American cultural context.

**ENGLISH 185I. From Canon to 'Fanon': Fan Fiction and the Democratization of Literature. 1-2 Unit.**

Fan fiction has been called one of the great unsung popular literary movements of the past fifty years. Long in existence but increasingly mainstream, the genre has emerged onto the 21st-century literary landscape as a cultural force to be reckoned with. This course will treat fan fiction as a legitimate genre of literature worthy of academic attention and analysis. We will examine both text and context, considering tropes and style of 'fanfic' as well as cultural impact and influence. Key themes of the course include intertextuality, reader-response criticism, and fanfic as a medium for narrative expansion and transgression.

**ENGLISH 190. Intermediate Fiction Writing. 5 Units.**

May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91.

**ENGLISH 190D. Dialogue Writing. 5 Units.**

For Fiction and Film students. Study how dialogue develops character, reveals information, moves plots forward, and creates tension. Use of short story, novels, graphic novels, and films. Students will write many short assignments, one dialogue scene, and one longer story or script (10-20pages). Priority to Fiction Into Film students, but open to all. Prerequisite: 90.

**ENGLISH 190F. Fiction into Film. 5 Units.**

Workshop. For screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90.

**ENGLISH 190T. Special Topics in Intermediate Fiction Writing. 5 Units.**

Focus on a particular topic or process. Work includes aspects of reading short stories and novels, writing at least 30-50 pages of fiction, and responding to peers' work in workshop. May be repeated for credit. Prerequisite: 91 or 90.

**ENGLISH 190V. Reading for Writers. 5 Units.**

Taught by the Stein Visiting Fiction Writer. Prerequisite: 90 or 91.

**ENGLISH 191. Intermediate Creative Nonfiction. 5 Units.**

Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90.

**ENGLISH 191DC. DCI Intermediate Memoir Workshop. 5 Units.**

English 191DC will provide an intermediate-level course in the art and craft of writing memoir. It will build on those strategies for writing with meaning and insight about the events in our lives that were presented in English 91DC. During the term, we will read texts that broadly innovate within and outside of the formal traditions of the memoir form, finding new and exciting ways to represent personal experience. This section will also serve as the continuing examination and practice of the formal elements of the memoir. During the term, Fellows will write, workshop, present to the class, and revise at least two short pieces, one long piece, and working drafts of excerpts. All workshops will serve as the springboard for our larger class conversation about theme and craft. During the quarter, we will meet in individual conferences. Throughout the quarter, creative work will be assigned in the form of essays, imitations, and revisions. Critical work will be assigned in the form of planning and leading class discussions, and writing and discussing critiques of colleagues' essays. A variety of creative prompts, critical exercises, and assigned readings will foster your understanding and appreciation of the memoir form, as well as your growth as a creative writer. Energetic, committed participation is a must.

**ENGLISH 191T. Special Topics in Intermediate Creative Nonfiction. 5 Units.**

Workshop. Continuation of 91. Focus is on forms of the essay. Works from across time and nationality for their craft and technique; experimentation with writing exercises. Students read and respond to each other's longer nonfiction projects. May be repeated for credit. Prerequisite: 91 or 90.

**ENGLISH 191V. Reading for Creative Non-Fiction Writers. 5 Units.**

Taught by the Stein Visiting Writer. Prerequisite English 90 or 91. Permission number required to enroll.

**ENGLISH 192. Intermediate Poetry Writing. 5 Units.**

May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92.

**ENGLISH 192T. Topics in Intermediate Poetry Writing. 5 Units.**

Generation and discussion of student poems. How to recognize a poem's internal structure; how to seek models for work. Students submit portfolio for group critique. May be repeated for credit. Prerequisite: ENGLISH 92.

**ENGLISH 192V. The Occasions of Poetry. 5 Units.**

Taught by the Mohr Visiting Poet. Prerequisite: 92. Permission number required to enroll.

**ENGLISH 194. Individual Research. 5 Units.**

See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research.

**ENGLISH 195B. How to Write a Great Essay: A Writing Bootcamp for Undergraduates. 5 Units.**

The course will be a practical workshop for undergraduates on how to improve essay-writing skills. We will focus on the finer points of vocabulary, grammar, mechanics, logic, timing, intellectual precision; how to connect with (and delight) an audience; how to magnify a theme; how to deflect counter-arguments; how to develop your own sophisticated authorial 'style'; how to write sentences (and papers!) your reader will care about and admire and maybe even remember.

**ENGLISH 196A. Honors Seminar: Critical Approaches to Literature. 5 Units.**

Overview of literary-critical methodologies, with a practical emphasis shaped by participants' current honors projects. Restricted to students in the English Honors Program.

**ENGLISH 197. Seniors Honors Essay. 1-10 Unit.**

In two quarters.

**ENGLISH 198. Individual Work. 1-5 Unit.**

Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without consent. Group seminars are not appropriate for 198.

**ENGLISH 198F. Hoffs-Roach Fiction into Film Tutorial. 2-5 Units.**

Up to three undergraduate writers work with Fiction Into Film instructors. Students design their own curriculum, and Instructors act as writing mentors and advisers. Prerequisite: 190F. Submitted manuscript required.

**ENGLISH 198L. Individual Work: Levinthal Tutorial. 5 Units.**

Undergraduate writers work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.

**ENGLISH 199. Senior Independent Essay. 1-10 Unit.**

Open, with department approval, to seniors majoring in non-Honors English who wish to work throughout the year on a 10,000 word critical or scholarly essay. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.

**ENGLISH 1D. Dickens Book Club. 1 Unit.**

Through the academic year, we will read one Dickens novel, one number a week for 19 weeks, as the Victorians would have done as they read the serialized novel over the course of 19 months. The group gets together once a week for an hour and a half to discuss each number, to look carefully at the pattern that the author is weaving, to guess, as the Victorians would have done, what might be coming next, and to investigate the Victorian world Dickens presents. We look carefully at themes, characters, metaphorical patterns, and scenes that form Dickens' literary world, and spend increasing time evaluating the critique that Dickens levels at Victorian life. The weekly gatherings are casual; the discussion is lively and pointed.

**ENGLISH 201. The Bible and Literature. 5 Units.**

Differences in translations of the Bible into English. Recognizing and interpreting biblical allusion in texts from the medieval to modern periods. Readings from the Bible and from British, Canadian, American, and African American, and African literature in English.

**ENGLISH 227. Melville's Moby-Dick. 5 Units.**

A slow and careful reading of Herman Melville's 1850 masterpiece, *Moby-Dick*; or, *The Whale*. In the process, we will unfold the novel's nineteenth-century literary-historical context as well as the world of Melville's own literary, religious, philosophical, technological, commercial, and scientific citations and allusions. We will seek to understand the multiple significances of Melville's experiments with the novelistic genre and their relationship with his building out the meaning of Americanness. In the second half of the quarter, we will focus on a selection of major mid-twentieth-century through contemporary critical, literary-theoretical, and political-theoretical readings of *Moby-Dick*.

**ENGLISH 233. Baroque and Neobaroque. 3-5 Units.**

The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.

Same as: COMPLIT 301, ILAC 293E

**ENGLISH 240A. Crooks, Quacks, and Courtesans: Jacobean City Comedy. 5 Units.**

We will read a series of plays set in or around early modern London, written by playwrights such as Ben Jonson, Thomas Middleton, and John Marston. The course will explore the plays' hilarious representations of the London underworld, with its confidence tricksters and naive victims, as well as more serious topics such as social mobility and social relations, economic expansion, disease transmission, and the built environment. Plays studied will include: *The Alchemist*, *Epicene*, *The Roaring Girl*, *A Chaste Maid In Cheapside*, *The Dutch Courtesan*..

Same as: ENGLISH 340A, HISTORY 232E, HISTORY 332E

**ENGLISH 241. Eighteenth-Century Women Writers. 5 Units.**

The course will deal with a number of eighteenth-century English women writers—primarily novelists, but also poets, critics and playwrights. Authors to be studied in depth will include both relatively well-known writers such as Behn and Wollstonecraft, and lesser-known authors such as Sarah Scott, Elizabeth Inchbald and Anna Seward. Considerable attention will be paid to recent feminist scholarship on eighteenth-century women's writing, generic issues and the question of a "women's literary tradition," the material conditions of female authorship in the period, and the history of the eighteenth-century literary marketplace. Same as: FEMGEN 241W

**ENGLISH 287G. A Woman's Life: 20th- (and 21st-) Century Memoirs by Women. 5 Units.**

Why do women write memoirs? Why has the memoir form become such a popular genre for American female authors? What do such books reveal, More broadly, about the condition of women in Contemporary Society? We will approach these questions by reading autobiographical works by some if not all of the following writers: Gertrude Stein, Joan Didion, Kathryn Harris, Audre Lorde, Patti Smith, Lucy Grealy, Michelle Tea, Jeannette Walls, Carrie Fisher, and Alison Bechdel. Same as: FEMGEN 287G

**ENGLISH 290. Advanced Fiction Writing. 5 Units.**

Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop. May be repeated for credit.

**ENGLISH 292. Advanced Poetry Writing. 5 Units.**

Focus is on generation and discussion of student poems, and seeking published models for the work.

**ENGLISH 293. Literary Translation. 4 Units.**

An overview of translation theories and practices over time. The aesthetic, ethical, and political questions raised by the act and art of translation and how these pertain to the translator's tasks. Discussion of particular translation challenges and the decision processes taken to address these issues. Coursework includes assigned theoretical readings, comparative translations, and the undertaking of an individual translation project.

Same as: DLCL 293

**ENGLISH 300. Medieval Methodologies. 1-3 Unit.**

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaeography will offer elementary training in these fundamental skills.

Same as: DLCL 300, MUSIC 300C

**ENGLISH 302. Early Modern Prose Fictions. 3-5 Units.**

The course considers the English and European prose fictions of the sixteenth and seventeenth centuries—romances, picaresques, pastorals, narratives of social class, and other genres—in the context of Renaissance and present-day theories of fiction. How is narrative form conditioned by social reality, and in turn how does it provide a zone for reflection on that reality in terms different from those of the more codified genres of drama and poetry?

Same as: COMPLIT 303

**ENGLISH 305H. Readings in Close Reading. 5 Units.**

The difference between reading and reading closely. Is close reading a specific method of literary criticism or theory, or does it describe a sensibility that can accompany any interpretation? Categories and frameworks for this ubiquitous, often undefined critical practice. Different, sometimes competing, traditions of close reading and recent critiques and alternatives. Texts could include Empson, Barthes, Auerbach, T. J. Clark, Adorno, Brooks, de Man, D. A. Miller, Helen Vendler.

**ENGLISH 307D. Bringing the Archives to Life. 5 Units.**

Introduction to the critical skills required for working in the archives. Students will be taught the core methods for working with archival sources, and will be trained in the transcription, editing, interpretation, and publication of primary textual materials. Our textual materials will be generically varied and chronologically diverse, and we shall move from late medieval to contemporary holdings in Stanford University Library's Special Collections, in other archives at Stanford, and in local private holdings.

**ENGLISH 313. Performance and Performativity. 1-4 Unit.**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specularity/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

Same as: FEMGEN 313, TAPS 313

**ENGLISH 314. Epic and Empire. 5 Units.**

Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

Same as: COMPLIT 320A

**ENGLISH 317A. Irony. 5 Units.**

Varieties of literary irony from Plato through the present. Topics include: verbal, dramatic, situational, and romantic irony. Focus will be on questions about what irony is and why writers use it. How does irony go astray? What kinds of topics seem to require irony? How does irony work? Writers include Chaucer, Swift, Thomas Mann, J.M. Coetzee and David Foster Wallace.

**ENGLISH 331. William Blake. 5 Units.**

This course will explore the illuminated world of William Blake poet, prophet, revolutionary, and visionary artist in the context of intellectual history, culture, and aesthetics. To study Blake is to witness the birth pangs of modernity and the pathos energy and agony of alternate, impossible histories that fell by the wayside. The task is multidisciplinary, and it is one that opens literary history into our contemporary moment. Blake challenges virtually every aspect of literary representation, from character to narrative structure, from poetic meter to typology and other features of print culture. He is historical in his situatedness (religious dissent, the chemical revolution, industrialization, commodification, and controversies about human and animal rights were all part of his milieu) but he is also radically present in his ongoing influence and relevance. The course will unpack Blake's iconography, ideology, mythology, and infernal method which made every illuminated book a unique work of art.

**ENGLISH 333. Philosophy, Literature, and the Arts Core Seminar. 2-4 Units.**

This course serves as the Core Seminar for the PhD Minor in Philosophy, Literature, and the Arts. It introduces students to a wide range of topics at the intersection of philosophy with literary and arts criticism. In this year's installment of the seminar, we will focus on issues about the nature of fiction, about the experience of appreciation and what it does for us, about the ethical consequences of imaginative fictions, and about different conceptions of the importance of the arts in life more broadly. The seminar is intended for graduate students. It is suitable for theoretically ambitious students of literature and the arts, philosophers with interests in value theory, aesthetics, and topics in language and mind, and other students with strong interest in the psychological importance of engagement with the arts. May be repeat for credit.

Same as: DLCL 333, PHIL 333

**ENGLISH 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.**

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.

Same as: MTL 334B

**ENGLISH 340A. Crooks, Quacks, and Courtesans: Jacobean City Comedy. 5 Units.**

We will read a series of plays set in or around early modern London, written by playwrights such as Ben Jonson, Thomas Middleton, and John Marston. The course will explore the plays' hilarious representations of the London underworld, with its confidence tricksters and naive victims, as well as more serious topics such as social mobility and social relations, economic expansion, disease transmission, and the built environment. Plays studied will include: *The Alchemist*, *Epicene*, *The Roaring Girl*, *A Chaste Maid In Cheapside*, *The Dutch Courtesan*..

Same as: ENGLISH 240A, HISTORY 232E, HISTORY 332E

**ENGLISH 350. Law and Literature. 3-4 Units.**

After its heyday in the 1970s and 1980s, many wondered whether the law and literature movement would retain vitality. Within the last decade there has, however, been an explosion of energy in the field, which has expanded beyond the boundaries of the literary text narrowly conceived and incorporated a range of other genres and humanistic approaches. Several recent or forthcoming books survey the range of emerging scholarship and the potential for new directions within the field. Using one of these—*New Directions in Law and Literature* (Oxford, 2017)—as a guide, this course will delve into a variety of topics that law and literature approaches can illuminate. These include, among others, conceptions of sovereignty and non-sovereign collectivities, the construction of the citizen and refugee, competing visions of marriage and its alternatives, law and the rhetorical tradition, and theoretical perspectives on intellectual property. Nearly every session will pair recent scholarship in the field with a literary or artistic work, ranging from Claudia Rankine's *Citizen* to Shakespeare's *Merchant of Venice*. Students taking the course for R credit can take the course for either 3 or 4 units, depending on the paper length. This class is limited to 22 students, with an effort made to have students from SLS (16 students will be selected by lottery) and six non-law students by consent of instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Cross-listed with the Law School (LAW 3517).

**ENGLISH 354. Scalar Reading. 5 Units.**

The computational study of literature allows us to analyze literature across vastly different scales: from extremely detailed word frequencies, to massive archives of texts. But how does criticism operate at these two extremes? How do new methods of analysis respond to the theories of reading offered by literary criticism? In this class, we will compare the scalar modes of reading that our new methods offer with historical theories of critical reading practices, from hermeneutics, to close reading, and beyond.

**ENGLISH 356T. Intro to Psychoanalysis as a Critical Method. 3-5 Units.**

Primary reading in Freud, Lacan, Laplanche, Irigaray and Kristeva. Secondary readings in film theory (Mulvey to Silverman), art history (Bryson, Bersani) and poststructuralism (Derrida, Foucault, Butler). Same as: TAPS 356T

**ENGLISH 360E. Futurities. 5 Units.**

Literary studies has long had a wide array of methods for theorizing the past. In more recent years, scholars have begun to theorize the future with equal energy. But what do we talk about when we talk about the future? Events that might happen, the way the thought of the future affects our actions today, or something more? We will discuss queer futurities, Afrofuturism, ecological futurity, revolutionary futures, reception and the futures of texts, and more.

**ENGLISH 364A. CLR James and American Literature. 5 Units.**

Intellectual CLR James was an insatiable reader of world literature, but the literature and popular culture of the United States claimed a special place in his imagination. This seminar reads American literature from the mid-nineteenth- (Melville, Whitman) to the late-twentieth centuries (Wright, Morrison, Alice Walker) alongside James's literary criticism and political thought. Recent critical and theoretical texts will supplement these primary readings.

**ENGLISH 365. Fictions of Literary Being. 5 Units.**

In an essay from his book *The Flesh of Words*, Jacques Rancière refers to the suspensive existence of literature. This seminar will be devoted to an in-depth consideration of the possible meanings of this phrase. At issue for us will be the suspension of the normative assumption that the fundamental difference between a person (the author, the reader) and a fictional character is that the former has being while the latter does not. The syllabus will feature a sub-genre of the novel that disturbs this normative assumption by explicitly staging the collapse of the divide between actual and fictional being, flesh and word, author and character, through an extended representation of the porosity of those categories on every level of the text structural, characterological, and narratological. The result is the development of a metafictional discourse within the fiction itself that narrates a crossing-over of the author's material actuality with the immateriality of character. We'll examine the forms of crossing-over, its particular temporal and spatial conditions, and its ethical consequences and philosophical implications both within and outside the novel.

**ENGLISH 366. Practicing Theories. 5 Units.**

An exploration of some of the main currents in post-WWII and contemporary literary theory from the new criticism to deconstruction, new historicism, etc., arriving at contemporary debates about surface reading, digital humanities, affect, and the new materialisms.

**ENGLISH 373. Shakespearean Tragedy and Its Critics. 5 Units.**

A close study of Shakespeare's major tragedies and exemplary criticism from the Restoration to the present.

**ENGLISH 381B. Theories of Race and Ethnicity. 5 Units.**

This interdisciplinary and reading-intensive course has been designed to familiarize you with the key scholars, as well as the most recent developments, in theorizations of race and ethnicity in literary and cultural studies, performance studies, visual studies, and philosophy. As we work our way through this diverse set of readings, particular attention will be paid to how the various approaches illuminate key issues under current debate: subjectivity, identity, biological difference, racial representation, affect, and political activism.

**ENGLISH 385A. Ulysses. 5 Units.**

Through intensive close reading of Joyce's novel along with selected theoretical texts, we will examine the formal structures and cultural and political implications of *Ulysses*. Topics will include modernist aesthetics and narrative innovation, depictions of consciousness, gender and sexuality, vernacular modernism, and the sensorium of modernity.

**ENGLISH 390. Graduate Fiction Workshop. 3 Units.**

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

**ENGLISH 392. Graduate Poetry Workshop. 3 Units.**

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

**ENGLISH 394. Independent Study. 1-10 Unit.**

Preparation for first-year Ph.D. qualifying examination and third year Ph.D. oral exam.

**ENGLISH 395. Ad Hoc Graduate Seminar. 1-5 Unit.**

Three or more graduate students who wish in the following quarter to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.

**ENGLISH 396. Introduction to Graduate Study for Ph.D. Students. 5 Units.**

Required for first-year graduate students in English. The major historical, professional, and methodological approaches to the study of literature in English.

**ENGLISH 396L. Pedagogy Seminar I. 2 Units.**

Required for first-year Ph.D students in English. Prerequisite for teaching required for Ph.D. students in English, Modern Thought and Literature and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

**ENGLISH 396P. Publication Workshop: The Article. 3-5 Units.**

For English Ph.D. candidates only. A practical and theoretical study of the genre of the journal article, with critical reflection on its status as a gateway to academic professionalization and as a highly specialized form of public address. We will be reading articles published over the last decade across a diverse range of journals, focusing on issues surrounding methodology, style, tone, and audience. Participants will work on developing an already polished piece of writing into the form of an article publishable by a peer-reviewed publication. Admission by application in Autumn quarter .

**ENGLISH 396R. Old and Modern(ist) Reading Group. 2 Units.**

This two-quarter-long reading group will alternate from week-to-week between Old English Biblical and Elegaic Poetry and David Jones's twentieth-century transnational Modernist masterpiece, "Anthemata" (which W. H. Auden called very probably the finest long poem written in English in this century). Students can choose to join biweekly for just Old English (in the original language) or just David Jones, or complete both sets of allied reading.

**ENGLISH 398. Research Course. 1-18 Unit.**

A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.

**ENGLISH 398L. Literary Lab. 2-5 Units.**

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.

Same as: COMPLIT 398L

**ENGLISH 398Q. Qualifying Exam Workshop. 10 Units.**

Qualifying Exam Workshop for 1st year cohort.

**ENGLISH 398R. Revision and Development of a Paper. 4-5 Units.**

Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.

**ENGLISH 398W. Orals, Publication and Dissertation Workshop. 2 Units.**

For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, publishing articles, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.

**ENGLISH 399. Thesis. 1-10 Unit.**

For M.A. students only. Regular meetings with thesis advisers required.

**ENGLISH 43A. American Indian Mythology, Legend, and Lore. 3-5 Units.**

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks".

Same as: AMSTUD 143M, ENGLISH 143A, NATIVEAM 143A

**ENGLISH 48N. The American Songbook and Love Poetry. 3 Units.**

A study of performances (Billie Holiday, Frank Sinatra etc) of songs by classic American composers (Porter, Rogers and Hart, Cohen).

Same as: AMSTUD 48N

**ENGLISH 50. HUMANITIES HOUSE WORKSHOP. 1 Unit.**

For student research workshops in Ng House / Humanities House. Open to both residents and non-residents. May be repeated for credit.

**ENGLISH 50A. Character Development: Writing a Script, Creating Engaging Characters. 1 Unit.**

Seminar with Writer in Residence John Markus (BA English '78); meets for seven sessions over three weeks in February. Students will work one on one and in small groups with this professional writer and Stanford alum. John has written everything from stand-up to critically-acclaimed network and cable television shows to independent films to, most recently, theatrical plays. This seminar is designed for students who would like to produce a piece of work in three weeks and/or to pursue a writing profession.

**ENGLISH 50B. A Humanist's Guide to Art, Community, Design, and the Earth. 1 Unit.**

This short, intensive seminar features Humanities Scholar & Artist in Residence Clare Whistler (visiting from England April 12-27) will meet for dialogue, workshop, creation, and improvisation. This workshop will help students to think through methods of humanistic inquiry as ways of integrating meaning and purpose into their lives; it will focus on projects, research, collaborations, walking explorations, and relationships. In five residence-based sessions around Gerhard Quad, students will learn to develop personal and professional practices such as finding and creating apprenticeships and internships, creating a Humanities "start up," and partnering with investors, foundations, fundraisers, patrons, and community. This course will be of interest to students who would like to maintain humanistic values, make a decent living, find good mentors and collaborators, and create communities that are attentive to their constructed and natural environments.

**ENGLISH 50Q. Life and Death of Words. 4 Units.**

In this course, we explore the world of words: their creation, evolution, borrowing, change, and death. Words are the key to understanding the culture and ideas of a people, and by tracing the biographies of words we are able to discern how the world was, is, and might be perceived and described. We trace how words are formed, and how they change in pronunciation, spelling, meaning, and usage over time. How does a word get into the dictionary? What do words reveal about status, class, region, and race? How is the language of men and women critiqued differently within our society? How does slang evolve? How do languages become endangered or die, and what is lost when they do? We will visit the Facebook Content Strategy Team and learn more about the role words play in shaping our online experiences. Together, the class will collect Stanford language and redesign the digital dictionary of the future. Trigger Warning: Some of the subject matter of this course is sensitive and may cause offense. Please consider this prior to enrolling in the course.

Same as: CSRE 50Q, FEMGEN 50Q, LINGUIST 50Q, NATIVEAM 50Q

**ENGLISH 51N. The Sisters: Poetry & Painting. 3 Units.**

Poetry and painting have often been called the "sister arts". Why? Sometimes a poem or a painting stands out to us, asking that we stay with it, that we remember it, although we cannot exactly say why. Poems have a way of making pictures in the mind, and paintings turn "rhymes" amid the people, places, and things they portray. Each is a concentrated world, inviting an exhilarating closeness of response: why does this line come first? Why does the artist include that detail? Who knows but that as we write and talk about these poems and pictures we will be doing what John Keats said a painter does: that is, arriving at a "trembling delicate and snail-horn perception of Beauty." Each week explore the kinship between a different pair of painter and poet and also focuses on a particular problem or method of interpretation. Some of the artist/poet combinations we will consider: Shakespeare and Caravaggio; Jorie Graham and (the photographer) Henri Cartier-Bresson; Alexander Pope and Thomas Gainsborough; William Wordsworth and Caspar David Friedrich; Christina Rossetti and Mary Cassatt; Walt Whitman and Thomas Eakins; Thomas Hardy and Edward Hopper.

Same as: ARTHIST 160N

**ENGLISH 52N. Mixed-Race Politics and Culture. 3 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? In this course, we approach issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st century U.S. We will examine issues surrounding the role of multiculturalism, immigration, acculturation, racial representation and racial prejudice in American society. Topics we will explore include the political and social formation of "race"; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of Census categories and the rise of the Multiracial Movement.

Same as: AFRICAAM 52N, POLISCI 29N

**ENGLISH 67. Contemporary Chicano & Latino Literature. 4 Units.**

What does it mean to be Chicano and Latino in the United States today? And, how have U.S. writers portrayed the evolution of a Latino identity as it has changed from the age of the Civil Rights Movement to the age of Twitter? This class provides students with an overview of 20th and 21st century U.S. Latino/a literature by focusing on American authors writing after the 1960s to the present. We will read a range of writers, including Gloria Anzaldúa, Sandra Cisneros, Héctor Tobar, and Junot Díaz, and examine how these authors grapple with the artistic task of representing the different national cultures and histories (Mexican American, Puerto Rican, etc.) that inform the U.S. Latino experience. Throughout the quarter we will explore how these fictional narratives offer insights into the topics of American identity, immigration, assimilation, class status, Women of Color feminism, gender and sexuality. In addition, we will also consider contemporary representations from film and television, ultimately working toward a comprehensive analysis of how literary genres and popular cultural contribute to the meaning of Latinidad in the U.S.

Same as: CHILATST 67

**ENGLISH 68N. Mark Twain and American Culture. 4 Units.**

Preference to freshmen. Mark Twain defined the rhythms of our prose and the contours of our moral map. He recognized our extravagant promise and stunning failures, our comic foibles and tragic flaws. He is viewed as the most American of American authors—and as one of the most universal. How does his work illuminate his society's (and our society's) responses to such issues as race, gender, technology, heredity vs. environment, religion, education, art, imperialism, animal welfare, and what it means to be "American"?

Same as: AMSTUD 68N

**ENGLISH 70N. Shakespeare Unbound. 3 Units.**

Unbound from classical poetics, or from any strict adherence to the conventions of comedy, tragedy, and history, Shakespeare made—and still makes—the stage come to life. The course will focus on some of the more unsettling productions from the hand of the bard, among them *Titus Andronicus*, *The Taming of the Shrew*, *Romeo and Juliet*, *A Midsummer Night's Dream*, *As You Like It*, *Twelfth Night*, *Troilus and Cressida*, *Coriolanus*, *Cymbeline*, and *The Winter's Tale*.

**ENGLISH 71. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

Same as: ARTHIST 36, COMPLIT 36A, EALC 36, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, RELIGST 21X, SLAVIC 36

**ENGLISH 75N. American Short Stories. 3 Units.**

How and why did the short story take root and flourish in an American context? Early works of classic American literature read alongside stories by women and minority writers, stretching from the early nineteenth century to the contemporary period.

Same as: AMSTUD 75N

**ENGLISH 76. After the Apocalypse. 3 Units.**

What happens after the world, as we know it, has ended? In the course of examining classic and newer speculative fictional narratives detailing the ravages of various post-apocalyptic societies and the challenges those societies pose to the survivors, we explore several related questions: What is an apocalypse? What resources does speculative fiction offer for understanding and responding to oppressive societies? Where does the idea of the apocalypse originate? Is an apocalypse always in the future? Or has it already occurred? For whom might apocalypse constitute an ongoing present? In this course, we use the tools of close reading and historical criticism to build an archive of knowledge about the narrative, visual, and aural features of apocalypse. Students will be guided through the creation of a multimedia portfolio over the course of the quarter, for presentation at the end. No written midterm or final exam.

**ENGLISH 802. TGR Dissertation. 0 Units.****ENGLISH 81. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**ENGLISH 82N. Thinking about Photographs. 3 Units.**

The course will begin with a short history of photography since the 19th century; followed by both a hands-on exploration of different types of photographs (possibly using the Cantor Collection) and then a more theoretical discussion of some of the acknowledged classics of photographic writing (Susan Sontag's *On Photography*, Roland Barthes' *Camera Lucida*, Linfield's *The Cruel Radiance*).

**ENGLISH 90. Fiction Writing. 5 Units.**

The elements of fiction writing: narration, description, and dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1 (waived in summer quarter).

**ENGLISH 90Q. Sports Writing. 3 Units.**

Study and practice of the unique narratives, tropes, images and arguments that creative writers develop when they write about popular sport. From regional fandom to individualist adventuring, boxing and baseball to mascot dancing and table tennis, exceptional creative writers mine from a diversity of leisure activity a rich vein of sports writing in the creative nonfiction genre. In doing so, they demonstrate the creative and formal adaptability required to write with excellence about any subject matter, and under the circumstances of any subjectivity. Discussion of the ways in which writers have framed, and even critiqued, our interest in athletic events, spectatorship, and athletic beauty. Writers include Joyce Carol Oates, Roland Barthes, David James Duncan, Arnold Rampersad, John Updike, Maxine Kumin, Susan Sterling, Ernest Hemingway, Norman Mailer, Dervla Murphy, Haruki Murakami, Don DeLillo, Henry Louis Gates, Jr., Annie Dillard, John McPhee, and Laura Hillenbrand. Close readings of essays on form and sport, as well as book excerpts. Students will engage in class discussions and write short weekly papers, leading to a more comprehensive project at the end of the quarter.

**ENGLISH 90V. Fiction Writing. 5 Units.**

Online workshop course that explores the ways in which writers of fiction have used language to examine the world, to create compelling characters, and to move readers. We will begin by studying a selection of stories that demonstrate the many techniques writers use to create fictional worlds; we'll use these stories as models for writing exercises and short assignments, leading to a full story draft. We will study figurative language, character and setting development, and dramatic structure, among other elements of story craft. Then, each student will submit a full draft and receive feedback from the instructor and his/her classmates. This course is taught entirely online, but retains the feel of a traditional classroom. Optional synchronous elements such as discussion and virtual office hours provide the student direct interaction with both the instructor and his/her classmates. Feedback on written work is both offered to and given by the student is essential to the course and creates class rapport.

**ENGLISH 90W. Writing and War. 5 Units.**

This introductory, five-unit course is designed for all students interested in reading the literature of and studying the expression of military conflict. Bridging the experiences of Veteran and non-Veteran students will be a central aim of the course and will be reflected in enrollment, reading materials, visiting guests and final narrative project.

**ENGLISH 91. Creative Nonfiction. 5 Units.**

Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content. May be repeat for credit.

**ENGLISH 91A. ASIAN-AMERICAN AUTOBIOGRAPHY/W. 5 Units.**

This is a dual purpose class: a writing workshop in which you will generate autobiographical vignettes/essays as well as a reading seminar featuring prose from a wide range of contemporary Asian-American writers. Some of the many questions we will consider are: What exactly is Asian-American memoir? Are there salient subjects and tropes that define the literature? And in what ways do our writerly interactions both resistant and assimilative with a predominantly non-Asian context in turn recreate that context? We'll be working/experimenting with various modes of telling, including personal essay, the epistolary form, verse, and even fictional scenarios.

Same as: ASNAMST 91A

**ENGLISH 91DC. Writing the Memoir. 5 Units.**

Open to DCI Fellows and Partners only. In this course, we will practice the art and craft of writing memoir: works of prose inspired by the memory of personal events and history. In our practice, we will look at different strategies for writing with meaning and insight about the events in our lives. We will read a variety of models by published authors who have made sense of the personal alongside the profound: the sad, joyful, simple and complicated stuff of living and being alive. Our learning will be discussion-driven. You should expect to do daily writing in the class, and to write and read widely between our class meetings. We will read, discuss, and imitate excerpts of memoirs by such authors as Augustine, Andrew Solomon, Joyce Carol Oates, Tim O'Brien, Joan Didion, and Eavan Boland, among many others. At least half of our class time will be devoted to the discussion of participants' work. The course will address issues ranging from how we select and write about events from our personal lives, to the ethical obligations of memoirists, to the ways we can explore new understanding about the past, as well as our own courage and reluctance to share personal writing. Writers at all levels of experience and comfort with creative writing are very welcome.

**ENGLISH 92. Reading and Writing Poetry. 5 Units.**

Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit.

**ENGLISH 93Q. The American Road Trip. 3 Units.**

From Whitman to Kerouac, Alec Soth to Georgia O'Keeffe, the lure of travel has inspired many American artists to pack up their bags and hit the open road. In this course we will be exploring the art and literature of the great American road trip. We will be reading and writing in a variety of genres, workshopping our own personal projects, and considering a wide breadth of narrative approaches. Assignments will range from reading Cormac McCarthy's novel, *The Road*, to listening to Bob Dylan's album, *Highway 61 Revisited*. We will be looking at films like *Badlands* and *Thelma and Louise*, acquainting ourselves with contemporary photographers, going on a number of campus-wide field trips, and finishing the quarter with an actual road trip down the California coast. Anyone with a sense of adventure is welcome!

**ENGLISH 94. Creative Writing Across Genres. 5 Units.**

For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92.

**ENGLISH 9CE. Creative Expression in Writing. 3 Units.**

Primary focus on giving students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests. For undergrads only.

**ENGLISH 9CT. Special Topics in Creative Expression. 3 Units.**

Focus on a particular topic or process of creative expression. Primary focus on giving students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests. For undergrads only. May repeat for credit.

**ENGLISH 9CV. Creative Expression in Writing. 3 Units.**

Online workshop whose primary focus is to give students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests. For undergrads only.

# Environment and Resources (ENVRES)

## **ENVRES 201. Designing and Evaluating Community Engagement Programs for Social and Environmental Change. 3 Units.**

Non-profit organizations seeking to achieve social and environmental change often run outreach and education programs to engage community members in their cause. Effective application of social science theory and methods may improve the design and evaluation of such community engagement programs. In this class, we partner with environmental and social justice organizations in the Bay Area to explore two questions: 1) How can recent findings from the social sciences be applied to design more effective community engagement programs? 2) How can we rigorously evaluate outreach and education programs to ensure they are achieving the desired objectives? The course will include an overview of key theories from psychology, sociology, and education, field trips to partnering organizations, and a term-long community-engaged research project focused on designing and/or evaluating a local outreach or educational program that is meant to achieve social and environmental change.

Same as: EARTHSYS 130

## **ENVRES 220. The Social Ocean: Ocean Conservation, Management, and Policy. 1-2 Unit.**

This interdisciplinary seminar addresses current coastal and marine topics through a series of readings, discussions, and guest lecturer presentations. Through classic and contemporary scientific literature, news articles, and multimedia sources, students will examine the challenges of coastal and marine policy and management and investigate the human dimensions of potential solutions. The course will begin with global scale topics and conclude with the individual stories of human connection to the ocean. This seminar is open to advanced undergraduate and graduate students.

## **ENVRES 221. New Frontiers and Opportunities in Sustainability. 1 Unit.**

Interdisciplinary exploration of how companies, government and non-profit organizations address some of the world's most significant environmental & resource sustainability challenges. Each week we will explore with an experienced sustainability practitioner new frontiers and opportunities in clean tech, policy, energy, transportation, consumer goods, agriculture, food, and sustainable built environments.

## **ENVRES 222. Climate Law and Policy. 3 Units.**

This course offers an interdisciplinary, graduate-level survey of historical and current efforts to regulate emissions of greenhouse gases in the United States. Students will read primary legal documents, including statutes, regulations, and court cases, in order to evaluate the forces and institutions shaping American climate policy. Although the class will focus on the intersection of climate policy and the legal system, no specific background in law is necessary.

## **ENVRES 225. E-IPER Current Topics Seminar. 1 Unit.**

For E-IPER Ph.D and Joint M.S. students only. Weekly presentations of E-IPER students' research and other program-related projects. Occasional guest speakers. Individual or team presentation, active participation, and regular attendance required for credit. May be taken for credit a maximum of two times.

## **ENVRES 230. Field Survey Data Collection & Analysis. 3 Units.**

In this course we will examine a range of issues related to the collection and analysis of survey data. Topics will include initiating a survey, designing an instrument, conducting enumeration, converting data from questionnaires to digital files, data analysis, empirical modeling and presenting results. Technical components will also be highly focused on application and implementation, and while prior training in econometrics would be useful, it will not be a prerequisite. The course will be tailored so that some of the specific topics covered will be based on the needs and interests of the students.

## **ENVRES 240. Environmental Decision-Making and Risk Perception. 1-3 Unit.**

Mobilizing successful conservation efforts to mitigate climate change and preserve both local and global ecosystems requires a new way of thinking. This course will investigate the barriers to pro-environmental behavior and the heuristics and biases that cloud our ability to respond effectively to environmental problems, using insights from behavioral economics, neuroeconomics, and environmental risk perception. Emphasis on interdisciplinary applications of recent research, and implications for environmental policymaking and persuasive messaging.

## **ENVRES 250. Environmental Governance. 3 Units.**

How do we work together to solve environmental problems? Across the globe, who has a voice, and who ultimately decides how to balance conservation and development? How do we build governance institutions that facilitate both environmental sustainability and social equity? This seminar on environmental governance will focus on the challenges and opportunities for managing common-pool resources, like fisheries, forests, and water. Because managing environmental resources is often about managing people, we will explore the motivations underlying human behavior towards the environment. We will discuss how institutions encode our cultural values and beliefs, and how we can reshape these institutions to achieve more sustainable outcomes. Coursework includes foundational readings and a pragmatic exploration of case studies. Teaching cases address topics in community-based conservation, international protected areas, market-based approaches, coping with environmental risk, and other themes. Interested undergraduate and graduate students from any discipline are welcome.

## **ENVRES 270. Graduate Practicum in Environment and Resources. 1-5 Unit.**

Opportunity for E-IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets US CIS requirements for off-campus employment with endorsement from designated school official.

## **ENVRES 276. Water Resources: Culture and Context. 3-5 Units.**

Students in this discussion-based seminar will examine both the social and environmental challenges of managing California's freshwater resources. The multidisciplinary team of instructors will introduce a range of textual sources - engineering, cartographic, art historical, and ecological, to name a few - and the class will engage directly with Cantor's 'Art of Water' exhibition as well as local feats of water infrastructure. Students will gain historically-grounded insights through tailored weekly assignments and develop creative solutions for freshwater security as the final project.

Same as: AMSTUD 276

## **ENVRES 280. Topics in Environment and Resources. 2 Units.**

Required core course restricted to E-IPER Joint M.S. students. This course functions as a gateway to fundamental concepts in environment, energy and sustainability. Topics include climate change, ecosystem services, life cycle assessment, energy systems, food systems, and others. Students engage with affiliated faculty, and begin to develop ways to integrate science and technology with business, law and other professional skills to solve environment and resource problems.

## **ENVRES 290. Capstone Project Seminar in Environment and Resources. 1-3 Unit.**

Required for and limited to E-IPER Joint M.S. students. Propose, conduct and publicly present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required. 3 total units required; can all be taken during one quarter or divided over two sequential quarters.

**ENVRES 300. Introduction to Resource, Energy and Environmental Economics. 3 Units.**

Required core course restricted to first year E-IPER Ph.D. students. Examination of environmental, energy and natural resource management problems through the lens of economics, with an emphasis on hands-on practical problem-solving. Topics include market failure, cost-benefit analysis, finance, risk & uncertainty, non-market valuation, regulation, green accounting, rent, renewable resources, exhaustible resources, including energy, and biodiversity. Prerequisite: proficiency in multivariate calculus. Knowledge of basic microeconomics helpful but not essential.

**ENVRES 315. Environmental Research Design Seminar. 1 Unit.**

Required core course restricted to first year E-IPER Ph.D. students. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in ENVRES 320. Designing Environmental Research. Topics parallel the ENVRES 320 syllabus. Corequisite: ENVRES 320.

**ENVRES 320. Designing Environmental Research. 3-4 Units.**

Required core course restricted to first year E-IPER Ph.D. students. Research design options for causal inference in environmentally related research. Major philosophies of knowledge and how they relate to research objectives and design choices. Identification of critical elements within a broad range of research designs. Evaluation of the types of research questions for which different designs are suited, emphasizing fit between objectives, design, methods, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.

**ENVRES 330. Research Approaches for Environmental Problem Solving. 3 Units.**

Required core course restricted to first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, a preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: ENVRES 398 with a faculty member chosen to explore a possible dissertation topic.

**ENVRES 340. E-IPER PhD Writing Seminar. 1-2 Unit.**

Required core course restricted to second-year E-IPER PhD students. Actively pursue one or more writing goals relevant to this stage in their graduate studies in a structured setting. Set specific writing goals, create and follow a plan for reaching these goals, and receive substantive feedback on their written products from their peers. Examples of writing products include, but are not limited to, the student's dissertation proposal, E-IPER Fields of Inquiry essay, a literature review, or a grant or fellowship application. By the end of the course, students are expected to have completed or have made substantial progress toward their writing goal.

**ENVRES 380. Innovating Large Scale Sustainable Transformations. 4 Units.**

This class establishes innovation of systemic transformations as a crucial leadership modality. It gives students the mindsets, theoretical framework, and hands-on experience in shaping innovative interventions that bring about scaled and profound transformations in the face of complex multi-factorial challenges. Students are immersed in the Deep Change Methodology, which combines systems thinking, strategy, design thinking, behavioral sciences, resilience theory, diffusion theory, decision theory, and a theoretical framework around scaled multistakeholder interventions. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create sustainability and resilience on environmental, societal, and economic fronts. This project-based team-based class challenges students to find solutions for complex real world challenges. Consent of instructor required. Class meets Fridays starting week 2 (April 13th), for 8 weeks at 9.30am - 4.20pm. Week 9 presentations (June 1st) 3.00pm - 8.00pm. Same as: SUST 230

**ENVRES 398. Directed Reading in Environment and Resources. 1-10 Unit.**

Under supervision of an E-IPER affiliated faculty member on a subject of mutual interest. Joint M.S. students must submit an Independent Study Agreement for approval. May be repeat for credit.

**ENVRES 399. Directed Research in Environment and Resources. 1-15 Unit.**

For advanced graduate students. Under supervision of an E-IPER affiliated faculty member. Joint M.S. students must submit an Independent Study Agreement for approval.

**ENVRES 801. TGR Project. 0 Units.**

.

**ENVRES 802. TGR Dissertation. 0 Units.**

.

## Ethics in Society (ETHICSOC)

**ETHICSOC 103X. Contemporary Muslim Political Thought. 4 Units.**

This course aims to provide an introduction to contemporary Muslim political thought. It presents post-nineteenth century Muslim contributions to political thought. It is designed as a survey of some major thinkers that sought to interpret Islam's basic sources and Islamic intellectual legacy from the Arab world to Iran and Southeast Asia, from Turkey to North America. Our readings include primary texts by Tahtawi, Tunisi, Afghani, Rida, Iqbal, Qutb, Maududi, Shariati, and some current figures. We will approach the texts as just other works of political theory rather than a study of intellectual history. We will analyze the recurring ideas in this body of thought such as decline, civilization, rationality, ijihad (Islamic independent reasoning), shura (deliberative decision-making), democracy, secularism, Muslim unity, khilafah (caliphate and vicegerency), freedom, equality, and justice. We will discuss their current significance from the ongoing theoretical debates in Muslim political thought and comparative political theory.

Same as: GLOBAL 136

**ETHICSOC 104X. Introduction to Disability Studies and Disability Rights. 4 Units.**

Disability Studies is a relatively new interdisciplinary academic field that examines disability as a social, cultural and political phenomenon. This is an introductory course to the field of disability studies and it aims to investigate the complex concept of disability through a variety of prisms and disciplines including social psychology, the humanities, legal studies and media studies. This course also focuses on the multiple connections between the study of disability and other identities including class, race, ethnicity, gender and sexual orientation, and also includes a comparative look at how disability is treated across cultures. Some of the topics covered in the class are disability and the family, the history of the disability rights movement, the development of disability identity and its intersectionality, antidiscrimination law, the UN Convention on the Rights of People with Disabilities, bioethical dilemmas pertaining to disability and more.

Same as: FEMGEN 94H, HUMRTS 104, SOC 186

**ETHICSOC 10SC. The Meaning of Life: Moral and Spiritual Inquiry through Literature. 2 Units.**

Short novels and plays will provide the basis for reflection on ethical values and the purpose of life. Some of the works to be studied are F. Scott Fitzgerald's *The Great Gatsby*, George Bernard Shaw's *Major Barbara*, Hermann Hesse's *Siddhartha*, Jane Smiley's *Good Will*, Robert Bolt's *A Man for All Seasons*, John Steinbeck's *Of Mice and Men*, and Nadine Gordimer's *None to Accompany Me*. We will read for plot, setting, character, and theme using a two-text method; looking at the narrative of the literary work and students' own lives, rather than either deconstructing the literature or relating it to the author's biography and psychology. The questions we will ask have many answers. Why are we here? How do we find meaningful work? What can death teach us about life? What is the meaning of success? What is the nature of true love? How can one find balance between work and personal life? How free are we to seek our own destiny? What obligations do we have to others? We will draw from literature set in the United States and elsewhere; secular and religious world views from a variety of traditions will be considered. The authors chosen are able to hold people up as jewels to the light, turning them around to show all of their facets, both blemished and pure, while at the same time pointing to any internal glow beneath the surface. Classes will be taught in a Socratic, discussion-based style. Study questions will accompany each reading and provide a foundation for class discussion. Grading will be based 50 percent on class participation, 25 percent on one-page reflection papers on reading assignments, and 25 percent on a four-page final paper due on September 15. Field trips will include an overnight camping experience.

**ETHICSOC 111. Leadership Challenges. 4-5 Units.**

This course will examine the responsibilities and challenges for those who occupy leadership roles in professional, business, non-profit, and academic settings. Topics will include characteristics and styles of leadership, organizational dynamics, forms of influence, decision making, diversity, social change, and ethical responsibilities. Class sessions will include visitors who have occupied prominent leadership roles. Readings will include excerpts of relevant research, problems, exercises, and case studies. Requirements will include class participation and short written weekly reflection papers (2 to 3 pages) on the assigned readings. The class will be capped at 50 students.  
Same as: PUBLPOL 111

**ETHICSOC 131S. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.**

This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx.  
Same as: POLISCI 131L

**ETHICSOC 131X. Ethics in Bioengineering. 3 Units.**

Bioengineering focuses on the development and application of new technologies in the biology and medicine. These technologies often have powerful effects on living systems at the microscopic and macroscopic level. They can provide great benefit to society, but they also can be used in dangerous or damaging ways. These effects may be positive or negative, and so it is critical that bioengineers understand the basic principles of ethics when thinking about how the technologies they develop can and should be applied. On a personal level, every bioengineer should understand the basic principles of ethical behavior in the professional setting. This course will involve substantial writing, and will use case-study methodology to introduce both societal and personal ethical principles, with a focus on practical applications.  
Same as: BIOE 131

**ETHICSOC 133. Ethics and Politics of Public Service. 3-5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.  
Same as: CSRE 178, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

**ETHICSOC 134R. The Ethics of Elections. 5 Units.**

Do you have a duty to vote? How should you choose whom to vote for? Should immigrants be allowed to vote? Should we make voting mandatory? How (if at all) should we regulate campaign finance? Should we even have elections at all? In this course, we will explore these and other ethical questions related to electoral participation and the design of electoral institutions. We will evaluate arguments from political philosophers, political scientists, and politicians to better understand how electoral systems promote important democratic values and how this affects citizens' and political leaders' ethical obligations. We will focus, in particular, on questions that are particularly relevant to the 2016 U.S. presidential election, though many of the ethical issues we will discuss in this course will be relevant in any electoral democracy.  
Same as: POLISCI 132A

**ETHICSOC 135R. The Ethics of Democratic Citizenship. 5 Units.**

We usually think about democratic citizenship in terms of rights and opportunities, but are these benefits of democracy accompanied by special obligations? Do citizens of a democracy have an obligation to take an interest in politics and to actively influence political decision making? How should citizens respond when a democracy's laws become especially burdensome? Do citizens of a democracy have a special obligation to obey the law? In this course, we will read classical and contemporary political philosophy including Plato's *Crito* and King's "Letter from a Birmingham Jail" to explore how political thinkers have understood and argued for the ethics of citizenship. Students in this course will draw on these materials to construct their own arguments, and to identify and assess implicit appeals to the ethics of citizenship in popular culture and contemporary public discourse, from The Simpsons to President Obama's speeches.  
Same as: POLISCI 135D

**ETHICSOC 136R. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to a series of real-world issues of international concern: global poverty, human rights, natural resources, climate change, migration, and the well-being of women.. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.  
Same as: INTNLREL 136R, PHIL 76, POLISCI 136R, POLISCI 336

**ETHICSOC 145. The Ethics of Migration. 4 Units.**

How should states treat immigrants and would-be immigrants? On what grounds can immigration be justly restricted, and through what means? This module engages with these complex questions by offering a broad overview of key issues in the ethics of migration and their relation to public policy. Guided by the tools of contemporary political philosophy, you will reflect closely upon a series of pressing issues including the basis of the state's right to exclude non-citizens, the prospect of open borders and their tensions with egalitarian justice, the human right to free movement, and the rights of refugees and undocumented migrants.

**ETHICSOC 155. The Ethics And Politics of Effective Altruism. 4-5 Units.**

What should I do? How should I live? These are the central questions that practical ethics seeks to answer. "Effective altruism" (EA), a growing school of thought and popular social movement, offers a clear and attractive response. It holds that we should try to do the best that we can for the world, and that we should do so on the basis of careful reasoning and reliable evidence. In a short amount of time, effective altruism has become a popular theoretical framework for thinking about our duties to others, and for navigating difficult practical questions. How much do I owe to others? To whom do I have obligations? How should I choose amongst different strategies for discharging these obligations? The course examines the theoretical assumptions behind effective altruism, its internal debates, external criticisms, and rival alternatives. We explore these questions in part by focusing on certain case studies that highlight different elements of the EA approach: organ donation, career choice, animal treatment, and global poverty. Guest lecturers, representing prominent advocates and critics of effective altruism, may also be added to the schedule, pending availability.

**ETHICSOC 170. Ethical Theory. 4 Units.**

How should we live our lives? Should you love your neighbour as yourself? Should you be digging wells rather than taking philosophy classes? Is taxation just? What obligations do we have to the not-yet-born, and to the dead? And says who? Are there really any answers to these questions? If so, what explains why they are one way rather than another? The will of God? Perhaps we need rules to ensure mutual benefits. But then, can I break them if no-one will find out? Can it be appropriate to blame you for doing something that you thought was the right thing to do (perhaps rejecting a blood transfusion)? Or to praise you for doing something you thought was the wrong thing to do (like Huck Finn)? By the end of this semester, you will be developing answers to these questions and many more. A more challenging version of Phil 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more. Same as: PHIL 170, PHIL 270

**ETHICSOC 171. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: PHIL 171, POLISCI 103, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**ETHICSOC 173. Introduction to Feminist Philosophy. 4 Units.**

If feminism is a political practice aimed at ending the patriarchy, what is the point of feminist philosophy? This course provides an introduction to feminist philosophy by exploring how important theoretical questions around sex and gender bear on practical ethical and political debates. The first part of the course will examine some of the broader theoretical approaches in feminist philosophy, including: the metaphysics of gender, standpoint epistemology, and feminist critiques of liberal political philosophy. Questions will include: how should we understand the category 'woman'? How does gender intersect with other axes of oppression? Does experience of gendered oppression give one better knowledge of social reality? Are political liberalism and capitalism compatible with feminism? The second part of the course will address more specific ethical and political topics within feminist philosophy, such as: objectification, pornography, consent, markets in women's sexual and reproductive labor, and the institution of marriage. Same as: PHIL 90R

**ETHICSOC 174A. Moral Limits of the Market. 4 Units.**

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: PHIL 174A, PHIL 274A, POLISCI 135P

**ETHICSOC 174L. Betrayal and Loyalty, Treason and Trust. 2 Units.**

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 274L, PHIL 174L, PHIL 274L

**ETHICSOC 174X. Universal Basic Income: the philosophy behind the proposal. 4 Units.**

The past three decades have seen the elaboration of a vast body of literature on unconditional basic income a radical policy proposal Philippe Van Parijs referred to as a disarmingly simple idea. It consists of a monthly cash allowance given to all citizens, regardless of personal desert and without means test to provide them with a standard of living above the poverty line. The seminar will seek to engage students in normative debates in political theory (feminism, liberalism, republicanism, communism, libertarianism, etc.) by appealing to the concrete example of basic income. It will allow students to learn a great deal about a policy that is gaining tremendous currency in academic and public debates, while discussing and learning about prominent political theorists - many of whom have written against or for basic income at one point in their career. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites. We will ask questions such as: is giving people cash no strings attached desirable and just? Would basic income promote a more gender equal society through the remuneration of care-work, or would it risks further entrenching the position of women as care-givers? Would alternative policies be more successful (such as the job guarantees, stakeholder grants or a negative income tax)? How can we test out basic income? What makes for a reliable and ethical basic income pilot? Students in Politics, Philosophy, Public Policy, Social Work, and Sociology should find most of those questions relevant to their interests. Some discussions on how to fund basic income, on the macro-economic implications of basic income and on the existing pilots projects (in Finland, Namibia, India, Canada and the US) may be of interest to Economists; while our readings on the impact of new technologies and artificial intelligence on the future of work and whether a basic income could be a solution, are likely to be of interest to computer scientists and engineers. By the end of the class, students will have an in depth knowledge of the policy and will have developed skills in the normative analysis of public policy. They will be able to deploy those critical and analytical skills to assess a broad range of other policies. Same as: ETHICSOC 274X, PHIL 174B, PHIL 274B, POLISCI 338

**ETHICSOC 178M. Introduction to Environmental Ethics. 4-5 Units.**

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.

Same as: ETHICSOC 278M, PHIL 178M, PHIL 278M, POLISCI 134L

**ETHICSOC 180M. The Ethics and Politics of Collective Action. 3-4 Units.**

Collective action problems arise when actions that are individually rational give rise to results that are collectively irrational. Scholars have used such a framework to shed light on various political phenomena such as revolutions, civil disobedience, voting, climate change, and the funding of social services. We examine their findings and probe the theoretical foundations of their approach. What does this way of thinking about politics bring into focus, and what does it leave out? What role do institutions play in resolving collective action problems? And what if the required institutions are absent? Can we, as individuals, be required to cooperate even if we expect that others may not play their part? Readings drawn from philosophy, political science, economics, and sociology.

Same as: PHIL 73, POLISCI 131A, PUBLPOL 304A

**ETHICSOC 181. Architecture, Space, and Politics. 4-5 Units.**

We spend most of our lives in buildings and cities that are planned by architects and urbanists. What are the normative considerations that should guide how these spaces are designed? What social role should architecture aim to play? and what criteria should we use to assess whether an architectural intervention is successful or not? This course seeks to address these questions by bringing architecture in conversation with contemporary normative political theory. It examines both how political theory can inform our thinking about architecture, and how the work of architects – with its attention to the specificities of the built environment – can advance our thinking about politics.

**ETHICSOC 185M. Contemporary Moral Problems. 4-5 Units.**

Conflict is a natural part of human life. As human beings we represent a rich diversity of conflicting personalities, preferences, experiences, needs, and moral viewpoints. How are we to resolve or otherwise address these conflicts in a way fair to all parties? In this course, we will consider the question as it arises across various domains of human life, beginning with the classroom. What are we to do when a set of ideas expressed in the classroom offends, threatens, or silences certain of its members? What is it for a classroom to be safe? What is it for a classroom to be just? We will then move from the classroom to the family, considering a difficult set of questions about how we are to square the autonomy rights of children, elderly parents, and the mentally ill with our desire as family members to keep them safe. Finally, we will turn to the conflicts of citizenship in a liberal democratic society in which the burdens and benefits of citizenship have not always been fairly distributed. We will consider, among others, the question of whether or not civil disobedience is ever morally permissible, of whether there is a right to healthcare, and of whether or not some citizens are owed reparations for past injustices.

Same as: PHIL 72, POLISCI 134P

**ETHICSOC 190. Ethics in Society Honors Seminar. 4 Units.**

For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

Same as: PHIL 178

**ETHICSOC 195. Ethics in Society Workshop. 1 Unit.**

Workshop for Ethics in Society seniors completing their honors thesis.

**ETHICSOC 199. Independent Studies in Ethics in Society. 1-15 Unit.**

May be repeated for credit.

**ETHICSOC 2. The Ethics of Anonymity. 1 Unit.**

When is it ethical to conceal your identity or to permit another to remain anonymous? What is the value to remaining unknown, and what might be the cost? Does anonymity free you to think, act, or be in ways you wouldn't otherwise? What else might it allow or constrain? How might your answers differ depending on the circumstances or context? In this one-unit lunchtime seminar, guest speakers will discuss topics that might include: anonymous sources in journalism; anonymity online; the history of anonymous authorship and attribution; whistleblowers and confidential informants; anonymous egg or sperm donors and birth parents; anonymity vs. confidentiality for research participants; anonymity and art; technology and anonymity.

Same as: COMM 127X, CSRE 127X

**ETHICSOC 20. Introduction to Moral Philosophy. 5 Units.**

What should I do with my life? What kind of person should I be? How should we treat others? What makes actions right or wrong? What is good and what is bad? What should we value? How should we organize society? Is there any reason to be moral? Is morality relative or subjective? How, if at all, can such questions be answered? Intensive introduction to theories and techniques in contemporary moral philosophy.

Same as: PHIL 2

**ETHICSOC 200A. Ethics in Society Honors Thesis. 1-5 Unit.**

Limited to Ethics in Society honors students, who must enroll once in 200A, once in 200B, and once in 200C in their senior year. Students enrolling in 200A for less than 3 units must get approval from the faculty director.

**ETHICSOC 200B. Ethics in Society Honors Thesis. 1-5 Unit.**

Limited to Ethics in Society honors students, who must enroll once in 200A, once in 200B, and once in 200C in their senior year. Students enrolling in 200B for less than 3 units must get approval from the faculty director.

**ETHICSOC 200C. Ethics in Society Honors Thesis. 1-5 Unit.**

Limited to Ethics in Society honors students, who must enroll once in 200A, once in 200B, and once in 200C in their senior year. Students enrolling in 200C for less than 3 units must get approval from the faculty director.

**ETHICSOC 202. EMOTIONS: MORALITY AND LAW. 2 Units.**

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 302, PHIL 177B, PHIL 277B

**ETHICSOC 202R. Ethics and Politics. 5 Units.**

A discussion of critical ethical issues faced by American and other national leaders. Case studies of 20th- and 21st-century decisions, including those involved with violence (e.g., the use of drone missiles or torture to extract information from enemies), whistle-blowing in government (e.g., decisions to expose what was known about 9/11 in advance), disobedience of those in authority (e.g., Daniel Ellsberg's release of the Pentagon Papers), policies on distributing scarce goods in society (e.g. rationing health care), policies involving justice and equal treatment (e.g. affirmative action or gay marriage), policies regarding life and death (e.g., abortion and euthanasia laws), and others. Students will debate some of the key issues, relying on ethical principles that will be discussed each week, and develop their own case studies.

**ETHICSOC 203R. Ethics in Real Life: How Philosophy Can Make Us Better People. 4 Units.**

Socrates thought that philosophy was supposed to be practical, but most of the philosophy we do today is anything but. This course will convince you that philosophy actually is useful outside of the classroom—and can have a real impact on your everyday decisions and how to live your life. We'll grapple with tough practical questions such as: 'Is it selfish if I choose to have biological children instead of adopting kids who need homes?' 'Am I behaving badly if I don't wear a helmet when I ride my bike?' 'Should I major in a subject that will help me make a lot of money so I can then donate most of it to overseas aid instead of choosing a major that will make me happy?' Throughout the course, we will discuss philosophical questions about blame, impartiality, the force of different 'shoulds,' and whether there are such things as universal moral rules that apply to everyone.

**ETHICSOC 205R. JUST AND UNJUST WARS. 2 Units.**

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751.

Same as: ETHICSOC 305R, PHIL 205R, PHIL 305R

**ETHICSOC 207R. Democratic Accountability and Transparency. 5 Units.**

This course critically examines two related democratic values, accountability and transparency. We begin with historical perspectives on accountability, tracing its centrality to democratic politics to ancient Athens and early modern debates about the nature and function of political representation. But the bulk of the course deals with contemporary issues and problems: how should we conceive of accountability, both conceptually and normatively, and what is its relationship to other values such as transparency and publicity? What forms of accountability are appropriate for modern democratic politics? Is accountability only for elites, or should ordinary citizens be accountable to one another? In what contexts are transparency and publicity valuable, and when might we instead find their operation counter-productive and troubling? Readings draw from canonical texts as well as contemporary political theory, philosophy, and political science.

**ETHICSOC 217X. Free Speech, Academic Freedom, and Democracy. 3 Units.**

The course examines connected ideas of free speech, academic freedom, and democratic legitimacy that are still widely shared by many of us but have been subject to skeptical pressures both outside and inside the academy in recent years. The course explores the principled basis of these ideas, how well they might (or might not) be defended against skeptical challenge, and how they might be applied in particular controversies about the rights of students, instructors, and researchers. Same as: EDUC 217, PHIL 278C

**ETHICSOC 21N. Ethics of Sports. 3 Units.**

This seminar will be focused on the ethical challenges that are encountered in sport. We will focus on the moral and political issues that affect the world of sport and which athletes, coaches, sports commentators and fans are faced with. For instance, we will ask questions such as: what is a fair game (the ethics of effort, merit, success)? Is it ethical to train people to use violence (the ethics of martial arts)? Are divisions by gender categories justified and what should we think of gender testing? Is the use of animals in sport ever justified? Which forms of performance enhancements are acceptable in sport (the ethics of drug use and enhancements through technologies)? Should we ban sports that damage the players' health? Does society owe social support to people who hurt themselves while practicing extreme sports? The class will be structured around small group discussions and exercises as well as brief lectures to introduce key moral and political concepts (such as fairness, equality, freedom, justice, exploitation, etc.). I will also bring guests speakers who are involved in a sport activity at Stanford or who have worked on sports as part of their academic careers. By the end of the seminar, students will have a good understanding of the various ethical challenges that surround the world of sport. They will be able to critically discuss sport activities, norms, modes of assessments and policies (on campus and beyond). They will also be prepared to apply the critical ethical thinking that they will have deployed onto other topics than sports. They will have been introduced to the normative approach to social issues, which consists in asking how things should be rather than describing how things are. They will be prepared to take more advanced classes in ethics, political theory, as well as moral and political philosophy.

Same as: PHIL 21N

**ETHICSOC 232T. Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.**

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? In the  $\zeta$ Philanthropy Lab $\zeta$  component of the course, students will award \$100,000 in grants to local nonprofits. Students will explore how nonprofit organizations operate domestically and globally as well as the historical development and modern structure of civil society and philanthropy. Readings in political philosophy, history, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S. Same as: POLISCI 236, POLISCI 236S

**ETHICSOC 233R. The Ethics of Religious Politics. 5 Units.**

Is it possible for a deeply committed religious person to be a good citizen in a liberal, pluralistic democracy? Is it morally inappropriate for religious citizens to appeal to the teachings of their tradition when they support and vote for laws that coerce fellow citizens? Must the religiously committed be prepared to defend their arguments by appealing to 'secular reasons' ostensibly accessible to all 'reasonable' citizens? What is so special about religious claims of conscience and expression that they warrant special protection in the constitution of most liberal democracies? Is freedom of religion an illusion when it is left to ostensibly secular courts to decide what counts as religion? Exploration of the debates surrounding the public role of religion in a religiously pluralistic American democracy through the writings of scholars on all sides of the issue from the fields of law, political science, philosophy, and religious studies.

**ETHICSOC 234R. Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.**

(Same as LAW 7020) The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: the Rohingya crisis in Myanmar; civilian space travel (Elon Musk's Mars plans); designer genetics; social media ethics (e.g. Facebook and Russia and on-line sex trafficking); free speech on University campuses (and Gawker type cases); artificial intelligence; Brexit; corporate and financial sector scandals (Epi pen pricing, hedge funds, Wells Fargo, Volkswagen emissions testing manipulation); and non-profit sector ethics challenges (e.g. should NGOs engage with ISIS). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with PUBLPOL 103E or PUBLPOL 103F), and Science, Technology and Society majors and satisfies the undergraduate Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Same as: PUBLPOL 134, PUBLPOL 234

**ETHICSOC 237. Civil Society and Democracy in Comparative Perspective. 5 Units.**

A cross-national approach to the study of civil societies and their role in democracy. The concept of civil society—historical, normative, and empirical. Is civil society a universal or culturally relative concept? Does civil society provide a supportive platform for democracy or defend a protected realm of private action against the state? How are the norms of individual rights, the common good, and tolerance balanced in diverse civil societies? Results of theoretical exploration applied to student-conducted empirical research projects on civil societies in eight countries. Summary comparative discussions. Prerequisite: a course on civil society or political theory. Students will conduct original research in teams of two on the selected nations. Enrollment limited to 18. Enrollment preference given to students who have taken PoliSci 236S/EthicSoc 232T. Same as: POLISCI 237S

**ETHICSOC 237M. Politics and Evil. 5 Units.**

In the aftermath of the Second World War, the political theorist Hannah Arendt wrote that the problem of evil will be the fundamental question of postwar intellectual life in Europe. This question remains fundamental today. The acts to which the word 'evil' might apply—genocide, terrorism, torture, human trafficking, etc.—persist. The rhetoric of evil also remains central to American political discourse, both as a means of condemning such acts and of justifying preventive and punitive measures intended to combat them. In this advanced undergraduate seminar, we will examine the intersection of politics and evil by considering works by philosophers and political theorists, with occasional forays into film and media. The thinkers covered will include: Hannah Arendt, Immanuel Kant, Niccolò Machiavelli, Friedrich Nietzsche, and Michael Walzer. Same as: POLISCI 237M

**ETHICSOC 274L. Betrayal and Loyalty, Treason and Trust. 2 Units.**

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 174L, PHIL 174L, PHIL 274L

**ETHICSOC 274X. Universal Basic Income: the philosophy behind the proposal. 4 Units.**

The past three decades have seen the elaboration of a vast body of literature on unconditional basic income a radical policy proposal Philippe Van Parijs referred to as a disarmingly simple idea. It consists of a monthly cash allowance given to all citizens, regardless of personal desert and without means test to provide them with a standard of living above the poverty line. The seminar will seek to engage students in normative debates in political theory (feminism, liberalism, republicanism, communism, libertarianism, etc.) by appealing to the concrete example of basic income. It will allow students to learn a great deal about a policy that is gaining tremendous currency in academic and public debates, while discussing and learning about prominent political theorists - many of whom have written against or for basic income at one point in their career. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites. We will ask questions such as: is giving people cash no strings attached desirable and just? Would basic income promote a more gender equal society through the remuneration of care-work, or would it risks further entrenching the position of women as care-givers? Would alternative policies be more successful (such as the job guarantees, stakeholder grants or a negative income tax)? How can we test out basic income? What makes for a reliable and ethical basic income pilot? Students in Politics, Philosophy, Public Policy, Social Work, and Sociology should find most of those questions relevant to their interests. Some discussions on how to fund basic income, on the macro-economic implications of basic income and on the existing pilots projects (in Finland, Namibia, India, Canada and the US) may be of interest to Economists; while our readings on the impact of new technologies and artificial intelligence on the future of work and whether a basic income could be a solution, are likely to be of interest to computer scientists and engineers. By the end of the class, students will have an in depth knowledge of the policy and will have developed skills in the normative analysis of public policy. They will be able to deploy those critical and analytical skills to assess a broad range of other policies. Same as: ETHICSOC 174X, PHIL 174B, PHIL 274B, POLISCI 338

**ETHICSOC 278M. Introduction to Environmental Ethics. 4-5 Units.**

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.

Same as: ETHICSOC 178M, PHIL 178M, PHIL 278M, POLISCI 134L

**ETHICSOC 280. Transitional Justice, Human Rights, and International Criminal Tribunals. 3-5 Units.**

Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

Same as: HUMRTS 103, INTNLREL 180A, IPS 280

**ETHICSOC 301. Conflicts, Ethics, and the Academy. 1-3 Unit.**

(Same as LAW 684) This course looks at conflicts of interest and ethical issues as they arise within academic work. The participants will be drawn from schools and departments across the University so that the discussion will prompt different examples of, and perspectives on, the issues we discuss. Topics will include the conflicts that arise from sponsored research, including choices of topics, shaping of conclusions, and nondisclosure agreements; issues of informed consent with respect to human subjects research, and the special issues raised by research conducted outside the United States; peer review, co-authorship, and other policies connected to scholarly publication; and the ethics of the classroom and conflicts of interest implicating professor-student relationships. Representative readings will include Marcia Angell's work, *Drug Companies and Doctors: A Story of Corruption*, N.Y. Rev. Books, Jan. 15, 2009, and *Is Academic Medicine for Sale?* 342 N. Engl. J. Med. 1516 (2000) (and responses); William R. Freudenburg, *Seeding Science, Courting Conclusions: Reexamining the Intersection of Science, Corporate Cash, and the Law*, 20 Sociological Forum 3 (2005); Max Weber, *Science as a Vocation*; legal cases; and conflict-of-interest policies adopted by various universities and professional organizations. The course will include an informal dinner at the end of each session. The goal of the course is to have students across disciplines think about the ethical issues they will confront in an academic or research career. Non-law students should enroll in ETHICSOC 301.

**ETHICSOC 302. EMOTIONS: MORALITY AND LAW. 2 Units.**

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 202, PHIL 177B, PHIL 277B

**ETHICSOC 303R. Ethics, Economics and the Market. 4 Units.**

Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.

Same as: PHIL 375, POLISCI 434A

**ETHICSOC 305R. JUST AND UNJUST WARS. 2 Units.**

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751.

Same as: ETHICSOC 205R, PHIL 205R, PHIL 305R

**ETHICSOC 371R. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

Same as: ECON 380, PHIL 371D, POLISCI 431L

**ETHICSOC 372R. Ending Wars: A Just Peace or Just a Peace. 2 Units.**

Much of just war theory focuses on the justifications for resorting to armed force and the conduct of hostilities. But what are the ethical and legal principles that govern ending wars and making peace? This course will explore the theory of "just peace," including such problems as when a party to war may demand the unconditional surrender of its adversary and what kinds of compromises are ethically permissible in order to end it or to avoid it armed conflict. We will also consider the terms and practices the winning party in war may impose on the loser, such as reparations and occupation (particularly transformative occupation). In addition, we will examine the topic of transitional justice, including issues related to amnesty, forgiveness, criminal and other forms of accountability, and reconciliation. Elements used in grading: Class Participation, Written Assignments, Final Exam.

Same as: PHIL 372M

**ETHICSOC 374R. Science, Religion, and Democracy. 3-5 Units.**

How should conflicts between citizens with science-based and religion-based beliefs be handled in modern liberal democracies? Are religion-based beliefs as suitable for discussion within the public sphere as science-based beliefs? Are there still important conflicts between science and religion, e.g., Darwinian evolution versus creationism or intelligent design? How have philosophy and recent theology been engaged with such conflicts and how should they be engaged now? What are the political ramifications? This is a graduate-level seminar; undergraduates must obtain permission of the instructors.

Same as: PHIL 374F, RELIGST 374F

**ETHICSOC 432X. Selections in Modern Political Thought. 3-5 Units.**

This graduate-level seminar explores selections from the canon of Western political thought from the late fifteenth through nineteenth centuries. Throughout the course, we will engage in close textual readings of individual thinkers and consider some of the larger questions raised by political modernity. The Fall 2015 offering of the course will focus on the three modern social contract thinkers: Thomas Hobbes, John Locke, and Jean-Jacques Rousseau.

Same as: POLISCI 432R

**ETHICSOC 75X. Philosophy of Public Policy. 4 Units.**

From healthcare to parliamentary reforms to educational policies, social and public policies are underpinned by normative justifications - that is by different conceptions of what is right, wrong or required by justice. By analyzing these assumptions and justifications, we can in turn challenge the policies in question - asking: Is workfare ever justified? What is wrong with racial profiling? When (if ever) is compulsory voting justified? Should children have the right to vote? Does affirmative action promote equality? Should freedom of expression ever be restricted? What are the duties of citizens of affluent countries toward asylum seekers and economic migrants? Do we have a right to privacy? The course aims to train students in the normative analysis of public policies. At the end of this class, students should be able to critically examine diverse policy proposals from the perspective of ethics, moral and political philosophy. Students will be introduced to a broad range of normative approaches to politics, and the seminars will be organized around debates and small-group exercises to train students in the concrete ways in which one argues normatively. Through concrete and important policy examples each week, students will be introduced to the main debates in moral and political theory. There are no prerequisites. Undergraduates and graduates from all departments are welcome to attend. After taking this class, students will be prepared to take more advanced classes in ethics, political theory, as well as moral and political philosophy. They will have developed competences in the normative analysis of public policy and they will be able to deploy those competences in other ethics classes.

Same as: PHIL 175B, PHIL 275B

## Feminist, Gend, & Sex. Studies (FEMGEN)

**FEMGEN 100X. Grassroots Community Organizing: Building Power for Collective Liberation. 3-5 Units.**

Taught by long-time community organizer, Beatriz Herrera. This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner.

Same as: AFRICAAM 100, CSRE 100, URBANST 108

**FEMGEN 101. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, CSRE 108, TAPS 108

**FEMGEN 102. Art and Social Criticism. 5 Units.**

Visual artists have long been in the forefront of social criticism in America. Since the 1960s, various visual strategies have helped emergent progressive political movements articulate and represent complex social issues. Which artists and particular art works/projects have become key anchors for discourses on racism, sexism, economic and social inequality, immigrant rights and climate change? We will learn about a spectrum of political art designed to raise social awareness, spark social change and rouse protest. The Art Workers Coalition's agit-prop opposing the Vietnam War and ACT-UP's emblematic signs and symbols during the AIDS/HIV crisis of the 1980s galvanized a generation into action. Works such as Judy Chicago's *The Dinner Party* (1979), Fred Wilson's *Mining the Museum* (1992), and Glenn Ligon's paintings appropriating fragments from African-American literature all raised awareness by excavating historical evidence of the long legacy resisting marginalization. For three decades feminist artists Barbara Kruger and the Guerilla Girls have combined institutional critique and direct address into a provocative form of criticality. Recent art for social justice is reaching ever broadening publics by redrawing the role of artist and audience exemplified by the democratization of poster making and internet campaigns of Occupy and the Movement for Black Lives. We will also consider the collective aesthetic activism in the Post-Occupy era including Global Ultra Luxury Faction, Climate Justice art projects, and the visual culture of Trump era mass protests. Why are each of these examples successful as influential and enduring markers of social criticism? What have these socially responsive practices contributed to our understanding of American history?

Same as: AFRICAAM 102B, AMSTUD 102, ARTHIST 162B, CSRE 102A

**FEMGEN 103. Feminist and Queer Theories and Methods Across the Disciplines. 2-5 Units.**

(Graduate Students register for PHIL 279A or FEMGEN 203) This course is an opportunity to explore the difference feminist and queer perspectives make in creative arts, humanities, and social science research. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor. NOTE: This course must be taken for a letter grade and a minimum of 3 units to be eligible for WAYS credit. The 2 unit option is for graduate students only.

Same as: FEMGEN 203, PHIL 179A, PHIL 279A

**FEMGEN 103S. Gender in Native American Societies. 5 Units.**

Seminar examines the impact of colonialism on gender roles & gender relations in American Indian communities beginning with the 17th century to the present. Topics include demographic changes; social, political & economic transformations associated with biological & spiritual assaults; the dynamism & diversity of native societies. Sources include history, ethnography, biography, autobiography, the novel & film. Same as: CSRE 103S, NATIVEAM 103S

**FEMGEN 104A. Junior Seminar and Practicum. 1 Unit.**

Preference to and required of Feminist Studies majors; others require consent of instructor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Developing the relationship between potential projects and their academic focus in the major.

**FEMGEN 104B. Senior Seminar and Practicum. 2 Units.**

Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.

**FEMGEN 105. Honors Work. 1-15 Unit.**

(Staff).

**FEMGEN 105P. FGSS Honors Preparation Seminar. 1 Unit.**

This 2 unit course will provide students the opportunity to explore possible honors topics, project design, advisor options, and university resources including grants, libraries, and faculty. Over the 10 weeks, students will review related research, potential methodologies, explore creative genres, and consider summer research and preparation. Students will use their findings to write a proposal to submit to the honors program as well as a proposal to submit to UAR for undergraduate funding. After completing the proposal, students will have more clear next steps for their honors projects, including summer research needs, spring course selection as it relates to their topic, and building advisor relationships.

**FEMGEN 107A. Ripped from the Headlines: Current Feminist, Gender, and Sexuality Issues and Questions. 1-2 Unit.**

Discussion of current issues and questions related to Feminist, Gender, and Sexuality Studies.

**FEMGEN 107C. You're Majoring in What?! Why Feminism is Still Relevant. 1-2 Unit.**

Stanford Feminist Study alum and community activists will join this weekly seminar to share how studying feminism has helped them professionally. Together speakers and students will explore answers to questions such as: Why study feminism, sexuality, or gender studies? Why is feminism still relevant?

**FEMGEN 107G. Sisterhood, Brotherhood, & Gender Identity: The Histories, Stories, and Constructs of Greek Life. 1 Unit.**

In this course, we will explore the history, the development, the critiques and praise of sororities and fraternities. We'll pay particular attention to how gender and sexuality are framed in those discussions by outsiders as well as ones by insiders. How do Greek organizations present their activities and goals? What values and roles do they highlight during recruitment? Who joins them? What expectations are there for participants? What are the perceived benefits that come with joining? What does it mean to be a fraternity brother or a sorority sister in modern Greek organizations? How are sorority women and fraternity men discussed by outsiders? How do the stereotypes of Greek life impact perceptions of individuals as well as particular sororities and fraternities? To consider these questions, we'll look at historical documents and analyze how groups described themselves as they were establishing; we'll also analyze recent documents (websites, books, etc.) to consider current ways organizations describe themselves, their activities, and their values. We'll use both to consider how the messages created by and about Greek organizations shape public perceptions as well as individuals' experiences of gender and sexuality identity.

**FEMGEN 107M. College Culture & Masculinity. 1-2 Unit.**

Students in this course will interrogate masculinity and its impacts on culture broadly, with a focus on college campuses. Some questions considered will include: How do structures and expectations of masculinity impact sexual assault and response to sexual assault? Where on campus do we see pressure to perform masculinity? What expectations do some campus communities, such as athletics and Greek life, have of their members to perform and maintain masculinity? How are male identifying individuals expected to behave in communities shaped by masculinity? What spaces are there for gender non-conforming folks in communities shaped by masculinity? How do structures of masculinity impact expectations of femininity and femme in these spaces and others?

**FEMGEN 107S. Barbie Girls vs Sea Monsters: Gender, Sexuality, & Identity in American Culture. 1-2 Unit.**

Incoming students bring widely varying experiences of intimate relationships, whether romantic, familial, platonic, or sexual. This course provides students an opportunity to examine sexuality as a broad concept encompassing a dimension of our humanity and its surrounding cultural systems, impacting how we relate with one another: our experience of sex, gender, intimacy, and worldview. Activities, readings, and discussions will prompt students to reflect on society constructs sex, gender, and intimacy. Themes will include intersectional feminism and codes of masculinity, concepts and practicalities of affirmative consent in straight and LGBTQIA contexts, gender and sexual identity spectrums, and the lived experience of dating, romance, and relationships.

**FEMGEN 108. Internship in Feminist Studies. 1-5 Unit.**

Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Service Learning Course (certified by Haas Center). Feminist, Gender, and Sexuality Majors may not receive 108 credit for their required practicum, as they are to sign up for FEMGEN 104 A & B instead. Prerequisites: Course work in Feminist, Gender, and Sexuality Studies, written proposal and application form submitted for approval by program office, written consent of faculty sponsor. Course may be taken 3 times total, for a max of 15 units.

**FEMGEN 108B. Gender in the Arab and Middle Eastern City. 5 Units.**

What are the components of gendered experience in the city, and how are these shaped by history and culture? How do meanings attributed to Islam and the Middle East obscure the specificity of women's and men's lives in Muslim-majority cities? This course explores gender norms and gendered experience in the major cities of Arab-majority countries, Iran and Turkey. Assigned historical and sociological readings contextualize feminism in these countries. Established and recent anthropological publications address modernity, mobility, reproduction, consumption, and social movements within urban contexts. Students will engage with some of the key figures shaping debates about gender, class, and Islam in countries of the region typically referenced as North Africa and the Middle East (MENA). They will also evaluate regional media addressing concerns about gender in light of the historical content of the course and related political concepts.

Same as: ANTHRO 108B, URBANST 108B

**FEMGEN 109. Looking Back, Moving Forward: Raising Critical Awareness in Gender and Sports. 3-5 Units.**

In 1972, Title IX legislation opened up a vast range of opportunities for women in sports. Since then, women's sports have continued to grow yet the fight for recognition and equality persists. Simply put, men's sports are more popular than women's—so much so, in fact, that people often make the hierarchical distinction between "sports" and "women's sports." But what would it take to get more women's sports featured on ESPN or more female athletes on the cover of Sports Illustrated? And, given the well-documented corruption at the highest levels of men's sports, should such an ascent in popularity be the goal for women's sports? This course will map out and respond to the multifaceted issues that emerge when women enter the sports world. Throughout the quarter, we will explore the fight for gender equality in sports through historical, cultural, and rhetorical lenses.

Same as: FEMGEN 209

**FEMGEN 10A. BAY AREA DOMESTIC WORKERS: RIGHTS: A GRASSROOTS CAMPAIGN FOR SOCIAL JUSTICE. 1 Unit.**

In this Alternative Spring Break course and trip, we will examine how our society and institutions allow for and perpetuate the exploitation and oppression of domestic workers. Historically, domestic workers have largely been excluded from basic labor protections. We cannot think critically about the issues domestic workers face without considering the roles of gender, race and ethnicity, immigration status, and language play in the industry. We will use a conceptual framework based on citizenship and reproductive labor theory to address themes in the context of Bay Area migrant women of color who are vehemently campaigning for equal labor rights. Through collaborations with domestic worker organizations based in San Francisco and Oakland, ASB participants will learn how this movement seeks to transform the domestic work industry through multilingual and multicultural alliances.

**FEMGEN 10SC. LGBT History and Culture in the Bay Area. 2 Units.**

Since at least World War II, the San Francisco Bay Area has served as a center for LGBTQ life in the United States. It emerged early as a place where queer people could congregate and interact more freely, but it also was frequently at the vanguard when it came to organizing around issues of gender and sexuality. At the same time, as some queer communities of the Bay Area have done extremely well, others have continued to have to struggle for their rights, their place and their say. This course explores the genesis and legacy of different queer communities and explores their impact on Bay Area culture. Topics discussed will include the Beats, lesbian separatism, the response to AIDS, the relationship between different LGBTQ communities and the police, trans activism, prostitution and sex worker rights. The course combines literature, art and poetry of seven decades with historical documents, as well as local visits and walking tours. The last third of the course allows students to pursue archival or oral history research projects, as students unearth their own stories of queer San Francisco.

**FEMGEN 110J. Romance, Desire, and Sexuality in Modern Japanese Literature. 3-4 Units.**

This class is structured around three motifs: love suicide (as a romantic ideal), female desire, and same-sex sexuality. Over the course of the quarter we will look at how these motifs are treated in the art and entertainment from three different moments of Japanese history: the Edo period (1615-1868), the modern period (1920-65), and the contemporary period (1965-present). We will start by focusing on the most traditional representations of these topics. Subsequently, we will consider how later artists and entertainers revisited the conventional treatments of these motifs, informing them with new meanings and social significance. We will devote particular attention to how this material comments upon issues of gender, sexuality, and human relationships in the context of Japan. Informing our perspective will be feminist and queer theories of reading and interpretation.

Same as: FEMGEN 210J, JAPAN 110, JAPAN 210

**FEMGEN 110X. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, COMPLIT 310, FEMGEN 310X

**FEMGEN 111. Reproductive Politics in the United States and Abroad. 3-5 Units.**

Course description: This course examines the issues and debates surrounding women's reproduction in the United States and beyond. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad. Topics include: birth control, population control, abortion, sex education, sex trafficking, genetic counseling, assisted reproductive technologies, midwifery, breastfeeding, menstruation, and reproductive hazards. Same as: AMSTUD 111

**FEMGEN 112. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.**

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's *Othello*. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960's play, *Who's Afraid of Virginia Woolf?*.

Same as: ENGLISH 182J, FEMGEN 212

**FEMGEN 113. Transgender Studies. 3-4 Units.**

Transgender and gender-expansive identities are the subject of growing attention and (often sensationalist) interest in the media as well as in the healthcare field, yet there exists a dearth of legitimate academic courses, research and writing that reflect and explore gender identity and expression as a fluid spectrum rather than a fixed binary. This course will address transgender and gender expansive identities from historical, medical, literary, developmental and sociopolitical perspectives.

Same as: FEMGEN 213

**FEMGEN 113X. Feminist Poetry in the U.S., 1973-2017. 3-5 Units.**

Traces the development of feminist poetry in the United States from second wave feminists like Adrienne Rich, Audre Lorde, and Alicia Ostriker to contemporary poetry of Anne Boyer, Steph Burt, and Eileen Myles, among others. We will think broadly about the relationship between politics and poetry, and focus specifically on the influences of second- and third- wave feminism on poetry produced by women in the U.S. from the 1970s until today.

Same as: COMPLIT 113

**FEMGEN 114. Sexual Diversity and Health. 1 Unit.**

Explores multiple aspects of sexual diversity and health, including: kink/BDSM, polyamory, trans\* sexuality, asexuality, high-risk sex, inter-sexuality, questioning gender and sexual binaries, and more. The format includes a one-day conference featuring a variety of expert speakers covering different aspects of sexual diversity and health, followed by a debriefing and discussion session to integrate what has been heard and learned.

Same as: FEMGEN 214

**FEMGEN 115. Queer Reading and Queer Writing in Early Modern England. 5 Units.**

Considers the possibility of identifying queer reading and writing practices in early modern England as well the theoretical and historical obstacles such a project necessarily encounters. Focus on the role which Renaissance discourses of desire continue to play in our negotiations of homo/erotic subjectivity, identity politics, and sexual and gender difference. Study of Renaissance queerness in relation to the classical tradition on the one hand and the contemporary discourses of religion, law, and politics on the other. Readings include plays, poems, and prose narratives as well as letters, pamphlets, and ephemeral literature. Both major and minor authors will be represented.

**FEMGEN 116. Narrating Queer Trauma. 4-5 Units.**

Psychiatrist Dori Laub has argued that the process of narrating trauma is essential to the healing process. Not only is telling the story important, but it is also crucial to have someone else bear witness to the narrative. But how do people even begin to narrate stories of violence and pain, and how do we become good listeners? How are these stories told and heard in the specific context of queer world making? This course will explore narratives of trauma in queer lives through literature, film, media, and performance in conjunction with trauma theory and psychoanalysis. We will pay specific attention to questions of community, healing, violence, and affect at the intersections of queerness and race, sex, disability, class, gender, and nationality.

Same as: FEMGEN 216X

**FEMGEN 117. Expanding Engineering Limits: Culture, Diversity, and Gender. 2-3 Units.**

This course investigates how culture, and diversity, including gender, shape who becomes an engineer, what problems get solved, and the quality of designs, technology, and products. We first examine the characteristics of engineering cultures – what are the interactions, symbols and ideas, and practices that define engineering? We then investigate how gender and other markers of diverse identities are interdependent and culturally constructed, how gender and other kinds of diversity are experienced in engineering cultures, and how these experiences have consequence for engineering innovation and the engineering profession. Finally, we analyze examples of cultural change in engineering and implications for engineering knowledge and practice. The course involves weekly presentations by distinguished scholars and engineers, readings, short writing assignments, small-group discussion, and exercises around one's own experiences in and related to engineering. Those taking the course for 3 units will also complete a research-based project, and must take the course for a letter grade to meet the undergraduate WAY-ED requirement.

Same as: CSRE 117, CSRE 217, ENGR 117, FEMGEN 217

**FEMGEN 117Q. Queer Arts: Remembering and Imagining Social Change. 4-5 Units.**

This interdisciplinary fine arts course is designed to examine the nature of artistic imagination, sources of creativity and the way this work helps shape social change. We will consider the relationship among muses, mentors and models for queer artists engaged in such fields as visual art, music, theatre, film, creative writing and dance. Exploring various cultures, lands and times, we will study the relationship between memory and vision in serious art. We will ask questions about the role of the artist in the academy and the broader social responsibility of the artist. We will locate some of the similarities and differences among artists, engage with different disciplines, and discover what we can learn from one another. This seminar requires the strong voices of all participants. To encourage students to take their ideas and questions beyond the classroom, we will be attending art events (performances, exhibits, readings) individually and in groups. The learning goals include a serious exploration of individual students' creativity, a more nuanced appreciation of diverse arts and a stronger understanding of the multifaceted nature of gender, race and class. Students will develop their abilities to write well-argued papers. They will stretch their imaginations in the written and oral assignments. And they will grow more confident as public speakers and seminar participants.

Same as: CSRE 117Q

**FEMGEN 118. Transgender Cultural Studies. 4-5 Units.**

In the United States, we seem to be in a transgender moment, or we've reached what Time magazine has called the transgender tipping point. In this course, we will explore what this cultural moment means for the representation of transgender, nonbinary, and gender non-conforming people. We will look historically and globally at differences in representation in order to better understand our current cultural moment. We will explore multiple genres, formats, and authorial points of view to critically think through how and by whom trans stories are told. How do interlocking systems of oppression continue to dictate and drive trans representation and narrative; how do trans authors and artists push back against these systems to (re)construct their own narrative and image? Through a critical engagement with film, memoir, graphic narrative, poetry, and fiction created by and/or about trans\* people, this course will engage students with an intersectional approach to trans identity and representation in concert with racial identity, sexuality, disability, socio-economic status, age, gender, and citizenship.

**FEMGEN 115I. Protecting your Bubble: Self Defense Strategies for College Students. 1 Unit.**

This course will offer self defense training for students, with a focus on mental and physical defense, primarily against sexual assault. The course will focus on an "empowerment" method of self defense, seeking to provide tools and build confidence in students for a variety of situations. Students will participate in group discussions on the topic of sexual assault on college campuses, as well as physical and mental self defense tactics both to build confidence in any situation, prevent assault, and to employ in dangerous situations.

**FEMGEN 121. Intro to Queer Studies. 4-5 Units.**

This course provides an interdisciplinary grounding in historical and theoretical foundations of queer culture and theory. A critical interrogation of sex, gender, sexuality, pleasure, and embodiment will provide students with a framework for producing their own queer cultural critique. We will explore LGBTQ history alongside contemporary queer issues in popular culture, health, science, government policy, and politics. This course will also address the intersections of sexuality and gender with race, class, ability, age, nationality, and religion. Students will engage with multiple disciplinary approaches that have both shaped queer studies and have been shaped by queer methodology.

**FEMGEN 123. Sex and Love in Modern U.S. Society. 3 Units.**

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: SOC 123, SOC 223

**FEMGEN 124. Challenging Sex and Gender Dichotomies in Medicine. 1 Unit.**

Explores and challenges the traditional physiological bases for distinguishing human males from females, as well as the psychosocial factors that play a role in experiencing and expressing gender and sexuality. Topics include the influence of sociocultural (gender) norms and behaviors on human biology, the interactions of sex and gender on medical outcomes, the importance of understanding the spectrum of sex, gender, and sexuality in clinical practice.

Same as: FEMGEN 224, SOMGEN 257

**FEMGEN 126D. Victorian Sex. 5 Units.**

How can we make sense of a culture of extraordinary sexual repression that nevertheless seemed fully preoccupied with sex? Examination of the depictions of sex in Victorian literary and cultural texts. Authors include: Collins, Braddon, the Brownings, Swinburne, Stoker and Wilde.

**FEMGEN 129. Critical Issues in International Women's Health. 4 Units.**

Facilitated discussion about women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on women's capacity to exercise their human rights including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor.

Same as: HUMBIO 129

**FEMGEN 125I. Beyond the Athlete: Intersection of Diversity, Storytelling, and Athletics. 1-2 Unit.**

This course explores the interaction of one's identities within the context of athletics. With an emphasis on the importance of self-awareness and storytelling, we will navigate how all identities intersect and affect the privilege we receive within current society. We will specifically look at how race, ethnicity, sexual orientations, religion, socioeconomic status, mental health, and disabilities interact with the sphere of athletics. Beyond the Athlete: Intersection of Storytelling, Diversity, and Athletics will help students find their voice and use it for positive social change within their communities.

**FEMGEN 13. Stanford Anti-Violence Educator Training. 2 Units.**

The Stanford Anti-Violence Educators (SAVE) Program seeks to cultivate a more resilient, supportive, and safe Stanford culture by engaging students in peer-to-peer dialogues about sexuality and consent, equipping them with skills to better relate with others. In this class, you will develop the knowledge and skill to facilitate peer education workshops with a variety of groups on campus throughout the year, including the required frosh curriculum. We will engage in conversations about sexuality, gender, identity, boundaries, and communication. We will examine social discourses, campus norms, systems of oppression, as well as explore new ways for the community to engage itself on these topics. The class will offer the structure and guidance to 1) gain in-depth knowledge of SAVE curricula content, 2) facilitate with presence, authenticity, and connection, and 3) increase self-efficacy as a leader for cultural change.

**FEMGEN 130. Sex and Gender in Judaism and Christianity. 3 Units.**

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.

Same as: JEWISHST 120, RELIGST 130

**FEMGEN 130S. Sex and the Novel. 5 Units.**

How do novels represent sexual life? This course reads texts from the eighteenth century to the present day, and considers how novelists represent the discombobulating effects of desire in fictional prose. Authors may include: S. Richardson, N. Hawthorne, J. Austen, E. Brontë, G. Gissing, H. James, D.H. Lawrence, J. Joyce, V. Nabokov, J. Baldwin, A. Hollinghurst and Z. Smith.

Same as: ENGLISH 130

**FEMGEN 131. Introduction to Queer Theory. 3-5 Units.**

What can Queer Theory help us do and undo? Emerging at the intersections of feminist theory, queer activism, and critical race studies in the 1990's, Queer Theory has become a dynamic interdisciplinary field that informs a wide range of cultural and artistic practices. This course will introduce students to the development of queer theory as well as core concepts and controversies in the field. While considering theoretical frames for thinking gender, sexuality, and sex, we will explore the possibilities--and limitations--of queer theory with a focus on doing and undoing identity, knowledge, and power.

**FEMGEN 132. Intersectional Feminism. 4 Units.**

This course is focused on the feminist concept of intersectionality. As a mode of Black feminist thought, lived activist practice, and interdisciplinary research methodology, intersectionality allows us to think about overlapping forms of identity and the interlocking power structures that produce systematic oppression and discrimination. We will examine the origins and development of intersectional feminism and consider its far-reaching impact in social justice work and contemporary activist movements. As we learn the language, methods, and critiques of intersectionality, we will cover issues related to rights, ethics, privilege, and globalization while discussing social difference on micro- and macro-levels.

**FEMGEN 133. Transgender Performance and Performativity. 4 Units.**

This course examines theater, performance art, dance, and embodied practice by transgender artists. Students will learn the history and politics of transgender performance while considering the creative processes and formal aesthetics trans artists use to make art. We will analyze creative work in conversation with critical and theoretical texts from the fields of performance studies, art history, and queer studies.

Same as: TAPS 133T

**FEMGEN 134. The Marriage Plot. 5 Units.**

The centrality of the marriage plot in the development of the British novel beginning in the 18th century with Samuel Richardson's *Pamela* and ending with Woolf's modernist novel *Mrs. Dalloway*. The relationship between novelistic plotting and the development of female characters into marriageable women. What is the relationship between the novel and feminine subjectivity? What aspects of marriage make it work as a plotting device? What kinds of marriages do marriage plots allow? Is the development of women's political agency related to their prominence in the novel form?

Same as: ENGLISH 134

**FEMGEN 135. Body Politics. 1-2 Unit.**

This weekly course facilitates conversations on issues of the body across a wide spectrum of contemporary experiences, controversies, and contexts. Informed by gender studies, critical race theory, and feminist theory, we will explore current events related to racialized violence, size liberation, reproductive rights, HIV criminalization, rape culture, disability, transgender rights, and health and fitness.

**FEMGEN 138. Men's Violence Against Women in Literature: A Critical and Social Analysis. 3-5 Units.**

Literature, as a social and cultural product of its time, can inform and deepen our understanding of oppression. Using literature as a vehicle, this course will explore the impact of and responses to men's violence against women. Students will critically assess how the author has portrayed the topic of sexual assault and relationship abuse, how the characters and/or author exhibits victim blaming, and, if the characters were living today, would current policies adequately hold the perpetrator responsible, provide safety and justice for the survivor, and challenge rape culture. In dialogue with theoretical texts, we will analyze the literary representations of patriarchy that inform societal acceptance of gender-based violence, identify the historical prevalence of victim blaming and impunity in these works, and assess the implications on policy making at the individual, community and political level. Students will critically examine literature including Shakespeare's *Taming of the Shrew*, Thomas Hardy's *Tess of the D'Urbervilles*, Zora Neale Hurston's *Their Eyes Were Watching God*, Louise Erdrich's *The Round House* and Joyce Carol Oates' *We Were the Mulvaney's*. There is an optional service-learning component.

Same as: FEMGEN 238

**FEMGEN 139. Rereading Judaism in Light of Feminism. 4 Units.**

During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.

Same as: JEWISHST 139

**FEMGEN 13N. Women Making Music. 3 Units.**

Preference to freshmen. Women's musical activities across times and cultures; how ideas about gender influence the creation, performance, and perception of music.

Same as: MUSIC 14N

**FEMGEN 140A. Destroying Dichotomies: Exploring Multiple Sex, Gender, and Sexual Identities. 3-5 Units.**

This course is designed to broaden the student's awareness of the human experience by introducing scholarly debates about sex, gender and sexual identities and expressions. We will consider the socially constructed nature of sex, gender and sexuality and examine the history and community of those who identify as intersexual, transgender, homosexual, bisexual, asexual, pansexual and/or queer through texts, discussion, films, and class presentations.

**FEMGEN 140D. LGBT/Queer Life in the United States. 4-5 Units.**

An introductory course that explores LGBT/Queer social, cultural, and political history in the United States. By analyzing primary documents that range from personal accounts (private letters, autobiography, early LGBT magazines, and oral history interviews) to popular culture (postcards, art, political posters, lesbian pulp fiction, and film) to medical, military, and legal papers, students will understand how the categories of gender and sexuality have changed over the past 150 years. This class investigates the relationship among queer, straight and transgender identities. Seminar discussions will question how the intersections of race, class, gender, and sexuality influenced the construction of these categories.

Same as: FEMGEN 240D, HISTORY 257C

**FEMGEN 140H. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CHILATST 168, CSRE 168

**FEMGEN 141. Intersectionality and Social Movements: Gender, Race, Sexuality and Collective Organizing. 4 Units.**

This course explores U.S. social movements from an intersectional perspective. How is social movement emergence related to participants' identities and experiences with inequality? How are the dynamics, targets and tactics of mobilized participants related to race, class, gender, age and/or sexuality? How have social movement scholars addressed the intersectional nature of identity and community? Readings include empirical and theoretical social movement texts, and discussion topics include feminist and civil rights movements, queer/LGBT movements, Occupy Wall Street and Black Lives Matter.

Same as: AFRICAAM 141X, CSRE 141X, SOC 153

**FEMGEN 142. Sociology of Gender. 3 Units.**

The aim of this course is to provide students with an understanding of the sociological conceptualization of gender. Through the sociological lens, gender is not an individual attribute or a role, but rather a system of social practices that constructs two different categories of people men and women and organizes social interaction and inequality around this difference. First we will explore what 'gender' is according to sociologists and the current state of gender inequality in the labor market, at home, and at school. We will then investigate how gender structures our everyday lives through the individual, interactional, and institutional levels. Finally, we will discuss avenues for reducing gender inequality. Throughout the course, we will prioritize reading, evaluating, and questioning sociological theory and research on gender."

Same as: FEMGEN 242, SOC 142, SOC 242

**FEMGEN 143. One in Five: The Law, Politics, and Policy of Campus Sexual Assault. 3-5 Units.**

**TRIGGER WARNING:** Over the past three years, the issue of campus sexual assault has exploded into the public discourse. While definitive figures are difficult to obtain due to the necessarily private nature of these events, several recent studies estimate that between 20-25% of college women (and a potentially higher proportion of students identifying as transgender and gender-nonconforming, as well as around 5-10% of male students) experience sexual assault. People of color, LGBT students, disabled individuals and other vulnerable groups are at increased risk. This is also a significant problem in K12 education. Survivors have come forward across the country with harrowing stories of assault followed by what they describe as an insensitive or indifferent response from college administrators. These survivors have launched one of the most successful, and surprising, social movements in recent memory. As a result, the federal government under President Obama stepped up its civil rights enforcement in this area, with over 300 colleges and universities under investigation for allegedly mishandling student sexual assault complaints as of July 2017. At the same time, this heightened response has led to a series of high-profile lawsuits by accused students who assert that they were falsely accused or subjected to mishandled investigations that lacked sufficient due process protections. The one thing that survivors and accused students appear to agree on is that colleges are not handling these matters appropriately. Colleges have meanwhile complained of being whipsawed between survivors, accused students, interest groups, and enforcement authorities. The election of President Trump has now created significant uncertainty about how this issue will be handled by the Department of Education going forward. The Trump Administration took the extraordinary step this September of rolling back all of the Obama Administration guidance on this subject. Meanwhile Congress has been unable to pass legislation addressing the issue, though there are several bipartisan bills under consideration. This course focuses on the legal, policy, and political issues surrounding sexual assault on college campuses. We will learn background about sexual violence and the efforts to implement legal protections for survivors in the educational context. We will also study the basic legal frameworks governing campus assault, focusing on the relevant federal laws such as Title IX and the Clery Act. We will hear from guest speakers who are actively involved in shaping policy and advocating in this area, including lawyers, lobbyists, filmmakers, journalists, and policymakers. The subject matter of this course is sensitive and students are expected to treat the material with sensitivity. Much of the reading and subject matter may be upsetting and/or triggering for students who identify as survivors. There is no therapeutic component for this course, although supportive campus resources and Title IX staff are available for those who need them. This course was previously a Sophomore College Class that is now being offered as a regular quarter-length course. Enrollment is by INSTRUCTOR PERMISSION. Access the consent form here [feminist.stanford.edu/academics/undergraduate-program/forms](http://feminist.stanford.edu/academics/undergraduate-program/forms) or email [rmeisels@stanford.edu](mailto:rmeisels@stanford.edu) to request a form via email. Cross-listed with Law 7065. Elements used in grading: Attendance, Class Participation, Written Assignment, Final Paper or Project.

Same as: SOC 188

**FEMGEN 144F. Female Modernists: Women Writers in Paris Between the Wars. 5 Units.**

The course will focus on expatriate women writers - American and British - who lived and wrote in Paris between the wars. Among them: Edith Wharton, Gertrude Stein and Alice B. Toklas, H.D., Djuna Barnes, Margaret Anderson, Janet Flanner, Natalie Barney, Kay Boyle, Mina Loy, Romaine Brooks, Mary Butts, Radclyffe Hall, Colette, and Jean Rhys. A central theme will be Paris as a lure and inspiration for bohemian female modernists, and the various alternative and emancipatory literary communities they created.

**FEMGEN 144G. Pop Feminism: Unrest and Unease in the Contemporary Feminist Moment. 3-5 Units.**

This course examines feminist reaction/expression/ to and in German and American pop culture. We will examine a feminist approach using a variety of different media, including film, music videos, and literature. We will consider the intersections of race and gender constructions, as well as the cultural aspects of each iteration of "pop." The course will be taught in English, but German-speaking students are encouraged to read in the original. nNote: This course contains sexually explicit content. Same as: CSRE 144G, GERMAN 144

**FEMGEN 144X. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.**

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders. Same as: ASNAMST 144, CSRE 144

**FEMGEN 145. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.**

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented, and, at times, contested, by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division. Same as: AMSTUD 145M, ARTHIST 145, ARTHIST 345

**FEMGEN 149. Gender Violence: Critical Race, Feminist, and Queer Perspectives. 5 Units.**

This course examines the problem of domestic violence, sexual violence, and other forms of gender violence using critical race, legal, feminist, and queer theory. Readings reflect an interdisciplinary approach to understanding gender violence as it is understood in U.S. law, history, culture, and politics. We will explore foundational theories for why gender violence persists as well as its relationship to structural power along axes of race, gender, class, sexuality, and nation. This course will also consider feminist anti-violence social movements and debates within legal and philosophical approaches to gender violence.

**FEMGEN 150. Sex, Gender, and Power in Modern China. 3-5 Units.**

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English. Same as: CHINA 115, CHINA 215, FEMGEN 250

**FEMGEN 150A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.**

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials. Same as: ANTHRO 150A, REES 250A

**FEMGEN 150G. Performing Race, Gender, and Sexuality. 4 Units.**

This theory and practice-based course will examine performances by and scholarly texts about artists who critically and mindfully engage race, gender, and sexuality. Students will cultivate their skills as artist-scholars through written assignments and the creation of performance-based works in response to the assigned material. Attendance and written reflection on the TAPS Vital Signs: Performance Art in the 21st Century performance art series are required. The practical component of the class will also incorporate meditation into the process of preparing for, making, and critiquing performance. We will approach mindfulness as method and theory in our own practice, as well in relation to the works studied, while attending to the ethics and current debates concerning its use. Examples of artists studied include James Luna, Nao Bustamante, William Pope.L, Yoko Ono, Cassils, Adrian Piper, Guillermo Gomez-Peña, Nikki S. Lee, and Ana Mendieta. Same as: CSRE 150G, TAPS 150G

**FEMGEN 150J. Queer Poetry in America. 3-5 Units.**

Some poets are known for portraying alternative sexualities in their poetry. Others seem to cover sexuality up. Can we use a poem to determine whether a poet is gay, lesbian, bisexual, transgender, or questioning? Or do some poets simply defy categorization? What makes a poem queer? Is poetry somehow more or less queer than other literary forms? Even if we can answer these questions, what would they tell us about literature in general? This course will investigate such topics and more by tracking queer poetry in twentieth-century America. We'll start with nineteenth-century figures Walt Whitman and Emily Dickinson, then move on to Gertrude Stein, Hart Crane, Langston Hughes, Countee Cullen, Elizabeth Bishop, Allen Ginsberg, Frank O'Hara, and others. We'll ask what their poetry meant in their own times, as well as what it means to us in our present era of expanding civil rights and changing sexual attitudes. Same as: AMSTUD 150J, ENGLISH 150J

**FEMGEN 152. 'Tis all in pieces: Space and Gender on the Threshold of the Modern World. 5 Units.**

These dramatic words, spoken by the British poet John Donne, signal the onset of the Early Modern world and the profound reconfigurations of space and related structures of thought, including conceptions of the self and the encoding of gender roles. We will explore the vibrant Early Modern world in the context of space and representations of gender, sexuality, and race as manifest in unprecedented literary and artistic forms, such as Shakespeare's *Othello*, Marlowe's *Doctor Faustus*, the poetry of John Donne, the art of Michelangelo and Caravaggio as well as key historical and cultural texts. And we will visit the Cantor Arts Center (on campus) for a guided tour and lecture on art and perspective. We also will read and discuss selected texts from the modern world, such as Samuel Beckett's *Waiting for Godot* and poetry and commentary by Adrienne Rich, to study both changes and continuities with the Early Modern period. We will consider the vital cognitive role of the reader or viewer in the formation of particular instances of artistic form, including recent—and highly thought-provoking—material from the neurosciences and cognitive studies. nNote: Instructor will consider changes in meeting times/days to accommodate student schedules if feasible. Please send request to: hbrooks@stanford.edu. Same as: FEMGEN 252

**FEMGEN 153Q. Reading and Writing the Gendered Story. 4-5 Units.**

Exploration of novels, stories, memoirs and micro-narratives in which gender plays a major role. The texts are by writers of varied genders and sexual orientations as well as varied class, racial and national backgrounds. Written assignments present a mixture of academic and creative options.

**FEMGEN 154. Black Feminist Theory. 5 Units.**

This course will examine black feminist theoretical traditions, marking black women's analytic interventions into sexual and pleasure politics, reproduction, citizenship, power, violence, agency, art, representation, and questions of the body. Exploring concepts like intersectionality, matrices of violence, the politics of respectability, womanism, and other contours of a black feminist liberation politic, we will look to black feminist scholars, activists, and artists from the 19th century to today. Same as: AFRICAAM 154

**FEMGEN 154E. Black Feminist Epistemology and Analytics. 5 Units.**

Building from the foundational canon of black feminist theory and praxis, this seminar will explore more recent advances in black feminist epistemologies and modes of analysis. Students will engage black feminist conceptions of the human and the self; love and relationality in precarious conditions; speculative queer, sexual, and body politics; aesthetics and cultural theory; and contemporary proposals for radical freedom and social transformation. We will consider how black feminist theory not only engages, builds on, critiques, and transforms other schools of thought, but also produces its own systems of reason and interpretation.

Same as: AFRICAAM 139

**FEMGEN 154G. Black Magic: Ethnicity, Race, and Identity in Performance Cultures. 3-4 Units.**

In 2013, CaShawn Thompson devised a Twitter hashtag, #blackgirlmagic, to celebrate the beauty and intelligence of black women. Twitter users quickly adopted the slogan, using the hashtag to celebrate everyday moments of beauty, accomplishment, and magic. In contrast, #blackmagic is used to describe everything from the uncanny to the personal. This course examines the discursive phenomenon of "black magic" and its permutations throughout Anglo-American histories. We will investigate the binaries of black/dark, white/light magic that has entered our contemporary lexicon, reading material on religion, magic performance, and theater.

Same as: AFRICAAM 154G, CSRE 154D, TAPS 154G

**FEMGEN 155. The Changing American Family. 4 Units.**

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

Same as: FEMGEN 255, SOC 155, SOC 255

**FEMGEN 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.**

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing.

Same as: AMSTUD 156H, HISTORY 156G

**FEMGEN 156X. Language and Gender. 3-5 Units.**

The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required.

Same as: LINGUIST 156

**FEMGEN 157. Language as Political Tool: Feminist and LGBTQ Movements and Impacts. 3-5 Units.**

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement, LGBTQ movements, or feminist movements, gain a voice and eventually enact change? In the mediascape of today, where everyone with access to a computer could have a voice, how does a movement change the national conversation? How do written and verbal choices of the movements impact their success and outreach to supporters? In this course, students will write and revise their own arguments in order to best understand the rhetorical potential in these movements; choices and to consider how those rhetorical moves are incorporated into political discourse. We'll examine the role of rhetoric, the use of argument to persuade, in social movements working toward social justice, party platforms, and public policy.

Same as: AMSTUD 157X, FEMGEN 257

**FEMGEN 157P. Solidarity and Racial Justice. 4-5 Units.**

Is multiracial solidarity necessary to overcome oppression that disproportionately affects certain communities of color? What is frontline leadership and what role should people play if they are not part of frontline communities? In this course we will critically examine practices of solidarity and allyship in movements for collective liberation. Through analysis of historical and contemporary movements, as well as participation in movement work, we will see how movements have built multiracial solidarity to address issues that are important to the liberation of all. We will also see how racial justice intersects with other identities and issues. This course is for students that want to learn how to practice solidarity, whether to be better allies or to work more effectively with allies. There will be a community engaged learning option for this course. Students who choose to participate in this option will either work with Stanford's DGen Office or a community organization that is explicitly devoted to multiracial movement-building.

Same as: AFRICAAM 157P, AMSTUD 157P, CSRE 157P

**FEMGEN 158. Black Queer Theory. 5 Units.**

This course takes a multifaceted approach to black queer theory, not only taking up black theories of gender and queer sexuality, but queer theoretical interrogations of blackness and race. The course will also examine some of the important ways that black queer theory reads and is intersected with issues like affect, epistemology, space and geography, power and subjectivity, religion, economy, the body, and the law, asking questions like: How have scholars critiqued the very language of queer and the ways it works as a signifier of white marginality? What are the different spaces we can find queer black relationality, eroticism, and kinship? How do we negotiate issues like trans\*misogyny or tensions around gender and sexuality in the context of race? Throughout the course, students will become versed in foundational and emerging black queer theory as we engage scholars like Sharon Holland, Cathy Cohen, Hortense Spillers, Marlon B. Ross, Aliyyah Abdur-Rahman, Barbara Smith, Roderick Ferguson, Robert Reid-Pharr, E. Patrick Johnson, and many others. Students will also gain practice applying black queer theory as an interpretive lens for contemporary social issues and cultural production including film, music, art, and performance.

Same as: AFRICAAM 158

**FEMGEN 159. James Baldwin & Twentieth Century Literature. 5 Units.**

Black, gay and gifted, Baldwin was hailed as a "spokesman for the race", although he personally, and controversially, eschewed titles and classifications of all kinds. This course examines his classic novels and essays as well as his exciting work across many lesser-examined domains - poetry, music, theatre, sermon, photo-text, children's literature, public media, comedy and artistic collaboration. Placing his work in context with other writers of the 20C (Faulkner, Wright, Morrison) and capitalizing on a resurgence of interest in the writer (NYC just dedicated a year of celebration of Baldwin and there are 2 new journals dedicated to study of Baldwin), the course seeks to capture the power and influence of Baldwin's work during the Civil Rights era as well as his relevance in the "post-race" transnational 21st century, when his prescient questioning of the boundaries of race, sex, love, leadership and country assume new urgency.

Same as: AFRICAAM 159, ENGLISH 159

**FEMGEN 160. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, TAPS 160, TAPS 260

**FEMGEN 160M. Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture. 3-4 Units.**

This course will introduce students to the ways in which the Middle East has been represented and performed by/in the 'West' through dance, performance, and popular culture in both historical and contemporary contexts. A brief look through today's media sources exposes a wide range of racialized and gendered representations of the Middle East that shape the way the world imagines the Middle East to be. As postcolonial theorist Edward Said explains, the framework we call Orientalism establishes the ontological character of the Orient and the Oriental as inherently 'Other'. Starting with 19th century colonialism and continuing into the post-9/11 era, this course will trace the Western production, circulation, and consumption of representations of the Middle East as 'Other' in relation to global geopolitics. We will further examine dance forms produced in mid-twentieth century Iran and Egypt, with particular attention to nation-state building and constructions of gender. Finally, we will examine artistic productions and practices from the Middle East and Middle Eastern diasporic communities that respond to colonialism, war, displacement, secularism, and Euro-American Empire. Using dance studies, postcolonial feminist, and critical race theoretical frameworks, we will consider the gender, racial, political, and cultural implications of selected performance works and practices in order to analyze how bodies produce meaning in dance, performance art, theater, film, photography, and new media. Students will engage in multiple modes of learning; the course will include lectures, engaged group discussions, viewing of live and recorded performance, embodied participation in dance practice, student oral presentations, and a variety of writing exercises. Course assignments will culminate in a final research project related to class themes and methods.

Same as: CSRE 160M, DANCE 160M, TAPS 160M

**FEMGEN 161. The Politics of Sex: Work, Family, and Citizenship in Modern American Women's History. 3-5 Units.**

This course explores the transition from Victorian to modern American womanhood by asking how Native, European, African, Mexican, and Asian American women navigated the changing sexual, economic, and political landscapes of the twentieth century. Through secondary readings, primary sources, films, music, and literature we explore the opportunities and boundaries on groups of women in the context of historical events that included immigration, urbanization, wartime, depression, the Cold War, as well as recurrent feminist and conservative political movements. Same as: AMSTUD 161, CSRE 162, HISTORY 61, HISTORY 161

**FEMGEN 161D. Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders. 3-4 Units.**

This introduction to dance studies course explores dance practice and performance as means for producing cultural meaning. Through theoretical and historical texts and viewing live and recorded dance, we will develop tools for analyzing dance and understanding its place in social, cultural, and political structures. This uses dance and choreography as a lens to more deeply understand a wide range of identity and cultural formations, such as gender, race, sexuality, (dis)ability, (trans)nationality, and empire. We will analyze dancing bodies that move across stages, dance clubs, film screens, and border zones. We will examine dance from diverse locales and time periods including ballet, modern and contemporary dance, contact improvisation, folkloric dance, burlesque, street dance, queer club dance, drag performance, music videos, TV dance competitions, and intermedia/new media performance. In addition to providing theoretical and methodological grounding in dance studies, this course develops performance analysis skills and hones the ability to write critically and skillfully about dance. No previous experience in dance is necessary to successfully complete the course. Same as: CSRE 61, DANCE 161D, TAPS 161D

**FEMGEN 163. Queer America. 4 Units.**

This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.

Same as: AMSTUD 163, ARTHIST 163

**FEMGEN 166. The Divine Feminine in India. 4 Units.**

What happens when God is a woman? Is the Goddess a feminist? The Goddess, in her numerous incarnations, is foundational to much of Indian religiosity, whether Hindu, Buddhist, or even Jain; and in turn, without her story, much of the theology and practice of these religions remains incomprehensible. This course examines the principal expressions of the theology and ritual worship of the Goddess in Indian history, from the Vedas to the Hindu Epics, to Indian philosophy, tantric ritual practice and modern global and new age movements in order to understand how the gendering of divinity affects theological speculation, religious experience, and embodied religious identity.

Same as: RELIGST 166

**FEMGEN 17. Gender and Power in Ancient Greece. 4 Units.**

(Formerly CLASSGEN 17.) Introduction to the sex-gender system of ancient Greece, with comparative material from modern America. How myths, religious rituals, athletics, politics and theater reinforced gender stereotypes and sometimes undermined them. Skills: finding clues, identifying patterns and making connections amongst the components of a strange and beautiful culture very different from our own. Weekly participation in a discussion section is required.

**FEMGEN 176. Feminism and Contemporary Art. 4 Units.**

(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

Same as: ARTHIST 176, ARTHIST 376, CSRE 167

**FEMGEN 177. Dramatic Writing: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, TAPS 177, TAPS 277

**FEMGEN 180. Gender Relations in Islam. 4 Units.**

This course investigates the ways in which gender identities and relationships between men and women have been articulated, constructed, and refashioned throughout the Muslim world. Starting with problematizing the fixed notions of gender and sexuality, we map the attitudes toward these notions through visiting a diverse array of sources from the Qurʾān, Sunna, and legal documents to historical and anthropological case studies, literature, and film from South East Asia to Europe and North America. We examine the notions of femininity and masculinity in the Qurʾān, family laws, and attitudes toward homosexuality and transgendered populations. We read examples of ambiguous use of language with regards to gender and sexuality in Persian poetry and mystical traditions. We study the dynamic relationship between Islam and Feminism in the Muslim world. Finally, we witness the implications of these attitudes in our case studies and stories, from a divorce court in Iran to a wedding in Sudan.

Same as: RELIGST 180

**FEMGEN 180A. Sex and Power. 5 Units.**

From hook-up culture to pornography and sex work and even Beyoncé's latest album, "Lemonade," our struggles with consent, betrayal, and violence evince collective confusions about the relationship between sex and power in our societies. A quick Google search for news articles on the topic reveals that we must communally brace ourselves, usually through a Public Service Announcement pun, Let's Talk About Sex, and then a warning, Talking about sex can be hard. Cultural and social analyses can help us un-brace ourselves and get closer to meaningfully, and respectfully, talking about how cultural difference and social hierarchies fuel, and our fueled by, ideologies about sex and sexuality. This course examines sex as a nexus of socio-cultural, economic, and political relations of power for individuals and groups across local and global and national and transnational boundaries. And because a lot of the difficulties in talking about sex entail difficulties about seeing sex, this class relies on visual culture and documentary filmmaking alongside ethnographies and theoretical scholarship.

Same as: ANTHRO 180A

**FEMGEN 181A. Gender in the Middle East: Iran, Turkey, and Egypt. 4 Units.**

This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women's status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women's and men's lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.

Same as: ANTHRO 181A

**FEMGEN 183. Re- Imagining American Borders. 5 Units.**

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual orientation, and class borders in the context of a current volatile national discussion about the place of Americans both here and in the world. How Anna Deavere Smith, Sherman Alexie, Shailja Patel or Ta-Nehisi Coates consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's 1986 conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these recent American narratives? Course includes creatively examining one's own identity.

Same as: AMSTUD 183, CSRE 183

**FEMGEN 187X. Sex, Gender, and Violence: French Women Writers Today. 3-5 Units.**

Long before the 2017 #MeToo campaign, French women writers have explored through powerful fictions and autobiographies the different shades of economic, social, psychological, physical, or sexual violence that are exerted against, but also by and between, women. How does literature - the power of words - address, deconstruct or comfort power dynamics (during sex and between the sexes) that are usually silenced, taboo or unspeakable? We will contrast these narrative to debates among French feminist writers (Beauvoir, Badinter, Mona Ozouf, Françoise Héritier, Michelle Perrot) around the theory (or myth?) of a specifically French kind of gender relation (ex: "galanterie," "séduction"). Themes explored: sex and gender, sex and power, rape culture, sexual and moral taboos (incest, abortion, pornography, infanticide), the body as social stigma or source of meaning, identity, power. Special attention will be given to narrative and descriptive strategies designed to avert, expose, deconstruct or account for specifically feminine experiences (rape, orgasm, pregnancy). Award-winning author Leila Slimani will participate in person in the class discussion of her novel on infanticide. Authors include Marie Darrieusecq, Christine Angot, Annie Ernaux, Marie NDiaye, Virginie Despentes, Leila Slimani, Ivan Jablonka. Taught in French.

Same as: FEMGEN 287X, FRENCH 187, FRENCH 287, FRENCH 387

**FEMGEN 188Q. Imagining Women: Writers in Print and in Person. 4-5 Units.**

Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects.

Same as: CSRE 188Q

**FEMGEN 191Q. Writing Women's Lives. 2 Units.**

Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.

**FEMGEN 192. Women in French Cinema: 1958-. 3-5 Units.**

Women as objects and subjects of the voyeuristic gaze inherent to cinema. The myth of the feminine idol in French films in historical and cultural context since the New Wave until now. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern, culturally mixed nation. The evolution of female characters, roles, actresses, directors in the film industry. Filmmakers include Vadim, Truffaut, Varda, Godard, Ozon, Coline Serreau, Tonie Marshall, Mäiwen. Discussion in English; films in French with English subtitles. 3 units, 4 units or 5 units. NOTE: FILMSTUD students must take this course for 3 units only.

Same as: FILMSTUD 112, FRENCH 192

**FEMGEN 193. The Chinese Empire from the Mongol Invasion to the Boxer Uprising. 5 Units.**

(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINA 183, HISTORY 193

**FEMGEN 193G. Psychological Well-Being on Campus: A Focus on Gender and Sexual Identities. 1 Unit.**

This course examines mental health and psychological well-being across the spectrum of gender and sexual identities. It addresses the unique challenges that face LGBTQ-identified students, and provides tools for supporting peers as they navigate these challenges. Discussion topics include current conceptualizations of gender identity and sexual orientation, including sexual and gender fluidity; the intersection of queer identities with multiple identities such as ethnic/racial identity and faith/spirituality; unpacking stereotypes; queer relationships and sexuality, coming out and disclosure, and mental health issues.

Same as: EDUC 193G

**FEMGEN 195. Directed Reading. 1-15 Unit.**

May be repeated for credit. (Staff).

**FEMGEN 195X. Research in Feminist, Gender, & Sexuality Studies. 1-5 Unit.**

Independent research conducted under faculty or graduate student supervision. May be taken for a maximum of 3 quarters of credit.

**FEMGEN 199A. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.**

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

**FEMGEN 199B. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.**

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

**FEMGEN 199C. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.**

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

**FEMGEN 199X. Preparation for Senior Thesis. 2-3 Units.**

This course is designed for juniors (majors, minors, and those seeking Interdisciplinary Honors in CSRE or FGSS) who intend to write a senior thesis in one of the CSRE Family of Programs or FGSS Interdisciplinary Honors. The course offers resources and strategies for putting together a significant and original senior thesis. Topics to be covered include: getting funding; finding an advisor; navigating the institutional review board; formulating an appropriate question; and finding the right data/medium/texts.

Same as: CSRE 199

**FEMGEN 203. Feminist and Queer Theories and Methods Across the Disciplines. 2-5 Units.**

(Graduate Students register for PHIL 279A or FEMGEN 203) This course is an opportunity to explore the difference feminist and queer perspectives make in creative arts, humanities, and social science research. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor. NOTE: This course must be taken for a letter grade and a minimum of 3 units to be eligible for WAYS credit. The 2 unit option is for graduate students only.

Same as: FEMGEN 103, PHIL 179A, PHIL 279A

**FEMGEN 205. Songs of Love and War: Gender, Crusade, Politics. 3-5 Units.**

Analysis of medieval love, satirical and Crusade lyrics of the troubadours. Study of deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Course readings include medieval treatises on lyric and modern translations of the troubadour tradition. Works by Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesse de Dia, Thibaut de Champagne, Raimon Vidal, Dante, and Pound. Taught in English. Course includes a lab component for creation of multi-media translation projects: trobar. stanford.edu.

Same as: FRENCH 205

**FEMGEN 206. Global Medical Issues Affecting Women. 1 Unit.**

This course probes the principal issues affecting women and girls medically around the world. Through interactive discussions, guest lectures, case studies, and academic readings, students become acquainted with the most critical challenges to women's health globally, and use selected analytical tools to assess how these may be addressed efficiently, cost-effectively, and sustainably. Topics include women's cancer, birth control, infertility, female genital mutilation, midwifery, obstetric fistula, breastfeeding, violence against women, and women's representation in biomedical research. The aim is to cultivate in students a nuanced appreciation of women's unique needs, roles, and challenges in the contemporary global health landscape.

Same as: SOMGEN 206

**FEMGEN 208B. Women Activists' Response to War. 4-5 Units.**

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.

Same as: HISTORY 208B, HISTORY 308B

**FEMGEN 209. Looking Back, Moving Forward: Raising Critical Awareness in Gender and Sports. 3-5 Units.**

In 1972, Title IX legislation opened up a vast range of opportunities for women in sports. Since then, women's sports have continued to grow yet the fight for recognition and equality persists. Simply put, men's sports are more popular than women's—so much so, in fact, that people often make the hierarchical distinction between "sports" and "women's sports." But what would it take to get more women's sports featured on ESPN or more female athletes on the cover of Sports Illustrated? And, given the well-documented corruption at the highest levels of men's sports, should such an ascent in popularity be the goal for women's sports? This course will map out and respond to the multifaceted issues that emerge when women enter the sports world. Throughout the quarter, we will explore the fight for gender equality in sports through historical, cultural, and rhetorical lenses.

Same as: FEMGEN 109

**FEMGEN 210J. Romance, Desire, and Sexuality in Modern Japanese Literature. 3-4 Units.**

This class is structured around three motifs: love suicide (as a romantic ideal), female desire, and same-sex sexuality. Over the course of the quarter we will look at how these motifs are treated in the art and entertainment from three different moments of Japanese history: the Edo period (1615-1868), the modern period (1920-65), and the contemporary period (1965-present). We will start by focusing on the most traditional representations of these topics. Subsequently, we will consider how later artists and entertainers revisited the conventional treatments of these motifs, informing them with new meanings and social significance. We will devote particular attention to how this material comments upon issues of gender, sexuality, and human relationships in the context of Japan. Informing our perspective will be feminist and queer theories of reading and interpretation.

Same as: FEMGEN 110J, JAPAN 110, JAPAN 210

**FEMGEN 212. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.**

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's *Othello*. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960's play, *Who's Afraid of Virginia Woolf?*

Same as: ENGLISH 182J, FEMGEN 112

**FEMGEN 213. Transgender Studies. 3-4 Units.**

Transgender and gender-expansive identities are the subject of growing attention and (often sensationalist) interest in the media as well as in the healthcare field, yet there exists a dearth of legitimate academic courses, research and writing that reflect and explore gender identity and expression as a fluid spectrum rather than a fixed binary. This course will address transgender and gender expansive identities from historical, medical, literary, developmental and sociopolitical perspectives.

Same as: FEMGEN 113

**FEMGEN 214. Sexual Diversity and Health. 1 Unit.**

Explores multiple aspects of sexual diversity and health, including: kink/BDSM, polyamory, trans\* sexuality, asexuality, high-risk sex, inter-sexuality, questioning gender and sexual binaries, and more. The format includes a one-day conference featuring a variety of expert speakers covering different aspects of sexual diversity and health, followed by a debriefing and discussion session to integrate what has been heard and learned.

Same as: FEMGEN 114

**FEMGEN 216. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.**

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, HISTORY 216, HISTORY 316

**FEMGEN 216X. Narrating Queer Trauma. 4-5 Units.**

Psychiatrist Dori Laub has argued that the process of narrating trauma is essential to the healing process. Not only is telling the story important, but it is also crucial to have someone else bear witness to the narrative. But how do people even begin to narrate stories of violence and pain, and how do we become good listeners? How are these stories told and heard in the specific context of queer world making? This course will explore narratives of trauma in queer lives through literature, film, media, and performance in conjunction with trauma theory and psychoanalysis. We will pay specific attention to questions of community, healing, violence, and affect at the intersections of queerness and race, sex, disability, class, gender, and nationality.

Same as: FEMGEN 116

**FEMGEN 217. Expanding Engineering Limits: Culture, Diversity, and Gender. 2-3 Units.**

This course investigates how culture, and diversity, including gender, shape who becomes an engineer, what problems get solved, and the quality of designs, technology, and products. We first examine the characteristics of engineering cultures – what are the interactions, symbols and ideas, and practices that define engineering? We then investigate how gender and other markers of diverse identities are interdependent and culturally constructed, how gender and other kinds of diversity are experienced in engineering cultures, and how these experiences have consequence for engineering innovation and the engineering profession. Finally, we analyze examples of cultural change in engineering and implications for engineering knowledge and practice. The course involves weekly presentations by distinguished scholars and engineers, readings, short writing assignments, small-group discussion, and exercises around one's own experiences in and related to engineering. Those taking the course for 3 units will also complete a research-based project, and must take the course for a letter grade to meet the undergraduate WAY-ED requirement.

Same as: CSRE 117, CSRE 217, ENGR 117, FEMGEN 117

**FEMGEN 21S. StoryCraft: On Relationships. 2 Units.**

This class prepares students to tell their stories in front of the audience for *Beyond Sex Ed: Intimacy & Relationships* in Spring 2018. Do we need love? And if so, what does it look like? In this class, students will learn about relationships from the inside-out: through an examination and telling of their lived experiences. We will explore various perspectives on intimacy and relationships that illuminate different aspects of our lives, and then dive into our own stories to discover the many facets of intimacy. Due to the personal nature of the topic, we will emphasize safety, trust, and confidentiality throughout. The class offers the structure and guidance to 1) mine your life for stories, 2) craft the structure and shape of your stories, and 3) perform with presence, authenticity, and connection.

Same as: TAPS 21S

**FEMGEN 21T. StoryCraft: On Sexuality. 2 Units.**

What is "sexuality education", and what could it be? How do I tell a compelling story? In this class, students will learn about sexuality and storytelling from the inside out. We will explore various perspectives on sexuality that illuminate different aspects of our lives and then dive into our own stories to discover the richness and vibrancy of human sexuality. Due to the personal nature of the topic, we will emphasize safety, trust, and confidentiality throughout. The class offers the structure and guidance to 1) mine your life for stories, 2) craft the structure and shape of your stories, and 3) perform with presence, authenticity, and connection. Students will be selected from this class to tell their stories in *Beyond Sex Ed: Consent & Sexuality* at Stanford during NSO 2018. Before enrolling, ensure that you will be on campus Sept 20-22, 2018 for rehearsal and performance. Email the TA, Eisa, with any questions, [equalshamma@stanford.edu](mailto:equalshamma@stanford.edu). Class will be held in KINGSCOTE Gardens First Floor Conference Room.

Same as: TAPS 21T

**FEMGEN 223X. The Politics of Gender in the United States. 5 Units.**

Gender is one of the most recognizable and important identities in daily life. Yet it has been paid scant attention by political scientists in terms of its role on access to political power, opinion formation, group identity politics, election outcomes, and political representation. This class provides a survey of the literature on gender in American politics. We begin with the interdisciplinary research on the social construction of gender to understand what gender is and is not. Throughout the course we will use these theories to analyze and critique the approaches of quantitative research on gender politics.

Same as: POLISCI 223

**FEMGEN 224. Challenging Sex and Gender Dichotomies in Medicine. 1 Unit.**

Explores and challenges the traditional physiological bases for distinguishing human males from females, as well as the psychosocial factors that play a role in experiencing and expressing gender and sexuality. Topics include the influence of sociocultural (gender) norms and behaviors on human biology, the interactions of sex and gender on medical outcomes, the importance of understanding the spectrum of sex, gender, and sexuality in clinical practice.

Same as: FEMGEN 124, SOMGEN 257

**FEMGEN 230. Sexual Function and Diversity in Medical Disciplines. 2 Units.**

(Same as FEMGEN 230). Focus is on development of personal and professional skills to interact with people across the diverse range of human sexuality, from childhood (pediatric) to older ages (geriatric), with consideration of gender identity, sexual orientation, sociocultural (predominantly U.S., not global) and religious values, and selected medical issues (e.g. hormonal therapy, disabilities, e.g. spinal cord injury, etc. with discussion of sexual taboos and unusual sexual practices that you might encounter in a general medical setting.

Same as: CHPR 230, FEMGEN 230X, SOMGEN 230

**FEMGEN 230X. Sexual Function and Diversity in Medical Disciplines. 2 Units.**

(Same as FEMGEN 230). Focus is on development of personal and professional skills to interact with people across the diverse range of human sexuality, from childhood (pediatric) to older ages (geriatric), with consideration of gender identity, sexual orientation, sociocultural (predominantly U.S., not global) and religious values, and selected medical issues (e.g. hormonal therapy, disabilities, e.g. spinal cord injury, etc. with discussion of sexual taboos and unusual sexual practices that you might encounter in a general medical setting.

Same as: CHPR 230, FEMGEN 230, SOMGEN 230

**FEMGEN 237. Health Impact of Sexual Assault and Relationship Abuse across the Lifecourse. 1-3 Unit.**

Cross-listed with HUMBIO 28 and AFRICAAM 28. An overview of the acute and chronic physical and psychological health impact of sexual abuse through the perspective of survivors of childhood, adolescent, young and middle adult, and elder abuse, including special populations such as pregnant women, military and veterans, prison inmates, individuals with mental or physical impairments. Also addresses: race/ethnicity, gender identity, sexual orientation, and other demographic and societal factors, including issues specific to college culture. Professionals with expertise in sexual assault present behavioral and prevention efforts such as bystander intervention training, medical screening, counseling and other interventions to manage the emotional trauma of abuse. HumBio students must enroll in HUMBIO 28 or AFRICAAM 28 for 3 units. For Ways eligibility, undergraduates must enroll in HUMBIO 28 or AFRICAAM 28 for 3 units and must be taken as a letter grade. Medical and graduate students may enroll for 1 to 3 units.

Same as: SOMGEN 237

**FEMGEN 238. Men's Violence Against Women in Literature: A Critical and Social Analysis. 3-5 Units.**

Literature, as a social and cultural product of its time, can inform and deepen our understanding of oppression. Using literature as a vehicle, this course will explore the impact of and responses to men's violence against women. Students will critically assess how the author has portrayed the topic of sexual assault and relationship abuse, how the characters and/or author exhibits victim blaming, and, if the characters were living today, would current policies adequately hold the perpetrator responsible, provide safety and justice for the survivor, and challenge rape culture. In dialogue with theoretical texts, we will analyze the literary representations of patriarchy that inform societal acceptance of gender-based violence, identify the historical prevalence of victim blaming and impunity in these works, and assess the implications on policy making at the individual, community and political level. Students will critically examine literature including Shakespeare's *Taming of the Shrew*, Thomas Hardy's *Tess of the D'Urbervilles*, Zora Neale Hurston's *Their Eyes Were Watching God*, Louise Erdrich's *The Round House* and Joyce Carol Oates' *We Were the Mulvaney's*. There is an optional service-learning component.

Same as: FEMGEN 138

**FEMGEN 24. Sexuality, Gender, and Religion. 2 Units.**

From ancient times to the present, religious texts, authority figures, adherents, and critics have had a great deal to say about sexuality and gender, with powerful impacts in personal, social and political spheres. Today these debates are more wide ranging and public than ever. In this lecture and discussion series, distinguished scholars from within and beyond Stanford will consider how sexuality and gender become *religious* in Judaism, Islam, Christianity, Hinduism, and Buddhism.

Same as: RELIGST 24

**FEMGEN 240D. LGBT/Queer Life in the United States. 4-5 Units.**

An introductory course that explores LGBT/Queer social, cultural, and political history in the United States. By analyzing primary documents that range from personal accounts (private letters, autobiography, early LGBT magazines, and oral history interviews) to popular culture (postcards, art, political posters, lesbian pulp fiction, and film) to medical, military, and legal papers, students will understand how the categories of gender and sexuality have changed over the past 150 years. This class investigates the relationship among queer, straight and transgender identities. Seminar discussions will question how the intersections of race, class, gender, and sexuality influenced the construction of these categories.

Same as: FEMGEN 140D, HISTORY 257C

**FEMGEN 241. Sex and Gender in Human Physiology and Disease. 2-3 Units.**

(HumBio students must enroll in HumBio 140.) Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. HUMBIO students must enroll for 3 units. Same as: HUMBIO 140, MED 240

**FEMGEN 241W. Eighteenth-Century Women Writers. 5 Units.**

The course will deal with a number of eighteenth-century English women writers—primarily novelists, but also poets, critics and playwrights. Authors to be studied in depth will include both relatively well-known writers such as Behn and Wollstonecraft, and lesser-known authors such as Sarah Scott, Elizabeth Inchbald and Anna Seward. Considerable attention will be paid to recent feminist scholarship on eighteenth-century women's writing, generic issues and the question of a "women's literary tradition," the material conditions of female authorship in the period, and the history of the eighteenth-century literary marketplace. Same as: ENGLISH 241

**FEMGEN 242. Sociology of Gender. 3 Units.**

The aim of this course is to provide students with an understanding of the sociological conceptualization of gender. Through the sociological lens, gender is not an individual attribute or a role, but rather a system of social practices that constructs two different categories of people men and women and organizes social interaction and inequality around this difference. First we will explore what "gender" is according to sociologists and the current state of gender inequality in the labor market, at home, and at school. We will then investigate how gender structures our everyday lives through the individual, interactional, and institutional levels. Finally, we will discuss avenues for reducing gender inequality. Throughout the course, we will prioritize reading, evaluating, and questioning sociological theory and research on gender." Same as: FEMGEN 142, SOC 142, SOC 242

**FEMGEN 24N. Sappho: Erotic Poetess of Lesbos. 3 Units.**

(Formerly CLASSGEN 24N.) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music. Same as: CLASSICS 16N

**FEMGEN 250. Sex, Gender, and Power in Modern China. 3-5 Units.**

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English. Same as: CHINA 115, CHINA 215, FEMGEN 150

**FEMGEN 252. 'Tis all in pieces: Space and Gender on the Threshold of the Modern World. 5 Units.**

These dramatic words, spoken by the British poet John Donne, signal the onset of the Early Modern world and the profound reconfigurations of space and related structures of thought, including conceptions of the self and the encoding of gender roles. We will explore the vibrant Early Modern world in the context of space and representations of gender, sexuality, and race as manifest in unprecedented literary and artistic forms, such as Shakespeare's *Othello*, Marlowe's *Doctor Faustus*, the poetry of John Donne, the art of Michelangelo and Caravaggio as well as key historical and cultural texts. And we will visit the Cantor Arts Center (on campus) for a guided tour and lecture on art and perspective. We also will read and discuss selected texts from the modern world, such as Samuel Beckett's *Waiting for Godot* and poetry and commentary by Adrienne Rich, to study both changes and continuities with the Early Modern period. We will consider the vital cognitive role of the reader or viewer in the formation of particular instances of artistic form, including recent—and highly thought-provoking—material from the neurosciences and cognitive studies. Note: Instructor will consider changes in meeting times/days to accommodate student schedules if feasible. Please send request to: hbrooks@stanford.edu. Same as: FEMGEN 152

**FEMGEN 255. The Changing American Family. 4 Units.**

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change. Same as: FEMGEN 155, SOC 155, SOC 255

**FEMGEN 256. Current Topics and Controversies in Women's Health. 2-3 Units.**

Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. For Ways credit eligibility, students must enroll in HUMBIO 125 for a minimum of 3 units and a letter grade. PhD minor in FGSS, enroll in FEMGEN 256 for 2 - 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units. Undergraduate prerequisite: Human Biology Core or equivalent or consent of instructor. Same as: HUMBIO 125, OBGYN 256

**FEMGEN 257. Language as Political Tool: Feminist and LGBTQ Movements and Impacts. 3-5 Units.**

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement, LGBTQ movements, or feminist movements, gain a voice and eventually enact change? In the mediascape of today, where everyone with access to a computer could have a voice, how does a movement change the national conversation? How do written and verbal choices of the movements impact their success and outreach to supporters? In this course, students will write and revise their own arguments in order to best understand the rhetorical potential in these movements; choices and to consider how those rhetorical moves are incorporated into political discourse. We'll examine the role of rhetoric, the use of argument to persuade, in social movements working toward social justice, party platforms, and public policy. Same as: AMSTUD 157X, FEMGEN 157

**FEMGEN 258X. Black Feminist Theater and Theory. 4 Units.**

From the rave reviews garnered by Angelina Weld Grimke's lynching play, Rachel to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorraine Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan-Lori Parks, Ntozake Shange, Pearl Cleage, Sarah Jones, Anna DeVeare Smith, Alice Childress, Lydia Diamond and Zora Neale Hurston.). Same as: AFRICAAM 258, CSRE 258, TAPS 258

**FEMGEN 260. Disability, Gender, and Identity: Women's Personal Experiences. 5 Units.**

This course explores visible and invisible disabilities, focusing on issues of gender and identity in the personal experiences of women. The course emphasizes psychological as well as physical health, the diversity of disability experiences, self-labeling, caretaking, stigma and passing, and social and political aspects. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of assistance. The readings draw from the disability studies literature and emphasize women's personal narratives in sociological perspective. Note: Instructor Consent Required.

Same as: AMSTUD 260, FEMGEN 360

**FEMGEN 261. Personal Narratives in Feminist, Gender, and Sexuality Studies. 4-5 Units.**

This course explores the contribution of personal narratives to knowledge in the field of feminist, gender, and sexuality studies. Each week, students do extensive readings of exemplary personal narratives that have contributed in substance and method to the field and that have opened up new areas of inquiry. These narratives deal especially with issues of individual and group identity; gender, sexuality, racial and ethnic diversity; and disability. Students select a topic of special interest to them to focus their readings and guide individual research during the quarter. The approach of the course is feminist, ethnographic, and welcoming of a variety of approaches to personal narrative. Instructor consent required; students apply at the first class meeting.

Same as: AMSTUD 261, FEMGEN 361

**FEMGEN 262. Sex and the Early Church. 4 Units.**

Sex and the Early Church examines the ways first- through sixth-century Christians addressed questions regarding human sexuality. We will pay particular attention to the relationship between sexuality and issues of gender, culture, power, and resistance. We will read a Roman gynecological manual, an ancient dating guide, the world's first harlequin romance novels, ancient pornography, early Christian martyrdom accounts, stories of female and male saints, instructions for how to best battle demons, visionary accounts, and monastic rules. These will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality. The purpose of our exploration is not simply to better understand ancient views of gender and sexuality. Rather, this investigation of a society whose sexual system often seems so surprising aims to denaturalize many of our own assumptions concerning gender and sexuality. In the process, we will also examine the ways these first centuries of what eventually became the world's largest religious tradition has profoundly affected the sexual norms of our own time. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history.

Same as: RELIGST 262, RELIGST 362

**FEMGEN 266. Women's Voices in Contemporary Italian Literature. 3-5 Units.**

The traditional canon of Italian literature consists almost exclusively of male authors. Yet Italian women writers have been active since the time of Dante. This course presents an overview of women's prose fiction of the last 100 years, from Sibilla Aleramo's groundbreaking feminist novel *Una donna* (1906) to Elena Ferrante's *La figlia oscura* (2015). We will examine such concerns as the central issue of sexual violence in many female autobiographies; the experience of motherhood; the conflict between maternal love and the desire for self-determination and autonomy; paths to political awareness; reinventing the historical novel. Taught in English.

Same as: ITALIAN 266

**FEMGEN 287G. A Woman's Life: 20th- (and 21st-) Century Memoirs by Women. 5 Units.**

Why do women write memoirs? Why has the memoir form become such a popular genre for American female authors? What do such books reveal, more broadly, about the condition of women in Contemporary Society? We will approach these questions by reading autobiographical works by some if not all of the following writers: Gertrude Stein, Joan Didion, Kathryn Harris, Audre Lorde, Patti Smith, Lucy Grealy, Michelle Tea, Jeannette Walls, Carrie Fisher, and Alison Bechdel.

Same as: ENGLISH 287G

**FEMGEN 287X. Sex, Gender, and Violence: French Women Writers Today. 3-5 Units.**

Long before the 2017 #MeToo campaign, French women writers have explored through powerful fictions and autobiographies the different shades of economic, social, psychological, physical, or sexual violence that are exerted against, but also by and between, women. How does literature - the power of words - address, deconstruct or comfort power dynamics (during sex and between the sexes) that are usually silenced, taboo or unspeakable? We will contrast these narrative to debates among French feminist writers (Beauvoir, Badinter, Mona Ozouf, Françoise Héritier, Michelle Perrot) around the theory (or myth?) of a specifically French kind of gender relation (ex: "galanterie," "séduction"). Themes explored: sex and gender, sex and power, rape culture, sexual and moral taboos (incest, abortion, pornography, infanticide), the body as social stigma or source of meaning, identity, power. Special attention will be given to narrative and descriptive strategies designed to avert, expose, deconstruct or account for specifically feminine experiences (rape, orgasm, pregnancy). Award-winning author Leila Slimani will participate in person in the class discussion of her novel on infanticide. Authors include Marie Darrieusecq, Christine Angot, Annie Ernaux, Marie NDiaye, Virginie Despentes, Leila Slimani, Ivan Jablonka. Taught in French. Same as: FEMGEN 187X, FRENCH 187, FRENCH 287, FRENCH 387

**FEMGEN 28N. Queer Lives in Music. 3 Units.**

Queer Lives in Music examines music by queer musicians in genres including punk, opera, rock, symphony, musical theater, folk, and jazz. We will study lesbian, gay, bisexual, transgender, and queer composers, performers, and listeners, to learn how queer people have expressed individual identity and built communities through music. We will learn how sexual stigma, taboo, oppression, and resistance have impacted musical creativity and music history. Class is designed for students interested in music, social history, cultural studies, and gender/sexuality studies.

Same as: MUSIC 28N

**FEMGEN 293E. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: HISTORY 293E, HISTORY 393E, RELIGST 257X, RELIGST 357X

**FEMGEN 297. Gender and Education in Global and Comparative Perspectives. 4 Units.**

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. As class meets just nine times, attendance at the first class meeting is required and no more than one absence is allowed in order to pass.

Same as: EDUC 197, SOC 134

**FEMGEN 299. Graduate Workshop: Feminist, Gender, and Sexuality Studies. 1-3 Unit.**

Theory, methods, and research in feminist, gender, and sexuality studies, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies, feminist pedagogy and career development issues. Restricted to doctoral students. Repeatable for credit. Required for PhD Minors in Feminist, Gender, and Sexuality Studies (3 quarters min.).

**FEMGEN 310X. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, COMPLIT 310, FEMGEN 110X

**FEMGEN 313. Performance and Performativity. 1-4 Unit.**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specular/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

Same as: ENGLISH 313, TAPS 313

**FEMGEN 314. Performing Identities. 4 Units.**

This course examines claims and counter-claims of identity, a heated political and cultural concept over the past few decades. We will consider the ways in which theories of performance have offered generative discursive frameworks for the study of identities, variously shaped by vectors of race, gender, sexuality, religion, class, nation, ethnicity, among others. How is identity as a social category different from identity as a unique and personal attribute of selfhood? Throughout the course we will focus on the inter-locking ways in which certain dimensions of identity become salient at particular historical conjunctures. In addition, we will consider the complex discourses of identity within transnational and historical frameworks. Readings include Robin Bernstein, Ann Pellegrini, Tavia Nyong'o, Jose Munoz, Michael Taussig, Wendy Brown, Talal Asad, Jasbir Puar, among others.

Same as: TAPS 314

**FEMGEN 344F. Beyond Pink and Blue: Gender in Tech. 1 Unit.**

This d-school seminar prototypes concepts and methods for "inclusive" design. From the moment we arrive on the planet, gender shapes our perception of the world. Examples of products (including objects, services, and systems) gone awry will serve as prompts for design activities, challenges, and discussions on gender issues to illustrate the different needs of women, men, and gender-fluid people. Class sessions mix use case explorations with design methodology, design thinking abilities, and guest speakers from technology, design, and academia. Students will be asked to work in interdisciplinary teams on several design challenges, culminating in the development of a toolkit for inclusive design. Methods will interact in crucial ways to create "intersectional thinking" (i.e., to consider how gender, ethnicity, sexuality, socio-economic status, etc. work together to require new solutions in design). Topics include: algorithms, media, seat belts for pregnant women, robotics, assistive technologies, tech for developing worlds, video games, urban/rural design, software development, and many more. Admission by application only. Visit [d.school.stanford.edu/classes](http://d.school.stanford.edu/classes) for more information.

Same as: HISTORY 244F, HISTORY 344F

**FEMGEN 360. Disability, Gender, and Identity: Women's Personal Experiences. 5 Units.**

This course explores visible and invisible disabilities, focusing on issues of gender and identity in the personal experiences of women. The course emphasizes psychological as well as physical health, the diversity of disability experiences, self-labeling, caretaking, stigma and passing, and social and political aspects. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of assistance. The readings draw from the disability studies literature and emphasize women's personal narratives in sociological perspective. Note: Instructor Consent Required.

Same as: AMSTUD 260, FEMGEN 260

**FEMGEN 361. Personal Narratives in Feminist, Gender, and Sexuality Studies. 4-5 Units.**

This course explores the contribution of personal narratives to knowledge in the field of feminist, gender, and sexuality studies. Each week, students do extensive readings of exemplary personal narratives that have contributed in substance and method to the field and that have opened up new areas of inquiry. These narratives deal especially with issues of individual and group identity; gender, sexuality, racial and ethnic diversity; and disability. Students select a topic of special interest to them to focus their readings and guide individual research during the quarter. The approach of the course is feminist, ethnographic, and welcoming of a variety of approaches to personal narrative. Instructor consent required; students apply at the first class meeting.

Same as: AMSTUD 261, FEMGEN 261

**FEMGEN 363D. Feminist Theory: Thinking Through/With/About the Gendered Body. 5 Units.**

Organized around a series of case studies, this graduate feminist theory course will consider issues related to the complex relationship between sex, gender, sexuality, biological reproduction, violence, and social power. It is a core course for the PhD minor in Feminist, Gender, and Sexuality Studies. Enrollment is limited to PhD-level students.

**FEMGEN 36N. Gay Autobiography. 4 Units.**

Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences?

Same as: HISTORY 36N

**FEMGEN 37S. Love and Lust in the French Empire, 1830-1962. 5 Units.**

Can we write the history of private life? Throughout this course, we will try out different historical approaches to the history of intimate matters in the French Empire. Beyond a more complete understanding of what colonialism was like, studying the intimate draws attention to the societal norms and anxieties of the nineteenth and twentieth centuries. Patriarchy, racism, and classism the power structures inherent in colonialism produce fruitful sites for prying into intimate matters. To that end, we will probe a wide variety of primary sources, including novels, films, paintings, letters, diaries, travel accounts produced by male and female Europeans, Africans, Arabs, and East Asians. Topics covered through these sources include, colonial masculinity and femininity; divorce; homosexuality; prostitution; and sexual violence. We will transcend racial and class divides, and cover a diverse geography including, France, North and West Africa, and Vietnam.

Same as: FRENCH 157, HISTORY 37S

**FEMGEN 395. Graduate Independent Study. 1-15 Unit.**

Students pursue a special subject of investigation under supervision of an affiliated faculty member. May be repeated for credit.

**FEMGEN 395J. Gender and Sexuality in Chinese History. 4-5 Units.**

Same as: CHINGEN 395, HISTORY 395J

**FEMGEN 3B. Transhistory: Gender Diversity from Medieval to Modern. 1-3 Unit.**

This series of six lectures explores the history of gender crossings and transgressions, broadly defined. Several Stanford faculty members and one visitor will present historical interpretations of how and why individuals crossed gender boundaries in the past, as well as how different societies have reacted to gender crossing. The topics range from medieval to modern times and across geographic regions, including Europe, China, South Asia and the Americas.

Same as: HISTORY 3B

**FEMGEN 3E. Michelle Obama in American Culture. 1 Unit.**

Never before has the United States had a First Lady like Michelle Obama. During her eight years in the White House, Michelle Obama transformed traditional meanings of womanhood, marriage, motherhood, and style and created new possibilities for what it means to be strong and what it means to be beautiful. No First Lady has ever been so scrutinized but also so beloved: from her J. Crew dresses to her Let's Move campaign, from her vegetable gardens to her chiseled arms, and from her powerful speeches to her casual and always authentic personality. This class examines the impact on American culture of the most popular First Lady in American history.

**FEMGEN 434. Gender and Performance. 5 Units.**

This seminar seeks to investigate relationships between performance, gender, and the body politic through a discussion of embodiment, body cultures, queerness, desire, representation. Through a weekly engagement with film texts from across the world as well as theoretical perspectives on gender and performance in various geo-political contexts, we will explore the intersections of gender with race, class, national discourse, and performance traditions. The seminar is conceived to be interdisciplinary and participants are encouraged to introduce and work with texts from other disciplines, including visual arts, theatre, dance, literature etc. No prior engagement with film studies is required. Screening times may range from 90 to 180 minutes.

Same as: FILMSTUD 434, MUSIC 434, TAPS 344A

**FEMGEN 444. Graduate Research Seminar: Gender in Science, Medicine, and Engineering. 5 Units.**

Theory and practice of gender in STEM. 1. "Fix the Numbers of Women" focuses on increasing women's participation; 2. "Fix the Institutions" promotes gender equality in careers through structural change in research organizations; 3. "Fix the Knowledge" or "gendered innovations" stimulates excellence in science and technology by integrating gender analysis into research. Seminar explores harnessing the creative power of gender analysis to enhance knowledge and spark innovation.

Same as: HISTORY 444

**FEMGEN 461A. Graduate Research Seminar on the History of Women, Gender, the Family, and Sexuality. 4-5 Units.**

Instructor consent required for non-History graduate students. Seminar introduces graduate students to current issues and methods in the history of women, gender, the family, and sexuality in the United States. After an initial period of working on secondary and primary source bibliographies, and some discussion of secondary readings, each student will choose a topic for an original research paper (20-30 pages) based on primary sources. Each student will complete a first draft of the paper by late May and a revised paper by the end of Spring Quarter.

Same as: HISTORY 461A

**FEMGEN 461B. Graduate Research Seminar on the History of Women, Gender, the Family, and Sexuality Part II. 4-5 Units.**

Prerequisite: 461A. Instructor consent required for non-History graduate students.

Same as: HISTORY 461B

**FEMGEN 466. Queer America. 5 Units.**

This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.

Same as: ARTHIST 466

**FEMGEN 50Q. Life and Death of Words. 4 Units.**

In this course, we explore the world of words: their creation, evolution, borrowing, change, and death. Words are the key to understanding the culture and ideas of a people, and by tracing the biographies of words we are able to discern how the world was, is, and might be perceived and described. We trace how words are formed, and how they change in pronunciation, spelling, meaning, and usage over time. How does a word get into the dictionary? What do words reveal about status, class, region, and race? How is the language of men and women critiqued differently within our society? How does slang evolve? How do languages become endangered or die, and what is lost when they do? We will visit the Facebook Content Strategy Team and learn more about the role words play in shaping our online experiences. Together, the class will collect Stanford language and redesign the digital dictionary of the future. Trigger Warning: Some of the subject matter of this course is sensitive and may cause offense. Please consider this prior to enrolling in the course.

Same as: CSRE 50Q, ENGLISH 50Q, LINGUIST 50Q, NATIVEAM 50Q

**FEMGEN 52N. Spoken Sexuality: Language and the Social Construction of Sexuality. 3 Units.**

The many ways language is used in the construction of sexuality and sexual identity. How language is used as a resource for performing and perceiving sexual identity. Drawing on linguistic analyses of pronunciation, word choice, and grammar, questions such as: Is there a gay accent? Why isn't there a lesbian accent? How do transgendered people modify their linguistic behavior when transitioning? How are unmarked (heterosexual) identities linguistically constructed? Sexuality as an issue of identity, as well as of desire. Iconic relations between elements of language such as breathy voice quality and high pitch, and aspects of desire such as arousal and excitement. How language encodes ideologies about sexuality; how language is used to talk about sexuality in public discourses about gay marriage and bullying, as well as in personal narratives of coming out. How language encodes dominant ideologies about sexuality, evident in labels for sexual minorities as well as terminology for sex acts. Discussions of readings, explorations of how sexuality is portrayed in popular media, and analyses of primary data. Final research paper on a topic of student choice.

Same as: LINGUIST 52N

**FEMGEN 54N. African American Women's Lives. 3 Units.**

This course encourages students to think critically about historical sources and to use creative and rigorous historical methods to recover African American women's experiences, which often have been placed on the periphery of American history and American life.

Same as: AFRICAAM 54N, AMSTUD 54N, CSRE 54N, HISTORY 54N

**FEMGEN 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.**

This course explores the long history of ideas about gender and equality. Each week we read, dissect, compare, and critique a set of primary historical documents (political and literary) from around the world, moving from the 15th century to the present. We tease out changing arguments about education, the body, sexuality, violence, labor, politics, and the very meaning of gender, and we place feminist critics within national and global political contexts.

Same as: AMSTUD 63N, CSRE 63N, HISTORY 63N

**FEMGEN 86Q. Love as a Force for Social Justice. 3 Units.**

Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of agape love. How love is conceptualized across cultures; agape love as the basis of many religions; different kinds of love; the biology of love; love in action for social justice; the languages of love, including art, literature, music, and poetry. Emphasis is on blog writing, participation, and oral presentation.

Same as: HUMBIO 86Q

**FEMGEN 93. The Chinese Empire from the Mongol Invasion to the Boxer Uprising. 3 Units.**

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINA 93, HISTORY 93

**FEMGEN 94H. Introduction to Disability Studies and Disability Rights. 4 Units.**

Disability Studies is a relatively new interdisciplinary academic field that examines disability as a social, cultural and political phenomenon. This is an introductory course to the field of disability studies and it aims to investigate the complex concept of disability through a variety of prisms and disciplines including social psychology, the humanities, legal studies and media studies. This course also focuses on the multiple connections between the study of disability and other identities including class, race, ethnicity, gender and sexual orientation, and also includes a comparative look at how disability is treated across cultures. Some of the topics covered in the class are disability and the family, the history of the disability rights movement, the development of disability identity and its intersectionality, antidiscrimination law, the UN Convention on the Rights of People with Disabilities, bioethical dilemmas pertaining to disability and more.

Same as: ETHICSOC 104X, HUMRTS 104, SOC 186

**FEMGEN 97. Bow Down: Queer Hip-Hop Pedagogy. 3 Units.**

Although Hip-Hop is frequently associated with homophobia, violence, sexism, and misogyny it continues to resonate with people the world over. By going beyond a surface level critique of Hip-Hop culture, this course explores the ways that queerness operates in and in conjunction with Hip-Hop culture. Topics covered include Hip-Hop and feminism, tensions between Hip-Hop and queerness, the role of commercialization of Hip-Hop in queer representation and inclusion with the culture, and how the intersections of Hip-Hop and queer theory can speak to issues of identity, power and privilege.

**FEMGEN 99. Seeds of Change. 1 Unit.**

This course is a required training for student leaders of the Seeds of Change initiative. This initiative takes an interdisciplinary approach to STEM education, infusing students' technical training with leadership training through a lens of gender inequality - bringing together key components of feminist pedagogy, service-learning, and experiential education to create a transformational learning experience. In this three-quarter course (Fall, Winter, Spring), student leaders will: learn the core content featured in the Seeds of Change curriculum, reflect on their experiences as both learners and teachers of this content, hone their own leadership and group facilitation skills, and engage as researchers in the initiative's evaluation efforts. NOTE: Instructor Consent Required. Please email [kpedersen@stanford.edu](mailto:kpedersen@stanford.edu) \*Cardinal Course certified by the Haas Center. See syllabus for adjusted course schedule and times.

**FEMGEN 9SI. A Road to Diversity inclusion: Learning to Embrace the Intersection of Identities within Athletics. 1 Unit.**

This course explores the interaction of one's identities within the context of athletics. With an emphasis on the importance of self-awareness and story telling, we will navigate how all identities intersect and affect the privilege we receive within current society. We will specifically look at how race, ethnicity, sexual orientation, religion, socioeconomic status, mental health, and disabilities interact with our identity as athletes. A Road to Diversity Inclusion: Learning to Embrace the Intersection of Identities within Athletics will help athletes find their voice and use it for positive social change within their communities.

## Film Production (FILMPROD)

**FILMPROD 101. Screen Writing I: Visual Writing. 4 Units.**

A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of script pages. Open to all majors; may substitute for ENGL 190F prerequisite for FP101.

**FILMPROD 101T. Writing the Television Pilot. 5 Units.**

A writing workshop in which students are introduced to the basic structures and genre of television pilots and to writing within the screenwriting/television writing form. Students will develop, outline, and workshop their own original pilot episode and series bible. Serves as a prerequisite for FP104 Intermediate Screenwriting. Enrollment by decision of instructor.

**FILMPROD 103. Adaptation. 4 Units.**

A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative choices made in adaptation to film. Source materials will include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. A weekly film screening is a requirement of the course.

**FILMPROD 104. Screenwriting II: Intermediate Screenwriting. 5 Units.**

Priority to Film and Media Studies majors and minors, and seniors. Craft, form, and approaches to writing for the screen. Students will write, workshop and rewrite the first act of a feature screenplay and create rough outline material for the rest of the film. Prerequisites: FP101, FP101T or ENGL190F and consent of the instructor. Same as: FILMPROD 301

**FILMPROD 105. Script Analysis. 4 Units.**

Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings. Same as: FILMPROD 305

**FILMPROD 106. Image and Sound: Filmmaking for the Digital Age. 3 Units.**

Despite the rise of emerging forms like two-minute YouTube videos, six second Vines, or interactive storytelling modules, many core principles of visual storytelling remain unchanged. In this hands-on film production class students will learn a broad set of filmmaking fundamentals (basic history, theory, and practice) and will apply them creating film projects using tools such as iPhones, consumer cameras and FCPX.

**FILMPROD 106S. Image and Sound: Filmmaking for the Digital Age. 3 Units.**

Despite the rise of emerging forms like two-minute YouTube videos, six second Vines, or interactive storytelling modules, many core principles of visual storytelling remain unchanged. In this hands-on film production class students will learn a broad set of filmmaking fundamentals (basic history, theory, and practice) and will apply them creating film projects using tools such as iPhones, consumer cameras and FCPX.

**FILMPROD 110. Screen Writing III: Advanced Screenwriting. 5 Units.**

Advanced writing workshop in which students develop and complete a feature-length screenplay. Prerequisites: FP101 Screenwriting and approval of the instructor. Enrollment is limited.

**FILMPROD 114. Introduction to Film and Video Production. 5 Units.**

Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing. Enrollment limited to 12 students. Priority to junior/senior Film & Media Studies majors. Admission determined on the first day of class.

**FILMPROD 12AX. Write and Shoot: Narrative Filmmaking. 2 Units.**

Write and Shoot: Narrative Filmmaking is a hybrid writing/production course that guides students through the process of completing a 2-3 minute narrative film. Students will write scripts for short fiction films, and then, by filming them, learn to apply the fundamentals of digital video production. Initial classwork will include visual writing exercises, DSLR cinematography instruction, script work, and basic fiction film production. Students will continue on in groups of three to develop, film, edit, and critique 2-3 minute narrative films based on a shared class theme or narrative premise. This course is truly INTENSIVE and requires a significant amount of work (including nights and weekends) outside of class and daily deadlines for submission of creative work.

**FILMPROD 148. Archival Cinema: Excavating the Future. 4 Units.**

This course examines the practices of appropriation of archival material in cinema, and the problems of representation inherent to them. The practical component consists of a series of creative assignments in which students are asked to use archival material, including some from Stanford's collections, to produce short moving image pieces. Same as: FILMPROD 348, FILMSTUD 148, FILMSTUD 348

**FILMPROD 301. Screenwriting II: Intermediate Screenwriting. 5 Units.**

Priority to Film and Media Studies majors and minors, and seniors. Craft, form, and approaches to writing for the screen. Students will write, workshop and rewrite the first act of a feature screenplay and create rough outline material for the rest of the film. Prerequisites: FP101, FP101T or ENGL190F and consent of the instructor. Same as: FILMPROD 104

**FILMPROD 305. Script Analysis. 4 Units.**

Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings. Same as: FILMPROD 105

**FILMPROD 348. Archival Cinema: Excavating the Future. 4 Units.**

This course examines the practices of appropriation of archival material in cinema, and the problems of representation inherent to them. The practical component consists of a series of creative assignments in which students are asked to use archival material, including some from Stanford's collections, to produce short moving image pieces. Same as: FILMPROD 148, FILMSTUD 148, FILMSTUD 348

**FILMPROD 400. Film/Video Writing and Directing. 4 Units.**

Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.

**FILMPROD 401. Nonfiction Film Production. 4 Units.**

Restricted to M.F.A. documentary students. 16mm production techniques and concepts. Final project is a short black-and-white film with multitrack sound design. Prerequisite: consent of instructor.

**FILMPROD 402. Digital Video. 4 Units.**

Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.

**FILMPROD 403. Advanced Documentary Directing. 4 Units.**

Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.

**FILMPROD 404. Advanced Video Production. 4 Units.**

Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in documentary video production. Prerequisite: consent of instructor.

**FILMPROD 405. Producing Practicum. 4 Units.**

Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.

**FILMPROD 406A. Documentary M.F.A. Thesis Seminar I. 4 Units.**

Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.

**FILMPROD 406B. Documentary M.F.A. Thesis Seminar II. 4 Units.**

Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.

FILMPROD 801. TGR Project. 0 Units.

## Finance (FINANCE)

### FINANCE 121. Undergraduate Finance Research and Discussion Seminar. 1 Unit.

This seminar is designed to provide some experience with research methods and topics in finance, and to assist undergraduates with career interests in financial research, whether academic or not, with preparation for those careers. The seminar meetings are weekly and discussion based, covering a range of issues and methods in financial economics. Students are expected to prepare a 30-minute research presentation once during the quarter.

### FINANCE 201. Finance I. 3 Units.

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, payout policy, the use and valuation of derivative securities, and risk management. This course is targeted to those students who are new to finance and for those with little quantitative background.

### FINANCE 204. Finance I - Accelerated. 3 Units.

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, the use and valuation of derivative securities (e.g., options and convertible securities), and risk management. No previous background in finance is required or expected, but in comparison with Finance 201, less time will be spent in class on the steps involved in solving basic problems. Therefore, students choosing this course should be relatively comfortable with basic mathematical operations (e.g., expressions involving multiplication of multiple terms, summation of multiple terms, etc.), though familiarity with the underlying finance concepts is not expected. A good diagnostic is to skim Section 4.2 "Rules for Time Travel" (pp. 98-104) in the course textbook, *Corporate Finance* by Berk and DeMarzo. If you are comfortable with the level of basic mathematics involved (even if the concepts are new), 204 is a good choice. If not, you should consider Finance 201.

### FINANCE 205. Accelerated Managerial Finance. 3 Units.

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, payout policy, the use and valuation of derivative securities, and risk management. This course is targeted to those students who are new to finance and for those with little quantitative background. No previous background in finance is required or expected for this course. Content will be comparable to F201, but the majority of course lecture material will be delivered online, with in-class sessions devoted to applications of key concepts. This "flipped classroom" version of the course is intended for self-motivated students with an interest in applications. Prerequisite material for the course will be posted online in the fall.

Same as: Lab-based Pilot

### FINANCE 207. Corporations, Finance, and Governance in the Global Economy. 3 Units.

As entrepreneurs, global leaders, and change agents tasked with developing transformative solutions of tomorrow, you will need certain skills and tools to interact with and navigate the complex and ever-changing financial landscape. This course focuses on the development of these skills and tools through the analysis of concise real-world financial situations around the globe. Topics include valuation of cash flows and control; the capital structure, payout policy and governance of both mature and entrepreneurial firms; restructuring and managing financial distress; the use of public markets to obtain liquidity and multiple share classes to retain control; financing and governance in venture capital and private equity; the rise of activism; and social responsibility and debates about the objectives of the firms of the present and future. This course is taught jointly by Professors Rauh and Seru.

### FINANCE 211. Corporate Finance: Applications, Techniques, and Models. 3 Units.

This course will develop and apply the basic tools and models of corporate finance to real-world corporate decisions. This course is designed to be the second course in the standard finance sequence; that is, it is designed to be the natural follow-up to the Winter Managerial Finance course. This course will develop and extend standard tools and techniques of financial analysis, valuation, and model-building, and apply these methods to a wide range of cases. Case topics will include mergers and acquisitions, private equity, corporate governance, capital structure, agency conflicts, and corporate restructuring. For all of these applications, this course will emphasize the central importance of financial analysis, valuation, and modeling to guiding optimal decision making.

### FINANCE 214. Accelerated Corporate Finance: Applications, Techniques, and Models. 3 Units.

This course will develop and apply the basic tools and models of corporate finance to real-world corporate decisions. This course is designed to be the second course in the standard finance sequence; that is, it is designed to be the natural follow-up to the Winter Managerial Finance course. This course will develop and extend standard tools and techniques of financial analysis, valuation, and model-building, and apply these methods to a wide range of cases. Case topics will include mergers and acquisitions, private equity, corporate governance, capital structure, agency conflicts, and corporate restructuring. For all of these applications, this course will emphasize the central importance of financial analysis, valuation, and modeling to guiding optimal decision making.

### FINANCE 229. MSx: Finance. 3 Units.

This course covers the foundations of corporate finance including the management of capital structure, financial forecasting, dividend policy, financial distress, cost of capital and capital budgeting. It discusses the major financial decisions made by corporate managers and the impact of those decisions on investors and the value of the firm. Topics include criteria for understanding the valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the role of derivative securities, including options. The course also provides coverage of the role of financial markets in the operations of the firm.

### FINANCE 305. Capital Markets and Institutional Investing. 3 Units.

This course teaches recent advances in asset allocation and management. We focus on the practical implementation of asset allocation and management tools in allocating assets, selecting asset managers and managing risk. Students apply these tools to real-time data in the computer lab. Topics covered include Asset Allocation; Delegated Asset Management and Manager Selection applied to Mutual Funds, Hedge Funds and Private Equity Funds; Multi-factor models and Factor Investing. The class will be co-taught by Kevin Mak, the director of the Real-Time Investment and Analysis Lab at Stanford. Robert Wallace, the CEO of Stanford Management Company, will guest-lecture.

**FINANCE 310. Finance - Advanced. 3 Units.**

This advanced applications course brings recent advances in finance to bear on real-world challenges in investment management and corporate finance. The goal of this course is to develop a deeper understanding of how capital markets actually work, drawing on recent advances in modern finance. We discuss the implications for financial decision making by managers and investors. The course is intended for MBA1 students who are familiar with the foundations of finance, including discounted cash flow (DCF) analysis, internal rate of return (IRR) calculations, mean-variance analysis and the Capital Asset Pricing Model (CAPM). Examples of broad topics covered in the class include corporate capital structure decisions, challenges in portfolio management, performance analysis of mutual funds, hedge funds and private equity, IPOs, hedging of currency and interest rate risk, etc. To be eligible, students must have passed the placement exam in Week Zero, must have solid quantitative skills and have a willingness to analyze data.

**FINANCE 315. Innovating for Financial Inclusion. 3 Units.**

This is a new MBA elective exploring innovative ways start-ups are altering household participation in financial services, by overcoming financial frictions and/or changing behaviors. "Inclusion" will be viewed broadly to encompass individuals/households from all socioeconomic classes in all aspects of their financial lives. The focus will be predominantly on start-ups that are disrupting financial services within the US legal and regulatory environment, though we will frequently draw upon lessons learned from welfare-enhancing innovations in the international FinTech sphere.

**FINANCE 319. Private Equity Investing Seminar. 4 Units.**

This PE Investing seminar launched in 1993 focuses on private equity investing, including investments with control, buyouts, and minority investments at various stages in a company's life. Private equity investing activity has grown significantly over the past 2 decades. This seminar explores selected topics in private equity investing for those MBA students who take the co-requisite course FINANCE 321.01, Investment Management and Entrepreneurial Finance. Private equity includes both established and early stage companies. The course extends and deepens the entrepreneurial finance area for those with an interest in private equity, venture capital and principal investing, taking a global view. Utilization will be made of original case studies and lecture-discussions, building on the framework of FINANCE 321. The Seminar meets with many outstanding investors. All those registered in F321.01 will also be registered in F319. See yellow Term Sheet put in MBA Boxes in late April. Note: All those registered in F321.02 will also be registered in F329.

**FINANCE 320. Debt Markets. 3 Units.**

This course is intended for those who plan careers that may involve debt financing for their businesses or other investments, or involve trading or investing in debt instruments and their derivatives, including money-market instruments including central bank deposits, government bonds, repurchase agreements, interest-rate swaps, mortgage-backed securities (MBS), corporate bonds, structured credit products, and credit derivatives. We will emphasize institutional features of the markets, including trading, pricing, and hedging. There is a special focus on distressed debt. Most lectures will start with a cold-called student presentation of an un-graded short homework calculation. There will also be a series of graded homework, a take-home mid-term, and about six graded 'pop quizzes' of 10 minutes or less.

**FINANCE 321. Investment Management and Entrepreneurial Finance. 3 Units.**

Our focus is fundamental value investing. Equity investment in companies, common stocks, early/growth stage ventures and private equity, deals, partnerships, hedge funds, or other entrepreneurial opportunities will be immediately or eventually important for most MBAs—either on the investing side or on the fund-raising financing side. This investment course discusses many practical and conceptual factors influencing the analysis and value of companies and deals, including publicly listed and private equity investments, and on success of investment approaches. The focus of this course is on quoted and private equity investments and on entrepreneurial finance. The format of the class is primarily case discussions and lecture discussions led by the professor and investors/principals who were involved in the case. This course enables MBA students to learn a broad investing skill-set and to study outstanding investors. See yellow Term Sheet put in MBA Boxes in late April.

**FINANCE 322. Financial Intermediaries and Capital Markets. 4 Units.**

This course focuses on financial markets, institutions, and instruments. We consider when and how firms raise capital through the life cycle, beginning with the capital-raising decisions and transactions for young firms and then discussing the decisions facing older, listed firms. We concentrate mainly on the firm's perspective while also considering the perspective of financial intermediaries. Issues to be considered in this course include the role of financial intermediaries like banks, the decision to go public, the pricing and role of investment banks in IPOs, bank debt, project finance, public debt, private placements, securitizations, convertibles, and markets for junk bonds.

**FINANCE 324. Practical Corporate Finance. 4 Units.**

The focus of this course is to apply the fundamental ideas of corporate finance to real-world problems. This course is a follow-up to the Fall course in Managerial Finance in which the basics of finance and valuation were covered. We will explore both how to make the acquired knowledge practical as well as to deepen our understanding of the core principles of finance. During the course we will analyze cases covering a wide range of topics such as capital structure, private equity and venture capital, mergers and acquisitions, hostile takeovers and leveraged buyouts, as well as bankruptcy and financial distress. These cases provide an opportunity to bridge the gap between theory and real-life situations. Students are expected to develop their own spreadsheets and provide recommendations based on their analysis of the case material. This course was formerly known as FINANCE 224. An accelerated version of this course is offered as FINANCE 331.

**FINANCE 326. Derivative Securities. 4 Units.**

This course is an introduction to options, futures and other derivative securities. The goal is to learn a core set of principles that underlie the pricing and use of derivatives. In particular, we will cover the valuation and use, both for risk management and for speculation, of forwards, futures, swaps, and options; the Black-Scholes option-pricing formula; delta-hedging; credit derivatives; financial risk management; and the role of derivatives in the recent financial crisis.

**FINANCE 327. Financial Markets. 4 Units.**

The aim of this course is to develop a thorough understanding of financial markets. We explore how investors make decisions about risk and return, how financial markets price risky assets in equilibrium, and how financial markets can sometimes malfunction. The course puts particular emphasis on the role of real-world imperfections that are absent from the standard textbook view of financial markets. For example, we explore the role of illiquidity: Why are there liquid markets for some types of assets but not for others? Why does liquidity often disappear in times of market turmoil? We will also study recent insights from behavioral finance about investor psychology and market inefficiencies. Moreover, we will look at financial innovations such as credit-default swaps, securitization, and hedge funds that play important roles in financial markets these days. We use cases to develop these topics in the context of practical decision-problems in the areas of asset allocation, risk management, and financing.

**FINANCE 329. Investment Seminar. 4 Units.**

F329 - Investment Seminar: "Global Principal Investing/Hedge Funds" is a seminar focused on selected topics in masterful investing in publicly traded with some private equity capital investments, with emphasis on the principal's point of view. We study hedge funds and mutual funds and meet with outstanding investors. The scope and context is global including emerging markets. The Seminar is taught by a founding director of one of the largest international investment funds. See yellow Term Sheet put in MBA Boxes in late April. All those registered in F321.02 will also be registered in F329. nnNote: All those registered in F321.01 will also be registered in F319.

**FINANCE 331. Practical Corporate Finance. 4 Units.**

(Note: this course was formerly known as FIN 230) The main aim of this course is to enable students to apply the fundamental ideas of finance to problems in the area of corporate finance with all the complexities the real world entails. The course is a follow-up to the Fall Managerial Finance course where students learnt basics of valuation tecyhniques and various finance applications. We will explore both how to make all this knowledge practical as well as how to deepen our knowledge of fundamental finance ideas. nnnThe main focus of this course is on the corporate financial manager and how he/she reaches decisions as to investments, dividends and financing of all sorts. Topics include leveraged buyouts, hostile takeovers, private equity financing and venture capital, financial distress and bankruptcy, mergers and acquisitions, managing working capital. The cases will be used to motivate our discussion of how to bridge the gap between rigorous finance theory and its application to practical problems in corporate finance.nnnThe course is case-based and more advanced than FINANCE 324. "Advanced" means that we will discuss a lot of subtle qualitative issues as well as explore deeper fundamental applications of core finance ideas. The course is intensive and will require students to prepare carefully all cases, read and understand a lot of materials, and actively participate in the class discussion. The main teaching method is cold calling. Same as: Accelerated

**FINANCE 332. Finance and Society. 3 Units.**

This interdisciplinary course explores how market and non-market forces shape the financial system and, through this system, affect the broad economy and society. You will gain an in-depth understanding of the interactions between individuals, corporations in the financial and non-financial sector, and governments around the globe, in an environment that is rife with conflicts of interests and differences in information and control. Topics include the structure and role of various financial institutions and the financial system, housing, credit and securities markets, central banks, regulation, global cooperation and competition, governance and accountability, and the role of the media.

**FINANCE 335. Corporate Valuation, Governance and Behavior. 4 Units.**

This course will develop a detailed knowledge of corporate valuation techniques, together with an understanding of the role such valuations play in a wide range of corporate financing decisions. First, the course will carefully consider different valuation techniques, the assumptions that underlie each of these methods, how they are applied in practice, how they are related to one another, and how to decide which method of valuation is appropriate for a given application. After developing these tools, they will then be applied to a wide range of corporate finance settings. Among the applications to be considered are mergers and acquisitions, international valuation, corporate governance, financial distress, agency conflicts, asymmetric information, and overvaluation. For all of these applications, this course will emphasize the central importance of valuation to understanding observed phenomena and to guiding optimal decision making, as well as the unique challenges to valuation posed by the particular application.

**FINANCE 336. The Finance of Retirement and Pensions. 4 Units.**

The financial economics of how retirement is financed, particularly in the US. Topics: basic finance concepts necessary for understanding individual retirement savings. Properties of financial instruments such as bonds and stocks. Optimization of individual retirement account or 401 (k) portfolios. Defined benefit pensions. Measuring defined benefit pension liabilities. Impact of defined benefit pension liabilities on corporate, state, and local budgeting. The economics of national retirement policy including Social Security and government treatment of private retirement savings.

**FINANCE 341. Modeling for Investment Management. 3 Units.**

This course will combine practical and up-to-date investment theory with modeling applications. Understanding beautiful theory, without the ability to apply it, is essentially useless. Conversely, creating state-of-the-art spreadsheets that apply incorrect theory is a waste of time. Here, we try to explicitly combine theory and application. The course will be divided into 6 modules, or topics. The first day of each module will be a lecture on an investment topic. Also provided is a team modeling project on the topic. The second day of each module will be a lab. The lab day will begin with modeling concepts (tips) designed to help you use Excel to implement the module's investment topic. After the tips are provided, the remainder of the lab day is devoted to teams working on their modeling project and allowing for Q&A. On the third day of each module will be presentations and wrap-up.

**FINANCE 345. History of Financial Crises. 3 Units.**

Financial crises are as old as financial markets themselves. There are many similarities between historical events. The 2007/8 credit crisis, for example, is far from unique. More often than not financial crises are the result of bubbles in certain asset classes or can be linked to a specific form of financial innovation. This course gives an overview of the history of financial crises. We go back almost 400 years and start with the Tulip mania of 1636. From there we will slowly make our way back to today, encountering many crisis episodes that are relevant from today;s point of view. The purpose of the course is to understand the causes of past crises and to develop a conceptual framework that ties common elements together. We will discuss the lessons that we can draw for financial markets today.

**FINANCE 346. Institutional Money Management. 3 Units.**

The object of this course is to study the money management industry from the perspective of the user — an investor who wants to invest money. This course will study the main components of the money management industry: mutual funds, hedge funds, private equity funds and venture capital funds. It will also examine important users of the industry such as non profits, endowments and defined benefit pension funds. The emphasis of the course will not be on how fund managers make money, but rather on how the industry is organized, how managerial skill is assessed, how compensation is determined, and how economic rents are divided between managers and investors. The course will explore how competitive market forces interact with managerial skill and other market frictions to give rise to the observed organization of the industry.

**FINANCE 347. Money and Banking. 3 Units.**

This course is designed to help students understand the connections between money (the Federal Reserve), financial markets, and the macroeconomy. How are interest rates determined, and how does the Federal Reserve conduct monetary policy? What economic factors drive the yield curves in different bond markets? We will pay particular attention to the banking system, with an eye toward understanding the function and importance of banks. Topics will include the role of the Federal Reserve as a lender of last resort during the recent, and prior, financial crises, unconventional monetary policy tools such as quantitative easing and forward guidance. We discuss new developments in payment and clearing including cryptocurrencies. We will often begin class with a discussion of current macro-financial market events in the context of our course coverage. The course is appropriate for anyone trying to gain a macroeconomic perspective on capital markets, from investors to bankers, or those simply interested in the linkages between interest rates, banks and the economy.

**FINANCE 350. Corporate Financial Modeling. 4 Units.**

This course will expose students to the fundamentals, best practices, and advanced techniques of corporate financial modeling. We begin with basic operating and integrated financial statement models, and ultimately develop financial models to analyze major corporate transactions, including venture capital funding, mergers and acquisitions, and leverage buyouts. We will integrate theories presented throughout the MBA core, particularly those from accounting and finance, and take a hands-on approach to understand how the theory is implemented in practice. The focus of the course will be on developing critical financial modeling skills, understanding best practices, and recognizing common pitfalls. Students will work on a series of cases and build models that can be used for earnings and pro-forma financial statement forecasts, valuation, the assessment of financing needs, merger analysis, and LBO evaluation. Students will also gain experience presenting financial models and critically assessing them. By the conclusion of the course, students will develop the skills to construct complex financial models and the logical frameworks to utilize them for various organizational applications.

**FINANCE 351. Advanced Corporate Financial Modeling. 4 Units.**

Students will engage in the development of corporate financial modeling cases and solutions. Students will also develop materials to aid others in building financial models, and serve as case leaders during lab workshops. Extensive background in financial modeling and experience with Excel is required.

**FINANCE 361. Behavioral Finance. 4 Units.**

This course provides an introduction to behavioral finance, a discipline which integrates insights from psychology into the study of financial decisions and markets. There will be a focus on understanding the psychological underpinnings of financial decision-making as well as the institutional frictions that may allow these psychological mechanisms to influence economic outcomes. Applications include the pricing of assets relative to fundamental value, trading strategies, managerial behavior, and household savings and investment decisions. Conceptual issues will be emphasized through a mix of case discussions and lectures, and quantitative exercises will serve to develop analytical tools for making financial choices.

**FINANCE 362. Financial Trading Strategies. 3 Units.**

The purpose of this course is to familiarize students with the different types of trading strategies employed by various money management institutions. These financial trading strategies are used to manage the risk and return profiles of specific portfolios. Throughout the sessions, students will be challenged to understand and explore the application and implementation of these different strategies. Trading simulations employed on the Rotman Interactive Trader and Rotman Portfolio Manager (using real market data and computer generated data) will be used extensively in this course as a way to learn and test different strategies. All classes will be held in the new Real-time Analytics and Investment Lab (RAIL), located on the third floor of the Bass Building (B312). Students are expected to attend all sessions. Grades are based on in-class simulation results, class participation, and two written assignments.

**FINANCE 373. Entrepreneurial Finance. 3 Units.**

This is a course about the financial decision-making process largely from the point of view of the CEO of an entrepreneurial venture, ranging from very early to very late stages. The course takes a two-pronged approach: First, we develop tools and concepts of corporate finance related to modeling, valuation, control, and investment decisions within an entrepreneurial context. Second, we use cases with firms at different stages of their life cycles from initial angel or venture capital investments through exit decisions, in order to see the issues that arise when these principles are applied in practice. In some cases we show the viewpoint of the entrepreneur and in others the perspective of the investor. After all, as an entrepreneur, one cannot negotiate effectively without understanding an investor's motivations. Conversely, an investor cannot evaluate a potential investment opportunity without appreciating the entrepreneur's perspective and incentives. Finally, we explore new developments in entrepreneurial finance such as crowdfunding and early liquidity provisions.

**FINANCE 377. China's Financial System. 3 Units.**

This course is a survey of China's financial system, including its banking industry, monetary policy structure, and financial markets (bonds, derivatives, equities, foreign exchange, alternative asset management, and related markets). The goal is an integrated view of how capital, risk, and liquidity are intermediated within China and cross-border. Current trends (including liberalization of markets) will be emphasized. Coverage will be through lectures, reading of both primary source documents and secondary (journalistic and analyst) commentary, as well as a range of subject-matter-expert speakers. Using our special High Immersion Classrooms at Stanford and at the Stanford Center at PKU, this course meets jointly with a parallel course offered at Beijing University. Students will participate actively in class discussion, make a 5-minute topical presentation, and submit a short (10-page) paper.

**FINANCE 381. Private Equity in Frontier Markets: Creating a New Investible Asset Class. 4 Units.**

In 2001, Jim O'Neil of Goldman Sachs wrote a research note which underscored the importance of so-called Emerging Markets to a well-balanced investment portfolio. Still today, most investors have little or no investment exposure beyond North America, Europe, Japan and more recently India, China and Brazil. All of this is just beginning to change. The not yet fully formed investment category called frontier market private equity is emerging and within the next decade is likely to be an asset class of its own. Private equity investments are being made in southeast Asia, in MENA (Middle East/ North Africa), in sub-Saharan countries beyond South Africa and in Latin America. Even fund of funds are appearing across these markets. At the same time, investors face a world of diminished returns expectations in developed economies just as aging demographics and the need for continued growth, innovation and infrastructure renewal places increasing demands for payout. Suffice it to say, investors will be looking beyond traditional asset classes and geographies for sources of return. This new course is designed to expose you to the still emerging, not yet fully formed world of frontier market private equity. To set the context we will start by reviewing the fundamentals of economic growth and development globally. In addition we will discuss the fundamental concepts involved in constructing and evaluating the performance of a large scale investment portfolio. We will then review cases on the elements of the private equity cycle/process and specifically address the special demands of frontier markets in general. We will also focus on issues that are specific to various markets (e.g. Nigeria, Vietnam, etc.). Students taking the course will be given the opportunity to make important contributions to the knowledge base of this still very young field by working in small teams to research topics of personal and general interest, the results of which will be reported to the rest of the class. This course will not be offered next academic year, 2017-2018.

**FINANCE 385. Angel and Venture Capital Financing for Entrepreneurs and Investors. 3 Units.**

This course covers all the stages of funding for early stage high-growth companies, from seed funding to venture capital rounds to a successful exit. We will concentrate on how entrepreneurs and investors make and should make important decisions. Examples of issues that we will cover are: How can entrepreneurs raise funding successfully? What are typical mistakes entrepreneurs make in raising capital and negotiating with investors? How to choose your investor? How to pitch to an investor? How do angels and VCs generate and process their deal flow and select companies? How are VCs involved in business decisions such as recruiting talent and replacing CEOs? What are the important provisions of financial contracts between VCs and founders? How to value early-stage companies? The course is very applied and mostly case-based. We will discuss a lot of nitty-gritty details that is a must for founders and investors. Case protagonists, founders, angels, and VCs will be among guest speakers. No prior knowledge of the VC industry is needed.

**FINANCE 548. The Political Economy of Banking Regulation in US and Europe. 1 Unit.**

The 2007-09 financial crisis exposed the extreme fragility of the financial system and the harm financial crises can cause. Have regulatory reforms in the US and Europe been effective and, if not, how and why? Does it matter if some institutions are "too big to fail," and, if so, how and why? This course will discuss the economic and political forces that are shaping the financial system in US and Europe and evaluate recent and current events that will have important implications for the economy for many years. We will see how politics trumps economics in Washington, London and Brussels in different but broadly predictable ways.

**FINANCE 555. Private Wealth Management and Personal Investing. 2 Units.**

The Private Wealth Management and Personal Investing course will address issues that relate to the management of personal assets as opposed to institutional investing. It will cover the origins and growth of private wealth management as an industry, investment planning, risk management, inter-generational transfers of wealth, philanthropy and tax planning. Special emphasis is on issues surrounding the selection of a wealth manager, how managers may be evaluated, including potential conflicts of interest, and performance measurement. Classes will focus on case studies and various readings. Two instructors will lead the class, one from the GSB and one from the private wealth management industry. Most classes will be augmented by visits from professionals in the wealth management and private banking business. Active class participation and a group project are required.

**FINANCE 559. The World of Investing. 1 Unit.**

This course is a speaker series, exposing students to the world of first-class investors and their philosophies. Each week will have a different visitor describing their investment strategy and experience. Attendance at all sessions is a requirement to pass the course.

**FINANCE 562. Financial Trading Strategies. 2 Units.**

The purpose of this course is to familiarize students with the different types of trading strategies employed by various money management institutions. These financial trading strategies are used to manage the risk and return profiles of specific portfolios. Throughout the sessions, students will be challenged to understand and explore the application and implementation of these different strategies. Trading simulations employed on the Rotman Interactive Trader and Rotman Portfolio Manager (using real market data and computer generated data) will be used extensively in this course as a way to learn and test different strategies. All classes will be held in the new Real-time Analytics and Investment Lab (RAIL), located on the third floor of the Bass Building (B312). Students are expected to attend all sessions. Graded are based on in-class simulation results, class participation, and two written assignments. This course is designed to have a fast learning curve and is a pre-requisite for FIN563, the advanced extension of this course.

**FINANCE 563. Financial Trading Strategies 2. 2 Units.**

This course is an extension of FIN562, Financial Trading Strategies. Students will expand on introductory topics from the Financial Trading Strategies Course and be required to build extensive live-market models and risk management models. Class discussions will closely link current market events and pricing anomalies to theoretical and simulated markets and we will closely study the deviations between them.

**FINANCE 587. Private Equity - An Overview of the Industry. 2 Units.**

This 2-unit elective at the GSB is an overview of the private equity industry including its reason for being and its growth. The course looks at all aspects of private equity partnerships and private equity investing. The course may be of particular interest to five groups of students: (i) students who aspire to be employed in private equity as a career; (ii) students who plan to be employed by companies that are owned by private equity firms; (iii) students who may invest in private equity partnerships as a limited partner; (iv) students who find private equity to be an interesting part of the financial services industry, and (v) students who expect to participate in corporate business development or mergers and acquisitions. The course will meet for nine classes. Each class will have at least one senior partner from a private equity firm to comment on the activities of his firm. In years past, some of the true leaders of the industry have participated. One class will be a mock investment review committee presentation as a final project.

**FINANCE 620. Financial Markets I. 3 Units.**

This course is an introductory PhD level course in financial economics. We begin with individual choice under uncertainty, then move on to equilibrium models, the stochastic discount factor methodology, and no-arbitrage pricing. We will also address some empirical puzzles relating to asset markets, and explore the models that have been developed to try to explain them.

**FINANCE 621. Financial Markets II. 3 Units.**

This course continues F620 and covers a number of main concepts in market microstructure. Among the topics that are covered are (i) Rational Expectations models and their foundations (ii) strategic trading models (iii) models of market and funding liquidity. In addition to the discussion of theoretic models time will be allotted to empirical applications.

**FINANCE 622. Dynamic Asset Pricing Theory. 4 Units.**

This course is an introduction to multiperiod models in finance, mainly pertaining to optimal portfolio choice and asset pricing. The course begins with discrete-time models for portfolio choice and security prices, and then moves to a continuous-time setting. The topics then covered include advanced derivative pricing models, models of the term structure of interest rates, the valuation of corporate securities, portfolio choice in continuous-time settings, and finally general-equilibrium and over-the-counter asset pricing models. Students should have had some previous exposure to general equilibrium theory and some basic courses in investments. Strong backgrounds in calculus, linear algebra, and probability theory are recommended. Problem assignments are frequent and, for most students, demanding. Prerequisite: F620 and MGTECON600 (or equivalent), or permission of instructor.

**FINANCE 624. Corporate Finance Theory. 4 Units.**

This course considers a wide range of topics in theoretical corporate finance (broadly interpreted). Topics include capital structure decisions, agency conflicts in the firm, dividend policy, security design, optimal financial contracting, the theory of the firm, the market for corporate control, and banking and financial intermediation, among others. The primary focus is on how asymmetric information, agency conflicts, strategic interactions, and incomplete contracting affect corporate financial decision-making. The course aims both to familiarize students with influential papers and current research, and to promote new research ideas in the area.

**FINANCE 625. Empirical Asset Pricing. 3 Units.**

This course is an introduction to empirical research in asset pricing. The focus of the course is on the interplay between financial economic theory, econometric method, and that analysis of financial market data. Topics include tests of asset pricing models, return predictability in time-series and cross-section, empirical studies of asset market imperfections, and studies of individual and professional investor behavior. Class discussions will draw on textbooks/monographs and original articles and working papers.

**FINANCE 626. Advanced Corporate Finance. 3 Units.**

This is a course on contemporary theoretical and empirical issues in corporate finance. Building upon the first-year courses in corporate finance theory and empirical methods in finance, we will examine issues in asset pricing applications to corporate finance, dynamic capital structure (dynamic financing decisions), financial distress, financing and investment interactions, and behavioral corporate finance. Both conceptual economic frameworks and econometric methods will be developed as needed. A requirement for this course is that students complete two written projects, one theoretical and one empirical, and at least one of these projects will be presented to the class.

**FINANCE 628. Finance Pre-Seminar Reading Course. 1 Unit.**

Finance Pre-Seminar Reading.

**FINANCE 630. Empirical Corporate Finance. 3 Units.**

This course provides an introduction to empirical research in corporate finance, with an emphasis on the application of cross-sectional and panel data econometric techniques for causal inference. Topics include investment policy, entrepreneurship and innovation, financing decisions, firm ownership, corporate governance, managerial incentives, financial contracting, and the structure and internal organization of firms. The course assumes knowledge of econometrics at the level of MGTECON 603.

**FINANCE 632. Empirical Dynamic Asset Pricing. 3 Units.**

This course explores the interplay between dynamic asset pricing theory, statistical assumptions about sources of risk, and the choice of econometric methods for analysis of asset return data. Therefore, the lectures will be a blend of theory, econometric method, and critical review of empirical studies. Both arbitrage-free and equilibrium preference-based pricing models will be discussed, with particular emphasis given to recent developments and outstanding puzzles in the literature. The prerequisites for F632 are MGTECON 603 - 604, Finance 620, Finance 622, and Finance 625. In particular, I will assume familiarity with dynamic asset pricing theory, at the level of F622; and large-sample theory for least-squares, generalized method-of-moments, and maximum likelihood estimation methods. We will review these methods in the context of specific applications, but this material will not be developed in depth.

**FINANCE 633. Advanced Empirical Corporate Finance. 3 Units.**

This class is devoted to recent developments in the empirical corporate finance literature. Topics include: financial contracting, liquidation and renegotiation, taxation and capital structure, the role of labor markets, leveraged buyouts, executive compensation, the causes and consequences of the financial crisis, and implications of finance for the public sector. The class is very interactive. Many of the sessions will consist of student presentations about the papers from the reading list. We will also further explore empirical methods relevant for applied research in corporate finance, with a focus on identification and panel data issues.

**FINANCE 635. Advanced Topics in Empirical Asset Pricing. 3 Units.**

This course will survey current research topics in empirical asset pricing. The emphasis will be on giving students exposure to active research areas and open questions rather than well-established areas and empirical techniques. Topics may include liquidity, capital market frictions, money management, volatility, investment-based asset pricing, return predictability, bubbles, and consumption-macro asset pricing models.

**FINANCE 637. Macroeconomics and Financial Markets. 3 Units.**

This PhD course will cover research topics at the boundary between macroeconomics and finance. Topics will include the study of macroeconomic models with financial frictions, the term structure of interest rates, conventional and unconventional monetary policy, sovereign debt crises, search frictions and segmentation in housing markets, (over)leveraging by households, heterogeneous expectations, excess volatility, financial bubbles and crises. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance.

**FINANCE 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

**FINANCE 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

**FINANCE 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**FINANCE 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**FINANCE 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

**French (FRENCH)****FRENCH 112. Oscar Wilde and the French Decadents. 3-5 Units.**

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde's *Salomé*, *Picture of Dorian Gray*, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: FRENCH 312

**FRENCH 12. Humanities Core: Great Books, Big Ideas -- Europe, Middle Ages and Renaissance. 3-4 Units.**

This three-quarter sequence asks big questions of major texts in the European and American tradition. What is a good life? How should society be organized? Who belongs? How should honor, love, sin, and similar abstractions govern our actions? What duty do we owe to the past and future? The second quarter focuses on the transition from the Middle Ages to Modernity, Europe's re-acquaintance with classical antiquity and its first contacts with the New World. Authors include Dante, Shakespeare, Machiavelli, Cervantes, and Milton.

Same as: DLCL 12, ENGLISH 112A, HUMCORE 12

**FRENCH 129. Camus. 4-5 Units.**

"The Don Draper of Existentialism" for Adam Gopnik, "the ideal husband of contemporary letters" for Susan Sontag, and "the admirable conjunction of a man, of an action, and of a work" for Sartre, Camus embodies the very French figure of the "intellectuel engagé," or public intellectual. From his birth in 1913 into a poor family in Algeria to the Nobel Prize in Literature in 1957, from Saint Germain-des-Prés to his predilection for the mediterranean culture, Camus captured the quest for universalism, for the politics of justice, and engaged in the great ethical battles of his time, from the fight against nazism and communism, from questioning colonial rules to the haunting Algerian War, and his complex "silence" over the war. Camus the Algerian, Camus the moralist, Camus the Resistant: through readings and films, we will explore his multiple, long-lasting legacies. Readings from Albert Camus, Kamel Daoud, Mouloud Feraoun, Alice Kaplan, Orhan Pamuk, A.B. Yehoshua, Assia Djebar, Jean-Paul Sartre, Yasmina Khadra. Movies include "The Stranger," and "Far from Men." This course is a gateway for French Studies, with special emphasis on oral proficiency. Taught in French.

Same as: CSRE 129, HISTORY 235F

**FRENCH 13. Humanities Core: Great Books, Big Ideas -- Europe, Modern. 3-4 Units.**

This three-quarter sequence asks big questions of major texts in the European and American tradition. What is a good life? How should society be organized? Who belongs? How should honor, love, sin, and similar abstractions govern our actions? What duty do we owe to the past and future? This third and final quarter focuses on the modern period, from the rise of revolutionary ideas to the experiences of totalitarianism and decolonization in the twentieth century. Authors include Locke, Mary Shelley, Marx, Nietzsche, Freud, Weber, Primo Levi, and Frantz Fanon.

Same as: DLCL 13, HISTORY 239C, HUMCORE 13, PHIL 13

**FRENCH 130. Introduction to Medieval and Renaissance French Literature. 4 Units.**

Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics (*La Chanson de Roland*), medieval romances (*Tristan, Chrétien de Troyes' Yvain*), post-Petrarchan poetics (*Du Bellay, Ronsard, Labé*), and prose humanists (*Rabelais, Montaigne*). Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

**FRENCH 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France. 4 Units.**

The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings may include *Corneille, Molière, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges*. Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

**FRENCH 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France. 4 Units.**

This course will explore several important texts of 19th- and 20th-Century French literature, with the aim of following the evolution of the main literary movements during those centuries of important cultural and social changes. We will study texts related to movements such as Romanticism, Realism, Naturalism, Surrealism, the Absurd, the Nouveau Roman in all major genres (prose, poetry, theater, film) and will regularly refer to other arts, such as painting and music. Authors include Chateaubriand, Musset, Balzac, Flaubert, Maupassant, Baudelaire, Rimbaud, Apollinaire, Proust, Céline, Radiguet, Ionesco, Robbe-Grillet, Duras, Gary. All readings, discussion, and assignments are in French.

**FRENCH 133. Literature and Society in Africa and the Caribbean. 4 Units.**

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Special guest: LEILA SLIMANI (Goncourt Prize 2016). Required readings include: Leila Slimani, *Le Sexe et Mensonges au Maroc*, Albert Memmi, "La Statue de Sel," Kaouther Adimi, "L'Envers des autres", Maryse Condé, "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", *Les Baies d'Alger*. nTaught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: AFRICAAM 133, AFRICAST 132, JEWISHST 143

**FRENCH 140. Paris: Capital of the Modern World. 4-5 Units.**

This course explores how Paris, between the eighteenth and twentieth centuries, became the political, cultural, and artistic capital of the modern world. It considers how the city has both shaped and been shaped by the tumultuous events of modern history- class conflict, industrialization, imperialism, war, and occupation. It will also explore why Paris became the major world destination for intellectuals, artists and writers. Sources will include films, paintings, architecture, novels, travel journals, and memoirs.

Same as: FRENCH 340, HISTORY 230C, URBANST 184

**FRENCH 145B. The African Atlantic. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during early and modern periods of globalization across the Atlantic, including the middle passage, exploration and colonialism, black internationalism, decolonization, immigration, and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of self-making or new citizenship, to evoke histories of racial unity or examine psychic and social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Conrad, Condé, Olinto), epic and prose poetry (Césaire, Walcott), theoretical reflection (Gilroy, Glissant, Mudimbe, Benitez-Rojo), and literary autobiography (Barack Obama, Saidiya Hartman). Note: To be eligible for WAYS credit, you must take COMPLIT 145B for a minimum of 3 Units and a Letter Grade.

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 345B

**FRENCH 156. Global May 1968. 3-5 Units.**

In April 1968, a group of students occupied their university residences, and were later forced out by the police who had stormed the campus. The students were protesting the university's links with the army. This student occupation did not take place in the 5th arrondissement of central Paris, home to the famous Sorbonne University at the heart of the student protests of May '68, but in Harlem at Columbia University in New York. May 1968 in Paris has come to symbolize - not just in France, but across the globe - the critical role of the young and of workers in the greatest upheavals in social, political and cultural life to take place since the Second World War. This course, which coincides with the 50th anniversary of this global event, will introduce students to the movements and happenings that took place in France and worldwide in and around May 1968. It will explore how these events and their afterlives shaped then and now French and global conversations around nationalism, imperialism, capital, gender, culture, globalization, and aesthetics. NOTE: To be eligible for WAYS credit, you must take FRENCH 136 for a minimum of 3 Units and a Letter Grade.

Same as: FRENCH 356

**FRENCH 157. Love and Lust in the French Empire, 1830-1962. 5 Units.**

Can we write the history of private life? Throughout this course, we will try out different historical approaches to the history of intimate matters in the French Empire. Beyond a more complete understanding of what colonialism was like, studying the intimate draws attention to the societal norms and anxieties of the nineteenth and twentieth centuries. Patriarchy, racism, and classism the power structures inherent in colonialism; produce fruitful sites for prying into intimate matters. To that end, we will probe a wide variety of primary sources, including novels, films, paintings, letters, diaries, travel accounts produced by male and female Europeans, Africans, Arabs, and East Asians. Topics covered through these sources include, colonial masculinity and femininity; divorce; homosexuality; prostitution; and sexual violence. We will transcend racial and class divides, and cover a diverse geography including, France, North and West Africa, and Vietnam.

Same as: FEMGEN 37S, HISTORY 37S

**FRENCH 166. Food, Text, Music: A Multidisciplinary Lab on the Art of Feasting. 3-5 Units.**

Students cook a collection of unfamiliar recipes each week while learning about the cultural milieus in which they originated. The course focuses on the fourteenth and fifteenth centuries, a time of great banquets that brought together chefs, visual artists, poets, musicians, and dancers. Students read late-medieval cookbooks under the guidance of professional chefs, learn songs and poetry with the help of visiting performers, and delve into a burgeoning scholarly literature on food history and sensory experience. We will also study trade routes and food networks, the environmental impact of large-scale banquets, the science of food, and the politics of plenty. This course may count towards the Medieval component of the French major, and corresponds to DLCL 121, a course requirement for the Medieval Studies Minor. Students interested in applying for course need to email Professors Galvez and Rodin (mailto:mgalvez@stanford.edu and mailto:jrodin@stanford.edu) with a statement of intent and dietary restrictions/preferences. Same as: FRENCH 366, MUSIC 133, MUSIC 333

**FRENCH 175. CAPITALS: How Cities Shape Cultures, States, and People. 3-5 Units.**

This course takes students on a trip to eight capital cities, at different moments in time: Renaissance Florence, Golden Age Madrid, Colonial Mexico City, Enlightenment and Romantic Paris, Existential and Revolutionary St. Petersburg, Roaring Berlin, Modernist Vienna, and bustling Buenos Aires. While exploring each place in a particular historical moment, we will also consider the relations between culture, power, and social life. How does the cultural life of a country intersect with the political activity of a capital? How do large cities shape our everyday experience, our aesthetic preferences, and our sense of history? Why do some cities become cultural capitals? Primary materials for this course will consist of literary, visual, sociological, and historical documents (in translation); authors we will read include Boccaccio, Lope de Vega, Sor Juana, Montesquieu, Baudelaire, Dostoyevsky, Irmgard Keun, Freud, and Borges. Note: To be eligible for WAYS credit, you must take the course for a minimum of 3 Units and a Letter Grade.

Same as: COMPLIT 100, DLCL 100, GERMAN 175, HISTORY 206E, ILAC 175, ITALIAN 175, URBANST 153

**FRENCH 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**FRENCH 187. Sex, Gender, and Violence: French Women Writers Today. 3-5 Units.**

Long before the 2017 #MeToo campaign, French women writers have explored through powerful fictions and autobiographies the different shades of economic, social, psychological, physical, or sexual violence that are exerted against, but also by and between, women. How does literature - the power of words - address, deconstruct or comfort power dynamics (during sex and between the sexes) that are usually silenced, taboo or unspeakable? We will contrast these narrative to debates among French feminist writers (Beauvoir, Badinter, Mona Ozouf, Françoise Héritier, Michelle Perrot) around the theory (or myth?) of a specifically French kind of gender relation (ex: "galanterie," "séduction"). Themes explored: sex and gender, sex and power, rape culture, sexual and moral taboos (incest, abortion, pornography, infanticide), the body as social stigma or source of meaning, identity, power. Special attention will be given to narrative and descriptive strategies designed to avert, expose, deconstruct or account for specifically feminine experiences (rape, orgasm, pregnancy). Award-winning author Leila Slimani will participate in person in the class discussion of her novel on infanticide. Authors include Marie Darrieusecq, Christine Angot, Annie Ernaux, Marie NDiaye, Virginie Despentes, Leila Slimani, Ivan Jablonka. Taught in French. Same as: FEMGEN 187X, FEMGEN 287X, FRENCH 287, FRENCH 387

**FRENCH 192. Women in French Cinema: 1958-. 3-5 Units.**

Women as objects and subjects of the voyeuristic gaze inherent to cinema. The myth of the feminine idol in French films in historical and cultural context since the New Wave until now. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern, culturally mixed nation. The evolution of female characters, roles, actresses, directors in the film industry. Filmmakers include Vadim, Truffaut, Varda, Godard, Ozon, Coline Serreau, Tonie Marshall, Maiwén. Discussion in English; films in French with English subtitles. 3 units, 4 units or 5 units. NOTE: FILMSTUD students must take this course for 3 units only. Same as: FEMGEN 192, FILMSTUD 112

**FRENCH 199. Individual Work. 1-12 Unit.**

Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.

**FRENCH 205. Songs of Love and War: Gender, Crusade, Politics. 3-5 Units.**

Analysis of medieval love, satirical and Crusade lyrics of the troubadours. Study of deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Course readings include medieval treatises on lyric and modern translations of the troubadour tradition. Works by Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesse de Dia, Thibaut de Champagne, Raimon Vidal, Dante, and Pound. Taught in English. Course includes a lab component for creation of multi-media translation projects: trobar. stanford.edu. Same as: FEMGEN 205

**FRENCH 219. The Renaissance Body in French Literature and Medicine. 3-5 Units.**

If the Renaissance is famous for discovering unknown continents and ancient texts the body too was a new territory of conquest. How did literature respond to the rise of an anatomical gaze in the arts and in medicine and how did it stage the aesthetic religious philosophical and moral issues related to such a promotion or deconstruction of the body? Does literature aim at representing the body or does it use it instead as a ubiquitous signifier for intellectual emotional and political ideas? The locus of desire, pleasure and disease, the body also functioned as a reminder of human mortality and was caught in the web of gender issues, religious controversies and new norms of behavior. Texts from prose fiction (Rabelais) poetry (Scève Ronsard Labé D'Aubigné) essays (Montaigne) and emblem literature. Extra documents include music scores tapestries paintings philosophical and anatomical plates from medical treatises. Taught in English; readings in French and English. Same as: FRENCH 319

**FRENCH 228. Science, technology and society and the humanities in the face of the looming disaster. 3-5 Units.**

How STS and the Humanities can together help think out the looming catastrophes that put the future of humankind in jeopardy. Same as: ITALIAN 228, POLISCI 233F

**FRENCH 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of The Lancet for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, HUMBIO 175L, MED 234

**FRENCH 230. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.**

An intensive reading of Vico's New Science with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's New Science and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book The Savage Mind. Taught in English. Same as: FRENCH 330, ITALIAN 327

**FRENCH 239. The Afterlife of the Middle Ages. 3-5 Units.**

Literary works that evoke a medieval past in contrast to a historical present, and critical texts that treat aspects of the medieval or medievalism. How does the concept of medievalism emerge and evolve through the ages? Topics include periodization, philology, critical theory, the study of Gothic architecture, and the use of the term medieval in modern political discourse and postcolonial studies. Authors include Burckhardt, Camille, Chateaubriand, Chrétien de Troyes, Didi-Huberman, Jauss, Michelet, Panofsky, Pound, films by Dreyer and Bergman, and contemporary poetry. Taught in English. Same as: FRENCH 339

**FRENCH 246. Body over Mind. 3-5 Units.**

How does modern fiction, aided by modern philosophy, give the lie to Descartes' famous "I think therefore I am"? And how does writing convey the desire for a different, perhaps stronger, integration of mind and body? Does the body speak a particular truth that we must learn to hear, that the mind is not always connected to? How do modern metaphors for the mind-body connection shape our experience? These questions will be explored via the works of major French and Italian writers and thinkers, including Pirandello, Calvino, Camus, Houellebecq, Sartre, and Agamben. Same as: FRENCH 346, ITALIAN 346

**FRENCH 249. The Algerian Wars. 3-5 Units.**

From Algiers the White to Algiers the Red, Algiers, the Mecca of the Revolutionaries in the words of Amílcar Cabral, this course offers to study the Algerian Wars since the French conquest of Algeria (1830-) to the Algerian civil war of the 1990s. We will revisit the ways in which the war has been narrated in literature and cinema, popular culture, and political discourse. A special focus will be given to the Algerian War of Independence (1954-1962). The course considers the racial representations of the war in the media, the continuing legacies surrounding the conflict in France, Africa, and the United States, from Che Guevara to the Black Panthers. A key focus will be the transmission of collective memory through transnational lenses, and analyses of commemorative events and movies. Readings from James Baldwin, Assia Djebar, Albert Camus, Frantz Fanon, Mouloud Feraoun. Movies include "The Battle of Algiers," "Days of Glory," and "Viva Laldjérie."

NTaught in English.

Same as: CSRE 249, HISTORY 239G, JEWISHST 249

**FRENCH 252. Art and Power: From Royal Spectacle to Revolutionary Ritual. 3-5 Units.**

From the Palace of Versailles to grand operas to Jacques-Louis David's portraits of revolutionary martyrs, rarely have the arts been so powerfully mobilized by the State as in early modern France. This course examines how the arts were used from Louis XIV to the Revolution in order to broadcast political authority across Europe. We will also consider the resistance to such attempts to elicit shock-and-awe through artistic patronage. By studying music, architecture, garden design, the visual arts, and theater together, students will gain a new perspective on works of art in their political contexts. But we will also examine the libelous pamphlets and satirical cartoons that turned the monarchy's grandeur against itself, ending the course with an examination of the new artistic regime of the French Revolution. The course will be taught in English with the option of French readings for departmental majors.

Same as: ARTHIST 252A

**FRENCH 254. Was Deconstruction an Illusion?. 3-5 Units.**

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified or the result of a misunderstanding. Participation through English translations is possible.

**FRENCH 260. Italy, France, and Postcolonialism. 3-5 Units.**

The starting point for our seminar is the question of how postcolonial thought enhances our possible understandings of Italy - as a nation, as a territorial unit coalescing cultural parts that remain disparate to this day, and as a population that has not come fully to terms with its fascist history, its crimes in World War II, or the atrocities it perpetrated as a colonizing state. The Italian case is unusual compared to others, in that the country's colonial past in north and east Africa is still being uncovered after a long period of public silence and government suppression; and what might be called the postcolonial Italian project has begun only recently, driven by a distinct minority of scholars, 'migrant' authors, and activists. French cultural politics and history are often taken as a point of reference from which to analyze Italian phenomena. In this case, we will make use of the French postcolonial tradition as a point of both comparison and differentiation. Among other things, we will focus on the different meanings of 'postcolonial' in a country that is strongly centralized (France) and another which is unremittingly fragmented (Italy). As just one example, we will scrutinize how Gramsci's work has been understood in Anglophone and Francophone criticism (cultural studies, Subaltern studies, and so on), as opposed to how it may be read in its original Italian context, where it concerned subalterns within the nation-state. Asking what is postcolonial, for whom, when, and where?, ultimately our goal is to discern the specific contours of Italy's postcolonialism by juxtaposing it with France's, and to simultaneously ask what light can be shed on French postcolonial particularities by placing it in this dialogue. Beginning with fundamental historical readings (Gramsci, Fanon, Memmi) and touching on some early Anglophone postcolonial critics (Said, Bhabha), the seminar will then be structured around key literary and theoretical readings from Italy and France. Ideally, readings will be in the original language, but as often as possible they will be selected such that they will be accessible in English translation as well. Taught in English.

**FRENCH 261. War and Peace: Writings by and about Veterans in the 20th and 21st Centuries. 2-5 Units.**

Since the aftermath of World War One, and with increasing urgency in contemporary America, stories about and by veterans are assigned a double role: that of exposing the horror of war yet also defending the possibility of a just war, and that of healing both veterans themselves and the society they return to. Key questions for this course are: Given the current practice of using writing and the hero's journey as a model for healing veterans and making their voices heard in our culture, can we look back to post-World-War-One culture and see if writing fulfills a similar function? And given how many post-World-War-One veterans became famous writers, how do we assess the interplay between literature, poetry, memoir, journalism, personal letters, photo accounts? Is there a connection between artistic innovation and the capacity to heal? Same as: FRENCH 361, ITALIAN 261, ITALIAN 361

**FRENCH 270. Les Misérables. 3-5 Units.**

*Les Misérables* is a true monument to XIXth century France. Yet, though everyone has heard of it, few have actually read it. In this seminar, we will correct this by reading the whole tome and by discussing its relevance to both its historical context and our current world. A monstrous novel spanning about 1800 pages, *Les Misérables* also spans a whole century of political conflict, social strife, cultural transformations, a personal drama. During the course of the quarter, we will go slowly through the novel, by turning our attention during each session to a specific topic present in the reading for the day. Those topics will include, among others, religion, the role of women in society, romanticism, war, Paris in the XIXth century, revolution, and justice. Taught in French. Same as: FRENCH 370

**FRENCH 272. Body Doubles: From the Fantastic Short Story to Science-Fiction. 2-5 Units.**

How do we imagine our bodies through language, at times almost completely refashioning a physical double, be it idealized or abject? How do such body doubles intersect with our sense of self, defining or redefining sexual identity, spiritual aspirations, illness and recovery, and the senses themselves, as our window into reality? This course focuses on short stories from the late 19th- and early 20th-century fantastic genre, and science fiction stories from the following turn of the century, 100 years later: in these revealing instances, body doubles often seem to acquire a will of their own, overwhelming normal physical identity. Same as: FRENCH 372, ITALIAN 272, ITALIAN 372

**FRENCH 287. Sex, Gender, and Violence: French Women Writers Today. 3-5 Units.**

Long before the 2017 #MeToo campaign, French women writers have explored through powerful fictions and autobiographies the different shades of economic, social, psychological, physical, or sexual violence that are exerted against, but also by and between, women. How does literature - the power of words - address, deconstruct or comfort power dynamics (during sex and between the sexes) that are usually silenced, taboo or unspeakable? We will contrast these narrative to debates among French feminist writers (Beauvoir, Badinter, Mona Ozouf, Françoise Héritier, Michelle Perrot) around the theory (or myth?) of a specifically French kind of gender relation (ex: "galanterie," "séduction"). Themes explored: sex and gender, sex and power, rape culture, sexual and moral taboos (incest, abortion, pornography, infanticide), the body as social stigma or source of meaning, identity, power. Special attention will be given to narrative and descriptive strategies designed to avert, expose, deconstruct or account for specifically feminine experiences (rape, orgasm, pregnancy). Award-winning author Leïla Slimani will participate in person in the class discussion of her novel on infanticide. Authors include Marie Darrieusecq, Christine Angot, Annie Ernaux, Marie NDiaye, Virginie Despentes, Leïla Slimani, Ivan Jablonka. Taught in French. Same as: FEMGEN 187X, FEMGEN 287X, FRENCH 187, FRENCH 387

**FRENCH 312. Oscar Wilde and the French Decadents. 3-5 Units.**

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde's *Salomé*, *Picture of Dorian Gray*, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome. Same as: FRENCH 112

**FRENCH 319. The Renaissance Body in French Literature and Medicine. 3-5 Units.**

If the Renaissance is famous for discovering unknown continents and ancient texts the body too was a new territory of conquest. How did literature respond to the rise of an anatomical gaze in the arts and in medicine and how did it stage the aesthetic religious philosophical and moral issues related to such a promotion or deconstruction of the body? Does literature aim at representing the body or does it use it instead as a ubiquitous signifier for intellectual emotional and political ideas? The locus of desire, pleasure and disease, the body also functioned as a reminder of human mortality and was caught in the web of gender issues, religious controversies and new norms of behavior. Texts from prose fiction (Rabelais) poetry (Scève Ronsard Labé D'Aubigné) essays (Montaigne) and emblem literature. Extra documents include music scores tapestries paintings philosophical and anatomical plates from medical treatises. Taught in English; readings in French and English. Same as: FRENCH 219

**FRENCH 320. The Posthumanistic Subject. 3-5 Units.**

The course will examine the need to rethink the traditional western idea of the strong subject. Through close readings of works by Agamben, Braidotti, Derrida, Deleuze, Hall, Haraway, Latour, Wolfe, among others, this course will explore posthumanist theories of individual and collective subjectivity that challenge traditional ways of defining the human and the non-human subject/person and promote fundamental reconsideration of issues such as agency, autonomy, essence, freedom, dignity, otherness, substance, personhood, sociality, and life itself. The course would consider, how we can empower the subject and community in order to develop a desired model of participatory democracy. Prerequisite: graduate standing or consent of instructor.

**FRENCH 322. Decadence and Modernism from Mallarmé to Marinetti. 1-2 Unit.**

One hundred years ago, artists feared their work was incompatible with modern economic systems, secular bourgeois values, and materialist science. Accused of being decadent, they took up this term of derision and made it into a program of rebellion that has shaped modern art. This course explores decadent rebellion, with an eye toward how the last turn of the century might be similar to our current one. Writers include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d'Annunzio, Valéry, Ungaretti, Marinetti, and Breton; we will also consider parallels in the visual arts.

**FRENCH 330. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.**

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English. Same as: FRENCH 230, ITALIAN 327

**FRENCH 331. The Craft of Confession and Its Cultural Contexts. 5 Units.**

Course examines medieval treatises and literature relating to the practice of confession as well as modern examples, with a focus on medieval concern with a sincere and authentic confession in theological, ethical, and aesthetic terms. Study includes expressions of subjectivity, institutional frameworks of confession, and the phenomenon as an instrument for political activity such as crusade. Texts: Augustine's *Confessions*, pastoral treatises, Aquinas, Arthurian romances concerning the grail legend, crusade lyric, and Foucault; films such as Dreyer and martyrdom videos. Taught in French.

**FRENCH 335A. Animism and Alter-Native Modernities. 5 Units.**

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour). Same as: ANTHRO 335A, REES 335A

**FRENCH 339. The Afterlife of the Middle Ages. 3-5 Units.**

Literary works that evoke a medieval past in contrast to a historical present, and critical texts that treat aspects of the medieval or medievalism. How does the concept of medievalism emerge and evolve through the ages? Topics include periodization, philology, critical theory, the study of Gothic architecture, and the use of the term medieval in modern political discourse and postcolonial studies. Authors include Burckhardt, Camille, Chateaubriand, Chrétien de Troyes, Didi-Huberman, Jauss, Michelet, Panofsky, Pound, films by Dreyer and Bergman, and contemporary poetry. Taught in English. Same as: FRENCH 239

**FRENCH 339A. Technologies of Extinctions: Ecocides and Genocides. 5 Units.**

This course will explore the relationship between history, ecological evolution and mass killing in the age of humanly caused species extinction. It will explore the universalization of the notion of the Jewish Holocaust, its use to integrate into genocide studies the Native American "spiritual" holocaust, the Japanese nuclear holocaust and the Rwandan genocide, and the ethical dilemmas posed by the ideas of biotic, animal and ecological holocausts. Anthropology and history of genocides and extinctions as well as posthumanist, multispecies theories will provide theoretical frames for the course. Same as: ANTHRO 339A

**FRENCH 340. Paris: Capital of the Modern World. 4-5 Units.**

This course explores how Paris, between the eighteenth and twentieth centuries, became the political, cultural, and artistic capital of the modern world. It considers how the city has both shaped and been shaped by the tumultuous events of modern history- class conflict, industrialization, imperialism, war, and occupation. It will also explore why Paris became the major world destination for intellectuals, artists and writers. Sources will include films, paintings, architecture, novels, travel journals, and memoirs.

Same as: FRENCH 140, HISTORY 230C, URBANST 184

**FRENCH 341A. Post-secular Humanities: Religion and Spirituality in the Contemporary World. 5 Units.**

The term "postsecularism" refers to various theories and approaches regarding the revival of religion in the present, as well as current reevaluations of the relationship between faith and reason in knowledge building. When thinking about a postsecular humanities, the course would follow scholars that are usually associated with this trend (like Agamben, Badiou, Derrida, Habermas), on the one hand, and discuss Braidotti's ideas of a new vitalism, Chakrabarty's postcolonial postsecularism, and Harvey's new animism, on the other. The course will examine the way interactions and collisions among various worldviews can provoke the rethinking of key ideas of our times: what it means to be secular, religious, a citizen, a hybrid, an indigenous, a non-human. Same as: ANTHRO 340A, REES 340A

**FRENCH 343. In Defense of Poetry. 3-5 Units.**

Beginning with the account of the quarrel between philosophy and poetry in Plato's Republic, we will read definitions and defenses of poetry by authors such as Cicero, Horace, Petrarch, Boccaccio, Sidney, Shelley, and Pound, among others. While we will try to historicize these authors' defenses as much as possible, we will also read them from the perspective of contemporary efforts to defend literature and the humanities. Topics of central concern will be the connection between poetry and ethics, the conflict between poetry and the professions of business, law, and medicine, poetry's place in the university, the political role of the poet, questions of poetic language and form, and the relevance of defenses of poetry to literary theory.

**FRENCH 345B. The African Atlantic. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during early and modern periods of globalization across the Atlantic, including the middle passage, exploration and colonialism, black internationalism, decolonization, immigration, and diasporic return. We will begin with Equiano's Interesting Narrative (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of self-making or new citizenship, to evoke histories of racial unity or examine psychic and social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Conrad, Condé, Olinto), epic and prose poetry (Césaire, Walcott), theoretical reflection (Gilroy, Glissant, Mudimbe, Benitez-Rojo), and literary autobiography (Barack Obama, Saidiya Hartman). Note: To be eligible for WAYS credit, you must take COMPLIT 145B for a minimum of 3 Units and a Letter Grade.

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B

**FRENCH 346. Body over Mind. 3-5 Units.**

How does modern fiction, aided by modern philosophy, give the lie to Descartes' famous "I think therefore I am"? And how does writing convey the desire for a different, perhaps stronger, integration of mind and body? Does the body speak a particular truth that we must learn to hear, that the mind is not always connected to? How do modern metaphors for the mind-body connection shape our experience? These questions will be explored via the works of major French and Italian writers and thinkers, including Pirandello, Calvino, Camus, Houellebecq, Sartre, and Agamben. Same as: FRENCH 246, ITALIAN 346

**FRENCH 356. Global May 1968. 3-5 Units.**

In April 1968, a group of students occupied their university residences, and were later forced out by the police who had stormed the campus. The students were protesting the university's links with the army. This student occupation did not take place in the 5th arrondissement of central Paris, home to the famous Sorbonne University at the heart of the student protests of May '68, but in Harlem at Columbia University in New York. May 1968 in Paris has come to symbolize - not just in France, but across the globe - the critical role of the young and of workers in the greatest upheavals in social, political and cultural life to take place since the Second World War. This course, which coincides with the 50th anniversary of this global event, will introduce students to the movements and happenings that took place in France and worldwide in and around May 1968. It will explore how these events and their afterlives shaped then and now French and global conversations around nationalism, imperialism, capital, gender, culture, globalization, and aesthetics. NOTE: To be eligible for WAYS credit, you must take FRENCH 136 for a minimum of 3 Units and a Letter Grade.

Same as: FRENCH 156

**FRENCH 36. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, RELIGST 21X, SLAVIC 36

**FRENCH 361. War and Peace: Writings by and about Veterans in the 20th and 21st Centuries. 2-5 Units.**

Since the aftermath of World War One, and with increasing urgency in contemporary America, stories about and by veterans are assigned a double role: that of exposing the horror of war yet also defending the possibility of a just war, and that of healing both veterans themselves and the society they return to. Key questions for this course are: Given the current practice of using writing and the hero's journey as a model for healing veterans and making their voices heard in our culture, can we look back to post-World-War-One culture and see if writing fulfills a similar function? And given how many post-World-War-One veterans became famous writers, how do we assess the interplay between literature, poetry, memoir, journalism, personal letters, photo accounts? Is there a connection between artistic innovation and the capacity to heal?.

Same as: FRENCH 261, ITALIAN 261, ITALIAN 361

**FRENCH 366. Food, Text, Music: A Multidisciplinary Lab on the Art of Feasting. 3-5 Units.**

Students cook a collection of unfamiliar recipes each week while learning about the cultural milieus in which they originated. The course focuses on the fourteenth and fifteenth centuries, a time of great banquets that brought together chefs, visual artists, poets, musicians, and dancers. Students read late-medieval cookbooks under the guidance of professional chefs, learn songs and poetry with the help of visiting performers, and delve into a burgeoning scholarly literature on food history and sensory experience. We will also study trade routes and food networks, the environmental impact of large-scale banquets, the science of food, and the politics of plenty. This course may count towards the Medieval component of the French major, and corresponds to DLCL 121, a course requirement for the Medieval Studies Minor. Students interested in applying for course need to email Professors Galvez and Rodin (mailto:mgalvez@stanford.edu and mailto:jrodin@stanford.edu) with a statement of intent and dietary restrictions/preferences.

Same as: FRENCH 166, MUSIC 133, MUSIC 333

**FRENCH 369. Introduction to the Profession of Literary Studies. 1-2 Unit.**

A survey of how literary theory and other methods have been made institutional since the nineteenth century. The readings and conversation are designed for entering Ph.D. students in the national literature departments and comparative literature.

Same as: COMPLIT 369, DLCL 369, GERMAN 369, ITALIAN 369

**FRENCH 370. Les Misérables. 3-5 Units.**

*Les Misérables* is a true monument to XIXth century France. Yet, though everyone has heard of it, few have actually read it. In this seminar, we will correct this by reading the whole tome and by discussing its relevance to both its historical context and our current world. A monstrous novel spanning about 1800 pages, *Les Misérables* also spans a whole century of political conflict, social strife, cultural transformations, a personal drama. During the course of the quarter, we will go slowly through the novel, by turning our attention during each session to a specific topic present in the reading for the day. Those topics will include, among others, religion, the role of women in society, romanticism, war, Paris in the XIXth century, revolution, and justice. Taught in French.

Same as: FRENCH 270

**FRENCH 372. Body Doubles: From the Fantastic Short Story to Science-Fiction. 2-5 Units.**

How do we imagine our bodies through language, at times almost completely refashioning a physical double, be it idealized or abject? How do such body doubles intersect with our sense of self, defining or redefining sexual identity, spiritual aspirations, illness and recovery, and the senses themselves, as our window into reality? This course focuses on short stories from the late 19th- and early 20th-century fantastic genre, and science fiction stories from the following turn of the century, 100 years later: in these revealing instances, body doubles often seem to acquire a will of their own, overwhelming normal physical identity.

Same as: FRENCH 272, ITALIAN 272, ITALIAN 372

**FRENCH 387. Sex, Gender, and Violence: French Women Writers Today. 3-5 Units.**

Long before the 2017 #MeToo campaign, French women writers have explored through powerful fictions and autobiographies the different shades of economic, social, psychological, physical, or sexual violence that are exerted against, but also by and between, women. How does literature - the power of words - address, deconstruct or comfort power dynamics (during sex and between the sexes) that are usually silenced, taboo or unspeakable? We will contrast these narrative to debates among French feminist writers (Beauvoir, Badinter, Mona Ozouf, Françoise Héritier, Michelle Perrot) around the theory (or myth?) of a specifically French kind of gender relation (ex: "galanterie," "séduction"). Themes explored: sex and gender, sex and power, rape culture, sexual and moral taboos (incest, abortion, pornography, infanticide), the body as social stigma or source of meaning, identity, power. Special attention will be given to narrative and descriptive strategies designed to avert, expose, deconstruct or account for specifically feminine experiences (rape, orgasm, pregnancy). Award-winning author Leila Slimani will participate in person in the class discussion of her novel on infanticide. Authors include Marie Darrieusecq, Christine Angot, Annie Ernaux, Marie NDiaye, Virginie Despentes, Leila Slimani, Ivan Jablonka. Taught in French.

Same as: FEMGEN 187X, FEMGEN 287X, FRENCH 187, FRENCH 287

**FRENCH 395. Philosophical Reading Group. 1 Unit.**

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English.

Same as: COMPLIT 359A, ITALIAN 395

**FRENCH 398. Intensive Reading in French/Italian. 10 Units.**

Enrollment is limited to French/Italian Ph.D. students. Course is designed for French/Italian Ph.D. students to prepare for department milestone exams.

Same as: ITALIAN 398

**FRENCH 399. Individual Work. 1-12 Unit.**

For students in French working on special projects or engaged in pre-dissertation research.

**FRENCH 75N. Narrative Medicine and Near-Death Experiences. 3 Units.**

Even if many of us don't fully believe in an afterlife, we remain fascinated by visions of it. This course focuses on Near-Death Experiences and the stories around them, investigating them from the many perspectives pertinent to the growing field of narrative medicine: medical, neurological, cognitive, psychological, sociological, literary, and filmic. The goal is not to understand whether the stories are veridical but what they do for us, as individuals, and as a culture, and in particular how they seek to reshape the patient-doctor relationship. Materials will span the 20th century and come into the present. Taught in English.

Same as: ITALIAN 75N

**FRENCH 801. TGR Project. 0 Units.****FRENCH 802. TGR Dissertation. 0 Units.****FRENCH 87N. The New Wave: How The French Reinvented Cinema. 3-4 Units.**

Focus on the French New Wave's cinematic revolution of 1959-1962. In a few years, the Nouvelle Vague delivered landmark works such as Truffaut's *400 Blows*, Godard's *Breathless*, Chabro's *Le Beau Serge* or Resnais' *Hiroshima mon amour*, and changed forever the way we make and think about movies. Why did these films look so radically fresh? What do they say about France's youth culture in the early 60s? How is the author's theory behind them still influencing us today? Focus is on cultural history, aesthetic analysis, interpretation of narrative, sound and visual forms. Taught in English.

## Genetics (GENE)

**GENE 104Q. Law and the Biosciences. 3 Units.**

Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

**GENE 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**GENE 19SI. Impact Investing in Neuroscience. 2 Units.**

The course will feature seminar-style lectures to examine various scenarios of investing for impact, incorporating both social and financial return metrics. Primary focus will be on developing ideas on best practices that will guide efficient allocation of funding in research, and early and later stage ventures for the advancement of the neuroscience sector and its impact on patients worldwide. Students will be able to engage with invited guest speakers, professionals within academia, non-profit and for-profit sectors, and learn about current practices in impact investing.

**GENE 200. Genetics and Developmental Biology Training Camp. 1 Unit.**

Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.

Same as: DBIO 200

**GENE 202. Human Genetics. 4 Units.**

Utilizes lectures and small group activities to develop a working knowledge of human genetics as applicable to clinical medicine. Basic principles of inheritance, risk assessment, and population genetics are illustrated using examples drawn from diverse areas of medical genetics practice including prenatal, pediatric, adult and cancer genetics. Practical aspects of molecular and cytogenetic diagnostic methods are emphasized. Existing and emerging treatment strategies for single gene disorders are also covered. Prerequisites: basic genetics. Only available to MD and MOM students.

**GENE 204. Essentials of Multidimensional Flow Cytometry. 1 Unit.**

Keep pace with automated flow cytometry data analysis via hands-on training. Learn how to design multicolor flow cytometry experiments. Elements of quantitative flow cytometry. Course for all students, staff and faculty. Prerequisite is background in topic.

**GENE 205. Advanced Genetics. 3 Units.**

For PhD students in any of the Biosciences Departments and Programs at Stanford University. Emphasis on developing the ability to solve problems using genetic ideas and methods, to understand the nature and reliability of genetic inference, and to apply genetic reasoning to biological research. Weekly paper discussions based on original research papers that define or illustrate the ideas and techniques covered in the lecture.

**GENE 207. Microfluidic Device Laboratory. 3-4 Units.**

This course exposes students to the design, fabrication, and testing of microfluidic devices for biological applications through combination of lectures and hands-on lab sessions. In teams of two, students will produce a working prototype devices designed to address specific design challenges within the biological community using photolithography, soft lithography, and imaging techniques.

Same as: BIOE 301D

**GENE 208. Gut Microbiota in Health and Disease. 2-3 Units.**

Preference to graduate students. Focus is on the human gut microbiota. Students enrolling for 3 units receive instruction on computational approaches to analyze microbiome data and must complete a related project.

Same as: BIOE 221G, MI 221

**GENE 209. Current Topics in Human, Population, and Statistical Genomics. 2 Units.**

Intensive seminar/workshop. Topics, drawn from current and past literature, may include: assessing and population genetic analysis of genomic variation; genome-to-phenome mapping; reconstructing demographic history from genome sequence data; domestication genomics; host-pathogen genome evolution; detecting signatures of selection; experimental design in human genetics; linkage and association mapping; ethical and social issues in human, plant, and animal genetics research. Emphasis on analysis and logic or experimental and observational genomics research. Faculty-led discussion with evaluation of response papers, problem sets, and intensive course project. May be repeated for credit.

**GENE 210. Genomics and Personalized Medicine. 3 Units.**

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200.

Same as: DBIO 220

**GENE 211. Genomics. 3 Units.**

The goal of this course is to explore different genomic approaches and technologies, to learn how they work from a molecular biology view point, and to understand how they can be applied to understanding biological systems. In addition, we teach material on how the data generated from these approaches can be analyzed, from an algorithmic perspective. The papers that are discussed are a mixture of algorithmic papers, and technological papers. Finally, the course has a strong programming component, with Python being the language that we teach. All of our problem sets require Python programming - while beginning programmers succeed in our course, it is a steep learning curve, and the problem sets can require a significant time investment.

**GENE 212. Introduction to Biomedical Informatics Research Methodology. 3-5 Units.**

Capstone Biomedical Informatics (BMI) experience. Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Issues related to research reproducibility. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 214 or 215 or 217 or 260. Preference to BMI graduate students. Consent of instructor required.

Same as: BIOE 212, BIOMEDIN 212, CS 272

**GENE 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.**

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisite: CS 106B; recommended: CS161; consent of instructor for 3 units.

Same as: BIOE 214, BIOMEDIN 214, CS 274

**GENE 215. Frontiers in Biological Research. 1 Unit.**

Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems.

Same as: BIOC 215, DBIO 215

**GENE 216. Practical Considerations and Industry Perspective on Academic-Industry Collaborations. 1 Unit.**

Provides an overview, fundamentals and practical considerations for different aspects of academic-industry collaborations by inviting current industrial experts to share their views and to answer questions. The different aspects include collaboration models, proposal building, IP right sharing, funding opportunities, sabbatical and internship in industry, industry job searching, etc. This class also serves as a platform to connect with Bay Area biotech and pharmaceutical executives and experts.

**GENE 217. Translational Bioinformatics. 4 Units.**

Computational methods for the translation of biomedical data into diagnostic, prognostic, and therapeutic applications in medicine. Topics: multi-scale omics data generation and analysis, utility and limitations of public biomedical resources, machine learning and data mining, issues and opportunities in drug discovery, and mobile/digital health solutions. Case studies and course project. Prerequisites: programming ability at the level of CS 106A and familiarity with biology and statistics.

Same as: BIOE 217, BIOMEDIN 217, CS 275

**GENE 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.**

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.

Same as: MI 218, PATH 218

**GENE 221. Current Issues in Aging. 2 Units.**

Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203, 205 or BIOS 200.

**GENE 224. Principles of Pharmacogenomics. 3 Units.**

This course is an introduction to pharmacogenomics, including the relevant pharmacology, genomics, experimental methods (sequencing, expression, genotyping), data analysis methods and bioinformatics. The course reviews key gene classes (e.g., cytochromes, transporters) and key drugs (e.g., warfarin, clopidogrel, statins, cancer drugs) in the field. Resources for pharmacogenomics (e.g., PharmGKB, Drugbank, NCBI resources) are reviewed, as well as issues implementing pharmacogenomics testing in the clinical setting. Reading of key papers, including student presentations of this work; problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, 42, 43, 44X, 44Y or consent of instructor.

Same as: BIOMEDIN 224

**GENE 232. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232

**GENE 233. The Biology of Small Modulatory RNAs. 2 Units.**

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

Same as: MI 233, PATH 233

**GENE 234. Fundamentals of RNA Biology. 2 Units.**

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

Same as: MI 234, PATH 234

**GENE 235. C. Elegans Genetics. 2 Units.**

Genetic approaches to *C. elegans*, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

**GENE 236. Deep Learning in Genomics and Biomedicine. 3 Units.**

Recent breakthroughs in high-throughput genomic and biomedical data are transforming biological sciences into "big data" disciplines. In parallel, progress in deep neural networks are revolutionizing fields such as image recognition, natural language processing and, more broadly, AI. This course explores the exciting intersection between these two advances. The course will start with an introduction to deep learning and overview the relevant background in genomics and high-throughput biotechnology, focusing on the available data and their relevance. It will then cover the ongoing developments in deep learning (supervised, unsupervised and generative models) with the focus on the applications of these methods to biomedical data, which are beginning to produce dramatic results. In addition to predictive modeling, the course emphasizes how to visualize and extract interpretable, biological insights from such models. Recent papers from the literature will be presented and discussed. Students will be introduced to and work with popular deep learning software frameworks. Students will work in groups on a final class project using real world datasets. Prerequisites: College calculus, linear algebra, basic probability and statistics such as CS109, and basic machine learning such as CS229. No prior knowledge of genomics is necessary. Same as: BIODS 237, BIOMEDIN 273B, CS 273B

**GENE 243. Intellectual Property: Scientific Evidence in Patent Litigation. 3 Units.**

(Same as LAW 343) Open to clinical MD and graduate students. Explores the role of scientific experts in patent infringement litigation. In other areas of the law where scientific experts are used – medical malpractice, environmental law, criminal law – the science itself is often in dispute. In patent cases, however, the parties generally agree on the science. This affects the relationship between the lawyer and the expert and the substantive content of their interactions. Patent experts need to be able to explain science to the judge and jury. But they also must help the litigators choose which legal issues to press and which to concede, and to be aware of how the complications of the science might help, hurt, obscure or reveal how the law should be applied to the facts. The class examines judicial decisions and trial documents involving scientific evidence in patent litigation, followed by work in teams on final projects: simulations of expert testimony in a patent case. Simulations are performed at the end of the quarter before panels of practicing patent lawyers. Prerequisite: graduate students must have completed their required coursework and have TGR status.

**GENE 244. Introduction to Statistical Genetics. 3 Units.**

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor. Same as: STATS 344

**GENE 245. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets. Same as: BIO 268, BIOMEDIN 245, CS 373, STATS 345

**GENE 260. Supervised Study. 1-18 Unit.**

Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

**GENE 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.**

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations. This class is open to both graduate and undergraduate students, but requires sufficient backgrounds in college level genetics, cell biology and biochemistry. Undergraduates who are interested are required to contact the course director first. Same as: BIO 267, NENS 267

**GENE 268. Biology and Applications of CRISPR/Cas9: Genome Editing and Epigenome Modifications. 1 Unit.**

This course is designed to provide a broad overview of the biology and applications of the revolutionary CRISPR/Cas9 system, with detailed exploration of several areas: / / –Basic biology of the CRISPR/Cas9 system / –High-throughput screening using CRISPR/Cas9 / –Epigenetic modifications and transcriptional regulation using dCas9 / –Therapeutic applications of gene editing with CRISPR / –Disease modeling with CRISPR / –Ethical considerations of the use of CRISPR/Cas9 / / The course will be geared toward advanced undergraduates and graduate students, and will assume a basic background in molecular biology and genetics. The course will be lecture-based, with frequent opportunities for discussion and questions. Same as: BIOS 268

**GENE 271. Human Molecular Genetics. 3 Units.**

For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics and genomics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and human disease; mitochondrial genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; variant interpretation; gene therapy, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course. Same as: CHPR 271

**GENE 272. Introduction to Medical Genetics. 2 Units.**

For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics practice, including taking a family history, modes of inheritance and risk assessment, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units. Same as: CHPR 272

**GENE 273. Introduction to Clinical Genetics Testing. 2 Units.**

For genetic counseling students, medical students, residents, and fellows. Uses a combination of case based assignments, laboratory observation and didactic lectures to introduce techniques and technology used in cytogenetics, molecular genetics and biochemical genetic testing, and to introduce clinical features of common genetic conditions that are commonly diagnosed through genetic testing.

**GENE 274A. A Case Based Approach to Clinical Genetics. 2 Units.**

For genetic counseling students, graduate students in genetics, medical students, residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

Same as: CHPR 274A

**GENE 274B. A Case Based Approach to Clinical Genetics. 2 Units.**

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders. This course is a continuation of GENE 274A, but may be taken individually with instructor permission.

Same as: CHPR 274B

**GENE 275. Role Play and Genetic Counseling Observations. 2 Units.**

Students role play aspects of genetic counseling sessions and learn through clinical observations. Observation includes genetic counseling sessions in prenatal, pediatric, and specialty settings.

**GENE 276. Genetic Counseling Clinical Rotations. 1-7 Unit.**

For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

**GENE 278. Prenatal Genetic Counseling. 1 Unit.**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening.

Same as: CHPR 278

**GENE 279. Pediatric and Adult Genetic Counseling. 1 Unit.**

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions, assessment of child development and medical history in the context of a genetic workup, the pediatric genetics medical examination, dysmorphology, introduction to laboratory genetic testing, development of a differential diagnosis, and resources for case management and family support.

Same as: CHPR 279

**GENE 280. Metabolic Genetic Counseling. 1 Unit.**

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

Same as: CHPR 280

**GENE 281. Cancer Genetic Counseling. 1 Unit.**

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

Same as: CHPR 281

**GENE 282A. Genetic Counseling Research Seminar. 1 Unit.**

For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

**GENE 282B. Genetic Counseling Research Seminar. 1 Unit.**

For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A.

**GENE 283. Genetic Counseling Research. 1-8 Unit.**

Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite: GENE 282.

**GENE 284. Medical Genetics Seminar. 1 Unit.**

Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit. Non-GC students: please contact the instructor when you enroll.

Same as: CHPR 284

**GENE 285A. Genetic Counseling Seminar. 3 Units.**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor.

**GENE 285B. Genetics Counseling Seminar. 3 Units.**

Year-long seminar primarily for genetic counseling students. Winter: the impact of chronic illness and genetic disease in a developmental manner.

**GENE 285C. Genetic Counseling Seminar. 3 Units.**

Year-long seminar primarily for genetic counseling students. Spring: applying therapeutic counseling approaches to the practice of genetic counseling.

**GENE 286. Advanced Genetic Counseling Seminar. 2 Units.**

For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics will be included. Must be taken for 3 quarters. Prerequisites: GENE 285 A,B,C and 276.

**GENE 286C. Advanced Genetic Counseling Seminar. 3 Units.**

Continuation of 286A/B. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

**GENE 287. CARDIOVASCULAR GENETICS. 1 Unit.**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellow; genetic counseling students should take this course in conjunction with their cardiovascular genetics rotation. Topics include: Basic cardiology principles, including relevant anatomy and physiology; diagnosis, management and genetic testing as it relates to common inherited cardiovascular conditions in both the pediatric and adult setting; predictive genetic testing issues specific to inherited cardiovascular conditions; psychologic issues related to sudden death conditions. This course is designed for genetic counseling students, medical students, residents, post-doctoral fellows and nurses interested in inherited cardiovascular conditions.

Same as: CHPR 287

**GENE 288. Neurogenetics. 1 Unit.**

The Neurogenetics Course is a flipped classroom, just-in-time, modular design which will be available online for genetic counseling students, medical students, residents and fellows with an interest in inherited neurologic conditions. It will encompass an introductory to neurology for beginners, including an overview of neurologic exam and localization, to provide non-neurologist trainees a foundation for understanding the differential diagnosis process in neurology. The course will cover common and exemplary neurogenetics disorders spanning the adult and pediatric neurologic sub-specialties, with a core set of lectures for all learners to watch and a set of optional lectures for a minimum of 10 content hours. Talks will exemplify key genetic concepts such as triple repeat disorders and FSHD. It will also cover ethical and psychological topics as well as gene-targets therapeutics. This course will prepare students so classroom and clinical experiences can begin at a more advanced level and integrate concepts from the online course. Medical students and graduate students outside of genetic counseling should obtain permission from instructor prior to enrollment. No prerequisite for genetic counseling students, genetics or neurology residents/fellows or post-docs.

**GENE 299. Directed Reading in Genetics. 1-18 Unit.**

Prerequisite: consent of instructor.

**GENE 346. Advanced Seminar on Prokaryotic Molecular Biology. 1 Unit.**

Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.  
Same as: BIO 346, CSB 346

**GENE 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**GENE 801. TGR Project. 0 Units.**

.

**GENE 802. TGR Dissertation. 0 Units.**

.

## German Language (GERLANG)

**GERLANG 1. First-Year German, First Quarter. 5 Units.**

Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.

**GERLANG 10. Elementary German for Seniors and Graduate Students. 4 Units.**

Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 250 fulfills Ph.D. reading exam.

**GERLANG 105. Advanced Business German. 4 Units.**

For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: Placement Test, GERLANG 22.

**GERLANG 10SC. German Immersion: Contemporary Issues in the German-Speaking World. 2 Units.**

We designed this course for students who have some German, but who want to jumpstart their language acquisition through an intense and immersive experience. If you have taken two or three quarters of German, or if you took German in high school, this course will allow you to dramatically improve your proficiency, all while you and classmates immerse yourselves in German-speaking cultures from Germany, Austria, Switzerland, Liechtenstein, Luxembourg and beyond. We will actively engage our German through exploration of contemporary, socio-political issues in the German-speaking world, including, but not limited to, the current refugee crisis, issues of identity and language, the environment, pop cultural trends and more. Working with various forms of media (film, music, texts), guest lectures, as well as class excursions to a local German immersion school, the Goethe Institute San Francisco, and other local cultural events, you will progress more quickly towards gaining Advanced proficiency in German. Students will develop their ability to more actively start and participate in culturally nuanced discussions and gain greater confidence and linguistic and cultural dexterity in giving presentations. Students from all disciplines with interest in this type of linguistic immersion and intellectual engagement are encouraged to apply!

**GERLANG 111. Television News from Germany. 3-4 Units.**

For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.

**GERLANG 199. Individual Reading. 1-5 Unit.**

Prerequisite: consent of instructor.

**GERLANG 1A. Accelerated First-Year German, Part 1. 5 Units.**

Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. Completes first-year sequence in two rather than three quarters.

**GERLANG 2. First-Year German, Second Quarter. 5 Units.**

Continuation of GERLANG 1. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Prerequisite: Placement Test, GERLANG 1.

**GERLANG 205A. Intensive First-Year German for Stanford Grads. 3-5 Units.**

Equivalent to GERLANG 5A. For Stanford graduate students only. Stanford graduate students restricted to 9 units; may take 205A, B and C for a total of 9 units.

**GERLANG 205B. Intensive First-Year German for Stanford Grads. 3-5 Units.**

Equivalent to GERLANG 5B. For Stanford graduate students only. Continuation of 205A. Stanford graduate students restricted to 9 units; may take 205A, B and C for a total of 9 units.

**GERLANG 205C. intensive First-Year German, Part C. 3-5 Units.**

Equivalent to GERLANG 5C. For Stanford graduate students only. Continuation of 205B. Stanford graduate students restricted to 9 units may take 205A, B and C for a total of 9 units.

**GERLANG 20A. Beginning German Conversation. 1 Unit.**

This course is for students with limited conversational abilities. Appropriate for students who are taking or have taken Gerlang 1. This course does not teach German from scratch, but is intended for students to practise basic conversations. Emphasis on everyday interactions. Attendance is required to receive course credit.

**GERLANG 20B. Intermediate German Conversation. 1 Unit.**

This course for students with some conversational abilities. Appropriate for students who are taking (or have taken) Gerlang 2, 3, or 21. Emphasis on conversational German, discussion of culture, exploring German media. Attendance is required to receive course credit.

**GERLANG 20C. Advanced German Conversation. 1 Unit.**

This course for students interested practising advanced-level conversation. Most appropriate for students who are taking Gerlang 21 or higher, heritage speakers, and students looking to practice professional German. Emphasis on discussion of cultural topics including politics, exploring media and news, and student interests. Attendance is required to receive course credit.

**GERLANG 20E. German Society in WWII. 1 Unit.**

German Society in WWII.

**GERLANG 20G. Fashion Through Film. 1 Unit.**

Modern German Fashion a film-based foray into several aspects of the history of modern German fashion. Topics from class to class will be somewhat sporadic, spanning the origins of traditional German attire, subcultural youth styles in Germany throughout the 20th century, and prominent German figures in the global fashion industry such as designer Karl Lagerfeld and photographer Helmut Newton, among others. May be repeat for credit.

**GERLANG 20J. Central European Brewing. 1 Unit.**

This is a general survey course of the variety of German Beers. All sessions take place at Haus Mitt, 620 Mayfield Ave. STUDENTS MUST BE 21 OR OLDER TO ENROLL-There will be a course fee (amount to be determined).

**GERLANG 20K. Kuche Mitt. 1 Unit.**

Explore the German art of baking by trying out a medley of traditional recipes. We will learn how to create delicious desserts, prepare hearty snacks and bake real bread so you can delight your friends with German tastes. The class will be held in Haus Mitt and enrollment is limited to 15 students.

Same as: German Cooking Class

**GERLANG 20M. German Film and Theater. 1 Unit.**

The German Film industry has transformed in recent years to highlight newfound race relations and demographics in Germany. Recent cinematography has captured changing dynamics from European Identity to Turkish Immigration. This course seeks to explore these topics through biweekly film viewings. All films will be shown in German with English subtitles and discussion will take place in English. Film selection from the following list pending feedback from students:.

**GERLANG 20P. Theme Project-Intermediate Dutch Conversation. 1 Unit.**

Dutch Conversation.

**GERLANG 20R. German Conversation through Drama. 1 Unit.**

Want to practice your German by playing improvisation games, reading dialogues and performing short scenes? In this German conversation course, for students anywhere from intermediate to advanced, we'll read scenes from Friedrich Dürrenmatt's *Die Physiker*, a hilarious dark comedy from the 1960's about three "scientists" in an insane asylum who want to save the world from the nuclear danger of scientific progress. We'll work through the play, discussing the broader issues and performing for each other different interpretations of important scenes. This is a great way to practice reading and speaking in German, learn new vocab, and play around with a fascinating, cold-war era text that has a lot to say about scientific ethics today.

**GERLANG 20T. Teaching German Conversation. 1 Unit.**

(AU).

**GERLANG 21. Intermediate German I. 4 Units.**

Continuation of Gerlang 3. Sequence integrating culture and language with emphasis on development of advanced oral and written proficiency. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic and professional contexts. Prerequisite: Placement Test, Gerlang 3.

**GERLANG 210. Elementary German for Graduate Students. 3-4 Units.**

Restricted to Stanford graduate students. Prerequisite: consent of instructor.

**GERLANG 21S. Intermediate German. 4 Units.**

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German; or two years high school German or equivalent, or AP German.

**GERLANG 21W. Intermediate German I: German for Business and International Relations. 4 Units.**

Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 3.

**GERLANG 22. Intermediate German II. 4 Units.**

Continuation of GERLANG 21. Sequence integrating culture and language with emphasis on development of advanced oral and written proficiency. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic and professional contexts. Prerequisite: Placement Test, Gerlang 21.

**GERLANG 22W. Intermediate German II: German for Business and International Relations. 4-5 Units.**

Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 21, 21W.

**GERLANG 23C. Second Year German, Third Quarter. 4 Units.**

Continuation of GERLANG 22. Sequence integrating culture and language with emphasis on development of advanced oral and written proficiency. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic and professional contexts. Prerequisite: Placement Test, Gerlang 22.

**GERLANG 250. Reading German. 4 Units.**

For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Fulfills University reading requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of German, or 10, or equivalent.

**GERLANG 2A. Accelerated First-Year German, Part 2. 5 Units.**

Completes first-year sequence in two rather than three quarters. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. For students with previous knowledge of German. Completion of 2A fulfills the Language Requirement.

**GERLANG 3. First-Year German, Third Quarter. 5 Units.**

Continuation of GERLANG 2. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Fulfills the University language requirement. Prerequisite: Placement Test, GERLANG 2.

**GERLANG 395. Graduate Studies in German. 1-5 Unit.**

Prerequisite: consent of instructor.

**GERLANG 399. Independent Study. 1-5 Unit.**

Prerequisite: consent of instructor.

**GERLANG 5A. Intensive First-Year German, Part A. 5 Units.**

Same as GERLANG 1. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C.

**GERLANG 5B. Intensive First-Year German, Part B. 5 Units.**

Same as GERLANG 2. Continuation of 5A. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

**GERLANG 5C. Intensive First-Year German, Part C. 5 Units.**

Same as GERLANG 3. Continuation of 5B. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University Foreign Language Requirement.

**GERLANG 99. Language Specials. 1-5 Unit.**

Prerequisite: consent of instructor.

## Health Research & Policy (HRP)

**HRP 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**HRP 201A. Health Policy PhD Core Seminar I--First Year. 2 Units.**

Seminar series is the core tutorial for first-year Health Policy and Health Services Research graduate students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.

Same as: MED 215A

**HRP 201B. Health Policy PhD Core Seminar II--First Year. 2 Units.**

Second in a three-quarter seminar series is the core tutorial for first-year Health Policy and Health Services Research graduate students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.

Same as: MED 215B

**HRP 201C. Health Policy PhD Core Seminar III--First Year. 2 Units.**

Third in a three-quarter seminar series is the core tutorial for first-year Health Policy and Health Services Research graduate students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.

Same as: MED 215C

**HRP 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.**

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis.

Prerequisite: knowledge of basic statistics.

Same as: CHPR 206, MED 206, STATS 211

**HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I. 2 Units.**

Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.

**HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II. 2 Units.**

Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.

**HRP 209. Health Law: The FDA. 2-3 Units.**

(Same as LAW 3003) Open to law and medical students; other graduate students by consent of instructor. The FDA's regulatory authority over drugs, biologics, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.

**HRP 210. Health Law and Policy. 3 Units.**

(Same as Law 313) Open to law, medicine, business, and graduate students. Focus this term is on the physician/patient relationship, medical ethics, and public health law.

**HRP 211. Law and the Biosciences: Neuroscience. 3 Units.**

(Same as LAW 3006) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, and cognitive enhancement.

**HRP 212. Cross Cultural Medicine. 3 Units.**

Developing interviewing and behavioral skills needed to facilitate culturally relevant health care across all population groups. Discussions focus on explicit and implicit cultural influences operating in formal and informal medical contexts.

**HRP 213. Writing in the Sciences. 2-3 Units.**

Primarily for medical students in the Clinical Research Scholarly concentration; open to graduate students except Epidemiology graduate students. Development of research questions and plans for statistical analysis. Study design, sample size and power calculations, and statistical analysis of study data. Analytic methods to carry out statistical power and sample size calculations. Prerequisites: 225, and 258 or 259, or consent of instructor.

**HRP 214. Scientific Writing. 2-3 Units.**

Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly in preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course. Please note 3-units students will additionally write and revise a manuscript.

**HRP 215. Scientific Writing for Basic and Translational Scientists. 2-3 Units.**

Teaches students in the basic sciences how to write clearly, concisely, and effectively. Focuses on the process of writing and publishing a scientific manuscript. 3 unit option requires work on a manuscript. Not intended for epidemiology graduate students.

**HRP 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research. 2-3 Units.**

Topics include: advanced aspects of study design and data analyses; evaluating confounding and interaction; modeling continuous characteristics of exposure; building prediction models; methods of summarizing literature and quantifying effect sizes (meta-analysis); handling missing data; and propensity score methods. 3 units requires a data analysis project. Prerequisites: 258 or 261, or consent of instructor.

**HRP 218. Methods for Health Care Delivery Innovation, Implementation and Evaluation. 2 Units.**

Preference given to postgraduate fellows and graduate students. Focus is on implementation science and evaluation of health care delivery innovations. Topics include implementation science theory, frameworks, and measurement principles; qualitative and quantitative approaches to designing and evaluating new health care models; hybrid design trials that simultaneously evaluate implementation and effectiveness; distinction between quality improvement and research, and implications for regulatory requirements and publication; and grant-writing strategies for implementation science and evaluation. Students will develop a mock (or actual) grant proposal to conduct a needs assessment or evaluate a Stanford/VA/community intervention, incorporating concepts, frameworks, and methods discussed in class. Priority for enrollment for CHPR 212 will be given to CHPR master's students. Same as: CHPR 212, MED 212

**HRP 219. Evaluating Technologies for Diagnosis, Prediction and Screening. 3 Units.**

New technologies designed to monitor and improve health outcomes are constantly emerging, but most fail in the clinic and in the marketplace because relatively few are supported by reliable, reproducible evidence that they produce a health benefit. This course covers the designs and methods that should be used to evaluate technologies to diagnose patients, predict prognosis or other health events, or screen for disease. These technologies can include devices, statistical prediction rules, biomarkers, gene panels, algorithms, imaging, or any information used to predict a future or a previously unknown health state. Specific topics to be covered include the phases of test development, how to frame a proper evaluation question, measures of test accuracy, Bayes theorem, internal and external validation, prediction evaluation criteria, decision analysis, net-utility, ROC curves, c-statistics, net reclassification index, decision curves and reporting standards. Examples of technology assessments and original methods papers are used. Software used in the course is R or Stata. Open to graduate students with a solid understanding of introductory biostatistics, epidemiologic and clinical research study design, and of medical conditions and related technologies required. Basic understanding of Stata or R is also required. Undergraduates may enroll with consent of instructor.

**HRP 220. BIOTECHNOLOGY LAW AND POLICY. 3 Units.**

(Same as LAW 440) Open to all law or medical students; other graduate students by consent of the instructor. Focuses on the biotechnology industry, with some discussion of the "med tech" or medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. In addition to a final exam, students are required to participate in a group project during the term, making law and business recommendations about a biotech firm.

**HRP 221. Law and the Biosciences: Genetics. 3 Units.**

(Same as LAW 3004) Open to all law or medical students; other graduate students by consent of the instructor. Focus is on ethical, legal, and social issues arising from advances in our knowledge of human genetics. Includes forensic uses of genetics, genetic testing, widespread whole genome sequencing, the consequences of genetics for human reproduction, and the ethics of genomic biobanks for research. Research paper required.

**HRP 222A. Advising Congress on Health Policy. 1 Unit.**

(Same as LAW 413L) Focus on conducting research on national health policy problems for the Medicare Payment Advisory Commission, or MedPAC. Students work in teams with lawyers and PhD economists from MedPAC, resident and fellow physicians from Stanford Hospital, and other students from throughout the University on expanding the healthcare workforce through reform of states' scope of practice regulation or designing antitrust policy to achieve the benefits of coordination and avoid the costs of consolidation. Application required.

**HRP 223. Introduction to Data Management and Analysis in SAS. 2 Units.**

Provides hands-on introduction to basic data management and analysis techniques using SAS. Data management topics include: Introduction to SAS and SAS syntax, importing data, creating and reading SAS datasets, data cleaning and validation, creating new variables, and combining data sets. Analysis techniques include: basic descriptive statistics (e.g., means, frequency) and bivariate procedures for continuous and categorical variables (e.g., t-tests, chi-squares).

**HRP 224. Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health. 3 Units.**

Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health is a new Collaboratory workshop for students/fellows to design/develop innovative social ventures/solutions addressing key challenges in public health and the environment, in support of the UN Sustainable Development Goals (SDGs 2030). SE Lab is open to students/fellows across Stanford and combines design thinking exercises, short lectures & case studies, workshops, small group teamwork, presentations, guest speakers, and faculty, practitioner and peer feedback to support/advance development of your ideas/plans. Join SE Lab with an idea or simply the desire to join a team. Enrollment limited to 50. Instructor's permission required.

Same as: MED 224, PUBLPOL 224

**HRP 225. Design and Conduct of Clinical and Epidemiologic Studies. 3-4 Units.**

Intermediate-level. The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, measures of association, estimating sample size, and sources of bias. Prerequisite: A basic/introductory course in statistics or consent of instructor.

**HRP 226. Intermediate Epidemiologic and Clinical Research Methods. 3 Units.**

The principles of study design, measurement, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Prerequisite: 225 or consent of instructor.

**HRP 228. Genetic Epidemiology. 2 Units.**

Provides framework for physicians, epidemiologists, and other scientists to interpret the literature and incorporate genetic information into human disease research. Topics include: common genetic measures, approaches to finding disease genes, study design and analysis issues, genome-wide association studies, meta-analysis of genetic studies, genetic risk prediction, and applications of new genomic technologies. Includes reading seminal papers in genetic epidemiology.

**HRP 229. Spectrum Scholars Seminar. 1 Unit.**

Preference to trainees awarded Stanford internal KL2, TL1 grants. Focus is on students and junior faculty who have received a Spectrum KL2 or TL1 Award. Discussions include progress and challenges involved in starting and conducting clinical research, current courses, time management and resources; support from peers; education and professional development. All scholars are required to attend a weekly seminar series meeting throughout the year that will cover an array of cross-cutting methodological topics with published examples of implementation. Prerequisite: Awarded a Spectrum KL2, TL1 Grant or Spectrum UL1.

**HRP 230. Cancer Epidemiology. 2-3 Units.**

Descriptive epidemiology and sources of incidence/mortality data; the biological basis of carcinogenesis and its implications for epidemiologic research; methodological issues relevant to cancer research; causal inference; major environmental risk factors; genetic susceptibility; cancer control; examples of current research; and critique of the literature. 3 units requires paper or project. Prerequisite: 225, or consent of instructor.

**HRP 231. Epidemiology of Infectious Diseases. 3 Units.**

Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance.

**HRP 234. Engineering Better Health Systems: modeling for public health. 4 Units.**

This course teaches engineering, operations research and modeling techniques to improve public health programs and systems. Students will engage in in-depth study of disease detection and control strategies from a "systems science" perspective, which involves the use of common engineering, operations research, and mathematical modeling techniques such as optimization, queuing theory, Markov and Kermack-McKendrick models, and microsimulation. Lectures and problem sets will focus on applying these techniques to classical public health dilemmas such as how to optimize screening programs, reduce waiting times for healthcare services, solve resource allocation problems, and compare macro-scale disease control strategies that cannot be easily evaluated through randomized trials. Readings will complement the lectures and problem sets by offering critical perspectives from the public health history, sociology, and epidemiology. In-depth case studies from non-governmental organizations, departments of public health, and international agencies will drive the course. Prerequisites: A course in introductory statistics, and a course in multivariable calculus including ordinarily differential equations. Open to upper-division undergraduate students and graduate students. Human Biology majors enroll in HUMBIO 154A.

Same as: HUMBIO 154A, MED 254

**HRP 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 135, EDUC 335, HUMBIO 26, MED 235

**HRP 236. Epidemiology Research Seminar. 1 Unit.**

Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit.

**HRP 237. Practical Approaches to Global Health Research. 3 Units.**

How do you come up with an idea for health research overseas? How do you develop a research question, concept note, and get your project funded? How do you manage personnel in the field, difficult cultural situations, or unexpected problems? How do you create a sampling strategy, select a study design, and ensure ethical conduct with human subjects? This course takes students through the process of health research in under-resourced countries from the development of the initial research question and literature review to securing support and detailed planning for field work. Students progressively develop and receive weekly feedback on a concept note to support a funding proposal addressing a research question of their choosing. Aims at graduate students; undergraduates in their junior or senior year may enroll with instructor consent. This course is restricted to undergraduates unless they have completed 85 units or more.

Same as: IPS 290, MED 226

**HRP 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health. 2-3 Units.**

The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: HUMBIO 159

**HRP 239. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.**

See <http://rogosateaching.com/stat209/>. Critical examination of statistical methods in social science and life sciences applications, especially for cause and effect determinations. Topics: mediating and moderating variables, potential outcomes framework, encouragement designs, multilevel models, heterogeneous treatment effects, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, path analysis and graphical models, group comparisons with longitudinal data. Prerequisite: intermediate-level statistical methods.

Same as: EDUC 260A, STATS 209

**HRP 243. Health Policy Seminar: Population Health. 1 Unit.**

This seminar course is intended to introduce students to the role of policy in the delivery of healthcare in the United States. In addition to speakers from the law school, SIEPR, HRP, and School of Medicine, we will be bringing in speakers from outside organizations such as the Pacific Business Group on Health, managed care organizations, and the Palo Alto Medical Foundation. There will be no assignments and lunch will be provided.

**HRP 244. Developing Measurement Tools for Health Research. 2 Units.**

The focus of this course is on providing the skills necessary to develop, validate and administer both qualitative and quantitative measures and instruments. Topics will include creating valid measures, ensuring the measures used address and apply to the research questions, design and samples; determining when to use standardized measures or develop new ones; instrument validation techniques; factor analysis; and survey administration, including determining the most effective way of administering measures (e.g., online, paper-and-pencil, ACASI) and the best way to design the survey.

**HRP 245. Intensive Course in Clinical Research. 2 Units.**

The Intensive Course in Clinical Research (ICCR) is a one-week immersion course designed for new or aspiring clinical investigators, medical students, residents, graduate students, fellows and junior faculty interested in pursuing careers in clinical and transnational research. Students spend five days and four evenings immersed in all aspects of research study design and performance. The format combined didactic with intense group/team activities focused on practical issues in clinical research design - from selection of a researchable study question through actual writing of a research proposal. Lectures and panel discussions are presented by an accomplished faculty of Stanford clinical researchers and key leaders from the Stanford community. Every presentation includes a discussion of relevant issues. The course is supported by over 40 faculty and fellows from across the School of Medicine.

**HRP 246. Seminar in Healthcare Quality and Safety. 1 Unit.**

Primarily for medical students in the Quality and Safety Scholarly Concentration. Almost everyone will be a patient at some point in their lives. It is estimated that over 98,000 patients die in US hospitals each year due to medical errors and recent articles suggest that medical errors are the third leading cause of death in the US. Patient safety is the foundation of high-quality health care, which has become a critical issue in health policy discussions. This course will provide an overview of the quality & patient safety movement, the array of measurement techniques and issues, and perspectives of quality improvement efforts under the current policy landscape.

Same as: BIOMEDIN 246

**HRP 247. Epidemic Intelligence: How to Identify, Investigate and Interrupt Outbreaks of Disease. 4 Units.**

We will cover: the components of public health systems in the US; principles of outbreak investigation and disease surveillance; different types of study design for field investigation; visualization and interpretation of public health data, including identification and prevention of biases; and implementation of disease control by public health authorities. Students will meet with leaders of health departments of the state and the county and will be responsible for devising and conducting their own investigation of a health problem. HUMBIO students must enroll in HUMBIO 57. HRP students must enroll in HRP 247.

Same as: HUMBIO 57

**HRP 249. Topics in Health Economics I. 2-5 Units.**

Course will cover various topics in health economics, from theoretical and empirical perspectives. Topics will include public financing and public policy in health care and health insurance; demand and supply of health insurance and healthcare; physicians' incentives; patient decision-making; competition policy in healthcare markets, intellectual property in the context of pharmaceutical drugs and medical technology; other aspects of interaction between public and private sectors in healthcare and health insurance markets. Key emphasis on recent work and empirical methods and modelling. Prerequisites: Micro and Econometrics first year sequences (or equivalent). Curricular prerequisites (if applicable): First year graduate Microeconomics and Econometrics sequences (or equivalent).

Same as: ECON 249, MED 249

**HRP 251. Design and Conduct of Clinical Trials. 3 Units.**

The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.

**HRP 252. Outcomes Analysis. 4 Units.**

Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.

Same as: BIOMEDIN 251, MED 252

**HRP 254. Quality & Safety in U.S. Healthcare. 3 Units.**

The course will provide an in-depth examination of the quality & patient safety movement in the US healthcare system, the array of quality measurement techniques and issues, and perspectives of quality and safety improvement efforts under the current policy landscape.

Same as: BIOMEDIN 254, SURG 255

**HRP 256. Economics of Health and Medical Care. 5 Units.**

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 156, BIOMEDIN 256, ECON 126

**HRP 257. Advanced Topics in the Economics of Health and Medical Care. 2 Units.**

Emphasis is on research studies in health economics. Seminar style course focuses on Health Economics. To be taken with HRP 256. Students will be expected to read and present papers to the group and discuss concepts with faculty. Restricted to second year PhD students in economics & economics-related disciplines.

Same as: MED 265

**HRP 258. Introduction to Probability and Statistics for Clinical Research. 3 Units.**

Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.

**HRP 259. Introduction to Probability and Statistics for Epidemiology. 3-4 Units.**

Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications. Differential between 3 and 4 units is the amount of out-of-class work required.

**HRP 261. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.**

Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.

Same as: BIOMEDIN 233, STATS 261

**HRP 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis. 3 Units.**

Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.

Same as: STATS 262

**HRP 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.**

Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.

Same as: MED 263

**HRP 264. Foundations of Statistical and Scientific Inference. 1 Unit.**

The course will consist of readings and discussion of foundational papers and book sections in the domains of statistical and scientific inference. Topics to be covered include philosophy of science, interpretations of probability, Bayesian and frequentist approaches to statistical inference and current controversies about the proper use of p-values and research reproducibility. Recommended preparation: At least 2 quarters of biostatistics and one of epidemiology. Intended for second year Masters students, of PhD students with at least 1 year of preceding graduate training.

**HRP 265. Advanced Methods for Meta-Analysis. 2 Units.**

Meta-analysis is a method to quantitatively combine information from multiple studies; this combination is also called "research synthesis." Historically, it has been used to combine studies with a similar design, such as randomized controlled trials or observational studies examining similar interventions or exposures. However, evidence about a given relationship is often provided by many studies with different designs, or studies that can be "fit together" to create an evidence base. This can only be done with advanced meta-analytic methods. The course will cover advanced methods for research synthesis, including multivariate meta-analysis for multiple outcomes, generalized evidence synthesis of multiple study designs, and network meta-analysis for multiple interventions. These techniques are being increasingly used in evidence-based medicine, health technology assessments and policy making. Recommended preparation: HRP 206, and at least 2 quarters of biostatistics and one of epidemiology, including clinical research design. Familiarity with logistic and linear regression modeling required.

**HRP 267. Life Course Epidemiology. 2 Units.**

The focus of this course is on understanding the evidence for how exposure at multiple levels and at multiple ages influences an individual's health at any given time. The course emphasizes the primary theories used to examine life course determinants of health and how these theories both facilitate and impede research. A secondary focus is on understanding the methodological challenges to studying health from a life course perspective, as well as how knowledge of life course determinants of health can inform interventions to improve health from a population perspective.

**HRP 271. Preparation and Practice: Scientific Communication and Media. 1-2 Unit.**

Through tailored lecture, case study, and a practical final project, academic and professional leaders will help you gain insight into the science communications and media industry and the skills necessary to succeed within the various positions and levels available within it. Anticipated Learning Outcomes: To assist interdisciplinary graduate students, medical students, residents and fellows in all levels of training to develop and hone the communication skills necessary for post-training and internship success in a science communications/media field; To provide an understanding of the scope of career opportunities within the science communications sector, focusing on the development, organization, and management issues specific to it; To provide a forum for interacting with alumni, faculty, and other practitioners from a variety of fields and organizations who may assist candidates with defining and meeting their own professional goals; To increase awareness of industry terminology and theories, combined with hands-on experience with techniques and methodologies most useful for credential development on the job market; To develop and hone expertise in the areas of: publishing, editing, workflow, ethics, trends, principles of effective scholarly/news writing, interviewing techniques, and media/website management.

**HRP 273. Essentials of Clinical Research at Stanford. 1 Unit.**

The course will consist of an introduction to the fundamentals of clinical research at Stanford, including the science of clinical research (design and analysis) and logistics (GCP, data management, regulatory). Material will be covered in approximately 4-6 3 hour sessions per quarter.

**HRP 274. Design for Service Innovation. 4 Units.**

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011.

Same as: BIOE 372, MED 274

**HRP 280. Spanish for Medical Students. 2 Units.**

First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include anatomy, general hospital procedures, pediatrics, nutrition, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Undergraduates are welcome to enroll.

Same as: SPANLANG 121M

**HRP 281. Spanish for Medical Students. 2 Units.**

Second quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include anatomy, general hospital procedures, reproductive health, emergency medicine, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Undergraduates are welcome to enroll.

Same as: SPANLANG 122M

**HRP 282. Spanish for Medical Students. 2 Units.**

Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include anatomy, diagnostic procedures, HIV, diabetes, hypertension, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Undergraduates are welcome to enroll.

Same as: SPANLANG 123M

**HRP 283. Health Services Research Core Seminar. 1 Unit.**

Presentation of research in progress and tutorials in the field of health services research.

**HRP 28SI. Alternative Spring Break: Prevention, Treatment, and Policy Perspectives on Alzheimer's Disease. 1 Unit.**

Examines four aspects of Alzheimer's disease. Goal is to give participants a clearer sense of the struggle that patients actually feel and experience during the progression of the disease. Also explores difficulties and issues that many relatives face in assuming the responsibility of full-time caregiver for an Alzheimer's patient. Addresses ethical considerations on genetic testing, should these advances be embraced or should we be wary of the knowledge they may bring? Finally, explores the notion of service through engaged scholarship by exposing oneself to cutting-edge discoveries as researchers attempt to unravel the puzzle.

**HRP 290. Advanced Medical Spanish Oral Communication. 2 Units.**

Enrollment limited to medical students. Designed to further develop linguistic skills, covering all medical specialties according to student needs. Sessions also include topics on patient education and diseases, such as diabetes, asthma, TB, and CVDs.

**HRP 292. Advanced Statistical Methods for Observational Studies. 2-3 Units.**

Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, and instrumental variables. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: HRP 261 and 262 or STAT 209 (HRP 239), or equivalent. See <http://rogosateaching.com/somgen290/>. Same as: CHPR 290, EDUC 260B, STATS 266

**HRP 295. Advanced Topics in Epidemiologic and Clinical Research. 2 Units.**

Topics include alternative study designs, causal inference methods, instrumental variables, time-varying confounding, registry-based research, missing data, and repeated events. Weekly readings and discussions will consider how these methods apply to numerous substantive areas including pharmacoepidemiology, reproductive and perinatal epidemiology, and many areas of chronic disease epidemiology. Prerequisite: HRP 225 and HRP 226 or permission of instructor.

**HRP 299. Directed Reading in Health Research and Policy. 1-18 Unit.**

Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.

**HRP 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**HRP 391. Health Law: Finance and Insurance. 3 Units.**

(SAME AS LAW 3001, MGTECON 331) This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at <https://syllabus.stanford.edu>. Elements used in grading: Participation, attendance, class presentation, and final exam. Same as: PUBLPOL 231

**HRP 392. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.**

(Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application. Same as: BIOMEDIN 432

**HRP 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**HRP 800. Second Year Health Policy PHD Tutorial. 3 Units.**

The goal of the second year tutorial is to provide PHD students with advanced training in health policy research and to assist them in successfully developing research proposals.

**HRP 801. TGR Project. 0 Units.**

.

**HRP 802. TGR Dissertation. 0 Units.**

.

**HRP 89Q. Introduction to Cross Cultural Issues in Medicine. 3 Units.**

Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system.

# History (HISTORY)

**HISTORY 101. The Greeks. 4-5 Units.**

(Formerly CLASSHIS 101.) 250 years ago, for almost the first time in history, a few societies rejected kings who claimed to know what the gods wanted and began moving toward democracy. Only once before had this happened—in ancient Greece. This course asks how the Greeks did this, and what they can teach us today. It uses texts and archaeology to trace the material and military sides of the story as well as cultural developments, and looks at Greek slavery and misogyny as well as their achievements. Weekly participation in a discussion section is required. Same as: CLASSICS 83

**HISTORY 102. History of the International System. 5 Units.**

After defining the characteristics of the international system at the beginning of the twentieth century, this course reviews the primary developments in its functioning in the century that followed. Topics include the major wars and peace settlements; the emergence of Nazism and Communism; the development of the Cold War and nuclear weapons; the rise of China, India, and the EU; and the impact of Islamic terrorism. The role of international institutions and international society will also be a focus as will the challenge of environment, health, poverty, and climate issues to the functioning of the system. Same as: INTNLREL 102

**HISTORY 102A. The Romans. 3-5 Units.**

(Formerly CLASSHIS 60.) How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. Weekly participation in a discussion section is required; enroll in sections on Coursework. Same as: CLASSICS 84

**HISTORY 103D. Human Society and Environmental Change. 4 Units.**

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1. Same as: EARTHYSYS 112, EARTHYSYS 212, ESS 112

**HISTORY 103E. The International History of Nuclear Weapons. 5 Units.**

An introduction to the history of nuclear weapons from World War II to the present. The focus is on politics, but the role of technology transfer, whether legal or illicit, in the development of nuclear weapons will be examined; so too will the theories about the military and political utility of nuclear weapons. We will look at the efforts to control and abolish nuclear weapons and at the international institutions created to reduce the danger of nuclear war. Same as: POLISCI 116

**HISTORY 103F. The Changing Face of War: Introduction to Military History. 3-5 Units.**

Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present day so-called new wars, we will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war. Same as: HISTORY 3F

**HISTORY 104. Introduction to Geospatial Humanities. 3-5 Units.**

This course introduces undergraduate students to the theory and methods of the geospatial humanities, understood broadly as the application of GIS techniques and other quantitative methods in the humanistic study of social and cultural patterns in past and present settings. Same as: HISTORY 4

**HISTORY 104D. International Security in a Changing World. 5 Units.**

This class examines the most pressing international security problems facing the world today: nuclear crises, nuclear non-proliferation, terrorism, and climate change. Alternative perspectives—from political science, history, and STS (Science, Technology, and Society) studies—are used to analyze these problems. The class includes an award-winning two-day international negotiation simulation.

Same as: IPS 241, POLISCI 114S

**HISTORY 106A. Global Human Geography: Asia and Africa. 5 Units.**

Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes.

**HISTORY 106B. Global Human Geography: Europe and Americas. 5 Units.**

Patterns of demography, economic and social development, geopolitics, and cultural differentiation. Use of maps to depict geographical patterns and processes.

**HISTORY 107D. Rise and Fall of Atlantic Slavery, 1500 to 1900. 3-5 Units.**

Between 1500 and 1900, about 12 million people were forcibly removed from Africa and transported to the Americas to work as slaves. This course explores the history of racial slavery in the Atlantic world and its lasting significance. Topics include the Middle Passage, the development of racism, the trans-Atlantic slave trade, the slave experience, resistance, African-American cultures, abolitionism, the process of emancipation, reparations, and the perpetuation of slavery and other forms of unfree labor.

Same as: AFRICAAM 107D, HISTORY 7D

**HISTORY 107E. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.**

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization.

These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography.

Same as: ANTHRO 13A, ARCHLGY 13, HISTORY 7E

**HISTORY 107G. Making Anglo-American Capitalism. 3-5 Units.**

This course addresses capitalism in global perspective to identify the roots of our current economic system. We will consider theories about capitalism, the politics and policies of implementation, and the human and environmental consequences through topics such as the imperial political economy, consumerism, plantation economies, the East India Company, and the rise of credit. Embedding markets in a range of social relations, cultural practices, and institutional arrangements, reveals how capital became an -ism in specific and knowable historical circumstances.

Same as: HISTORY 7G

**HISTORY 108C. Sugar and Slavery, Race and Revolution: The Caribbean 1450-1888. 3-5 Units.**

This course examines race and slavery across British, French, and Spanish islands, plus Brazil. The intensity of Caribbean slavery produced societies where more people were enslaved than free. The idea of "black" was invented and contested as Caribbean inhabitants leaned on African roots to shape new cultures. Sugar production sparked global wars and planted the seed of modern financial systems. Black people fought back, in ways large and small, marking the beginning of emancipation with the Haitian Revolution.

Same as: AFRICAAM 18C, CSRE 108C, HISTORY 8C

**HISTORY 10B. Renaissance to Revolution: Early Modern Europe. 3 Units.**

(Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) Few historical settings offer a more illuminating perspective on our world today than old-regime Europe. Few cast a darker shadow. Science and the enlightened ambition to master nature and society, the emergence of statehood and its grasp for human mobility, bloodshed and coexistence in the face of religious fragmentation, as well as capitalism and the birth of modern finance: this course surveys some of the most consequential developments in European societies between the late fifteenth and the early nineteenth century.

**HISTORY 10N. Thinking About War. 3 Units.**

This course examines classic approaches to war as an intellectual problem, looking at how a matter of such great physical violence and passions can be subjected to understanding and used in philosophy, political theory, and art. Questions to be examined include the definition of war, its causes, its moral value, the nature of its participants, its use in the self-definition of individuals and societies, its relation to political authority, warfare and gender, and the problem of civil war.

**HISTORY 10SC. Biography in History, Fiction, and Elsewhere. 2 Units.**

How biographers, novelists, critics and others have written about the rhythms of life the lives of the famous as well as the obscure - will be explored in this course. Biographical writing can be frivolous, but at its best it has the capacity to undercover so much of life's richness, complexity, and confusions. We'll study biography with the use of some of the most resonant, compelling examples of the genre. Together we'll read books about poets Sylvia Plath and Ted Hughes, Henry James Aspern Papers, the brilliant novel on biographical writing, A. S. Byatt's Possession, and Norman Mailer on Marilyn Monroe. How one chooses one topic over another; the differences and similarities between the representation of lives in fiction and biography; the benefits and pitfalls of an intense identification with one's own subjects these and other matters will be examined. We'll meet in San Francisco with local writers wrestling with issues of this sort, and students will be encouraged to try their hands at writing about lives based on research, personal observation, or both.

**HISTORY 110B. Renaissance to Revolution: Early Modern Europe. 5 Units.**

(Same as HISTORY 10B. History majors and others taking 5 units, register for 110B.) Few historical settings offer a more illuminating perspective on our world today than old-regime Europe. Few cast a darker shadow. Science and the enlightened ambition to master nature and society, the emergence of statehood and its grasp for human mobility, bloodshed and coexistence in the face of religious fragmentation, as well as capitalism and the birth of modern finance: this course surveys some of the most consequential developments in European societies between the late fifteenth and the early nineteenth century.

**HISTORY 112. Medicine and Disease in the Ancient World. 5 Units.**

(Same as HISTORY 12. History majors and others taking 5 units, register for HISTORY 112.) This course explores medicine and disease through case studies from civilizations of the ancient world such as Egypt, Greece, and Peru. We will discuss how these cultures conceptualized disease, and in turn, how they contended with illnesses. Lectures will address different forms of illness through medical texts, art, and human remains. Weekly discussion will incorporate evidence from these sources to explore both their potential and their limitations.

**HISTORY 113. Before Globalization: Understanding Premodern World History. 3-5 Units.**

(Formerly CLASSHIS 147.) This course covers the history of the world from 60,000 years ago until 1500 by asking big questions: Why did civilizations develop the way they did? What factors were responsible for similarities and differences between different parts of the world? What does this mean for our newly globalized world?.

**HISTORY 115D. Europe in the Middle Ages, 300-1500. 3-5 Units.**

This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we'll concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it.

Same as: HISTORY 15D, RELIGST 115X

**HISTORY 116. Traders and Crusaders in the Medieval Mediterranean. 3-5 Units.**

Trade and crusade were inextricably interconnected in the high Middle Ages. As merchant ships ferried knights and pilgrims across the Mediterranean, rulers borrowed heavily to finance their expeditions, while military expansion opened new economic opportunities. Course themes include the origins of the Crusading movement; the rise of Venice and other maritime powers; the pivotal roles of the Byzantine and Mongol Empires; relations between Christians, Muslims, and Jews; new military, maritime, and commercial technologies; and the modern legacy of the Crusades.

Same as: HISTORY 16

**HISTORY 116N. Howard Zinn and the Quest for Historical Truth. 3 Units.**

With more than two million copies in print, Howard Zinn's *A People's History* is a cultural icon. We will use Zinn's book to probe how we determine what was true in the past. *A People's History* will be our point of departure, but our journey will visit a variety of historical trouble spots: debates about whether the US was founded as a Christian nation, Holocaust denial, and the "Birther" controversy of President Obama.

Same as: EDUC 116N

**HISTORY 115C. How Is a Buddhist. 2 Units.**

Buddhism as a system of thought, a culture, a way of life, a definition of reality, a method for investigating it, and a mental, physical, and social practice. Buddhism as a total phenomenon. Readings, films, music, and art. How Buddhist practices constitute the world of the Buddhist.

**HISTORY 11W. Service-Learning Workshop on Issues of Education Equity. 1 Unit.**

Introduces students to a variety of issues at stake in the public education of at-risk high school youth in California. Participants will hear from some of the leading faculty in the School of Education as well as the Departments of Psychology, Sociology, and others, who will share perspectives on the problems and challenges of educating a diverse student body in the state's public school system. The service-learning component of the workshop is a mentoring project (Stanford Students for Educational Equity) with junior class history students from East Palo Alto Academy High School, a Stanford charter school.

Same as: CSRE 11W

**HISTORY 12. Medicine and Disease in the Ancient World. 3 Units.**

(Same as HISTORY 112. History majors and others taking 5 units, register for 112.) This course explores medicine and disease through case studies from civilizations of the ancient world such as Egypt, Greece, and Peru. We will discuss how these cultures conceptualized disease, and in turn, how they contended with illnesses. Lectures will address different forms of illness through medical texts, art, and human remains. Weekly discussion will incorporate evidence from these sources to explore both their potential and their limitations.

**HISTORY 120A. The Russian Empire, 1450-1800. 5 Units.**

(Same as HISTORY 20A. History majors and others taking 5 units, register for 120A.) Explores rise of Russian state and expanse of empire; patterns of governance of a Eurasian empire; strategies and institutions of governance; survey of various ethnic and religious groups in empire and their varied cultures and political economies; gender and family; serfdom; Russian Orthodox religion and culture; reforms and Europeanization of 18th century.

**HISTORY 120B. The Russian Empire. 5 Units.**

From Peter the Great to the Bolsheviks. Russia as an empire; its varied regions, including the Caucasus, Central Asia, Ukraine, Poland, and the Baltics. Focus is on the politics and cultures of empire. Sources include novels, political tracts, paintings, music, and other primary sources.

**HISTORY 120C. 20th-Century Russian and Soviet History. 5 Units.**

The Soviet polity from the 1917 Revolution to its collapse in 1991. Essentials of Marxist ideology; the Russian Empire in 1917. Causation in history; interpretations of the Revolution; state building in a socialist polity; social engineering through collectivization of agriculture, forced industrialization, and cultural revolution; terror as concept and practice; nationality policies in a multiethnic socialist empire; the routinization, decline, and collapse of the revolutionary ethos; and the legacy of the Soviet experiment in the new Russia.

**HISTORY 126B. Protestant Reformation. 3-5 Units.**

The emergence of Protestant Christianity in 16th-century Europe. Analysis of writings by evangelical reformers (Luther, Calvin, Zwingli, Sattler, Hubmeier, Müntzer) and study of reform movements (Lutheran, Reformed, Anabaptist, Spiritualist) in their medieval context and as expressions of new and influential visions of Christian belief, life, social order.

Same as: RELIGST 126

**HISTORY 12N. The Early Roman Emperors: History, Biography, and Fiction. 3 Units.**

Preference to freshmen. The politics, drama, and characters of the period after the fall of the Roman Republic in 49 B.C.E. Issues of liberty and autocracy explored by Roman writers through history and biography. The nature of history writing, how expectations about literary genres shape the materials, the line between biography and fiction, and senatorial ideology of liberty. Readings include: Tacitus' *Annals*, Suetonius' *Lives of the Caesars*, and Robert Graves' *I Claudius* and episodes from the BBC series of the same title.

**HISTORY 131G. From Oil to Opium: Commodities and Consumption In European and Global History, 1800-present. 5 Units.**

This course surveys the origins and impact of encounters at several sites of European empires: Qing China, India, Africa, the Pacific, and the Caribbean. The course conducts its inquiry from several angles, focusing on the way Western imperial systems affected politics, law, economics, and culture. Students will grapple with key concepts, including financial imperialism and neocolonialism; they will also learn about such specialized topics as the laws of imperial expansion. While the course will spend ample time covering the effects of imperialism at home, it will equally engage with its effects abroad.

**HISTORY 132. Ordinary Lives: A Social History of the Everyday in Early Modern Europe. 5 Units.**

What war meant for foot soldiers and the peasants across whose fields they marched. Ordinary people's lives in the eras of Machiavelli, Shakespeare, the Reformation, and the scientific revolution. Topics include: birth, marriage, and death; city life and peasant culture; lay encounters with religious and intellectual ideas; war and crime; and gender and sexuality.

**HISTORY 137. The Holocaust. 4-5 Units.**

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 337, JEWISHST 183, JEWISHST 383

**HISTORY 139. Modern Britain and the British Empire. 5 Units.**

(Same as HISTORY 39. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain.

**HISTORY 140. World History of Science. 5 Units.**

(Same as HISTORY 40. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions.

**HISTORY 140A. The Scientific Revolution. 5 Units.**

What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.

**HISTORY 145A. Africa Until European Conquest. 5 Units.**

Episodes in African history from the earliest records up until European partition of the continent, focusing on how knowledge about the natural, social, and spiritual worlds was linked to the exercise of power. The effects of technological innovations on states and other forms of social complexity; use of religious beliefs and practices to legitimate or critique authority. The effects of slave trades and imperial conquest on these forms of authority.

**HISTORY 145B. Africa in the 20th Century. 5 Units.**

(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans.

Same as: AFRICAAM 145B

**HISTORY 146. History of Humanitarian Aid in sub-Saharan Africa. 4-5 Units.**

Explores humanitarian endeavors through the era of the slave trade, colonialism, the Cold War and the present. Our focus is both local and global examining international humanitarian policy and the effects and perceptions of humanitarian aid within different African localities. Assignments use primary and secondary sources including organizational reports, ethnographies, memoirs and film. Topics: anti-slave trade and abolition movements, `civilizing; missions, development, refugees, peacekeeping, famine and women's rights.

**HISTORY 147. History of South Africa. 5 Units.**

(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: AFRICAAM 147, CSRE 174

**HISTORY 148. The Egyptians. 3-5 Units.**

Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Participation in class is required.

Same as: AFRICAAM 30, CLASSICS 82, HISTORY 48

**HISTORY 149C. The Slave Trade. 5 Units.**

(Same as HISTORY 49C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slaving and the European conquest of Africa.

**HISTORY 14N. Making the Middle Ages. 3 Units.**

Through hands-on engagement with Stanford's diverse collections of medieval artifacts-- from grungy coins to lavish manuscripts-- this course offers an introduction to the cultures of Europe and the Mediterranean world from 400-1400 CE. In addition, the course will explore competing contemporary understandings of the "Middle Ages" and the role of the "medieval" in shaping what it means to be "modern".

**HISTORY 150A. Colonial and Revolutionary America. 5 Units.**

(Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.

Same as: AMSTUD 150A

**HISTORY 150B. Nineteenth Century America. 5 Units.**

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AFRICAAM 150B, AMSTUD 150B, CSRE 150S

**HISTORY 150C. The United States in the Twentieth Century. 5 Units.**

(Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Covering the past century, this course will survey U.S. politics, culture, and social movements, tracing three recurrent themes: the growth of the federal government and ensuing political debates about its role; the development of the United States into a world power; and the contested expansion of American democracy. Lectures meet Mon, Tues, Wed. This is a Massive Multiplayer Humanities course: students will participate in two archival workshops held on Thursdays. Research workshops for 5 credit students will also be held on Thursdays. Suitable for non-majors and majors alike. Three and five credit options, with the choice of a research paper or proposal for 5 credit students.

Same as: AMSTUD 150C

**HISTORY 151. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, ENGLISH 124, POLISCI 124A

**HISTORY 152. History of American Law. 5 Units.**

(Formerly Law 318. Now Law 3504.) This course examines the growth and development of American legal institutions with particular attention to crime and punishment, slavery and race relations, the role of law in developing the economy, and the place of lawyers in American society, from colonial times to the present. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final exam or paper. Automatic grading penalty waived for writers. Cross-listed with History (HISTORY 152 Consent of instructor required) & (HISTORY 352B). Same as: HISTORY 352B

**HISTORY 152K. America as a World Power: U.S. Foreign Relations, 1914 to Present. 5 Units.**

This course will examine the modern history of American foreign relations, from 1914 to the present. Beginning with the fateful decision to intervene in the First World War, it will examine the major crises and choices that have defined the "American Century." Our study of U.S. foreign relations will consider such key factors as geopolitics, domestic politics, bureaucracy, psychology, race, and culture. Students will be expected to undertake their own substantial examination of a critical episode in the era studied. Same as: INTNLREL 168

**HISTORY 153. CREATION OF THE CONSTITUTION. 5 Units.**

(Same as LAW 230.) The course begins with readings setting forth the intellectual and experiential background of the framing, including common law and natural rights theory, republicanism, economic & political scientific ideas, and colonial and post-Independence experience. We then study large parts of the debates at the Constitutional Convention, primarily using Madison's Notes. Next come the ratification debates, including readings from antifederalist writers, about half of *The Federalist*, and overviews of the Virginia and New York ratification conventions. We conclude with the addition of the Bill of Rights. Classes consist of a combination of lecture and extensive participation by students. Elements used in grading: Exam.

**HISTORY 154. American Intellectual and Cultural History to the Civil War. 5 Units.**

(Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. Same as: AMSTUD 154

**HISTORY 155. American Constitutional History from the Civil War to the War on Poverty. 5 Units.**

(Same as LAW 7008.) This course addresses U.S. constitutional history from the post-Civil War Reconstruction period through the mid-20th century. Because of the breadth of the subject matter, the view will necessarily be partial. In particular we will take as our focus the way the Constitution has provided a point of political mobilization for social movements challenging economic and social inequality. Topics covered include: Civil War Reconstruction and restoration; the rise of corporate capitalism and efforts to constrain it; Progressive Era regulation; the New Deal challenge to federalism and the anti-New Deal backlash; government spending; WWII and the Japanese Internment; the Civil Rights Era, and the War on Poverty. Readings will include both legal and historical materials with a focus on the relationship between law and society. Readings will include both legal and historical materials with a focus on the relationship between law and society. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Paper extensions will be granted with instructor permission. No automatic grading penalty for late papers. Same as: AMSTUD 155

**HISTORY 155D. The Asian American Movement: A History of Activism. 3-5 Units.**

The "Asian American Movement" was born in the late 1960s inspired by other movements for social change and justice in the era. Activism among Asians in America has a longer history and a continuity to today. We will examine past, present, and future and consider issues of racial/ethnic identity, of inequality, and of injustice. And we will explore avenues that sought remedy and progress. Political, social, cultural, gender and sexuality, and international dimensions will be considered. Same as: AMSTUD 155D, ASNAMST 55D, ASNAMST 155D, HISTORY 55D

**HISTORY 156. American Economic History. 5 Units.**

The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; emergence of American technology and business organization; economics of the Great Depression and the New Deal; post-World War II economic performance and social change; globalization, information technology, and inequality. Prerequisite: 1 or 1V. Same as: AMSTUD 116

**HISTORY 156G. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.**

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing. Same as: AMSTUD 156H, FEMGEN 156H

**HISTORY 157. The Constitution: A Brief History. 5 Units.**

A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. Same as: AMSTUD 157, POLISCI 128S

**HISTORY 158C. History of Higher Education in the U.S.. 3-5 Units.**

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. Same as: AMSTUD 165, EDUC 165, EDUC 265

**HISTORY 15D. Europe in the Middle Ages, 300-1500. 3-5 Units.**

This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we'll concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it. Same as: HISTORY 115D, RELIGST 115X

**HISTORY 15N. Inequality: the Last 100,000 Years. 3 Units.**

(Formerly CLASSHIS 13N.) This seminar traces the evolution of resource inequality from the Stone Age to the present. Only this long-term perspective reveals the forces that drive inequality and allows us to address two key questions: what causes inequality, and what factors have been capable of reducing it, at least for a while? We are going to confront challenging arguments: that inequality has been closely tied up with overall economic and human development, and that over the long course of history, war, revolution and pestilence were the most effective equalizers of income and wealth. This class will help you appreciate contexts and complexities that are usually obscured by partisan polemics and short-term thinking. Seminar participants will be directly involved in the instructor's current research project on the history of inequality. Same as: CLASSICS 28N

**HISTORY 16. Traders and Crusaders in the Medieval Mediterranean. 3-5 Units.**

Trade and crusade were inextricably interconnected in the high Middle Ages. As merchant ships ferried knights and pilgrims across the Mediterranean, rulers borrowed heavily to finance their expeditions, while military expansion opened new economic opportunities. Course themes include the origins of the Crusading movement; the rise of Venice and other maritime powers; the pivotal roles of the Byzantine and Mongol Empires; relations between Christians, Muslims, and Jews; new military, maritime, and commercial technologies; and the modern legacy of the Crusades.

Same as: HISTORY 116

**HISTORY 161. The Politics of Sex: Work, Family, and Citizenship in Modern American Women's History. 3-5 Units.**

This course explores the transition from Victorian to modern American womanhood by asking how Native, European, African, Mexican, and Asian American women navigated the changing sexual, economic, and political landscapes of the twentieth century. Through secondary readings, primary sources, films, music, and literature we explore the opportunities and boundaries on groups of women in the context of historical events that included immigration, urbanization, wartime, depression, the Cold War, as well as recurrent feminist and conservative political movements. Same as: AMSTUD 161, CSRE 162, FEMGEN 161, HISTORY 61

**HISTORY 163. A History of North American Wests. 5 Units.**

The history, peoples, and natural systems of a region that has never been contained within a single empire or nation state, but has been united by the movement of peoples, species, and things. Topics include smallpox, horses, gold, salmon, rivers, coal, and oil.

**HISTORY 164C. From Freedom to Freedom Now: African American History, 1865-1965. 5 Units.**

(Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music.

Same as: AMSTUD 164C

**HISTORY 166B. Immigration Debates in America, Past and Present. 3-5 Units.**

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions.

Same as: CSRE 166B, HISTORY 366B

**HISTORY 167A. Martin Luther King, Jr. and the Global Freedom Struggle. 3-5 Units.**

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will be taught by Professor Carson and his colleagues at the Institute. It will provide a general introduction to the life and legacy of Martin Luther King, Jr., as well as devote attention to the movements he inspired. In addition to lectures, the course will include presentations of documentaries such as *Eyes on the Prize*. Students will be expected to read the required texts, participate in class discussions, and take a final exam or submit a research paper (or an audio-visual project developed in consultation with the professor).

**HISTORY 168. American History in Film Since World War II. 3-4 Units.**

U.S. society, culture, and politics since WW II through feature films. Topics include: McCarthyism and the Cold War; ethnicity and racial identity; changing sex and gender relationships; the civil rights and anti-war movements; and mass media. Films include: *The Best Years of Our Lives*, *Salt of the Earth*, *On the Waterfront*, *Raisin in the Sun*, *Kramer v Kramer*, and *Falling Down*.

**HISTORY 168D. Martin Luther King, Jr.: The Inner Life and Global Vision. 3-5 Units.**

Martin Luther King, Jr., was the 20th-century's best-known African-American leader, but the religious roots of his charismatic leadership are far less widely known. The documents assembled and published by Stanford's King Research and Education Institute provide the source materials for this exploration of King's swift rise to international prominence as an articulate advocate of global peace and justice. Same as: AFRICAAM 68D, AMSTUD 168D, CSRE 68, HISTORY 68D

**HISTORY 170C. Modern Latin America. 3-5 Units.**

This course examines Latin American history from independence to the present day. Key issues include nationalism, urbanization, culture, and revolution. Sources include writings in the social sciences as well as primary documents, fiction, and film.

Same as: HISTORY 70C

**HISTORY 172A. Mexico: From Colony to Nation, or the History of an impossible Republic?. 5 Units.**

Was a republican form of government even possible in 19th-century Mexico after 300 years of colonial rule under the Spanish monarchy? Was the Spanish colonial heritage a positive or a negative legacy according to 19th-century Mexican politicians? How were they to forge a new national identity with so many ethnically and culturally diverse peoples throughout the territory? Just how *¿traditional¿* was, in fact, the colonial period? These are some of the questions we will explore in this course. Journeying from the late colonial period (c.1700) to the 35-year dictatorship known as El Porfiriato (1876-1911) we will examine how Mexico's diverse indigenous peoples adapted to both colonial and postcolonial rule, how they actively participated in politics and political discourse to preserve their cultures, customs and colonial privileges, and how after independence in 1821, a new republican political culture was forged. Mexico was not an impossible republic, but rather another kind of republic.

**HISTORY 177D. U.S. Intervention and Regime Change in 20th Century Latin America. 5 Units.**

Policy discussions of regime change by US politicians, journalists and pundits usually focus on Iraq, Iran, Syria and North Korea, often with little or no historical context or perspective. This course does the opposite and takes seriously the proverbial saying "if history is any guide..." by examining U.S. interventions in Latin America, a region where so-called preventive regime change (covert as well as overt) has been operative policy for well over a century. Investigates the rationales, motivations and strategies behind U.S.-backed or engineered regime changes in Mexico in the 1910s, Guatemala in the 1950s, Chile in the 1970s, and Nicaragua in the 1980s.

**HISTORY 180. The Ottoman Empire: Conquest, Coexistence, and Coffee. 3-5 Units.**

The Ottoman Empire ruled the Middle East, North Africa and Eastern Europe from the 15th to the early 20th centuries. How did the Ottoman enterprise appear in the frontier region between Christendom and the Islamic world? How were diverse peoples, religions, and regions integrated under the Ottoman order? Was there an Ottoman Mediterranean and Indian Ocean? How did reform movements in Islamic, Christian and Jewish thinking transform Ottoman societies? Topics include the Ottoman Empire between Europe and Eastern Islamic World; merchants and their markets; elite, urban, rural and nomadic lives; women, family, childhood and sexuality; life, afterlife and dreams. Special emphasis will be given to coffee and coffee houses which shaped public life in the Ottoman World since the 16th century. The survey ends with the rise of nationalisms, inter-communal violence and the disintegration of the Ottoman world.

Same as: HISTORY 80

**HISTORY 181B. Formation of the Contemporary Middle East. 5 Units.**

Focusing on the period from World War I to the recent past, the course emphasizes the eastern Arab world Egypt, greater Syria, and Iraq plus Saudi Arabia, Turkey, Iran, and Israel. Themes include: integration of the region into the world economy; imperialism and the formation of the contemporary state system; competing forms of identity (national states, pan-Arab nationalism, Islam) and ideology (liberalism, Marxism, fascism, Islamism); changing gender relations; Palestine/Israel, decolonization, the Cold War; the transition from British to U.S. hegemony; and several contemporary crises.

**HISTORY 182C. Making of the Islamic World, 600-1500. 5 Units.**

(Same as HISTORY 82C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1500. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols.

**HISTORY 182G. Making Palestine Visible. 3-5 Units.**

Israel-Palestine is one of the most difficult subjects to talk about, in large part because we in the United States do not have much exposure to Palestinian history, culture, and politics in their own terms. This course aims to humanize Palestinians and asks why Palestinian claims to rights are illegible for much of the American public. We begin to answer this question by examining a broad sampling of history, structures of power and law, culture, and contemporary political issues.

Same as: COMPLIT 82, COMPLIT 182, CSRE 82G, HISTORY 82G

**HISTORY 185B. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 4-5 Units.**

(Same as HISTORY 85B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life *¿* all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 185B, HISTORY 385C, JEWISHST 185B, REES 185B

**HISTORY 190. Early Chinese Thought. 3-5 Units.**

This lecture course examines the emergence of critical thought in early China. After a brief study of the social and political changes that made this emergence possible, it looks at the nature and roles of the thinkers, and finally their ideas about the social order, the state, war and the army, the family, the cosmos, and the self (both physical and mental). Some brief comparisons with early Greek thought.

Same as: HISTORY 90

**HISTORY 191D. China: The Northern and Southern Dynasties. 5 Units.**

(Same as HISTORY 91D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization.

**HISTORY 193. The Chinese Empire from the Mongol Invasion to the Boxer Uprising. 5 Units.**

(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINA 183, FEMGEN 193

**HISTORY 194B. Japan in the Age of the Samurai. 5 Units.**

(Same as HISTORY 94B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community.

**HISTORY 194G. Humanities Core: Technology and Media in Modern Japan. 3-5 Units.**

This course considers the political, economic, social, cultural, and artistic effects of the introduction of new technologies and media to modern China and Japan. The methodology will integrate techniques gleaned from the disciplines of history and literary studies. Our cross-discipline exploration will encompass printed books and images, language reform, communication technology, serialized fiction and commercial journalism, propaganda and censorship, cinema, comics, animation and television, gaming, and the internet. Through examination of these topics we will investigate a wide range of issues including nationality, ethnic identity, class, revolution, cultural identification, gender, sexuality, literacy, colonialism, imperialism, consumerism, materialism, and globalism, to name just a few. Throughout the course we will be attentive not only to the ways that new technology and media are represented in cultural materials but also how they are materialized in these products through the acts of adaptation, translation, transliteration, and remediation. Students will survey, collect, and synthesize archival materials, engage in media analysis, and undertake close readings to illuminate narrative strategies and other signifying effects. This work will in part be facilitated by the Massive Multiplayer Humanities pedagogical model, which involves flipped classrooms, faculty curated online archives, and student initiated group work.

Same as: HUMCORE 23, JAPAN 119

**HISTORY 195. Modern Korean History. 4-5 Units.**

(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) This lecture course provides a general introduction to the history of modern Korea. Themes include the characteristics of the Chosŏn dynasty, reforms and rebellions in the nineteenth century, Korean nationalism; Japan's colonial rule and Korean identities; decolonization and the Korean War; and the different state-building processes in North and South, South Korea's democratization in 1980s, and the current North Korean crisis.

Same as: HISTORY 395

**HISTORY 195C. Modern Japanese History: From Samurai to Pokemon. 5 Units.**

(Same as HISTORY 95C. History majors and others taking 5 units, register for 195C.) Japan's modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions.

**HISTORY 198. The History of Modern China. 5 Units.**

(Same as HISTORY 98. History majors and others taking 5 units, register for 198.) Do you want to understand Modern China? If so, this course is for you. And even if you've studied China before, or grew up there, this course will deepen and challenge your perspectives. Through vivid and propulsive lectures - drawing on fiction, film, political essays, and more - Professor Tom Mullaney will chart out China's historical transformations from 1800 to today, equipping you to speak and write intelligently about Chinese politics, society, economy, culture, gender, ethnicity, and international affairs.

**HISTORY 198G. Beijing, Shanghai, and the Structure of China. 3-5 Units.**

China's modern history through the rivalry of its two most important cities. The course begins in the nineteenth century, contrasting Beijing, the classic imperial capital and a foreign foundation paradoxically celebrated as the embodiment of "traditional" China, with Shanghai, a treaty port and demographic/economic center of China, but identified as a "foreign" city. After following the cities' history through the warlord period, the "Shanghai decade" of Nationalist rule, and the Japanese occupation, the course examines the two cities' developments under Mao and Deng. The course concludes with a look at their current relations and roles, and the transformed nature of China's cities.

**HISTORY 1B. Global History: The Early Modern World, 1300 to 1800. 3-5 Units.**

Topics include early globalization and cross-cultural exchanges; varying and diverse cultural formations in different parts of the world; the growth and interaction of empires and states; the rise of capitalism and the economic divergence of "the west"; changes in the nature of technology, including military and information technologies; migration of ideas and people (including the slave-trade); disease, climate, and environmental change over time. Designed to accommodate beginning students, non-majors, and more advanced history students.

**HISTORY 1C. Global History: Empires, Technology, and Modernity. 3-5 Units.**

How did the power of states evolve around the globe during the modern period? And how did it shape global experiences of modernity? In this course we will examine the development of technologies of rule from the eighteenth to the twenty-first century, from the age of empires and revolutions, through the world wars, the Cold War, and the war on terror. We will look at the political, social, cultural, and intellectual roots behind their invention and their results on the ground. In doing so, we will attempt to grasp the way they have shaped the history and experience of modernity. The course offers a broad overview not of a particular region but of the wider set of processes and technologies that connected the historical experiences of far-flung human communities. Topics include the evolution of government bureaucracies and classificatory schemes; the industrial revolution; technologies of rebellion and revolution; technologies of trade, including maps, ships, guns, and railroads; liberalism's urban technologies; airpower; the history and practice of development; camps and borders; and anti-colonial critiques of these various tools of empire. Through these, we will attempt to make sense of how the technologies of imperial power have shaped the bonds and inequalities of global capitalism and the world of nation-states. We will focus on different case studies each week to trace the unfolding of large-scale processes. Students will read primary sources (produced in the period) and historians' analyses of the events from a distance. The class is appropriate for beginning students, non-majors, and more advanced history students, and may be taken for different levels of credit.

**HISTORY 201. From Confederate Monuments to Wikipedia: The Politics of Remembering the Past. 5 Units.**

Gateway course for Public History/Public Service track. Examines various ways history is used outside of the classroom, and its role in political/cultural debates in the U.S. and abroad. Showcases issues and careers in public history with guest speakers.

Same as: AFRICAAM 102, CSRE 201

**HISTORY 201C. The U.S., U.N. Peacekeeping, and Humanitarian War. 5 Units.**

The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter's provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan. \* Course satisfies the WIM requirement for International Relations majors.

Same as: INTNLREL 140C

**HISTORY 201J. Objects of History: From "Material Culture" to "Making". 4-5 Units.**

This class considers objects as historical sources. It surveys diverse approaches to the study and display of physical evidence, from "material culture" to "making." These explorations of object-oriented research will inform the course's hands-on components, working with objects and replicating historical experiences. With its focus on the question of what historical knowledge can be gained through interactivity, the course is suited to students whose interests include museums and public history, reenactment and performance, the maker movement, or interdisciplinary methodology.

Same as: HISTORY 301J

**HISTORY 201K. A History of the Global Left: Revolutionary Movements against Empire. 4-5 Units.**

This class will trace the formation of trans-regional movements against imperialism in the modern period that helped create a "global Left." We will read contemporary works by thinkers such as Lord Byron, Karl Marx, Mohandas K. Gandhi, Annie Besant, and Faiz Ahmad Faiz, as well as historical studies of these figures and the movements in which they figured. Key topics include the American Revolution, the Indian "Mutiny" of 1857, the Ghadar movement, Pan-Islamism, Irish nationalism, and global communism.

Same as: HISTORY 301K

**HISTORY 202D. The History of Genocide. 4-5 Units.**

This course will explore the history, politics, and character of genocide from the beginning of world history to the present. It will also consider the ways that the international system has developed to prevent and punish genocide.

Same as: HISTORY 302D

**HISTORY 202G. Peoples, Armies and Governments of the Second World War. 4-5 Units.**

Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history.

Same as: HISTORY 302G

**HISTORY 202J. Climate Change Controversies: Past, Present, Future. 3-4 Units.**

Provides a unique perspective on contemporary debates about climate change through a study of their long history. After some background about climate science and a look at how people thought about climate in the 18th, 19th, and early 20th centuries, we explore the co-evolution of climate science and climate politics from World War II to the present. The approach is to examine a series of political issues and debates that established human effects on the global atmosphere as serious problems. We then focus on the UN Framework Convention on Climate Change, the 2015 Paris Agreement, and the future of international climate policy. Assignments include in-class presentations and a policy brief.

Same as: IPS 271

**HISTORY 202K. The Holocaust and Its Aftermath. 4-5 Units.**

This seminar gives an overview over different aspects of the history of the Holocaust and its aftermath and will examine key issues in recent Holocaust historiography and questions of memory and representation. Special emphasis is put on the nature of the historian's task, as viewed through the lens of historians of the Holocaust, as well as to the significance of the Holocaust in history and how it has changed over time. The course will confront students with historiographical texts and historical documents, with photography and film, works of scholarship and art.

Same as: HISTORY 302K, JEWISHST 282K, JEWISHST 382K

**HISTORY 203. Premodern Economic Cultures. 4-5 Units.**

Modern economists have made a science of studying the aggregate effects of individual choices. This science is based on the realities of personal freedom and individual choice. Prior to the modern era, however, different realities comprised very different economic cultures: moral economies in which greed was evil and generosity benefitted the patron's soul; familial collectives operating within historical conditioned diasporas; economies of obligation that threatened to collapse under their own weight as economic structures shifted. In this course we will be reading cross-culturally to develop an understanding of the shared and distinct elements of premodern economic cultures.

Same as: HISTORY 303

**HISTORY 203C. History of Ignorance. 5 Units.**

Scholars pay a lot of attention to knowledge—how it arises and impacts society—but much less attention has been given to ignorance, even though its impacts are equally profound. Here we explore the political history of ignorance, through case studies including: corporate denials of harms from particular products (tobacco, asbestos), climate change denialism, and creationist rejections of Darwinian evolution. Students will be expected to produce a research paper tracing the origins and impact of a particular form of ignorance.

**HISTORY 203K. Trauma and History. 2 Units.**

This course will examine trauma as a historical process, following the intergenerational impacts of history's darker dramas, analyzing collective strategies for coping and healing after trauma, and asking whether we can speak of "traumatized societies." Short readings and weekly discussions.

Same as: CSRE 203H

**HISTORY 204. What is History?. 5 Units.**

An introduction to the discipline of history, designed for current or prospective History majors. Focusing on methods and theories of historical inquiry, students will learn how historians frame problems, collect and analyze evidence, and contribute to on-going debates.

Through a series of case studies or exemplary works of historical study, the course will also explore different genres of historical writing (such as narrative, biography, social history) and different methodological approaches to history (such as Annales school, microhistory, and cultural history).

**HISTORY 204A. Reimagining History: New Approaches to the Past. 4-5 Units.**

This class explores, through analysis and practice, the ways in which history can be told and experienced through means other than traditional scholarly narratives. Approaches include literary fiction and non-fiction, digital media, graphic arts, maps, exhibitions, and film. A final project will require students to produce their own innovative work of history.

Same as: HISTORY 304A

**HISTORY 204D. Advanced Topics in Agnotology. 4-5 Units.**

Advanced research into the history of ignorance. Our goal will be to explore how ignorance is created, maintained and destroyed, using case studies from topics such as tobacco denialism, global climate denialism, and other forms of resistance to knowledge making. Course culminates in a research paper on the theory and practice of agnotology, the science of ignorance.

Same as: HISTORY 304D

**HISTORY 205D. Freedom in Chains: Black Slavery in the Atlantic, 1400s-1800s. 5 Units.**

This course will focus on the history of slavery in the British, French, Spanish, Portuguese and Dutch Atlantic world(s), from the late 1400s to the 1800s. Its main focus will be on the experiences of enslaved Africans and their descendants. Between the sixteenth and nineteenth centuries, the Europeans forcibly embarked over 10 million Africans to the Americas. Drawing on methodologies used by historians, archaeologists and anthropologists, the course will reconstruct the daily lives and the socio-economic, cultural and political histories of these captives. We will seek to hear their voices by investigating a variety of historical testimonies and recent scholarship. The course will examine slavery in the context of broader trends in Atlantic World studies, a field that has grown considerably in recent years, providing new ways of understanding historical developments across national boundaries. We will seek to identify commonalities and differences across time periods and regions and the reasons for those differences. Covered topics will include slave ship voyages, labor, agency, the creation of new identities (creolization), religion, race, gender, resistance, legacies, and memory. Same as: AFRICAAM 113V, AFRICAST 113V, CSRE 113V

**HISTORY 205F. Digital History: Concepts, Methods, Problems. 5 Units.**

This course confronts the current and potential influence of digital media on the theory and practice of history. We will focus on resources enabling new forms of scholarship, looking at tools for visualization and text analysis for generating historical interpretations, and explore alternative forms of publishing, design, and research. The course covers a range of readings along with a critical engagement with tools and resources. Students will also contribute to a digital spatial exhibit on the history of Silicon Valley.

**HISTORY 205G. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.**

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources. Same as: HISTORY 305G, POLISCI 235J, POLISCI 335J

**HISTORY 205K. The Age of Revolution: America, France, and Haiti. 4-5 Units.**

This course examines the "Age of Revolution," spanning the 18th and 19th centuries. Primarily, this course will focus on the American, French, and Haitian Revolutions (which overthrew both French and white planter rule). Taken together, these events reshaped definitions of citizenship, property, and government. But could republican principles—color-blind in rhetoric—be so in fact? Could nations be both republican and pro-slavery? Studying a wide range of primary materials, this course will explore the problem of revolution in an age of empires, globalization, and slavery. Same as: AFRICAAM 205K, HISTORY 305K

**HISTORY 206A. City, Society, Literature- 19th Century Histories. 4 Units.**

This course examines the rise of modern cities through an analysis of urban society and the imaginative literature of the 1800s. Same as: HISTORY 306A, URBANST 106

**HISTORY 206B. Intoxicated: Commodities & Globalization in the Early Modern World. 4-5 Units.**

Early modern Europe experienced an influx of foreign goods, including coffee, sugar, chocolate, tea, and drugs, that ushered in a new era of global commerce. Yet, these developments also had consequences: the large-scale enslavement and relocation of human beings and the violent subjugation of local populations in the name of empire. A wider range of goods from far-flung places entered the grasp of a larger swath of society, but from where, by what means, and at what cost?. Same as: HISTORY 306B

**HISTORY 206E. CAPITALS: How Cities Shape Cultures, States, and People. 3-5 Units.**

This course takes students on a trip to eight capital cities, at different moments in time: Renaissance Florence, Golden Age Madrid, Colonial Mexico City, Enlightenment and Romantic Paris, Existential and Revolutionary St. Petersburg, Roaring Berlin, Modernist Vienna, and bustling Buenos Aires. While exploring each place in a particular historical moment, we will also consider the relations between culture, power, and social life. How does the cultural life of a country intersect with the political activity of a capital? How do large cities shape our everyday experience, our aesthetic preferences, and our sense of history? Why do some cities become cultural capitals? Primary materials for this course will consist of literary, visual, sociological, and historical documents (in translation); authors we will read include Boccaccio, Lope de Vega, Sor Juana, Montesquieu, Baudelaire, Dostoyevsky, Irmgard Keun, Freud, and Borges. Note: To be eligible for WAYS credit, you must take the course for a minimum of 3 Units and a Letter Grade. Same as: COMPLIT 100, DLCL 100, FRENCH 175, GERMAN 175, ILAC 175, ITALIAN 175, URBANST 153

**HISTORY 206J. Resist, Rebel, Revolt: A Global History. 4-5 Units.**

This course will explore the inspirations and contexts of political, social, intellectual, and cultural forms of resistance in modern global history. Historical subjects will include anti-capitalism, anti-colonialism, resistance to Fascism and Nazism, anti-Communism, civil rights movements, human rights campaigns, and contemporary forms of dissidence. Same as: HISTORY 306J

**HISTORY 207. Biography and History. 4-5 Units.**

The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's *Possession*, Bernard Malamud's *Dubin's Lives*) that illuminate the intellectual underpinnings of biographical labor. Same as: HISTORY 308

**HISTORY 207B. Environment, Technology and Revolution in World History. 4-5 Units.**

Exploration of historiographical and interdisciplinary methodologies and approaches to intersections among environmental, technological, and revolutionary social change in diverse geographical and temporal contexts. Readings include broad theoretical and synthetic works as well as case studies of American, French, Mexican, Russian, Chinese, and Hungarian revolutions.

**HISTORY 207C. The Global Early Modern. 4-5 Units.**

In what sense can we speak of "globalization" before modernity? What are the characteristics and origins of the economic system we know as "capitalism"? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean. HISTORY 307C is a prerequisite for HISTORY 402 (Spring quarter). Same as: HISTORY 307C

**HISTORY 207S. Digital Humanities: Concepts, Tools, Problems. 4-5 Units.**

How can digital tools benefit research in history and neighboring disciplines? The aim of this seminar is to equip students with basic skills in some of the most important digital tools currently used by scholars in the humanities and social sciences. Individual classes will focus on Geographic Information Systems (GIS), web mapping, digital network analysis, data visualization, and digital publishing formats. As part of the exercise to use digital methods, students will develop collaborative digital projects. No prior technical skills are needed for this course. Same as: HISTORY 407K

**HISTORY 208. Private Lives, Public Stories: Autobiography in Women's History. 5 Units.**

Changing contexts of women's lives and how women's actions have shaped and responded to those contexts.

**HISTORY 208A. Science and Law in History. 4-5 Units.**

How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof.

Same as: HISTORY 308A

**HISTORY 208B. Women Activists' Response to War. 4-5 Units.**

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.

Same as: FEMGEN 208B, HISTORY 308B

**HISTORY 208K. Global Capitalism and the Global South. 5 Units.**

Is modern capitalism a European innovation or a global phenomenon? Can there be different manifestations of capitalism in different local, regional, national, and imperial contexts? What role has the Global South played in the history of capitalism? This course examines the ways that capitalism has innovated, destroyed, and matured from the 17th to 20th centuries. It explores the themes of business, trade, labor, agriculture, gender, and race with a focus on the Middle East, Africa, and East and South Asia.

**HISTORY 208S. Facing the Past: The Politics of Retrospective Justice. 5 Units.**

Forms of injustice in history including slavery, genocide, ethnic cleansing, mass rape, forced religious conversion, and torture of prisoners. Mechanisms developed over the last century to define, deter, and alleviate the effects of such offenses, including war crimes tribunals, truth commissions, national apologies, and monetary reparations. Case studies chart the international field of retrospective justice, exploring the legal, political, and moral implications of confronting traumatic pasts.

**HISTORY 209B. The Idea of Politics. 4-5 Units.**

Can we live without politics? Is politics indispensable for humanity and vice-versa? The idea of politics is that it must transform, through human action, conditions of collective life. But the 20th century produced colliding beliefs about what that life might be and what the human being itself might look like. Explore whether, after the century, we might still think of politics as an ethical idea and the "human" as foundational political category. Keywords: Civility, Cruelty, Friendship, Empire, Democracy, Humanism, Animals.

Same as: HISTORY 309B

**HISTORY 209C. Liberalism and Violence. 4-5 Units.**

Does Liberalism have a theory of violence? What does modern political thought, in privileging humanity and rights, share with "terrorists" and "rogue states?" How is liberalism transformed by the use of religion and death for political ends? We read key thinkers of modern life- Adorno, Arendt, Agamben, Benjamin, Derrida, Fanon, Foucault, Gandhi, Heidegger, and Schmitt- to interrogate the relationship between religion, sacrifice, and democracy. At the center are connections between war and modern life, and between violence and non-violence.

Same as: HISTORY 309C

**HISTORY 209D. Postcolonialism and Universalism. 4-5 Units.**

Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.

Same as: HISTORY 309A

**HISTORY 209S. Research Seminar for Majors. 5 Units.**

Required of History majors. How to conduct original, historical research and analysis, including methods such as using the libraries and archives at Stanford and elsewhere, and working collaboratively to frame topics, identify sources, and develop analyses. Autumn quarter focuses on gender, race, sexuality and History of Science; Winter quarter on early modern travel and Europe before 1500; Spring quarter on American political history and open topic.

**HISTORY 20A. The Russian Empire, 1450-1800. 3 Units.**

(Same as HISTORY 120A. History majors and others taking 5 units, register for 120A.) Explores rise of Russian state and expanse of empire; patterns of governance of a Eurasian empire; strategies and institutions of governance; survey of various ethnic and religious groups in empire and their varied cultures and political economies; gender and family; serfdom; Russian Orthodox religion and culture; reforms and Europeanization of 18th century.

**HISTORY 20N. Russia in the Early Modern European Imagination. 4 Units.**

Preference to freshmen. The contrast between the early modern image of Europe as free, civilized, democratic, rational, and clean against the notion of New World Indians, Turks, and Chinese as savage. The more difficult, contemporary problem regarding E. Europe and Russia which seemed both European and exotic. Readings concerning E. Europe and Russia from the Renaissance to the Enlightenment; how they construct a positive image of Europe and conversely a negative stereotype of E. Europe. Prerequisite: PWR 1.

**HISTORY 216. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.**

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, FEMGEN 216, HISTORY 316

**HISTORY 217S. Minorities In Medieval Europe. 5 Units.**

This course examines attitudes towards outsider groups within medieval society and the treatment of these groups by medieval Christians. Heretics, Jews, Muslims, homosexuals, prostitutes and usurers occupied ambivalent and at times dangerous positions within a society that increasingly defined itself as Christian. Differences in the treatment of these various 'outcast' groups, their depiction in art, their legal segregation, and their presumed association with demonic activity are addressed through discussion, and readings from primary and secondary source material.

Same as: RELIGST 217X

**HISTORY 218. The Holy Dead: Saints and Spiritual Power in Medieval Europe. 4-5 Units.**

Examines the cult of saints in medieval religious thought and life. Topics include martyrs, shrines, pilgrimage, healing, relics, and saints' legends.

Same as: HISTORY 318, RELIGST 218X, RELIGST 318X

**HISTORY 219C. Science, Technology, and Modernity in the Soviet Union. 5 Units.**

Science and technology were integral to the Soviet claim to offer a vision of modernity superior to that of Western capitalism. Science and technology would flourish; society would develop on a scientific basis. The results were more complex than the vision. Topics to be covered: science and Marxism-Leninism; the Lysenko affair; the R&D system; the role of the secret police; the atomic project; the space race; missile development; Andrei Sakharov; technology and innovation.

Same as: HISTORY 319C

**HISTORY 220G. Demons, Witches, Old Believers, Holy Fools, and Folk Belief: Popular Religion in Russia. 4-5 Units.**

19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

Same as: HISTORY 320G, REES 220G, REES 320G

**HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800. 5 Units.**

Social values, gender relations, and social change in an era of rapid change; challenges to established norms by new constructions of deviance (witchcraft, religious reform, and revolt) and new standards of civility; encounters with non-Russians and the construction of national consciousness. Social values as political ethos: patrimonial autocracy and the reality of female rule in the late 17th and 18th century.

**HISTORY 221B. The 'Woman Question' in Modern Russia. 5 Units.**

Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia.

Same as: FEMGEN 221B

**HISTORY 222. Crime and Punishment in Early Modern Europe and Russia. 4-5 Units.**

Explores criminal law in early modern Europe and Russia, ca 1500-1800, in law and in practice. Engages debates about use of exemplary public executions as tactic of governance, and about gradual decline in "violence" in Europe over this time. Explores practice of accusatory and inquisitory judicial procedures, judicial torture, forms of punishment, concepts of justice.

Same as: HISTORY 322A

**HISTORY 223. Art and Ideas in Imperial Russia. 4-5 Units.**

Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.

Same as: HISTORY 323

**HISTORY 223E. Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean. 3-5 Units.**

This course explores the cities of the Habsburg, Ottoman and Russian empires in the dynamic and turbulent period of their greatest transformation from the 19th century through the Two World Wars. Through the reading of urban biographies of Venice and Trieste, Vienna, Budapest, Cracow, Lviv, Sarajevo, Belgrade, Salonica, and Odessa, we consider broad historical trends of political, economic, and social modernization, urbanization, identity formation, imperialism, cosmopolitanism, and orientalism. As vibrant centers of coexistence and economic exchange, social and cultural borderlands, and sites of transgression, these cities provide an ideal lens through which to examine these themes in the context of transition from imperial to post-imperial space.

Same as: HISTORY 323E, REES 204, REES 304

**HISTORY 224A. The Soviet Civilization. 4-5 Units.**

Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

Same as: HISTORY 424A, REES 224A

**HISTORY 224C. Genocide and Humanitarian Intervention. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 324C, JEWISHST 284C, JEWISHST 384C, PEDS 224

**HISTORY 226E. Famine in the Modern World. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011.

Same as: HISTORY 326E, PEDS 226

**HISTORY 227D. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.**

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.

Same as: HISTORY 327D, REES 227, REES 327

**HISTORY 228. Circles of Hell: Poland in World War II. 5 Units.**

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.

Same as: HISTORY 328, JEWISHST 282, JEWISHST 382

**HISTORY 229A. Nationhood and Belonging: Poles and Jews. 3 Units.**

Examines changing conceptions of nationhood in Poland, late-19th century to present, with focus on place of Jews in Polish society. What conditions fostered the early political sense of the nation? Why was it replaced with integral nationalism, and for some, fascism? How did Jews relate to their homeland? Emphasis on post-1918 history: impact of independence, Great Depression, West European fascism, World War II, imposition of communist rule, and collapse of the Soviet Bloc. Considers current Polish-Jewish relations.

Same as: HISTORY 329A, JEWISHST 289A, JEWISHST 389A

**HISTORY 22S. From 'superfluous women' to the 'Yolocaust': The Experience of War in 20th Century Europe. 5 Units.**

Through a variety of primary sources, including diaries, photographs, letters, and artifacts this course explores the multiplicity of ways in which Europeans experienced the great conflicts that swept the continent in the 20th century. The unprecedented impact of these wars will be traced in stories of those whose voices have been marginalized in conventional historiography. This course encourages and guides students in their first forays into archival work in a hands-on approach to developing ways of thinking historically.

Same as: JEWISHST 22S

**HISTORY 230A. The Witness in Modern History: Memoir, Reportage, Image. 5 Units.**

The rise of the witness as icon and debates about its reliability as a historical source. The power of eyewitness accounts to convict accused criminals, inspire indignation about war and genocide, and attract attention to humanitarian crises. Their notorious unreliability due to exaggeration and misapprehension. Sources include reportage, photography, and documentary film. Case studies include criminal cases, war, poverty, and natural disasters.

**HISTORY 230C. Paris: Capital of the Modern World. 4-5 Units.**

This course explores how Paris, between the eighteenth and twentieth centuries, became the political, cultural, and artistic capital of the modern world. It considers how the city has both shaped and been shaped by the tumultuous events of modern history- class conflict, industrialization, imperialism, war, and occupation. It will also explore why Paris became the major world destination for intellectuals, artists and writers. Sources will include films, paintings, architecture, novels, travel journals, and memoirs.

Same as: FRENCH 140, FRENCH 340, URBANST 184

**HISTORY 230D. Europe in the World, 1789-Present. 4-5 Units.**

The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more "globalized" society we live in today.

Same as: HISTORY 330D

**HISTORY 231E. Paper, Printing, and Digital Revolutions: Transformations of the Book. 4-5 Units.**

What is a book? This seminar explores the conceptual implications of approximately two millennia of transformations in the physical and material properties of books. How have the meaning and authority we assign the written word changed as technologies of book production and dissemination have evolved, and how have they remained continuous? Topics covered include the rise of the medieval manuscript codex, the emergence of print culture in early modern Europe, and current debates over the nature of text in the digital age.

Same as: HISTORY 331E

**HISTORY 232B. Heretics, Prostitutes and Merchants: The Venetian Empire. 5 Units.**

Between 1200-1600, Venice created a powerful empire at the boundary between East and West that controlled much of the Mediterranean, with a merchant society that allowed social groups, religions, and ethnicities to coexist. Topics include the features of Venetian society, the relationship between center and periphery, order and disorder, orthodoxy and heresy, the role of politics, art, and culture in the Venetian Renaissance, and the empire's decline as a political power and reinvention as a tourist site and living museum.

Same as: ITALIAN 232B

**HISTORY 232C. European Security Since World War Two. 4-5 Units.**

This course looks at European security during the Cold War and up to the present. There are many historical controversies to be examined, e.g. the enlargement of NATO, as well as theoretical and doctrinal debates, e.g. about extended deterrence and detente.

Same as: HISTORY 332C, IPS 235, POLISCI 116A

**HISTORY 232E. Crooks, Quacks, and Courtesans: Jacobean City Comedy. 5 Units.**

We will read a series of plays set in or around early modern London, written by playwrights such as Ben Jonson, Thomas Middleton, and John Marston. The course will explore the plays' hilarious representations of the London underworld, with its confidence tricksters and naive victims, as well as more serious topics such as social mobility and social relations, economic expansion, disease transmission, and the built environment. Plays studied will include: *The Alchemist*, *Epicene*, *The Roaring Girl*, *A Chaste Maid In Cheapside*, *The Dutch Courtesan*.

Same as: ENGLISH 240A, ENGLISH 340A, HISTORY 332E

**HISTORY 232G. Early Modern Cities. 4-5 Units.**

Colloquium on the history of early modern European cities, covering urbanization, street life, neighborhoods, fortifications, guilds and confraternities, charity, vagrancy, and begging, public health, city-countryside relationship, urban constitutions, and confederations. Assignments include annotated bibliography, book review, and a final paper. Second-quarter continuation of research seminar available (HIST299S or HIST402).

Same as: HISTORY 332G

**HISTORY 233C. Two British Revolutions. 4-5 Units.**

Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.

Same as: HISTORY 333C

**HISTORY 233K. The Invention of the Modern Republic. 4-5 Units.**

Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

Same as: HISTORY 333K

**HISTORY 235. The Renaissance of War: Politics, Technology, and War in Late Medieval and Renaissance Italy. 5 Units.**

The dynamic societies of the Italian Peninsula of the 14th to 16th centuries "prosperous, astonishingly creative, politically fractious, and endemically violent" produced sweeping, deeply consequential changes. Among these were new developments in the theory and practice of war, politics, and diplomacy that laid the foundations for the modern state system and European military power. The class covers: new diplomatic practice; the Military Revolution; state-building; war finance; court culture; and the intersection of these with the shimmering brilliance of Renaissance culture.

**HISTORY 235C. Readings in the Supernatural. 4-5 Units.**

Class will read and discuss a selection of monographs, scholarly essays, and primary sources on the rich supernatural world of early modern Europe. We will discuss how fairies, werewolves, nightmares, and trolls all became witches, how the binary of angels and demons figured in European thought, and how the marginalized imaginary was reconstituted in theatre and fiction.

Same as: HISTORY 335C

**HISTORY 235F. Camus. 4-5 Units.**

"The Don Draper of Existentialism" for Adam Gopnik, "the ideal husband of contemporary letters" for Susan Sontag, and "the admirable conjunction of a man, of an action, and of a work" for Sartre, Camus embodies the very French figure of the "intellectuel engagé," or public intellectual. From his birth in 1913 into a poor family in Algeria to the Nobel Prize in Literature in 1957, from Saint Germain-des-Prés to his predilection for the mediterranean culture, Camus captured the quest for universalism, for the politics of justice, and engaged in the great ethical battles of his time, from the fight against nazism and communism, from questioning colonial rules to the haunting Algerian War, and his complex "silence" over the war. Camus the Algerian, Camus the moralist, Camus the Resistant: through readings and films, we will explore his multiple, long-lasting legacies. Readings from Albert Camus, Kamel Daoud, Mouloud Feraoun, Alice Kaplan, Orhan Pamuk, A.B. Yehoshua, Assia Djebar, Jean-Paul Sartre, Yasmina Khadra. Movies include "The Stranger," and "Far from Men." This course is a gateway for French Studies, with special emphasis on oral proficiency. Taught in French.  
Same as: CSRE 129, FRENCH 129

**HISTORY 236. The Ethics of Imperialism. 5 Units.**

Can a commitment to liberty, progress, and universal rights be reconciled with imperialism? The ethical underpinnings of empire; how modern Europeans provided ethical and political justifications for colonial expansion. How European ideals were used to defend and justify inequality, violence, and genocide. The ethics of American-driven globalization and humanitarianism. Texts include primary sources, philosophical treatises, and historical studies.

**HISTORY 236F. The End of the World As They Knew It: Culture, Cafés, and Crisis in Europe, 1880-1918. 4-5 Units.**

The years stretching from roughly 1880 to end of the First World War were marked by profound social upheaval and an intense burst of creativity. This seminar will focus on the major cultural movements and big ideas of the period. Topics covered include the rise of mass culture and cinema, the origins of psychoanalysis, anti-Semitism and Zionism, new anxieties about sexuality and the "New Woman," anarchism, decadence, degeneration, and Dada, with cameos from Bernhardt, Freud, Klimt, Nietzsche, Toulouse-Lautrec, Wilde, Zola, and other luminaries of the age.

Same as: HISTORY 336F

**HISTORY 237D. The French Revolution and the Birth of Modern Politics. 4-5 Units.**

(Students who have taken HISTORY 134 should not enroll in this course.) This course will focus on the birth of modern politics in the French Revolution. The goal will be to understand the structural contradictions of the French monarchy in the pre-revolutionary period, the reasons for the monarchy's failure to resolve those contradictions, and the political dynamic unleashed as they were solved by the revolutionary action of 1789. Sovereignty, democracy, rights, representation, and terror will be principal themes. Lectures will be combined with close reading and discussions of political and philosophical writings of the period.

Same as: HISTORY 337D

**HISTORY 237F. 20th Century British History through the Hoover Archives. 4-5 Units.**

From the rich resources of the Hoover Institution, the students in this course will select a particular archive (war posters, politician, spy, literary figure, diplomat, etc. etc.) to investigate, to write about, discuss in class, and, it is hoped, present in an exhibition at the Hoover, learning museum skills along the way as well as the history of Britain in the 20th century.  
Same as: HISTORY 337F

**HISTORY 237G. Outer Space Exploration in Germany in the Twentieth Century. 1-5 Unit.**

Since the nineteenth century, Germans, like their counterparts around the world, have considered the meaning and the role of humanity in outer space. As space travel developed from a dream to a reality, and as Germany changed borders and political systems among empires, dictatorships, socialist states, and capitalist states, German interest in spaceflight remained, although the meaning found in the stars changed dramatically. This course considers Germans' dreams of and predictions for outer space travel alongside German technological developments in spaceflight. It includes the different German states throughout the century, including Weimar Germany, National Socialism, East Germany, and West Germany. The course looks at science fiction films and novels, newspaper reports, scientific developments, and German space engineering projects, which together demonstrate how and why space travel often found high levels of support in Germany. Students will engage in historical and cultural analysis through course readings, discussions, and assignments.  
NOTE: To be eligible for WAYS credit, you must take this course for a minimum of 3 units and a letter grade.  
Same as: GERMAN 275

**HISTORY 238D. Germany and the World Wars, 1870-1990. 4-5 Units.**

(Students who have taken History 38A/138A should not enroll in this course.) This course examines Germany's tumultuous history from the Second Empire through the end of the Cold War. During this time, Germany ushered in five regimes and two world wars, seesawing between material ruin and economic prosperity on the frontline of Europe's military and ideological rifts. Beginning with Bismarck's wars of unification, the class spans World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.  
Same as: HISTORY 338D, JEWISHST 288D, JEWISHST 388D

**HISTORY 238G. Ethnography of the Late Middle Ages: Social history and popular culture in the age of the plague. 4-5 Units.**

During the late Middle Ages, as Europe was recovering from the devastation of the Black Death, political reorganization contributed to a burst of archival documentation that allows historians richly detailed glimpses of societies in transition. We will be reading selected scholarly articles and monographs covering such topics as persecution, prechristian cultural remnants, folk theologies, festival cultures, peasant revolts, heresy, and the advent of the diabolic witch.  
Same as: HISTORY 338G

**HISTORY 238J. The European Scramble for Africa: Origins and Debates. 5 Units.**

Why and how did Europeans claim control of 70% of African in the late nineteenth century? Students will engage with historiographical debates ranging from the national (e.g. British) to the topical (e.g. international law). Students will interrogate some of the primary sources on which debaters have rested their arguments. Key discussions include: the British occupation of Egypt; the autonomy of French colonial policy; the mystery of Germany's colonial entry; and, not least, the notorious Berlin Conference of 1884-1885.

**HISTORY 238K. Vox Populi: Populism and its Origins. 1-5 Unit.**

This seminar traces the proliferation of populism in contemporary Europe and the United States, with reference to the historical background of anti-institutional and anti-representational ideas of popular sovereignty. Subjects include: the notion of 'vox populi' from the early middle ages to the early modern period; ideas of radical democracy in the enlightenment era; 19th century notions of identifying 'the people' (nation, 'Volk', class, race, mass); the populist, reform and volkish movements around 1900; the rise of fascist and totalitarian ideas of popular sovereignty; the struggle over the meaning of democracy in the Cold War era; semantic transformations of 'the popular' through the audio-visual media; and the rise of today's populism since 1989. The material to be analyzed will consist of 1. Primary sources (programs, manifests, pamphlets, speeches and propaganda material including visual sources); 2. Contemporary theoretical texts (political philosophy, history, sociology, psychology, and popular science); and 3. Today's theories and practices of populism. nNote: The course will be taught by Visiting Professor Christian Geulen, University of Koblenz, Germany.

Same as: GERMAN 248, GERMAN 348, HISTORY 338K

**HISTORY 239C. Humanities Core: Great Books, Big Ideas -- Europe, Modern. 3-4 Units.**

This three-quarter sequence asks big questions of major texts in the European and American tradition. What is a good life? How should society be organized? Who belongs? How should honor, love, sin, and similar abstractions govern our actions? What duty do we owe to the past and future? This third and final quarter focuses on the modern period, from the rise of revolutionary ideas to the experiences of totalitarianism and decolonization in the twentieth century. Authors include Locke, Mary Shelley, Marx, Nietzsche, Freud, Weber, Primo Levi, and Frantz Fanon. Same as: DLCL 13, FRENCH 13, HUMCORE 13, PHIL 13

**HISTORY 239F. Empire and Information. 4-5 Units.**

How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable. Same as: HISTORY 339F

**HISTORY 239G. The Algerian Wars. 3-5 Units.**

From Algiers the White to Algiers the Red, Algiers, the Mecca of the Revolutionaries in the words of Amilcar Cabral, this course offers to study the Algerian Wars since the French conquest of Algeria (1830-) to the Algerian civil war of the 1990s. We will revisit the ways in which the war has been narrated in literature and cinema, popular culture, and political discourse. A special focus will be given to the Algerian War of Independence (1954-1962). The course considers the racial representations of the war in the media, the continuing legacies surrounding the conflict in France, Africa, and the United States, from Che Guevara to the Black Panthers. A key focus will be the transmission of collective memory through transnational lenses, and analyses of commemorative events and movies. nReadings from James Baldwin, Assia Djebar, Albert Camus, Frantz Fanon, Mouloud Feraoun. Movies include "The Battle of Algiers," "Days of Glory," and "Viva Laldjérie." nTaught in English.

Same as: CSRE 249, FRENCH 249, JEWISHST 249

**HISTORY 239H. Colonialism and Empire in Modern Europe. 5 Units.**

To better understand the history of modern Europe within a global context, explores the following questions: What impact did more than a century of colonialism have on the social lives, cultural attitudes, political loyalties, and intellectual world views of European women and men during the nineteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism?

**HISTORY 23N. The Soviet Union and the World: View from the Hoover Archives. 3 Units.**

This course seeks to explore the Soviet Union's influence on the world from 1917 to its end in 1991 from a variety of perspectives. Hoover Institution archival holdings will be the basic sources for the course.

**HISTORY 240. The History of Evolution. 4-5 Units.**

This course examines the history of evolutionary biology from its emergence around the middle of the eighteenth century. We will consider the continual engagement of evolutionary theories of life with a larger, transforming context: philosophical, political, social, economic, institutional, aesthetic, artistic, literary. Our goal will be to achieve a historical rich and nuanced understanding of how evolutionary thinking about life has developed to its current form.

Same as: BIO 340, HISTORY 340

**HISTORY 240G. Science and Empire, 1500-1900. 4-5 Units.**

During the scientific revolution of the seventeenth and eighteenth centuries, European states carved out vast colonial empires in Asia, Africa, and the Americas. How did empires make science and how did science make empires? In this course, we will explore the history of the global exchange of people, objects, and knowledge. We will consider how early modern science, medicine, and technology helped create global empires, while emerging across the division of the world into "the West and the rest."

Same as: HISTORY 340G

**HISTORY 241D. Einstein and the Structure of Reality. 4-5 Units.**

Albert Einstein once remarked "One cannot help but be in awe when one contemplates the mysteries of the marvelous structure of reality. It is enough if one tries to contemplate only a little of this mystery each day." In this course we will contemplate the history, science, and philosophy involved in three pathbreaking and contentious episodes in Einstein's lifelong quest to unveil the structure of reality: the special theory of relativity, the general theory of relativity, and the quantum theory.

Same as: HISTORY 341D

**HISTORY 242D. Knowledge and Information Infrastructures. 3-4 Units.**

This course introduces historical, theoretical, and comparative perspectives on knowledge and information systems from the medieval world to the present. Cases include libraries, meteorology, climate science, the Internet, the World Wide Web, and social science data systems. It theorizes how infrastructures form, how they change, and how they shape (and are shaped by) social systems. The course ends with challenges to modern knowledge infrastructures, such as crowdsourcing, citizen science, and alternative and bogus knowledge.

Same as: STS 166

**HISTORY 242F. Medicine in an Age of Empires. 4-5 Units.**

This course connects changing ways of understanding the body and disease in the seventeenth and eighteenth centuries to the business of empire. How did new ideas and methods of selling medicine relate to the rise of state-sponsored violence, resource extraction, global trade, and enslaved labor? Following black ritual practitioners in the Caribbean, apothecaries in England, and scientists abroad reveals the diversity of medical traditions and knowledge production in the early modern period that formed the basis of modern medicine today.

Same as: HISTORY 342F

**HISTORY 243G. Tobacco and Health in World History. 4-5 Units.**

Cigarettes are the world's leading cause of death—but how did we come into this world, where 6 trillion cigarettes are smoked every year? Here we explore the political, cultural, and technological origins of the cigarette and cigarette epidemic, using the tobacco industry's 80 million pages of secret documents. Topics include the history of cigarette advertising and cigarette design, the role of the tobacco industry in fomenting climate change denial, and questions raised by the testimony of experts in court.

Same as: HISTORY 343G

**HISTORY 243S. Human Origins: History, Evidence, and Controversy. 4-5 Units.**

Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required.

Same as: HISTORY 443A

**HISTORY 244C. The History of the Body in Science, Medicine, and Culture. 4-5 Units.**

The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.

Same as: HISTORY 444C

**HISTORY 244F. Beyond Pink and Blue: Gender in Tech. 1 Unit.**

This d-school seminar prototypes concepts and methods for "inclusive" design. From the moment we arrive on the planet, gender shapes our perception of the world. Examples of products (including objects, services, and systems) gone awry will serve as prompts for design activities, challenges, and discussions on gender issues to illustrate the different needs of women, men, and gender-fluid people. Class sessions mix use case explorations with design methodology, design thinking abilities, and guest speakers from technology, design, and academia. Students will be asked to work in interdisciplinary teams on several design challenges, culminating in the development of a toolkit for inclusive design. Methods will interact in crucial ways to create "intersectional thinking" (i.e., to consider how gender, ethnicity, sexuality, socio-economic status, etc. work together to require new solutions in design). Topics include: algorithms, media, seat belts for pregnant women, robotics, assistive technologies, tech for developing worlds, video games, urban/rural design, software development, and many more. Admission by application only. Visit [d.school.stanford.edu/classes](http://d.school.stanford.edu/classes) for more information.

Same as: FEMGEN 344F, HISTORY 344F

**HISTORY 245G. Law and Colonialism in Africa. 4-5 Units.**

Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority.

Same as: HISTORY 348D

**HISTORY 246. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, HISTORY 346, POLISCI 246P, POLISCI 346P

**HISTORY 247C. Revolutionary Mothers, National Fathers: Household, Politics and Nation in 20th Century Africa. 5 Units.**

A luta continua! This cry, Latin for "the struggle continues," evokes sub-Saharan African liberation struggles. Yet histories of these struggles sometimes cast them narrowly: as quests to transform European colonies into African-governed sovereign nation-states; struggles led by men; or public struggles, conducted in government buildings or on the streets. This course examines how freedom fighting intersected with other processes: changing gender norms, ethnic or religious identification, and labor or housing conditions, paying attention to ways political struggles came into homes.

**HISTORY 248D. Histories of Race in Science and Medicine at Home and Abroad. 4 Units.**

This course has as its primary objective, the historical study of the intersection of race, science and medicine in the US and abroad with an emphasis on Africa and its Diasporas in the US. By drawing on literature from history, science and technology studies, sociology and other related disciplines, the course will consider the sociological and cultural concept of race and its usefulness as an analytical category. The course will explore how the study of race became its own science in the late-Enlightenment era, the history of eugenics—a science of race aimed at the ostensible betterment of the overall population through the systematic killing or "letting die" of humanity's "undesirable" parts, discuss how the ideology of pseudo-scientific racism underpinned the health policies of the French and British Empires in Africa, explore the fraught relationship between race and medicine in the US, discuss how biological notions of race have quietly slipped back into scientific projects in the 21st century and explore how various social justice advocates and scholars have resisted the scientific racisms of the present and future and/or proposed new paths towards a more equitable and accessible science.

Same as: AFRICAAM 122F, AFRICAST 122F, CSRE 122F

**HISTORY 25. St. Petersburg: A Cultural Biography. 1 Unit.**

This course explores the rich cultural heritage of St. Petersburg: art, architecture, urban planning, literature, dance, music, theater. Lectures will be extensively slide-illustrated, particularly on architecture and art. The course will meet Thursday evenings 7:00-9:00 pm as part of the Continuing Studies Program (CSP) for adult students; undergraduate students are welcome to participate by enrolling in this 1-unit History course. Readings will be posted in Coursework for CSP participants and will be available but optional for undergraduate students. Satisfactory credit for undergraduates will be earned by attending 80% of the lectures and by submitting a 5-page paper on a topic of the student's choice utilizing the CSP assigned readings and sources suggested by the instructor.

**HISTORY 250A. History of California Indians. 5 Units.**

Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system.

Same as: CSRE 117S, NATIVEAM 117S

**HISTORY 250E. Taxing America: From the Puritans to Prop. 13. 5 Units.**

Taxes have shaped American society and politics since before the Revolution. And they've been extremely controversial just as long. In this course we'll try to understand American society and government by looking at the politics of taxation from the colonial period to the twentieth century. Topics include the legitimacy of taxation, the constitution, economic development, inequality, gender, and race.

**HISTORY 251J. The End of American Slavery, 1776-1865. 4-5 Units.**

How did the institution of American slavery come to an end? The story is more complex than most people know. This course examines the rival forces that fostered slavery's simultaneous contraction in the North and expansion in the South between 1776 and 1861. It also illuminates, in detail, the final tortuous path to abolition during the Civil War. Throughout, the course introduces a diverse collection of historical figures, including seemingly paradoxical ones, such as slaveholding southerners who professed opposition to slavery and non-slaveholding northerners who acted in ways that preserved it. Historical attitudes toward race are a central integrative theme.

Same as: AFRICAAM 251J, AMSTUD 251J, HISTORY 351J

**HISTORY 252B. Diplomacy on the Ground: Case Studies in the Challenges of Representing Your Country. 5 Units.**

The tragic death of Ambassador Chris Stevens has recently highlighted the dangers of diplomacy in the modern era. This class will look at how Americans in embassies have historically confronted questions such as authoritarian rule, human rights abuses, violent changes of government, and covert action. Case studies will include the Berlin embassy in the 1930s, Tehran in 1979, and George Kennan's experiences in Moscow, among others. Recommended for students contemplating careers in diplomatic service. \* Course satisfies the WiM requirement for International Relations majors.

Same as: INTNLREL 174

**HISTORY 252C. The Old South: Culture, Society, and Slavery. 5 Units.**

This course explores the political, social, and cultural history of the antebellum American South, with an emphasis on the history of African-American slavery. Topics include race and race making, slave community and resistance, gender and reproduction, class and immigration, commodity capitalism, technology, disease and climate, indigenous Southerners, white southern honor culture, the Civil War, and the region's place in national mythmaking and memory.

Same as: AFRICAAM 252C, CSRE 252C

**HISTORY 254. Popular Culture and American Nature. 5 Units.**

Despite John Muir, Aldo Leopold, and Rachel Carson, it is arguable that the Disney studios have more to do with molding popular attitudes toward the natural world than politicians, ecologists, and activists. Disney as the central figure in the 20th-century American creation of nature. How Disney, the products of his studio, and other primary and secondary texts see environmentalism, science, popular culture, and their interrelationships.

**HISTORY 254G. The Causes and Consequences of the American Revolution. 5 Units.**

Why did Britain's North American colonies declare independence from an empire they had long revered? What did the American Revolution mean for the people who experienced it? In this course we will explore the explosive origins of the American republic. Topics: revolutionary ideology, empire, the federal constitution, slavery, social conflict, and the international consequences of the American Revolution.

**HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice. 5 Units.**

The religious and political thought of Martin Luther King, Jr., using the documentary resources of the King Institute at Stanford. His social gospel Christianity and prophetic message of radical social transformation. Readings include the forthcoming *The Papers of Martin Luther King, Jr., Volume VI: Advocate of the Social Gospel*.

**HISTORY 255D. Racial Identity in the American Imagination. 4-5 Units.**

From Sally Hemings to Barack Obama, this course explores the ways that racial identity has been experienced, represented, and contested throughout American history. Engaging historical, legal, and literary texts and films, this course examines major historical transformations that have shaped our understanding of racial identity. This course also draws on other imaginative modes including autobiography, memoir, photography, and music to consider the ways that racial identity has been represented in American society. Most broadly, this course interrogates the problem of American identity and examines the interplay between racial identity and American identity.

Same as: AFRICAAM 255, AMSTUD 255D, CSRE 255D, HISTORY 355D

**HISTORY 255E. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.**

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, AMSTUD 216, CSRE 216X, EDUC 216

**HISTORY 256. 350 Years of America-China Relations. 4-5 Units.**

The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

Same as: EASTASN 256, HISTORY 356

**HISTORY 256E. The American Civil War. 5 Units.**

What was it like to live in the United States during the Civil War? This course uses the lenses of racial/ethnic identity, gender, class, and geography (among others) to explore the breadth of human experience during this singular moment in American history. It illuminates the varied ways in which Americans, in the Union states and the Confederate states, struggled to move forward and to find meaning in the face of unprecedented division and destruction.

Same as: AFRICAAM 256E, AMSTUD 256E

**HISTORY 256G. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: AFRICAAM 236, AMSTUD 246, CSRE 246, HISTORY 356G, RELIGST 246, RELIGST 346

**HISTORY 257. Was the American Revolution a Social Revolution?. 4-5 Units.**

What kind of a revolution was the American Revolution? The revolution gave colonial Americans political independence from Britain to found the United States. But did the revolution also transform American society in its wake? This course explores how historians and historical participants alike have answered this question paying attention to historical changes (or lack thereof) that took place in American society between c. 1750-1820 as well as grappling with what conceptually constitutes a "social" revolution in the first place.

Same as: HISTORY 357

**HISTORY 257C. LGBT/Queer Life in the United States. 4-5 Units.**

An introductory course that explores LGBT/Queer social, cultural, and political history in the United States. By analyzing primary documents that range from personal accounts (private letters, autobiography, early LGBT magazines, and oral history interviews) to popular culture (postcards, art, political posters, lesbian pulp fiction, and film) to medical, military, and legal papers, students will understand how the categories of gender and sexuality have changed over the past 150 years. This class investigates the relationship among queer, straight and transgender identities. Seminar discussions will question how the intersections of race, class, gender, and sexuality influenced the construction of these categories.

Same as: FEMGEN 140D, FEMGEN 240D

**HISTORY 258B. History of Education in the United States. 3-5 Units.**

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: AMSTUD 201, EDUC 201

**HISTORY 258E. History of School Reform: Origins, Policies, Outcomes, and Explanations. 3-5 Units.**

Strongly recommended for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. This course is strongly recommended for POLS students pursuing K-12 leadership.

Same as: EDUC 220D

**HISTORY 259A. Poverty and Homelessness in America. 4-5 Units.**

Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. Service Learning Course (certified by Haas Center).

**HISTORY 259E. American Interventions, 1898-Present. 5 Units.**

This class seeks to examine the modern American experience with limited wars, beginning with distant and yet pertinent cases, and culminating in the war in Iraq. Although this class will examine war as a consequence of foreign policy, it will not focus primarily on presidential decision making. Rather, it will place wartime policy in a broader frame, considering it alongside popular and media perceptions of the war, the efforts of antiwar movements, civil-military relations, civil reconstruction efforts, and conditions on the battlefield. We will also examine, when possible, the postwar experience.

Same as: HISTORY 359E, INTNLREL 168A

**HISTORY 25N. Stalin's Europe, 1944-1948. 3 Units.**

This freshman seminar explores the history of wartime and postwar Europe through the lenses of the communist parties of Europe, the anti-Soviet forces on the continent, the devastation of the civilian population, and the intentions and actions of the Soviet Union on the one hand, and the United States on the other. We will analyze issues of resistance and collaboration under the Nazis, Allied occupation, and the division of Europe. We will also consider the forcible displacement of peoples and the fate of Jewish survivors. The idea is to understand the harsh and complex realities of European life and politics in this crucial time frame spanning war and peace. One can discover the beginnings of the Cold War in this period, the first signs of the "Iron Curtain," and the origins of the European Union. Our sources for the reconstruction of European life at this crucial time include documents, memoirs, literature, film, and various collections at the Hoover Archives. In addition to analyzing written and visual materials in discussion, presentations, and short essays, you will engage in a quarter long project on one thematic or country study during this period.

**HISTORY 260. California's Minority-Majority Cities. 4-5 Units.**

Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

Same as: CSRE 260, URBANST 169

**HISTORY 260K. Exploring American Religious History. 4 Units.**

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: AMSTUD 91, CSRE 91, RELIGST 91

**HISTORY 261. Race, Gender, and Class in Jim Crow America. 5 Units.**

How African American life and labor were redefined from 1890-1954. Topics include family life, work, leisure patterns, transnational relations, cultural expressions emphasizing literature and music, resistance and social activism. Primary sources including visual materials, literature, and film; historical interpretations of the period.

**HISTORY 261G. Presidents and Foreign Policy in Modern History. 5 Units.**

Nothing better illustrates the evolution of the modern presidency than the arena of foreign policy. This class will examine the changing role and choices of successive presidential administrations over the past century, examining such factors as geopolitics, domestic politics, the bureaucracy, ideology, psychology, and culture. Students will be encouraged to think historically about the institution of the presidency, while examining specific case studies, from the First World War to the conflicts of the 21st century.

Same as: INTNLREL 173

**HISTORY 263D. Junipero Serra. 3-5 Units.**

Why is Junipero Serra considered a representative figure of California? How have assessments of Serra evolved over the last 200 years? Why does his name appear so often on our campus? In this course we will consider these and other questions in terms of Spanish empire, Native American history, California politics of memory and commemoration, among other approaches. Requirements include weekly reading, class discussion, a field trip to Carmel Mission, short writing assignments, and a formal debate on the ethics naming university or public buildings after historical figures with contested pasts. Taught in English.

**HISTORY 265. Writing Asian American History. 5 Units.**

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: AMSTUD 265, ASNAMST 265, HISTORY 365

**HISTORY 265G. African-American Independent Film- On Both Sides of the Camera. 4-5 Units.**

From D. W. Griffith's controversial "Birth of A Nation" (1915) to Nate Parker's also controversial "Birth of a Nation" (2016), Black Americans have played roles in Hollywood movies while also seeking to define how they are depicted in these movies. This course will introduce students to this history by featuring works of pioneering black filmmakers who challenged Hollywood racial stereotypes and created alternative images of the African-American experience.

Same as: AFRICAAM 265G, HISTORY 365G

**HISTORY 267E. Martin Luther King, Jr. - His Life, Ideas, and Legacy. 4-5 Units.**

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will provide a general introduction to King's life, visionary ideas, and historical significance. In addition to lectures and discussions, the course will include presentations of documentaries such as *Eyes on the Prize*.

Students will be expected to read the required texts, participate in class discussions, and submit a research paper or an audio-visual project developed in consultation with the professor.

Same as: AFRICAAM 267E, AMSTUD 267E

**HISTORY 268C. Poverty in America. 4-5 Units.**

During the twentieth century, Americans launched numerous bold efforts to reduce poverty in the United States. Federal welfare policy, community-based programs, academic research, philanthropic charity, and grassroots activism committed time and resources to the cause, but poverty-- and inequality-- have persisted. Why? This seminar considers the origins, implementation, and consequences of these remedies, noting in particular how race, gender, citizenship, family composition, and geography have shaped the lives of those in poverty and the public and private responses to it.

Same as: AMSTUD 268C, CSRE 268C, HISTORY 368C

**HISTORY 271. Mexicans in the United States. 5 Units.**

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: AMSTUD 271, CHILATST 171, CSRE 171H

**HISTORY 272D. Teaching Mexican American History in High School. 5 Units.**

The purpose of the course is two fold: 1) to expose students to salient historical themes and topics in Mexican American history, and 2) to establish a mentoring project with students currently enrolled in Mexican American history courses at Luis Valdez Leadership Academy (LVLA) high school in San Jose. Students will gain a broad understanding of Mexican American history, especially since the early twentieth century, with a particular focus on the Chicano Movement of the 1960s and 1970s. Students must also commit to enrollment in Hist 272F in spring quarter.

Same as: CHILATST 272A, CSRE 272A

**HISTORY 272F. Teaching Mexican American History in High School, Part II. 5 Units.**

Prerequisite: HISTORY 272D. This course is the second part of a continuing course about teaching Mexican American history in high school. In addition to continuing the mentoring work with students at Luis Valdez Leadership Academy, the spring quarter course will focus on the conceptualization, design, and development of a website that will provide resources for U.S. history teachers who seek information about Mexican American history. Students will identify primary sources, bibliographies, lesson plans, and other materials for use by high school teachers.

Same as: CHILATST 272B, CSRE 272B

**HISTORY 273C. Caribbean Migration to the United States. 4-5 Units.**

The course will explore the history of Caribbean migration to the United States.

Same as: AFRICAAM 273C, CSRE 273, HISTORY 373C

**HISTORY 273E. The Emergence of Nations in Latin America: Independence Through 1880. 4-5 Units.**

This course provides an introduction to the main themes of nineteenth-century Latin American history, including independence from Spain, the emergence of various nation-states, and the development of a new social, political, and economic order in the region.

Same as: HISTORY 373E

**HISTORY 274E. Urban Poverty and Inequality in Latin America. 5 Units.**

We examine historical issues of social inequality, poverty, crime, industrialization, globalization, and environment in major Latin American cities.

**HISTORY 274G. Public Space, the Private Sphere, and Dictatorship in Latin America. 5 Units.**

Recently, questions about the use of force, the state's monopoly on violence, and freedom of expression have taken on a new importance in the US. In Latin America, these issues were a focus of activism in the 1960s and 1970s. This course will consider everyday life and artistic interventions in urban space as acts of resistance, focusing on the idea that public space is central to the expression of freedom, paying special attention to the role of women.

**HISTORY 275B. History of Modern Mexico. 4-5 Units.**

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Same as: AMSTUD 275B, CHILATST 275B, CSRE 275B, HISTORY 375C

**HISTORY 276K. The Nature State: Latin American Conservation in Global Perspective. 4-5 Units.**

This colloquium studies the history of conservation as a way to understand (territorial) state formation. It examines Latin America from a global perspective by comparing case studies from around the world. It examines how various political arrangements allowed for nature protection, the creation and functioning of institutions and bureaucracies in charge of protected areas, what these developments tell us about citizenship, the role of science in state formation, and the implications of different environments in the building of national territories.

Same as: HISTORY 376K

**HISTORY 278D. Race, Ethnicity, and the Environment in Latin America. 4-5 Units.**

In a long sweep from the late eighteenth century to today, this seminar explores how race, ethnicity and the environment intersect in Latin American history, with emphasis on Colombia. It will inspect the meaning of the concepts of race and ethnicity and examine how the histories of black and indigenous peoples are better understood by taking the environment—both materially and symbolically—into account. We will read a variety of scholarly works, as well as primary sources.

Same as: HISTORY 378D

**HISTORY 278S. The Ethical Challenges of Climate Change. 4-5 Units.**

This course explores the ethical challenges of climate change from historical, social, economic, political, cultural and scientific perspectives. These include the discovery of global warming over two centuries, the rise of secular and religious denialism and skepticism toward the scientific consensus on it, the dispute between developed and developing countries over how to forge a binding global agreement to mitigate it, and the "role morality" of various actors (scientists, politicians, fossil fuel companies, the media and ordinary individuals) in the US in assessing ethical responsibility for the problem and its solutions.

Same as: HISTORY 478

**HISTORY 279. Latin American Development: Economy and Society, 1800-2014. 4-5 Units.**

The newly independent nations of Latin America began the 19th century with economies roughly equal to the U.S. and Canada. What explains the economic gap that developed since 1800? Why are some Latin American nations rich and others poor and how have societies changed over time? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks are explored. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice are examined and debated.

Same as: HISTORY 379

**HISTORY 281A. Twentieth-Century Iraq: A Political and Social History. 5 Units.**

The colonial experience, creation of the modern Iraqi state, and transition to military dictatorship. Political movements, religious and tribal elements, and their relation to the state. Geopolitical context.

**HISTORY 281B. Modern Egypt. 4-5 Units.**

From the mid-nineteenth century to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt.

Same as: HISTORY 381B

**HISTORY 282. The United States and the Middle East since 1945. 4-5 Units.**

Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel.

Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?

Same as: HISTORY 382

**HISTORY 283. Middle East Oil and Global Economy. 4-5 Units.**

The class studies Middle East oil in the global economy using the method of political economy. Topics addressed include: origins of the Middle East oil industry; the Seven Sisters international oil cartel; Aramco and the U.S.-Saudi alliance; the post-World War II petroleum order; petroleum, the crisis of 1971-82, and the rise of a new regime of capital accumulation regulated neo-liberal economic orthodoxy and "Washington Consensus" policies- commonly referred to as "globalization" since the 1990s.

Same as: HISTORY 383

**HISTORY 283G. Place, Nature, and Life: Production of Space in European and Muslim History. 4-5 Units.**

How did people experience, produce and imagine their physical and spiritual environment, their past and future, their immediate places and far geographies, life and afterlife in Europe and the Muslim Eurasia throughout history? How did political, legal and economic organizations configure and claim spaces in different time and geographies in Europe and the Muslim world? In addition to various case studies, primary texts and visual depictions, the theoretical framework of discussions will be based on texts by Lefebvre, Foucault, Soja, de Certeau, Yi-Fu Tuan, J.B. Jackson, Casey, Harvey.

Same as: HISTORY 383G

**HISTORY 284F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800. 4-5 Units.**

Focuses on political regimes, economic interactions and sociocultural formations in the early modern Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sufis.

Same as: HISTORY 384F

**HISTORY 286. Jews Among Muslims in Modern Times. 4-5 Units.**

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 386, JEWISHST 286, JEWISHST 386

**HISTORY 287C. Zionism and its Critics. 5 Units.**

Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

**HISTORY 288D. American Jewish History: Learning to be Jewish in America. 2-4 Units.**

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units.

Same as: AMSTUD 279X, EDUC 279, JEWISHST 297X, RELIGST 279X

**HISTORY 290. North Korea in Historical Perspective. 4-5 Units.**

This colloquium will approach North Korea from a longer historical perspective and also discuss the country's current crisis and its future. Themes will include the northern region in colonial Korea, Kim Il Sung and Manchurian guerrillas, the USSR and North Korean Revolution, the reconstruction after the Korean War, Juche ideology and the political system, the everyday life of North Korea people, the Cold War and North Korean diplomacy, culture and mass performance, the great famine and economy in transition, the military and nuclear development, and refugees and the succession of leadership.

Same as: HISTORY 390

**HISTORY 290E. Movies and Empire in East Asia. 4-5 Units.**

Cinema was invented in the 1890s and simultaneously introduced to East Asia. This colloquium explores how this new medium changed the cultural and social landscape of East Asia and how the visual power of films also affected the culture politics of empires in the region. The themes include cinema and urban spaces, cultural imperialism, film images and gender discourse, colonial modernity, Americanism and Asianism, the visual and the textual, wartime propaganda, and Hollywood movies and cold war empires.

Same as: HISTORY 390E

**HISTORY 291J. East Asian Environmental History. 4-5 Units.**

Traversing 2,500 years of history, this colloquium begins with conceptions of nature, agricultural time, and agriculture in ancient East Asia, proceeds to look closely at the environmental history of China, Japan, Korea, and Vietnam, and then concludes with environmental issues in East Asia from a contemporary perspective.

Same as: HISTORY 391J

**HISTORY 291K. Korean History and Culture before 1900. 3-5 Units.**

This course serves as an introduction to Korean culture, society, and history before the modern period. It begins with a discussion of early Korea and controversies over Korean origins; the bulk of the course will be devoted to the Chos'n period (1392-1910), that from the end of medieval Korea to the modern period. Topics to be covered include: Korean national and ethnic origins, the role of religious and intellectual traditions such as Buddhism and Confucianism, popular and indigenous religious practices, the traditional Korean family and social order, state and society during the Chos'n dynasty, vernacular prose literature, Korean's relations with its neighbors in East Asia, and changing conceptions of Korean identity. The course will be conducted through the reading and discussion of primary texts in English translation alongside scholarly research. As such, it will emphasize the interpretation of historical sources, which include personal letters, memoirs, and diaries, traditional histories, diplomatic and political documents, along with religious texts and works of art. Scholarly work will help contextualize these materials, while the class discussions will introduce students to existing scholarly debates about the Korean past. Students will be asked also to examine the premodern past with an eye to contemporary reception. The final project for the class is a film study, where a modern Korean film portraying premodern Korea will be analyzed as a case study of how the past works in public historical memory in contemporary Korea, both North and South. An open-ended research paper is also possible, pending instructor approval.

Same as: HISTORY 391K, KOREA 158, KOREA 258

**HISTORY 292D. Japan in Asia, Asia in Japan. 4-5 Units.**

How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.

Same as: HISTORY 392D

**HISTORY 292F. Culture and Religions in Korean History. 4-5 Units.**

This colloquium explores the major themes of Korean history before 1800 and the role of culture and religions in shaping the everyday life of Chosôn-dynasty Koreans. Themes include the aristocracy and military in the Koryô dynasty, Buddhism and Confucianism in the making of Chosôn Korea, kingship and court culture, slavery and women, family and rituals, death and punishment, and the Korean alphabet (Hangûl) and print culture.

Same as: HISTORY 392F

**HISTORY 292J. Sino-Korean Relations, Past and Present. 3-5 Units.**

Korea and China have long been intertwined in their political, economic, and cultural histories. The depth of this historical relationship has enormous ramifications for East Asia today. This course will investigate the history of Korea-China relations from its deep roots in the ancient past, through its formative periods in the early modern period and the age of imperialism, to the contemporary era. Topics to be covered include formation of Chinese and Korean national identity, Sino-Korean cultural exchange, premodern Chinese empire in East Asia, China and Korea in the wake of Western and Japanese imperialism, communist revolutions in East Asia, the Korean War, and China's relations with a divided Korea in the twentieth and twenty-first centuries. Particular attention will be paid to how the modern and contemporary ramifications of past historical relations and how contemporary Chinese and Koreans interpret their own and each others' pasts. This course will ask students to engage with diverse interpretations of the past and to consider how a common history is interpreted by different audiences and for different purposes. What are the implications of divergent memories of a single historical event for Chinese and Korean political, cultural, and ethnic identities? How are political, cultural, and ethnic identities constructed through engagement with difference? And what is at stake in different constructions of identity? In addressing these issues, students will also engage in social inquiry. They will be asked to understand how political ideology, economic organization, and social forces have shaped the character of Sino-Korean relations. What are the economic and political institutions that influence these relations in each time period? How do ideologies like Confucianism, Communism, or free-market liberalism interface with Chinese and Korean societies and impact their relations? Same as: CHINA 156, CHINA 256, KOREA 156, KOREA 256

**HISTORY 293A. Research Seminar on Political Thought. 4-5 Units.**

A series of texts and documents that form the heart of what Marx and Engels called "the colonial question". Discussions center on specific themes relating to each student's research topic and/or interests. The seminar will be organized around a set of core common readings and weekly discussions, supplemented by a designed list of secondary texts and primary materials. Themes include: secularism, religion, state, capital, empire, anticolonialism, gender, democracy, textual and print cultures, cinema, political and legal theory, and history of economic thought. 400-level options allows students to do a two-quarter sequence, with the Spring devoted to writing up the research paper.

Same as: HISTORY 493

**HISTORY 293E. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: FEMGEN 293E, HISTORY 393E, RELIGST 257X, RELIGST 357X

**HISTORY 294C. First Encounters: China and the West, 1500-1860. 4-5 Units.**

For four hundred years, the peoples of China and the West have engaged with each other. What happened when worlds and world-views came into contact? In this course, we will explore the experience of encounter and its cultural impact on two largely distinct, but never isolated societies. We will study the history of cross-cultural exchange between China and the West to see how each emerged through dialogue with the other and to understand the roots of our own interconnected world.

Same as: HISTORY 394C

**HISTORY 294D. Manchuria: Cradle of Conflict, Cockpit of Asia. 4-5 Units.**

How did Manchuria become Chinese? This course utilizes the dual waves of early twentieth-century writings and a wide array of recent scholarship dealing with Manchuria to explore the formation of nation-states out of the Qing and Japanese empires in Northeast Asia through the lenses of opium, migration, cities, warlords, and memoir. This course will be of interest to students concerned with developing transcultural understandings of Northeast Asian history.

Same as: HISTORY 394D

**HISTORY 295F. Race and Ethnicity in East Asia. 4-5 Units.**

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day.

Same as: ASNAMST 295F, CSRE 295F, HISTORY 395F

**HISTORY 296. Communism and Revolution in China. 5 Units.**

From the formation of the Chinese Communist Party (CCP) in 1921 through the 1949 founding of the People's Republic of China (PRC). Topics include: early theories of socialism in China; the relationship between Chinese communism and the Communist International and Soviet Union; agrarian reformulation of communism by Mao; the communist-nationalist civil war; the Communist Revolution of 1949; and the consolidation of communist power in the PRC.

**HISTORY 296C. The Making of Modern India. 4-5 Units.**

What does the history of the modern world look like as seen through India's history? Through an examination of ancient India and the development of Hindu and Buddhist communities, to the influx of Muslims and the rise of the Mughal Empire, to European colonialism, Gandhi and anti-colonial movements, to Partition, Independence, Bollywood, and the rise of Hindu nationalist political parties, this course will provide a fresh lens to not only view India's history, but India's role in shaping the modern world.

Same as: HISTORY 396C

**HISTORY 296F. Short Stories from India and Pakistan. 3-5 Units.**

The course introduces the main periods and trends of 20th- and 21st-century Urdu short story: Progressive Writers' Movement, Partition literature, Modernism, contemporary fiction. Classes include close reading and discussion of selected short stories, with special focus on prominent themes such as social problems; personal loss, exile, displacement, alienation, and questions of identity; gender and sexuality; history, memory, and nostalgia; myth and imagination. Readings include: Premchand, Manto, Ismat Chughtai, Qurratulain Hyder, Intizar Husain, Naiyer Masud. All readings are in English.

Same as: ICA 296F

**HISTORY 297. The Cold War and East Asia. 5 Units.**

Explores how East Asia negotiated superpower rivalry and global ideological competition during the Cold War. Considers the ways in which China, Japan, and Korea were more than battlegrounds for US-Soviet contestation and played active roles in defining the nature and dynamics of the conflict. Re-examines conventional narratives and periodizations against alternative conceptual models and interpretive frameworks highlighting the constructed nature of the struggle as well as the role of historical and cultural factors in shaping the East Asian experience. Same as: HISTORY 397

**HISTORY 297F. Religion and Power in the Making of Modern South Asia. 3-5 Units.**

This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. Undergraduates must enroll in RELIGST 255 for 5 units. Graduate students must enroll RELIGST 355 for 3-5 units. HISTORY297F must be taken for 4-5 units. Same as: RELIGST 255, RELIGST 355

**HISTORY 298G. Death and Death Culture in Modern China. 4-5 Units.**

From the late Qing period to the Cultural Revolution, Chinese society experienced a radical transformation of the beliefs, practices, and organizations that addressed the issue of death. The culture of death was at the heart of society. This colloquium will explore the diverse aspects of Chinese social, religious, and material practices involved in parting with the dead, in rural and urban society, in China as well as overseas. Sources: we shall use a wide body of texts, photographs, images, and films. Hardly anything changed more in modern Chinese history than the ways in which Chinese society. Same as: HISTORY 398G

**HISTORY 299A. Senior Research I. 1-5 Unit.**

.

**HISTORY 299B. Senior Research II. 1-5 Unit.**

.

**HISTORY 299C. Senior Research III. 1-5 Unit.**

.

**HISTORY 299D. Tooling Up for Digital Humanities. 1 Unit.**

What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

**HISTORY 299F. Curricular Practical Training. 1 Unit.**

Following internship work, students complete a research report outlining work activity, problems investigated, key results and follow-up projects. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship and faculty sponsorship.

**HISTORY 299H. Junior Honors Colloquium. 1 Unit.**

Required of junior History majors planning to write a History honors thesis during senior year. Meets four times during the quarter.

**HISTORY 299M. Undergraduate Directed Research: Martin Luther King, Jr., Research and Education Institute. 1-4 Unit.**

May be repeated for credit.

**HISTORY 299P. Undergraduate Directed Research: Pioneering Women. 1 Unit.**

May be repeated for credit.

**HISTORY 299S. Undergraduate Directed Research and Writing. 1-5 Unit.**

May be repeated for credit.

**HISTORY 299X. Preparing for International Field Work: Public Service or Research. 1 Unit.**

Open to students in all classes, those planning internships abroad and those planning research, from juniors with honors theses and sophomores with Chappell Lougee grants to freshmen thinking ahead. Introduces resources on campus for planning international research and service. Raises issues that need to be considered in advance of going abroad: ethical concerns, Human Subjects Protocol, networking, personal safety and gender issues, confronting cultural differences. Exposes students to research methods: case studies, interviewing, working in foreign libraries and archives.

Same as: HISTORY 399A

**HISTORY 301E. Life Under Nazism. 4-5 Units.**

This course explores everyday life in the Third Reich. Moving inside political events, students will examine daily experiences in the Nazi state-- from Hitler's tumultuous rise to power through the end of World War Two. We will see how people navigated new ideologies, practices, anti-Semitism, war, and mass murder. Through analysis of memoirs, diaries, essays, novels, propaganda, scholarship, and film, students will investigate how social and political developments can reveal the very boundaries between self and society.

**HISTORY 301J. Objects of History: From "Material Culture" to "Making". 4-5 Units.**

This class considers objects as historical sources. It surveys diverse approaches to the study and display of physical evidence, from "material culture" to "making." These explorations of object-oriented research will inform the course's hands-on components, working with objects and replicating historical experiences. With its focus on the question of what historical knowledge can be gained through interactivity, the course is suited to students whose interests include museums and public history, reenactment and performance, the maker movement, or interdisciplinary methodology.

Same as: HISTORY 201J

**HISTORY 301K. A History of the Global Left: Revolutionary Movements against Empire. 4-5 Units.**

This class will trace the formation of trans-regional movements against imperialism in the modern period that helped create a "global Left." We will read contemporary works by thinkers such as Lord Byron, Karl Marx, Mohandas K. Gandhi, Annie Besant, and Faiz Ahmad Faiz, as well as historical studies of these figures and the movements in which they figured. Key topics include the American Revolution, the Indian "Mutiny" of 1857, the Ghadar movement, Pan-Islamism, Irish nationalism, and global communism.

Same as: HISTORY 201K

**HISTORY 302D. The History of Genocide. 4-5 Units.**

This course will explore the history, politics, and character of genocide from the beginning of world history to the present. It will also consider the ways that the international system has developed to prevent and punish genocide.

Same as: HISTORY 202D

**HISTORY 302G. Peoples, Armies and Governments of the Second World War. 4-5 Units.**

Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history.

Same as: HISTORY 202G

**HISTORY 302K. The Holocaust and Its Aftermath. 4-5 Units.**

This seminar gives an overview over different aspects of the history of the Holocaust and its aftermath and will examine key issues in recent Holocaust historiography and questions of memory and representation. Special emphasis is put on the nature of the historian's task, as viewed through the lens of historians of the Holocaust, as well as to the significance of the Holocaust in history and how it has changed over time. The course will confront students with historiographical texts and historical documents, with photography and film, works of scholarship and art.

Same as: HISTORY 202K, JEWISHST 282K, JEWISHST 382K

**HISTORY 303. Premodern Economic Cultures. 4-5 Units.**

Modern economists have made a science of studying the aggregate effects of individual choices. This science is based on the realities of personal freedom and individual choice. Prior to the modern era, however, different realities comprised very different economic cultures: moral economies in which greed was evil and generosity benefitted the patron's soul; familial collectives operating within historical conditioned diasporas; economies of obligation that threatened to collapse under their own weight as economic structures shifted. In this course we will be reading cross-culturally to develop an understanding of the shared and distinct elements of premodern economic cultures.

Same as: HISTORY 203

**HISTORY 303C. History of Ignorance. 4-5 Units.**

Scholars pay a lot of attention to knowledge—how it arises and impacts society—but much less attention has been given to ignorance, even though its impacts are equally profound. Here we explore the political history of ignorance, through case studies including: corporate denials of harms from particular products (tobacco, asbestos), climate change denialism, and creationist rejections of Darwinian evolution. Students will be expected to produce a research paper tracing the origins and impact of a particular form of ignorance.

**HISTORY 303F. Words and Things in the History of Classical Scholarship. 4-5 Units.**

How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.

Same as: CLASSICS 331

**HISTORY 303K. Trauma and History: Intergenerational suffering and collective healing. 4-5 Units.**

This course will examine trauma as a historical process, following the intergenerational impacts of history's darker dramas, analyzing collective strategies for coping and healing after trauma, and asking whether we can speak of "traumatized societies." Readings for graduate students will include Ben Shephard's *A War of Nerves*, Didier Fassin and Richard Rechtman's *The Empire of Trauma*, and selections from Yael Danieli, ed., *Intergenerational Handbook of Multigenerational Legacies of Trauma*. Colloquium will be discussion-oriented, but will also include guest discussants from around the world. The course will culminate in a conference to be held at Stanford, June 4-6: "Soul Wounds: Trauma and Healing Across Generations." Undergraduate requirements for 1 credit: Attend weekly "Mind, Body, and Culture" workshop and first hour of Wednesday morning discussion, attend some part of conference on June 4-6. Graduate requirements for 4-5 credits: Attend workshop, read weekly, discussion on Wednesday mornings, write a paper and if desired present at conference.

**HISTORY 304. Approaches to History. 4-5 Units.**

Required of first-year History Ph.D. students. This course explores ideas and debates that have animated historical discourse and shaped historiographical practice over the past half-century or so. The works we will be discussing raise fundamental questions about how historians imagine the past as they try to write about it, how they constitute it as a domain of study, how they can claim to know it, and how (and why) they argue about it.

**HISTORY 304A. Reimagining History: New Approaches to the Past. 4-5 Units.**

This class explores, through analysis and practice, the ways in which history can be told and experienced through means other than traditional scholarly narratives. Approaches include literary fiction and non-fiction, digital media, graphic arts, maps, exhibitions, and film. A final project will require students to produce their own innovative work of history.

Same as: HISTORY 204A

**HISTORY 304D. Advanced Topics in Agnotology. 4-5 Units.**

Advanced research into the history of ignorance. Our goal will be to explore how ignorance is created, maintained and destroyed, using case studies from topics such as tobacco denialism, global climate denialism, and other forms of resistance to knowledge making. Course culminates in a research paper on the theory and practice of agnotology, the science of ignorance.

Same as: HISTORY 204D

**HISTORY 305. Graduate Pedagogy Workshop. 1 Unit.**

Required of first-year History Ph.D. students. Perspectives on pedagogy for historians: course design, lecturing, leading discussion, evaluation of student learning, use of technology in teaching lectures and seminars. Addressing today's classroom: sexual harassment issues, integrating diversity, designing syllabi to include students with disabilities.

**HISTORY 305C. Graduate Workshop Series. 1 Unit.**

This is a 1-credit course for which only regular attendance is required, and graduate students may audit any or all of the sessions as they find useful. The majority of the course addresses questions of research, grant writing, and professionalization, while the last few sessions offer general guidance on preparing for the job market.

**HISTORY 305G. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.**

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolò Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources.

Same as: HISTORY 205G, POLISCI 235J, POLISCI 335J

**HISTORY 305K. The Age of Revolution: America, France, and Haiti. 4-5 Units.**

This course examines the "Age of Revolution," spanning the 18th and 19th centuries. Primarily, this course will focus on the American, French, and Haitian Revolutions (which overthrew both French and white planter rule). Taken together, these events reshaped definitions of citizenship, property, and government. But could republican principles—color-blind in rhetoric—be so in fact? Could nations be both republican and pro-slavery? Studying a wide range of primary materials, this course will explore the problem of revolution in an age of empires, globalization, and slavery. Same as: AFRICAAM 205K, HISTORY 205K

**HISTORY 306. Beyond Borders: Approaches to Transnational History. 4-5 Units.**

This core colloquium for the Transnational, International, and Global (TIG) field will introduce students to the major historiographical trends, methodological challenges, and theoretical approaches to studying and writing transnational histories.

**HISTORY 306A. City, Society, Literature- 19th Century Histories. 4 Units.**

This course examines the rise of modern cities through an analysis of urban society and the imaginative literature of the 1800s.

Same as: HISTORY 206A, URBANST 106

**HISTORY 306B. Intoxicated: Commodities & Globalization in the Early Modern World. 4-5 Units.**

Early modern Europe experienced an influx of foreign goods, including coffee, sugar, chocolate, tea, and drugs, that ushered in a new era of global commerce. Yet, these developments also had consequences: the large-scale enslavement and relocation of human beings and the violent subjugation of local populations in the name of empire. A wider range of goods from far-flung places entered the grasp of a larger swath of society, but from where, by what means, and at what cost?.

Same as: HISTORY 206B

**HISTORY 306D. World History: Graduate Colloquium. 4 Units.**

How do historians engage the global scale in the classroom as well as in research? The world history canon including Toynbee, McNeill, Braudel, Wolf, and Wallerstein; contrasting approaches, recent research, and resources for teaching. Recommended: concurrent enrollment in HISTORY 306K.

**HISTORY 306J. Resist, Rebel, Revolt: A Global History. 4-5 Units.**

This course will explore the inspirations and contexts of political, social, intellectual, and cultural forms of resistance in modern global history. Historical subjects will include anti-capitalism, anti-colonialism, resistance to Fascism and Nazism, anti-Communism, civil rights movements, human rights campaigns, and contemporary forms of dissidence.

Same as: HISTORY 206J

**HISTORY 306K. World History Pedagogy Workshop. 1 Unit.**

Students draft a syllabus and create a curriculum module for use in a world history lecture course. Corequisite: HISTORY 306D, recommended.

**HISTORY 307A. Legal History Workshop. 4-5 Units.**

(Same as LAW 372.) The Legal History Workshop is designed as a forum in which faculty and students from both the Law School and the History Department can discuss some of the best work now being done in the field of legal history. Every other week, an invited speaker will present his or her current research for discussion. This year the theme of the Workshop will be Conservative Legal Movements from 1950 to the Present. Speakers will include Reva Siegel, the Nicholas deB. Katzenbach Professor of Law at Yale Law School, and Thomas Sugrue, the David Boies Professor of History and Sociology at the University of Pennsylvania, as well several other scholars of law, the social sciences and humanities writing about this topic. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Special Instructions: Students are required to write a brief response to each speaker's paper. There will be a total of four speakers, and thus four papers. Guidance will be provided concerning how to frame these response papers, which will be due every two weeks - i.e., on the day before speaker presents and students will receive "W" writing credit. Students taking the course to receive "R" research credit are required to write a research paper on a legal history topic that they choose (in consultation with the professor). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation, attendance, assignments and final paper. This course is open to first-year Law School students. Writing (W) credit is for students entering prior to Autumn 2012.

**HISTORY 307C. The Global Early Modern. 4-5 Units.**

In what sense can we speak of "globalization" before modernity? What are the characteristics and origins of the economic system we know as "capitalism"? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean. HISTORY 307C is a prerequisite for HISTORY 402 (Spring quarter).

Same as: HISTORY 207C

**HISTORY 308. Biography and History. 4-5 Units.**

The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's *Possession*, Bernard Malamud's *Dubin's Lives*) that illuminate the intellectual underpinnings of biographical labor.

Same as: HISTORY 207

**HISTORY 308A. Science and Law in History. 4-5 Units.**

How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof.

Same as: HISTORY 208A

**HISTORY 308B. Women Activists' Response to War. 4-5 Units.**

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.

Same as: FEMGEN 208B, HISTORY 208B

**HISTORY 308F. Law and Humanities Workshop: History, Literature, and Philosophy. 4-5 Units.**

(Formerly LAW 516, now LAW 3515.) The Law and Humanities Workshop: History, Literature, and Philosophy is designed as a forum in which faculty and students from the Law School and from various humanities departments can discuss some of the best work now being done in law and humanities. Every other week, an invited speaker will present his or her current research for discussion. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Enrollment will be limited to 30 students—20 from SLS who will be selected by lottery and 10 from H&S. Elements used in grading: Class participation, attendance, and writing assignments.

**HISTORY 309A. Postcolonialism and Universalism. 4-5 Units.**

Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry. Same as: HISTORY 209D

**HISTORY 309B. The Idea of Politics. 4-5 Units.**

Can we live without politics? Is politics indispensable for humanity and vice-versa? The idea of politics is that it must transform, through human action, conditions of collective life. But the 20th century produced colliding beliefs about what that life might be and what the human being itself might look like. Explore whether, after the century, we might still think of politics as an ethical idea and the "human" as foundational political category. Keywords: Civility, Cruelty, Friendship, Empire, Democracy, Humanism, Animals. Same as: HISTORY 209B

**HISTORY 309C. Liberalism and Violence. 4-5 Units.**

Does Liberalism have a theory of violence? What does modern political thought, in privileging humanity and rights, share with "terrorists" and "rogue states?" How is liberalism transformed by the use of religion and death for political ends? We read key thinkers of modern life—Adorno, Arendt, Agamben, Benjamin, Derrida, Fanon, Foucault, Gandhi, Heidegger, and Schmitt—to interrogate the relationship between religion, sacrifice, and democracy. At the center are connections between war and modern life, and between violence and non-violence. Same as: HISTORY 209C

**HISTORY 309E. History Meets Geography. 4-5 Units.**

Focus is on developing competence in GIS computer applications and applying it to historical problems. Previous experience with GIS not required. Recommended: complete the GIS tutorial in Branner Library before the course starts.

**HISTORY 309F. Maps in the Early Modern World. 4-5 Units.**

The significance of cartographic enterprise across the early modern world. Political, economic, and epistemological imperatives that drove the proliferation of nautical charts, domain surveys, city plans, atlases, and globes; the types of work such artifacts performed for their patrons, viewers, and subjects. Contributions of indigenous knowledge to imperial maps; the career of the map in commerce, surveillance, diplomacy, conquest, and indoctrination. Sources include recent research from Asia, Europe, and the Americas. Same as: HISTORY 209F

**HISTORY 309G. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.**

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: CLASSICS 215, DLCL 209, RELIGST 204

**HISTORY 311A. Family, Gender, and Production in Ancient Rome. 4-5 Units.**

Seminar. The household as the basic unit of production in Rome in the context of family relations and ideologies of gender. Methodological challenges of doing social and economic history from literary, epigraphic, and literary texts. Demography of family and kinship in ancient Rome. Ideologies of gender and family roles and their influence on economic production. Economic theories of the family and human capital.

**HISTORY 311G. Big Ancient History. 4-5 Units.**

How the shift away from thinking about European history in terms of a western civilization model toward embedding it in stories of how global history affects research and teaching on ancient Greece and Rome. Conventional, evolutionary, and global history narratives of the past 5,000 to 15,000 years and some new ideas about how Greco-Roman history might fit into different storylines.

**HISTORY 313. Core Colloquium: Graduate Readings in Medieval History. 4-5 Units.**

This course serves as a graduate-level introduction to major themes, problems, methods, and historiographical traditions in medieval European history.

**HISTORY 315. Advanced Paleography. 5 Units.**

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment. Same as: CLASSICS 216, RELIGST 329X

**HISTORY 316. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.**

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, FEMGEN 216, HISTORY 216

**HISTORY 318. The Holy Dead: Saints and Spiritual Power in Medieval Europe. 4-5 Units.**

Examines the cult of saints in medieval religious thought and life. Topics include martyrs, shrines, pilgrimage, healing, relics, and saints' legends. Same as: HISTORY 218, RELIGST 218X, RELIGST 318X

**HISTORY 319C. Science, Technology, and Modernity in the Soviet Union. 5 Units.**

Science and technology were integral to the Soviet claim to offer a vision of modernity superior to that of Western capitalism. Science and technology would flourish; society would develop on a scientific basis. The results were more complex than the vision. Topics to be covered: science and Marxism-Leninism; the Lysenko affair; the R&D system; the role of the secret police; the atomic project; the space race; missile development; Andrei Sakharov; technology and innovation.  
Same as: HISTORY 219C

**HISTORY 320G. Demons, Witches, Old Believers, Holy Fools, and Folk Belief: Popular Religion in Russia. 4-5 Units.**

19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.  
Same as: HISTORY 220G, REES 220G, REES 320G

**HISTORY 321A. State, Society and Nation in Modern Russian Historiography. 4-5 Units.**

Main trends of Russian intellectual history as seen through major historians' treatment of Muscovy: Romanticism, Slavophilism, Hegelianism, Populism, Social Democracy, New Idealism, and Marxism-Leninism.

**HISTORY 321B. Imperial Russian Historiography. 4-5 Units.****HISTORY 322A. Crime and Punishment in Early Modern Europe and Russia. 4-5 Units.**

Explores criminal law in early modern Europe and Russia, ca 1500-1800, in law and in practice. Engages debates about use of exemplary public executions as tactic of governance, and about gradual decline in "violence" in Europe over this time. Explores practice of accusatory and inquisitory judicial procedures, judicial torture, forms of punishment, concepts of justice.  
Same as: HISTORY 222

**HISTORY 323. Art and Ideas in Imperial Russia. 4-5 Units.**

Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.  
Same as: HISTORY 223

**HISTORY 323B. Research Methodologies in Early Modern Russian History. 4-5 Units.****HISTORY 323E. Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean. 3-5 Units.**

This course explores the cities of the Habsburg, Ottoman and Russian empires in the dynamic and turbulent period of their greatest transformation from the 19th century through the Two World Wars. Through the reading of urban biographies of Venice and Trieste, Vienna, Budapest, Cracow, Lviv, Sarajevo, Belgrade, Salonica, and Odessa, we consider broad historical trends of political, economic, and social modernization, urbanization, identity formation, imperialism, cosmopolitanism, and orientalism. As vibrant centers of coexistence and economic exchange, social and cultural borderlands, and sites of transgression, these cities provide an ideal lens through which to examine these themes in the context of transition from imperial to post-imperial space.  
Same as: HISTORY 223E, REES 204, REES 304

**HISTORY 324C. Genocide and Humanitarian Intervention. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.  
Same as: HISTORY 224C, JEWISHST 284C, JEWISHST 384C, PEDS 224

**HISTORY 324F. The Caucasus and the Muslim World. 4-5 Units.**

The linkages connecting the societies of the Caucasus to Muslim communities in Iran, Russia, the Ottoman Empire and Turkey, S. Asia, and the Middle East.

**HISTORY 326A. Modern Europe: Society and Politics. 5 Units.**

The goal of this course is to introduce graduate students to major works of history and literature in the field of nineteenth and early-twentieth century history. A colloquia will be given in tandem with a research seminar.

**HISTORY 326C. Graduate Colloquium on Balkan History. 4-5 Units.**

Designed for History Ph.D. students to develop competence in the history and historiography of the modern Balkans, from the French Revolution to the present. Areas of study include the influence of empires on the region, the rise of nationalism and nation states, the dilemmas of independence, the emergence and decline of communism in the region, and the recurrence of war and ethnic conflict.

**HISTORY 326E. Famine in the Modern World. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011.  
Same as: HISTORY 226E, PEDS 226

**HISTORY 327D. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.**

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.  
Same as: HISTORY 227D, REES 227, REES 327

**HISTORY 328. Circles of Hell: Poland in World War II. 5 Units.**

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.  
Same as: HISTORY 228, JEWISHST 282, JEWISHST 382

**HISTORY 329A. Nationhood and Belonging: Poles and Jews. 3 Units.**

Examines changing conceptions of nationhood in Poland, late-19th century to present, with focus on place of Jews in Polish society. What conditions fostered the early political sense of the nation? Why was it replaced with integral nationalism, and for some, fascism? How did Jews relate to their homeland? Emphasis on post-1918 history: impact of independence, Great Depression, West European fascism, World War II, imposition of communist rule, and collapse of the Soviet Bloc. Considers current Polish-Jewish relations.

Same as: HISTORY 229A, JEWISHST 289A, JEWISHST 389A

**HISTORY 330. Core Colloquium on Early Modern Europe: Ancien Regime. 4-5 Units.**

Topics in the social, political, and religious history of Western Europe, 1550-1789, with an emphasis on France. May be repeated for credit.

**HISTORY 330A. Early Modern Colloquium. 4-5 Units.**

Historiographical survey from the Renaissance to the Enlightenment. Topics include Renaissance, Reformation, European expansion, state and nation building, printing, military, and scientific revolutions, origins of Enlightenment. Designed to prepare students doing either a primary or secondary graduate field in early modern European history.

**HISTORY 330D. Europe in the World, 1789-Present. 4-5 Units.**

The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more "globalized" society we live in today.

Same as: HISTORY 230D

**HISTORY 331B. Core Colloquium on Modern Europe: The 19th Century. 4-5 Units.**

The major historical events and historiographical debates of the long 19th century from the French Revolution to WW I.

**HISTORY 331D. Core Colloquium on Modern Europe: Intellectual History. 4-5 Units.****HISTORY 331E. Paper, Printing, and Digital Revolutions: Transformations of the Book. 4-5 Units.**

What is a book? This seminar explores the conceptual implications of approximately two millennia of transformations in the physical and material properties of books. How have the meaning and authority we assign the written word changed as technologies of book production and dissemination have evolved, and how have they remained continuous? Topics covered include the rise of the medieval manuscript codex, the emergence of print culture in early modern Europe, and current debates over the nature of text in the digital age.

Same as: HISTORY 231E

**HISTORY 332C. European Security Since World War Two. 4-5 Units.**

This course looks at European security during the Cold War and up to the present. There are many historical controversies to be examined, e.g. the enlargement of NATO, as well as theoretical and doctrinal debates, e.g. about extended deterrence and detente.

Same as: HISTORY 232C, IPS 235, POLISCI 116A

**HISTORY 332E. Crooks, Quacks, and Courtesans: Jacobean City Comedy. 5 Units.**

We will read a series of plays set in or around early modern London, written by playwrights such as Ben Jonson, Thomas Middleton, and John Marston. The course will explore the plays' hilarious representations of the London underworld, with its confidence tricksters and naive victims, as well as more serious topics such as social mobility and social relations, economic expansion, disease transmission, and the built environment. Plays studied will include: *The Alchemist*, *Epicene*, *The Roaring Girl*, *A Chaste Maid In Cheapside*, *The Dutch Courtesan*.

Same as: ENGLISH 240A, ENGLISH 340A, HISTORY 232E

**HISTORY 332G. Early Modern Cities. 4-5 Units.**

Colloquium on the history of early modern European cities, covering urbanization, street life, neighborhoods, fortifications, guilds and confraternities, charity, vagrancy, and begging, public health, city-countryside relationship, urban constitutions, and confederations. Assignments include annotated bibliography, book review, and a final paper. Second-quarter continuation of research seminar available (HIST299S or HIST402).

Same as: HISTORY 232G

**HISTORY 333C. Two British Revolutions. 4-5 Units.**

Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.

Same as: HISTORY 233C

**HISTORY 333K. The Invention of the Modern Republic. 4-5 Units.**

Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

Same as: HISTORY 233K

**HISTORY 334F. Science, Technology, and Empire. 4-5 Units.**

How modern Europe came to be connected to the wider world through repeated cycles of expansion, circulation, and exchange from the mid-nineteenth century to the present. Using weekly themes and in-depth discussions of watershed moments, the roles played by colonialism, migration, commerce, warfare, telecommunications, and popular culture in redefining the place of Europe in a changing global landscape will be explored.

**HISTORY 335. The Renaissance of War: Politics, Technology, and War in Late Medieval and Renaissance Italy. 4-5 Units.**

The dynamic societies of the Italian Peninsula of the 14th to 16th centuries "prosperous, astonishingly creative, politically fractious, and endemically violent" produced sweeping, deeply consequential changes. Among these were new developments in the theory and practice of war, politics, and diplomacy that laid the foundations for the modern state system and European military power. The class covers: new diplomatic practice; the Military Revolution; state-building; war finance; court culture; and the intersection of these with the shimmering brilliance of Renaissance culture.

**HISTORY 335C. Readings in the Supernatural. 4-5 Units.**

Class will read and discuss a selection of monographs, scholarly essays, and primary sources on the rich supernatural world of early modern Europe. We will discuss how fairies, werewolves, nightmares, and trolls all became witches, how the binary of angels and demons figured in European thought, and how the marginalized imaginary was reconstituted in theatre and fiction.

Same as: HISTORY 235C

**HISTORY 336. Modern France. 4-5 Units.**

(Daughton).

**HISTORY 336E. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.**

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques. Same as: CLASSICS 396, DLCL 396

**HISTORY 336F. The End of the World As They Knew It: Culture, Cafés, and Crisis in Europe, 1880-1918. 4-5 Units.**

The years stretching from roughly 1880 to end of the First World War were marked by profound social upheaval and an intense burst of creativity. This seminar will focus on the major cultural movements and big ideas of the period. Topics covered include the rise of mass culture and cinema, the origins of psychoanalysis, anti-Semitism and Zionism, new anxieties about sexuality and the *‘New Woman,’* anarchism, decadence, degeneration, and Dada *‘with cameos from Bernhardt, Freud, Klimt, Nietzsche, Toulouse-Lautrec, Wilde, Zola, and other luminaries of the age.’*

Same as: HISTORY 236F

**HISTORY 337. The Holocaust. 4-5 Units.**

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 137, JEWISHST 183, JEWISHST 383

**HISTORY 337C. Street History: Learning the Past in School and Out. 3-5 Units.**

Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?

Same as: EDUC 356

**HISTORY 337D. The French Revolution and the Birth of Modern Politics. 4-5 Units.**

(Students who have taken HISTORY 134 should not enroll in this course.) This course will focus on the birth of modern politics in the French Revolution. The goal will be to understand the structural contradictions of the French monarchy in the pre-revolutionary period, the reasons for the monarchy's failure to resolve those contradictions, and the political dynamic unleashed as they were solved by the revolutionary action of 1789. Sovereignty, democracy, rights, representation, and terror will be principal themes. Lectures will be combined with close reading and discussions of political and philosophical writings of the period.

Same as: HISTORY 237D

**HISTORY 337F. 20th Century British History through the Hoover Archives. 4-5 Units.**

From the rich resources of the Hoover Institution, the students in this course will select a particular archive (war posters, politician, spy, literary figure, diplomat, etc. etc.) to investigate, to write about, discuss in class, and, it is hoped, present in an exhibition at the Hoover, learning museum skills along the way as well as the history of Britain in the 20th century.

Same as: HISTORY 237F

**HISTORY 338A. Graduate Colloquium in Modern British History, Part I. 4-5 Units.**

Influential approaches to problems in British, European, and imperial history. The 19th-century British experience and its relationship to Europe and empire. National identity, the industrial revolution, class formation, gender, liberalism, and state building. Goal is to prepare specialists and non-specialists for oral exams.

**HISTORY 338B. MODERN BRITISH HISTORY PART II. 4-5 Units.**

Themes include empire and racism, the crisis of liberalism, the rise of the welfare state, national identity, the experience of total war, the politics of decline, and modernity and British culture.

**HISTORY 338D. Germany and the World Wars, 1870-1990. 4-5 Units.**

(Students who have taken History 38A/138A should not enroll in this course.) This course examines Germany's tumultuous history from the Second Empire through the end of the Cold War. During this time, Germany ushered in five regimes and two world wars, seesawing between material ruin and economic prosperity on the frontline of Europe's military and ideological rifts. Beginning with Bismarck's wars of unification, the class spans World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.

Same as: HISTORY 238D, JEWISHST 288D, JEWISHST 388D

**HISTORY 338G. Ethnography of the Late Middle Ages: Social history and popular culture in the age of the plague. 4-5 Units.**

During the late Middle Ages, as Europe was recovering from the devastation of the Black Death, political reorganization contributed to a burst of archival documentation that allows historians richly detailed glimpses of societies in transition. We will be reading selected scholarly articles and monographs covering such topics as persecution, prechristian cultural remnants, folk theologies, festival cultures, peasant revolts, heresy, and the advent of the diabolic witch.

Same as: HISTORY 238G

**HISTORY 338K. Vox Populi: Populism and its Origins. 1-5 Unit.**

This seminar traces the proliferation of populism in contemporary Europe and the United States, with reference to the historical background of anti-institutional and anti-representational ideas of popular sovereignty. Subjects include: the notion of 'vox populi' from the early middle ages to the early modern period; ideas of radical democracy in the enlightenment era; 19th century notions of identifying 'the people' (nation, 'Volk', class, race, mass); the populist, reform and volkish movements around 1900; the rise of fascist and totalitarian ideas of popular sovereignty; the struggle over the meaning of democracy in the Cold War era; semantic transformations of 'the popular' through the audio-visual media; and the rise of today's populism since 1989. The material to be analyzed will consist of 1. Primary sources (programs, manifests, pamphlets, speeches and propaganda material including visual sources); 2. Contemporary theoretical texts (political philosophy, history, sociology, psychology, and popular science); and 3. Today's theories and practices of populism. nNote: The course will be taught by Visiting Professor Christian Geulen, University of Koblenz, Germany.

Same as: GERMAN 248, GERMAN 348, HISTORY 238K

**HISTORY 339F. Empire and Information. 4-5 Units.**

How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.

Same as: HISTORY 239F

**HISTORY 339H. Modern European History in a Global Age. 4-5 Units.**

How scholars can write the history of modern Europe in a way that integrates global and transnational perspectives. Discussed the methodological challenges and merits of various approaches and reviews relevant theoretical and interdisciplinary models for how this can best be done. Topics include globalization, migration, internationalism, colonialism, post-colonialism, modern warfare, and the media.

**HISTORY 340. The History of Evolution. 4-5 Units.**

This course examines the history of evolutionary biology from its emergence around the middle of the eighteenth century. We will consider the continual engagement of evolutionary theories of life with a larger, transforming context: philosophical, political, social, economic, institutional, aesthetic, artistic, literary. Our goal will be to achieve a historical rich and nuanced understanding of how evolutionary thinking about life has developed to its current form.

Same as: BIO 340, HISTORY 240

**HISTORY 340G. Science and Empire, 1500-1900. 4-5 Units.**

During the scientific revolution of the seventeenth and eighteenth centuries, European states carved out vast colonial empires in Asia, Africa, and the Americas. How did empires make science and how did science make empires? In this course, we will explore the history of the global exchange of people, objects, and knowledge. We will consider how early modern science, medicine, and technology helped create global empires, while emerging across the division of the world into "the West and the rest."

Same as: HISTORY 240G

**HISTORY 341D. Einstein and the Structure of Reality. 4-5 Units.**

Albert Einstein once remarked "One cannot help but be in awe when one contemplates the mysteries of the marvelous structure of reality. It is enough if one tries to contemplate only a little of this mystery each day." In this course we will contemplate the history, science, and philosophy involved in three pathbreaking and contentious episodes in Einstein's lifelong quest to unveil the structure of reality: the special theory of relativity, the general theory of relativity, and the quantum theory.

Same as: HISTORY 241D

**HISTORY 342. Darwin in the History of Life. 4-5 Units.**

Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. Attendance at the lectures of HISTORY 142 is required.

**HISTORY 342F. Medicine in an Age of Empires. 4-5 Units.**

This course connects changing ways of understanding the body and disease in the seventeenth and eighteenth centuries to the business of empire. How did new ideas and methods of selling medicine relate to the rise of state-sponsored violence, resource extraction, global trade, and enslaved labor? Following black ritual practitioners in the Caribbean, apothecaries in England, and scientists abroad reveals the diversity of medical traditions and knowledge production in the early modern period that formed the basis of modern medicine today.

Same as: HISTORY 242F

**HISTORY 343G. Tobacco and Health in World History. 4-5 Units.**

Cigarettes are the world's leading cause of death—but how did we come into this world, where 6 trillion cigarettes are smoked every year? Here we explore the political, cultural, and technological origins of the cigarette and cigarette epidemic, using the tobacco industry's 80 million pages of secret documents. Topics include the history of cigarette advertising and cigarette design, the role of the tobacco industry in fomenting climate change denial, and questions raised by the testimony of experts in court.

Same as: HISTORY 243G

**HISTORY 344. Narrative Knowing. 1-2 Unit.**

Philosophers and historians have been debating the status of narrative explanation for well over 50 years. Until quite recently, a supposed dichotomy between natural science and history has shaped the discussion. Beginning from the origins, history, and limitations of the dichotomy, this seminar will explore how claims for narrative understanding and explanation have come to occupy an increasingly important role in the natural sciences as well as the social sciences. Some classic contributors are Hempel, Danto, Mink, Kuhn, White, Ricouer, Geertz, and Ginzburg. Current authors include Roth, Rheinberger, Kitcher, Beatty, Morgan, and (yes) Wise.

Same as: PHIL 344

**HISTORY 344F. Beyond Pink and Blue: Gender in Tech. 1 Unit.**

This d-school seminar prototypes concepts and methods for "inclusive" design. From the moment we arrive on the planet, gender shapes our perception of the world. Examples of products (including objects, services, and systems) gone awry will serve as prompts for design activities, challenges, and discussions on gender issues to illustrate the different needs of women, men, and gender-fluid people. Class sessions mix use case explorations with design methodology, design thinking abilities, and guest speakers from technology, design, and academia. Students will be asked to work in interdisciplinary teams on several design challenges, culminating in the development of a toolkit for inclusive design. Methods will interact in crucial ways to create "intersectional thinking" (i.e., to consider how gender, ethnicity, sexuality, socio-economic status, etc. work together to require new solutions in design). Topics include: algorithms, media, seat belts for pregnant women, robotics, assistive technologies, tech for developing worlds, video games, urban/rural design, software development, and many more. Admission by application only. Visit [d.school.stanford.edu/classes](http://d.school.stanford.edu/classes) for more information.

Same as: FEMGEN 344F, HISTORY 244F

**HISTORY 345A. Africa in the Era of the Slave Trade. 4-5 Units.**

The slave trade, including the trans-Saharan, Indian Ocean, and trans-Atlantic trades, constituted nearly a millennium of interaction with the wider world and set in motion transformations in African societies, politics, and cultures. Topics include the debates about slavery in Africa, the impact of the slave trade on African societies, state formation, economic change, religious change, and household change in the period before the scramble for Africa in the late 19th century.

**HISTORY 346. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, HISTORY 246, POLISCI 246P, POLISCI 346P

**HISTORY 348D. Law and Colonialism in Africa. 4-5 Units.**

Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority.

Same as: HISTORY 245G

**HISTORY 349. Bodies, Technologies, and Natures in Africa. 4-5 Units.**

This interdisciplinary course explores how modern African histories, bodies, and natures have been entangled with technological activities. Viewing Africans as experts and innovators, we consider how technologies have mediated, represented, or performed power in African societies. Topics include infrastructure, extraction, medicine, weapons, communications, sanitation, and more. Themes woven through the course include citizenship, mobility, labor, bricolage, in/formal economies, and technopolitical geographies, among others. Readings draw from history, anthropology, geography, and social/cultural theory. Same as: AFRICAST 249, ANTHRO 348B

**HISTORY 351A. Core in American History, Part I. 4-5 Units.**

May be repeated for credit.

**HISTORY 351B. Core in American History, Part II. 4-5 Units.****HISTORY 351C. Core in American History, Part III. 4-5 Units.****HISTORY 351D. Core in American History, Part IV. 4-5 Units.**

May be repeated once for credit.

**HISTORY 351E. Core in American History, Part V. 4-5 Units.**

Required of all first-year United States History Ph.D. students. Topics in Twentieth Century United States History.

**HISTORY 351F. Core in American History, Part VI. 4-5 Units.**

Required of all first-year Ph.D. students in U.S. History.

**HISTORY 351J. The End of American Slavery, 1776-1865. 4-5 Units.**

How did the institution of American slavery come to an end? The story is more complex than most people know. This course examines the rival forces that fostered slavery's simultaneous contraction in the North and expansion in the South between 1776 and 1861. It also illuminates, in detail, the final tortuous path to abolition during the Civil War. Throughout, the course introduces a diverse collection of historical figures, including seemingly paradoxical ones, such as slaveholding southerners who professed opposition to slavery and non-slaveholding northerners who acted in ways that preserved it. Historical attitudes toward race are a central integrative theme. Same as: AFRICAAM 251J, AMSTUD 251J, HISTORY 251J

**HISTORY 352B. History of American Law. 5 Units.**

(Formerly Law 318. Now Law 3504.) This course examines the growth and development of American legal institutions with particular attention to crime and punishment, slavery and race relations, the role of law in developing the economy, and the place of lawyers in American society, from colonial times to the present. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final exam or paper. Automatic grading penalty waived for writers. Cross-listed with History (HISTORY 152 Consent of instructor required) & (HISTORY 352B). Same as: HISTORY 152

**HISTORY 353D. Approaches to American Legal History. 4-5 Units.**

(Same as LAW 651.) Legal history may once have been primarily devoted to exploring legal doctrines and key judicial opinions, and thus to be of interest mainly to legal scholars and lawyers. Now, the best writing in legal history resembles historical writing more generally, and the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Examines recent writings in American legal history, ranging broadly across time and space to ask how the field reflects developments in historical writing more generally, and how the use of legal materials affects our understanding of major aspects of American history.

**HISTORY 354D. Religion and War in America. 4 Units.**

Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.

Same as: AMSTUD 105R, CSRE 105, HISTORY 254D, RELIGST 105

**HISTORY 354F. Law and Empire in U.S. History. 2-3 Units.**

(Same as LAW 3506. Instructor consent required for History 354F.) This course will examine the interrelationship between legal norms and empire in the history of the United States. Topics in this part will include the Constitution as an imperial document; law and the expansion of the United States in western North America, Puerto Rico, and Hawaii; the Insular Cases; and current debates over extraterritoriality and the War on Terror. Substantial readings will consist of scholarly articles, historical cases, and primary sources, and will be provided online. Requirements for the course include regular class participation and, at the students' election, either response papers or a historiographical essay. Students may also elect to complete a research paper, in which case they will receive 3 units and "R" credit.

**HISTORY 355D. Racial Identity in the American Imagination. 4-5 Units.**

From Sally Hemings to Barack Obama, this course explores the ways that racial identity has been experienced, represented, and contested throughout American history. Engaging historical, legal, and literary texts and films, this course examines major historical transformations that have shaped our understanding of racial identity. This course also draws on other imaginative modes including autobiography, memoir, photography, and music to consider the ways that racial identity has been represented in American society. Most broadly, this course interrogates the problem of American identity and examines the interplay between racial identity and American identity.

Same as: AFRICAAM 255, AMSTUD 255D, CSRE 255D, HISTORY 255D

**HISTORY 356. 350 Years of America-China Relations. 4-5 Units.**

The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

Same as: EASTASN 256, HISTORY 256

**HISTORY 356G. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: AFRICAAM 236, AMSTUD 246, CSRE 246, HISTORY 256G, RELIGST 246, RELIGST 346

**HISTORY 357. Was the American Revolution a Social Revolution?. 4-5 Units.**

What kind of a revolution was the American Revolution? The revolution gave colonial Americans political independence from Britain to found the United States. But did the revolution also transform American society in its wake? This course explores how historians and historical participants alike have answered this question paying attention to historical changes (or lack thereof) that took place in American society between c. 1750-1820 as well as grappling with what conceptually constitutes a "social" revolution in the first place.

Same as: HISTORY 257

**HISTORY 359E. American Interventions, 1898-Present. 5 Units.**

This class seeks to examine the modern American experience with limited wars, beginning with distant and yet pertinent cases, and culminating in the war in Iraq. Although this class will examine war as a consequence of foreign policy, it will not focus primarily on presidential decision making. Rather, it will place wartime policy in a broader frame, considering it alongside popular and media perceptions of the war, the efforts of antiwar movements, civil-military relations, civil reconstruction efforts, and conditions on the battlefield. We will also examine, when possible, the postwar experience.

Same as: HISTORY 259E, INTNLREL 168A

**HISTORY 362G. The Pivotal Decade in U.S. History: 1960's or 1970's?. 4-5 Units.**

Which had more lasting impact, the civil war of the 1960s or the conservative revolt of the 1970s? Should the 1970s supersede the 1960s as a pivotal moment when something happened of considerable importance to historians? Considers this debate of the decades comparatively and thematically, addressing topics including civil rights, foreign policy, electoral politics, popular culture, law, economics, labor, and social movement organizing.

**HISTORY 365. Writing Asian American History. 5 Units.**

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: AMSTUD 265, ASNAMST 265, HISTORY 265

**HISTORY 365G. African-American Independent Film- On Both Sides of the Camera. 4-5 Units.**

From D. W. Griffith's controversial "Birth of A Nation" (1915) to Nate Parker's also controversial "Birth of a Nation" (2016), Black Americans have played roles in Hollywood movies while also seeking to define how they are depicted in these movies. This course will introduce students to this history by featuring works of pioneering black filmmakers who challenged Hollywood racial stereotypes and created alternative images of the African-American experience.

Same as: AFRICAAM 265G, HISTORY 265G

**HISTORY 366B. Immigration Debates in America, Past and Present. 3-5 Units.**

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions.

Same as: CSRE 166B, HISTORY 166B

**HISTORY 368C. Poverty in America. 4-5 Units.**

During the twentieth century, Americans launched numerous bold efforts to reduce poverty in the United States. Federal welfare policy, community-based programs, academic research, philanthropic charity, and grassroots activism committed time and resources to the cause, but poverty-- and inequality-- have persisted. Why? This seminar considers the origins, implementation, and consequences of these remedies, noting in particular how race, gender, citizenship, family composition, and geography have shaped the lives of those in poverty and the public and private responses to it.

Same as: AMSTUD 268C, CSRE 268C, HISTORY 268C

**HISTORY 36N. Gay Autobiography. 4 Units.**

Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences?.

Same as: FEMGEN 36N

**HISTORY 371. Graduate Colloquium: Explorations in Latin American History and Historiography. 4-5 Units.**

Introduction to modern Latin American history and historiography, including how to read and use primary sources for independent research.

Same as: ILAC 371

**HISTORY 372A. Mexico: From Colony to Nation or the History of an Impossible Republic?. 5 Units.**

Was a republican form of government even possible in 19th-century Mexico after 300 years of colonial rule under the Spanish monarchy? Was the Spanish colonial heritage a positive or a negative legacy according to 19th-century Mexican politicians? How were they to forge a new national identity with so many ethnically and culturally diverse peoples throughout the territory? Just how "traditional" was, in fact, the colonial period? These are some of the questions we will explore in this course. Journeying from the late colonial period (c.1700) to the 35-year dictatorship known as El Porfiriato (1876-1911) we will examine how Mexico's diverse indigenous peoples adapted to both colonial and postcolonial rule, how they actively participated in politics and political discourse to preserve their cultures, customs and colonial privileges, and how after independence in 1821, a new republican political culture was forged. Mexico was not an impossible republic, but rather another kind of republic.

**HISTORY 373C. Caribbean Migration to the United States. 4-5 Units.**

The course will explore the history of Caribbean migration to the United States.

Same as: AFRICAAM 273C, CSRE 273, HISTORY 273C

**HISTORY 373E. The Emergence of Nations in Latin America: Independence Through 1880. 4-5 Units.**

This course provides an introduction to the main themes of nineteenth-century Latin American history, including independence from Spain, the emergence of various nation-states, and the development of a new social, political, and economic order in the region.

Same as: HISTORY 273E

**HISTORY 375B. Borders and Borderlands in Modern Mexico. 4-5 Units.**

Surveys the history of Mexico's borders and borderlands from the nineteenth century to the present. Examines theoretical conceptualizations of the borderlands as well as the historical development of identities and geographic borders within and around Mexico. Topics include the legacies of war, map making, the construction of lo Mexicano, the politics of culture, and migrations to, from, and through Mexico. Analyzes the prevailing trends in Mexicanist historiography.

**HISTORY 375C. History of Modern Mexico. 4-5 Units.**

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Same as: AMSTUD 275B, CHILATST 275B, CSRE 275B, HISTORY 275B

**HISTORY 376K. The Nature State: Latin American Conservation in Global Perspective. 4-5 Units.**

This colloquium studies the history of conservation as a way to understand (territorial) state formation. It examines Latin America from a global perspective by comparing case studies from around the world. It examines how various political arrangements allowed for nature protection, the creation and functioning of institutions and bureaucracies in charge of protected areas, what these developments tell us about citizenship, the role of science in state formation, and the implications of different environments in the building of national territories.

Same as: HISTORY 276K

**HISTORY 378A. The Logic of Authoritarian Government, Ancient and Modern. 5 Units.**

If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.

**HISTORY 378D. Race, Ethnicity, and the Environment in Latin America. 4-5 Units.**

In a long sweep from the late eighteenth century to today, this seminar explores how race, ethnicity and the environment intersect in Latin American history, with emphasis on Colombia. It will inspect the meaning of the concepts of race and ethnicity and examine how the histories of black and indigenous peoples are better understood by taking the environment—both materially and symbolically—into account. We will read a variety of scholarly works, as well as primary sources.

Same as: HISTORY 278D

**HISTORY 379. Latin American Development: Economy and Society, 1800-2014. 4-5 Units.**

The newly independent nations of Latin America began the 19th century with economies roughly equal to the U.S. and Canada. What explains the economic gap that developed since 1800? Why are some Latin American nations rich and others poor and how have societies changed over time? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks are explored. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice are examined and debated.

Same as: HISTORY 279

**HISTORY 37S. Love and Lust in the French Empire, 1830-1962. 5 Units.**

Can we write the history of private life? Throughout this course, we will try out different historical approaches to the history of intimate matters in the French Empire. Beyond a more complete understanding of what colonialism was like, studying the intimate draws attention to the societal norms and anxieties of the nineteenth and twentieth centuries. Patriarchy, racism, and classism the power structures inherent in colonialism produce fruitful sites for prying into intimate matters. To that end, we will probe a wide variety of primary sources, including novels, films, paintings, letters, diaries, travel accounts produced by male and female Europeans, Africans, Arabs, and East Asians. Topics covered through these sources include, colonial masculinity and femininity; divorce; homosexuality; prostitution; and sexual violence. We will transcend racial and class divides, and cover a diverse geography including, France, North and West Africa, and Vietnam.

Same as: FEMGEN 37S, FRENCH 157

**HISTORY 381. Economic and Social History of the Modern Middle East. 4-5 Units.**

The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine.

**HISTORY 381B. Modern Egypt. 4-5 Units.**

From the mid-nineteenth century to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt.

Same as: HISTORY 281B

**HISTORY 382. The United States and the Middle East since 1945. 4-5 Units.**

Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?

Same as: HISTORY 282

**HISTORY 382F. History of Modern Turkey. 4-5 Units.**

Social, political and cultural history of Modern Turkey from the last decades of the Ottoman Empire in the late 19th century until Today. Themes include transformation from a multi-national empire to a national republic; Islam, secularism and radical modernism; military, bureaucracy and democratic experience; economic development, underdevelopment and class; Istanbul, Ankara and provincial Turkey; socialism, conservatism(s), and Kurdish challenge; Turkey in Europe, the Middle East and Central Asia; gender, sexuality and family; popular culture, soccer, and film industry; Post-Modernism, Neo-Ottomanism, and the New-Turkey; The class also include reading works of Turkish literature and watching movies by Turkish directors.

**HISTORY 383. Middle East Oil and Global Economy. 4-5 Units.**

The class studies Middle East oil in the global economy using the method of political economy. Topics addressed include: origins of the Middle East oil industry; the Seven Sisters international oil cartel; Aramco and the U.S.-Saudi alliance; the post-World War II petroleum order; petroleum, the crisis of 1971-82, and the rise of a new regime of capital accumulation regulated neo-liberal economic orthodoxy and "Washington Consensus" policies- commonly referred to as "globalization" since the 1990s.

Same as: HISTORY 283

**HISTORY 383G. Place, Nature, and Life: Production of Space in European and Muslim History. 4-5 Units.**

How did people experience, produce and imagine their physical and spiritual environment, their past and future, their immediate places and far geographies, life and afterlife in Europe and the Muslim Eurasia throughout history? How did political, legal and economic organizations configure and claim spaces in different time and geographies in Europe and the Muslim world? In addition to various case studies, primary texts and visual depictions, the theoretical framework of discussions will be based on texts by Lefebvre, Foucault, Soja, de Certeau, Yi-Fu Tuan, J.B. Jackson, Casey, Harvey.  
Same as: HISTORY 283G

**HISTORY 384F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800. 4-5 Units.**

Focuses on political regimes, economic interactions and sociocultural formations in the early modern Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sufis.

**HISTORY 385A. Core Colloquium in Jewish History, 17th-19th Centuries. 4-5 Units.**

Same as: JEWISHST 385A

**HISTORY 385B. Graduate Colloquium in Modern Jewish History. 4-5 Units.**

Instructor consent required.  
Same as: JEWISHST 385B

**HISTORY 385C. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 4-5 Units.**

(Same as HISTORY 85B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life – all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will be the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 185B, HISTORY 185B, JEWISHST 185B, REES 185B

**HISTORY 385K. History of Modern Antisemitism: Nineteenth and Twentieth Centuries. 4-5 Units.**

The articulations of anti-Jewish hatred from the advent of Jewish emancipation in Europe. The legacy of premodern Christian demonization and its modern protean transformations as they penetrated and annexed new currents of ideology, notions of identity (social, national, racial), taste, and aesthetics. A history of ideas, representations, and stereotypes, and their relation to historical experience, action, and mobilization. Europe is the focus; case studies also include the Middle East and elsewhere.

**HISTORY 386. Jews Among Muslims in Modern Times. 4-5 Units.**

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 286, JEWISHST 286, JEWISHST 386

**HISTORY 387C. Zionism and Its Critics. 4-5 Units.**

Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

**HISTORY 387K. Gentlemen and Jews: History of the Jews of England. 4-5 Units.**

Focuses on key chapters in the cultural and political histories of Britain and its Jews, between 1650 and 1950 and examines the advantages, as well as possible difficulties, that emerge when connecting Anglo-Jewish history to mainstream British history. What is unique about Jewish emancipation in England, and what are its connections to the formation of British national identity? Is there unique path in which Jewish Enlightenment developed in England? What was the contribution of Jews to British Imperialism? Is there a cultural affinity between English philosemitism and liberalism?.

**HISTORY 39. Modern Britain and the British Empire. 3 Units.**

(Same as HISTORY 139. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain.

**HISTORY 390. North Korea in Historical Perspective. 4-5 Units.**

This colloquium will approach North Korea from a longer historical perspective and also discuss the country's current crisis and its future. Themes will include the northern region in colonial Korea, Kim Il Sung and Manchurian guerrillas, the USSR and North Korean Revolution, the reconstruction after the Korean War, Juche ideology and the political system, the everyday life of North Korea people, the Cold War and North Korean diplomacy, culture and mass performance, the great famine and economy in transition, the military and nuclear development, and refugees and the succession of leadership.

Same as: HISTORY 290

**HISTORY 390A. Major Topics in Modern Chinese History: Qing/Republican Transition. 4-5 Units.**

Continuities and discontinuities in society, economy, politics, culture, and thought during the transition from the Qing dynasty to the republic. May be repeated for credit.

**HISTORY 390E. Movies and Empire in East Asia. 4-5 Units.**

Cinema was invented in the 1890s and simultaneously introduced to East Asia. This colloquium explores how this new medium changed the cultural and social landscape of East Asia and how the visual power of films also affected the culture politics of empires in the region. The themes include cinema and urban spaces, cultural imperialism, film images and gender discourse, colonial modernity, Americanism and Asianism, the visual and the textual, wartime propaganda, and Hollywood movies and cold war empires.

Same as: HISTORY 290E

**HISTORY 391. East Asia in the Early Buddhist Age. 4-5 Units.**

Evolution of cities in imperial China through early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative examination of cases from European history.

**HISTORY 391B. The City in Imperial China. 4-5 Units.**

The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.

**HISTORY 391C. Early Imperial China. 4-5 Units.**

The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form.

**HISTORY 391J. East Asian Environmental History. 4-5 Units.**

Traversing 2,500 years of history, this colloquium begins with conceptions of nature, agricultural time, and agriculture in ancient East Asia, proceeds to look closely at the environmental history of China, Japan, Korea, and Vietnam, and then concludes with environmental issues in East Asia from a contemporary perspective.

Same as: HISTORY 291J

**HISTORY 391K. Korean History and Culture before 1900. 3-5 Units.**

This course serves as an introduction to Korean culture, society, and history before the modern period. It begins with a discussion of early Korea and controversies over Korean origins; the bulk of the course will be devoted to the Chosŏn period (1392-1910), that from the end of medieval Korea to the modern period. Topics to be covered include: Korean national and ethnic origins, the role of religious and intellectual traditions such as Buddhism and Confucianism, popular and indigenous religious practices, the traditional Korean family and social order, state and society during the Chosŏn dynasty, vernacular prose literature, Korean's relations with its neighbors in East Asia, and changing conceptions of Korean identity. The course will be conducted through the reading and discussion of primary texts in English translation alongside scholarly research. As such, it will emphasize the interpretation of historical sources, which include personal letters, memoirs, and diaries, traditional histories, diplomatic and political documents, along with religious texts and works of art. Scholarly work will help contextualize these materials, while the class discussions will introduce students to existing scholarly debates about the Korean past. Students will be asked also to examine the premodern past with an eye to contemporary reception. The final project for the class is a film study, where a modern Korean film portraying premodern Korea will be analyzed as a case study of how the past works in public historical memory in contemporary Korea, both North and South. An open-ended research paper is also possible, pending instructor approval.

Same as: HISTORY 291K, KOREA 158, KOREA 258

**HISTORY 392D. Japan in Asia, Asia in Japan. 4-5 Units.**

How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.

Same as: HISTORY 292D

**HISTORY 392E. The Historical Roots of Modern East Asia. 4-5 Units.**

Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire.

Same as: HISTORY 92A

**HISTORY 392F. Culture and Religions in Korean History. 4-5 Units.**

This colloquium explores the major themes of Korean history before 1800 and the role of culture and religions in shaping the everyday life of Chosŏn-dynasty Koreans. Themes include the aristocracy and military in the Koryŏ dynasty, Buddhism and Confucianism in the making of Chosŏn Korea, kingship and court culture, slavery and women, family and rituals, death and punishment, and the Korean alphabet (Hangŭl) and print culture.

Same as: HISTORY 292F

**HISTORY 392G. Modern Korea. 4-5 Units.**

Examines seminal works and major historical debates in the study of modern Korea. Topics include the state and society in the Chosŏn dynasty, reform and rebellion in the nineteenth century, colonization, gender and colonial modernity, national identity and assimilation, wartime colonial Korea, decolonization and the North Korean revolution, the Korean War and its aftermath, the Pak Chung Hee regime and labor relations, and democratization.

**HISTORY 393A. State, Society, and Economy in Qing Dynasty China. 4-5 Units.**

Historical scholarship on China during the Qing period, including the gentry, civil examinations, and the debate about social mobility; merchants, cities, and the debate about civil society/public sphere; taxation, local security, and famine relief; heterodoxy, collective violence, and rebellion; and rival approaches (neo-Malthusian, neo-conservative, and neo-Marxist) to understanding the high Qing economy.

**HISTORY 393C. The Chinese Empire from the Mongol Invasion to the Boxer Uprising. 4-5 Units.**

A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINA 383C

**HISTORY 393E. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: FEMGEN 293E, HISTORY 293E, RELIGST 257X, RELIGST 357X

**HISTORY 394C. First Encounters: China and the West, 1500-1860. 4-5 Units.**

For four hundred years, the peoples of China and the West have engaged with each other. What happened when worlds and world-views came into contact? In this course, we will explore the experience of encounter and its cultural impact on two largely distinct, but never isolated societies. We will study the history of cross-cultural exchange between China and the West to see how each emerged through dialogue with the other and to understand the roots of our own interconnected world.

Same as: HISTORY 294C

**HISTORY 394D. Manchuria: Cradle of Conflict, Cockpit of Asia. 4-5 Units.**

How did Manchuria become Chinese? This course utilizes the dual waves of early twentieth-century writings and a wide array of recent scholarship dealing with Manchuria to explore the formation of nation-states out of the Qing and Japanese empires in Northeast Asia through the lenses of opium, migration, cities, warlords, and memoir. This course will be of interest to students concerned with developing transcultural understandings of Northeast Asian history.

Same as: HISTORY 294D

**HISTORY 395. Modern Korean History. 4-5 Units.**

(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) This lecture course provides a general introduction to the history of modern Korea. Themes include the characteristics of the Chosôn dynasty, reforms and rebellions in the nineteenth century, Korean nationalism; Japan's colonial rule and Korean identities; decolonization and the Korean War; and the different state-building processes in North and South, South Korea's democratization in 1980s, and the current North Korean crisis.

Same as: HISTORY 195

**HISTORY 395F. Race and Ethnicity in East Asia. 4-5 Units.**

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day.

Same as: ASNAMST 295F, CSRE 295F, HISTORY 295F

**HISTORY 395J. Gender and Sexuality in Chinese History. 4-5 Units.**

Same as: CHINGEN 395, FEMGEN 395J

**HISTORY 396C. The Making of Modern India. 4-5 Units.**

What does the history of the modern world look like as seen through India's history? Through an examination of ancient India and the development of Hindu and Buddhist communities, to the influx of Muslims and the rise of the Mughal Empire, to European colonialism, Gandhi and anti-colonial movements, to Partition, Independence, Bollywood, and the rise of Hindu nationalist political parties, this course will provide a fresh lens to not only view India's history, but India's role in shaping the modern world.

Same as: HISTORY 296C

**HISTORY 397. The Cold War and East Asia. 5 Units.**

Explores how East Asia negotiated superpower rivalry and global ideological competition during the Cold War. Considers the ways in which China, Japan, and Korea were more than battlegrounds for US-Soviet contestation and played active roles in defining the nature and dynamics of the conflict. Re-examines conventional narratives and periodizations against alternative conceptual models and interpretive frameworks highlighting the constructed nature of the struggle as well as the role of historical and cultural factors in shaping the East Asian experience.

Same as: HISTORY 297

**HISTORY 398G. Death and Death Culture in Modern China. 4-5 Units.**

From the late Qing period to the Cultural Revolution, Chinese society experienced a radical transformation of the beliefs, practices, and organizations that addressed the issue of death. The culture of death was at the heart of society. This colloquium will explore the diverse aspects of Chinese social, religious, and material practices involved in parting with the dead, in rural and urban society, in China as well as overseas. Sources: we shall use a wide body of texts, photographs, images, and films. Hardly anything changed more in modern Chinese history than the ways in which Chinese society.

Same as: HISTORY 298G

**HISTORY 399A. Preparing for International Field Work: Public Service or Research. 1 Unit.**

Open to students in all classes, those planning internships abroad and those planning research, from juniors with honors theses and sophomores with Chappell Lougee grants to freshmen thinking ahead. Introduces resources on campus for planning international research and service. Raises issues that need to be considered in advance of going abroad: ethical concerns, Human Subjects Protocol, networking, personal safety and gender issues, confronting cultural differences. Exposes students to research methods: case studies, interviewing, working in foreign libraries and archives.

Same as: HISTORY 299X

**HISTORY 399E. Preparing for International Field Research: Public Svc or Research, Electronic Version. 1 Unit.**

Restricted to students studying at a Stanford Overseas Studies campus; same course content as HISTORY 299X. Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys. Prerequisite: consent of instructor.

**HISTORY 399P. Archives-Based Teaching Practicum. 1 Unit.**

Through hands-on exercises and key readings, students will learn about basic archival handling techniques, usage guidelines, security issues, principles of archival organization, and bibliographic literacy around archival and Special Collections materials, along with an insiders tour of Stanford University Special Collections. During the second, students will partake in a hands-on session using Special Collections materials, with a class session enactment that demonstrates the program's concepts. Note: Enrollment only open to PhD students (ANY department) with instructor permission required.

**HISTORY 399W. Graduate Directed Reading. 1-10 Unit.****HISTORY 3B. Transhistory: Gender Diversity from Medieval to Modern. 1-3 Unit.**

This series of six lectures explores the history of gender crossings and transgressions, broadly defined. Several Stanford faculty members and one visitor will present historical interpretations of how and why individuals crossed gender boundaries in the past, as well as how different societies have reacted to gender crossing. The topics range from medieval to modern times and across geographic regions, including Europe, China, South Asia and the Americas.

Same as: FEMGEN 3B

**HISTORY 3D. Dangerous Ideas. 1 Unit.**

Ideas matter. Concepts such as race, progress, and evil have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like religious tolerance, voting rights, and wilderness preservation play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these dangerous ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

**HISTORY 3E. Michelle Obama in American Culture. 1 Unit.**

Never before has the United States had a First Lady like Michelle Obama. During her eight years in the White House, Michelle Obama transformed traditional meanings of womanhood, marriage, motherhood, and style and created new possibilities for what it means to be strong and what it means to be beautiful. No First Lady has ever been so scrutinized but also so beloved: from her J. Crew dresses to her Let's Move campaign, from her vegetable gardens to her chiseled arms, and from her powerful speeches to her casual and always authentic personality. This class examines the impact on American culture of the most popular First Lady in American history.

Same as: AFRICAAM 3E, AMSTUD 3E, CSRE 3E, FEMGEN 3E

**HISTORY 3F. The Changing Face of War: Introduction to Military History. 3-5 Units.**

Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present day so-called new wars, we will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war.

Same as: HISTORY 103F

**HISTORY 3G. Hamilton: An American Musical. 1 Unit.**

"Hamilton" is one of the most popular and most celebrated musicals in American history. It has received 11 Tony Awards, including best musical, and 16 Tony nominations, the most nominations in Broadway history. It won the Pulitzer Prize and a Grammy Award. The musical draws on the language and rhythms of hip-hop and R & B, genres that are underrepresented in the musical theater tradition. "Hamilton" has redefined the American musical, particularly in terms of sound, casting, and storytelling. What explains the deep cultural impact and acclaim for this play? This interdisciplinary course examines Alexander Hamilton and his world as well as *Hamilton: An American Musical* through a series of lectures from faculty in History, Theater and Performance Studies, English, Music, and Writing and Rhetoric.

Same as: AFRICAAM 5I, AMSTUD 5I, CSRE 5I

**HISTORY 4. Introduction to Geospatial Humanities. 3-5 Units.**

This course introduces undergraduate students to the theory and methods of the geospatial humanities, understood broadly as the application of GIS techniques and other quantitative methods in the humanistic study of social and cultural patterns in past and present settings.

Same as: HISTORY 104

**HISTORY 40. World History of Science. 3 Units.**

(Same as HISTORY 140. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions.

**HISTORY 401B. Spatial History, Part II. 4-5 Units.**

Prerequisite: 401A.

**HISTORY 407K. Digital Humanities: Concepts, Tools, Problems. 4-5 Units.**

How can digital tools benefit research in history and neighboring disciplines? The aim of this seminar is to equip students with basic skills in some of the most important digital tools currently used by scholars in the humanities and social sciences. Individual classes will focus on Geographic Information Systems (GIS), web mapping, digital network analysis, data visualization, and digital publishing formats. As part of the exercise to use digital methods, students will develop collaborative digital projects. No prior technical skills are needed for this course.

Same as: HISTORY 207S

**HISTORY 40A. The Scientific Revolution. 3 Units.**

(Same as History 140A. History majors and others taking 5 units, register for History 140A.) What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.

**HISTORY 421A. Early Modern Russia. 4-5 Units.****HISTORY 422A. Research Seminar on the History of the Russian Empire. 4-5 Units.****HISTORY 424A. The Soviet Civilization. 4-5 Units.**

Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

Same as: HISTORY 224A, REES 224A

**HISTORY 42S. The Circle of Life: Visions of Nature in Modern Science, Religion, Politics and Culture. 5 Units.**

A new understanding of nature emerged in the 1700s that fundamentally altered our perception of the living world and humanity's relationship with it. By tracing the evolution of this understanding forward, we gain insight into the interactions among science, religion, politics and culture. Topics include: nature in Romantic science, poetry and art; Darwin's theory of evolution and its afterlife in science, literature and popular culture; the science and politics of the 20th-century environmental movement; and the philosophical presuppositions underlying modern debates about biodiversity. In addition to close readings of canonical texts and contemporary commentaries, students will be introduced to digital history methods. Students will design their own final projects in consultation with the instructor.

**HISTORY 430. Graduate Research Seminar: Early Modern Europe. 4-5 Units.**

Prerequisite: HISTORY 332G. Students may research any aspect of late medieval, Renaissance, and early modern history, ca. 1300-1800. Students wishing to take this seminar must enroll in HISTORY 332G: Early Modern Cities in Autumn 2017.

**HISTORY 430A. Graduate Research Seminar: Early Modern Europe. 3-5 Units.**

Students will begin a research project on any aspect of early modern European history, 1400-1800, by taking HISTORY 430A in winter quarter as the first quarter of this two-quarter sequence. Enrollment by permission of instructor.

**HISTORY 431. Early Modern Things. 4-5 Units.**

How do objects reveal their histories? What can be learned about the past by studying things? The material culture of early modern Europe, ca 1450-1750. Recent work on the circulation, use, and consumption of things, starting with the Columbian exchange which expanded the material horizons of the early modern world in the late 15th century, exploring challenges to the meaning of things in the age of the Reformation and Scientific Revolution, and ending with the birth of consumer society in the 18th century How did the meaning of things and people's relationships to them change over these centuries? What objects, ordinary and extraordinary, secular and sacred, natural and man-made, came to define the emerging features of the early modern world?.

**HISTORY 433A. Research Seminar in Modern Europe. 4-5 Units.**

Students will complete an article-length research paper based on primary sources.

**HISTORY 433B. Research Seminar in Modern Europe. 4-5 Units.**

Prerequisite: HISTORY 433A.

**HISTORY 438. European History Workshop. 1 Unit.**

All European history graduate students in residence register for this weekly workshop, at which dissertation chapters and prospectuses, papers, and grant proposals by students and faculty are read and discussed.

**HISTORY 439A. Graduate Research Seminar: Modern Britain and the British Empire. 4-5 Units.****HISTORY 439B. Graduate Research Seminar: Modern Britain and the British Empire II. 4-5 Units.****HISTORY 44. Women and Gender in Science, Medicine and Engineering. 3 Units.**

(Same as HISTORY 144. Majors and others taking 5 units, enroll in HISTORY 144.) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What efforts are underway globally to transform research institutions so that both men's and women's careers can flourish? How have science and medicine studied and defined males and females? How can we harness the creative power of gender analysis to enhance knowledge and spark innovation?.

**HISTORY 443A. Human Origins: History, Evidence, and Controversy. 4-5 Units.**

Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required.

Same as: HISTORY 243S

**HISTORY 444. Graduate Research Seminar: Gender in Science, Medicine, and Engineering. 5 Units.**

Theory and practice of gender in STEM. 1. "Fix the Numbers of Women" focuses on increasing women's participation; 2. "Fix the Institutions" promotes gender equality in careers through structural change in research organizations; 3. "Fix the Knowledge" or "gendered innovations" stimulates excellence in science and technology by integrating gender analysis into research. Seminar explores harnessing the creative power of gender analysis to enhance knowledge and spark innovation.

Same as: FEMGEN 444

**HISTORY 444C. The History of the Body in Science, Medicine, and Culture. 4-5 Units.**

The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.

Same as: HISTORY 244C

**HISTORY 445A. Research Seminar in African History. 4-5 Units.**

Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.

**HISTORY 445B. Research Seminar in African History. 4-5 Units.**

Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.

**HISTORY 459A. Grad Research Seminar in U.S. History. 4-5 Units.****HISTORY 45B. Africa in the Twentieth Century. 3 Units.**

(Same as HISTORY 145B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans.

**HISTORY 45S. The Cold War and the Shaping of Modern Africa. 5 Units.**

This course considers the options and obstacles facing Africa during the Cold War, covering the period from the 1940s to the 2000s. Topics include the Cold War histories of Ghana, Algeria, Democratic Republic of the Congo (Zaire), Tanzania, and South Africa, among others. The legacies of the Cold War for contemporary Africa will also be discussed. This course will also focus on how to manage large source bases and ways to engage with diverse primary sources including film and literature.

Same as: AFRICAAM 45S

**HISTORY 460. Research Seminar in America in the World. 4-5 Units.**

Ways to place American history in an international context. Comparative, transnational, diplomatic, and world systems are approaches to complete a research paper based on research into primary materials. Historical methodologies, research strategies, and essay projects. May be repeated for credit.

**HISTORY 461A. Graduate Research Seminar on the History of Women, Gender, the Family, and Sexuality. 4-5 Units.**

Instructor consent required for non-History graduate students. Seminar introduces graduate students to current issues and methods in the history of women, gender, the family, and sexuality in the United States. After an initial period of working on secondary and primary source bibliographies, and some discussion of secondary readings, each student will choose a topic for an original research paper (20-30 pages) based on primary sources. Each student will complete a first draft of the paper by late May and a revised paper by the end of Spring Quarter.

Same as: FEMGEN 461A

**HISTORY 461B. Graduate Research Seminar on the History of Women, Gender, the Family, and Sexuality Part II. 4-5 Units.**

Prerequisite: 461A. Instructor consent required for non-History graduate students.

Same as: FEMGEN 461B

**HISTORY 47. History of South Africa. 3 Units.**

(Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: AFRICAAM 47, CSRE 74

**HISTORY 471A. Environmental History of Latin America. 5 Units.**

What role did the natural environment play in the emergence of Latin America as a distinct geographical and socio-cultural world region? How do we analyze the historical relationship between the regions rich and seemingly abundant natural resources and its status as underdeveloped? What historical consequences did this relationship have and what alternative, more sustainable developmental paths can we envision for the future in light of the past that we will study? In this course, students will become familiar with the historiography on Brazil, Mexico, Peru, Cuba and Honduras that has explored these questions through a variety of approaches, methodologies and points of view.

**HISTORY 471B. Environmental History of Latin America. 5 Units.**

What role did the natural environment play in the emergence of Latin America as a distinct geographical and socio-cultural world region? How do we analyze the historical relationship between the region's rich and seemingly abundant natural resources and its status as 'underdeveloped'? What historical consequences did this relationship have and what alternative, more sustainable developmental paths can we envision for the future in light of the past that we will study? In this course, students will become familiar with the historiography on Brazil, Mexico, Peru, Cuba and Honduras that has explored these questions through a variety of approaches, methodologies and points of view.

**HISTORY 472. The Caribbean. 4-5 Units.**

This course will examine the social history of the Caribbean.

**HISTORY 478. The Ethical Challenges of Climate Change. 4-5 Units.**

This course explores the ethical challenges of climate change from historical, social, economic, political, cultural and scientific perspectives. These include the discovery of global warming over two centuries, the rise of secular and religious denialism and skepticism toward the scientific consensus on it, the dispute between developed and developing countries over how to forge a binding global agreement to mitigate it, and the "role morality" of various actors (scientists, politicians, fossil fuel companies, the media and ordinary individuals) in the US in assessing ethical responsibility for the problem and its solutions.  
Same as: HISTORY 278S

**HISTORY 48. The Egyptians. 3-5 Units.**

Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Participation in class is required.  
Same as: AFRICAAM 30, CLASSICS 82, HISTORY 148

**HISTORY 481. Research Seminar in Middle East History. 4-5 Units.**

Student-selected research topics. May be repeated for credit.  
Same as: JEWISHST 287S, JEWISHST 481

**HISTORY 486A. Graduate Research Seminar in Jewish History. 4-5 Units.**

Same as: JEWISHST 486A

**HISTORY 486B. Graduate Research Seminar in Jewish History. 4-5 Units.**

Prerequisite: HISTORY 486A.  
Same as: JEWISHST 486B

**HISTORY 48Q. South Africa: Contested Transitions. 4 Units.**

Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for South Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet.  
Same as: AFRICAAM 48Q

**HISTORY 491A. Modern Korea Research Seminar. 4-5 Units.**

This graduate seminar prepares students to undertake research using Korean-language sources on a variety of themes in modern Korea. Students will identify characteristics of major online and offline archives in Korean studies, learn essential skills in investigating primary sources, and analyze selected sample documents in class.

**HISTORY 491B. Modern Korea Research Seminar. 4-5 Units.**

This graduate seminar prepares students to undertake research using Korean-language sources on a variety of themes in modern Korea. Students will identify characteristics of major online and offline archives in Korean studies, learn essential skills in investigating primary sources, and analyze selected sample documents in class.

**HISTORY 492B. Origins of Technical Medicine in the Han Dynasty. 4-5 Units.**

How medicine as a technical, text-based art monopolized by specialists was established under the Han Dynasty in competition with practices aimed at nourishing life and securing longevity.

**HISTORY 493. Research Seminar on Political Thought. 4-5 Units.**

A series of texts and documents that form the heart of what Marx and Engels called "the colonial question". Discussions center on specific themes relating to each student's research topic and/or interests. The seminar will be organized around a set of core common readings and weekly discussions, supplemented by a designed list of secondary texts and primary materials. Themes include: secularism, religion, state, capital, empire, anticolonialism, gender, democracy, textual and print cultures, cinema, political and legal theory, and history of economic thought. 400-level options allows students to do a two-quarter sequence, with the Spring devoted to writing up the research paper.  
Same as: HISTORY 293A

**HISTORY 496A. Research Seminar in Chinese History. 4-5 Units.**

First part of a two part sequence. Primary sources and research methods to be used in the study of modern Chinese history.

**HISTORY 496B. Research Seminar in Chinese History. 4-5 Units.**

Second part of a two part sequence. Primary sources and research methods to be used in the study of modern Chinese history. Prerequisite: HISTORY 496A.

**HISTORY 498D. Japanese Imperial Archives, Part 2. 4-5 Units.**

Second part of a two-quarter research graduate seminar on Japanese imperialism in Asia. Students complete research papers based on research conducted for History 498C; the class meets occasionally to report on progress and discuss working drafts. Prerequisite: History 498C.

**HISTORY 499X. Graduate Research. 1-10 Unit.**

Units by arrangement. May be repeated for credit.

**HISTORY 4N. A World History of Genocide. 3-5 Units.**

Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide.  
Same as: JEWISHST 4N

**HISTORY 50A. Colonial and Revolutionary America. 3 Units.**

(Same as HISTORY 150A. History majors and others taking 5 units, register for 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.

**HISTORY 50B. Nineteenth Century America. 3 Units.**

(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AFRICAAM 50B, CSRE 50S

**HISTORY 50C. The United States in the Twentieth Century. 3 Units.**

(Same as HISTORY 150C. History majors and others taking 5 units, register for 150C.) Covering the past century, this course will survey U.S. politics, culture, and social movements, tracing three recurrent themes: the growth of the federal government and ensuing political debates about its role; the development of the United States into a world power; and the contested expansion of American democracy. Lectures meet Mon, Tues, Wed. This is a Massive Multiplayer Humanities course: students will participate in two archival workshops held on Thursdays. Research workshops for 5 credit students will also be held on Thursdays. Suitable for non-majors and majors alike. Three and five credit options, with the choice of a research paper or proposal for 5 credit students.

**HISTORY 50K. John F. Kennedy: Fifty Years Later. 1 Unit.**

November 22, 2013 marks the 50th anniversary of President John F. Kennedy's assassination. Half a century on, our visually saturated culture remains besotted with images of the youthful president and his strikingly photogenic family. But the passage of time has also yielded new perspectives on Kennedy's presidency and on his era. November 22, 1963 may well come to be remembered not only as the day when the life of a promising young leader was violently cut short, but also as the pivot between two distinct eras in American history. Ironically, though Kennedy was the first World War II veteran to reach the White House, his death heralded the end of the long postwar season of national pride, optimism, confidence, and widely shared prosperity, and may have opened the road to the great catastrophe that was the Vietnam War. His passing also helped to pry open the portals to historic changes in the lives of millions of African Americans, as witnessed by Lyndon Johnson's artful invocation of the fallen president to bring about passage of the epic civil rights legislation of the late 1960s. This course will examine the postwar domestic and international settings in which Kennedy rose to and exercised power. It will probe our continuing fascination with his character and with his family; his role as a Cold Warrior, especially in the tense confrontation known as the Cuban Missile Crisis; and his relation to the African American struggle to bury Jim Crow. We will conclude with an assessment of the longer-term historical consequence of his brief moment in the arenas of celebrity and power. Guest speakers will include noted Kennedy biographer Robert Dallek; Johnson biographer Bruce Schulman; Taylor Branch, acclaimed biographer of Martin Luther King, Jr.; and Stanford's own Jennifer Burns, historian of modern America.

**HISTORY 51K. Election 2016. 1 Unit.**

The 2016 Presidential Election season has been anything but ordinary. So much in the Democratic and Republican primaries consistently defied conventional wisdom and upended the predictions of experts. This course will attempt, with the help of distinguished guests, to make sense of an election that defies all historical precedent and to take stock of the health of American democracy. Class is jointly offered for Continuing Studies students and Stanford students. As a 1 unit, online course for Stanford students, enrollment is unlimited. Registration for the course offers online access to a livestream of each class session, participation in online discussions, access to course website and materials, and admission to a lottery for attending each class in person.

Same as: CSRE 51K, POLISCI 51K

**HISTORY 51S. American Travel, Tourism and Empire in the Pacific, 1880s-1970s. 5 Units.**

What does it mean to be a traveler or a tourist? Is travel a form of empire or exploitation? Can it ever be an innocent form of economic and cultural exchange? This class will examine how cultures of travel and tourism helped everyday Americans understand and shape the country's political, social, and economic challenges from the 1880s to 1970s, as the U.S. evolved from a continental empire, into an overseas empire, and finally into an informal empire.

Same as: AMSTUD 51S, CSRE 51S

**HISTORY 52Q. Democracy in Crisis: Learning from the Past. 3 Units.**

This Sophomore Seminar will focus on U.S. democracy and will use a series of case studies of major events in our national history to explore what happened and why to American democracy at key pressure points. This historical exploration should shed light on how the current challenges facing American democracy might best be handled. (Cardinal Course certified by the Haas Center).

Same as: EDUC 122Q, POLISCI 20Q

**HISTORY 54N. African American Women's Lives. 3 Units.**

This course encourages students to think critically about historical sources and to use creative and rigorous historical methods to recover African American women's experiences, which often have been placed on the periphery of American history and American life.

Same as: AFRICAAM 54N, AMSTUD 54N, CSRE 54N, FEMGEN 54N

**HISTORY 54S. The American Civil War. 5 Units.**

Few events in American history match the significance of the Civil War, a conflict that freed 4 million people held in bondage and left 750,000 men dead. This course will explore the war from a range of perspectives, including those of Union and Confederate soldiers, African Americans, women, and Native Americans. Based on the documents these different groups left behind, as well as the histories they inspired, we will seek to understand how the Civil War was experienced and commemorated. Priority given to history majors and minors.

**HISTORY 55D. The Asian American Movement: A History of Activism. 3-5 Units.**

The "Asian American Movement" was born in the late 1960s inspired by other movements for social change and justice in the era. Activism among Asians in America has a longer history and a continuity to today. We will examine past, present, and future and consider issues of racial/ethnic identity, of inequality, and of injustice. And we will explore avenues that sought remedy and progress. Political, social, cultural, gender and sexuality, and international dimensions will be considered.

Same as: AMSTUD 155D, ASNAMST 55D, ASNAMST 155D, HISTORY 155D

**HISTORY 55Q. The Origins of the Modern American City, 1865-1920. 3 Units.**

Are we living in a new Gilded Age? To answer this question, we go back to the original Gilded Age, as well as its successor, the Progressive Era. How did urban Americans around the turn of the twentieth century deal with stark inequalities of class, race, ethnicity, gender, and sexuality? And what can we learn from their struggles for our own time? Students use primary and secondary sources in digital and print formats. Possible field trip to San Francisco.

Same as: AMSTUD 25Q, URBANST 25Q

**HISTORY 57E. State of the Union 2014. 1 Unit.**

This course will examine major themes that contribute to the health, or disease, of the US body politic. Challenges and opportunities abound: we live in an age of rising inequality, dazzling technological innovation, economic volatility, geopolitical uncertainty, and the accumulating impact of climate change. These conditions confront our political leaders and us as citizens of a democracy plagued by dysfunction. What are the implications for the body politic? Led by Rob Reich (Political Science, Stanford), David Kennedy (History, Stanford), and James Steyer (CEO, Common Sense Media), the course will bring together distinguished analysts of American politics. Together, we will examine the following topics: inequality; energy and the environment; media and technology; the economy; and the 2014 midterm elections. The course is designed for the entire Stanford community: jointly offered for undergraduate and graduate students at Stanford (through listings in Political Science and History) and for community members through the Continuing Studies Program. For students, the course is available for 1 credit. This course may not be taken for a Letter Grade.

Same as: POLISCI 57E

**HISTORY 58Q. American Landscapes of Segregation. 3-4 Units.**

This course examines various landscapes of segregation in U.S. history from 19th century reconstruction and settler expansion through the contemporary U.S. security state. Each week we consider different histories of segregation including native reservation and boarding school stories, Jim Crow and post-World War II urban/suburban segregation, school integration and bussing, and the rise of the carceral state. We will ask: How have Americans moved through space with different degrees of freedom and constraint over time, and how has that shaped what it has meant to be an American in different ways for different groups? How has access to land, property, consumer, recreational and educational spaces and resources been regulated by categories of race, gender, sexuality, colonial subjectivity, immigrant status and class? To gain a better sense of our local history, we will also consider how structures of segregation have historically mapped the Bay Area. Sources include primary and secondary historic texts, feature and documentary films, photography, and poetry.

Same as: AFRICAAM 58Q, AMSTUD 58Q

**HISTORY 60N. Revolutionaries and Founders. 3 Units.**

Americans remain fascinated by the revolutionary generation which secured independence and established a national constitutional republic. Books about the founders come steadily from the presses, some describing the lives of individual revolutionaries, others trying to analyze and explain what made these events possible. This seminar will approach the Revolution through both a biographical and analytical framework, relying both on scholarly writings and the massive array of primary sources that are readily available through letterpress editions and on-line. The course will rely on the instructor's own recent book, *Revolutionaries: A New History of the Invention of America*, which carries the story from the crisis around the Boston Tea Party of 1773 through the end of President Washington's first administration. The course will be divided evenly between modern scholarship and the careful reading of original materials, and students will write short essays that will involve the analysis of explanatory problems, the close interpretation of documents, and the crafting of historical narratives. Topics to be discussed will include the outbreak of the revolution, constitution-making at both the state and national levels of government, the conduct of the war, and the legacies that Americans particularly associate with Thomas Jefferson, James Madison, and Alexander Hamilton.

**HISTORY 61. The Politics of Sex: Work, Family, and Citizenship in Modern American Women's History. 3-5 Units.**

This course explores the transition from Victorian to modern American womanhood by asking how Native, European, African, Mexican, and Asian American women navigated the changing sexual, economic, and political landscapes of the twentieth century. Through secondary readings, primary sources, films, music, and literature we explore the opportunities and boundaries on groups of women in the context of historical events that included immigration, urbanization, wartime, depression, the Cold War, as well as recurrent feminist and conservative political movements. Same as: AMSTUD 161, CSRE 162, FEMGEN 161, HISTORY 161

**HISTORY 61N. The Worlds of Thomas Jefferson. 3 Units.**

Thomas Jefferson assumed many roles during his life-- Founding Father, revolutionary, and author of the Declaration of Independence; natural scientist, inventor, and political theorist; slaveholder, founder of a major political party, and President of the United States. This introductory seminar explores these many worlds of Jefferson, both to understand the multifaceted character of the man and the broader historical contexts that he inhabited and did so much to shape.

**HISTORY 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.**

This course explores the long history of ideas about gender and equality. Each week we read, dissect, compare, and critique a set of primary historical documents (political and literary) from around the world, moving from the 15th century to the present. We tease out changing arguments about education, the body, sexuality, violence, labor, politics, and the very meaning of gender, and we place feminist critics within national and global political contexts.

Same as: AMSTUD 63N, CSRE 63N, FEMGEN 63N

**HISTORY 64. Racial and Ethnic Diversity in Modern America. 4-5 Units.**

How ethnicity influenced the American experience and how prevailing attitudes about racial and ethnic groups over time have affected the historical and contemporary reality of the nation's major minority populations. Focus is on the past two centuries.

Same as: CSRE 64

**HISTORY 68D. Martin Luther King, Jr.: The Inner Life and Global Vision. 3-5 Units.**

Martin Luther King, Jr., was the 20th-century's best-known African-American leader, but the religious roots of his charismatic leadership are far less widely known. The documents assembled and published by Stanford's King Research and Education Institute provide the source materials for this exploration of King's swift rise to international prominence as an articulate advocate of global peace and justice.

Same as: AFRICAAM 68D, AMSTUD 168D, CSRE 68, HISTORY 168D

**HISTORY 68S. New Orleans: An American City?. 5 Units.**

Some scholars argue that New Orleans is not quite an American city, but is instead a cultural hybrid of Europe, Africa, and the Caribbean. This course will investigate that claim by studying New Orleans from its colonial period to the present. Topics include colonial empires, the role of New Orleans as the largest slave market in North America, the Great Mississippi Flood of 1927, Civil Rights, Carnival, tourism, religion, and state and federal responses to Hurricane Katrina, among others.

Same as: AFRICAAM 68S, AMSTUD 68S, URBANST 68S

**HISTORY 69Q. American Road Trips. 4 Units.**

"Nothing behind me, everything ahead of me, as is ever so on the road."  
 –Jack Kerouac, *On the Road*, 1957. From Jack Kerouac's *On the Road* to Cheryl Strayed's *Wild*, this course explores epic road trips of the twentieth century. Travel is a fundamental social and cultural practice through which Americans have constructed ideas about the self, the nation, the past, and the future. The open road, as it is often called, offered excitement, great adventure, and the space for family bonding and memory making. But the footloose and fancy-free nature of travel that Jack Kerouac celebrated was available to some travelers but not to all. Engaging historical and literary texts, film, autobiography, memoir, photography, and music, we will consider the ways that travel and road trips have been represented in American culture. This course examines the following questions: How did men and women experience travel differently? How did the motivations for travel change over time? What role did race, ethnicity, class, relationships, and sexuality play in these trips? Students will work together to plan a road trip of their own which the class will take during the quarter.

Same as: AMSTUD 109Q

**HISTORY 70C. Modern Latin America. 3-5 Units.**

This course examines Latin American history from independence to the present day. Key issues include nationalism, urbanization, culture, and revolution. Sources include writings in the social sciences as well as primary documents, fiction, and film.

Same as: HISTORY 170C

**HISTORY 71S. American Political Thought from the Civil War to the Cold War. 5 Units.**

This course explores America's most important political tradition: liberalism. What does liberalism mean? Does it mean something different today than it did in the past? Using multiple textual and visual sources, students will grapple with how Americans remade liberalism in the 19th and 20th centuries and how political thinkers have understood its meaning over time. We will see how American liberalism was shaped by factors of race, gender, and class and by competing ideologies like conservatism and socialism.

**HISTORY 73S. History of the Police in the United States: Slave Patrols to Ferguson. 5 Units.**

How did police come to have the power to use violence? Themes: growth of professional policing, creation of private police forces and vigilantism, and public portrayals of police—by Hollywood and the press. The historical relationship between race and the administration of policing is a central question. Students will hone the methodology necessary to examine primary sources such as police memoirs, court records, police files, detective novels, music videos and photographs. The course fulfills the departmental Sources and Methods requirement. Priority given to history majors and minors.

**HISTORY 74S. Sounds of the Century: Popular Music and the United States in the 20th Century. 5 Units.**

What can popular music teach us about the past? What can we learn about music if we study it historically? This course grapples with these two questions by examining various examples of American music in the 20th century, as well as more conventional historical sources, scholarly books, and essays. Will pay special attention to how issues of race, gender, sexuality, class, and nation were reflected in and produced by people's interactions with music, inside and outside American borders.

**HISTORY 78Q. Film and History of Latin American Revolutions and Counterrevolutions. 3 Units.**

In this course we will watch and critique films made about Latin America's 20th century revolutions focusing on the Mexican, Cuban, Chilean and Nicaraguan revolutions. We will analyze the films as both social and political commentaries and as aesthetic and cultural works, alongside archivally-based histories of these revolutions.

**HISTORY 7D. Rise and Fall of Atlantic Slavery, 1500 to 1900. 3-5 Units.**

Between 1500 and 1900, about 12 million people were forcibly removed from Africa and transported to the Americas to work as slaves. This course explores the history of racial slavery in the Atlantic world and its lasting significance. Topics include the Middle Passage, the development of racism, the trans-Atlantic slave trade, the slave experience, resistance, African-American cultures, abolitionism, the process of emancipation, reparations, and the perpetuation of slavery and other forms of unfree labor.

Same as: AFRICAAM 107D, HISTORY 107D

**HISTORY 7E. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.**

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography.

Same as: ANTHRO 13A, ARCHLGY 13, HISTORY 107E

**HISTORY 7G. Making Anglo-American Capitalism. 3-5 Units.**

This course addresses capitalism in global perspective to identify the roots of our current economic system. We will consider theories about capitalism, the politics and policies of implementation, and the human and environmental consequences through topics such as the imperial political economy, consumerism, plantation economies, the East India Company, and the rise of credit. Embedding markets in a range of social relations, cultural practices, and institutional arrangements, reveals how capital became an -ism in specific and knowable historical circumstances.

Same as: HISTORY 107G

**HISTORY 7S. Stanford Collects: A History of Collecting. 5 Units.**

Leland Stanford, Jr. was a curator extraordinaire. His collecting shaped Stanford into a university, an archive, a library, and a museum. Students will explore Stanford's campus collections to discover how objects and artifacts tell the history not only of the university, but also Palo Alto, California, and the American West writ large. The course is hosted in Green Library and features visits to the Cantor Arts Center, Stanford University Archaeology Collections, and more. All majors welcome. Priority given to history majors and minors.

Same as: ARTHIST 278S

**HISTORY 80. The Ottoman Empire: Conquest, Coexistence, and Coffee. 3-5 Units.**

The Ottoman Empire ruled the Middle East, North Africa and Eastern Europe from the 15th to the early 20th centuries. How did the Ottoman enterprise appear in the frontier region between Christendom and the Islamic world? How were diverse peoples, religions, and regions integrated under the Ottoman order? Was there an Ottoman Mediterranean and Indian Ocean? How did reform movements in Islamic, Christian and Jewish thinking transform Ottoman societies? Topics include the Ottoman Empire between Europe and Eastern Islamic World; merchants and their markets; elite, urban, rural and nomadic lives; women, family, childhood and sexuality; life, afterlife and dreams. Special emphasis will be given to coffee and coffee houses which shaped public life in the Ottoman World since the 16th century. The survey ends with the rise of nationalisms, inter-communal violence and the disintegration of the Ottoman world.

Same as: HISTORY 180

**HISTORY 802. TGR Dissertation. 0 Units.**

Units by arrangement.

**HISTORY 82C. Making of the Islamic World, 600-1500. 3 Units.**

(Same as HISTORY 182C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1500. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols.

**HISTORY 82G. Making Palestine Visible. 3-5 Units.**

Israel-Palestine is one of the most difficult subjects to talk about, in large part because we in the United States do not have much exposure to Palestinian history, culture, and politics in their own terms. This course aims to humanize Palestinians and asks why Palestinian claims to rights are illegible for much of the American public. We begin to answer this question by examining a broad sampling of history, structures of power and law, culture, and contemporary political issues.

Same as: COMPLIT 82, COMPLIT 182, CSRE 82G, HISTORY 182G

**HISTORY 83S. Refugees of Palestine and Syria: History, Identity, and Politics of Exile in the Middle East. 5 Units.**

Mass displacements of Palestinians (1948, 1967) and Syrians (2011-) remain crucial to our understanding of history and politics of the modern Middle East. The course topics include the media's role in alleviating or worsening refugee crises, the Palestinian "right of return," and the place of religion in the Syrian civil war. By looking at autobiographies, graffiti, revolutionary posters, and music, we will study the construction of refugee identities, through the prism of race, ethnicity, statelessness, gender, and sexual orientation. Priority given to history majors and minors.

**HISTORY 84N. The American Empire in the Middle East. 4 Units.**

What have been the traditional objectives of U.S. policy in the Middle East since the end of World War II? What forces shape U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq and Israel/Palestine.

**HISTORY 85B. Jews in the Contemporary World: Faith and Ethnicity, Visibility and Vulnerability. 3 Units.**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life – all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 85B, JEWISHST 85B, REES 85B

**HISTORY 85S. A History of Strangers: Jews in the Mediterranean. 5 Units.**

A community needs outsiders. Sometimes it needs them to provide material things, but always it needs them to define itself. Focusing on Jews in the early-modern Mediterranean (1450-1750), this course asks questions about the nature of community, the causes and effects of exclusion, and processes of creating the "other." We will look at primary sources produced by "strangers" and so-called "host" societies. Sources include travelogues, maps, novels, poetry, paintings, contracts, Ottoman edicts, Italian charters, and rulings from religious courts.

Same as: JEWISHST 85S

**HISTORY 86Q. Blood and Money: The Origins of Antisemitism. 4-5 Units.**

For over two millennia, Jews and Judaism have been the object of sustained anxieties, fears, and fantasies, which have in turn underpinned repeated outbreaks of violence and persecution. This course will explore the development and impact of antisemitism from Late Antiquity to the Enlightenment, including the emergence of the Blood libel, the association between Jews and moneylending, and the place of Judaism in Christian and Islamic theology. No prior background in history or Jewish studies is necessary. Prerequisite: PWR 1.

Same as: JEWISHST 86Q

**HISTORY 8C. Sugar and Slavery, Race and Revolution: The Caribbean 1450-1888. 3-5 Units.**

This course examines race and slavery across British, French, and Spanish islands, plus Brazil. The intensity of Caribbean slavery produced societies where more people were enslaved than free. The idea of "black" was invented and contested as Caribbean inhabitants leaned on African roots to shape new cultures. Sugar production sparked global wars and planted the seed of modern financial systems. Black people fought back, in ways large and small, marking the beginning of emancipation with the Haitian Revolution.

Same as: AFRICAAM 18C, CSRE 108C, HISTORY 108C

**HISTORY 90. Early Chinese Thought. 3-5 Units.**

This lecture course examines the emergence of critical thought in early China. After a brief study of the social and political changes that made this emergence possible, it looks at the nature and roles of the thinkers, and finally their ideas about the social order, the state, war and the army, the family, the cosmos, and the self (both physical and mental). Some brief comparisons with early Greek thought.

Same as: HISTORY 190

**HISTORY 90S. The Forgotten War: The Korean War in Historical Perspective. 5 Units.**

This course examines the history of the Korean War (1950-53), a pivotal moment in modern world history. Using sources across seven countries including photographs, film, maps, diaries, literature, music, declassified military communications and psychological warfare materials, we will examine the war as a complex, multidimensional human phenomenon. Along the way we will find that the Korean War sheds light on a range of contemporary issues including US-China relations, the War on Terror, and America's larger place in the world. Priority given to history majors and minors.

Same as: AMSTUD 90S, KOREA 155X

**HISTORY 91D. China: The Northern and Southern Dynasties. 3 Units.**

(Same as HISTORY 191D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization.

**HISTORY 92A. The Historical Roots of Modern East Asia. 4-5 Units.**

Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire.

Same as: HISTORY 392E

**HISTORY 93. The Chinese Empire from the Mongol Invasion to the Boxer Uprising. 3 Units.**

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINA 93, FEMGEN 93

**HISTORY 94B. Japan in the Age of the Samurai. 3 Units.**

(Same as HISTORY 194B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community.

**HISTORY 95. Modern Korean History. 3 Units.**

(Same as HISTORY 195. History majors and others taking 5 units, register for 195.) This lecture course provides a general introduction to the history of modern Korea. Themes include the characteristics of the Chosôn dynasty, reforms and rebellions in the nineteenth century, Korean nationalism; Japan's colonial rule and Korean identities; decolonization and the Korean War; and the different state-building processes in North and South, South Korea's democratization in 1980s, and the current North Korean crisis.

**HISTORY 95C. Modern Japanese History: From Samurai to Pokemon. 3 Units.**

(Same as History 195C. History majors and others taking 5 units, register for 195C.) Japan's modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions.

**HISTORY 95N. Maps in the Modern World. 4-5 Units.**

Preference to freshmen. Focus is on cutting-edge research. Topics: the challenge of grasping the globe as a whole; geography's roots in empire; maps as propaganda and as commodities; the cultural production of scale; and the cartography of imaginary worlds. Sources include resources in the Green Library Special Collections and in the Stanford Spatial History Lab.

**HISTORY 95S. Protest in Modern China. 5 Units.**

How has protest impacted the history of China? In this course, we study the history of state-citizen confrontation from the fall of the Qing Dynasty in 1911 to the Occupy Central movement in 2014. We seek to understand the politics of civic engagement in China today as part of politicized, global conversation about human rights, democracy, and revolution. We will examine a wide range of primary sources, explore archival offerings on campus, and hone critical reading and analytical writing skills.

Same as: PUBLPOL 95S

**HISTORY 98. The History of Modern China. 3 Units.**

(Same as HISTORY 198. History majors and others taking 5 units, register for 198.) Do you want to understand Modern China? If so, this course is for you. And even if you've studied China before, or grew up there, this course will deepen and challenge your perspectives. Through vivid and propulsive lectures - drawing on fiction, film, political essays, and more - Professor Tom Mullaney will chart out China's historical transformations from 1800 to today, equipping you to speak and write intelligently about Chinese politics, society, economy, culture, gender, ethnicity, and international affairs.

**HISTORY 98N. Beijing, Shanghai, and the Structure of Modern China. 3 Units.**

This course examines the transformation of China from the late empire to the present by studying the nature of its two greatest cities. Topics examined will include the evolving physical structure of the cities, their changing relations to the Chinese state and the outside world, shifting understandings of the urban population/crowd, the changing nature of time, new modes of self-definition through patterns of consumption, the cities as topics of literature and movies, and the nature of urban modernity.

**HISTORY 9N. How to Start Your Own Country: Sovereignty and State-Formation in Modern History. 3 Units.**

What does it mean to start a country, or to acquire and possess sovereignty over a territory? This course will examine the historical evolution of fundamental concepts in our international system: state formation, statehood, and sovereignty. Each week will spotlight a case-study in which sovereignty and statehood have appeared greatly confused and hotly contested. These include: the UK-China lease for control of Hong Kong; the US Naval Station in Guantanamo Bay; the corporate state of the legendary British East India Company; and Disney World.

**HISTORY 9S. Censorship & Propaganda: From Renaissance to Revolution. 5 Units.**

Information is power. From the fifteenth through eighteenth centuries, a shadowy world of illicit communication challenged church and state. We'll explore the resulting communication wars as waged through print, art, architecture, and theatre. We'll read banned, scandalous and satirical works by Niccolò Machiavelli, Martin Luther and Benjamin Franklin among many others. From the archives to the digital humanities, students will gain new tools to explore the politics and historical development of information control.

Same as: DLCL 106

## Human Biology (HUMBIO)

**HUMBIO 11. Meet HumBio: a lecture series introducing HumBio themes. 1 Unit.**

A lecture and discussion series designed for freshmen who want to learn more about Human Biology - either the major itself or the topics within its realm - by hearing from some of HumBio's most engaging faculty. Each week the class will feature a faculty member addressing three central questions: What do I do? Why is it important? and What professional opportunities are possible for a person concentrating in my field? The course is not meant to cover a specific body of content, therefore the assignments for the class aim to build fundamental study skills. These include taking useful notes, articulating questions or ideas prompted by the presentations, visiting office hours, connecting lecture topics with current events or journal articles, paying full courteous attention to speakers and peers, and creating a study guide. There will be no required readings or exams.

**HUMBIO 112. Conservation Biology: A Latin American Perspective. 3 Units.**

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class.

Same as: BIO 144, BIO 234

**HUMBIO 113. The Human-Plant Connection. 3 Units.**

The intertwined biologies of humans and plants, particularly the ways in which people and plants have imposed selection pressures and ecological change on one another. Topics include evolution and basic plant structure; plant domestication; effects of agriculture on human health and physiology; plants in traditional and contemporary diets; and human influences on plant biology through genetic manipulation and environmental change. Class meetings center on journal articles. Final project includes written and multimedia presentations. Prerequisites: Human Biology Core or equivalent or consent of instructor.

**HUMBIO 113S. Healthy/Sustainable Food Systems: Maximum Sustainability across Health, Economics, and Environment. 4 Units.**

Focus on problems with and systems-based solutions to food system issues. Four particular settings are addressed: University, worksite, hospital, and school food. Traditional vs. disruptive food system models compared and contrasted. The goal is to determine how best to maximize sustainability across several dimensions, including health, economics, and the environment. Underlying class themes include social justice and the potential for changing social norms around food production and consumption. Discussion-based seminar. Prerequisite: Human Biology Core or equivalent or consent of instructor.

Same as: CHPR 113

**HUMBIO 114. Environmental Change and Emerging Infectious Diseases. 4-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, ANTHRO 277, EARTHSYS 114, EARTHSYS 214

**HUMBIO 118. Theory of Ecological and Environmental Anthropology. 5 Units.**

Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America.

Same as: ANTHRO 90C

**HUMBIO 120. Health Care in America: An Introduction to U.S. Health Policy. 4 Units.**

Health policy and health care delivery from a historical and a current policy perspective. Introduces cost, quality, and access as measures of health system performance. Considers institutional aspects of health care reform. Upper division course with preference given to upperclassmen.

**HUMBIO 120A. American Health Policy. 3 Units.**

Issues in health care reform and the policy making process, the evolution of current systems, and theories underlying efforts for change. The national search for solutions to the problems of the uninsured, and the feasibility, options, and ramifications of alternative proposals for health care reform. Student presentations. Prerequisite: Human Biology 4B or equivalent, Human Biology 120, or consent of instructor.

**HUMBIO 121. Critical Issues in Child Health. 4 Units.**

Integrated picture of the physical and psychosocial health factors that result in a healthy child building on principles taught in the Human Biology core. Students apply basic human physiology to the physiology of the child to develop perspective on global pediatric health challenges and how the cultural context influences and defines the child living within it. Prerequisite: Human Biology Core or equivalent or consent of instructor. Enrollment will be limited and preference given to Seniors.

**HUMBIO 121E. Ethnicity and Medicine. 1-3 Unit.**

Weekly lecture series. Examines the linguistic, social class, and cultural factors that impact patient care. Presentations promote culturally sensitive health care services and review contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. 1 unit requires weekly lecture attendance, completion of required readings, completion of response questions; 2 units requires weekly lecture attendance and discussion session, completion of required readings and weekly response questions; additional requirement for 3 units (HUMBIO only) is completion of a significant term paper. Only students taking the course for 3 units may request a letter grade. Enrollment limited to students with sophomore academic standing or above. This course must be taken for a minimum of 3 units to be eligible for Ways credit.

Same as: FAMMED 244

**HUMBIO 122. Beyond Health Care: the effects of social policies on health. 3 Units.**

Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HumBio 4B or equivalent, and some background in research methods and statistics, or Instructor permission.

Same as: PEDS 222

**HUMBIO 122M. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations. 3 Units.**

(Undergraduate students must enroll in HUMBIO 122M. MD and Graduate students enroll in PEDS 212) An emerging area of inquiry. Topics include: global migration trends, health issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students. Upper division course with preference given to upperclassmen.

Same as: PEDS 212

**HUMBIO 122S. Social Class, Race, Ethnicity, and Health. 4 Units.**

Examines health disparities in the U.S., looking at the patterns of those disparities and their root causes. Explores the intersection of lower social class and ethnic minority status in affecting health status and access to health care. Compares social and biological conceptualizations of race and ethnicity. Upper division course with preference given to upperclassmen.

Same as: AFRICAAM 132

**HUMBIO 123. Obesity in America: Clinical and Public Health Implications. 3-4 Units.**

Interdisciplinary clinical, research, and policy approaches. The prevalence, predictors, and consequences of obesity and diabetes; biological and physiological mechanisms; clinical treatments including medications and surgery; and the relevance of behavioral, environmental, economic, and policy approaches to obesity prevention and control. Undergraduate prerequisite: Human Biology core or equivalent, or consent of instructor. HumBio students must enroll in HumBio 123. CHPR Master's students who are not medical students enroll in CHPR 223 for a letter grade. Priority for enrollment given to CHPR master's students.

Same as: CHPR 223

**HUMBIO 124C. Global Child Health. 3 Units.**

This course introduces students to key challenges to the health and well being of children worldwide. We focus on child health problems in low- and middle-income countries (LMIC) to reflect the global burden of disease among children. We will review the scope and magnitude of the leading causes of morbidity and mortality among children, as well as examine regional variations. We will then identify both medical and non-medical causes, effects of, as well as interventions to address, some of the biggest child health problems. The course will also present an overview of the role of culture, gender, and non-state actors (NGOs, foundations, etc.) on health and health policy. Upper division course with preference given to upperclassmen.

**HUMBIO 124E. Economics of Infectious Disease and Global Health. 3 Units.**

Introduction to global health topics such as childhood health, hygiene, drug resistance, and pharmaceutical industries from an economic development perspective. Introduces economic concepts including decision-making over time, externalities, and incentives as they relate to health. Prerequisite: Human Biology Core or equivalent or consent of the instructor.

Same as: MED 236

**HUMBIO 125. Current Topics and Controversies in Women's Health. 2-3 Units.**

Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. For Ways credit eligibility, students must enroll in HUMBIO 125 for a minimum of 3 units and a letter grade. PhD minor in FGSS, enroll in FEMGEN 256 for 2 - 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units. Undergraduate prerequisite: Human Biology Core or equivalent or consent of instructor.

Same as: FEMGEN 256, OBGYN 256

**HUMBIO 126. Promoting Health Over the Life Course: Multidisciplinary Perspectives. 3 Units.**

(HUMBIO students must enroll in HumBio 126. CHPR students must enroll in CHPR 226 for a letter grade.) Disease prevention and health promotion topics pertinent to different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on scientific investigation, the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; obesity, nutrition, and stress; children, young adult, mid-life and aging health issues; health care delivery and public health system; workplace wellness programs; and other additional issues. Undergraduate prerequisite: Human Biology Core or equivalent or consent of instructor. Students enrolled in CHPR 226 must complete additional assignments appropriate for its Masters level listing.

Same as: CHPR 226

**HUMBIO 126A. Advanced Seminar in Health and Security. 3 Units.**

In this course, we explore the growing interconnections between health and security. Global health can no longer be addressed without some important consideration of international security as war, civil conflict and political instability have increasingly defined the health challenges in major parts of the world. This course will address the interaction of three types of security: human, national, and international. Health is obviously a component of human security. However, it has also been raised as a concern of national and international security, particularly in areas where HIV/AIDS and Ebola have been prevalent and where the risk of pandemic outbreaks is high. This course will bring together a cross-disciplinary examination of these issues and address the opportunities and potential risks of tightly linking the provision of essential health services to security considerations. We will use case studies to explore both the conceptual and technical issues inherent in health and security. The challenges of Ebola, HIV, complex humanitarian emergencies, and pandemics will be explored in detail. As part of each discussion, the intense interaction of biology, service delivery, political legitimacy, human rights, and international relations will be examined. Upper division course with preference given to upperclassmen.

**HUMBIO 127A. Community Health: Assessment and Planning I. 4 Units.**

Major determinants of health in a community. Working with community partners to identify health issues and plan programs and policies to prevent disease and promote health. Service learning component involving students in community health assessment techniques. Final grade given upon completion of HUMBIO 127B. Service Learning Course (certified by Haas Center). Prerequisite: HUMBIO 4B or equivalent, or consent of instructor.

**HUMBIO 127B. Community Health: Assessment and Planning II. 4 Units.**

Continuation of 127A. Service learning course with emphasis on conducting community health assessment and planning projects in collaboration with community-based organizations. Service Learning Course (certified by Haas Center). Prerequisite: HUMBIO 4B or equivalent HUMBIO 127A, or consent of instructor.

**HUMBIO 128. Community Health Psychology. 4 Units.**

Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent.

Same as: PSYCH 101

**HUMBIO 129. Critical Issues in International Women's Health. 4 Units.**

Facilitated discussion about women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on women's capacity to exercise their human rights including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor.

Same as: FEMGEN 129

**HUMBIO 129S. Global Public Health. 4 Units.**

The class is an introduction to the fields of international public health and global medicine. It focuses on resource poor areas of the world and explores major global health problems and their relation to policy, economic development and human rights. The course is intended for students interested in global health, development studies, or international relations, and provides opportunities for in-depth discussion and interaction with experts in the field. Upper division course with preference given to upperclassmen.

**HUMBIO 129W. Health Care Systems Around the World. 4 Units.**

This course will explore the role of health care systems in societies around the world, identifying the common challenges facing health care systems and how different institutional structures in different countries perform in response to these challenges. We will structure the course around general conceptual frameworks related to key health system institutions (including financing, insurance, provider payment, patient cost-sharing, and the regulation of medical technology). From this foundation, we will draw on the experience of individual countries (high and low income, with heavy chronic disease and infectious disease burdens) to illustrate the function of these institutions under real-world circumstances observed around the globe. Prerequisite: Human Biology Core or equivalent or consent of instructor.

Same as: MED 129

**HUMBIO 130. Human Nutrition. 4 Units.**

The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to population and cultural, race, ethnic, religious, and social economic diversity. The relationships between nutrition and disease; ethnic diets; vegetarianism; nutritional deficiencies; nutritional supplementation; phytochemicals. HUMBIO students must enroll in HUMBIO 130. CHPR master's students must enroll for a letter grade. Undergraduate prerequisite: Human Biology Core or equivalent or consent of instructor.

Same as: CHPR 130

**HUMBIO 131. Kinesiology. 4 Units.**

This course covers the basic principles governing human movement with an emphasis on sports applications. The course spends roughly equal amounts of time on the applied anatomy and biology, meaning both the large and small-scale body structure and function. The applied anatomy portion includes body structure (the muscles and their connections) and mechanics (e.g. forces, torque, momentum and power), which together describe macroscopic movement. The applied biology portion includes the molecular and cellular basis of movement, mainly muscle contraction, nerve signaling, and the mechanisms of exercise damage, cramping, muscle memory, delayed-onset muscle soreness, and fatigue. Prerequisite: Human Biology Core or equivalent or consent of instructor.

**HUMBIO 133. Human Physiology. 4 Units.**

Human physiology will be examined by organ systems: cardiovascular, respiratory, renal, gastrointestinal and endocrine. Molecular and cell biology and signaling principles that underlie organ development, pathophysiology and opportunities for regenerative medicine are discussed, as well as integrative control mechanisms and fetal development. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.

Same as: BIO 112

**HUMBIO 135. Exercise Physiology. 4 Units.**

Explore the amazing capacity of your body to move and adapt within your everyday world. You will learn: how your body systems respond to the stress of acute exercise and adapt to chronic exercise training, how your cardiovascular system adapts to optimize oxygen delivery and utilization, how your muscles generate force and hypertrophy in response to training, and how your metabolic/biochemical pathways are regulated to support the increased energy demand of exercise. We will discuss theories on the causes of fatigue and muscle soreness, and on what limits human performance. Applied topics such as the effects of aging, gender, and environmental conditions (high altitude, heat, cold, microgravity) on your body will be emphasized in the second half of the course. Portions of the class will be taught through videos that use online lectures and engaging stories to illustrate physiology concepts. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.

**HUMBIO 135S. Body Hacking: Applied Topics in Exercise Physiology. 3 Units.**

Our increasing understanding of exercise physiology and biochemistry provide new insights into how we can "hack" the human body to increase the response to exercise training and improve human performance and health. We will explore research and training interventions that try to capitalize on this new knowledge. Science communication will also be emphasized in the class, so students will learn the fundamentals of science storytelling and mixed media presentation of ideas.

Requirements of this class include participating in blogs & in-class discussions, evaluating physiology research, writing a research paper, and creating a science-based story by video or podcast to share with the class. If class is full, contact instructor for an application. Enrollment limited to 10. Prerequisites: B+ or higher in HUMBIO 135 and/or consent of instructor.

**HUMBIO 136. Human Physiology Laboratory. 4 Units.**

This laboratory course is active and inquiry based. Aspects of exercise and temperature are explored; however, the specific questions the class tackles differ each quarter. Samples of past questions: Does lactic acid accumulation correlate with exercise fatigue at different exercise and body temperatures? Does palm cooling during exercise mitigate the effect of body temperature on fatigue with or without evaporative cooling? Students participate both as experimenters and as subjects of the experiments in two-person teams. Participants must be in good physical condition, though not necessarily athletes, and must be willing to participate in strenuous exercise routines under adverse environmental conditions. Varsity athletes concurrently participating in a spring sport must consult the instructor before applying. Discussion sessions include student presentations of journal articles, data analyses, and feedback on individual WIM research proposals. By application only, see [sites.stanford.edu/bio107humbio136](https://sites.stanford.edu/bio107humbio136) for the application form.

Prerequisite: Bio 42 or HumBio 4A. Satisfies WIM for Biology.

Same as: BIO 107

**HUMBIO 139S. Sport and Exercise Medicine. 3 Units.**

Formerly HUMBIO 139E. This is an upper division course with a common theme of injury as well as injury prevention in sport and physical activity. The topics include the treatment and evaluation of common sports injuries and illnesses for both musculoskeletal and non-musculoskeletal/medical conditions. Students will also develop critical reading and thinking skills. Classes will incorporate didactic lectures, critical analysis of sports medicine literature, as well as hand-on labs incorporating current sports medicine injury evaluation tools. Prerequisite: Human Biology Core or Biology Foundations or equivalent or consent of instructor.

**HUMBIO 140. Sex and Gender in Human Physiology and Disease. 2-3 Units.**

(HumBio students must enroll in HumBio 140.) Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. HUMBIO students must enroll for 3 units.

Same as: FEMGEN 241, MED 240

**HUMBIO 142. Adolescent Development. 4 Units.**

Underlying changes and their consequences in everyday functioning. Physical, cognitive, social, and sexual development; how these changes influence the emerging sense of identity, autonomy, and intimacy. Contexts in which adolescents move such as family, friends and peers, school, and workplace. Focus is on normal development of boys and girls; attention to problem outcomes including eating disorders, depression, and teen pregnancy. Prerequisite: HUMBIO 3B or PSYCH 1, or consent of instructor.

**HUMBIO 142M. Special Topics in Adolescent Mental Health. 4 Units.**

Includes the study of aspects of common disorders seen in adolescent populations, such as prevalence, developmental course, gender differences, theoretical explanations, and therapeutic interventions. Topics will include mood/anxiety disorders, eating disorders, learning disabilities and ADHD, sexual risk behaviors, developmental disorders, substance abuse, and self-harm. Goals of this course include getting students to think critically about the unique mental health needs of adolescents, collaborating on devising ways to improve the way our society meets those needs, and strengthening writing and communication skills applicable to this area of inquiry. Prerequisite: Human Biology Core or equivalent or consent of instructor.

**HUMBIO 143. Adolescent Sexuality. 4 Units.**

Developmental perspective. Issues related to scientific, historical, and cultural perceptions; social influences on sexual development; sexual risk; and the limitations and future directions of research. Sexual identity and behavior, sexually transmitted diseases including HIV, pregnancy, abortion, gay and lesbian youth, sex education and condom availability in schools, mass media, exploitative sexual activity, and difficulties and limitations in studying adolescent sexuality. Legal and policy issues, gender differences, and international and historical trends. Prerequisite: Human Biology core or equivalent, or consent of instructor.

**HUMBIO 144. Boys' Psychosocial Development. 4 Units.**

Focuses on early childhood through adolescence. Examines boys' lives and experiences as embedded within interpersonal relationships as well as social and cultural contexts. Includes perspectives from psychology, sociology, gender studies, and education. Prerequisite: Human Biology core, Developmental Psychology, or consent of instructor.

**HUMBIO 145L. The Biology and Evolution of Language. 4-5 Units.**

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 171, ANTHRO 271

**HUMBIO 146. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.**

Unusual mental phenomena have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? Optional: The course will be taught in conjunction with an optional two-unit discussion section or engaged learning component.

Same as: ANTHRO 186, ANTHRO 286, PSYC 286

**HUMBIO 146D. Developmental Disabilities: From Biology to Policy. 3 Units.**

Fifteen percent of US children have disabilities. While advances in medicine and technology have increased life expectancy for these children, health care delivery, education, and public attitudes have not kept pace. Students in this course will learn the possibilities and limitations of new biomedical treatments of Down syndrome, cerebral palsy, and autism. Students will also evaluate the impact of public policy initiatives, such as the Individuals with Disabilities Education Act and Americans with Disabilities Act on inclusion and participation in society. Prerequisite: HUMBIO 25SI or Human Biology Core or equivalent.

Same as: PEDS 246

**HUMBIO 147. Biology, Culture and Family in Early Development. 3-4 Units.**

Early childhood is a time of both enormous promise and vulnerability. Parents differ widely in their practices and beliefs about their role in enabling children to avoid risk and to achieve their potential for a healthy and productive life in the particular physical, social and cultural contexts of the communities and societies in which they live. In this seminar we will evaluate evidence from the biological and social sciences showing how experiences in infancy have profound and enduring effects on early brain architecture, with consequences for later language, cognitive, and socio-emotional development in childhood and adulthood. We will also consider the challenges of designing more effective social policies and programs to provide support for families in diverse socioeconomic and cultural contexts, who all want to help their children thrive. A community-service learning option, working with children as a reading tutor, is included for students taking this class for 4-units. Enrollment is limited and consent of instructor is required. Please send a brief statement of your interests, goals, and academic preparation relevant to the themes of this class to Prof. Fernald (afernald@stanford.edu). Pre-requisites: Psych 01 and Psych 60, or Human Biology 3B.

Same as: PSYCH 176

**HUMBIO 149. Psychological and Educational Resilience Among Children and Youth. 4 Units.**

Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

Same as: EDUC 256

**HUMBIO 149L. Longevity. 4 Units.**

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

Same as: NENS 202, PSYCH 102

**HUMBIO 151R. Biology, Health and Big Data. 3 Units.**

We are living in the midst of a revolution in the accessibility and availability of biological and medical data. How can all this data be used to improve human health? In this course, students will look at case studies from diabetes and cancer research to learn how to access publicly available data ranging from gene or protein level datasets to information about clinical trials. Students will apply what they learn from the case studies to develop a research proposal and presentation on a biology-related topic of their choice. The class will have a small group workshop-type format. Students will gain skills in research methods including accessing, analyzing and presenting data. There will be exercises using the R programming language. Prior programming experience is not required. Prerequisites: HumBio 2A, 3A or equivalent.

**HUMBIO 152. Viral Lifestyles. 3 Units.**

Viral lifestyles is a seminar devoted to exploring contemporary topics in microbiology with a focus on the examination of the major transitions in evolution. The course includes lectures and will provide an opportunity for students to interact with each other, the instructor and guest lecturers to explore novel research areas in microbiology that are still being formed. The course will begin with lectures on topics such as the major transitions framework, postulated by John Maynard Smith and Eors Szathmary, proposes that major leaps in evolution follow the same roadmap, where individual entities come together to form complex individuals, in the process giving up their ability to reproduce independently. and will transition to presentation and discussion led by student groups. A significant percentage of class will be devoted to presentation and discussion focused on group projects. Prerequisite: Human Biology core or Biology core or equivalent, or consent of instructor.

**HUMBIO 153. Parasites and Pestilence: Infectious Public Health Challenges. 4 Units.**

We will learn about parasitic and other pestilence of public health importance and how they affect billions of people worldwide. We examine the pathogenesis, clinical syndromes, complex life cycles, and the interplay among environment, vectors, hosts, and reservoirs; we explore historical contexts as it informs current interventions and programming against disease. Public health policy initiatives aimed at halting disease transmission are viewed critically through the lens of researchers, public health level initiatives, popular media (TV and movies) and individual patients with these diseases. There will be guest visitors who have experienced these diseases and we will hear from several researchers and experts working on the challenges of controlling, eliminating or even eradicating these diseases. We will become familiar with the targeted diseases of the World Health Organization tropical disease research list, including river blindness, sleeping sickness, leishmaniasis, schistosomiasis, mycobacterial disease (tuberculosis and leprosy), malaria, toxoplasmosis, dracunculiasis, and intestinal helminthes. There will be a lab section for "hands on" learning and viewing of parasites. Interactive sessions will involve teaching each other about these biological forces of nature that invade humans. Prerequisite: Human Biology core or equivalent, or consent of instructor.

**HUMBIO 154A. Engineering Better Health Systems: modeling for public health. 4 Units.**

This course teaches engineering, operations research and modeling techniques to improve public health programs and systems. Students will engage in in-depth study of disease detection and control strategies from a "systems science" perspective, which involves the use of common engineering, operations research, and mathematical modeling techniques such as optimization, queuing theory, Markov and Kermack-McKendrick models, and microsimulation. Lectures and problem sets will focus on applying these techniques to classical public health dilemmas such as how to optimize screening programs, reduce waiting times for healthcare services, solve resource allocation problems, and compare macro-scale disease control strategies that cannot be easily evaluated through randomized trials. Readings will complement the lectures and problem sets by offering critical perspectives from the public health history, sociology, and epidemiology. In-depth case studies from non-governmental organizations, departments of public health, and international agencies will drive the course. Prerequisites: A course in introductory statistics, and a course in multivariable calculus including ordinarily differential equations. Open to upper-division undergraduate students and graduate students. Human Biology majors enroll in HUMBIO 154A.

Same as: HRP 234, MED 254

**HUMBIO 154B. Principles of Epidemiology, with an emphasis on women's health. 3 Units.**

Epidemiology is the study of the distribution and determinants of health and disease in human populations. Utilizing the lens of women's health, this course will introduce students to the basic principles of epidemiological study design, analysis, and interpretation. The course will draw on critical topics in women's health for lectures, discussions, readings and assignments. Research articles from epidemiology as well as other social science disciplines will be utilized to offer students multiple perspectives on contemporary women's health issues. Human Biology 154 courses can be taken separately or as a series. Prerequisite: Human Biology core or equivalent or consent of instructor.

**HUMBIO 154C. Cancer Epidemiology. 4 Units.**

Clinical epidemiological methods relevant to human research in cancer will be the focus. The concepts of risk; case control, cohort, and cross-sectional studies; clinical trials; bias; confounding; interaction; screening; and causal inference will be introduced and applied. Social, political, economic, and ethical controversies surrounding cancer screening, prevention, and research will be considered. Human Biology 154 courses can be taken separately or as a series. Prerequisite: Human Biology core or equivalent, or instructor consent.

**HUMBIO 155C. Human and Viruses Part III. 3 Units.**

Comprehensive survey of human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Prerequisite: prior enrollment MI 155A/HUMBIO 155H and MI 155B/HUMBIO 155V and concurrent enrollment with MI 155D. Same as: MI 155C

**HUMBIO 155D. Human and Viruses Part IV. 3 Units.**

Comprehensive survey of human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Prerequisite: prior enrollment in MI 155A/HUMBIO 155H and MI 155B/HUMBIO 155V and concurrent enrollment with MI 155C. Same as: MI 155D

**HUMBIO 155H. Humans and Viruses I. 3 Units.**

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response. Prerequisite: Concurrent enrollment in MI 155B or HUMBIO 155V. Same as: MI 155A

**HUMBIO 155V. Humans and Viruses II. 3 Units.**

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Topics: measles and viral epidemiology, rotavirus and world health, rabies and infections of the brain, HPV and cancer-causing viruses, herpes simplex and viral latency, CMV and viral teratogenesis, retrovirology and endogenous viral sequences, HIV and viral treatment, viral hepatitis and chronic infections, prions and diseases of life style. Prerequisite: Concurrent enrollment with MI 155A or HUMBIO 155H. Same as: MI 155B

**HUMBIO 157. The Biology of Stem Cells. 3 Units.**

The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: HumBio 2A and HUMBIO 3A, or the equivalent in the BioCore in Biological Sciences.

**HUMBIO 158. The Human Genome and Disease. 3 Units.**

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIO 109A, BIOC 109A, BIOC 209A

**HUMBIO 158S. Genetics and Society. 3 Units.**

This course will focus on social science engagement with developments in genetic research, focusing on two key issues. First, social scientists are trying to figure out how genetic data can be used to help them better understand phenomena they have been long endeavoring to understand. Second, social scientists try to improve understanding of how social environments moderate, amplify, or attenuate genetic influences on outcomes.

Same as: EDUC 373, SOC 232

**HUMBIO 159. Genes and Environment in Disease Causation: Implications for Medicine and Public Health. 2-3 Units.**

The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

Same as: HRP 238

**HUMBIO 160. Human Behavioral Biology. 5 Units.**

Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

Same as: BIO 150

**HUMBIO 161. The Neurobiology of Sleep. 4 Units.**

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

Same as: BIO 149, BIO 249

**HUMBIO 162L. The Literature of Psychosis. 3-5 Units.**

One of the great gifts of literature is its ability to give us insight into the internal worlds of others. This is particularly true of that state clinicians call "psychosis." But psychosis is a complex concept. It can be terrifying and devastating for patients and families, and yet shares characteristics with other, less pathological states, such as mysticism and creativity. How then can we begin to make sense of it? In this course, we will examine the first-hand experience of psychosis. We will approach it from multiple perspectives, including clinical descriptions, works of art, and texts by writers ranging from Shakespeare, to the science fiction writer Philip K. Dick, to patients attempting to describe their experience. This class is not only for students thinking of careers in medicine, psychology or anthropology, but also readers and writers interested exploring extraordinary texts. There are no prerequisites necessary; all that is needed is a love of language and a curiosity about the secrets of other minds.

Same as: ANTHRO 82P, PSYC 82, PSYC 282

**HUMBIO 163. Neural Systems and Behavior. 4 Units.**

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A.

Same as: BIO 263

**HUMBIO 164. Autism Spectrum Disorder. 3 Units.**

Deficits in social communication and interaction and repetitive behaviors are the core symptoms of Autism Spectrum Disorder (ASD), a neurodevelopmental disorder that affects about 1% of all children and costs society an estimated \$268B annually. This interactive seminar course will provide an overview of our understanding of ASD, from genetics through epidemiology, biology and treatment, and the many implications for society, including the principles and problems of diagnosis, its impact upon family and across the lifespan, and controversies regarding its etiology, perception and care. Preference given to Seniors. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.

**HUMBIO 165. Frontiers in Global Mental Health. 3 Units.**

This class will increase awareness of global mental health issues and social disparities while developing tools to address associated challenges both at home and abroad. Special attention will be placed on human rights issues including access to mental health care and the mental health of survivors of human rights abuses. Prerequisite: Human Biology Core or equivalent or consent of instructor.

**HUMBIO 166. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context. 4 Units.**

The material in this course is an introduction to the field and the target audience is undergraduates. It may be of interest to graduate students unfamiliar with the field. The class examines the array of forces that affect the foods human beings eat, and when, where, and how we eat them, including human labor, agriculture, environmental sustainability, politics, animal rights/welfare, ethics, policy, culture, economics, business, law, trade, and ideology, and psychology. The class addresses the impact of current policies and actions that might be taken to improve human nutrition and health; macro-scale influences on food, nutrition, and eating behavior. Undergraduate Prerequisite: Human Biology Core or equivalent or consent of instructor.

Same as: CHPR 166

**HUMBIO 167. The Art of Vision. 3 Units.**

This course is about eyes and art. We explore how eyes are built, how they process visual information, and how they are affected by disease. And we explore how fine art and famous artists (from all eras, ancient to modern) have depended upon vision, both normal and abnormal. There are short diversions into animal eyes and the role of vision in music, literature, and sports. Prerequisite: HumBio 4A or BIO 42 or consent of Instructor.

**HUMBIO 168. Multidisciplinary Perspectives on Guilt. 3 Units.**

The seminar encompasses the personal and cultural components of guilt from multidisciplinary perspectives. At the individual level, it explores behaviors that induce guilt; their relational aspects; genesis in evolutionary and developmental terms: and its normal and pathological manifestations. The cultural section includes cross-cultural perspectives on guilt and its conceptions in Christianity, Judaism, Islam, Hinduism, Buddhism, and Confucianism; as well as in the philosophy of Aristotle, Kant, J. S Mill and Nietzsche, and culpability in the law. Derived from this material, the course will also focus on the nature of ethical reasoning and the ways we make ethical choices and judgments in our lives.

Prerequisite: Human Biology Core or equivalent or consent of instructor.

**HUMBIO 16SC. The Stanford Safari: Field Observations in Our Own Backyard. 2 Units.**

Although Stanford is renowned as a place of learning and research, the goal of this class is to approach Stanford University as a subject worthy of study in and of itself. Students will study Stanford in terms of the built environment (e.g. architecture; how buildings and styles interact; how the landscape shapes the flow of people, plants, and animals), the human interactions (e.g. sociology of tourism, the politics of land use), and the ecology (flora, fauna, geology, climatology, and pest control) of campus. The students in this course will defamiliarize themselves with their campus environment and approach Stanford with new eyes—the eyes of the anthropologist, the photographer, the historian, the artist, and the tourist. We will explore its edifices, gardens, sculptures, open spaces, and commercial areas. Moreover, we will use Stanford as a lens to discuss a variety of disciplines: architecture, educational theory, California history, climatology, and natural history. But more than anything, we will focus on the human component, including the vision, drive, and serendipity that shaped the University. In taking the course students will hone their skills in field observation that will carry over to future field work in more distant locales, develop an interdisciplinary approach to analyzing complex institutions, and gain a deeper appreciation for the complexity and richness of Stanford that will enhance all aspects of their remaining time as undergraduates. On a daily basis, the class will consist of three components: class presentations and discussions, formal and informal talks by many of the local experts at Stanford, and topical field trips. Students will select a theme that is of personal interest and develop field observation techniques useful for their particular topics. Course assignments will be to give two presentations on specific aspects of Stanford. In addition, each student will keep a field note-book with daily observations and field notes, post a collection of photographic observations, and complete pertinent readings. Plan to work intensely and have a great time in the process.

**HUMBIO 170. Facts, Science & Making Policy. 5 Units.**

The World Is Flat, The Sun Revolves Around The Earth, and other Alternative Facts. The role of science in civil rights, justice, policy, criminal justice, evidence, education, and disabled rights. Prerequisite: Upper division course with preference given to upperclassmen.

**HUMBIO 170A. Sex and the Law. 5 Units.**

This course uses an interdisciplinary approach to examine the laws and regulation of sex in the United States by considering the legal, policy, social, political and scientific bases (or lack thereof) of such laws, the context and objectives of sex regulation, and the political dynamics of contemporary and controversial issues presented by this subject. Some laws reflect policies to protect persons from harm related to sexual conduct, such as rape, assault and pedophilia. Other laws impose notions of morality, such as sodomy, incest or polygamy, or homosexuality, or reflect policy or social judgments regarding abortion, contraceptives, and sexual activity of minors. Regulation often concern consensual conduct. This course will consider these topics from varying perspectives and policy objectives, and in the context of Constitutional and other liberty interests. Prerequisite: Upper division course with preference given to upperclassmen.

**HUMBIO 171. The Death Penalty: Human Biology, Law, and Policy. 3 Units.**

Combines academic study with student participation in forensic research and case investigation, including DNA evidence, psychological and physiological development, mental and physical disabilities, and witness interviews. The philosophy, structure, and application of capital punishment in the U.S. Goal is to examine and challenge the issues involved in the death penalty from the perspective of involvement in a real case. Course not taught from a preconceived belief or political or philosophical agenda except to involve students in an intellectual challenge of policy and philosophy. Prerequisite: Upper division course with preference given to upperclassmen.

**HUMBIO 172B. Children, Youth, and the Law. 5 Units.**

How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; freedom of speech; and sex. The class is interactive, using hypotheticals for discussion and analysis. A and B alternate; students may take one or both. Prerequisite: Upper division course with preference given to upperclassmen. Same as: PUBLPOL 172

**HUMBIO 173. Science, Innovation and the Law. 5 Units.**

The interaction of science, business and law: how scientific ideas are protected by law; the rights of those who invent, develop, and finance scientific discovery; the kinds of protections that apply; and how ideas are commercialized and brought to market. Guest speakers will include investors, start-up founders, scientists and inventors, and other relevant experts from IT, medical, pharma and biological sectors. The history of Silicon Valley will be examined as a paradigm for innovation, including a tour of historical landmarks in Silicon Valley. Prerequisite: Upper division course with preference given to upperclassmen.

**HUMBIO 174. Foundations of Bioethics. 3 Units.**

Classic articles, legal cases, and foundational concepts. Theoretical approaches derived from philosophy. The ethics of medicine and research on human subjects, assisted reproductive technologies, genetics, cloning, and stem cell research. Ethical issues at the end of life. Prerequisite: Human Biology core or equivalent, or consent of instructor.

**HUMBIO 175H. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care. Note: This course must be taken for a letter grade to be eligible for WAYS credit. Same as: AFRICAAM 223, COMPLIT 223, CSRE 123B, MED 220

**HUMBIO 175L. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, FRENCH 229, MED 234

**HUMBIO 176A. Medical Anthropology. 4 Units.**

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 82, ANTHRO 282

**HUMBIO 178. Ethics and Politics of Public Service. 3-5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

**HUMBIO 180. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, ANTHRO 275, BIO 174, BIO 274

**HUMBIO 182. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.**

Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.

Same as: ANTHRO 18, ARCHLGY 12, EARTHSYS 21

**HUMBIO 18SC. Conservation and Development Dilemmas in the Amazon. 2 Units.**

This course explores the human dimensions of conservation efforts under way in the Amazon Basin of South America. It has two specific goals: (1) to introduce the human ecology of Amazonia; and (2) to assess the prospects for joint efforts at biodiversity conservation and community development. We will draw on case studies to investigate such topics as the causes and consequences of deforestation, the social impact of parks and protected areas, and the potential for "Integrated Conservation and Development Projects" (ICDPs) such as extractive reserves, natural forest management, biodiversity prospecting, and community-based ecotourism. The course views Amazonia as a microcosm of the challenges facing conservation and development efforts today in the Third World. Part of the course is an intensive 11-day expedition to the Peruvian Amazon, at no extra cost, to observe firsthand the conservation and development dilemmas discussed in class. We will visit ecolodges in the rainforest, walking miles of trails to learn about local flora, fauna, and conservation efforts. We will also visit Machu Picchu in the upper reaches of the rainforest. For the travel portion of the class, undergraduates will be joined by a group of Stanford alumni and friends. Student contributions and presentations are emphasized throughout the course. Students are expected to come well-prepared to each session, to lead discussions, and to carry out literature research. The final assignment is a 6 to 8 page paper on a case study of your own choosing or an equivalent piece of a longer collaborative paper that offers a critical assessment of one particular conservation and/or development project in or near the region we will visit. Students will present the main findings of their papers in a joint seminar of undergraduates and alumni as we travel in the Peruvian Amazon. Note: Students will arrive on campus and will be housed at Stanford until we leave for the Amazon. Travel to and from Peru organized by the Travel/Study Program of the Stanford Alumni Association is included; costs are defrayed by the Stanford Field Seminar Fund and generous donors.

Same as: ANTHRO 11SC

**HUMBIO 191. Human Biology Practicum. 1 Unit.**

Restricted to Human Biology majors. For students who have undertaken supervised community-engaged service, research (e.g. HB-REX, Bio-X) or pre-professional experiences related to their Area of Concentration topic. Includes a series of five required workshops, written reflection and presentation. Satisfies the Capstone Requirement of the major.

**HUMBIO 192A. Human Biology Synthesis. 2-3 Units.**

Co-Requisite HUMBIO 191. Restricted to Human Biology majors. Expands the work of the Human Biology Practicum; (can also focus on a different aspect of the Area of Concentration). Allows students the opportunity to craft a culminating, creative work of scholarship based on a synthesis of personal and academic interests, including service projects. Exhibited during senior year.

**HUMBIO 192S. Human Biology Synthesis. 2-3 Units.**

Co-Requisite HUMBIO 191. Restricted to Human Biology majors. Expands the work of the Human Biology Practicum; (can also focus on a different aspect of the Area of Concentration). Allows students the opportunity to craft a culminating, creative work of scholarship based on a synthesis of personal and academic interests, including service projects. Exhibited during senior year.

**HUMBIO 192W. Human Biology Synthesis. 2-3 Units.**

Co-Requisite HUMBIO 191. Restricted to Human Biology majors. Expands the work of the Human Biology Practicum; (can also focus on a different aspect of the Area of Concentration). Allows students the opportunity to craft a culminating, creative work of scholarship based on a synthesis of personal and academic interests, including service projects. Exhibited during senior year.

**HUMBIO 193. Research in Human Biology. 1-5 Unit.**

Independent research conducted under faculty supervision, in junior or senior year, normally but not necessarily in pursuit of an honors project. May be taken for a maximum 3 quarters of credit. Prerequisite: Faculty approval; application available in student services office.

**HUMBIO 194. Honors. 1-10 Unit.**

Restricted to Human Biology majors. Completion of the honors project, normally taken in the student's final quarter. First component: the honors thesis, a final paper providing evidence of rigorous research, fully referenced, and written in an accepted scientific style. Second component: participation in the honors symposium, including a 10-minute oral presentation followed by a brief question and answer session. Prerequisites: 193 or 199, and acceptance into the honors program.

**HUMBIO 197. Human Biology Internship. 1-4 Unit.**

Limited to and required of Human Biology majors. A supervised field, community, or lab experience of student's choosing, pre-approved by Human Biology faculty and student advisers, and initiated at least three quarters prior to graduation. Participation in a poster session on the internship experience is required during the first quarter that the student is in residence at Stanford after completion of the internship. May be repeated for credit and a total of 4 units accumulatively. Prerequisite: Human Biology core.

**HUMBIO 198. Senior Tutorial in Human Biology. 1-5 Unit.**

Reading for Human Biology majors in exceptional circumstances and under sponsorship of Human Biology associated faculty. Students must apply through Human Biology student services before registering. Reading list, paper, and evaluation required. May be repeated for credit.

**HUMBIO 199. Directed Reading/Special Projects. 1-4 Unit.**

Human Biology majors must obtain a sponsor from the Human Biology associated faculty or the Academic Council. Non-majors and students who have not declared must obtain a sponsor only from the Human Biology associated faculty. Students must complete application in student services office.

**HUMBIO 19SC. Parks and Peoples: Dilemmas of Protected Area Conservation in East Africa. 2 Units.**

The world-famous landscapes of East Africa, including Serengeti National Park, Ngorongoro Conservation Area, and the Rift Valley lakes of Tanzania form the backdrop for this special course on protected area conservation and its impacts on local people. The course is designed to explore the pros and cons of parks and protected areas as they affect flora, fauna, and human inhabitants, and to address the dilemma of how to achieve conservation in a manner that creates local community benefits and promotes social justice. We will use a case study approach to ask: (1) What approach to protected area (PA) conservation has been taken in each case? Who are the key proponents and what are their main social and ecological objectives? (2) How successful has the protected area been at achieving its conservation goals? (3) What are the benefits of the PA to people and who receives them? (4) What are the costs of the PA to people and who pays them? (5) Where benefits are not commensurate to costs, what, if anything, is being done to address the imbalance? How well is it working? (6) Are there alternative conservation models that would make the interests of parks and people more compatible, and reduce the tradeoffs between them? What is needed to operationalize these alternative models, and how do they incentivize conservation behavior among local residents? This course includes an intensive 12-day expedition to Tanzania to observe firsthand the dilemmas of parks and peoples we have discussed in class. We are scheduled to visit Tarangire, Lake Manyara, Mt. Meru, and Serengeti National Parks, the Ngorongoro Conservation Area, and nearby Maasai villages. Both on campus and in Tanzania, the course emphasizes student contributions and presentations. Students are required to read one or two books a month over the summer, and to come to campus in the fall well-prepared to discuss each one, including co-leading the discussion of one of the readings. Students are also expected to carry out literature research on a particular conservation dilemma in East Africa that is of interest to them for the final assignment of the seminar, a 6- to 8-page paper, and to present the main findings of that paper during evening seminars as we travel in East Africa. Note: Students will arrive on campus and will be housed at Stanford until we leave for the travel portion of the course. A group of 20-some Stanford alumni will join us for the last 2 days on campus and for the travel portion of the course.

**HUMBIO 200. Teaching of Human Biology. 1-5 Unit.**

For upper division undergraduates and graduate students. Practical experience in teaching Human Biology or serving as an assistant in a lecture course. May be repeated for credit.

**HUMBIO 25SI. Diverse Perspectives on Disabilities. 1-2 Unit.**

This class investigates definitions and the complexities of life with a disability through discussion and panel based learning. Through student and parent panels, speakers, professors, and professionals in the field of disability, this class looks at the different perspectives and ways that disability interacts with the world. In addition to learning about the scientific, social and legal backgrounds students can also participate in a community volunteering project for an additional unit through Kids with Dreams or another community or student organization.

**HUMBIO 26. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 135, EDUC 335, HRP 235, MED 235

**HUMBIO 27. Traditional Chinese Medicine. 1 Unit.**

The philosophy and history behind traditional Chinese medicine. Concepts such as Qi, Yin/Yang, meridians, Chinese organs, and the 5 elements. How these concepts are applied through techniques such as acupuncture, herbal medicine, Qi gong, and massage. How traditional Chinese medicine is understood from a scientific standpoint. Political and socioeconomic implications. Observation of an acupuncturist. Readings on the integration of Eastern and Western medicine and on traditional Chinese medicine.

**HUMBIO 28. Health Impact of Sexual Assault and Relationship Abuse across the Lifecourse. 1-3 Unit.**

Cross-listed with SOMGEN 237 and FEMGEN 237. HumBio students must enroll in HumBio 28 or AFRICAAM 28. An overview of the acute and chronic physical and psychological health impact of sexual abuse through the perspective of survivors of childhood, adolescent, young and middle adult, and elder abuse, including special populations such as pregnant women, military and veterans, prison inmates, individuals with mental or physical impairments. Also addresses: race/ethnicity, gender identity, sexual orientation, and other demographic and societal factors, including issues specific to college culture. Professionals with expertise in sexual assault present behavioral and prevention efforts such as bystander intervention training, medical screening, counseling and other interventions to manage the emotional trauma of abuse. Undergraduates must enroll for 3 units. Medical and graduate students should enroll in SOMGEN 237 for 1-3 units. To receive a letter grade in any listing, students must enroll for 3 units. This course must be taken for a letter grade and a minimum of 3 units to be eligible for Ways credit. Same as: AFRICAAM 28

**HUMBIO 29A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, CSRE 177E, EDUC 177A

**HUMBIO 2A. Genetics, Evolution, and Ecology. 5 Units.**

Introduction to the principles of classical and modern genetics, evolutionary theory, and population biology. Topics: micro- and macro-evolution, population and molecular genetics, biodiversity, and ecology, emphasizing the genetics and ecology of the evolutionary process and applications to human populations. HUMBIO 2A and HUMBIO 2B are designed to be taken concurrently and exams for both sides may include material from joint module lectures. Concurrent enrollment is strongly encouraged and is necessary for majors in order to meet declaration deadlines. Please note Human Biology majors are required to take the Human Biology Core Courses for a letter grade.

**HUMBIO 2B. Culture, Evolution, and Society. 5 Units.**

Introduction to the evolutionary study of human diversity. Hominid evolution, the origins of social complexity, social theory, and the emergence of the modern world system, emphasizing the concept of culture and its influence on human differences. HUMBIO 2B, with HUMBIO 3B and HUMBIO 4B, satisfies the Writing in the Major (WIM) requirement for students in Human Biology. HUMBIO 2A and HUMBIO 2B are designed to be taken concurrently and exams for both sides may include material from joint module lectures. Concurrent enrollment is strongly encouraged and is necessary for majors in order to meet declaration deadlines. Please note Human Biology majors are required to take the Human Biology Core Courses for a letter grade.

**HUMBIO 3A. Cell and Developmental Biology. 5 Units.**

The principles of the biology of cells: principles of human developmental biology, biochemistry of energetics and metabolism, the nature of membranes and organelles, hormone action and signal transduction in normal and diseased states (diabetes, cancer, autoimmune diseases), drug discovery, immunology, and drug addiction. HUMBIO 3A and HUMBIO 3B are designed to be taken concurrently and exams for both sides may include material from joint module lectures. Concurrent enrollment is strongly encouraged and is necessary for majors in order to meet declaration deadlines. Please note Human Biology majors are required to take the Human Biology Core Courses for a letter grade. Prerequisite: college chemistry or completion of the HumBio Core on-line chemistry lecture series during the fall quarter.

**HUMBIO 3B. Behavior, Health, and Development. 5 Units.**

Research and theory on human behavior, health, and life span development. How biological factors and cultural practices influence cognition, emotion, motivation, personality, and health in childhood, adolescence, and adulthood. HUMBIO 3B, with HUMBIO2B and HUMBIO 4B, satisfies the Writing in the Major (WIM) requirement for students in Human Biology. HUMBIO 3A and HUMBIO 3B are designed to be taken concurrently and exams for both sides may include material from joint module lectures. Concurrent enrollment is strongly encouraged and is necessary for majors in order to meet declaration deadlines. Please note Human Biology majors are required to take the Human Biology Core Courses for a letter grade.

**HUMBIO 3Y. Practicum in Child Development. 1 Unit.**

Practicum experience at Bing Nursery School for 1-1/4 hours of observation per week, class meeting every other week for 1 hour for a total of 5 meetings. Pre- or corequisite: HUMBIO 3B.

**HUMBIO 4A. The Human Organism. 5 Units.**

Integrative Physiology: Neurobiology, endocrinology, and organ system function, control, and regulation. HUMBIO 4A and HUMBIO 4B are designed to be taken concurrently and exams for both sides may include material from joint module lectures. Concurrent enrollment is strongly encouraged and is necessary for majors in order to meet declaration deadlines. Please note Human Biology majors are required to take the Human Biology Core Courses for a letter grade.

**HUMBIO 4B. Environmental and Health Policy Analysis. 5 Units.**

Connections among the life sciences, social sciences, public health, and public policy. The economic, social, and institutional factors that underlie environmental degradation, the incidence of disease, and inequalities in health status and access to health care. Public policies to address these problems. Topics include pollution regulation, climate change policy, biodiversity protection, health care reform, health disparities, and women's health policy. HUMBIO 4B, with HUMBIO 2B and HUMBIO 3B, satisfies the Writing in the Major (WIM) requirement for students in Human Biology. HUMBIO 4A and HUMBIO 4B are designed to be taken concurrently and exams for both sides may include material from joint module lectures. Concurrent enrollment is strongly encouraged and is necessary for majors in order to meet declaration deadlines. Please note Human Biology majors are required to take the Human Biology Core Courses for a letter grade.

**HUMBIO 51. Big Data for Biologists - Decoding Genomic Function. 3 Units.**

Biology and medicine are becoming increasingly data-intensive fields. This course is designed to introduce students interested in human biology and related fields to methods for working with large biological datasets. There will be in-class activities analyzing real data that have revealed insights about the role of the genome and epigenome in health and disease. For example, we will explore data from large-scale gene expression and chromatin state studies. The course will provide an introduction to the relevant topics in biology and to fundamental computational skills such as editing text files, formatting and storing data, visualizing data and writing data analysis scripts. Students will become familiar with both UNIX and Python. This course is designed at the introductory level. Previous university-level courses in biology and programming experience are not required.

**HUMBIO 57. Epidemic Intelligence: How to Identify, Investigate and Interrupt Outbreaks of Disease. 4 Units.**

We will cover: the components of public health systems in the US; principles of outbreak investigation and disease surveillance; different types of study design for field investigation; visualization and interpretation of public health data, including identification and prevention of biases; and implementation of disease control by public health authorities. Students will meet with leaders of health departments of the state and the county and will be responsible for devising and conducting their own investigation of a health problem. HUMBIO students must enroll in HUMBIO 57. HRP students must enroll in HRP 247.

Same as: HRP 247

**HUMBIO 5E. Science Education in Human Biology. 1 Unit.**

In this seminar, students will become familiar with research on science education. They will use this knowledge to create and analyze teaching material such as section plans, exams, and problem sets. Material produced in this course will be related to the topics covered in the core course of the Program in Human Biology. Students will experience and practice various teaching styles. Prerequisite: Human Biology Core or equivalent or consent of instructor.

**HUMBIO 6. Human Origins. 5 Units.**

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 6, ANTHRO 206

**HUMBIO 65. Biosocial Medicine: The Social, Psychological, and Biological Determinants of Behavior and Wellbeing. 2-3 Units.**

Explores how social forces, psychological influences, and biological systems combine to affect human behavior in early childhood, in the educational experience, and throughout the life course. Examines how behaviors are linked to well-being. Uses a flipped classroom model, in which a series of lectures are available for students to view on-line before class. In-class time then focuses on case studies from published research. Undergraduates enroll for 3 units. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Same as: EDUC 205, SOMGEN 215

**HUMBIO 74. Ethics in a Human Life. 4 Units.**

Ethical questions pervade a human life from before a person is conceived until after she dies, and at every point in between. This course raises a series of ethical questions, following along the path of a person's life - questions that arise before, during, and after she lives it. We will explore distinctive questions that a life presents at each of several familiar stages: prior to birth, childhood, adulthood, death, and even beyond. We will consider how some philosophers have tried to answer these questions, and we will think about how answering them might help us form a better understanding of the ethical shape of a human life as a whole.

Same as: PHIL 74A

**HUMBIO 79Q. Sexuality and Society. 3 Units.**

This course will explore how sexual identity, attitudes, and behaviors are shaped by the messages sent by the various agents of society such as schools, family, peers, media, and religious, medical, and political institutions. The interaction of biology, psychology, and socio-cultural factors, such as gender roles and sexual/relationship scripts will be discussed, as will the intersection of sexuality and notions of love, romance, and commitment. Critical developmental periods, such as adolescence and emerging adulthood will be examined in depth. Students will explore their own values and feelings about sexuality and come to an understanding of how their beliefs were formed. We will discuss how information about sexuality is disseminated in our society and what we can do to help ensure that such information is used in a way that promotes healthy self-conceptions, behavior, and relationships.

**HUMBIO 82A. Qualitative Research Methodology. 3 Units.**

Goal is to develop knowledge and skills for designing and conducting qualitative research studies including purposes, conceptual contexts, research questions, methods, validity issues, and interactions among these facets. Each student designs a qualitative research study.

**HUMBIO 82B. Advanced Data Analysis in Qualitative Research. 3 Units.**

For students writing up their own qualitative research. Students prepare a complete draft presenting their own qualitative research study including results, with reports drafted section by section, week by week. Class provides feedback, guidance, support.

**HUMBIO 85A. Essential Statistics for Human Biology. 4 Units.**

Introduction to statistical concepts and methods that are essential to the study of questions in biology, environment, health and related areas. The course will teach and use the computer language R and Python (you learn both, choose one). Topics include distributions, probabilities, likelihood, linear models; illustrations will be based on recent research.

Same as: BIO 108

**HUMBIO 86Q. Love as a Force for Social Justice. 3 Units.**

Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of agape love. How love is conceptualized across cultures; agape love as the basis of many religions; different kinds of love; the biology of love; love in action for social justice; the languages of love, including art, literature, music, and poetry. Emphasis is on blog writing, participation, and oral presentation. Same as: FEMGEN 86Q

**HUMBIO 88. Introduction to Statistics for the Health Sciences. 4 Units.**

Students will learn the statistical tools used to describe and analyze data in the fields of medicine and epidemiology. This very applied course will rely on current research questions and publicly available data. Students will gain proficiency with Stata to do basic analyses of health-related data, including linear and logistic regression, and will become sophisticated consumers of health-related statistical results.

**HUMBIO 89. Statistics in the Health Sciences. 3 Units.**

This course aims to provide a firm grounding in the foundations of probability and statistics, with a focus on analyzing data from the health sciences. Students will learn how to read, interpret, and critically evaluate the statistics in medical and biological studies. The course also prepares students to be able to analyze their own data, guiding them on how to choose the correct statistical test, avoid common statistical pitfalls, and perform basic functions in R deducer. Cardinal Course certified by the Haas Center.

**HUMBIO 8P. Pre-field Course for Bolivia Impact Abroad in Child Family Health International. 1 Unit.**

Enrollment restricted to undergraduates participating in Impact Abroad's Boliva Program. Focus is on understanding service-learning principles and the historical, social and political context of Bolivia's health system.

**HUMBIO 9. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EARTHYSYS 9, EDUC 9, PUBLPOL 74, URBANST 101

**HUMBIO 91Q. Neuroethology: The Neural Control of Behavior. 3 Units.**

Preference to sophomores. Animal behavior offers insights about evolutionary adaptations and this seminar will discuss the origins of the study of animal behavior and its development to the present. How does the nervous system control behavior and how is it changed by behavior? We will analyze and discuss original research papers about the neural basis of behavior. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat.

Same as: BIO 32Q

**HUMBIO 94Q. Law, Lawyers and Justice in Cinema. 4 Units.**

Examination of how the law, justice and lawyers are depicted in film, how real the depictions are, and the social issues that are the subjects of the film and the effect of film on change, attitudes and policy.

**HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes. 3 Units.**

This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their beliefs.

## Humanities & Sciences (HUMSCI)

**HUMSCI 201. Graduate Environment of Support. 1 Unit.**

Psychosocial, financial, and career issues in adapting graduate students to Stanford; how these issues relate to diversity, resources, policies, and procedures. Discussions among faculty, advanced graduate students, campus resource people, and the dean's office. (Thomas).

## International Relations (INTNLREL)

**INTNLREL 101Z. Introduction to International Relations. 4 Units.**

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

Same as: POLISCI 101Z

**INTNLREL 102. History of the International System. 5 Units.**

After defining the characteristics of the international system at the beginning of the twentieth century, this course reviews the primary developments in its functioning in the century that followed. Topics include the major wars and peace settlements; the emergence of Nazism and Communism; the development of the Cold War and nuclear weapons; the rise of China, India, and the EU; and the impact of Islamic terrorism. The role of international institutions and international society will also be a focus as will the challenge of environment, health, poverty, and climate issues to the functioning of the system.

Same as: HISTORY 102

**INTNLREL 110C. America and the World Economy. 5 Units.**

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit.

Same as: POLISCI 110C, POLISCI 110X

**INTNLREL 110D. War and Peace in American Foreign Policy. 5 Units.**

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period.

Same as: AMSTUD 110D, POLISCI 110D, POLISCI 110Y

**INTNLREL 114D. Democracy, Development, and the Rule of Law. 5 Units.**

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.

Same as: IPS 230, POLISCI 114D, POLISCI 314D

**INTNLREL 118S. Political Economy of International Trade and Investment. 5 Units.**

How domestic and international politics influence the economic relations between countries. Why do governments promote or oppose globalization? Why do countries cooperate economically in some situations but not others? Why do countries adopt bad economic policies? Focus on the politics of international trade and investment. Course approaches each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence from many geographical regions around the world. Prerequisites: ECON 1A, ECON 1B, and a statistics course.

Same as: POLISCI 218S

**INTNLREL 122. Introduction to European Studies. 5 Units.**

This course offers an introduction to major topics in the study of historical and contemporary Europe. We focus on European politics, economics and culture. First, we study what makes Europe special, and how its distinct identity has been influenced by its history. Next, we analyze Europe's politics. We study parliamentary government and proportional representation electoral systems, and how they affect policy. Subsequently, we examine the challenges the European economy faces. We further study the European Union and transatlantic relations.

Same as: POLISCI 213E

**INTNLREL 123. The Future of the European Union: Challenges and Opportunities. 5 Units.**

First, this course analyzes the EU's greatest challenge, preserving the monetary union, and discusses the political and economic reforms needed to achieve that goal. In this context the course also studies the fiscal and budgetary policies of the EU. Second, the course discusses the EU's role in global politics, its desire to play a more prominent role, and the ways to reach that objective. Third, the course analyzes the EU's institutional challenges in its efforts to enhance its democratic character.

**INTNLREL 135A. International Environmental Law and Policy. 4-5 Units.**

This course addresses the nature, content, and structure of international environmental law. We will discuss its sources (formal and informal) and general principles, along with the emerging principles (sustainable development, precautionary principle, etc.) We will evaluate the role of international and non-governmental organizations, as well as examine the negotiation, conclusion, and implementation of international environmental agreements. Problem areas to be examined include global warming, stratospheric ozone depletion, exports of hazardous substances, transboundary pollution, trade and environment, and development and environment. RECOMMENDED PREREQ: students have completed POLISCI 101 and/or INTNLREL 140A.

**INTNLREL 136R. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to a series of real-world issues of international concern: global poverty, human rights, natural resources, climate change, migration, and the well-being of women.. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.

Same as: ETHICSOC 136R, PHIL 76, POLISCI 136R, POLISCI 336

**INTNLREL 140A. International Law and International Relations. 5 Units.**

What is the character of international legal rules? Do they matter in international politics, and if so, to what degree? How effective can they really be? What should we expect from international law in shaping international relations? This seminar will provide introductory knowledge of the foundational principles and sources of public international law and a brief review of the most prominent IR-theories. Besides exploring how these theories address the role of IL in international politics, we will also consider a set of practical problems, where IL and IR intersect most dramatically, such as intervention by force, human rights, and enforcement of criminal law. Course satisfies the WiM requirement for International Relations majors.

**INTNLREL 140C. The U.S., U.N. Peacekeeping, and Humanitarian War. 5 Units.**

The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter's provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan. \* Course satisfies the WiM requirement for International Relations majors.

Same as: HISTORY 201C

**INTNLREL 141A. Camera as Witness: International Human Rights Documentaries. 5 Units.**

Rarely screened documentary films, focusing on global problems, human rights issues, and aesthetic challenges in making documentaries on international topics. Meetings with filmmakers.

**INTNLREL 142. Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice. 3-5 Units.**

This seminar is part of a broader program on Social Entrepreneurship at CDDRRL in partnership with the Haas Center for Public Service. It will use practice to better inform theory. Working with three visiting social entrepreneurs from developing and developed country contexts students will use case studies of successful and failed social change strategies to explore relationships between social entrepreneurship, gender, democracy, development and justice. It interrogates current definitions of democracy and development and explores how they can become more inclusive of marginalized populations. This is a service learning class in which students will learn by working on projects that support the social entrepreneurs' efforts to promote social change. Students should register for either 3 OR 5 units only. Students enrolled in the full 5 units will have a service-learning component along with the course. Students enrolled for 3 units will not complete the service-learning component. Limited enrollment. Attendance at the first class is mandatory in order to participate in service learning.

Same as: AFRICAST 142, AFRICAST 242

**INTNLREL 145. Genocide and Humanitarian Intervention. 4 Units.**

The course, traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo, and Sudan. The final session of the course will be devoted to a discussion of the International Criminal Court and the separate criminal tribunals that have been tasked with investigating and punishing the perpetrators of genocide.

**INTNLREL 152. Organized Crime and Democracy in Latin America. 5 Units.**

Scholars and policy analysts have long emphasized the strength of the rule of law as a key determinant of economic development and social opportunity. They also agree that the rule of law requires an effective and accountable legal system. The growth of transnational organized crime is a major impediment, however, to the creation of effective and accountable legal systems. This seminar examines how and why transnational criminal organizations have developed in Latin America, explores why they constitute a major challenge to the consolidation of democratic societies, economic development and individual rights. It also examines the efforts of governments to combat them, with a focus on the experiences of Mexico, Colombia, and Brazil. The course examines these cases in order to draw lessons, by pointing to both successes and failures, of use to policy analysts, legal scholars, and practitioners.

Same as: IPS 247

**INTNLREL 168. America as a World Power: U.S. Foreign Relations, 1914 to Present. 5 Units.**

This course will examine the modern history of American foreign relations, from 1914 to the present. Beginning with the fateful decision to intervene in the First World War, it will examine the major crises and choices that have defined the "American Century." Our study of U.S. foreign relations will consider such key factors as geopolitics, domestic politics, bureaucracy, psychology, race, and culture. Students will be expected to undertake their own substantial examination of a critical episode in the era studied.

Same as: HISTORY 152K

**INTNLREL 168A. American Interventions, 1898-Present. 5 Units.**

This class seeks to examine the modern American experience with limited wars, beginning with distant and yet pertinent cases, and culminating in the war in Iraq. Although this class will examine war as a consequence of foreign policy, it will not focus primarily on presidential decision making. Rather, it will place wartime policy in a broader frame, considering it alongside popular and media perceptions of the war, the efforts of antiwar movements, civil-military relations, civil reconstruction efforts, and conditions on the battlefield. We will also examine, when possible, the postwar experience.

Same as: HISTORY 259E, HISTORY 359E

**INTNLREL 173. Presidents and Foreign Policy in Modern History. 5 Units.**

Nothing better illustrates the evolution of the modern presidency than the arena of foreign policy. This class will examine the changing role and choices of successive presidential administrations over the past century, examining such factors as geopolitics, domestic politics, the bureaucracy, ideology, psychology, and culture. Students will be encouraged to think historically about the institution of the presidency, while examining specific case studies, from the First World War to the conflicts of the 21st century.

Same as: HISTORY 261G

**INTNLREL 174. Diplomacy on the Ground: Case Studies in the Challenges of Representing Your Country. 5 Units.**

The tragic death of Ambassador Chris Stevens has recently highlighted the dangers of diplomacy in the modern era. This class will look at how Americans in embassies have historically confronted questions such as authoritarian rule, human rights abuses, violent changes of government, and covert action. Case studies will include the Berlin embassy in the 1930s, Tehran in 1979, and George Kennan's experiences in Moscow, among others. Recommended for students contemplating careers in diplomatic service. \* Course satisfies the WiM requirement for International Relations majors.

Same as: HISTORY 252B

**INTNLREL 179. Major Themes in U.S.-Latin America Diplomatic History. 5 Units.**

This seminar provides an overview of the most important events and initiatives that have characterized the relationship of the United States of America with its neighbors to the south, including Mexico, the Caribbean (especially Cuba, Haiti, and the Dominican Republic), Central America, and South America since the proclamation of the Monroe Doctrine in the early 19th century until the Obama Administration. In particular, the course examines the motivations for the Theodore Roosevelt Corollary to the Monroe Doctrine and the resulting period of blatant interventionism known as "Dollar Diplomacy," the Good Neighbor Policy of Franklin Delano Roosevelt, the brutal Cold War period, as well as policies pursued by the Clinton, George W. Bush, and Obama administrations, such as the Free Trade Area of the Americas (FTAA) and the Energy and Climate Partnership of the Americas (ECPA). The seminar explores not only what motivated U.S. policy makers and how their policies were implemented (and explains why they either succeeded or failed), but also discusses the impacts on individual countries and/or the region as a whole and the long-term consequences whose repercussions are still being felt today. The course also examines the major features of the inter-American system from the Pan American Union to the creation of the Organization of American States (OAS) and its continued relevancy in light of new institutional frameworks such as the Community of Latin American and Caribbean States (CELAC) and the Union of South American Nations (UNASUR) that exclude the United States of America.

**INTNLREL 180A. Transitional Justice, Human Rights, and International Criminal Tribunals. 3-5 Units.**

Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

Same as: ETHICSOC 280, HUMRTS 103, IPS 280

**INTNLREL 182. The Great War. 5 Units.**

The First World War provided a prototype for a new, horrific kind of war. It catalyzed the emergence of modern means of warfare and the social mechanisms necessary to sustain the industrialized war machine. Killing millions, it became the blueprint for the total war that succeeded it. It also brought about new social and political orders, transforming the societies which it mobilized at unprecedented levels. This course will examine the military, political, economic, social and cultural aspects of the conflict. We will discuss the origins and outbreak of the war, the land, sea and air campaigns, the war's economic and social consequences, the home fronts, the war's final stages in eastern and western Europe as well as non-European fronts, and finally, the war's impact on the international system and on its belligerents and participants' perceptions of the new reality it had created.

**INTNLREL 189. PRACTICAL TRAINING. 1-3 Unit.**

Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by the director. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to declared International Relations students only who are non-US citizens. May be repeated for credit.

**INTNLREL 197. Directed Reading in International Relations. 1-5 Unit.**

Open only to declared International Relations majors. (Staff).

**INTNLREL 198. Senior Thesis. 2-10 Units.**

Open only to declared International Relations majors with approved senior thesis proposals.

**INTNLREL 200A. International Relations Honors Field Research. 3 Units.**

For juniors planning to write an honors thesis during senior year. Initial steps to prepare for independent research. Professional tools for conceptualizing a research agenda and developing a research strategy. Preparation for field research through skills such as data management and statistics, references and library searches, and fellowship and grant writing. Creating a work schedule for the summer break and first steps in writing. Prerequisite: acceptance to IR honors program.

**INTNLREL 200B. International Relations Honors Seminar. 3 Units.**

Second of two-part sequence. For seniors working on their honors theses. Professional tools, analysis of research findings, and initial steps in writing of thesis. How to write a literature review, formulate a chapter structure, and set a timeline and work schedule for the senior year. Skills such as data analysis and presentation, and writing strategies. Prerequisites: acceptance to IR honors program, and 199 or 200A. \* Course satisfies the WiM requirement for International Relations majors who are accepted into the IR Honors program.

**INTNLREL 200C. IR Honors Thesis Writing. 1 Unit.**

Mandatory seminar for International Relations Honors Students who are writing their Honors Thesis. INTNLREL 200A and 200B are prerequisites.

**INTNLREL 60Q. United Nations Peacekeeping. 3 Units.**

Focus is on an examination of United Nations peacekeeping, from its inception in 1956 in the wake of the Suez Crisis, to its increasingly important role as an enforcer of political stability in sub-Saharan Africa. Examines the practice of "classic" peacekeeping as it developed during the Cold War, the rise and fall of "second-generation" peacekeeping, and the reemergence of a muscular form of peacekeeping in sub-Saharan Africa more recently. Topics include the basic history of the United Nations since 1945, the fundamentals of the United Nations Charter, and the historical trajectory of U.N. peacekeeping and the evolving arguments of its proponents and critics over the years.

**INTNLREL 61Q. Food and security. 3 Units.**

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

Same as: EARTHSYS 61Q, ESS 61Q

**INTNLREL 62Q. Mass Atrocities and Reconciliation. 3 Units.**

This seminar considers the theory and practice of transitional justice as exemplified by diverse case studies, such as Germany, South Africa, Bosnia, and Rwanda. We will ask ourselves throughout the term whether and to what extent mass atrocities and grave human rights violations can be ameliorated and healed, and what legal, institutional, and political arrangements may be most conducive to such attempts. We will study war crimes tribunals and truth commissions, and we will ask about their effectiveness, especially in regards to their potential of fostering reconciliation in a given society. In every case we will encounter and evaluate specific shortcomings and obstacles, which will provide us with a more nuanced understanding of the complex process of coming to terms with the past.

**INTNLREL 82. The Ending of World War I: Three Perspectives. 2 Units.**

This course is required for those students who will be taking the BOSP Overseas Seminar, The Ending of the First World War and the Shaping of the 20th Century. Enrollment is limited to students who will be taking the overseas seminar, or are waitlisted for the seminar. This course has three learning goals: 1.) to provide historical background on the war and the events and processes leading up to the ending of the war; 2.) to help students formulate possible research topics for the Overseas Seminar; and 3.) to acquaint the students with archival research in preparation for their time in London. The course will be taught from the perspectives of military history, political science, and literature. Each week we will meet to discuss the reading material.

## Italian (ITALIAN)

**ITALIAN 101. Italy: The Good, the Bad and the Ugly. 3 Units.**

Renowned for its rich cultural tradition, Italy is also one of the most problematic nations in Europe. This course explores the contradictions at the heart of Italy by examining how art and literature provide a unique perspective onto modern Italian history. We will focus on key phenomena that contribute both positively and negatively to the complex "spirit" of Italy, such as the presence of the past, political realism and idealism, revolution, corruption, decadence, war, immigration, and crises of all kinds. Through the study of historical and literary texts, films, and news media, the course seeks to understand Italy's current place in Europe and its future trajectory by looking to its past as a point of comparison. Taught in English.

**ITALIAN 127. Inventing Italian Literature: Dante, Boccaccio, Petrarca. 4 Units.**

This course examines the origins of Italian literature in the late Middle Ages. We will read selections from Dante's *Vita Nuova* and *Inferno*; Petrarca's *Canzoniere*; and Boccaccio's *Decameron*. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent.

**ITALIAN 128. The Italian Renaissance and the Path to Modernity. 4 Units.**

The literature, art, and history of the Renaissance and beyond. Readings from the 15th through 18th centuries include Moderata Fonte, Machiavelli, Ariosto, Tasso, Galileo, and Goldoni. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent (2 years of Italian).

**ITALIAN 129. Modern Italian Culture. 4 Units.**

This course examines the fate of Italian culture since 1800. We will study major examples of Italian literature, art, and cinema from the modern period in relation to their historical context. Taught in Italian. Prerequisites: ITALLANG 22A or equivalent.

**ITALIAN 143. Favorite Italian Films. 2 Units.**

In this course we will view and discuss 9 beloved & critically acclaimed Italian films, primarily from the 1980's and 90's, including "Cinema paradiso," "Il postino," "Mediterraneo," and "La vita e bella." This course is especially intended for returnees from the Florence program who want to maintain and develop their spoken Italian. A film screening time will be scheduled during the first week of class. Taught in Italian. Prerequisites: ITALLANG 21 or equivalent (4 quarters of Italian).

**ITALIAN 152. Boccaccio's Decameron: The Ethics of Storytelling. 3-5 Units.**

This course involves an in-depth study of Boccaccio's *Decameron* in the context of medieval theories of poetry and interpretation. The goal is to understand more fully the relationship between literature and lived experience implied by Boccaccio's fictions. We will address key critical issues and theoretical approaches related to the text. Taught in English translation, there will be an optional supplementary Italian discussion section during weeks 2-9.

Same as: ITALIAN 352

**ITALIAN 155. The Mafia in Society, Film, and Fiction. 4 Units.**

The mafia has become a global problem through its infiltration of international business, and its model of organized crime has spread all over the world from its origins in Sicily. At the same time, film and fiction remain fascinated by a romantic, heroic vision of the mafia. Compares both Italian and American fantasies of the Mafia to its history and impact on Italian and global culture. Taught in English.

**ITALIAN 175. CAPITALS: How Cities Shape Cultures, States, and People. 3-5 Units.**

This course takes students on a trip to eight capital cities, at different moments in time: Renaissance Florence, Golden Age Madrid, Colonial Mexico City, Enlightenment and Romantic Paris, Existential and Revolutionary St. Petersburg, Roaring Berlin, Modernist Vienna, and bustling Buenos Aires. While exploring each place in a particular historical moment, we will also consider the relations between culture, power, and social life. How does the cultural life of a country intersect with the political activity of a capital? How do large cities shape our everyday experience, our aesthetic preferences, and our sense of history? Why do some cities become cultural capitals? Primary materials for this course will consist of literary, visual, sociological, and historical documents (in translation); authors we will read include Boccaccio, Lope de Vega, Sor Juana, Montesquieu, Baudelaire, Dostoyevsky, Irmgard Keun, Freud, and Borges. Note: To be eligible for WAYS credit, you must take the course for a minimum of 3 Units and a Letter Grade. Same as: COMPLIT 100, DLCL 100, FRENCH 175, GERMAN 175, HISTORY 206E, ILAC 175, URBANST 153

**ITALIAN 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, PHIL 81, SLAVIC 181

**ITALIAN 199. Individual Work. 1-12 Unit.****ITALIAN 216. Michelangelo Architect. 5 Units.**

The architecture of Michelangelo Buonarroti (1475-1564), "Father and Master of all the Arts," redefined the possibilities of architectural expression for generations. This course considers his civic, ecclesiastic, and palatial works. It proceeds from his beginnings in Medicean Florence to his fulfillment in Papal Rome. It examines the anxiety of influence following his death and his enduring legacy in modernism. Topics include: Michelangelo's debt to Classical and Early Renaissance prototypes; his transformation of the canon; the iterative sketch as disegno; architecture and the body; the queering of architectural language; sketch, scale, and materiality; Modernism and Michelangelo. The historiography of Michelangelo has predominantly favored studies in painting and sculpture. Our focus on architecture encourages students to test new ideas and alternative approaches to his work.

Same as: ARTHIST 416A, CEE 33A

**ITALIAN 228. Science, technology and society and the humanities in the face of the looming disaster. 3-5 Units.**

How STS and the Humanities can together help think out the looming catastrophes that put the future of humankind in jeopardy.

Same as: FRENCH 228, POLISCI 233F

**ITALIAN 232B. Heretics, Prostitutes and Merchants: The Venetian Empire. 5 Units.**

Between 1200-1600, Venice created a powerful empire at the boundary between East and West that controlled much of the Mediterranean, with a merchant society that allowed social groups, religions, and ethnicities to coexist. Topics include the features of Venetian society, the relationship between center and periphery, order and disorder, orthodoxy and heresy, the role of politics, art, and culture in the Venetian Renaissance, and the empire's decline as a political power and reinvention as a tourist site and living museum.

Same as: HISTORY 232B

**ITALIAN 235E. Dante's "Inferno". 3-5 Units.**

Intensive reading of Dante's "Inferno" (the first canticle of his three canticle poem *The Divine Comedy*). Main objective: to learn how to read the *Inferno* in detail and in depth, which entails both close textual analysis as well as a systematic reconstruction of the Christian doctrines that subtend the poem. The other main objective is to understand how Dante's civic and political identity as a Florentine, and especially his exile from Florence, determined his literary career and turned him into the author of the poem. Special emphasis on Dante's moral world view and his representation of character. Taught in English. nNOTE: Enrollment requires Professor Harrison's approval. Please contact him directly at harrison@stanford.edu.

Same as: COMPLIT 235E

**ITALIAN 236E. Dante's "Purgatorio" and "Paradiso". 4-5 Units.**

Reading the second and third canticles of Dante's *Divine Comedy*. Prerequisite: students must have read Dante's *Inferno* in a course or on their own. Taught in English. Recommended: reading knowledge of Italian.

Same as: COMPLIT 236E

**ITALIAN 261. War and Peace: Writings by and about Veterans in the 20th and 21st Centuries. 2-5 Units.**

Since the aftermath of World War One, and with increasing urgency in contemporary America, stories about and by veterans are assigned a double role: that of exposing the horror of war yet also defending the possibility of a just war, and that of healing both veterans themselves and the society they return to. Key questions for this course are: Given the current practice of using writing and the hero's journey as a model for healing veterans and making their voices heard in our culture, can we look back to post-World-War-One culture and see if writing fulfills a similar function? And given how many post-World-War-One veterans became famous writers, how do we assess the interplay between literature, poetry, memoir, journalism, personal letters, photo accounts? Is there a connection between artistic innovation and the capacity to heal?.

Same as: FRENCH 261, FRENCH 361, ITALIAN 361

**ITALIAN 266. Women's Voices in Contemporary Italian Literature. 3-5 Units.**

The traditional canon of Italian literature consists almost exclusively of male authors. Yet Italian women writers have been active since the time of Dante. This course presents an overview of women's prose fiction of the last 100 years, from Sibilla Aleramo's groundbreaking feminist novel *Una donna* (1906) to Elena Ferrante's *La figlia oscura* (2015). We will examine such concerns as the central issue of sexual violence in many female autobiographies; the experience of motherhood; the conflict between maternal love and the desire for self-determination and autonomy; paths to political awareness; reinventing the historical novel. Taught in English.

Same as: FEMGEN 266

**ITALIAN 272. Body Doubles: From the Fantastic Short Story to Science-Fiction. 2-5 Units.**

How do we imagine our bodies through language, at times almost completely refashioning a physical double, be it idealized or abject? How do such body doubles intersect with our sense of self, defining or redefining sexual identity, spiritual aspirations, illness and recovery, and the senses themselves, as our window into reality? This course focuses on short stories from the late 19th- and early 20th-century fantastic genre, and science fiction stories from the following turn of the century, 100 years later: in these revealing instances, body doubles often seem to acquire a will of their own, overwhelming normal physical identity.

Same as: FRENCH 272, FRENCH 372, ITALIAN 372

**ITALIAN 315. Italian Film, Fashion, and Design, 1950-1968. 3-5 Units.**

In a close analysis of films by Fellini, Antonioni, Rossellini, Pasolini, and Bertolucci, we will explore the various contradictions that fueled the Italian cultural imagination in the 50s and 60s: minimalism and multiplicity, male and female, industrial and archaic, comic and tragic, wealth and poverty. Special emphasis placed on fashion, design, and modernist art. Taught in English, with the option of an additional discussion section in Italian. Occasional screenings Monday evenings at 7pm.

**ITALIAN 325. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.**

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

**ITALIAN 327. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.**

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English. Same as: FRENCH 230, FRENCH 330

**ITALIAN 346. Body over Mind. 3-5 Units.**

How does modern fiction, aided by modern philosophy, give the lie to Descartes' famous "I think therefore I am"? And how does writing convey the desire for a different, perhaps stronger, integration of mind and body? Does the body speak a particular truth that we must learn to hear, that the mind is not always connected to? How do modern metaphors for the mind-body connection shape our experience? These questions will be explored via the works of major French and Italian writers and thinkers, including Pirandello, Calvino, Camus, Houellebecq, Sartre, and Agamben. Same as: FRENCH 246, FRENCH 346

**ITALIAN 352. Boccaccio's Decameron: The Ethics of Storytelling. 3-5 Units.**

This course involves an in-depth study of Boccaccio's *Decameron* in the context of medieval theories of poetry and interpretation. The goal is to understand more fully the relationship between literature and lived experience implied by Boccaccio's fictions. We will address key critical issues and theoretical approaches related to the text. Taught in English translation, there will be an optional supplementary Italian discussion section during weeks 2-9. Same as: ITALIAN 152

**ITALIAN 361. War and Peace: Writings by and about Veterans in the 20th and 21st Centuries. 2-5 Units.**

Since the aftermath of World War One, and with increasing urgency in contemporary America, stories about and by veterans are assigned a double role: that of exposing the horror of war yet also defending the possibility of a just war, and that of healing both veterans themselves and the society they return to. Key questions for this course are: Given the current practice of using writing and the hero's journey as a model for healing veterans and making their voices heard in our culture, can we look back to post-World-War-One culture and see if writing fulfills a similar function? And given how many post-World-War-One veterans became famous writers, how do we assess the interplay between literature, poetry, memoir, journalism, personal letters, photo accounts? Is there a connection between artistic innovation and the capacity to heal?. Same as: FRENCH 261, FRENCH 361, ITALIAN 261

**ITALIAN 369. Introduction to the Profession of Literary Studies. 1-2 Unit.**

A survey of how literary theory and other methods have been made institutional since the nineteenth century. The readings and conversation are designed for entering Ph.D. students in the national literature departments and comparative literature. Same as: COMPLIT 369, DLCL 369, FRENCH 369, GERMAN 369

**ITALIAN 372. Body Doubles: From the Fantastic Short Story to Science-Fiction. 2-5 Units.**

How do we imagine our bodies through language, at times almost completely refashioning a physical double, be it idealized or abject? How do such body doubles intersect with our sense of self, defining or redefining sexual identity, spiritual aspirations, illness and recovery, and the senses themselves, as our window into reality? This course focuses on short stories from the late 19th- and early 20th-century fantastic genre, and science fiction stories from the following turn of the century, 100 years later: in these revealing instances, body doubles often seem to acquire a will of their own, overwhelming normal physical identity. Same as: FRENCH 272, FRENCH 372, ITALIAN 272

**ITALIAN 395. Philosophical Reading Group. 1 Unit.**

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English. Same as: COMPLIT 359A, FRENCH 395

**ITALIAN 398. Intensive Reading in French/Italian. 10 Units.**

Enrollment is limited to French/Italian Ph.D. students. Course is designed for French/Italian Ph.D. students to prepare for department milestone exams. Same as: FRENCH 398

**ITALIAN 399. Individual Work. 1-12 Unit.**

Repeatable for Credit.

**ITALIAN 75N. Narrative Medicine and Near-Death Experiences. 3 Units.**

Even if many of us don't fully believe in an afterlife, we remain fascinated by visions of it. This course focuses on Near-Death Experiences and the stories around them, investigating them from the many perspectives pertinent to the growing field of narrative medicine: medical, neurological, cognitive, psychological, sociological, literary, and filmic. The goal is not to understand whether the stories are veridical but what they do for us, as individuals, and as a culture, and in particular how they seek to reshape the patient-doctor relationship. Materials will span the 20th century and come into the present. Taught in English. Same as: FRENCH 75N

**ITALIAN 802. TGR Dissertation. 0 Units.**

## Jewish Studies (JEWISHST)

**JEWISHST 101A. First-Year Hebrew, First Quarter. 5 Units.**

In the first-year program, students acquire essential Hebrew through abundant opportunities to interact in the language in meaningful ways. The students learn to function appropriately in the language in a variety of social and cultural contexts. Same as: AMELANG 128A

**JEWISHST 101B. First-Year Hebrew, Second Quarter. 5 Units.**

Continuation of AMELANG 128A. Prerequisite: Placement Test, AMELANG 128A. Same as: AMELANG 128B

**JEWISHST 101C. First-Year Hebrew, Third Quarter. 5 Units.**

Continuation of AMELANG 128B. Prerequisite: Placement Test, AMELANG 128B. Fulfill the University Foreign Language Requirement. Same as: AMELANG 128C

**JEWISHST 102A. Second-Year Hebrew, First Quarter. 4 Units.**

Continuation of AMELANG 128C. Prerequisite: Placement Test, AMELANG 128C. Same as: AMELANG 129A

**JEWISHST 102B. Second-Year Hebrew, Second Quarter. 4 Units.**

Continuation of AMELANG 129A. Prerequisite: Placement Test, AMELANG 129A. Same as: AMELANG 129B

**JEWISHST 102C. Second-Year Hebrew, Third Quarter. 4 Units.**

Continuation of AMELANG 129B. Prerequisite: Placement Test, AMELANG 129B. Same as: AMELANG 129C

**JEWISHST 103A. Third-Year Hebrew, First Quarter. 3 Units.**

Continuation of AMELANG 129C. Prerequisite: Placement Test, AMELANG 129C. Same as: AMELANG 130A

**JEWISHST 104. Hebrew Forum. 2-4 Units.**

Intermediate and advanced level. Biweekly Hebrew discussion on contemporary issues with Israeli guest speakers. Vocabulary enhancement. Focus on exposure to academic Hebrew. May be repeat for credit.

Same as: AMELANG 131A

**JEWISHST 104A. First-Year Yiddish, First Quarter. 4 Units.**

Reading, writing, and speaking.

Same as: AMELANG 140A

**JEWISHST 104B. First-Year Yiddish, Second Quarter. 4 Units.**

Continuation of AMELANG 140A. Prerequisite: AMELANG.

Same as: AMELANG 140B

**JEWISHST 104C. First-Year Yiddish, Third Quarter. 4 Units.**

Continuation of AMELANG 140B. Prerequisite: AMELANG 140B. Fulfills the University Foreign Language Requirement.

Same as: AMELANG 140C

**JEWISHST 105. Hebrew Forum. 2-4 Units.**

Intermediate and advanced level. Biweekly Hebrew discussion on contemporary issues with Israeli guest speakers. Vocabulary enhancement. Focus on exposure to academic Hebrew. May repeat for credit.

Same as: AMELANG 131B

**JEWISHST 106. Reflection on the Other: The Jew and the Arab in Literature. 3-5 Units.**

How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music. Note: To be eligible for WAYS credit, you must take course for a Letter Grade.

Same as: AMELANG 126, COMPLIT 145

**JEWISHST 107A. Biblical Hebrew, First Quarter. 2 Units.**

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or on their own.

Same as: AMELANG 170A, RELIGST 170A

**JEWISHST 107B. Biblical Hebrew, Second Quarter. 2 Units.**

Continuation of 170A.

Same as: AMELANG 170B

**JEWISHST 107C. Biblical Hebrew, Third Quarter. 2 Units.**

Continuation of 170B.

Same as: AMELANG 170C

**JEWISHST 120. Sex and Gender in Judaism and Christianity. 3 Units.**

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.

Same as: FEMGEN 130, RELIGST 130

**JEWISHST 125. Modern Jewish Mystics: Devotion in a Secular Age. 4 Units.**

The twentieth-century was a time of tremendous upheaval and unspeakable tragedy for the Jewish communities of Europe. But the past hundred years were also a period of great renewal for Jewish spirituality, a renaissance that has continued into the present day. We will explore the mystic writings of figures from the Safed Renaissance, the Hasidic masters, with a particular focus on the works of Martin Buber, Hillel Zeitlin, Abraham Isaac Kook, Abraham Joshua Heschel, and Arthur Green. We will examine their teachings in light of the challenges of the two World Wars, the Holocaust, and the processes of modernity and secularism. Consideration will be made of the unique cultural contexts of modern Israel and contemporary America.

Same as: RELIGST 165

**JEWISHST 127D. Readings in Talmudic Literature. 1 Unit.**

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Class meets on Fridays, from 12:00-1:15 pm in Hillel (Koret Pavilion Taube Hillel House; Ziff Center for Jewish Life). May be repeat for credit.

**JEWISHST 129. Sacred Words: Jewish Thought and the Question of Language. 4 Units.**

Jews have long been referred as the people of the book, but they might better be referred to as the people of the word. Drawing upon texts from the Hebrew Bible to the works of modern Hebrew writers like of Hayyim Nahman Bialik and Amos Oz, this seminar will chart the development of Jewish thinking on language over the past two millennia. We will explore issues such as: the idea of canonization; oral versus written language; the nature and possibility of translation; the origins of language; notions of negative theology; mystical approaches to the word; the rebirth of Hebrew as a spoken and cultural language; and the limits of language after the Holocaust. This course will also bring Jewish thought into dialogue with contemporary philosophical reflections on issues of language. Modern explorations of language will prove an interesting way of deepening our understanding of the Jewish thinkers on one hand, and enriching contemporary intellectual discourse on the other.

Same as: RELIGST 169

**JEWISHST 132. Between Nation-Building and Liberalization: The Welfare State in Israel. 3 Units.**

According to one commentator, the political economy of Israel is characterized by embedded illiberalism. In the context of a national and territorial conflict, the Israeli state fostered comprehensive nation-building projects (such as immigration absorption), via employment and social protection schemes. This course surveys the distinctive development of the Israeli welfare state in comparative perspective, and analyzes its particular politics and outcomes in the form of inclusion but also exclusion of different populations from full citizenship. The course will follow a chronological path from the pre-state crystallization of national welfare institutions to the current neo-liberalization trend that seems to undermine collectivist projects and advance the re-commodification of citizenship. Throughout the course we will discuss issues such as: the role of labor and nationalism in the design of social policy, the production of national, ethnic and gender inequality, and the dynamics of change and continuity following heightened liberalization and internationalization since the 1980s. The course exposes students to key issues of the sociology of the welfare state with particular emphasis on the development and role of the state in a deeply conflicted society, using the Israeli experience. At the conclusion of the course students are expected to understand how welfare state institutions reflect but also reproduce societal schisms and conflicts, and be familiar with central aspects of Israeli politics past and present.

Same as: SOC 102

**JEWISHST 132A. Social Inequality in Israel. 3 Units.**

Like the US, Israel is a nation of immigrants. Israel additionally shares with the US vast economic, ethnic/racial and gender gaps, which are shaped and are being shaped by the demographic diversity characterizing its society. The course will provide a comparative framework for analyzing social inequality in Israel. We will start by reviewing essential concepts and theories in the study of social stratification. We will then review the main cleavages characterizing Israeli society, while comparing them to gaps in other advanced societies and particularly the US. We will focus on class, gender and ethnicity as the main distinctions and will examine their implications for differences in life chances in several domains across the life course. We will conclude with a discussion of possible scenarios for change, which are relevant to both Israel and the US. Throughout the course, we will study critical thinking techniques and will use them for analyzing issues that are central for the analysis of social inequality in Israel and elsewhere.

Same as: CSRE 132A, SOC 102A

**JEWISHST 132D. Sociology of Jewishness. 3-5 Units.**

Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.

Same as: CSRE 132J, SOC 132J

**JEWISHST 133. Sociology of Citizenship. 3 Units.**

Not only a legal status, citizenship forms a major concern for political sociologists interested in questions of membership, exclusion, redistribution, and struggles over the boundaries of collective identity. Citizenship is in essence membership in a political community that entails rights and duties, and structures a tripartite relationship between the individual, community and state. The institutions of citizenship include formal and bureaucratic rules of eligibility but also informal institutions such as identity and belonging. Throughout the course, students are exposed to key issues of the sociology of citizenship such as the historically different paths of men, women, minority groups and immigrants into citizenship, the contested development of rights and duties, the regulation of population, as well as insurgency and collective attempts to rearticulate the terms of the "contract" with the state. Israel, the USA, France and Germany are used as empirical illustrations. At the conclusion of the course students will know how to utilize the analytic framework of citizenship in order to analyze a wide range of political phenomena in contemporary societies.

Same as: SOC 103

**JEWISHST 133A. WELFARE, WORK AND POVERTY.. 3 Units.**

Early theorists of the welfare state described it as a reaction to the emergence of needs and interests of specific social groups during processes of economic development and change. Later theorists countered that the welfare state does not merely react to social cleavages during times of economic change but rather works to actively shape them, in line with worldviews or the interests of dominant group members. Adopting the latter approach, the goal of this course is to provide the tools and knowledge necessary for a critical evaluation of the social services provided to Israeli citizens and their impact on social and economic inequalities. The course will survey various approaches to the understanding of the goals of the welfare state. A comparative and historical account of the development of the welfare state will be presented, while highlighting recent developments, such as the increase in poverty rates and the aging of the population. During the course, we will examine the diverse needs that are served by the welfare state, as well as major dilemmas associated with the provision of services. Throughout the course, we will study critical thinking techniques and will use them for analyzing issues that are central for the development of social policies in Israel and the US.

Same as: CSRE 133J, SOC 103A

**JEWISHST 139. Rereading Judaism in Light of Feminism. 4 Units.**

During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.

Same as: FEMGEN 139

**JEWISHST 143. Literature and Society in Africa and the Caribbean. 4 Units.**

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Special guest: LEILA SLIMANI (Goncourt Prize 2016). Required readings include: Leila Slimani, *Sexe et Mensonges au Maroc*, Albert Memmi, "La Statue de Sel," Kaouther Adimi, "L'Envers des autres", Maryse Condé, "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", "Les Baies d'Alger". nTaught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: AFRICAAM 133, AFRICAST 132, FRENCH 133

**JEWISHST 144B. Poetic Thinking Across Media. 4 Units.**

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclesiastes, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts—from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

**JEWISHST 145. Masterpieces: Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers.

Same as: COMPLIT 114, COMPLIT 350, GERMAN 150, GERMAN 350

**JEWISHST 147B. The Hebrew and Jewish Short Story. 3-5 Units.**

Short stories from Israel, the US and Europe including works by Agnon, Kafka, Keret, Castel-Bloom, Kashua, Singer, Benjamin, Freud, biblical myths and more. The class will engage with questions related to the short story as a literary form and the history of the short story. Reading and discussion in English. Optional: special section with readings and discussions in Hebrew. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.

Same as: COMPLIT 127B

**JEWISHST 148. Writing Between Languages: The Case of Eastern European Jewish Literature. 1-5 Unit.**

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well. \*\*\*This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit\*\*\*.

Same as: JEWISHST 348, SLAVIC 198, SLAVIC 398

**JEWISHST 148N. Other People's Words: Folklore and Literature. 4 Units.**

What happens when you collect and use other people's words? This class considers folklore and literature based on it, focusing on the theme of objects that come to life and threaten their makers or owners (including Russian fairy tales and Nikolai Gogol's stories, the Golem legend and Michael Chabon's *Amazing Adventures of Kavalier and Clay*, and Ovid's and Shaw's *Pygmalion*). We read essays by Jacob Grimm, Sigmund Freud, Roman Jakobson, and others, to understand what folklore can mean and how the oral and the written can interact. Students collect living folklore from a group of their choosing. This course fulfills the second-level Writing and Rhetoric Requirement (Write-2) and emphasizes oral and multimedia presentation. Prerequisite: PWR 1.

Same as: SLAVIC 118N

**JEWISHST 155D. Jewish American Literature. 5 Units.**

From its inception, Jewish-American literature has taken as its subject as well as its context the idea of Jewishness itself. Jewish culture is a diasporic one, and for this reason the concept of Jewishness differs from country to country and across time. What stays remarkably similar, though, is Jewish self-perception and relatedly Jewish literary style. This is as true for the first-generation immigrant writers like Isaac Bashevis Singer and Anzia Yezierska who came to the United States from abroad as it is for their second-generation children born in the United States, and the children of those children. In this course, we will consider the difficulties of displacement for the emigrant generation and their efforts to sustain their cultural integrity in the multicultural American environment. We'll also examine the often comic revolt of their American-born children and grandchildren against their (grand-)parents nostalgia and failure to assimilate. Only by considering these transnational roots can one understand the particularity of the Jewish-American novel in relation to mainstream and minority American literatures. In investigating the link between American Jewish writers and their literary progenitors, we will draw largely but not exclusively from Russia and the countries of Eastern Europe.

Same as: AMSTUD 145D, ENGLISH 145D, REES 145D

**JEWISHST 183. The Holocaust. 4-5 Units.**

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 137, HISTORY 337, JEWISHST 383

**JEWISHST 185B. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 4-5 Units.**

(Same as HISTORY 85B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life—all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will be the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact of the Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 185B, HISTORY 185B, HISTORY 385C, REES 185B

**JEWISHST 18N. Religion and Politics: Comparing Europe to the U.S.. 3-4 Units.**

Interdisciplinary and comparative. Historical, political, sociological, and religious studies approaches. The relationship between religion and politics as understood in the U.S. and Europe. How this relationship has become tense both because of the rise of Islam as a public religion in Europe and the rising influence of religious groups in public culture. Different understandings and definitions of the separation of church and state in Western democratic cultures, and differing notions of the public sphere. Case studies to investigate the nature of public conflicts, what issues lead to conflict, and why. Why has the head covering of Muslim women become politicized in Europe? What are the arguments surrounding the Cordoba House, known as the Ground Zero Mosque, and how does this conflict compare to controversies about recent constructions of mosques in Europe? Resources include media, documentaries, and scholarly literature.

**JEWISHST 199B. Directed Reading in Yiddish, Second Quarter. 1-5 Unit.**

For intermediate or advanced students. May be repeated for credit.

**JEWISHST 19N. Everyone Eats: Food, Religion and Culture. 3 Units.**

Food is one of the most essential aspects of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. In this seminar we will study how food habits have shaped religious traditions, and vice versa, how religious traditions have shaped food ways. Some traditions are centered around food regimens such as the dietary laws, derived from biblical law that shapes Jewish and Christian tradition very differently. Indeed, many religious and ethical thinkers, as well as anthropologists, have interpreted the meanings of the dietary laws very differently. Further, in many religious traditions the killing of animals and consumption of meat is deeply fraught. We will explore the history of food practices and their contemporary impact; the connections between food, religion, and identity; the meanings that religious thinkers and anthropologists have attributed to food habits; as well as the creative translations of religious traditions into contemporary food ethics by various social movements and groups, predominantly in the U.S. Same as: CSRE 19N, RELIGST 19N

**JEWISHST 221D. Readings in Syriac Literature. 2-5 Units.**

In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts. Same as: JEWISHST 321D, RELIGST 221D, RELIGST 321D

**JEWISHST 224. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.**

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy. Same as: JEWISHST 324, RELIGST 234, RELIGST 334

**JEWISHST 227D. Readings in Talmudic Literature. 1 Unit.**

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Class meets on Fridays, from 12:00-1:15 pm in Hillel (Koret Pavilion Taube Hillel House; Ziff Center for Jewish Life). May be repeat for credit. Same as: JEWISHST 127D, RELIGST 170D

**JEWISHST 22S. From 'superfluous women' to the 'Yolocaust': The Experience of War in 20th Century Europe. 5 Units.**

Through a variety of primary sources, including diaries, photographs, letters, and artifacts this course explores the multiplicity of ways in which Europeans experienced the great conflicts that swept the continent in the 20th century. The unprecedented impact of these wars will be traced in stories of those whose voices have been marginalized in conventional historiography. This course encourages and guides students in their first forays into archival work in a hands-on approach to developing ways of thinking historically.

Same as: HISTORY 22S

**JEWISHST 237. Religion and Politics: A Threat to Democracy?. 4-5 Units.**

The meddling of religion in politics has become a major global issue. Can religion co-exist with politics in a democracy? In Israel this is an acute issue exhibiting an existential question: To what extent religion is a source of the weaknesses and vulnerabilities of Israeli Democracy? The course offered is a research workshop, part of a policy-oriented applied research in motion. The workshop will meet a few times during the Fall Quarter and the instructor will be available to consult with the workshop's participants on a bi-weekly basis. The workshop will include unique opportunities for hands-on, team-based research.

Same as: IPS 237

**JEWISHST 240. The Yiddish Story. 3-5 Units.**

The Yiddish language is associated with jokes, folktales, and miracle legends, as well as modern stories. This class traces the development of Yiddish literature through these short oral and written forms, following Jewish writers out of the East European market town to cities in the Soviet Union, Israel, and especially the United States. We conclude with stories written in other languages about Yiddish writers. Readings include Sholem Aleichem, I. L. Peretz, Isaac Bashevis Singer, Esther Singer-Kreitman, Cynthia Ozick, and Dina Rubina. Readings in English; optional discussion section for students who read Yiddish.

Same as: AMSTUD 240Y

**JEWISHST 249. The Algerian Wars. 3-5 Units.**

From Algiers the White to Algiers the Red, Algiers, the Mecca of the Revolutionaries in the words of Amilcar Cabral, this course offers to study the Algerian Wars since the French conquest of Algeria (1830-) to the Algerian civil war of the 1990s. We will revisit the ways in which the war has been narrated in literature and cinema, popular culture, and political discourse. A special focus will be given to the Algerian War of Independence (1954-1962). The course considers the racial representations of the war in the media, the continuing legacies surrounding the conflict in France, Africa, and the United States, from Che Guevara to the Black Panthers. A key focus will be the transmission of collective memory through transnational lenses, and analyses of commemorative events and movies. Readings from James Baldwin, Assia Djebar, Albert Camus, Frantz Fanon, Mouloud Feraoun. Movies include "The Battle of Algiers," "Days of Glory," and "Viva Laldjérie." nTaught in English.

Same as: CSRE 249, FRENCH 249, HISTORY 239G

**JEWISHST 271C. Campaigns and Elections in Israel. 5 Units.**

Employing a theoretical and comparative framework, this seminar focuses on campaigns and elections in Israel. The seminar is divided into two interrelated sections. In the first section, we will cover voting behavior. Here we will look at Israel's election laws, its political culture, socialization and cleavages, turnout, political sophistication, ideology, partisanship and issue voting. In the second half of the semester we will examine elections from the perspective of candidates and campaign strategists. The topics we will focus on include election laws, public and private campaign finance, campaign strategy, media, polling, and advertising. In examining these topics, we will cover a variety of elections campaigns since Israel's birth, with an emphasis on the most recent ones.

Same as: POLISCI 241C

**JEWISHST 275D. Special Topics: Dilemmas of Democracy and Security in Israel and the Middle East. 5 Units.**

The Middle East is known to be a volatile region, characterized by political violence, armed conflicts, and social instabilities. This volatility is of relevance for many countries including the US with its invested interests in the region and Israel that exists at the heart of the region, and along with its conflict with the Palestinians is considered to be one of the root causes of this volatility. Moreover, the volatility brings into encounter two kinds of collective goods: democracy and security. Their encounter in a conflictual and unstable environment raises a host of questions and dilemmas, both moral and practical: should we balance democracy and security and if so how? Can the two be accommodated at all? Does democracy is better or worse in addressing security problems? Does democracy and security constitute each other conceptually? Do democratic states tend to cooperate with each other when confronting security issues? And what about democratization: how good a ca use is it as a foreign policy? How good a cause is it in justifying war and/or not ending one? From its establishment the State of Israel found itself torn by these and others related questions and the recent decades saw the US drawn by these dilemmas as well (think of the Bybee Memo and the Patriot acts). In the course we will introduce these dilemmas, analyze them and examine different normative and policy answers that were discussed in academia and in the policy world.

Same as: POLISCI 215D

**JEWISHST 282. Circles of Hell: Poland in World War II. 5 Units.**

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.

Same as: HISTORY 228, HISTORY 328, JEWISHST 382

**JEWISHST 282K. The Holocaust and Its Aftermath. 4-5 Units.**

This seminar gives an overview over different aspects of the history of the Holocaust and its aftermath and will examine key issues in recent Holocaust historiography and questions of memory and representation. Special emphasis is put on the nature of the historian's task, as viewed through the lens of historians of the Holocaust, as well as to the significance of the Holocaust in history and how it has changed over time. The course will confront students with historiographical texts and historical documents, with photography and film, works of scholarship and art.

Same as: HISTORY 202K, HISTORY 302K, JEWISHST 382K

**JEWISHST 284C. Genocide and Humanitarian Intervention. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 224C, HISTORY 324C, JEWISHST 384C, PEDS 224

**JEWISHST 286. Jews Among Muslims in Modern Times. 4-5 Units.**

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 481, JEWISHST 481

**JEWISHST 288D. Germany and the World Wars, 1870-1990. 4-5 Units.**

(Students who have taken History 38A/138A should not enroll in this course.) This course examines Germany's tumultuous history from the Second Empire through the end of the Cold War. During this time, Germany ushered in five regimes and two world wars, seeing between material ruin and economic prosperity on the frontline of Europe's military and ideological rifts. Beginning with Bismarck's wars of unification, the class spans World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.

Same as: HISTORY 238D, HISTORY 338D, JEWISHST 388D

**JEWISHST 289A. Nationhood and Belonging: Poles and Jews. 3 Units.**

Examines changing conceptions of nationhood in Poland, late-19th century to present, with focus on place of Jews in Polish society. What conditions fostered the early political sense of the nation? Why was it replaced with integral nationalism, and for some, fascism? How did Jews relate to their homeland? Emphasis on post-1918 history: impact of independence, Great Depression, West European fascism, World War II, imposition of communist rule, and collapse of the Soviet Bloc. Considers current Polish-Jewish relations.

**JEWISHST 291X. Learning Religion: How People Acquire Religious Commitments. 4 Units.**

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education. May be repeat for credit.

Same as: AMSTUD 231X, EDUC 231, RELIGST 231X

**JEWISHST 297X. American Jewish History: Learning to be Jewish in America. 2-4 Units.**

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units. Same as: AMSTUD 279X, EDUC 279, HISTORY 288D, RELIGST 279X

**JEWISHST 348. Writing Between Languages: The Case of Eastern European Jewish Literature. 1-5 Unit.**

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well. \*\*\*This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit\*\*\*.

Same as: JEWISHST 148, SLAVIC 198, SLAVIC 398

**JEWISHST 37Q. Zionism and the Novel. 3 Units.**

At the end of the nineteenth century, Zionism emerged as a political movement to establish a national homeland for the Jews, eventually leading to the establishment of the State of Israel in 1948. This seminar uses novels to explore the changes in Zionism, the roots of the conflict in the Middle East, and the potentials for the future. We will take a close look at novels by Israelis, both Jewish and Arab, in order to understand multiple perspectives, and we will also consider works by authors from the North America and from Europe. Note: This course must be taken for a letter grade to be eligible for WAYS credit.

Same as: COMPLIT 37Q

**JEWISHST 382. Circles of Hell: Poland in World War II. 5 Units.**

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society. Same as: HISTORY 228, HISTORY 328, JEWISHST 282

**JEWISHST 382K. The Holocaust and Its Aftermath. 4-5 Units.**

This seminar gives an overview over different aspects of the history of the Holocaust and its aftermath and will examine key issues in recent Holocaust historiography and questions of memory and representation. Special emphasis is put on the nature of the historian's task, as viewed through the lens of historians of the Holocaust, as well as to the significance of the Holocaust in history and how it has changed over time. The course will confront students with historiographical texts and historical documents, with photography and film, works of scholarship and art.

Same as: HISTORY 202K, HISTORY 302K, JEWISHST 282K

**JEWISHST 383. The Holocaust. 4-5 Units.**

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 137, HISTORY 337, JEWISHST 183

**JEWISHST 384C. Genocide and Humanitarian Intervention. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

**JEWISHST 385A. Core Colloquium in Jewish History, 17th-19th Centuries. 4-5 Units.**

Same as: HISTORY 385A

**JEWISHST 385B. Graduate Colloquium in Modern Jewish History. 4-5 Units.**

Instructor consent required.

Same as: HISTORY 385B

**JEWISHST 386. Jews Among Muslims in Modern Times. 4-5 Units.**

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 286, HISTORY 386, JEWISHST 286

**JEWISHST 388D. Germany and the World Wars, 1870-1990. 4-5 Units.** (Students who have taken History 38A/138A should not enroll in this course.) This course examines Germany's tumultuous history from the Second Empire through the end of the Cold War. During this time, Germany ushered in five regimes and two world wars, seesawing between material ruin and economic prosperity on the frontline of Europe's military and ideological rifts. Beginning with Bismarck's wars of unification, the class spans World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.  
Same as: HISTORY 238D, HISTORY 338D, JEWISHST 288D

**JEWISHST 389A. Nationhood and Belonging: Poles and Jews. 3 Units.** Examines changing conceptions of nationhood in Poland, late-19th century to present, with focus on place of Jews in Polish society. What conditions fostered the early political sense of the nation? Why was it replaced with integral nationalism, and for some, fascism? How did Jews relate to their homeland? Emphasis on post-1918 history: impact of independence, Great Depression, West European fascism, World War II, imposition of communist rule, and collapse of the Soviet Bloc. Considers current Polish-Jewish relations.  
Same as: HISTORY 229A, HISTORY 329A, JEWISHST 289A

**JEWISHST 393X. The Education of American Jews. 4 Units.** This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.  
Same as: EDUC 313, RELIGST 313X

**JEWISHST 39S. The Other Side: Ethnography and Travel Writing through Jewish, Christian and Muslim Eyes. 3 Units.** In an age of reality television and social media, we are bombarded with snapshots of the exotic, monstrous, and bizarre. Yet despite their quantity, these images pale in comparison to the qualities of terror, wonder and curiosity that ancient travelers evoked in their encounters with foreign lands and peoples. Early ethnographers, too, painstakingly explored the beliefs and practices of unfamiliar peoples sometimes very close to home. This course surveys their most vivid writings, from ancient Greece to the colonization of the New World, focusing on the relation between fascination with the other and the author's own religious imagination. In particular, it introduces the contributions of Jewish travelers and ethnographers to this history, which has often been written from the standpoint of imperial, ecclesiastical or colonial power. It stresses literary continuities across three general periods (ancient, medieval, and colonial), showing how remarkably consistent patterns of identification spring from diverse encounters.

**JEWISHST 481. Research Seminar in Middle East History. 4-5 Units.** Student-selected research topics. May be repeated for credit.  
Same as: HISTORY 481, JEWISHST 287S

**JEWISHST 486A. Graduate Research Seminar in Jewish History. 4-5 Units.**  
Same as: HISTORY 486A

**JEWISHST 486B. Graduate Research Seminar in Jewish History. 4-5 Units.**  
Prerequisite: HISTORY 486A.  
Same as: HISTORY 486B

**JEWISHST 4N. A World History of Genocide. 3-5 Units.** Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide.  
Same as: HISTORY 4N

**JEWISHST 5. Biblical Greek. 3-5 Units.** (Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.  
Same as: CLASSICS 6G, RELIGST 171A

**JEWISHST 53. Exploring Jewish Spirituality. 4 Units.** It was once accepted as fact that Judaism is a purely rational religion devoid of any authentic mystical tradition. But the past century of scholarship has reversed this claim, demonstrating that the spiritual life has been integral to Judaism's vital heart since ancient times. This yearning for a direct immediate experience of God's Presence, a longing to grasp the mysteries of the human soul and know the inner dynamics of the Divine realm, has taken on many different forms across the centuries. This course will introduce students to the major texts and core ideas of Jewish mysticism and spirituality, tracking their development from the Hebrew Bible to the present day. Close attention will be paid to the sources, historical context, and we will also engage with broader methodological questions regarding the academic study of religion and the comparative approach to mysticism.  
Same as: RELIGST 53

**JEWISHST 5B. Biblical Greek. 3-5 Units.** (Formerly CLASSGRK 6) This is a continuation of the Winter Quarter Biblical Greek Course. Pre-requisite: CLASSICS 6G (Formerly CLASSGRK 5) or a similar introductory course in Ancient Greek.  
Same as: CLASSICS 7G

**JEWISHST 5G. Intensive Biblical Greek. 8 Units.** Equivalent to two quarters of Biblical Greek (CLASSICS 6G, 7G). Students will learn the core of New Testament Greek with the goal of learning to accurately translate and read the New Testament. Students will read one-third of the Gospel of John during the course and will be well-prepared to read the Greek New Testament independently after the course. Focus on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. No previous knowledge of Greek required. Course does not fulfill the Stanford language requirement.  
Same as: RELIGST 171X

**JEWISHST 71. Jews and Christians: Conflict and Coexistence. 3 Units.** The relationship between Judaism and Christianity has had a long a controversial history. Christianity originated as a dissident Jewish sect but eventually evolved into an independent religion, with only tenuous ties to its Jewish past and present. Since the Holocaust, Jews and Christians have begun the serious work of forging more meaningful relationships with each other. This course explores the most significant moments that have shaped the relationship between Judaism and Christianity and examines some of the theological complexities imbedded in these traditions, while searching constructive ways of situating oneself amidst such complexities.  
Same as: RELIGST 71

**JEWISHST 80T. Jewish Music in the Lands of Islam. 4 Units.**

An Interdisciplinary study of Music, Society, and Culture in communities of the Jewish Diaspora in Islamic countries. The course examines the diverse and rich musical traditions of the Jews in North Africa and the Middle East. Based on the "Maqamat" system, the Arabic musical modes, Jewish music flourished under Islamic rule, encompassing the fields of sacred music, popular songs, and art music. Using musicological, historical, and anthropological tools, the course compares and contrasts these traditions from their original roots through their adaptation, appropriation, and re-synthesis in contemporary art music and popular songs.

Same as: MUSIC 80T

**JEWISHST 85B. Jews in the Contemporary World: Faith and Ethnicity, Visibility and Vulnerability. 3 Units.**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life – all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will be the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 85B, HISTORY 85B, REES 85B

**JEWISHST 85S. A History of Strangers: Jews in the Mediterranean. 5 Units.**

A community needs outsiders. Sometimes it needs them to provide material things, but always it needs them to define itself. Focusing on Jews in the early-modern Mediterranean (1450-1750), this course asks questions about the nature of community, the causes and effects of exclusion, and processes of creating the "other." We will look at primary sources produced by "strangers" and so-called "host" societies. Sources include travelogues, maps, novels, poetry, paintings, contracts, Ottoman edicts, Italian charters, and rulings from religious courts.

Same as: HISTORY 85S

**JEWISHST 86. Exploring the New Testament. 4 Units.**

To explore the historical context of the earliest Christians, students will read most of the New Testament as well as many documents that didn't make the final cut. Non-Christian texts, Roman art, and surviving archeological remains will better situate Christianity within the ancient world. Students will read from the Dead Sea Scrolls, explore Gnostic gospels, hear of a five-year-old Jesus throwing divine temper tantrums while killing (and later resurrecting) his classmates, peruse an ancient marriage guide, and engage with recent scholarship in archeology, literary criticism, and history.

Same as: CLASSICS 43, RELIGST 86

**JEWISHST 86Q. Blood and Money: The Origins of Antisemitism. 4-5 Units.**

For over two millennia, Jews and Judaism have been the object of sustained anxieties, fears, and fantasies, which have in turn underpinned repeated outbreaks of violence and persecution. This course will explore the development and impact of antisemitism from Late Antiquity to the Enlightenment, including the emergence of the Blood libel, the association between Jews and moneylending, and the place of Judaism in Christian and Islamic theology. No prior background in history or Jewish studies is necessary. Prerequisite: PWR 1.

Same as: HISTORY 86Q

## Law (LAW)

**LAW 1001. Antitrust. 4 Units.**

(Formerly Law 233) Antitrust law sets the ground rules for competition. This course will explore the basic concepts in antitrust law. We will examine cartels and competitor collaborations, monopolization, vertical restraints and horizontal mergers. There are no prerequisites for this course. No economic background is required. The course is open to GSB students and graduate students in the Economics Department. To apply for this course, non-Law students must complete a Non-Law Student Add Request Form available on the SLS Registrar's Office website (see Non-Law Students). Elements used in grading: Class participation, attendance and final exam.

**LAW 1002. Advanced Antitrust: Monopolization and Abuse of Dominance in the US and the EU. 3 Units.**

This course will take an in-depth look at the principles in US and EU competition law regarding conduct by firms that excludes or weakens rivals. This is perhaps the most controversial and unsettled part of competition law and the part about which there is the least multinational agreement. We will study, among other materials, some of the major recent cases in which the same or very similar matters were addressed by both US and EU competition authorities, including matters involving Microsoft, Google, Intel and Rambus. The objectives are to gain a deeper understanding of the principles regarding exclusionary conduct and the ways in which those principles in US and EU law differ and, from that understanding, to draw inferences about the reasons for the differences between US and the EU law and the impact of different enforcement procedures on substantive legal principles. Elements used in grading: Class participation and written assignments or final paper. This course is open to anyone who has taken Antitrust Law 233 and to others with the permission of the instructor.

**LAW 1003. Bankruptcy. 3 Units.**

(Formerly Law 240) This course concerns the law and finance of corporate bankruptcy with an emphasis on reorganization. The course reviews the fundamentals of debt contracting, including the role of events of default, debt priority, and security interests. The course examines various aspects of the bankruptcy process: including the automatic stay, the avoidance of prebankruptcy transactions (e.g. fraudulent conveyances and preferences), the treatment of executory contracts, the debtor's governance structure during bankruptcy, the financing of operations and investments in bankruptcy, sales of assets during bankruptcy, and the process of negotiating, voting, and ultimately confirming a plan of reorganization. Elements use in grading: Class participation and exam.

**LAW 1004. Comparative Corporate Capitalism. 2 Units.**

From the United States to China, and from Brazil to the EU, corporate capitalism has triumphed globally as the dominant form of economic organization. Yet despite the common attributes of the corporation familiar to every U.S. law student, corporations around the world have diverse ownership structures, interact in their domestic political economies in different ways, and exhibit a host of traits that vary with the institutional context in which they operate. This seminar explores the many forms corporate capitalism takes around the world, and the important legal and policy issues raised by global corporate activity. We will explore the rise of "agency capitalism" in the U.S. and the proliferation of new corporate ownership structures around the world, the emergence of Chinese state capitalism and its legal and policy consequences, efforts to reform Japanese stakeholder capitalism, and hybrid forms of organization such as the "benefit corporation" and public-private partnerships (PPP). Policy issues to be considered include corporate social responsibility, the national security implications of investment by state-owned enterprises, and the consequences of global activist investing. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Presentation.

**LAW 1005. Comparative Venture Capital - China. 2 Units.**

(Formerly Law 736) This course is taught in conjunction with Law 1006. Students may enroll for this course alone or for both this course and Law 1006. Law 1005 is intended to introduce students to the legal and financial principles underlying venture capital investment in start-up enterprises and innovative technologies. A special emphasis of this course will be a comparative analysis of the ways in which the various legal and financial structures employed by venture capitalists are replicated in other legal environments, with a focus on the largest venture capital and IPO market in the world - China. The first eight weeks of the course will coincide with the first eight weeks of Winter Quarter, and will be conducted at Stanford Law School. Class sessions will be comprised of lectures regarding the basic concepts and structures, as well as seminar discussions with venture capital industry participants. Elements used in grading: Final exam, attendance and class participation. Special Instructions: Enrollment in the Beijing option is limited to 12 students (See Law 1006 for application instructions and deadline).

**LAW 1006. Comparative Venture Capital - China: Field Study. 1 Unit.**

(Formerly Law 736A) This is the Stanford Center at Peking University in Beijing component of Comparative Venture Capital - China (Law 1005). For details, see course description for Law 1006. During spring break 2017, the course will be held at the Stanford Center at Peking University in Beijing, and will consist of meetings and seminars with lawyers, entrepreneurs, and venture capitalists active in the Chinese venture capital market. Students will also tour start-up enterprises made possible with venture investments. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and a visa to travel to Beijing. Elements used in grading: class participation and short writing assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 1007. Contracts: American Law. 4 Units.**

(Formerly Law 722) This course will provide advanced-degree students with coverage of Contracts law comparable to the fall course offered for first-year JD students. The course will identify the scope and purpose of the legal protection accorded to interests created by voluntary undertakings. We will focus on problems of contract formation, enforceability, interpretation, performance and excuses for non-performance, and remedies for breach. The course will cover both the U.S. common law of contracts and the basics of UCC Article 2 (sales of goods). Not open to JD students. Open only to students in the SLS Advanced Degree Programs. Elements used in grading: Class Participation, Attendance, Final Exam.

**LAW 1008. Contract Design: Principles and Practice. 2 Units.**

(Formerly Law 434) Although transaction lawyers spend much time drafting contracts and related documents, they can contribute very significant value by designing transactions. Transactions should be tailored to the goals and circumstances of each set of parties, but there are some general principles that can guide the design process. This seminar examines some of these principles: such as the use of embedded options in contracts, of third parties, and of tailored procedures for dispute resolution and enforcement. Some of the readings and discussion will be at a fairly high level of abstraction, drawing on economic theories of contracting. A good part of our analysis will be closer to ground level, looking at particular types of transactions: for example, franchising, construction, corporate acquisition, loans, data use and insurance contracts. We will also look at the process of innovation and negotiation in contract design, including the role of lawyers and digital document production. Students will be required to write paper for the seminar, and encouraged to focus on a specific type of transaction. Elements used in grading: Class participation (10%) and an independent research paper for "R" (Research credit).

**LAW 1009. Corporate Finance I. 3 Units.**

(Formerly Law 262) There are many contexts in which lawyers need an understanding of finance. For example, many of the disputes that give rise to litigation center on the financial valuation of firms and the securities they issue. In addition, an understanding of firms' capital structures and the design of corporate securities is necessary in analyzing many legal issues, especially those arising in corporate transactions, executive compensation, and bankruptcy proceedings. This course is designed to provide students with a rigorous conceptual understanding of finance and to give students the analytical tools needed to make financial decisions and value financial securities. The course stresses problem solving and includes problem sets, cases, and a midterm and final examination. The course is designed to be accessible to students with a fairly limited mathematical background. In general we will not assume any knowledge of mathematics beyond high-school algebra. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

**LAW 1010. Corporate Income Taxation. 4 Units.**

(Formerly Law 351) Overview of the fundamental tax rules and principles regarding the taxation of domestic corporate entities. Course will address choice of entity (C corporation, S corporation and non-corporate pass-through entities), capital structure and formation issues, corporate operations, including cash and property distributions and shareholder exit transactions. Approximately half of the course will be devoted to taxable and non-taxable acquisitions, dispositions and reorganizations, including planning and structuring strategies; a portion will address current tax policy considerations. The student's final grade will be based on a final exam, although class participation may improve a student's grade. Prerequisite: Taxation 1 or Partnership Tax. Elements used in grading: Class Participation, Final Exam.

**LAW 1011. Advanced Corporate Finance. 3 Units.**

(Formerly Law 264) Lawyers often need an advanced understanding of corporate financial decisions, instruments, and transactions, including equity financing and initial public offerings, the determination of a firm's cost of capital, valuation, payout policy, recapitalizations and bankruptcy, mergers and acquisitions, and the market for corporate control. Advanced Corporate Finance introduces these topics by lecture and then explores them through detailed analysis of actual cases. This structure maximizes the synergy between theory and practice, providing students with portable, durable, and marketable tools for their careers. Legal considerations that arise in the execution of these corporate financial decisions include mandatory disclosure requirements, the issuance of dual class shares, charges of anticompetitive practices, taxes, appraisal cases and fairness opinions, takeover defenses and fiduciary duty challenges, contractual provisions in merger agreements, insider trading, and Chapter 11 bankruptcy proceedings. This class rigorously advances both conceptual and practical/analytical understanding. The knowledge gained will facilitate professional dealings with boards of directors, chief financial officers and corporate treasurers, investment bankers, consultants, portfolio and investment managers, venture capitalists, and private equity investors. Prerequisite: Corporate Finance I (Law 1009, formerly Law 262) or equivalent background. Elements used in grading: class participation and final exam.

**LAW 1012. Corporate Reorganization. 3 Units.**

(Formerly Law 248) This course examines the reorganization of a financially distressed company under chapter 11 of the Bankruptcy Code. The course follows a fictitious company through several stages of a business turnaround and financial restructuring, including an out-of-court workout, a chapter 11 filing, selected chapter 11 operating issues, and the formulation, negotiation and confirmation of a plan of reorganization. In addition, the course follows current developments in bankruptcy, primarily through reports in the media. For example, in recent years the course has followed issues as they have arisen in actual chapter 11 cases (e.g., General Motors, Chrysler Corporation, Lehman Brothers, SunEdison, Westinghouse Electric, several retailers) and the effects of bankruptcy on various industries (e.g., real estate, energy, retail, technology, airlines, automotive). The course also touches on various issues that often arise in a reorganization setting, such as valuation, leveraged buyouts, debt and derivative instruments, and distressed debt trading. Elements used in grading: Class participation and final exam.

**LAW 1013. Corporations. 4 Units.**

(Formerly Law 242) This is a basic course in corporation law and provides a foundation for advanced business courses. The course examines the role of law in structuring economic relationships among shareholders, management, creditors, and other participants in modern business corporations. Some background in accounting and corporate finance is helpful, but not required. The course briefly considers basic theories of the firm, the reasons for incorporation of a business enterprise, and agency theory. The course then turns to management and control of the corporation, the actions of directors and officers, and the distribution of powers within the corporate structure more generally. The role of shareholders is examined next, and we devote substantial attention to the fiduciary duties of directors and controlling shareholders. Finally, we closely examine transactions in corporate control and consider the permissible scope of anti-takeover devices. Elements used in grading: Attendance, Class Participation, Exam.

**LAW 1014. Current Issues in Tax Practice. 2 Units.**

(Formerly Law 785) This course will introduce students to major issues in tax practice. Each class will be co-taught by one or more leading practitioners in the tax bar, with other members of the bar attending. Subjects include international tax, intellectual property and tax, tax litigation, state and local taxation, working for the government in tax, tax lobbying and working in a corporate tax department. Class will meet at my home (with take-out dinner provided). The class offers students a good opportunity to connect their SLS tax courses to real-world tax issues and practitioners. Elements used in grading: Class Participation, Attendance, Written Assignments.

**LAW 1015. Corporate Social Responsibility. 2 Units.**

Although corporate social responsibility ("CSR") initiatives have been pursued by a range of companies as voluntary measures for decades, recent developments have rendered the exercise by companies of designing and implementing environmental, social and governance mechanisms inherently legal in nature. This course will explore the legal issues that companies have been forced to confront, increasingly with the support of specialized legal counsel, in pursuing CSR or sustainability objectives, including those arising in the context of supply chain human rights due diligence (e.g., minerals sourcing and human trafficking), impact investment and the adoption of alternative corporate forms, voluntary standards and mandatory requirements regarding non-financial disclosure and reporting (e.g., SASB, sustainability listing standards, possible amendments to Regulation S-K, and the EU non-financial reporting rules), director fiduciary duties and the changing expectations of investors, shareholder proposals and stakeholder engagement, and the rise of corporate social activism by companies and their officers, among others. Elements used in grading: Class Participation, Written Assignments, Final Paper.

**LAW 1016. Deals I. 4 Units.**

(Formerly Law 273) This course applies economic concepts to the practice of structuring contracts. The course extends over two quarters. In the Fall quarter it will meet four hours per week. In the Winter quarter, it will meet ONLY FOR FIVE WEEKS for four hours per week—for 2 units of course credit. During those five weeks, it will meet on Monday and Friday. Exactly which five weeks the course will meet will be announced during the Fall quarter. Students enrolled in the course must take both quarters. All of the first quarter will be spent in a traditional classroom setting but with untraditional materials. Most of the materials consist of case studies of business transactions (and no case law). We will use those case studies to analyze the economics underlying a wide range of business transactions and the contractual terms and structures use to respond to underlying economic challenges. During the second quarter, we will explore deals in greater detail by studying five complex transactions in full. For this part of the course, students will be divided into groups and will be assigned one of the five deals. Each group will give a presentation of its deal to the class, and in the following class, a lawyer or other participant in the deal will come to class to present the deal based on his or her experience. We study five new deals each year. Deals that we have studied over the years have included movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, corporate reorganizations, and more. Special Instructions: Students enrolled in the course must take both quarters. Students who have not taken the course in the fall cannot register for it in the winter, and those who took it in the fall must register for it in the winter. No exam in Autumn Term. An In-School exam will be given at the conclusion of the course in the Winter Term. Grades will be given at the end of the second quarter and will be applied to both quarters. I use the consent form to ensure diversity of experience and non-experience and diversity across classes. There is no background required for the course. Elements used in grading: Attendance, class participation, class presentation, written assignments, group paper, and exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 1017. Deals II. 2 Units.**

(Formerly Law 275) This course applies economic concepts to the practice of structuring contracts. The course extends over two quarters. In the Fall quarter it will meet four hours per week. In the Winter quarter, it will meet ONLY FOR FIVE WEEKS for four hours per week—for 2 units of course credit. During those five weeks, it will meet on Monday and Friday. Exactly which five weeks the course will meet will be announced during the Fall quarter. Students enrolled in the course must take both quarters. All of the first quarter will be spent in a traditional classroom setting but with untraditional materials. Most of the materials consist of case studies of business transactions (and no case law). We will use those case studies to analyze the economics underlying a wide range of business transactions and the contractual terms and structures use to respond to underlying economic challenges. During the second quarter, we will explore deals in greater detail by studying five complex transactions in full. For this part of the course, students will be divided into groups and will be assigned one of the five deals. Each group will give a presentation of its deal to the class, and in the following class, a lawyer or other participant in the deal will come to class to present the deal based on his or her experience. We study five new deals each year. Deals that we have studied over the years have included movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, corporate reorganizations, and more. Special Instructions: Students enrolled in the course must take both quarters. Students who have not taken the course in the fall cannot register for it in the winter, and those who took it in the fall must register for it in the winter. No exam in Autumn Term. An In-School exam will be given at the conclusion of the course in the Winter Term. Grades will be given at the end of the second quarter and will be applied to both quarters. NOTE: This year, I have blocked out 4 class periods per week in the second quarter on Mondays and Fridays. As explained above, however, WE WILL ONLY USE HALF OF THOSE CLASSES – that is, FIVE MONDAYS and FIVE FRIDAYS over the Winter quarter. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration) to the instructors. See Consent Application Form for submission deadline. I use the consent form to ensure diversity of experience and non-experience and diversity across classes. There is no background required for the course. Elements used in grading: Attendance, class participation, class presentation, written assignments, group paper, and exam.

**LAW 1018. Derivatives. 2 Units.**

(Formerly Law 299) The course will examine the legal, regulatory, trading and risk management aspects of the \$600 trillion notional over-the-counter and cleared derivatives markets. Derivatives have historically not been well-understood by regulators or the public and have been blamed for causing or contributing to the economic crisis. This course will offer students the opportunity to understand how various derivative products are designed, traded and risk-managed and what role regulators play in the derivatives industry. In addition, students will focus on understanding key legal contracts that underpin the global derivatives industry, in particular focusing on the ISDA® Master Agreement and Credit Support Annex, as well as documentation supporting credit derivatives and other common derivative types. Students will also consider the shifting regulatory landscape for financial institutions and hedge funds as it relates to the way in which these products are traded, with rates and credit products migrating to clearinghouses. The course will conclude with an examination of the economic crisis that erupted with Lehman Brothers' bankruptcy in September 2008 and the consequent policy reactions to that event from a derivatives and bankruptcy perspective. Elements used in grading: attendance, written homework assignments and a final exam.

**LAW 1019. Current Topics in Sports Law. 1 Unit.**

Current Topics in Sports Law is a one-unit seminar for up to 15 students with San Francisco 49ers General Counsel and SLS alumna Hannah Gordon. The class is made up of six 90-minute sessions and brief reflection papers. Attendance is mandatory at all six sessions to pass the course. The class will meet the first six weeks of Autumn Quarter. The seminar will explore current topics in the practice of law that are impacting the sports industry, both through litigation and legislation. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 1020. Entertainment Law. 3 Units.**

(Formerly Law 297) Entertainment law is not, in and of itself, a separate legal discipline. Instead, the practice of entertainment law lies at the intersection of various traditional legal disciplines, such as contract, tort, copyright, trademark, antitrust, secured transactions, etc., and applies those disciplines to a unique business setting. This course is intended to approach the study of entertainment law from a practical perspective, applying the principles of traditional legal disciplines to avoid problems and find solutions in various facets of the entertainment industry. To accomplish the necessary background, we will study the entertainment industry from both a macro level (i.e., the organization of the motion picture, television and music business, including the function of studios, producers, networks, record companies, agencies, managers, lawyers and labor unions) and a micro level (i.e., examining actual agreements in order to understand the principal components of motion picture talent, production and distribution contracts, television series contracts, music and book publishing contracts). We will also examine key litigation issues that affect the industry, such as the interaction of the First Amendment and the right of publicity, the right of privacy and libel, the anti-SLAPP laws, the "final cut" and profit participation cases. The impact of the digital media (including the internet) will, of course, be analyzed, along with the future of the entertainment industry, including convergence, holograms, syntho-thesians and the like. We plan to include guest speakers from the entertainment industry so that this class will embody both business and legal considerations. The overall goals of this course are (1) to expose students to the unique and increasingly complex structure of the entertainment business; (2) to foster an understanding of the role the law and entertainment lawyers play in that unique business structure; (3) to strengthen students' ability to draft key documents and craft persuasive legal arguments to accomplish the goals they may seek to achieve as lawyers in the entertainment industry; and (4) to develop the analytical and problem-solving skills necessary to make them into effective entertainment lawyers. Elements used in grading: Class participation, brief writing exercises, team contract negotiation and drafting projects.

**LAW 1021. Estate Planning. 3 Units.**

(Formerly Law 292) This class will cover the basics of the gift and estate tax system and estate planning principles. With these fundamentals, the course will then examine basic and advanced estate planning and wealth transfer techniques, including wills, various types of trusts, titling property, gifts during lifetime, charitable vehicles, handling closely held businesses and valuation matters—with an emphasis on how to use these tools in planning an estate to meet the objectives of a couple or individual. Probate of an estate, durable power of attorneys, conservatorships, and planning for other life situations will be explored. Elements used in grading: Class participation (is a small factor and only in the positive direction) and final open book exam. This course is open to GSB and graduate students with consent of the instructor.

**LAW 1022. International Tax. 2 Units.**

(Formerly Law 352) This course examines the United States federal income taxation of international operations and transactions, including international joint ventures and M&A transactions. Income source, foreign tax credits and Subpart F are important. International transfer pricing rules also will be addressed. Congress is currently debating fundamental reform of US international tax rules; developments in this area will also be covered. Elements used in grading: Final Exam.

**LAW 1023. International Securities Offerings. 2 Units.**

This course will focus on the application of United States securities laws and regulations to non-US issuers. We will examine how that regulatory framework differs for Foreign Private Issuers, as compared to other issuers in the United States. Initial public offerings, private placements under Rule 144A and Regulation S and ADR programs will all be covered. We will take a close look at the Alibaba IPO and Alibaba's subsequent regulation as a public company listed in the United States. The course will be taught from a practical perspective with in-class review of SEC filings, offering documents and SEC correspondence. The Morrison Case and its progeny defining the reach of U.S. Securities law to conduct with limited U.S. contacts will also be examined. Elements used in grading: Class Participation, Final Exam.

**LAW 1024. Private Equity Investing. 3 Units.**

(Formerly Law 522) This course will focus on the central issues involved in private equity investing. Topics will include: pricing, structuring and valuation of private equity and venture capital investments; buyouts and other transactions involving multitiered capital structures; the structure and governance of PE and VC funds; conceptual issues relevant in this realm such as option theory, asymmetric information and bounded rationality; and private equity as a distinct asset class. There are no required prerequisites. Students will develop skills and tools used in the private equity arena, including financial analysis (e.g., "deal arithmetic" fundamentals, spreadsheet modeling and forecast preparation); the drafting and negotiation of transaction documents; and the ability to conduct comprehensive due diligence examinations of prospective acquisitions and investments. We will have a number of guest speakers during the term, and will draw on various materials illustrative of what one would encounter in private equity deals and funds. Elements Used in Grading: Periodic problem sets, a final case study and class participation. (The case study will be completed in a small group, and it will give students the opportunity to analyze a real-world transaction from a number of perspectives.) A Final Note: While a 3-credit course, Private Equity Investing will not meet for the entirety of the Winter quarter. The final class session will be on March 2nd (rather than March 12th). This class is limited to 24 students. 16 SLS students will be selected by lottery. The other eight spots will be allocated by consent of instructor, and will be selected from law students who were waitlisted and non-law students. All interested students must attend the first two class sessions (January 10 & 12) in order to keep a spot on the class list or waitlist.

**LAW 1026. Securities Litigation. 3 Units.**

(Formerly Law 300) Executives of American public companies control one of the largest accumulations of wealth in history, amounting to trillions of dollars in market capitalization. Tens of billions of dollars of securities in these companies are traded daily. This course addresses the most interesting and complex litigation that arises in connection with these securities, including fraud claims against executives and corporations, criminal actions for insider trading, internal investigations of executive misconduct, SEC enforcement actions, and derivative actions against corporate directors and officers. This course does not concern stock market technicalities. Instead, you will learn the basic legal framework governing this area, the theories underpinning it, and how to present legal arguments in this area. You will learn in a group setting by working out solutions to some of the most challenging issues that we have faced. In the process you will come to recognize the patterns we see and understand the forces behind them, so that you are prepared to practice in this area. Elements used in grading: Attendance, Class Participation, Exam.

**LAW 1027. Securities Regulation: Capital Formation from Start-Up to IPO and Beyond. 4 Units.**

(Formerly 591) This course uses Silicon Valley's venture capital process as a template to examine the legal regime governing capital formation in the United States. The course tracks financing from the earliest angel investing rounds, through billion dollar private placements, initial public offerings (IPO's), and subsequent governance as a publicly traded firm. The course also explores emerging crowd-funding markets, secondary market mechanisms for trading privately held shares, and the operation of Rule 144A, which allows large foreign firms to raise significant amounts from US institutional investors without ever registering with the SEC. The course relies extensively on recent transactions including the Alibaba, Facebook, and Square IPOs, and Uber private placements. Students interested in a more complete appreciation of the securities regulation process are advised also to take the Spring Securities Litigation course. Elements used in grading: Final exam.

**LAW 1028. Tax Policy. 2 Units.**

(Formerly Law 359) This course will explore various tax policy issues. In past years, the issues we've explored have included the carbon tax, health care, social security, consumption tax, tax compliance, tax shelters and school financing. Special Instructions: Grades will be based on either (A) class participation and memos responding to the discussion questions for any three of the sessions or (B) class participation and a research paper on a topic of your choosing (subject to instructor approval). Option B is Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, attendance and written assignments.

**LAW 1029. Taxation I. 4 Units.**

(Formerly Law 355) This course provides an overview of the federal income tax. Elements use in grading: Class participation and final exam.

**LAW 1030. Partnership Tax. 2 Units.**

(Formerly Law 377) This course will cover the basic rules that govern the tax treatment of partnerships and partners, with a focus on agreements and issues that are relevant to venture capital and private equity investment partnerships. The course will be primarily problem-set based. Prerequisites: Taxation I required; Corporate Income Taxation suggested but not required. Elements used in grading: Final Exam, Class Participation.

**LAW 1031. Current Issues in Business Law. 2 Units.**

This course will focus on issues in law and business that are both important to practitioners and the subject of academic or policy debates. We will cover a range of legal and economic issues, including the following topics: nonbank lending, gatekeeper liability, capital repatriation and tax policy, corporate restructuring, blockchain and smart contracts, and cyber risk management. Each of these issues will be introduced by readings and presentations, but the classes will rely on student discussion and critical evaluation of the papers and positions we examine. Students will have the opportunity to write reaction papers that critically analyze the required readings and to learn and analyze other business law issues of their choice by working in groups. Elements used in grading: Reaction papers, class participation, and performance in the group project and presentation.

**LAW 1032. Banking Law. 3 Units.**

(Formerly 378) This course will examine the legal and regulatory system governing financial institutions, with an emphasis on banks. It will do so by exploring the underlying economics of banking, and the ongoing effort to reform financial regulation. Questions addressed will include: Why do we regulate financial institutions? What dangers do we want to avoid? How well does the current regulatory system achieve what we want to achieve? What alternative approaches can be taken? What are the costs and benefits of the current system, and those of the alternatives? Elements used in grading: Class participation, attendance, final exam.

**LAW 1033. Trusts and Estates. 2 Units.**

(Formerly Law 430) This course will cover the following topics: intestacy; will execution and revocation; will provisions and interpretations; restrictions on the right to devise; probate; creation, amendment and termination of trusts; revocable and irrevocable trusts; trust provisions; charitable trusts; trust administration; and substitutes and conservatorships. Elements used in grading: Final exam (In-School: open book, essay).

**LAW 1034. Real Estate Transactions and Commercial Development. 3 Units.**

(Formerly Law 336) Real Estate Transactions and Commercial Development examines the structuring, negotiation and documentation of commercial real estate transactions. Working both individually and in groups, students will learn the requisite skills for drafting and negotiation leases, letters of intent, sale contracts and related financing documents. As time permits, development-related matters will be explored, including the legal aspects of site acquisition, design and construction. Classes will be a mixture of lectures, interactive discussions, and several mock negotiations. Elements used in grading: Class attendance, individual and group project participation, and written assignments.

**LAW 1035. Mergers, Acquisitions and other Complex Transactions. 3 Units.**

This course is a comprehensive introduction to the law and practice of mergers, acquisitions and other complex transactions. It will cover key and emerging issues in transactional legal practice, including in mergers, tender offers, carve-outs and asset sales, negotiated and unsolicited acquisitions, buyouts, conflict transactions, spin-offs/split-offs and deal activism. In addition to the relevant laws, regulations and fiduciary standards, the course will cover key aspects of the deal-making process, including mechanisms for protecting a preferred transaction and increasing deal certainty, takeover preparedness and responding to hostile offers, as well as structuring alternatives. The course will include practical exercises on M&A topics and guest speakers who have encountered some of the issues discussed. Prerequisite: Corporations, except on petition to the instructors based on prior coursework or special experience. The course is intended both for students anticipating a career in transactional legal practice as well as for students seeking to develop a general understanding of issues in M&A transactions. Elements used in grading: Attendance, Class Participation, Exam. Casebook: We will be using a casebook: *Mergers and Acquisitions Law, Theory, and Practice* by Claire Hill, Brian JM Quinn and Steven Davidoff Solomon (West Academic Publishing 2016).

**LAW 1036. Introduction to Finance. 2 Units.**

(Formerly Law 794) This course is a basic introduction to the principles of finance and is intended as a primer on principles of valuation that are useful in everything from settlement negotiations to family law. No prior knowledge of finance will be assumed. If you want an introduction to corporate finance and won't take the full 3 credit course, this is for you. The first part of the course (approximately 6 weeks) will consist of on-line modules and problem sets that you will complete on your own and in small groups. We will cover topics such as: earnings, cash flows, income statements, interest rates, time value of money, estimating firm value, risk and return and the cost of capital. We will provide a framework for answering questions such as: how much is this project (or firm) worth? How should the firm raise money for a new investment? There will be weekly problem sets and you will get experience with building a simple model (excel spreadsheet) that will help you estimate the value of a potential new project. The second part of the course will consist of in-class discussions of case studies that apply these valuation principles to particular legal settings: e.g. valuing settlement offers, merger proposals, appraisal proceedings, and the efficient capital markets hypothesis. We hope that this flexible format will allow more students to take finance. If you wish, you can take this course and then later take Corporate Finance 1. The class will meet (TBA). Additional small group meetings will be scheduled with the instructor. On-line component. Elements used in grading: Written Assignments, Final Project.

**LAW 1037. The Evolution of Finance. 2 Units.**

(Formerly Law 487) This course provides a framework to understand how uncertainty and technology affect the evolution of finance (and businesses generally), and its illustration with heavy emphasis on recent developments and future trends. In recent years Myron Scholes has given about half the lectures with the other half given by prominent guests. The guest list changes year to year but 2016's list included David Booth, Howard Marks, Martin Chavez, James Manyika, Kevin Warsh, Tom Kempner, and Larry Summers. Special instructions: LAW 1037 is limited to 15 law students. If more than 15 law students enroll, a lottery will be run to determine the final class list. Elements used in grading: No Exam. Participation 50% Projects/Papers 50%. Mandatory attendance. Absences impact grade. Cross-listed with Graduate School of Business (MGTECON 343).

**LAW 1038. The Future of Finance. 2 Units.**

If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of global financial markets such as how the world has evolved post-financial crisis, how it is being disrupted by FinTech, RegTech, artificial intelligence, crowd financing, blockchain, machine learning & robotics (to name a few), how it is being challenged by IoT, cyber, financial warfare & crypto currency risks (to name a few) and how it is seizing new opportunities in fast-growing areas such as ETFs, new instruments/payment platforms, robo advising, big data & algorithmic trading (to name a few). The course will include guest-lecturer perspectives on how sweeping changes are transforming business models and where the greatest opportunities exist for students entering or touching the world of finance today including existing, new and disruptive players. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration) to the instructor(s). Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration) to the instructor(s). See Consent Application Form for submission deadline. Cross-listed with Economics (ECON 152/252), Public Policy (PUBLPOL 364), Statistics (STATS 238).

**LAW 1039. Deal Litigation Seminar. 2-3 Units.**

(Formerly Law 483) This seminar is designed as an introduction to mergers and acquisitions litigation. The course provides both a practical and doctrinal perspective on M&A-related litigation and will rely heavily on readings and issues derived from practice in the Delaware courts where much contemporary deal litigation occurs. Students will be asked to apply cases and legal principles in various practical situations that may arise in a transactional litigation practice. Familiarity with basic corporate law principles is assumed. Classes and readings. The first segment of the course will introduce basic doctrinal principles of M&A law and provide an introduction to the litigator's role in the transactional setting. The remaining sessions will revolve around two detailed M&A case studies, with seminar members divided into group roles. The first week of each case study will involve the negotiation and structuring of an M&A transaction. The second week will involve litigation relating to the transaction. Reading for these sessions will include case scenarios, supporting materials, and additional relevant case law and articles. The attendance and active participation of seminar members is essential. Readings for all classes will be provided in spiral-bound volumes distributed in class. Written assignments and grading. Students will be expected to (i) write a final paper; (ii) prepare two additional short written assignments associated with the case study assignments (such as marking up draft documents or preparing court papers); and (iii) participate actively in class. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Students taking the seminar for R credit can take the seminar for either 2 or 3 units, depending on the paper length. Corporations (Law 242) is a prerequisite. Elements used in grading: Attendance, class participation, written assignments and paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 1040. Venture Capital. 3 Units.**

(Formerly Law 465) This course examines the venture capital (VC) industry from both a theoretical and a practical perspective. The course traces the start-up process from initial formation of a new venture through angel investments, institutional venture capital financing rounds, with a view to potential exits via acquisition or initial public offering. The class will analyze each step in the process from the perspective of the business entity, the founders and employees, the investors, and the lawyers for each party. It also will consider the incentives and control structures used at each step of the transaction, with a focus on both the underlying economic and financial theory, as well as on pragmatic considerations in structuring the transactions. Students will learn the VC business model to understand what makes it unique from other investment forms and how that impacts the startup ecosystem. Students are required to complete a term sheet or other negotiation exercise, participate in class discussions, and sit for an examination. There will be required readings for each session that include a range of materials from VC practitioners' blog posts to case law. Some sessions will include guest speakers with experience in VC or entrepreneurship. This course is co-taught by Gordon Davidson and Michael Esquivel. Both are partners at Fenwick & West LLP who advise technology companies, startups, and venture capitalists. Elements used in grading: Class participation/ assignments, negotiation exercises and written summary, and the final exam.

**LAW 1041. Venture Capital II: Starting and Running a Venture-Backed Company. 3 Units.**

(Formerly Law 401) This class will focus on the legal and non-legal tactical details of entrepreneurial endeavors. The legal specifics of corporate formation, tax, and contracts are well covered by a variety of other courses at the Law School and will only be reviewed briefly in this course. Instead, the course will examine the life stages (formation, financing, execution, and exit) of a venture-backed company from the entrepreneur's perspective. Students who are interested in either starting companies or working with startup founders as their legal counsel will solidify their foundations in this course. There will be no textbook – course materials will include PowerPoint slides, readings from various entrepreneur and venture capital blogs, sample business plans, and other sources. This course is limited to 14 students. Those students who have taken VC I receive priority in enrollment. Prerequisites: A modest background in financial analysis or the use of Excel, such as might be obtained from any of the introductory finance courses in most undergraduate curriculums or the handful of similar graduate classes at Stanford (such as QM Finance) is strongly recommended for this course. Venture Capital I will also be helpful but is not a prerequisite. Elements used in grading: Class participation (20%), and a 60 minute oral business plan presentation with accompanying slide deck and written materials (80%). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

**LAW 1042. New Venture Finance. 2 Units.**

This is a practice-oriented business law seminar designed to provide students with an understanding of the legal, business, financial and practical issues that arise in advising venture capital-backed and emerging growth companies through the typical stages of their development and common transactions. The seminar will cover selected corporate, securities and tax issues in areas such as business entity formation, corporate organization and governance, venture capital financings, employee benefits, acquisitions and initial public offerings, with an emphasis on practical solutions and business realities. The goal of the seminar is to provide students with a window into the daily life of a typical Silicon Valley-style corporate attorney. Students are required to complete a number of assignments, participate in a negotiation exercise, participate in class discussions and sit for an exam. There will be required readings for each session that include a range of materials. Some sessions will include guest speakers. This course is taught by Mark Reinstra (JD '92), a partner at Wilson Sonsini Goodrich & Rosati. Mark represents emerging growth companies in substantially all facets of their corporate lives, from incorporation, financings, strategic transactions and, ultimately, liquidity events. Elements used in grading: Students will be evaluated on class participation/assignments, negotiation exercises and a final exam (In-School Essay - closed book).

**LAW 1046. Deals in Hong Kong: Field Study. 1 Unit.**

This is a travel course that is integrated into Deals I and Deals II. Students who take this course will have taken Deals I and Deals II in the same year. The course will have two elements. First, there will be two deals assigned to two groups of students, as is true of Deals II. Rather than meeting with the lawyers involved in those deals here at Stanford, as we do in Deals II, we will meet in Hong Kong. Students will complete their papers on these deals shortly following their week in Hong Kong. Second, we have a variety of meetings in Hong Kong in which we learn about transactions that are handled by lawyers and bankers there and more generally about business in that part of the world.

**LAW 2001. Criminal Procedure: Adjudication. 4 Units.**

(Formerly Law 315) The Law School offers two survey courses dealing with constitutional criminal procedure. "Criminal Investigation" will consider questions that arise under the fourth, fifth, and sixth amendments regarding investigations, interrogations, and charging decisions. This course, "Criminal Adjudication," will look at the way the judicial system handles criminal cases. Topics will include the right to counsel (and the concomitant right to "effective assistance" of counsel), prosecutorial discretion and plea bargaining, joinder and severance, discovery, the right to jury trial, double jeopardy, sentencing, and appellate review. Students may take both Criminal Investigation and Criminal Adjudication. (There is, of course, no requirement to do so.) Elements used in grading: Attendance, participation and final exam. Small grade adjustments will be made for exceptional class participation.

**LAW 2002. Criminal Procedure: Investigation. 4 Units.**

(Formerly Law 312) The law school offers two survey courses dealing with constitutional criminal procedure. "Criminal Adjudication" covers the formal pretrial and trial processes, including the right of counsel, prosecutorial charging criteria, grand juries, bail, speedy trial, discovery, plea bargaining, trial by jury, and double jeopardy. This course, "Criminal Investigation," covers police investigation in the form of searches and seizures, interrogations, lineups, and undercover operations, and hence examines the Fourth and Fifth (and, to a limited extent, the Sixth) Amendment rules regulating the police in these endeavors. It also incorporates some of the federal laws governing electronic communications and privacy. Students may take both Criminal Investigation and Criminal Adjudication. (There is, of course, no requirement to do so.) Elements used in grading: Final exam (in-class, open book), plus small adjustments for exceptional class participation.

**LAW 2006. Race, Class, and Punishment. 3 Units.**

Since the early 1970s, the criminal justice system in the United States has expanded dramatically. America has adopted an array of increasingly tough approaches to crime, including aggressive street-level policing, longer sentences, and a range of collateral consequences for criminal convictions. As a result, there are currently 2.2 million persons in prisons and jails and seven million under some form of correctional supervision. The impact on communities of color has been especially profound: In many of our nation's cities, nearly one-half of young black men are in the criminal justice system. This seminar will begin with readings discussing the tough-on-crime era's historical roots. We will then turn to examine the impact of these policies. Finally, we will turn to current efforts to resist and reform the system that has been created. This portion of the seminar will focus on violent crime, and whether and how to respond to violent crime differently than we currently do. The assigned reading will be substantial, and will come from a wide variety of sources, including history, sociology, political science, criminology, and law. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

**LAW 2008. Three Strikes Project: Criminal Justice Reform & Individual Representation. 3 Units.**

(Formerly Law 419) This seminar offers an opportunity to study mass incarceration and criminal justice reform in real time. California has been at the forefront of political movements leading to the era of mass incarceration and is now leading the trend in the opposite direction. In this seminar students read and analyze a variety of cases and articles, examining the evolution of incarceration and sentencing reform and assist with related ongoing research, public policy analysis advocacy, and live litigation on behalf of inmates sentenced to life in prison for nonviolent crimes. The class focuses largely on California's 'Three Strikes' recidivist sentencing law as a case study in the history, politics, constitutional doctrine, practical considerations and legal regulation of sentencing policy throughout the country. Students will also test their skills in the field by assisting with the representation of individual inmates sentenced to long prison terms for nonviolent crimes in state and federal courts. The Project has been intimately involved in the movement to reduce incarceration in California, leading ballot measures that implemented legislative reforms to shorten prison sentences and representing individual prisoners sentenced to life for nonviolent crimes. Based on this experience, the Project recently partnered with the Obama administration to support prisoners who receive sentence commutations from the President. Students enrolled in the seminar are involved in all aspects of the Project's work, including assistance with different stages of ongoing litigation. Students will visit a Project client in prison, conduct factual investigations, and draft petitions on our clients' behalf. The Project is an active, fast-paced organization that depends on the hard work and contributions of law students enrolled in this seminar. This seminar offers the opportunity to both study the theory behind the law and to hone practical litigation and advocacy skills in and out of the courtroom. The seminar will meet for 3 hours per week. Students will also meet for 1 hour individually and in teams with Project director Mike Romano each week to discuss their work on their projects. CONSENT APPLICATION: Interested students must apply to enroll in the seminar by sending a one-page statement of interest and resume by email with the subject line "application" to Mike Romano (mromano@stanford.edu). Applications will be considered on a rolling basis. Elements used in grading: Class Participation, Attendance, Written Assignments.

**LAW 2009. White Collar Crime. 3 Units.**
